OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

YUCCA VALLEY PROPERTY
NEWTON LANE
YUCCA VALLEY, CA 92284

TARGET PROPERTY COORDINATES

Latitude (North):	34.166982 - 34° 10' 1.14''
Longitude (West):	116.420805 - 116° 25' 14.90''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	553384.1
UTM Y (Meters):	3780627.5
Elevation:	3721 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50004086 YUCCA VALLEY NORTH, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

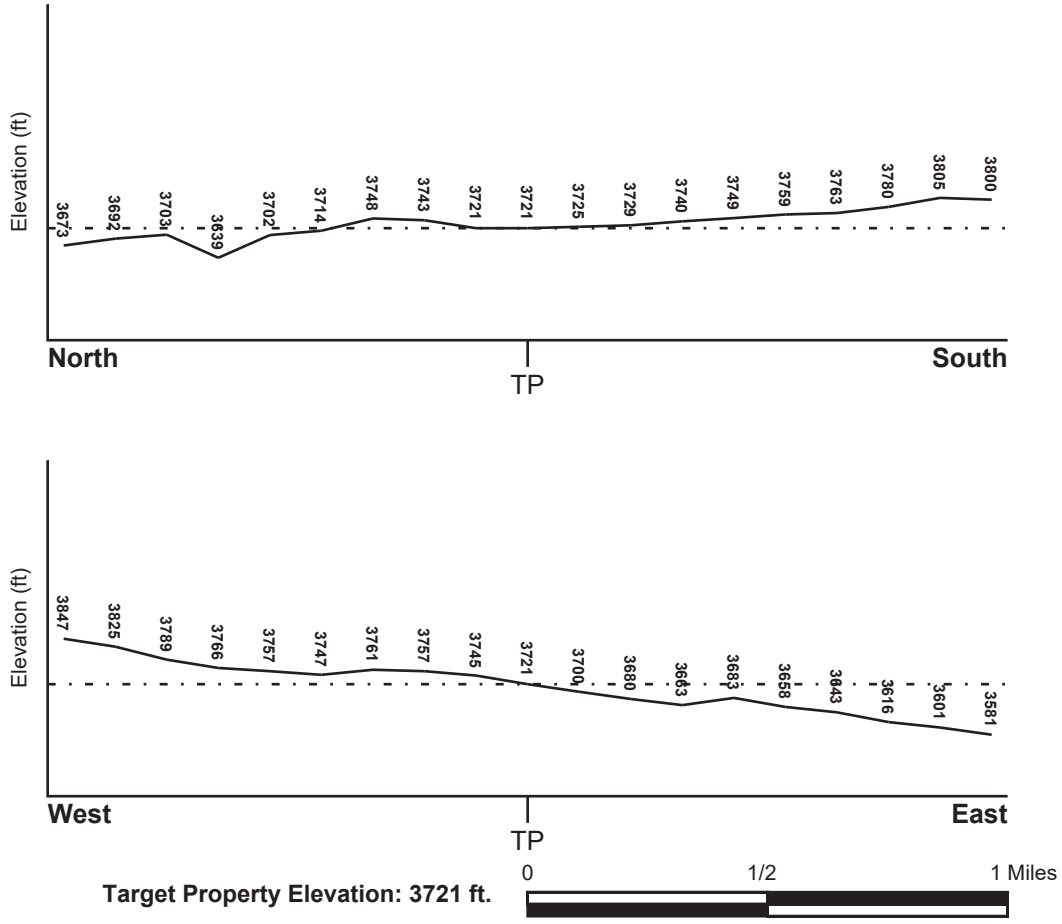
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C8120H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8115H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
YUCCA VALLEY NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Precambrian
System:	Precambrian
Series:	Orthogneiss and paragneiss
Code:	Xm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Metamorphic Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	HANFORD
Soil Surface Texture:	coarse sandy loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	12 inches	coarse sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 5.60
2	12 inches	50 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 5.60
3	50 inches	60 inches	gravelly - fine sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam
gravelly - sandy loam
loamy sand
stony - loam
cobbly - loamy sand

Surficial Soil Types: sandy loam
gravelly - sandy loam
loamy sand
stony - loam
cobbly - loamy sand

Shallow Soil Types: gravelly - loam
very cobbly - loam

Deeper Soil Types: stratified
gravelly - sandy loam
weathered bedrock

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

SUBJECT: CERTIFIED RECORD SEARCH FINDINGS
APN #S: 0597-111-67-0000 AND 0597-111-61-0000
(4815 AND 4831 NEWTON LANE/ROAD, YUCCA VALLEY, CALIFORNIA)

This is to confirm that the San Bernardino County Hazardous Materials Section has identified records that may pertain to the subject site, as described in your request for records search.

ACTIVE PERMIT FACILITIES: (Regulatory files for facilities with annual operating permits to maintain underground storage tanks, handle hazardous materials, and/or generate hazardous waste. Files include permits, inspections, reports, test results, correspondence, and related materials. Files will also include any underground tank removal/construction activity records and site remediation/contamination records for facilities still in operation).

Full-Circle, Inc. 4831 Newton Rd Yucca Valley	FA0009441 ~ CERS ID: 10049953 Small Quantity Generator Permit Hazardous Materials 4-10 Chemicals Handler Permit (Last CERS Submission: 8/22/2024)

INACTIVE PERMIT AND/OR NON-PERMIT FACILITIES: (Inactive regulatory files for formerly permitted facilities that maintained underground storage tanks, stored hazardous materials, and/or generated hazardous waste and/or facilities with underground storage tanks removed and/or materials and waste removed. Files will also include any underground tank removal/construction activity records and site remediation/contamination records for facilities no longer operating underground tanks).

No record of inactive permit and/or non-permit facilities identified in this search.

PERMITS TO REMOVE/INSTALL/MODIFY UNDERGROUND STORAGE TANKS:

No record of permits to remove/install/modify underground storage tanks identified in this search.

HAZARDOUS MATERIAL INCIDENT AND/OR COMPLAINT RESPONSE ACTIVITY: (other records of spill notifications and/or complaints not listed below may also exist in facility permit files).

Full-Circle, Inc. 4831 Newton Rd Yucca Valley	CO0028764 8/10/2011 Complaint stating an unknown amount of machine coolant released from several machines.

BOARD OF DIRECTORS

Col. Paul Cook (Ret.), Vice Chairman, First District
Jesse Armendarez, Second District
Dawn Rowe, Chair, Third District
Curt Hagman, Fourth District
Joe Baca, Jr., Fifth District
Luther Snoke, Chief Executive Officer

Full-Circle, Inc. 4831 Newton Rd Yucca Valley	CO0028683 8/10/2011 Complaint stating an unknown amount of machine coolant released from several machines.

SITE REMEDIATION: (Underground Storage Tank Clean-Up under Local Oversight Program or Voluntary Hazardous Waste Clean-Up activity under Local Jurisdiction) (documents may be included in regular active or inactive permit files listed above).

No record of site remediation identified in this search.

Records searched include permit database systems for facilities with permits as hazardous waste generators, hazardous materials handlers, and/or underground storage tanks, including inactive and/or out of business records; logs of permits issued for the removal and/or installation of underground storage tanks; records and databases pertaining to illicit dumping and releases; records of non-permitted facilities; sites undergoing remediation for contaminated soil and/or groundwater; and incidents responded to by the hazardous materials emergency response team. Records searched date back to the mid-1980's.

Records consist of 1 PDF file(s). You may contact us at hazmatrecords@sbcfire.org to request and schedule a file review appointment to view any site plans, maps, and/or blueprints that may have been redacted.

powered by Graphus®

Good morning, Gabriel,

The Colorado River Basin Regional Water Quality Control Board received your request for records pertaining to the property located in Yucca Valley, APN: 0597-111-67-0000.

Our PRA request process has not changed and requests can be sent to our PRA Email address, WB-R7-PRA@waterboards.ca.gov. The PRA Coordinator was out of the office, which delayed the response date of October 18, 2024. We apologize for the inconvenience.

staff have reviewed the databases available using APN 0597-111-67-0000; it was determined we do not have responsive records for this site.

As this property is currently an empty lot, providing a physical address or previous company name that may have occupied the lot will assist in a more complete search for records.

This completes the Colorado River Basin Water Board's research of records for this request.
If you have any questions, please contact me using the information below, referring to public records request, PRA241005.

Thank you,

CALIFORNIA WATER BOARDS Colorado River Basin - R7

ATTENTION: GABRIEL HARO

SUBJECT: CERTIFIED RECORD SEARCH FINDINGS
APN #S: 0597-111-67-0000 AND 0597-111-61-0000
(4815 AND 4831 NEWTON LANE/ROAD, YUCCA VALLEY, CALIFORNIA)

This is to confirm that the San Bernardino County Hazardous Materials Section has identified records that may pertain to the subject site, as described in your request for records search.

ACTIVE PERMIT FACILITIES: (Regulatory files for facilities with annual operating permits to maintain underground storage tanks, handle hazardous materials, and/or generate hazardous waste. Files include permits, inspections, reports, test results, correspondence, and related materials. Files will also include any underground tank removal/construction activity records and site remediation/contamination records for facilities still in operation).

Full-Circle, Inc. 4831 Newton Rd Yucca Valley	FA0009441 ~ CERS ID: 10049953 Small Quantity Generator Permit Hazardous Materials 4-10 Chemicals Handler Permit (Last CERS Submission: 8/22/2024)

INACTIVE PERMIT AND/OR NON-PERMIT FACILITIES: (Inactive regulatory files for formerly permitted facilities that maintained underground storage tanks, stored hazardous materials, and/or generated hazardous waste and/or facilities with underground storage tanks removed and/or materials and waste removed. Files will also include any underground tank removal/construction activity records and site remediation/contamination records for facilities no longer operating underground tanks).

No record of inactive permit and/or non-permit facilities identified in this search.

PERMITS TO REMOVE/INSTALL/MODIFY UNDERGROUND STORAGE TANKS:

No record of permits to remove/install/modify underground storage tanks identified in this search.

HAZARDOUS MATERIAL INCIDENT AND/OR COMPLAINT RESPONSE ACTIVITY: (other records of spill notifications and/or complaints not listed below may also exist in facility permit files).

Full-Circle, Inc. 4831 Newton Rd Yucca Valley	CO0028764 8/10/2011 Complaint stating an unknown amount of machine coolant released from several machines.

BOARD OF DIRECTORS

Col. Paul Cook (Ret.), Vice Chairman, First District
Jesse Armendarez, Second District
Dawn Rowe, Chair, Third District
Curt Hagman, Fourth District
Joe Baca, Jr., Fifth District
Luther Snoke, Chief Executive Officer

Full-Circle, Inc. 4831 Newton Rd Yucca Valley	CO0028683 8/10/2011 Complaint stating an unknown amount of machine coolant released from several machines.

SITE REMEDIATION: (Underground Storage Tank Clean-Up under Local Oversight Program or Voluntary Hazardous Waste Clean-Up activity under Local Jurisdiction) (documents may be included in regular active or inactive permit files listed above).

No record of site remediation identified in this search.

Records searched include permit database systems for facilities with permits as hazardous waste generators, hazardous materials handlers, and/or underground storage tanks, including inactive and/or out of business records; logs of permits issued for the removal and/or installation of underground storage tanks; records and databases pertaining to illicit dumping and releases; records of non-permitted facilities; sites undergoing remediation for contaminated soil and/or groundwater; and incidents responded to by the hazardous materials emergency response team. Records searched date back to the mid-1980's.

Records consist of 1 PDF file(s). You may contact us at hazmatrecords@sbcfire.org to request and schedule a file review appointment to view any site plans, maps, and/or blueprints that may have been redacted.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**Yes**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**

Aboveground Petroleum Storage

Does your facility own or operate aboveground petroleum storage tanks or containers AND: * have a total aboveground petroleum storage capacity of 1,320 gallons or more, OR * have one or more petroleum tanks in an underground area?	**No**

Regulated Substances

Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

CUPA COMPLIANCE INSPECTION REPORT

NAME: **FULL-CIRCLE, INC.** FACILITY ID: **FA0009441**

ADDRESS: **4831 NEWTON RD** CERS ID: **10049953**

CITY: **YUCCA VALLEY** STATE: **CA** ZIP CODE: **92284** INSPECTION DATE: **8/13/2024**

Consent granted by:

[X] **Photograph** [X] **Inspect** **Name:** MANAGER **Title:** NATHAN HEINRICH

An inspection was conducted on 08/13/2024 to determine compliance with applicable hazardous materials and hazardous waste laws and regulations. Nathan Heinrich, Manager, was the escort during this inspection.

Full-Circle, Inc. manufactures hose-end fittings attached to the filler valve on propane delivery trucks that transfers liquid propane gas. This facility generates hazardous waste from equipment maintenance. Examples of hazardous waste being generated by this facility include used oil and waste coolant. No hazardous waste was observed on site at the time of inspection.

Inventory:
The hazardous materials inventory observed during the inspection was consistent with the inventory submitted in the California Environmental Reporting System (CERS) on 02/22/2024 except for the following:
- (4) 55-gallon drums of coolant

Document Review:
- CUPA Program permits are current; expiration date of 01/31/2025.
- EPA ID # CAL000212349 was active at the time of the inspection.
- The Hazardous Materials Business Plan was last updated via CERS on 02/22/2024. CERS ID # 10049953.
- HCI Environmental & Engineering Services is the hazardous waste hauler. Hazardous waste manifests were available for review at the time of inspection.
- This facility generates between 27 and 270 gallons of hazardous waste per month.
- Scrap Metal is recycled by SA Recycling.
- Uniforms and rags are serviced by Prudential Overall Supply.
- Hazardous materials employee training records were available for review at the time of inspection.

Complete and submit the Certificate of Compliance (CofC) provided along with all requested documentation, to this Hazardous Materials Section within 30 days of inspection.

Please contact Antoinette Saunchez at (909) 386–8401 or by e-mail at asaunchez@sbcfire.org with any questions regarding this report.

If you have any questions regarding CERS, please call the CERS Help Desk at (909) 386–8432.

Refer to Title 19 and Title 22 of the California Code of Regulations (CCR), Chapters 6.5, 6.67 and 6.95 of the California Health Safety Code (CHSC), and Division 3 of Title 2 of the San Bernardino County Code (SBCC). The following lines marked in the V column are violations that must be corrected.

CERTIFICATE OF COMPLIANCE

Return certification to inspector ANTOINETTE SAUNCHEZ within 30 days of inspection unless otherwise specified.

RESPONDENT: LAUREN DOUCETTE

VIOLATION(S) CITED ON: 8/13/2024

FACILITY NAME: **FULL-CIRCLE, INC.** FACILITY ID: **FA0009441**

SITE ADDRESS: **4831 NEWTON RD** CERS ID: **10049953**

CITY: **YUCCA VALLEY** STATE: **CA** ZIP CODE: **92284**

Summary of Violations:

IMPORTANT- Attach all requested documentation when returning this certification.

H209 CORRECTIVE ACTION: Update the required business plan information via CERS. CERS ID# 10049953.

W159 CORRECTIVE ACTION: Update the required business plan information via CERS. CERS ID# 10049953.

I certify under penalty of law that:

- Respondent has corrected violations specified in the above-entitled action.
- I have personally examined any documentation attached to this certification to establish that the violations have been corrected.
- Based on my examination of the attached documentation and inquiry of the individuals, who prepared or obtained them, I believe the information to be true, accurate and complete.
- I am authorized to file this certification on behalf of the Respondent.
- I am aware there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

CUPA COMPLIANCE INSPECTION REPORT

NAME: **FULL-CIRCLE, INC.** FACILITY ID: **FA0009441**

ADDRESS: **4831 NEWTON RD** CERS ID: **10049953**

CITY: **YUCCA VALLEY** STATE: **CA** ZIP CODE: **92284** INSPECTION DATE: **7/7/2021**

Consent granted by:

☒ **Photograph** ☒ **Inspect** **Name:** Nathan Hienrich **Title:** Lead

An inspection was conducted on 7/7/2021 to determine compliance with applicable hazardous materials and hazardous waste laws and regulations. Nathan Hienrich, Lead, was the escort during the inspection.

Full Circle Inc created machine fittings for propane trucks. Coolant, odorless mineral spirits, acetylene, and oxygen are used in the fitting process. Used oil is generated from the machines creating the fittings.

Inventory:

-Hazardous materials observed on site were consistent with the inventory submitted via the California Environmental Reporting System (CERS) from 3/8/2019.

Document Review

- CUPA permits were current; expiration date of 1/31/2022.
- EPA ID # CAL000212349 was active during the time of the inspection.
- The Hazardous Materials Business Plan was last updated via CERS on 3/30/2020 for the facility information and 3/8/2019 for the inventory and emergency response information.
- HCI Environmental & Engineering Services hauls the hazardous waste and manifests were available for review.
- Facility generates between 27 and 270 gallons of hazardous waste per month.
- Hazardous materials employee training records were available for review at the time of the inspection.

Complete and submit the Certificate of Compliance (CofC) provided along with all requested documentation, to the attention of Ana Villanueva within 30 days of inspection.

Please contact Ana Villanueva at (909)386-8401 or by email at avillanueva@sbcfire.org with any questions regarding this report.

If you have any questions regarding CERS, please call the CERS Help Desk at (909) 386-8432.

Refer to Title 19 and Title 22 of the California Code of Regulations (CCR), Chapters 6.5, 6.67 and 6.95 of the California Health Safety Code (CHSC), and Division 3 of Title 2 of the San Bernardino County Code (SBCC). The following lines marked in the V column are violations that must be corrected.

VIOLATION CODE	DESCRIPTION	SECTION		V
42	**HMRRP (HAZARDOUS MATERIALS HANDLER)**			
H201	Hazardous Material Handler Permit Current	SBCC	23.0602(a)	
H202	Hazardous Materials Business Plan Established and Implemented	CHSC	25507	
H203	Hazardous Materials Business Plan Submittal	CHSC	25505, 25508(a)(1)	
H204	Immediately Report Any Release or Threatened Release of a Hazardous Material		Multiple	
H205	Facility Access for Inspection Granted	CHSC	25511	
H206	**Business Plan Annual Review/Certification**	CHSC	25508.2	X
Violation	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the required due date.			
MINOR	OBSERVATION: At the time of the inspection, the last business plan certification by this facility was 3/30/2020 for the facility information and 3/8/2019 for the inventory and emergency response information.			
	CORRECTIVE ACTION: Certify the business plan via CERS. The CERS ID# 10049953.

CERTIFICATE OF COMPLIANCE

Return certification to inspector ANA VILLANUEVA within 30 days of inspection unless otherwise specified.

RESPONDENT: Nathan Hienrich

VIOLATION(S) CITED ON: 7/7/2021

FACILITY NAME: **FULL-CIRCLE, INC.** FACILITY ID: **FA0009441**

SITE ADDRESS: **4831 NEWTON RD** CERS ID: **10049953**

CITY: **YUCCA VALLEY** STATE: **CA** ZIP CODE: **92284**

Summary of Violations:

IMPORTANT- Attach all requested documentation when returning this certification.

H206 CORRECTIVE ACTION: Certify the business plan via CERS. The CERS ID# 10049953.

I certify under penalty of law that:

- Respondent has corrected violations specified in the above-entitled action.
- I have personally examined any documentation attached to this certification to establish that the violations have been corrected.
- Based on my examination of the attached documentation and inquiry of the individuals, who prepared or obtained them, I believe the information to be true, accurate and complete.
- I am authorized to file this certification on behalf of the Respondent.
- I am aware there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

CUPA COMPLIANCE INSPECTION REPORT

NAME: **FULL-CIRCLE, INC.** FACILITY ID: **FA0009441**

ADDRESS: **4831 NEWTON RD** CERS ID:**10049953**

CITY: **YUCCA VALLEY** STATE: **CA** ZIP CODE: **92284** INSPECTION DATE: **1/31/2018**

Consent granted by:
☒ **photograph** ☒ **inspect** **Name:** Nathan Heinrich **Title:** Assistant Lead

An inspection was conducted on January 31, 2018 to determine compliance with hazardous materials and hazardous waste laws and regulations. Nathan Heinrich, was the facility escort.

The facility is a machine shop and manufacturer of metal swivel connectors. The facility stores hazardous materials and generate hazardous waste as a result of routine operations.

INVENTORY:
The hazardous materials stored onsite were consistent with hazardous materials inventory submitted via CERS on 2/24/2017

DOCUMENTATION REVIEW:
- Hazardous materials handler permit was obtained and expires January 31, 2019.
- Hazardous waste generator permit is current and expires January 31, 2019.
- Business Plan was established and last updated February 24, 2017. CERS ID: 10049953.
- EPA ID Number was obtained. CAL000212349 was active.
- Hazardous waste disposal records and manifests were available for review.
- Hazardous waste was removed by HCI Environmental.
- Parts cleaner was serviced by Safety Kleen
- Weekly inspections of hazardous waste accumulation and storage areas were conducted.
- Employee training was provided.

Contact Jerry Nguyen at 909-386-8401 or JNguyen@sbcfire.org with questions regarding this inspection report.

Refer to the California Health Safety Code (CHSC), California Code of Regulations (CCR) and San Bernardino County Code (SBCC). The following lines marked in the V column are violations that must be corrected.

HAZARDOUS WASTE STORAGE AREA WEEKLY INSPECTION CHECKLIST

Inspector Name: Norman Baysinger Date: 1-2-15 Time: 8:40

Location of Inspection: B5 Total Number of Containers: 1

	YES	NO
1. Is the area free of debris and other materials?	☒	☐
2. Is the ground clean and dry?	☒	☐
3. Are container tops free of spillage?	☒	☐
4. Is the area free of spills or leaks?	☒	☐
5. Are all of the containers in good condition? (free of dents and corrosion, not bulging, or otherwise deteriorating?)	☒	☐
6. Are all containers properly closed?	☒	☐
7. Are containers labeled with hazardous waste labels?	☒	☐
8. Is the following information on the labels filled out?		
Generator name and address	☒	☐
Accumulation start date	☒	☐
Contents	☒	☐
Physical state	☒	☐
Hazardous properties	☒	☐
9. Is the information on the labels legible?	☒	☐
10. Have wastes been disposed of within the allowable accumulation time?	☒	☐
11. Are the containers compatible with their contents?	☒	☐
12. Are incompatible wastes stored separately?	☒	☐
13. Is there adequate aisle space?	☒	☐

Describe any observations for items checked 'NO'. _____

Corrective actions required. _____

* Inspections must be conducted on a weekly basis

* Maintain checklist as documentation of this requirement

* Inspection program must meet requirements of 22 CCR §66265.174

HAZARDOUS WASTE STORAGE AREA WEEKLY INSPECTION CHECKLIST

Inspector Name: Norman Baysinger Date: 12-26-14 Time: 7:30

Location of inspection: B5 Total Number of Containers: 1

	YES	NO
1. Is the area free of debris and other materials?	☑	☐
2. Is the ground clean and dry?	☑	☐
3. Are container tops free of spillage?	☑	☐
4. Is the area free of spills or leaks?	☑	☐
5. Are all of the containers in good condition? (free of dents and corrosion, not bulging, or otherwise deteriorating?)	☑	☐
6. Are all containers properly closed?	☑	☐
7. Are containers labeled with hazardous waste labels?	☑	☐
8. Is the following information on the labels filled out?		
Generator name and address	☑	☐
Accumulation start date	☑	☐
Contents	☑	☐
Physical state	☑	☐
Hazardous properties	☑	☐
9. Is the information on the labels legible?	☑	☐
10. Have wastes been disposed of within the allowable accumulation time?	☑	☐
11. Are the containers compatible with their contents?	☑	☐
12. Are incompatible wastes stored separately?	☑	☐
13. Is there adequate aisle space?	☑	☐

Describe any observations for items checked 'NO'. _____

Corrective actions required. _____

* Inspections must be conducted on a weekly basis

* Maintain checklist as documentation of this requirement

* Inspection program must meet requirements of 22 CCR §66265.174

Revised 10/12/2009

HAZARDOUS WASTE STORAGE AREA WEEKLY INSPECTION CHECKLIST

CUPA COMPLIANCE INSPECTION REPORT

NAME: **FULL-CIRCLE, INC.**		FACILITY ID: **FA0009441**
ADDRESS: **4831 NEWTON RD**		CERS ID:**10049953**
CITY: **YUCCA VALLEY**	STATE: **CA** ZIP CODE: **92284**	INSPECTION DATE: **12/19/2014**

Inspector was given permission to: [X] photograph [X] inspect

Inspection Narrative (v020000)

An inspection was conducted to determine compliance with hazardous materials and hazardous waste generator laws and regulations. Norman Baysinger, Lead was the escort during the inspection. Also present during the inspection was Nathan Hainrich, Facility Employee. Digital photos were taken at the time of the inspection.

This facility is a machine manufacturer of metal swivel connectors for liquids and liquefied gases. For a description of facility see 09/19/2011 inspection report.

Per operator and manifest record review, this facility generates around 50 gallons of hazardous waste per month. The facility permits will be updated so to reflect the small quantity generator permits.

HAZARDOUS MATERIALS INVENTORY:

The hazardous materials stored on site are consisted with hazardous materials inventory submitted via CERS on 08/03/2013.

DOCUMENTATION REVIEW:

-Permits are current; expiration date of 01/31/2015. Permits to be updated to reflect correct category.
-Hazardous waste is hauled by HCI Environmental & Engineering Services
-Hazardous waste was last hauled on 09/04/2014
-Manifest waste disposal records available for review
-Safety Kleen services the parts washer
-The EPA ID number, CAL000212349, is established and active
-Uniforms and rags are serviced by Prudential Uniform Service
-Employee training was conducted
-The scrap metal is hauled by Davis Exporters Inc

Once all of the above-mentioned violations have been corrected, sign and date the enclosed Certificate of Compliance and return the certificate with required documentation by mail to the address listed above to the attention of Yanet Melgarejo.

If you have any further questions, please contact me at ymelgarejo@sbcfire.org or (909) 386-8401. "If you have any questions regarding CERS, please call the CERS Help Line at (909) 386-8432."

The following lines marked in the V column are violations that must be corrected. Marked items in the N column require additional information to determine compliance.

VIOLATION CODE	DESCRIPTION	SECTION	V	N
42	**HMRRP (HAZARDOUS MATERIALS HANDLER)**			
0201	Failure to obtain a CUPA Hazardous Materials Handler permit.	23.0602(a)		
0202	Failure to establish a Business Plan.	CAL. HEALTH & SAFETY CODE 25507		
0203	Failure to submit a Business Plan.	CAL. HEALTH & SAFETY CODE 25508		
0204	Failure to immediately report any release or threatened release of a hazardous material.	CAL. HEALTH & SAFETY CODE 25510		
0205	Failure to allow a hazardous materials handler inspection.	CAL. HEALTH & SAFETY CODE 25511		
0206	Failure to update the Business Plan	CAL. HEALTH & SAFETY CODE 25508.2	X	
Violation:	At least once every 12 months, the owner/owner shall review and certify that the information in the statewide information management system has been verified and is complete, accurate and up to date.			
Correction:	Using the California Environmental Reporting System (CERS), electronically update the information submitted to the statewide information management system.			
Observation:	The business plan elements were last submitted via CERS on 08/06/2013.			
	Comply by date: **1/18/2015**			
0209	Failure to submit an amendment to the inventory form within 30 days of change.	CAL. HEALTH & SAFETY CODE 25508.1		
1231	Failure to submit a corrected Business Plan within 30 days after notification of deficiencies.	CAL. HEALTH & SAFETY CODE 25508		
1232	Failure to submit a Business Plan revision within 30 days of a substantial change in operation.	CAL. HEALTH & SAFETY CODE 25505(b)		

VIOLATION CODE	DESCRIPTION	SECTION	V	N
44	**HAZARDOUS WASTE GENERATOR**			
0101	Failure to obtain CUPA Haz Waste Generator Permit	S.B. COUNTY CODE 23.0602(b)(1)		
0102	Failure to allow access to facility for inspection	CAL. HEALTH & SAFETY CODE 25185		
0103	Failure to determine if waste is hazardous waste	CAL. CODE OF REGULATIONS 66262.11		
0104	Failure to obtain an EPA ID Number	CAL. CODE OF REGULATIONS 66262.12(a)		
0105	Failure to obtain Hazardous Waste treatment/storag	CAL. HEALTH & SAFETY CODE 25201(a)		
0106	Failure to operate and maintain facility to preven	CAL. CODE OF REGULATIONS 66265.31	X	
Violation:	Failure to operate and maintain facility to prevent release/fire			
Correction:				
Observation:	Facilities shall be maintained and operated to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste to air, soil, or surface water, which could threaten human health or the environment. Any container holding hazardous waste shall be sound and kept closed during storage and transfer unless adding or removing waste. Observed (2) 55 gallon drums of oily water waste with no lids. The violation was corrected at the time of inspection: operator transferred the oily water waste to a sound and closed drum at the time of the inspection. Comply by date: **1/18/2015** Complied on: **12/19/2014**			
0107	Failure to establish a Contingency Plan	CAL. CODE OF REGULATIONS 66265.51(a)		
0108	Unlawful management of recyclable materials	CAL. HEALTH & SAFETY CODE 25143.2		
0110	Failure to label hazardous waste containers	CAL. CODE OF REGULATIONS 66262.34(f)(3)	X	
Violation:	Failure to label hazardous waste containers			
Correction:				
Observation:	All containers and tanks used to store a hazardous waste must be labeled or marked with the words "hazardous waste;" Containers accumulating used oil must be labeled with the words "Used Oil," and include the following information: generator name and address, hazardous properties of the waste, composition and physical state of the waste, and the accumulation start date. Observed (3) 55 gallon drums of oily water waste with missing hazardous waste labels. The violation was corrected at the time of the inspection: operator added new hazardous waste labels with all the required information to all the hazardous waste drums at the time of the inspection. Comply by date: **1/18/2015** Complied on: **12/19/2014**			
0111	Hazardous waste containers labels not complete	CAL. CODE OF REGULATIONS 66262.34(f)(3)	X	
Violation:	Hazardous waste containers labels not complete			
Correction:				
Observation:	All containers and tanks used to store a hazardous waste must be labeled or marked with the words "hazardous waste;" Containers accumulating used oil must be labeled with the words "Used Oil," and include the following information: generator name and address, hazardous properties of the waste, composition and physical state of the waste, and the accumulation start date. Observed (1) 55 gallon drum of used oil with damaged and faded hazardous waste labels. The violation was corrected at the time of the inspection: operator added new hazardous waste labels with all the required information to all the hazardous waste drums at the time of the inspection. Comply by date: **1/18/2015** Complied on: **12/19/2014**			
0112	Failure to note accumulation start date on labels	CAL. CODE OF REGULATIONS 66262.34(f)(2)	X	
Violation:	Failure to note accumulation start date on labels			
Correction:	You shall mark the initial date accumulation begins on your hazardous waste container(s)			
Observation:	Observed (3) 55 gallon drums of oily water waste, and (1) 55 gallon drum of used oil with missing accumulation start dates. Per operator the accumulation start date of the used oil is 10/01/2014, and 12/01/2014 for the oily water waste. The violation was corrected at the time of the inspection: operator added new hazardous waste labels with all the required information and the accumulation start date to all the hazardous waste drums at the time of the inspection. Comply by date: **1/18/2015** Complied on: **12/26/2014**			
0113	Hazardous waste accumulation time exceeded	CAL. CODE OF REGULATIONS 66262.34(a)		
0114	Failure to store hazardous waste in sound conts	CAL. CODE OF REGULATIONS 66265.171		
0115	Hazardous Waste containers leaking	CAL. CODE OF REGULATIONS 66265.173(b)		
0116	Failure to keep hazardous waste containers closed	CAL. CODE OF REGULATIONS 66265.173(a)	X	
Violation:	Failure to keep hazardous waste containers closed			
Correction:	You shall keep all hazardous waste containers closed at all times during storage or transfer except when adding or removing waste			
Observation:	Facilities shall be maintained and operated to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste to air, soil, or surface water, which could threaten human health or the environment. Any container holding hazardous waste shall be sound and kept closed during storage and transfer unless adding or removing waste. Observed (2) 55 gallon drums of oily water waste with no lids. The violation was corrected at the time of inspection: operator transferred the oily water waste to a sound and closed drum at the time of the inspection. Comply by date: **1/18/2015** Complied on: **12/19/2014**			

0117	Unlawful management of contaminated co rs	CAL. CODE OF LATIONS 66261.7	X	
	Violation: Unlawful management of contaminated containers Correction: All containers which have held a hazardous material, including hazardous waste, shall be handled as hazardous waste unless: no material can be poured from it; All empty containers larger than 5 gallons that previously held a hazardous material must be mar Observation: Containers, or inner liners removed from a container, that previously held a hazardous material or a hazardous waste are considered contaminated containers and shall be managed properly. Empty contaminated containers larger than 5 gallons must be marked with the word "Empty", the date that the container became empty and must be removed from the site within one year of that date. Observed (10) empty 55 gallon drums that previously held hazardous materials or hazardous waste. Per operator the oldest empty drum has been on site for less than 11 months. The violation was corrected at the time of inspection: operator marked all the drums with the word "Empty", and the dates that the drums became empty. Comply by date: **1/18/2015** Complied on: **12/19/2014**			
0118	Failure to inspect Hazardous Waste container stora	CAL. CODE OF REGULATIONS 66265.174	X	
	Violation: Failure to inspect Hazardous Waste container storage area weekly Correction: You shall inspect areas used for container storage or transfer at least weekly, looking for leaks and for deterioration. Submit copies of three weeks of inspection records. A sample weekly inspection checklist is available from this Department Observation: Hazardous waste storage areas and containers must be inspected weekly for leaking containers, proper labeling, debris, spillage, closed containers, compatible containers, and adequate aisle space. Hazardous waste storage area weekly inspections are not conducted. Corrective Text: Conduct Hazardous Waste Weekly Inspections. Submit three consecutive weeks of completed Weekly Hazardous Waste Storage Area Inspection Checklists. Comply by date: **1/18/2015**

Certified Mail Provides:

- A mailing receipt
- A unique identifier for your mailpiece
- A record of delivery kept by the Postal Service for two years

Important Reminders:

- Certified Mail may ONLY be combined with First-Class Mail® or Priority Mail®.
- Certified Mail is *not* available for any class of international mail.
- NO INSURANCE COVERAGE IS PROVIDED with Certified Mail. For valuables, please consider Insured or Registered Mail.
- For an additional fee, a *Return Receipt* may be requested to provide proof of delivery. To obtain Return Receipt service, please complete and attach a Return Receipt (PS Form 3811) to the article and add applicable postage to cover the fee. Endorse mailpiece "Return Receipt Requested". To receive a fee waiver for a duplicate return receipt, a USPS® postmark on your Certified Mail receipt is required.
- For an additional fee, delivery may be restricted to the addressee or addressee's authorized agent. Advise the clerk or mark the mailpiece with the endorsement *"Restricted Delivery"*.
- If a postmark on the Certified Mail receipt is desired, please present the article at the post office for postmarking. If a postmark on the Certified Mail receipt is not needed, detach and affix label with postage and mail.

IMPORTANT: Save this receipt and present it when making an inquiry.

INSPECTION NARRATIVE

An inspection was conducted on 9.14.2011 to determine compliance with applicable hazardous materials and hazardous waste laws and regulations, and to follow up on an anonymous complaint alleging that the facility released machine fluids onto the ground. Mr. Norman Baysinger – Lead, was the inspection escort. Photographs were not taken during the inspection. Photographs may be taken with the approval of the corporate office. A photograph of the front of the facility was taken from the public road.

This facility manufactures swivel connectors (machined metal parts) for liquids and liquefied gases. Various lubricating and coolant fluids associated with the machining process are used. Rust inhibiting solution and carbon dioxide gas is used for the parts testing process. Hazardous waste is generated from the machining process and parts testing. A 499-Gal propane tanks is also located on site.

☒ NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

SUPPLEMENTAL INSPECTION REPORT

INSPECTION DATE:	9.14.2011

FACILITY ID	FACILITY NAME:	FACILITY LOCATION:
9441	FULL – CIRCLE, INC.	4831 NEWTON RD., YUCCA VALLEY
Consent Granted by: X Inspect Photograph	NAME: MR. NORMAN BAYSINGER	TITLE: LEAD

Inventory:

(1) ~20-Gal parts washer/solvent
(2) 55-Gal drum of hydraulic fluid
(1) 55-Gal drum of Simple Green cleaner
(2) 55-Gal drum of lapping oil
(1) 499-Gal propane tank
(1) 500-Gal used oil container
(10) ~200-FT^3 cylinders of CO_2.
(1) Parts washer/mineral spirits
(1) ~200-FT^3 cylinder of oxygen
(1) 55-Gal drum of way oil
(1) 55-Gal drum of mineral spirits
(1) 55-Gal drum of Trim Sol coolant
(5) Machines, each containing hydraulic and cooling fluids

Document Review:

The CUPA permits are current. The most recent Business Plan on file is dated 2005. Hazardous waste disposal records were available. Recycle It Environmental Services is the hazardous waste hauler. The parts washer is serviced by Safety-Kleen. EPA ID number CAL000212349 is in active status and is being used for hazardous waste tracking. MSDS' were available at time of inspection. Employee safety training is provided. Universal waste management requirements were discussed.

Correct the following violations within 30 days of receipt of this report:

203. Failure to update the Business Plan – California Health and Safety Code (CHSC) 25505. A Business Plan update or recertification is required annually by March 1. A full plan update is required every 3 years. This facility has not submitted an update since 2005. A full plan update is required at this time.

Compliance Requirement: Submit the original AND one copy of the Business Emergency/Contingency Plan to this Division within 30 days of receipt of this report.

☒ NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

SUPPLEMENTAL INSPECTION REPORT

INSPECTION DATE: 9.14.2011		
FACILITY ID 9441	FACILITY NAME: FULL – CIRCLE, INC.	FACILITY LOCATION: 4831 NEWTON RD., YUCCA VALLEY
Consent Granted by: XInspect Photograph	NAME MR. NORMAN BAYSINGER	TITLE LEAD

136. Failure to maintain used oil uncontaminated with hazardous waste – CHSC 25250.7. Waste must be properly managed and not be contaminated with other hazardous waste. The operator stated that rust inhibiting liquid waste associated with the parts testing dip tank is disposed of as hazardous waste by pouring in the waste oil tank.

Compliance Requirement: Hazardous waste streams must be stored, managed and disposed of separately. Submit a signed statement indicating that dip tank hazardous waste will not be mixed with used oil, it will be tracked separately and properly managed through a hazardous waste hauler.

Comments:

The operator stated that a release of machine fluids has not occurred. However, a stain was observed in the driveway near the north side of the facility. The stain continued onto a small area of dirt. The operator stated this area is used for rinsing the mop buckets and the stain is caused by rusting of residual metal chips. Operator was advised to maintain all areas of the facility clean. Some facilities containerize and manage mop water through a hazardous waste hauler/disposal facility. Runoff onto dirt from mop bucket rinsing activities may have storm water runoff/NPDES consequences. Contact your storm water regulatory agency for additional details and compliance requirements.

Submit the completed Certificate of Compliance (CofC) provided, to this Division within 30 days of receipt of this report.

Contact Gheorghe Man if necessary at gman@sbcfire.org or 909.386.8401 regarding this report.

☒ NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

PRELIMINARY FIELD INSPECTION REPORT

INSPECTION DATE: 9.14.2011

FACILITY ID	FACILITY NAME:	FACILITY LOCATION:
9441	FULL-CIRCLE, INC.	4831 NEWTON RD, YUCCA VALLEY
Consent Granted by: ☑ Inspect ☐ Photograph	NAME NORMAN BAYSINGER	TITLE MANAGER

The following is a preliminary list of violations observed at the time of inspection. The final report may list additional violations. Violations must be corrected within 30 days of receipt of the final report unless otherwise specified below.

AN INSPECTION WAS CONDUCTED ON 9.14.2011 TO DETERMINE COMPLIANCE WITH HAZARDOUS MATERIALS AND HAZARDOUS WASTE LAWS AND REGULATIONS.

NO PHOTOGRAPHS WERE TAKEN EXCEPT FOR FRONT OF FACILITY FROM PUBLIC ROAD.

CORRECT THE FOLLOWING VIOLATION WITHIN 30 DAYS OF RECEIPT OF FINAL REPORT:

① FAILURE TO UPDATE BUSINESS EMERGENCY/CONTINGENCY PLAN - CHSC 25505. THE MOST RECENT BUSINESS PLAN ON FILE IS DATED 2005. THE BUSINESS PLAN MUST BE UPDATED AS REQUIRED AND/OR RECERTIFIED ANNUALLY BY MARCH 1.
*COMPLIANCE REQUIREMENT: SUBMIT A FULL BUSINESS PLAN TO THIS DEPT. WITHIN 30 DAYS OF RECEIPT OF FINAL REPORT.

A FINAL REPORT WILL BE PROVIDED WITHIN 65 DAYS. THE FINAL REPORT MAY CONTAIN ADDITIONAL VIOLATIONS.

CONTACT GEORGE MAN IF NECESSARY @ 9093868401 REGARDING THIS REPORT.

GENERATOR AND HANDLER INSPECTION REPORT

Facility Name: Full Circle | Inspection Date: 16 Dec. '04

Street Address: 4831 Newton Road | Facility ID No: new 9441

City: Yucca Valley, CA | Zip Code: 92284 | EPA ID No: CAL000212349

Facility Contact: Don Allen Chuck Joslin | Phone: 760 369-1234 | # of Employees: 10 | Packet left on site? (Yes)/No

Refer to Title 19 and Title 22 of the California Code of Regulations (CCR), Chapter 6.5 and 6.95 of the California Health and Safety Code (CHSC) and Division 3 of Title 2 of the San Bernardino County Code (CC)

THE FOLLOWING SECTIONS ARE IN VIOLATION IF THEY ARE CHECKED

General Requirements:

☑ (101)/(201) Hazardous Waste and/or Materials Permits not current. (CC 23.0602(a)) paid 2/15/05
Compliance requirement: Submit fees within 30 days of billing.

☐ 104. EPA ID Number not obtained for waste generation. (CCR 66262.12(a))
Compliance Requirement: Obtain permanent EPA ID Number by submitting Form 1358 to DTSC. Submit your EPA ID Number to this Division.

☐ 106. Facility not operated to prevent a spill or release. (CCR 66265.31)
Compliance Requirement: Facility must conduct housekeeping and operate to prevent all spills. Signature on certification denotes compliance.

☑ (107) A Contingency Plan has not been established. (CCR 66265.51(a)) 1/10/05

☑ (202) A Business Plan has not been established. (CHSC 25503.5)

☑ (203) A Business Plan has not been submitted / updated. (CHSC 25505)

INVENTORY: 1 282 cuft cylinder oxygen
One 116 cuft. cylinder acetylene
Eight 250 cuft. cylinders CO_2
2 55 gal drums lapping oil (vegtable)
1 55 gal drum trimsol. 5 55 gal drums lub oil.

Compliance Requirement: Submit the original and one copy of the Business Emergency/Contingency Plan to this Division. NOTE: You must keep a current copy of your Business Emergency/Contingency Plan onsite and available at all times.

☐ 131. Training documentation not complete or available. (CCR 66262.34(d)(2))
Compliance Requirement: Submit training documentation as required.

Container Storage and Labeling Requirements:

OK ☑ (110) Hazardous waste containers are not labeled. (CCR 66262.34(f)(3)) Corrected during inspection

OK ☑ (111) Hazardous waste label is incomplete. (CCR 66262.34(f)(3))

OK ☑ (112) Accumulation start date is missing from label. (CCR 66262.34(f)(2))
Compliance Requirement: Hazardous waste label is to be applied to the container. All fields and lines are to be correctly completed.

☑ (113) Accumulation time exceeded. (CCR 66262.34)
Compliance Requirement: Dispose of waste using a licensed waste hauler within 30 days. Submit copies of disposal documents to this Division.

☐ 114. Hazardous waste container not sound. (CCR 66265.171)

☐ 115. Hazardous waste container leaking. (CCR 66265.173(b))

☐ 116. Hazardous waste container open when not in use. (CCR 66265.173(a))
Compliance Requirement: Waste containers must be sound, not leaking and closed when not in use.

Waste Management:

Waste oil picked up 5/16/04 by Golden West - 250 gal.

☐ 119. Hazardous waste managed unlawfully. (CHSC 25154)
Compliance Requirement: Hazardous waste containers and aboveground tanks must be labeled, closed, and inspected (weekly or daily, as appropriate). Waste is to be removed by a licensed waste hauler within the allowed time periods.

☐ 127. Failure to retain **manifested** waste disposal records for 3 years. (CCR 66262.40(a))

☐ 137. Failure to retain **consolidated** waste disposal records for 3 years. (CHSC 25160.2(b)(3))
Compliance Requirement: Submit copies of waste disposal records for the past

☐ 138. Unlawful management of used oil filters. (CCR 66266.130)
Compliance Requirement: Label all used oil filter containers with "DRAINED USED OIL FILTERS" and the accumulation start date.

Comments: Machine shop that manufactures swivel connectors for propane + oil trucks.

Inspector: Glen T. Fleming Received by: Chuck Joslin Title: PM I

Sign and submit the yellow copy of ~~this form~~ within 30 days with the required documents listed in each "Compliance requirement" section.

PERMIT CONDITIONS

As a condition of the permit to operate, the owner, operator, and permit holder shall comply with the following:

a. **Hazardous Materials Release Response Plans and Inventories Program (HMRRP):** California Health and Safety Code (CHSC) Division 20, Chapter 6.95, Article 1 and Title 19 California Code of Regulations (CCR).

b. **California Accidental Release Prevention Program (CalARP):** CHSC Division 20, Chapter 6.95, Article 2 and Title 19 CCR.

c. **Underground Storage Tanks (USTs):** CHSC Division 20, Chapters 6.5, 6.7, 6.75, and Title 23 CCR, Chapters 16 & 18.

   (1) Monitoring, Response and Plot Plans shall be approved by the San Bernardino County CUPA.

   (2) The owner and operator are subject to all applicable requirements of Chapter 6.7 and 6.75 of the CHSC and the applicable regulations.

   (3) This permit and permit conditions including the Monitoring, Response and Plot Plans shall be maintained on site.

   (4) Monitoring or programming for monitoring shall be conducted at the locations of the following UST equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas (e.g. double-walled piping); mechanical or electronic line leak detectors; and in-tank liquid level probes used for leak detection.
   Note: The UST ID Number is listed on the front of the permit for each UST.

d. **Aboveground Petroleum Storage Act SPCC Plans:** CHSC Division 20, Chapter 6.67 and 40 CFR 112.

e. **Hazardous Waste Generator and Hazardous Waste Onsite Treatment:** CHSC Division 20, Chapter 6.5 and Title 22 CCR, Division 4.5, Chapters 10, 11, 12, 20 and 31.

f. **Uniform Fire Code, Hazardous Materials Management Plans and Inventories:** CHSC Division 12, Part 2, Chapter 1, Article 2, Section 13143.9, CHSC Division 20, Chapter 6.95, Article 1, Section 25509.2, California Fire Code Chapter 27, Section 2701.5.1 and Section 2701.5.2, formerly referred to as UFC Section 80.103.

g. **Unified Program Forms and Electronic Reporting:** CHSC Division 20, Chapter 6.11, Section 25404(e)(4) and Title 27 CCR.

EMERGENCY RESPONSE PLANS & PROCEDURES – AGENCY NOTIFICATION

BUSINESS NAME (Same as FACILITY NAME or DBA) Full-Circle 3

POST BY TELEPHONE

Agency Notification: **If a situation is an emergency, call 911 first.** Additionally, a handler of hazardous materials is required to immediately report any release or threatened release of a hazardous material to San Bernardino County Fire Department, Hazardous Materials Division and the Governor's Office of Emergency Services. Spills exceeding Federal reportable quantities require additional notification to the National Response Center. However, California statute does not limit the requirement to report to any specific quantity. **Also note that calling 911 does not meet the requirement for the handler to report a release and that the local fire department cannot make required notifications on behalf of the handler.** This CUPA requires a written report within 15 days after any reportable release or threatened release. Contact the CUPA for further guidance.

Agency (* Indicates mandatory notification)	Phone Number
1. *Local Emergency Response Agency (if an emergency)	**911**
2. *San Bernardino County Fire Department Hazardous Materials Division	**(800) 33-TOXIC** or **(909) 386-8425**
*Note: (800) 33-TOXIC does not work nationwide; non-local callers must use (909) 386-8425 to report **any** release or threatened release.*	
3. *Cal E·M·A (Formerly known as OES)	**(800) 852-7550** or **(916) 845-8911**
4. National Response Center	**(800) 424-8802**
5. Other Agencies *(Cal OSHA, Regional Board, Air Quality, as applicable)*	

Agency Name	*Phone Number*
Agency Name	*Phone Number*
Agency Name	*Phone Number*

EMERGENCY INFORMATION REQUIRED: BE PREPARED TO PROVIDE THE FOLLOWING INFORMATION

- Name & phone number of person reporting
- Name and street address of the business
- Location of the incident or threatened release
- Type of incident or threatened release
- Hazardous materials involved & physical state
- Hazards to human health and/or environment
- Actions taken or planned
- Contractor or cleanup company name
- Estimate of the quantity released
- Media (soil, water, air) into which release occurred
- Precautions to take (if known)
- Time and duration of the release
- Is the chemical an extremely hazardous substance?
- Extent of injuries, if any
- Is any assistance required?

Release reporting citations (California Health and Safety Code):

§ 25501. Definitions:
(r) "Release" means any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment, unless permitted or authorized by a regulatory agency.
(u) "Threatened release," means a condition creating a substantial probability of harm, when the probability and potential extent of harm make it reasonably necessary to take immediate action to prevent, reduce, or mitigate damages to persons, property, or the environment.

§ 25507(a) ... the handler or any employee, authorized representative, agent, or designee of a handler shall, upon discovery, immediately report any release or threatened release of a hazardous material to the administering agency, and to the office, in accordance with the regulations adopted pursuant to Section 25503. Each handler and any employee, authorized representative, agent, or designee of a handler shall provide all state, city, or county fire or public health or safety personnel and emergency rescue personnel with access to the handler's facilities.

See Appendix G for further citations and explanation.

EMERGENCY RESPONSE PLANS AND PROCEDURES

BUSINESS NAME (Same as FACILITY NAME or DBA)
Full-Circle

State Law requires your business to complete all sections of the Emergency Response Procedure listed below:
For each of the following, **briefly** describe your business's standard operating procedures relating to the release or threatened release of hazardous materials located at your facility. You may attach additional pages if necessary, but do not include copies of facility manuals unless requested to do so by this Department. You may reference manuals that are used by your facility for these procedures, but you must still give a brief description here.

EVACUATION/NOTIFICATION: Indicate location(s) where employees, customers, visitors or others on site are to evacuate in an emergency. Describe how your business will immediately notify people and evacuate the facility in the event of a release or threatened release of hazardous materials. Include the route and meeting place.

In case of an emergency all employees, customers, visitors or other personnel in the building will be told to evacuate and will meet in the evacuation staging area in front of the building by Newton Road.

PREVENTION/MITIGATION/ABATEMENT: Describe what policies and procedures your business will follow to prevent, reduce and/or remove the hazard to persons, property or the environment caused by a release or threatened release of hazardous materials and/or hazardous wastes. (√ Check those items that apply and write additional information in the space provided).

- [x] Reduction of containers on site if not used or needed
- [x] Containers are properly labeled and closed when not in use
- [x] Compressed gas cylinders are properly secured
- [ ] Use of monitoring system Type: _____
- [ ] Other:

EMERGENCY RESPONSE PLANS AND PROCEDURES

BUSINESS NAME (Same as FACILITY NAME or DBA) Full-Circle

FACILITY TRAINING PLAN: Describe employee and operator training including local emergency response coordination, use of facility emergency equipment, and provisions for initial and refresher training. In addition, describe training for hazardous materials/waste handling as required by OSHA. (√ Check those items that apply and write additional information in the space provided)

- [x] New employee training
- [x] Annual training & periodic refresher courses
- [x] Familiarization with the Emergency Response Plans and Procedures of this Business Plan
- [x] Spill control equipment
- [ ] Monitoring system
- [ ] Personal Protective Equipment
- [ ] On the job training (Described below)
- [ ] Other:

EMERGENCY PROCEDURES: Describe duties of the Emergency Coordinator and how implementation of Facility Emergency Response will be accomplished. (e.g. Notification, evacuation, emergency coordination) (√ Check those items that apply and write additional information in the space provided)

Emergency Coordinator will:

- [x] Identify potential hazards and determine whether a release has occurred
- [x] Activate local emergency systems (e.g. manual shutoff devices) and take appropriate immediate actions based on level of training and the ability to act safely
- [x] Coordinate the notification and evacuation of employees, customers, and other visitors from the facility
- [x] Make required agency notifications and request needed assistance
- [x] Assist responding agencies by providing access to the facility and information about the facility
- [ ] Other:

Date: 9-28-11

FACILITY EARTHQUAKE RESPONSE: Identify areas of the facility as well as mechanical or other systems that require immediate inspection due to their vulnerability to earthquake related ground motion. (e.g. Hazardous materials or waste storage locations, vessels, piping, pipe and tank supports, valves, gauges, etc.) (√ Check those items that apply and write additional information in the space provided)

- ☒ Chemical Storage Locations – Product and Waste
- ☐ Process vessels
- ☒ Aboveground storage tanks
- ☐ Emergency shut-off systems
- ☐ Piping and pipe supports
- ☒ Utility connections
- ☐ _____
- ☐ _____
- ☐ _____
- ☐ _____

ARRANGEMENTS/AGREEMENTS: Describe any arrangements or agreements that you have with private emergency response teams, waste haulers, disposal companies, recyclers, local hospitals, police and/or fire. If you have no arrangements or agreements, state that fact in the space provided. (√ Check those items that apply and write additional information in the space provided)

INVENTORY SUMMARY FORM

I. FACILITY IDENTIFICATION

FACILITY ID # F A 9 4 4 1 — 1 (This number is on your CUPA permit.)

BUSINESS NAME (Same as FACILITY NAME or DBA) — 3

Full-Circle

Item #	Name of Hazardous Material or Waste	Maximum Quantity	Size of Largest Container	Unit of Measure
3.	*Lubricating Oil (Example Only)*	*555*	*500*	*Gallon*
1	Waste-Water Soluble oil (coolant)	480	480	gal.
2	Waste-Oils	110	55	gal.
3	Mineral Spirits Odorless	110	55	gal.
4	Oil-base lapping vehicle	110	55	gal.
5	Mobil-Vactra Oil No. 2	110	55	gal.
6	Mobil-DTE 24	110	55	gal.
7	Simple Green Industrial cleaner/degreaser	110	55	gal.
8	Trimsol (coolant)	110	55	gal.
9	Oxygen (O_2)	250	250	$ft.^3$
10	Carbon Dioxide (CO_2)	500	50	Lbs.
11	Acetylene	145	145	$ft.^3$
12	Propane	500	500	gal.

Summarize the Business Plan inventory on this page. Place this summary in front of the inventory section of the Business Plan. Make copies of this sheet as necessary. Reminder: You need not report hazardous materials with a maximum quantity of less than 55 gallons, 500 pounds, 200 cubic feet, or the threshold planning quantity of an extremely hazardous substance. However, hazardous wastes, Category 1 and 2 pesticides, and explosives are reportable at any quantity.

III. SIGNATURE- EPCRA Facilities MUST sign the bottom of each individual attached inventory form.

SIGNATURE OF OWNER/OPERATOR	NAME OF SIGNER (*print*) 136	DATE 134

005 01/07/03 MINERAL SPIRITS ODORLESS

****
PRODUCT IDENTIFICATION
****

PRODUCT NAME: MINERAL SPIRITS ODORLESS

MSDS#: EX849691

DATE ISSUED: 10/18/2002

SUPERSEDES: 2/20/2002

ISSUED BY: 008505

MATERIAL SAFETY DATA SHEET

SECTION 1 CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: MINERAL SPIRITS ODORLESS

CHEMICAL NAME:
SYNTHETIC ISOPARAFFINIC HYDROCARBON 64742-48-9

CHEMICAL FAMILY:
ALIPHATIC HYDROCARBON

PRODUCT DESCRIPTION:
CLEAR COLORLESS LIQUID.

DISTRIBUTED BY:
Univar USA Inc.
6100 Carillon Point
Kirkland, WA 98033
425-889-3400

EMERGENCY TELEPHONE NUMBERS: (24 hrs)
CHEMTREC 800-424-9300

SECTION 2 COMPOSITION/INFORMATION ON INGREDIENTS

THIS PRODUCT IS HAZARDOUS AS DEFINED IN 29 CFR1910.1200.
OSHA HAZARD
COMBUSTIBLE

SECTION 3 HAZARDS IDENTIFICATION

POTENTIAL HEALTH EFFECTS
EYE CONTACT:
SLIGHTLY IRRITATING BUT DOES NOT INJURE EYE TISSUE.
SKIN CONTACT:
FREQUENT OR PROLONGED CONTACT MAY IRRITATE AND CAUSE DERMATITIS.
LOW ORDER OF TOXICITY.
SKIN CONTACT MAY AGGRAVATE AN EXISTING DERMATITIS CONDITION.
INHALATION:
HIGH VAPOR/AEROSOL CONCENTRATIONS (GREATER THAN APPROXIMATELY 1000 PPM) ARE IRRITATING TO THE EYES AND THE RESPIRATORY TRACT, MAY CAUSE HEADACHES, DIZZINESS, ANESTHESIA, DROWSINESS, UNCONSCIOUSNESS, AND OTHER CENTRAL NERVOUS SYSTEM EFFECTS, INCLUDING DEATH.
INGESTION:
SMALL AMOUNTS OF THIS PRODUCT ASPIRATED INTO THE RESPIRATORY SYSTEM DURING

INGESTION OR VOMITING MAY CAUSE MILD TO SEVERE PULMONARY INJURY, POSSIBLY PROGRESSING TO DEATH.
MINIMAL TOXICITY.

SECTION 4 FIRST AID MEASURES

EYE CONTACT:
FLUSH EYES WITH LARGE AMOUNTS OF WATER UNTIL IRRITATION SUBSIDES. IF IRRITATION PERSISTS, GET MEDICAL ATTENTION.
SKIN CONTACT:
FLUSH WITH LARGE AMOUNTS OF WATER; USE SOAP IF AVAILABLE.
REMOVE GROSSLY CONTAMINATED CLOTHING, INCLUDING SHOES, AND LAUNDER BEFORE REUSE.
INHALATION:
USING PROPER RESPIRATORY PROTECTION, IMMEDIATELY REMOVE THE AFFECTED VICTIM FROM EXPOSURE. ADMINISTER ARTIFICIAL RESPIRATION IF BREATHING IS STOPPED. KEEP AT REST. CALL FOR PROMPT MEDICAL ATTENTION.
INGESTION:
IF SWALLOWED, DO NOT INDUCE VOMITING. KEEP AT REST. GET PROMPT MEDICAL ATTENTION.

SECTION 5 FIRE-FIGHTING MEASURES

FLASH POINT: 120 DEG F.
FLAMMABLE LIMITS: LEL: 1.3 UEL: 9.8 @ 77 DEG F. NOTE: APPROXIMA
AUTOIGNITION TEMPERATURE: 660 DEG F. NOTE: APPROXIMATE
GENERAL HAZARD
COMBUSTIBLE LIQUID, CAN FORM COMBUSTIBLE MIXTURES AT TEMPERATURES AT OR ABOVE THE FLASHPOINT.
STATIC DISCHARGE, MATERIAL CAN ACCUMULATE STATIC CHARGES WHICH CAN CAUSE AN INCENDIARY ELECTRICAL DISCHARGE .
"EMPTY" CONTAINERS RETAIN PRODUCT RESIDUE (LIQUID AND/OR VAPOR) AND CAN BE DANGEROUS. DO NOT PRESSURIZE, CUT, WELD, BRAZE, SOLDER, DRILL, GRIND, OR EXPOSE SUCH CONTAINERS TO HEAT, FLAME, SPARKS, STATIC ELECTRICITY, OR OTHER SOURCES OF IGNITION; THEY MAY EXPLODE AND CAUSE INJURY OR DEATH. EMPTY DRUMS SHOULD BE COMPLETELY DRAINED, PROPERLY BUNGED AND PROMPTLY RETURNED TO A DRUM RECONDITIONER, OR PROPERLY DISPOSED OF.

FIRE FIGHTING
USE WATER SPRAY TO COOL FIRE EXPOSED SURFACES AND TO PROTECT PERSONNEL.
ISOLATE "FUEL" SUPPLY FROM FIRE.
USE FOAM, DRY CHEMICAL, OR WATER SPRAY TO EXTINGUISH FIRE.
AVOID SPRAYING WATER DIRECTLY INTO STORAGE CONTAINERS DUE TO DANGER OF BOILOVER.
THIS LIQUID IS VOLATILE AND GIVES OFF INVISIBLE VAPORS. EITHER THE LIQUID OR VAPOR MAY SETTLE IN LOW AREAS OR TRAVEL SOME DISTANCE ALONG THE GROUND OR SURFACE TO IGNITION SOURCES WHERE THEY MAY IGNITE OR EXPLODE.

DECOMPOSITION PRODUCTS UNDER FIRE CONDITIONS

SECTION 6 ACCIDENTAL RELEASE MEASURES

LAND SPILL
ELIMINATE SOURCES OF IGNITION. PREVENT ADDITIONAL DISCHARGE OF MATERIAL, IF POSSIBLE TO DO SO WITHOUT HAZARD. FOR SMALL SPILLS IMPLEMENT CLEANUP PROCEDURES; FOR LARGE SPILLS IMPLEMENT CLEANUP PROCEDURES AND, IF IN PUBLIC AREA, KEEP PUBLIC AWAY AND ADVISE AUTHORITIES. ALSO, IF THIS PRODUCT IS SUBJECT TO CERCLA REPORTING (SEE SECTION 15 REGULATORY INFORMATION) NOTIFY THE NATIONAL RESPONSE CENTER.
PREVENT LIQUID FROM ENTERING SEWERS, WATERCOURSES, OR LOW AREAS. CONTAIN SPILLED LIQUID WITH SAND OR EARTH. DO NOT USE COMBUSTIBLE MATERIALS SUCH AS SAWDUST.
RECOVER BY PUMPING (USE AN EXPLOSION PROOF OR HAND PUMP) OR WITH A

SUITABLE ABSORBENT.
CONSULT AN EXPERT ON DISPOSAL OF RECOVERED MATERIAL AND ENSURE CONFORMITY TO LOCAL DISPOSAL REGULATIONS.

WATER SPILL
ELIMINATE SOURCES OF IGNITION. WARN OCCUPANTS AND SHIPPING IN SURROUNDING AND DOWNWIND AREAS OF FIRE AND EXPLOSION HAZARD AND REQUEST ALL TO STAY CLEAR.
REMOVE FROM SURFACE WITH SUITABLE ADSORBENTS. IF ALLOWED BY LOCAL AUTHORITIES AND ENVIRONMENTAL AGENCIES, SINKING AND/OR SUITABLE DISPERSANTS MAY BE USED IN NON-CONFINED WATERS.
CONSULT AN EXPERT ON DISPOSAL OF RECOVERED MATERIAL AND ENSURE CONFORMITY TO LOCAL DISPOSAL REGULATIONS.

SECTION 7 STORAGE AND HANDLING

ELECTROSTATIC ACCUMULATION HAZARD:
YES, USE PROPER BONDING AND/OR GROUNDING PROCEDURE.
ADDITIONAL INFORMATION REGARDING SAFE HANDLING OF PRODUCTS WITH STATIC ACCUMULATION POTENTIAL CAN BE ORDERED BY CONTACTING THE AMERICAN PETROLEUM INSTITUTE (API) FOR API RECOMMENDED PRACTICE 2003, ENTITLED "PROTECTION AGAINST IGNITIONS ARISING OUT OF STATIC, LIGHTING, AND STRAY CURRENTS" (AMERICAN PETROLEUM INSTITUTE, 1220 L STREET NORTHWEST, WASHINGTON, DC 20005), OR THE NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) FOR NFPA 77 ENTITLED "STATIC ELECTRICITY" (NATIONAL FIRE PROTECTION ASSOCIATION, 1 BATTERYMARCH PARK, P.O. BOX 9101, QUINCY, MA 02269-9101).
STORAGE TEMPERATURE, DEG F:
AMBIENT
LOADING/UNLOADING TEMPERATURE, DEG F:
AMBIENT
STORAGE/TRANSPORT PRESSURE, MMHG:
ATMOSPHERIC
LOADING/UNLOADING VISCOSITY, CST:
2.1
STORAGE AND HANDLING:
KEEP CONTAINER CLOSED. HANDLE AND OPEN CONTAINERS WITH CARE. STORE IN A COOL, WELL VENTILATED PLACE AWAY FROM INCOMPATIBLE MATERIALS.
DO NOT HANDLE OR STORE NEAR AN OPEN FLAME, HEAT OR OTHER SOURCES OF IGNITION. PROTECT MATERIAL FROM DIRECT SUNLIGHT.
MATERIAL WILL ACCUMULATE STATIC CHARGES WHICH MAY CAUSE AN ELECTRICAL SPARK (IGNITION SOURCE). USE PROPER BONDING AND/OR GROUNDING PROCEDURES.
DO NOT PRESSURIZE, CUT, HEAT, OR WELD CONTAINERS. EMPTY PRODUCT CONTAINERS MAY CONTAIN PRODUCT RESIDUE. DO NOT REUSE EMPTY CONTAINERS WITHOUT COMMERCIAL CLEANING OR RECONDITIONING.

SECTION 8 EXPOSURE CONTROLS/PERSONAL PROTECTION

EXPOSURE CONTROLS
THE USE OF LOCAL EXHAUST VENTILATION IS RECOMMENDED TO CONTROL PROCESS EMISSIONS NEAR THE SOURCE. LABORATORY SAMPLES SHOULD BE HANDLED IN A LAB HOOD. PROVIDE MECHANICAL VENTILATION OF CONFINED SPACES. SEE RESPIRATORY PROTECTION RECOMMENDATIONS.

PERSONAL PROTECTION
FOR OPEN SYSTEMS WHERE CONTACT IS LIKELY, WEAR SAFETY GLASSES WITH SIDE SHIELDS, LONG SLEEVES, AND CHEMICAL RESISTANT GLOVES.
WHERE CONTACT MAY OCCUR, WEAR SAFETY GLASSES WITH SIDE SHIELDS.
WHERE CONCENTRATIONS IN AIR MAY EXCEED THE LIMITS GIVEN IN THIS SECTION AND ENGINEERING, WORK PRACTICE OR OTHER MEANS OF EXPOSURE REDUCTION ARE NOT ADEQUATE, NIOSH/MSHA APPROVED RESPIRATORS MAY BE NECESSARY TO PREVENT OVEREXPOSURE BY INHALATION.

WORKPLACE EXPOSURE GUIDELINES

VENDOR RECOMMENDS THE FOLLOWING OCCUPATIONAL EXPOSURE LIMITS:
A TWA OF 1200 MG/M3 (177 PPM) BASED ON TOTAL HYDROCARBON.

SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

SPECIFIC GRAVITY, AT DEG F:	0.76 AT 60
VAPOR PRESSURE, MMHG AT DEG F:	1 AT 68 3 AT 100
SOLUBILITY IN WATER, WT. % AT DEG F:	LESS THAN 0.01 AT 77
VISCOSITY OF LIQUID, CST AT DEG F:	1.7 AT 77 APPROXIMATE
SP. GRAV. OF VAPOR, AT 1 ATM (AIR=1):	5.40 CALCULATED
FREEZING/MELTING POINT, DEG F:	LESS THAN -76
EVAPORATION RATE, N-BU ACETATE=1:	LESS THAN 0.1
BOILING POINT, DEG F:	354 TO 372

SECTION 10 STABILITY AND REACTIVITY

STABILITY:
STABLE
CONDITIONS TO AVOID INSTABILITY:
NOT APPLICABLE
HAZARDOUS POLYMERIZATION:
WILL NOT OCCUR
CONDITIONS TO AVOID HAZARDOUS POLYMERIZATION:
NOT APPLICABLE
MATERIALS AND CONDITIONS TO AVOID INCOMPATIBILITY:
HAZARDOUS DECOMPOSITION PRODUCTS:
NONE

SECTION 11 TOXICOLOGICAL INFORMATION

PLEASE REFER TO SECTION 3 FOR AVAILABLE INFORMATION ON POTENTIAL HELATH EFFECTS.

SECTION 12 ECOLOGICAL INFORMATION

NO SPECIFIC ECOLOGICAL DATA ARE AVAILABLE FOR THIS PRODUCT. PLEASE REFE TO SECTION 6 FOR INFORMATION REGARDING ACCIDENTAL RELEASES AND SECTION 1 FOR REGULATORY REPORTING INFORMATION.

SECTION 13 DISPOSAL CONSIDERATIONS

PLEASE REFER TO SECTIONS 5, 6 AND 15 FOR DISPOSAL AND REGULATORY INFORMATION.

SECTION 14 TRANSPORT INFORMATION

DEPARTMENT OF TRANSPORTATION (DOT):
DOT SHIPPING DESCRIPTION: PETROLEUM DISTILLATE, N.O.S., COMBUSTIBLE LIQUID UN 1268, III
NOTE: IN CONTAINERS OF 119 GALLONS CAPACITY OR LESS THIS PRODUCT IS NOT REGULATED BY DOT.

SECTION 15 REGULATORY INFORMATION

TSCA:

THIS PRODUCT IS LISTED ON THE TSCA INVENTORY AT CAS REGISTRY NUMBER 64742-48-9

CLEAN WATER ACT/OIL POLLUTION ACT:
THIS PRODUCT IS CLASSIFIED AS AN OIL UNDER SECTION 311 OF THE CLEAN WATER ACT (40 CFR 110) AND THE OIL POLLUTION ACT OF 1990. DISCHARGE OR SPILLS WHICH PRODUCE A VISIBLE SHEEN ON EITHER SURFACE WATER, OR IN WATERWAYS/SEWERS WHICH LEAD TO SURFACE WATER, MUST BE REPORTED TO THE NATIONAL RESPONSE CENTER AT 800-424-8802.

CERCLA:
IF THIS PRODUCT IS ACCIDENTALLY SPILLED, IT IS NOT SUBJECT TO ANY SPECIAL REPORTING UNDER THE REQUIREMENTS OF THE COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY ACT. WE RECOMMEND YOU CONTACT LOCAL AUTHORITIES TO DETERMINE IF THERE MAY BE OTHER LOCAL REPORTING REQUIREMENTS.

SARA TITLE III:
UNDER THE PROVISIONS OF TITLE III, SECTIONS 311/312 OF THE SUPERFUND AMENDMENTS AND REAUTHORIZATION ACT, THIS PRODUCT IS CLASSIFIED INTO THE FOLLOWING HAZARD CATEGORIES:
FIRE.
THIS INFORMATION MAY BE SUBJECT TO THE PROVISIONS OF THE COMMUNITY RIGHT-TO-KNOW REPORTING REQUIREMENTS (40 CFR 370) IF THRESHOLD QUANTITY CRITERIA ARE MET.

SECTION 16 OTHER INFORMATION

HAZARD RATING SYSTEMS:
THIS INFORMATION IS FOR PEOPLE TRAINED IN:
NATIONAL PAINT & COATINGS ASSOCIATION'S (NPCA)
HAZARDOUS MATERIALS IDENTIFICATION SYSTEM (HMIS)
NATIONAL FIRE PROTECTION ASSOCIATION (NFPA 704)
IDENTIFICATION OF THE FIRE HAZARDS OF MATERIALS

	NPCA-HMIS	NFPA 704
HEALTH	1	1
FLAMMABILITY	2	2
REACTIVITY	0	0

KEY
4 = SEVERE
3 = SERIOUS
2 = MODERATE
1 = SLIGHT
0 = MINIMAL

CAUTION: HMIS ratings are based on a 0-4 rating scale with 1 representing minimal hazards or risks, and f representing significant hazards or risks. Recommended HMIS ratings should not be used in the absence of a fully implemented HMIS hazard communication program.

LAPMASTER®

MATERIAL SAFETY DATA SHEET

Date: April 2010

Section #1: PRODUCT AND COMPANY IDENTIFICATION

Lapmaster International, LLC
501 W. Algonquin Road
Mt. Prospect, IL 60056

Telephone: (224) 659-7101 (Office Hours 8:00 a.m. to 5:30 p.m. CST)
Emergency Phone: 24 Hours/Chemtrec – 1-800-424-9300

Product Identification: Oil-Base Lapping Vehicle
Product Name: Oil-Base Vehicle #3

Section #2: COMPOSITION INFORMATION ON INGREDIENTS

Ingredient Information: Oil Distillates

Component Name	Percentage %	CAS Number	OSHA PEL	ACGIH TWA
Paraffinic Distillates Light	< 10%	64741-44-2	5mg/m3	5mg/m3
Light Petroleum Distillate	< 75%	64742-47-8	Not Established	Not Established
Paraffinic Distillates Heavy	< 15%	64742-54-7	5mg/m3	5mg/m3

Section #3: HAZARDS INFORMATION

EMERGENCY OVERVIEW: Spill may cause slipping hazard

POTENTIAL HEALTH EFFECTS:

EYE: May cause irritation
SKIN: May cause irritation
INGESTION: May cause irritation or loose bowels
INHALATION: No hazard in normal use

MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE:
None Known

HEALTH HAZARDS (ACUTE AND CHRONIC):

Health – 2
Flammability - 2

SIGNS AND SYMPTOMS OF EXPOSURE:

No Data Available

CHRONIC / CARCINOGENICITY:

N/A
NTP: N/A
OSHA: N/A
IARC: N/A

Section #4: FIRST AID MEASURES

EYES: Remove Contacts – Flush eyes with saline – Seek Medical Attention
SKIN: Wash with Soap and water for 15 minutes – If irritated, Seek Medical Attention
INGESTION: DO NOT Induce Vomiting, Provide water or milk– Seek Medical Attention
INHALATION: Remove to fresh air, seek medical attention

Section #5: FIRE FIGHTING MEASURES

FIRE FIGHTING: Wear self-contained breathing apparatus. Avoid fume inhalation.
EXTINGUISHING MEDIA: CO2; Dry Chemical; Foam
HAZARDOUS COMBUSTION PRODUCTS: Carbon Monoxide and Carbon Dioxide
CONDITIONS OF FLAMMABILITY: 180 Degrees F Flashpoint or ignition source
Lower Explosive Limit: 0.9% Upper Explosive Limit: 7.0%
EXPLOSION DATA:
IMPACT SENSITIVITY: N/A
STATIC DISCHARGE: N/A
AUTOIGNITION: 660 degrees F

Section #6: ACCIDENTAL RELEASE MEASURES

GENERAL: Confine spill, use local and/or federal regulations in the collecting and disposal of material.

Section #7: HANDLING AND STORAGE

HANDLING: Wear Safety Goggles, Use Protective Gloves
STORAGE: Store between 60 & 90 degrees F. Keep containers sealed until ready for use. Avoid (keep away) from sources of ignition.

Section #8: EXPOSURE CONTROLS/PERSONAL PROTECTION

ENGINEERING CONTROLS: N/A
PERSONAL PROTECTION:
EYE/FACE: Wear Chemical Safety Goggles
SKIN: Use Oil-Resistant Gloves
RESPIRATORY: N/A

Section #9: PHYSICAL AND CHEMICAL PROPERTIES

PHYSICAL STATE:	Liquid
ODOR AND APPEARANCE:	Mild Oil Odor
BOILING POINT:	367-450 degrees F
Viscosity:	40 SUS
PH:	N/A
VAPOR PRESSURE (mmHg):	<1.0mm Hg @ 75 degrees F
SPECIFIC GRAVITY:	0.8085
WATER SOLUBILITY:	No
% VOLATILES:	> 75%
EVAPORATION RATE:	Slower than Butyl Acetate
COEFFICIENT WATER/OIL:	0% Water

Section #10: STABILITY AND REACTIVITY

STABILITY: Stable
STABILITY CONDITIONS TO AVOID: Strong Oxidizers
REACTIVITY: N/A
REACTIVITY CONDITIONS TO AVOID: Exposure to heat or flame

Section #11: TOXICOLOGICAL INFORMATION

ACUTE HEALTH HAZARDS:
ACUTE ORAL: N/A
COMPONENTS: N/A

Section #12: ECOLOGICAL INFORMATION

GENERAL: Product is classified as an oil under EPA-CWA Section 311. Spills leading to surface waters must be reported to National Response Center.

Section #13: DISPOSAL INFORMATION

WASTE DISPOSAL: Comply with State and/or Federal regulations
RCRA HAZARDOUS WASTE: Not RCRA hazardous waste

Section #14: TRANSPORTATION INFORMATION

DOT HAZARD CLASS:	Flammable Liquid, Hazard Class 3
PROPER SHIPPING NAME:	Petroleum Distillates, N.O.S.
IDENTIFICATION NUMBER:	UN1268
TDGA:	Not Listed
Packing Group:	III

Section #15: REGULATORY INFORMATION

TSCA STATUS: All ingredients in this product are on the TSCA inventory
WHMIS CLASSIFICATION: N/A
SARA Title III: No SARA section 313 components exist in this product

Section #16: OTHER INFORMATION

HMIS Code: Health 1, Flammability 2, Reactivity 0, Personal Protection B

Volatile Organic Compounds (VOCS): 4.98 lbs/gal, 597 grams/liter

The information contained in this Material Safety Data Sheet (MSDS) document is believed to be accurate and reliable. Because it is impossible to anticipate all conditions of use, some additional safety precautions may be required. ***LAPMASTER INTERNATIONAL, LLC, MAKES NO REPRESENTATION OR WARRANTY, EITHER EXPRESS OR IMPLIED, AS TO THE MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.*** Each user should read and understand the information provided and incorporate it into their individual site safety programs as required by applicable hazard communication standards and regulations.

UPCF (Rev. 12/2007)

MATERIAL SAFETY DATA SHEET

SECTION 1 PRODUCT AND COMPANY IDENTIFICATION

PRODUCT

Product Name: **MOBIL VACTRA OIL NO. 2**
Product Description: Base Oil and Additives
Product Code: 600494-00, 970716
Intended Use: Lubricant

COMPANY IDENTIFICATION

Supplier: **EXXON MOBIL CORPORATION**
3225 GALLOWS RD.
FAIRFAX, VA. 22037 USA

24 Hour Health Emergency	609-737-4411
Transportation Emergency Phone	800-424-9300
ExxonMobil Transportation No.	281-834-3296
Product Technical Information	800-662-4525, 800-947-9147
MSDS Internet Address	http://www.exxon.com, http://www.mobil.com

SECTION 2 COMPOSITION / INFORMATION ON INGREDIENTS

No Reportable Hazardous Substance(s) or Complex Substance(s).

SECTION 3 HAZARDS IDENTIFICATION

This material is not considered to be hazardous according to regulatory guidelines (see (M)SDS Section 15).

POTENTIAL HEALTH EFFECTS

Low order of toxicity. Excessive exposure may result in eye, skin, or respiratory irritation. High-pressure injection under skin may cause serious damage.

NFPA Hazard ID:	Health:	0	Flammability:	1	Reactivity:	0
HMIS Hazard ID:	Health:	0	Flammability:	1	Reactivity:	0

NOTE: This material should not be used for any other purpose than the intended use in Section 1 without expert advice. Health studies have shown that chemical exposure may cause potential human health risks which may vary from person to person.

SECTION 4 FIRST AID MEASURES

INHALATION

Remove from further exposure. For those providing assistance, avoid exposure to yourself or others. Use adequate respiratory protection. If respiratory irritation, dizziness, nausea, or unconsciousness occurs, seek immediate medical assistance. If breathing has stopped, assist ventilation with a mechanical device or use

mouth-to-mouth resuscitation.

SKIN CONTACT

Wash contact areas with soap and water. If product is injected into or under the skin, or into any part of the body, regardless of the appearance of the wound or its size, the individual should be evaluated immediately by a physician as a surgical emergency. Even though initial symptoms from high pressure injection may be minimal or absent, early surgical treatment within the first few hours may significantly reduce the ultimate extent of injury.

EYE CONTACT

Flush thoroughly with water. If irritation occurs, get medical assistance.

INGESTION

First aid is normally not required. Seek medical attention if discomfort occurs.

SECTION 5 FIRE FIGHTING MEASURES

EXTINGUISHING MEDIA

Appropriate Extinguishing Media: Use water fog, foam, dry chemical or carbon dioxide (CO2) to extinguish flames.

Inappropriate Extinguishing Media: Straight Streams of Water

FIRE FIGHTING

Fire Fighting Instructions: Evacuate area. Prevent runoff from fire control or dilution from entering streams, sewers, or drinking water supply. Firefighters should use standard protective equipment and in enclosed spaces, self-contained breathing apparatus (SCBA). Use water spray to cool fire exposed surfaces and to protect personnel.

Hazardous Combustion Products: Smoke, Fume, Aldehydes, Sulfur oxides, Incomplete combustion products, Oxides of carbon

FLAMMABILITY PROPERTIES

Flash Point [Method]: >205C (401F) [ASTM D-92]
Flammable Limits (Approximate volume % in air): LEL: 0.9 UEL: 7.0
Autoignition Temperature: N/D

SECTION 6 ACCIDENTAL RELEASE MEASURES

NOTIFICATION PROCEDURES

In the event of a spill or accidental release, notify relevant authorities in accordance with all applicable regulations. US regulations require reporting releases of this material to the environment which exceed the applicable reportable quantity or oil spills which could reach any waterway including intermittent dry creeks. The National Response Center can be reached at (800)424-8802.

SPILL MANAGEMENT

Land Spill: Stop leak if you can do it without risk. Recover by pumping or with suitable absorbent.

Water Spill: Stop leak if you can do it without risk. Confine the spill immediately with booms. Warn other shipping. Remove from the surface by skimming or with suitable absorbents. Seek the advice of a specialist before using dispersants.

Water spill and land spill recommendations are based on the most likely spill scenario for this material; however, geographic conditions, wind, temperature, (and in the case of a water spill) wave and current direction and speed may greatly influence the appropriate action to be taken. For this reason, local experts should be consulted. Note: Local regulations may prescribe or limit action to be taken.

ENVIRONMENTAL PRECAUTIONS

Large Spills: Dike far ahead of liquid spill for later recovery and disposal. Prevent entry into waterways, sewers, basements or confined areas.

SECTION 7 HANDLING AND STORAGE

HANDLING

Prevent small spills and leakage to avoid slip hazard.

Static Accumulator: This material is a static accumulator.

STORAGE

Do not store in open or unlabelled containers. Keep away from incompatible materials.

SECTION 8 EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure limits/standards for materials that can be formed when handling this product: When mists / aerosols can occur, the following are recommended: 5 mg/m³ - ACGIH TLV, 10 mg/m³ - ACGIH STEL, 5 mg/m³ - OSHA PEL.

NOTE: Limits/standards shown for guidance only. Follow applicable regulations.

ENGINEERING CONTROLS

The level of protection and types of controls necessary will vary depending upon potential exposure conditions. Control measures to consider:

No special requirements under ordinary conditions of use and with adequate ventilation.

PERSONAL PROTECTION

Personal protective equipment selections vary based on potential exposure conditions such as applications, handling practices, concentration and ventilation. Information on the selection of protective equipment for use with this material, as provided below, is based upon intended, normal usage.

Respiratory Protection: If engineering controls do not maintain airborne contaminant concentrations at a level which is adequate to protect worker health, an approved respirator may be appropriate. Respirator

selection, use, and maintenance must be in accordance with regulatory requirements, if applicable. Types of respirators to be considered for this material include:

No special requirements under ordinary conditions of use and with adequate ventilation.

For high airborne concentrations, use an approved supplied-air respirator, operated in positive pressure mode. Supplied air respirators with an escape bottle may be appropriate when oxygen levels are inadequate, gas/vapor warning properties are poor, or if air purifying filter capacity/rating may be exceeded.

Hand Protection: Any specific glove information provided is based on published literature and glove manufacturer data. Glove suitability and breakthrough time will differ depending on the specific use conditions. Contact the glove manufacturer for specific advice on glove selection and breakthrough times for your use conditions. Inspect and replace worn or damaged gloves. The types of gloves to be considered for this material include:

No protection is ordinarily required under normal conditions of use.

Eye Protection: If contact is likely, safety glasses with side shields are recommended.

Skin and Body Protection: Any specific clothing information provided is based on published literature or manufacturer data. The types of clothing to be considered for this material include:

No skin protection is ordinarily required under normal conditions of use. In accordance with good industrial hygiene practices, precautions should be taken to avoid skin contact.

Specific Hygiene Measures: Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants. Discard contaminated clothing and footwear that cannot be cleaned. Practice good housekeeping.

ENVIRONMENTAL CONTROLS

See Sections 6, 7, 12, 13.

SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

Typical physical and chemical properties are given below. Consult the Supplier in Section 1 for additional data.

GENERAL INFORMATION

Physical State: Liquid
Color: Brown
Odor: Characteristic
Odor Threshold: N/D

IMPORTANT HEALTH, SAFETY, AND ENVIRONMENTAL INFORMATION

Relative Density (at 15 C): 0.883
Flash Point [Method]: >205C (401F) [ASTM D-92]
Flammable Limits (Approximate volume % in air): LEL: 0.9 UEL: 7.0
Autoignition Temperature: N/D
Boiling Point / Range: N/D
Vapor Density (Air = 1): > 2 at 101 kPa
Vapor Pressure: < 0.013 kPa (0.1 mm Hg) at 20 C
Evaporation Rate (n-butyl acetate = 1): N/D
pH: N/A

Log Pow (n-Octanol/Water Partition Coefficient): > 3.5
Solubility in Water: Negligible
Viscosity: 68 cSt (68 mm2/sec) at 40 C | 8.6 cSt (8.6 mm2/sec) at 100C
Oxidizing Properties: See Sections 3, 15, 16.

OTHER INFORMATION

Freezing Point: N/D
Melting Point: N/A
Pour Point: -6°C (21°F)
DMSO Extract (mineral oil only), IP-346: < 3 %wt

SECTION 10 STABILITY AND REACTIVITY

STABILITY: Material is stable under normal conditions.

CONDITIONS TO AVOID: Excessive heat. High energy sources of ignition.

MATERIALS TO AVOID: Strong oxidizers

HAZARDOUS DECOMPOSITION PRODUCTS: Material does not decompose at ambient temperatures.

HAZARDOUS POLYMERIZATION: Will not occur.

SECTION 11 TOXICOLOGICAL INFORMATION

ACUTE TOXICITY

Route of Exposure	Conclusion / Remarks
Inhalation	
Toxicity (Rat): LC50 > 5000 mg/m3	Minimally Toxic. Based on test data for structurally similar materials.
Irritation: No end point data.	Negligible hazard at ambient/normal handling temperatures. Based on assessment of the components.
Ingestion	
Toxicity (Rat): LD50 > 5000 mg/kg	Minimally Toxic. Based on test data for structurally similar materials.
Skin	
Toxicity (Rabbit): LD50 > 5000 mg/kg	Minimally Toxic. Based on test data for structurally similar materials.
Irritation (Rabbit): Data available.	Negligible irritation to skin at ambient temperatures. Based on test data for structurally similar materials.
Eye	
Irritation (Rabbit): Data available.	May cause mild, short-lasting discomfort to eyes. Based on test data for structurally similar materials.

CHRONIC/OTHER EFFECTS

Contains:

Base oil severely refined: Not carcinogenic in animal studies. Representative material passes IP-346, Modified Ames test, and/or other screening tests. Dermal and inhalation studies showed minimal effects; lung non-specific infiltration of immune cells, oil deposition and minimal granuloma formation. Not sensitizing in test animals.

Additional information is available by request.

The following ingredients are cited on the lists below: None.

--REGULATORY LISTS SEARCHED--

1 = NTP CARC	3 = IARC 1	5 = IARC 2B
2 = NTP SUS	4 = IARC 2A	6 = OSHA CARC

SECTION 12 ECOLOGICAL INFORMATION

The information given is based on data available for the material, the components of the material, and similar materials.

ECOTOXICITY

Material -- Not expected to be harmful to aquatic organisms.

MOBILITY

Base oil component -- Low solubility and floats and is expected to migrate from water to the land. Expected to partition to sediment and wastewater solids.

PERSISTENCE AND DEGRADABILITY

Biodegradation:

Base oil component -- Expected to be inherently biodegradable

BIOACCUMULATION POTENTIAL

Base oil component -- Has the potential to bioaccumulate, however metabolism or physical properties may reduce the bioconcentration or limit bioavailability.

SECTION 13 DISPOSAL CONSIDERATIONS

Disposal recommendations based on material as supplied. Disposal must be in accordance with current applicable laws and regulations, and material characteristics at time of disposal.

DISPOSAL RECOMMENDATIONS

Product is suitable for burning in an enclosed controlled burner for fuel value or disposal by supervised incineration at very high temperatures to prevent formation of undesirable combustion products.

REGULATORY DISPOSAL INFORMATION

RCRA Information: The unused product, in our opinion, is not specifically listed by the EPA as a hazardous waste (40 CFR, Part 261D), nor is it formulated to contain materials which are listed as hazardous wastes. It does not exhibit the hazardous characteristics of ignitability, corrositivity or reactivity and is not formulated with contaminants as determined by the Toxicity Characteristic Leaching Procedure (TCLP). However, used product may be regulated.

Empty Container Warning Empty Container Warning (where applicable): Empty containers may contain residue and can be dangerous. Do not attempt to refill or clean containers without proper instructions. Empty drums should be

completely drained and safely stored until appropriately reconditioned or disposed. Empty containers should be taken for recycling, recovery, or disposal through suitably qualified or licensed contractor and in accordance with governmental regulations. DO NOT PRESSURISE, CUT, WELD, BRAZE, SOLDER, DRILL, GRIND, OR EXPOSE SUCH CONTAINERS TO HEAT, FLAME, SPARKS, STATIC ELECTRICITY, OR OTHER SOURCES OF IGNITION. THEY MAY EXPLODE AND CAUSE INJURY OR DEATH.

SECTION 14 TRANSPORT INFORMATION

LAND (DOT) : Not Regulated for Land Transport

LAND (TDG) : Not Regulated for Land Transport

SEA (IMDG) : Not Regulated for Sea Transport according to IMDG-Code

AIR (IATA) : Not Regulated for Air Transport

SECTION 15 REGULATORY INFORMATION

OSHA HAZARD COMMUNICATION STANDARD: When used for its intended purposes, this material is not classified as hazardous in accordance with OSHA 29 CFR 1910.1200.

NATIONAL CHEMICAL INVENTORY LISTING: AICS, IECSC, DSL, EINECS, ENCS, KECI, PICCS, TSCA

EPCRA: This material contains no extremely hazardous substances.

SARA (311/312) REPORTABLE HAZARD CATEGORIES: None.

SARA (313) TOXIC RELEASE INVENTORY: This material contains no chemicals subject to the supplier notification requirements of the SARA 313 Toxic Release Program.

The Following Ingredients are Cited on the Lists Below: None.

--REGULATORY LISTS SEARCHED--

1 = ACGIH ALL	6 = TSCA 5a2	11 = CA P65 REPRO	16 = MN RTK
2 = ACGIH A1	7 = TSCA 5e	12 = CA RTK	17 = NJ RTK
3 = ACGIH A2	8 = TSCA 6	13 = IL RTK	18 = PA RTK
4 = OSHA Z	9 = TSCA 12b	14 = LA RTK	19 = RI RTK
5 = TSCA 4	10 = CA P65 CARC	15 = MI 293	

Code key: CARC=Carcinogen; REPRO=Reproductive

SECTION 16 OTHER INFORMATION

N/D = Not determined, N/A = Not applicable

THIS SAFETY DATA SHEET CONTAINS THE FOLLOWING REVISIONS:

No revision information is available.

The information and recommendations contained herein are, to the best of ExxonMobil's knowledge and belief, accurate and reliable as of the date issued. You can contact ExxonMobil to insure that this document is the most current available from ExxonMobil. The information and recommendations are offered for the user's consideration and examination. It is the user's responsibility to satisfy itself that the product is suitable for the intended use. If buyer repackages this product, it is the user's responsibility to insure proper health, safety and other necessary information is included with and/or on the container. Appropriate warnings and safe-handling procedures should be provided to handlers and users. Alteration of this document is strictly prohibited. Except to the extent required by law, re-publication or retransmission of this document, in whole or in part, is not permitted. The term, "ExxonMobil" is used for convenience, and may include any one or more of ExxonMobil Chemical Company, Exxon Mobil Corporation, or any affiliates in which they directly or indirectly hold any interest.

UPCF (Rev. 12/2007)

MATERIAL SAFETY DATA SHEET

SECTION 1 PRODUCT AND COMPANY IDENTIFICATION

PRODUCT

Product Name: **MOBIL DTE 24**
Product Description: Base Oil and Additives
Product Code: 201560102010, 602623-00, 970972
Intended Use: Hydraulic fluid

COMPANY IDENTIFICATION

Supplier: **EXXON MOBIL CORPORATION**
3225 GALLOWS RD.
FAIRFAX, VA. 22037 USA

24 Hour Health Emergency	609-737-4411
Transportation Emergency Phone	800-424-9300
ExxonMobil Transportation No.	281-834-3296
Product Technical Information	800-662-4525, 800-947-9147
MSDS Internet Address	http://www.exxon.com, http://www.mobil.com

SECTION 2 COMPOSITION / INFORMATION ON INGREDIENTS

No Reportable Hazardous Substance(s) or Complex Substance(s).

SECTION 3 HAZARDS IDENTIFICATION

This material is not considered to be hazardous according to regulatory guidelines (see (M)SDS Section 15).

POTENTIAL HEALTH EFFECTS

Low order of toxicity. Excessive exposure may result in eye, skin, or respiratory irritation. High-pressure injection under skin may cause serious damage.

NFPA Hazard ID:	Health:	0	Flammability:	1	Reactivity:	0
HMIS Hazard ID:	Health:	0	Flammability:	1	Reactivity:	0

NOTE: This material should not be used for any other purpose than the intended use in Section 1 without expert advice. Health studies have shown that chemical exposure may cause potential human health risks which may vary from person to person.

SECTION 4 FIRST AID MEASURES

INHALATION

Remove from further exposure. For those providing assistance, avoid exposure to yourself or others. Use

adequate respiratory protection. If respiratory irritation, dizziness, nausea, or unconsciousness occurs, seek immediate medical assistance. If breathing has stopped, assist ventilation with a mechanical device or use mouth-to-mouth resuscitation.

SKIN CONTACT

Wash contact areas with soap and water. If product is injected into or under the skin, or into any part of the body, regardless of the appearance of the wound or its size, the individual should be evaluated immediately by a physician as a surgical emergency. Even though initial symptoms from high pressure injection may be minimal or absent, early surgical treatment within the first few hours may significantly reduce the ultimate extent of injury.

EYE CONTACT

Flush thoroughly with water. If irritation occurs, get medical assistance.

INGESTION

First aid is normally not required. Seek medical attention if discomfort occurs.

SECTION 5 FIRE FIGHTING MEASURES

EXTINGUISHING MEDIA

Appropriate Extinguishing Media: Use water fog, foam, dry chemical or carbon dioxide (CO2) to extinguish flames.

Inappropriate Extinguishing Media: Straight Streams of Water

FIRE FIGHTING

Fire Fighting Instructions: Evacuate area. Prevent runoff from fire control or dilution from entering streams, sewers, or drinking water supply. Firefighters should use standard protective equipment and in enclosed spaces, self-contained breathing apparatus (SCBA). Use water spray to cool fire exposed surfaces and to protect personnel.

Unusual Fire Hazards: Pressurized mists may form a flammable mixture.

Hazardous Combustion Products: Smoke, Fume, Aldehydes, Sulfur oxides, Incomplete combustion products, Oxides of carbon

FLAMMABILITY PROPERTIES

Flash Point [Method]: >200C (392F) [ASTM D-92]
Flammable Limits (Approximate volume % in air): LEL: 0.9 UEL: 7.0
Autoignition Temperature: N/D

SECTION 6 ACCIDENTAL RELEASE MEASURES

NOTIFICATION PROCEDURES

In the event of a spill or accidental release, notify relevant authorities in accordance with all applicable regulations. US regulations require reporting releases of this material to the environment which exceed the applicable reportable quantity or oil spills which could reach any waterway including intermittent dry creeks. The

National Response Center can be reached at (800)424-8802.

PROTECTIVE MEASURES

Avoid contact with spilled material. See Section 5 for fire fighting information. See the Hazard Identification Section for Significant Hazards. See Section 4 for First Aid Advice. See Section 8 for advice on the minimum requirements for personal protective equipment. Additional protective measures may be necessary, depending on the specific circumstances and/or the expert judgment of the emergency responders. For emergency responders: Respiratory protection: respiratory protection will be necessary only in special cases, e.g., formation of mists. Half-face or full-face respirator with filter(s) for dust/organic vapor or Self Contained Breathing Apparatus (SCBA) can be used depending on the size of spill and potential level of exposure. If the exposure cannot be completely characterized or an oxygen deficient atmosphere is possible or anticipated, SCBA is recommended. Work gloves that are resistant to hydrocarbons are recommended. Gloves made of polyvinyl acetate (PVA) are not water-resistant and are not suitable for emergency use. Chemical goggles are recommended if splashes or contact with eyes is possible. Small spills: normal antistatic work clothes are usually adequate. Large spills: full body suit of chemical resistant, antistatic material is recommended.

SPILL MANAGEMENT

Land Spill: Stop leak if you can do it without risk. Recover by pumping or with suitable absorbent.

Water Spill: Stop leak if you can do it without risk. Confine the spill immediately with booms. Warn other shipping. Remove from the surface by skimming or with suitable absorbents. Seek the advice of a specialist before using dispersants.

Water spill and land spill recommendations are based on the most likely spill scenario for this material; however, geographic conditions, wind, temperature, (and in the case of a water spill) wave and current direction and speed may greatly influence the appropriate action to be taken. For this reason, local experts should be consulted. Note: Local regulations may prescribe or limit action to be taken.

ENVIRONMENTAL PRECAUTIONS

Large Spills: Dike far ahead of liquid spill for later recovery and disposal. Prevent entry into waterways, sewers, basements or confined areas.

SECTION 7 HANDLING AND STORAGE

HANDLING

Prevent small spills and leakage to avoid slip hazard. Material can accumulate static charges which may cause an electrical spark (ignition source). When the material is handled in bulk, an electrical spark could ignite any flammable vapors from liquids or residues that may be present (e.g., during switch-loading operations). Use proper bonding and/or ground procedures. However, bonding and grounds may not eliminate the hazard from static accumulation. Consult local applicable standards for guidance. Additional references include American Petroleum Institute 2003 (Protection Against Ignitions Arising out of Static, Lightning and Stray Currents) or National Fire Protection Agency 77 (Recommended Practice on Static Electricity) or CENELEC CLC/TR 50404 (Electrostatics - Code of practice for the avoidance of hazards due to static electricity).

Static Accumulator: This material is a static accumulator.

STORAGE

The container choice, for example storage vessel, may effect static accumulation and dissipation. Do not store in open or unlabelled containers. Keep away from incompatible materials.

SECTION 8 EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure limits/standards for materials that can be formed when handling this product: When mists/aerosols can occur the following are recommended: 5 mg/m³ - ACGIH TLV (inhalable fraction), 5 mg/m³ - OSHA PEL.

NOTE: Limits/standards shown for guidance only. Follow applicable regulations.

ENGINEERING CONTROLS

The level of protection and types of controls necessary will vary depending upon potential exposure conditions. Control measures to consider:

No special requirements under ordinary conditions of use and with adequate ventilation.

PERSONAL PROTECTION

Personal protective equipment selections vary based on potential exposure conditions such as applications, handling practices, concentration and ventilation. Information on the selection of protective equipment for use with this material, as provided below, is based upon intended, normal usage.

Respiratory Protection: If engineering controls do not maintain airborne contaminant concentrations at a level which is adequate to protect worker health, an approved respirator may be appropriate. Respirator selection, use, and maintenance must be in accordance with regulatory requirements, if applicable. Types of respirators to be considered for this material include:

No special requirements under ordinary conditions of use and with adequate ventilation.

For high airborne concentrations, use an approved supplied-air respirator, operated in positive pressure mode. Supplied air respirators with an escape bottle may be appropriate when oxygen levels are inadequate, gas/vapor warning properties are poor, or if air purifying filter capacity/rating may be exceeded.

Hand Protection: Any specific glove information provided is based on published literature and glove manufacturer data. Glove suitability and breakthrough time will differ depending on the specific use conditions. Contact the glove manufacturer for specific advice on glove selection and breakthrough times for your use conditions. Inspect and replace worn or damaged gloves. The types of gloves to be considered for this material include:

No protection is ordinarily required under normal conditions of use.

Eye Protection: If contact is likely, safety glasses with side shields are recommended.

Skin and Body Protection: Any specific clothing information provided is based on published literature or manufacturer data. The types of clothing to be considered for this material include:

No skin protection is ordinarily required under normal conditions of use. In accordance with good industrial hygiene practices, precautions should be taken to avoid skin contact.

Specific Hygiene Measures: Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants. Discard contaminated clothing and footwear that cannot be cleaned. Practice good housekeeping.

ENVIRONMENTAL CONTROLS

See Sections 6, 7, 12, 13.

SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

Note: Physical and chemical properties are provided for safety, health and environmental considerations only and may not fully represent product specifications. Contact the Supplier for additional information.

GENERAL INFORMATION

Physical State: Liquid
Color: Brown
Odor: Characteristic
Odor Threshold: N/D

IMPORTANT HEALTH, SAFETY, AND ENVIRONMENTAL INFORMATION

Relative Density (at 15.6 C): 0.871
Flash Point [Method]: >200C (392F) [ASTM D-92]
Flammable Limits (Approximate volume % in air): LEL: 0.9 UEL: 7.0
Autoignition Temperature: N/D
Boiling Point / Range: > 316C (600F)
Vapor Density (Air = 1): > 2 at 101 kPa
Vapor Pressure: < 0.013 kPa (0.1 mm Hg) at 20 C
Evaporation Rate (n-butyl acetate = 1): N/D
pH: N/A
Log Pow (n-Octanol/Water Partition Coefficient): > 3.5
Solubility in Water: Negligible
Viscosity: 32 cSt (32 mm2/sec) at 40 C | 5.3 cSt (5.3 mm2/sec) at 100C
Oxidizing Properties: See Hazards Identification Section.

OTHER INFORMATION

Freezing Point: N/D
Melting Point: N/A
Pour Point: -18°C (0°F)
DMSO Extract (mineral oil only), IP-346: < 3 %wt

SECTION 10 STABILITY AND REACTIVITY

STABILITY: Material is stable under normal conditions.

CONDITIONS TO AVOID: Excessive heat. High energy sources of ignition.

MATERIALS TO AVOID: Strong oxidizers

HAZARDOUS DECOMPOSITION PRODUCTS: Material does not decompose at ambient temperatures.

HAZARDOUS POLYMERIZATION: Will not occur.

SECTION 11 TOXICOLOGICAL INFORMATION

ACUTE TOXICITY

Route of Exposure	Conclusion / Remarks
Inhalation	
Toxicity (Rat): LC50 > 5000 mg/m3	Minimally Toxic. Based on test data for structurally similar materials.
Irritation: No end point data.	Negligible hazard at ambient/normal handling temperatures. Based on assessment of the components.
Ingestion	
Toxicity (Rat): LD50 > 5000 mg/kg	Minimally Toxic. Based on test data for structurally similar materials.
Skin	
Toxicity (Rabbit): LD50 > 5000 mg/kg	Minimally Toxic. Based on test data for structurally similar materials.
Irritation (Rabbit): Data available.	Negligible irritation to skin at ambient temperatures. Based on test data for structurally similar materials.
Eye	
Irritation (Rabbit): Data available.	May cause mild, short-lasting discomfort to eyes. Based on test data for structurally similar materials.

CHRONIC/OTHER EFFECTS

Contains:

Base oil severely refined: Not carcinogenic in animal studies. Representative material passes IP-346, Modified Ames test, and/or other screening tests. Dermal and inhalation studies showed minimal effects; lung non-specific infiltration of immune cells, oil deposition and minimal granuloma formation. Not sensitizing in test animals.

Additional information is available by request.

The following ingredients are cited on the lists below: None.

--REGULATORY LISTS SEARCHED--

1 = NTP CARC	3 = IARC 1	5 = IARC 2B
2 = NTP SUS	4 = IARC 2A	6 = OSHA CARC

SECTION 12 ECOLOGICAL INFORMATION

The information given is based on data available for the material, the components of the material, and similar materials.

ECOTOXICITY

Material -- Not expected to be harmful to aquatic organisms.

MOBILITY

Base oil component -- Low solubility and floats and is expected to migrate from water to the land. Expected to partition to sediment and wastewater solids.

PERSISTENCE AND DEGRADABILITY

Biodegradation:

Base oil component -- Expected to be inherently biodegradable

BIOACCUMULATION POTENTIAL

Base oil component -- Has the potential to bioaccumulate, however metabolism or physical properties may reduce the bioconcentration or limit bioavailability.

SECTION 13 DISPOSAL CONSIDERATIONS

Disposal recommendations based on material as supplied. Disposal must be in accordance with current applicable laws and regulations, and material characteristics at time of disposal.

DISPOSAL RECOMMENDATIONS

Product is suitable for burning in an enclosed controlled burner for fuel value or disposal by supervised incineration at very high temperatures to prevent formation of undesirable combustion products. Protect the environment. Dispose of used oil at designated sites. Minimize skin contact. Do not mix used oils with solvents, brake fluids or coolants.

REGULATORY DISPOSAL INFORMATION

RCRA Information: The unused product, in our opinion, is not specifically listed by the EPA as a hazardous waste (40 CFR, Part 261D), nor is it formulated to contain materials which are listed as hazardous wastes. It does not exhibit the hazardous characteristics of ignitability, corrositivity or reactivity and is not formulated with contaminants as determined by the Toxicity Characteristic Leaching Procedure (TCLP). However, used product may be regulated.

Empty Container Warning Empty Container Warning (where applicable): Empty containers may contain residue and can be dangerous. Do not attempt to refill or clean containers without proper instructions. Empty drums should be completely drained and safely stored until appropriately reconditioned or disposed. Empty containers should be taken for recycling, recovery, or disposal through suitably qualified or licensed contractor and in accordance with governmental regulations. DO NOT PRESSURISE, CUT, WELD, BRAZE, SOLDER, DRILL, GRIND, OR EXPOSE SUCH CONTAINERS TO HEAT, FLAME, SPARKS, STATIC ELECTRICITY, OR OTHER SOURCES OF IGNITION. THEY MAY EXPLODE AND CAUSE INJURY OR DEATH.

SECTION 14 TRANSPORT INFORMATION

LAND (DOT): Not Regulated for Land Transport

LAND (TDG): Not Regulated for Land Transport

SEA (IMDG): Not Regulated for Sea Transport according to IMDG-Code

AIR (IATA): Not Regulated for Air Transport

SECTION 15 REGULATORY INFORMATION

OSHA HAZARD COMMUNICATION STANDARD: When used for its intended purposes, this material is not

classified as hazardous in accordance with OSHA 29 CFR 1910.1200.

Complies with the following national/regional chemical inventory requirements:: ENCS, AICS, TSCA, DSL, IECSC, PICCS, KECI, EINECS

EPCRA: This material contains no extremely hazardous substances.

SARA (311/312) REPORTABLE HAZARD CATEGORIES: None.

SARA (313) TOXIC RELEASE INVENTORY: This material contains no chemicals subject to the supplier notification requirements of the SARA 313 Toxic Release Program.

The following ingredients are cited on the lists below:

Chemical Name	CAS Number	List Citations
SOLVENT REFINED LIGHT NAPHTHENIC DISTILLATE (PETROLEUM)	64741-97-5	16, 17
ZINC ALKYL DITHIOPHOSPHATE	68649-42-3	15

UPCF (Rev. 12/2007)

Material Safety Data Sheet: **Crystal Simple Green® Industrial Cleaner/Degreaser**
Simple Green® Safety Towels

Version No. 19128-11B Date of Issue: September 2011 *ANSI-Z400.1-2003 Format*

Section 1: PRODUCT & COMPANY IDENTIFICATION

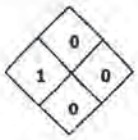
Product Name: Crystal Simple Green® Industrial Cleaner and Degreaser
Additional Names: Simple Green® Safety Towels (fluid only)

Manufacturer's Part Number: **Please refer to page 4*

Company: Sunshine Makers, Inc.
15922 Pacific Coast Highway
Huntington Beach, CA 92649 USA
Telephone: 800-228-0709 • 562-795-6000 Fax: 562-592-3830
Emergency Phone: Chem-Tel 24-Hour Emergency Service: 800-255-3924

Section 2: HAZARDS IDENTIFICATION

Emergency Overview: **CAUTION. Irritant. This is a clear colored liquid with a chemical/detergent odor. Safety towels are infused with a diluted version of mixture.**



NFPA/HMIS Rating:
Health = 1 = slight
Fire, Reactivity, and Special = 0 = minimal

Potential Health Effects

Eye Contact: Mildly irritating.
Skin Contact: No adverse effects expected under typical use conditions. Prolonged exposure may cause dryness. Chemically sensitive individuals may experience mild irritation.
Ingestion: May cause stomach or intestinal irritation if swallowed.
Inhalation: No adverse effects expected under typical use conditions. Adequate ventilation should be present for prolonged usage in small enclosed areas.

Section 3: COMPOSITION/INFORMATION ON INGREDIENTS

Ingredient	CAS Number	Percent Range
Water	7732-18-5	≥ 78%
2-butoxyethanol	111-76-2	≤ 6%
Ethoxylated Alcohol Mixture	Proprietary	≤ 5%
Tetrapotassium Pyrophosphate	7320-34-5	≤ 5%
Sodium Citrate	68-04-2	≤ 5%
Fragrance	Proprietary	≤ 1%

Section 4: FIRST AID MEASURES

If Inhaled: If adverse effect occurs, move to fresh air.
If on skin: If adverse effect occurs, rinse skin with water.
If in eyes: Flush with plenty of water. After 5 minutes of flushing, remove contact lenses, if present. Continue flushing for at least 10 more minutes. If irritation persists seek medical attention.
If ingested: Drink plenty of water to dilute.

Section 5: FIRE FIGHTING MEASURES

This formula is stable, non-flammable, and will not burn. No special procedures necessary

Flammability: Non-flammable
Flash Point: Non-flammable

Suitable Extinguishing Media: Use Dry chemical, CO2, water spray or "alcohol" foam.
Extinguishing Media to Avoid High volume jet water.
Special Exposure Hazards: In event of fire created carbon oxides, oxides of phosphorus may be formed.
Special Protective Equipment: Wear positive pressure self-contained breathing apparatus; Wear full protective clothing.

Section 6: ACCIDENTAL RELEASE MEASURES

Personal Precautions: See section 8 – personal protection.

Environmental Precautions: Do not allow into open waterways and ground water systems.

Method for Clean Up: Dilute with water and rinse into sanitary sewer system or soak up with inert absorbent material.

Section 7: HANDLING AND STORAGE

Handling: Keep container tightly closed. Ensure adequate ventilation. Keep out of reach of children.

Storage: Keep in cool dry area.

Section 8: EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Limit Values:	OSHA PEL	ACGIH TLV
2-butoxyethanol	TWA 50 ppm (240 mg/m^3)	20 ppm (97 mg/m^3)
Tetrapotassium Pyrophosphate		5 mg/m^3

Exposure Controls:
Eye Contact: Use protective glasses if splashing or spray-back is likely.
Respiratory: Use in well ventilated areas.
Skin Contact: Prolonged exposure or dermal sensitive individuals should use protective gloves.

Section 9: PHYSICAL AND CHEMICAL PROPERTIES

Appearance:	Clear Liquid	**Vapor Pressure:**	18 mmHg @20°C; 23.5 mmHg @26°C	
Odor:	No added odor; chemical/detergent	**Density:**	8.5 lb/gal;	
Specific Gravity:	1.020 ± 0.010	**Water Solubility:**	100%	
pH:	9.0 – 9.9 (Crystal)	**VOC composite Partial Pressure:**	TBD	
	8.0 – 8.9 (Safety Towel)	**VOC:**	CARB Method 310	5.8%*
Boiling Point:	~212°F (100.6°C)		SCAQMD Method 313	6.6%*
Freezing Point:	~ 16°F (-9°C)		** product must be diluted to meet air quality regulations*	
Nutrient Content:	Phosphorous: 0.28% Chloride: ~110 ppm	Sulfur: ~180 ppm Fluorine: ~90 ppm		

Section 10: STABILITY AND REACTIVITY

Stability: Stable
Materials to Avoid: None known
Hazardous Decomposition Products: Normal products of combustion - CO, CO2; Oxides of Phosphorous may occur.

Section 11: TOXICOLOGICAL INFORMATION

Acute Toxicity: Oral LD_{50} (rat) > 5 g/kg body weight
Dermal LD_{50} (rabbit) > 5 g/kg body weight
Toxicity calculated from ingredients using OECD SERIES ON TESTING AND ASSESSMENT Number 33

Carcinogens: No ingredients are listed by OSHA, IARC, or NTP as known or suspected carcinogens.

Section 12: ECOLOGICAL INFORMATION

Hazard to wild mammals: Low, based on toxicology profile

Hazard to avian species: Low, based on toxicology profile

Hazard to aquatic organisms: Low, based on toxicology profile

Chemical Fate Information: Readily Biodegradable based on biodegradability profile of ingredients

Section 13: DISPOSAL CONSIDERATIONS

Appropriate Method for Disposal:

Unused Product: *Dilute with water to use concentration and dispose by sanitary sewer.

Used Product: *This product can enter into clarifiers and oil/water separators. Used product may be hazardous depending on the cleaning application and resulting contaminants.

Empty Containers: *Triple-rinse with water and offer for recycling if available in your area. Otherwise, dispose as non-hazardous waste.

*Dispose of used or unused product, and empty containers in accordance with the local, State, Provincial, and Federal regulations for your location. Never dispose of used degreasing rinsates into lakes, streams, and open bodies of water or storm drains.

Section 14: TRANSPORT INFORMATION

U.S. Department of Transportation (DOT) / Canadian TDG:	Not Regulated		
IMO / IDMG:	Not classified as Dangerous		
ICAO/ IATA:	Not classified as Dangerous		
ADR/RID:	Not classified as Dangerous		
U.N. Number	Not Required	Proper Shipping Name:	Detergent Solution
Hazard Class:	Non-Hazardous	Marine Pollutant:	No

Section 15: REGULATORY INFORMATION

All components are listed on: EINECS, TSCA, DSL and AICS Inventory.
No components listed under: Clean Air Act Section 112; Clean Water Act 307 & 311

SARA Title III: 2-butoxyethanol is subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 as Category N230 – Certain Glycol Ethers.

RCRA Status: Not a hazardous waste CERCLA Status : No components listed

State Right To Know Lists

2-butoxyethanol Illinois, Massachusetts, New Jersey, Pennsylvania, Rhode Island

WHMIS Classification – Category D, subcategory 2B, eye irritant

Name	Toxic Substances List – Schedule 1 – CEPA (Canadian Environmental Protection Act)	NPRI Inventory
2-butoxyethanol	Yes	No

This product has been classified according to the hazard criteria of the CPR and the MSDS contains all the information required by Canada's Controlled Products Regulation.

UPCF (Rev. 12/2007)

MATERIAL SAFETY DATA SHEET
TRIM SOL®

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

Product name TRIM SOL®

Material type General-purpose Emulsion

Classification/synonym(s) Chemical emulsion/Soluble oil

Product use Coolant and lubricant in metal removal processes

Manufacturer address MASTER CHEMICAL CORPORATION
501 West Boundary
Perrysburg, OH 43551-1200
419-874-7902

Emergency telephone 800-424-9300 **Fax number** 419-874-0684

2. COMPOSITION/INFORMATION ON INGREDIENTS

COMPONENT	OSHA PEL	ACGIH TLV	OTHER LIMITS RECOM.	CAS #	%RANGE
Severely hydrotreated petroleum oil	5mg/m^3 (mist)	5mg/m^3 (mist)	none	64742-52-5 64742-58-1 64742-54-0	55-65

The exact chemical identities and percentages of the raw materials used in TRIM SOL® are trade secrets. This information is being withheld as provided for in the Occupational Safety and Health Administration's Hazard Communication Rule (29 CFR 1910.1200).

3. HAZARDS IDENTIFICATION

Emergency overview Blue green liquid
No immediate hazard
Fire may produce oxides of carbon, nitrogen, sulfur, and acid chlorides

POTENTIAL HEALTH EFFECTS

Acute effects of overexposure

Eye Contact	Transient irritation
Skin Contact	Possible defatting, nonirritant, nonsensitizer
Inhalation	Nontoxic
Ingestion	Nontoxic
Skin Absorption	Nontoxic

Chronic effects of overexposure None currently known

Product/Ingredients listed as carcinogen or potential carcinogen? **NTP Annual Report** No **IARC Monographs** No **OSHA** No

Signs and symptoms of exposure None

Medical conditions generally aggravated by exposure	None known

4. FIRST AID MEASURES

Emergency and first aid procedures	Eyes	Flush immediately with cool, clean water for at least 15 minutes
	Skin	Wash with mild soap and warm water
	Inhalation	Move to fresh air
	Ingestion	If large quantities are ingested, contact a physician

In every case get medical attention as required

5. FIRE FIGHTING MEASURES

Flash point (test method) >230°F (>110°C) (COC) **Flammable limits** Not determined

Extinguishing media As appropriate for the surrounding fire: water (flood with water), dry chemical, CO_2, or "alcohol" foam

Special fire fighting procedures None **Unusual fire and explosion hazards** None

6. ACCIDENTAL RELEASE MEASURES

Steps to be taken if material is released or spilled Mop up or use dry absorbent

7. HANDLING AND STORAGE

Precautions to be taken in handling and storing Avoid contact with eyes. Avoid prolonged or repeated skin contact with the concentrate. Wash thoroughly after handling. Do not swallow.

Other precautions Refer to container labels.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Respiratory protection (Specify type) None

Ventilation	Local exhaust	Not normally required
	Mechanical (General)	General room ventilation should be sufficient
	Special	None
	Other	None

Protective gloves	None
Other protective equipment	None
Eye protection	Safety glasses
Exposure limits	None established by ACGIH or OSHA for product as whole Refer to Section 2

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance	Blue-green liquid
Odor	Mild, sweet

pH of concentrate	9.0 – 9.1
Typical operating pH (as range)	8.0 – 9.0
Boiling point (ASTM D86)	>208°F (>98°C)
Freezing point	0°F (-18°C)
Solubility in water	Soluble
Specific gravity (H_2O=1)	1.002
V.O.C. Content (EPA Method 24)	1.945 lbs/gal
Evaporation rate (butyl acetate=1)	0.012

10. STABILITY AND REACTIVITY

Stability	Stable	**Conditions to avoid**	None
Incompatibility (materials to avoid)	Strong acids and oxidizers		
Hazardous combustion or decomposition products	Thermal decomposition (fire) may produce oxides of carbon, nitrogen, sulfur, and acid chlorides		
Hazardous polymerization	Will not occur	**Conditions to avoid**	None

11. TOXICOLOGICAL INFORMATION

		Results	
Study	**Test Animal**	**Concentrate**	**10% Solution**
Acute inhalation toxicity	Rat	---	nontoxic LC_{50}>225mg/l
Acute oral toxicity	Rat	nontoxic LD_{50}>5g/kg	nontoxic
Acute dermal toxicity	Rabbit	nontoxic LD_{50}>2g/kg	nontoxic
Primary skin irritation	Rabbit	irritant PDI index=6.75	nonirritant PDI index=0.00
Primary eye irritation	Rabbit	irritant	nonirritant
Repeated insult patch	Human volunteers	---	possible defatting nonirritant nonsensitizer

12. ECOLOGICAL INFORMATION

No data available

13. DISPOSAL CONSIDERATIONS

Waste disposal method Must comply with local, state, and federal regulations. If pre-treatment is needed, chemical treatment or ultrafiltration may be used. Contact Master Chemical Tech Line (1-800-537-3365) for assistance.

14. TRANSPORT INFORMATION

Department of Transportation	**DOT Hazard Class:** None TRIM SOL® is not classified as a hazardous material by DOT.

15. REGULATORY INFORMATION

Resource Conservation and Recovery Act	**EPA Hazardous Waste Number(s):** None TRIM SOL® is not classified as a hazardous waste by EPA.
Toxic Substances Control Act	All TRIM SOL® ingredients are listed on the TSCA Inventory of Chemical Substances.
Superfund Amendments and Reauthorization Act of 1986	TRIM SOL® does not contain any Section 302/304 Extremely Hazardous Substances or Section 313 Toxic Chemicals.

16. OTHER INFORMATION

	HMIS Hazard Index	**NFPA Rating**
	Concentrate	
(Health)	H = 1	H = 1
(Fire)	F = 0	F = 0
(Reactivity)	R = 0	R = 0
(Personal Protection)	PP = A (safety glasses)	Special hazards = none
	Typical Working Solution	
	H = 1	H = 1
	F = 0	F = 0
	R = 0	R = 0
	PP = A (safety glasses)	Special hazards = none

Key 0 = minimal 1 = slight 2 = moderate 3 = serious 4 = severe
This information is intended solely for the use of individuals trained in the particular system.

TRIM SOL® is a registered trademark of Master Chemical Corporation.
(C) 1963 – 2009 Master Chemical Corporation.

The information herein is given in good faith and believed current as of the date of this MSDS. Because conditions of use are beyond our control, no guarantee, representation, or warranty expressed or implied is made. Consult Master Chemical Corporation for further information.

Date of preparation December 21, 2009

UPCF (Rev. 12/2007)

Material Safety Data Sheet

Oxygen

Airgas

Section 1. Chemical product and company identification

Product name	: Oxygen
Supplier	: AIRGAS INC., on behalf of its subsidiaries 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Product use	: Synthetic/Analytical chemistry.
Synonym	: Molecular oxygen; Oxygen molecule; Pure oxygen; O2; Liquid-oxygen-; UN 1072; UN 1073; Dioxygen; Oxygen USP, Aviator's Breathing Oxygen (ABO)
MSDS #	: 001043
Date of Preparation/Revision	: **6/16/2011.**
In case of emergency	: 1-866-734-3438

Section 2. Hazards identification

Physical state	: Gas.
Emergency overview	: DANGER! GAS: OXIDIZER. CONTACT WITH COMBUSTIBLE MATERIAL MAY CAUSE FIRE. CONTENTS UNDER PRESURE. Do not puncture or incinerate container. May cause severe frostbite. LIQUID: OXIDIZER. CONTACT WITH COMBUSTIBLE MATERIAL MAY CAUSE FIRE. Extremely cold liquid and gas under pressure. May cause severe frostbite. Do not puncture or incinerate container. Store in tightly-closed container. Avoid contact with combustible materials. Contact with rapidly expanding gases or liquids can cause frostbite.
Routes of entry	: Inhalation

Potential acute health effects

Eyes	: May cause eye irritation. Contact with rapidly expanding gas may cause burns or frostbite. Contact with cryogenic liquid can cause frostbite and cryogenic burns.
Skin	: May cause skin irritation. Contact with rapidly expanding gas may cause burns or frostbite. Contact with cryogenic liquid can cause frostbite and cryogenic burns.
Inhalation	: Respiratory system irritation after overexposure to high oxygen concentrations.
Ingestion	: Ingestion is not a normal route of exposure for gases. Contact with cryogenic liquid can cause frostbite and cryogenic burns.
Medical conditions aggravated by over-exposure	: Acute or chronic respiratory conditions may be aggravated by overexposure to this gas.

See toxicological information (Section 11)

Section 3. Composition, Information on Ingredients

Name	CAS number	% Volume	Exposure limits
Oxygen	7782-44-7	100	

Section 4. First aid measures

No action shall be taken involving any personal risk or without suitable training.If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus.It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

Eye contact : Check for and remove any contact lenses. Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical attention immediately.

Skin contact : None expected.

Frostbite : Try to warm up the frozen tissues and seek medical attention.

Inhalation : If inhaled, remove to fresh air. If not breathing, give artificial respiration. Get medical attention.

Ingestion : As this product is a gas, refer to the inhalation section.

Section 5. Fire-fighting measures

Flammability of the product : Non-flammable.

Products of combustion : No specific data.

Fire hazards in the presence of various substances : Extremely flammable in the presence of the following materials or conditions: reducing materials, combustible materials and organic materials.

Fire-fighting media and instructions : Use an extinguishing agent suitable for the surrounding fire.

Apply water from a safe distance to cool container and protect surrounding area. If involved in fire, shut off flow immediately if it can be done without risk.

Contains gas under pressure. Contact with combustible material may cause fire. This material increases the risk of fire and may aid combustion. In a fire or if heated, a pressure increase will occur and the container may burst or explode.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions : Immediately contact emergency personnel. Keep unnecessary personnel away. Use suitable protective equipment (section 8). Eliminate all ignition sources if safe to do so. Do not touch or walk through spilled material. Shut off gas supply if this can be done safely. Isolate area until gas has dispersed.

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Methods for cleaning up : Immediately contact emergency personnel. Stop leak if without risk. Use spark-proof tools and explosion-proof equipment. Note: see section 1 for emergency contact information and section 13 for waste disposal.

Section 7. Handling and storage

Handling : High pressure gas. Do not puncture or incinerate container. Use equipment rated for cylinder pressure. Close valve after each use and when empty. Store in tightly-closed container. Avoid contact with combustible materials. Protect cylinders from physical damage; do not drag, roll, slide, or drop. Use a suitable hand truck for cylinder movement.

Never allow any unprotected part of the body to touch uninsulated pipes or vessels that contain cryogenic liquids. Prevent entrapment of liquid in closed systems or piping without pressure relief devices. Some materials may become brittle at low temperatures and will easily fracture.

Storage : Keep container tightly closed. Keep container in a cool, well-ventilated area. Separate from acids, alkalies, reducing agents and combustibles. Cylinders should be stored upright, with valve protection cap in place, and firmly secured to prevent falling or being knocked over. Cylinder temperatures should not exceed 52 °C (125 °F).
For additional information concerning storage and handling refer to Compressed Gas Association pamphlets P-1 Safe Handling of Compressed Gases in Containers and P-12 Safe Handling of Cryogenic Liquids available from the Compressed Gas Association, Inc.

Section 8. Exposure controls/personal protection

Engineering controls : Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

Personal protection

Eyes : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists or dusts.

When working with cryogenic liquids, wear a full face shield.

Skin : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

The applicable standards are (US) 29 CFR 1910.134 and (Canada) Z94.4-93

Hands : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.

Insulated gloves suitable for low temperatures

Personal protection in case of a large spill : Self-contained breathing apparatus (SCBA) should be used to avoid inhalation of the product.

Product name

Oxygen

Consult local authorities for acceptable exposure limits.

Section 9. Physical and chemical properties

Molecular weight : 32 g/mole

Molecular formula : O2

Boiling/condensation point : -183°C (-297.4°F)

Melting/freezing point : -218.4°C (-361.1°F)

Critical temperature : -118.6°C (-181.5°F)

Vapor density : 1.105 (Air = 1) Liquid Density@BP: 71.23 lb/ft3 (1141 kg/m3)

Specific Volume (ft^3/lb) : 12.0482

Gas Density (lb/ft^3) : 0.083

Section 10. Stability and reactivity

Stability and reactivity : The product is stable.

Incompatibility with various substances : Extremely reactive or incompatible with the following materials: oxidizing materials, reducing materials and combustible materials.

Hazardous decomposition products : Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 11. Toxicological information

Toxicity data

Other toxic effects on humans : No specific information is available in our database regarding the other toxic effects of this material to humans.

Specific effects

Carcinogenic effects : No known significant effects or critical hazards.

Mutagenic effects : No known significant effects or critical hazards.

Reproduction toxicity : No known significant effects or critical hazards.

Section 12. Ecological information

Aquatic ecotoxicity

Not available.

Environmental fate : Not available.

Environmental hazards : This product shows a low bioaccumulation potential.

Toxicity to the environment : Not available.

Section 13. Disposal considerations

Product removed from the cylinder must be disposed of in accordance with appropriate Federal, State, local regulation.Return cylinders with residual product to Airgas, Inc.Do not dispose of locally.

Section 14. Transport information

Regulatory information	UN number	Proper shipping name	Class	Packing group	Label	Additional information
DOT Classification	UN1072 UN1073	OXYGEN, COMPRESSED Oxygen, refrigerated liquid	2.2	Not applicable (gas).	 	**Limited quantity** Yes. **Packaging instruction** **Passenger aircraft** Quantity limitation: 75 kg **Cargo aircraft** Quantity limitation: 150 kg **Special provisions** A52
TDG Classification	UN1072 UN1073	OXYGEN, COMPRESSED Oxygen, refrigerated liquid	2.2	Not applicable (gas).	 	**Explosive Limit and Limited Quantity Index** 0.125 **ERAP Index** 3000 **Passenger Carrying Ship**

Oxygen

Mexico Classification	UN1072 UN1073	OXYGEN, COMPRESSED Oxygen, refrigerated liquid	2.2	Not applicable (gas).	 	-

"Refer to CFR 49 (or authority having jurisdiction) to determine the information required for shipment of the product."

Section 15. Regulatory information

United States

U.S. Federal regulations : **TSCA 8(a) IUR**: Partial exemption
United States inventory (TSCA 8b): This material is listed or exempted.

SARA 302/304/311/312 extremely hazardous substances: No products were found.
SARA 302/304 emergency planning and notification: No products were found.
SARA 302/304/311/312 hazardous chemicals: Oxygen
SARA 311/312 MSDS distribution - chemical inventory - hazard identification: Oxygen: Fire hazard, Sudden release of pressure, Delayed (chronic) health hazard

State regulations : **Connecticut Carcinogen Reporting**: This material is not listed.
Connecticut Hazardous Material Survey: This material is not listed.
Florida substances: This material is not listed.
Illinois Chemical Safety Act: This material is not listed.
Illinois Toxic Substances Disclosure to Employee Act: This material is not listed.
Louisiana Reporting: This material is not listed.
Louisiana Spill: This material is not listed.
Massachusetts Spill: This material is not listed.
Massachusetts Substances: This material is listed.
Michigan Critical Material: This material is not listed.
Minnesota Hazardous Substances: This material is not listed.
New Jersey Hazardous Substances: This material is listed.
New Jersey Spill: This material is not listed.
New Jersey Toxic Catastrophe Prevention Act: This material is not listed.
New York Acutely Hazardous Substances: This material is not listed.
New York Toxic Chemical Release Reporting: This material is not listed.
Pennsylvania RTK Hazardous Substances: This material is listed.
Rhode Island Hazardous Substances: This material is not listed.

Canada

WHMIS (Canada) : Class A: Compressed gas.
Class C: Oxidizing material.

CEPA Toxic substances: This material is not listed.
Canadian ARET: This material is not listed.
Canadian NPRI: This material is not listed.
Alberta Designated Substances: This material is not listed.
Ontario Designated Substances: This material is not listed.
Quebec Designated Substances: This material is not listed.

Section 16. Other information

United States

Label requirements : GAS:
OXIDIZER.
CONTACT WITH COMBUSTIBLE MATERIAL MAY CAUSE FIRE.
CONTENTS UNDER PRESURE.
Do not puncture or incinerate container.
May cause severe frostbite.
LIQUID:
OXIDIZER.
CONTACT WITH COMBUSTIBLE MATERIAL MAY CAUSE FIRE.
Extremely cold liquid and gas under pressure.
May cause severe frostbite.

Canada

Label requirements : Class A: Compressed gas.
Class C: Oxidizing material.

Physical state	: Gas or Liquid.
Emergency overview	: WARNING! GAS: CONTENTS UNDER PRESURE. MAY CAUSE RESPIRATORY TRACT, EYE, AND SKIN IRRITATION. CAN CAUSE TARGET ORGAN DAMAGE. Do not puncture or incinerate container. Can cause rapid suffocation. LIQUID: MAY CAUSE RESPIRATORY TRACT, EYE, AND SKIN IRRITATION. CAN CAUSE TARGET ORGAN DAMAGE. Extremely cold liquid and gas under pressure. Can cause rapid suffocation. May cause severe frostbite. Do not puncture or incinerate container. Avoid contact with eyes, skin and clothing. May cause target organ damage, based on animal data. Wash thoroughly after handling. Keep container closed. Avoid breathing gas. Use with adequate ventilation. Contact with rapidly expanding gas, liquid, or solid can cause frostbite.
Target organs	: May cause damage to the following organs: lungs, cardiovascular system, skin, eyes, central nervous system (CNS).
Routes of entry	: Inhalation Dermal Eyes

Potential acute health effects

Eyes	: Moderately irritating to eyes. Contact with rapidly expanding gas may cause burns or frostbite. Contact with cryogenic liquid can cause frostbite and cryogenic burns.
Skin	: Moderately irritating to the skin. Contact with rapidly expanding gas may cause burns or frostbite. Contact with cryogenic liquid can cause frostbite and cryogenic burns.
Inhalation	: Moderately irritating to the respiratory system.
Ingestion	: Ingestion is not a normal route of exposure for gases. Contact with cryogenic liquid can cause frostbite and cryogenic burns.
Potential chronic health effects	: **CARCINOGENIC EFFECTS**: Not available. **MUTAGENIC EFFECTS**: Not available. **TERATOGENIC EFFECTS**: Not available.
Medical conditions aggravated by over-exposure	: Pre-existing disorders involving any target organs mentioned in this MSDS as being at risk may be aggravated by over-exposure to this product.

See toxicological information (section 11)

Section 3. Composition, Information on Ingredients

Name	CAS number	% Volume	Exposure limits
Carbon Dioxide	124-38-9	100	**ACGIH TLV (United States, 1/2008).** STEL: 54000 mg/m³ 15 minute(s). STEL: 30000 ppm 15 minute(s). TWA: 9000 mg/m³ 8 hour(s). TWA: 5000 ppm 8 hour(s). **NIOSH REL (United States, 6/2008).** STEL: 54000 mg/m³ 15 minute(s). STEL: 30000 ppm 15 minute(s). TWA: 9000 mg/m³ 10 hour(s). TWA: 5000 ppm 10 hour(s). **OSHA PEL (United States, 11/2006).** TWA: 9000 mg/m³ 8 hour(s). TWA: 5000 ppm 8 hour(s). **OSHA PEL 1989 (United States, 3/1989).** STEL: 54000 mg/m³ 15 minute(s). STEL: 30000 ppm 15 minute(s). TWA: 18000 mg/m³ 8 hour(s). TWA: 10000 ppm 8 hour(s).

Section 4. First aid measures

No action shall be taken involving any personal risk or without suitable training.If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus.It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

Eye contact : Check for and remove any contact lenses. Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical attention immediately.

Skin contact : In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention immediately.

Frostbite : Try to warm up the frozen tissues and seek medical attention.

Inhalation : Move exposed person to fresh air. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention immediately.

Ingestion : As this product is a gas, refer to the inhalation section.

Section 5. Fire-fighting measures

Flammability of the product : Non-flammable.

Products of combustion : Decomposition products may include the following materials:
carbon dioxide
carbon monoxide

Fire-fighting media and instructions : Use an extinguishing agent suitable for the surrounding fire.

Apply water from a safe distance to cool container and protect surrounding area. If involved in fire, shut off flow immediately if it can be done without risk.

Contains gas under pressure. In a fire or if heated, a pressure increase will occur and the container may burst or explode.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions : Immediately contact emergency personnel. Keep unnecessary personnel away. Use suitable protective equipment (section 8). Shut off gas supply if this can be done safely. Isolate area until gas has dispersed.

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Methods for cleaning up : Immediately contact emergency personnel. Stop leak if without risk. Note: see section 1 for emergency contact information and section 13 for waste disposal.

Section 7. Handling and storage

Handling : Wash thoroughly after handling. High pressure gas. Do not puncture or incinerate container. Use equipment rated for cylinder pressure. Close valve after each use and when empty. Keep container closed. Avoid contact with skin and clothing. Use with adequate ventilation. Avoid contact with eyes. Protect cylinders from physical damage; do not drag, roll, slide, or drop. Use a suitable hand truck for cylinder movement. Never allow any unprotected part of the body to touch uninsulated pipes or vessels that contain cryogenic liquids. Prevent entrapment of liquid in closed systems or piping without pressure relief devices. Some materials may become brittle at low temperatures and will easily fracture.

Storage : Cylinders should be stored upright, with valve protection cap in place, and firmly secured to prevent falling or being knocked over. Cylinder temperatures should not exceed 52 °C (125 °F).
For additional information concerning storage and handling refer to Compressed Gas Association pamphlets P-1 Safe Handling of Compressed Gases in Containers and P-12 Safe Handling of Cryogenic Liquids available from the Compressed Gas Association, Inc.

Section 8. Exposure controls/personal protection

Engineering controls : Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

Personal protection

Eyes : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists or dusts.

When working with cryogenic liquids, wear a full face shield.

Skin : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

The applicable standards are (US) 29 CFR 1910.134 and (Canada) Z94.4-93

Hands : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.

Insulated gloves suitable for low temperatures

Personal protection in case of a large spill : Self-contained breathing apparatus (SCBA) should be used to avoid inhalation of the product. Full chemical-resistant suit and self-contained breathing apparatus should be worn only by trained and authorized persons.

Consult local authorities for acceptable exposure limits.

Section 9. Physical and chemical properties

Molecular weight : 44.01 g/mole
Molecular formula : C-O2
Boiling/condensation point : -78.6°C (-109.5°F)
Melting/freezing point : Sublimation temperature: -78.5°C (-109.3°F)
Critical temperature : 30.9°C (87.6°F)
Vapor pressure : 830 (psig)
Vapor density : 1.53 (Air = 1) Liquid Density@BP: Solid density = 97.5 lb/ft3 (1562 kg/m3)
Specific Volume (ft ³/lb) : 8.7719
Gas Density (lb/ft ³) : 0.114

Section 10. Stability and reactivity

Stability and reactivity : The product is stable.
Hazardous decomposition products : Under normal conditions of storage and use, hazardous decomposition products should not be produced.
Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 11. Toxicological information

Toxicity data

Product/ingredient name	Result	Species	Dose	Exposure
carbon dioxide	LC50 Inhalation Gas.	Rat	470000 ppm	30 minutes

IDLH : 40000 ppm
Chronic effects on humans : May cause damage to the following organs: lungs, cardiovascular system, skin, eyes, central nervous system (CNS).
Other toxic effects on humans : No specific information is available in our database regarding the other toxic effects of this material to humans.

Specific effects

Carcinogenic effects : No known significant effects or critical hazards.
Mutagenic effects : No known significant effects or critical hazards.
Reproduction toxicity : No known significant effects or critical hazards.

Section 12. Ecological information

Aquatic ecotoxicity

Not available.

Toxicity of the products of biodegradation : not available

Environmental fate : Not available.

Environmental hazards : No known significant effects or critical hazards.

Toxicity to the environment : Not available.

Section 13. Disposal considerations

Product removed from the cylinder must be disposed of in accordance with appropriate Federal, State, local regulation.Return cylinders with residual product to Airgas, Inc.Do not dispose of locally.

UPCF (Rev. 12/2007)

Material Safety Data Sheet

Acetylene

Section 1. Chemical product and company identification

Product name	:	Acetylene
Supplier	:	AIRGAS INC., on behalf of its subsidiaries 259 North Radnor-Chester Road Suite 100 Radnor, PA 19087-5283 1-610-687-5253
Product use	:	Synthetic/Analytical chemistry.
Synonym	:	acetylen; acetylene ; ethine; ethyne; narcylen
MSDS #	:	001001
Date of Preparation/Revision	:	**5/11/2011.**
In case of emergency	:	1-866-734-3438

Section 2. Hazards identification

Physical state	:	Gas.
Emergency overview	:	WARNING! FLAMMABLE GAS. MAY CAUSE FLASH FIRE. MAY CAUSE TARGET ORGAN DAMAGE, BASED ON ANIMAL DATA. CONTENTS UNDER PRESSURE. Keep away from heat, sparks and flame. Do not puncture or incinerate container. May cause target organ damage, based on animal data. Use only with adequate ventilation. Keep container closed. Contact with rapidly expanding gases can cause frostbite.
Target organs	:	May cause damage to the following organs: lungs, upper respiratory tract, central nervous system (CNS).
Routes of entry	:	Inhalation

Potential acute health effects

Eyes	:	Contact with rapidly expanding gas may cause burns or frostbite.
Skin	:	Contact with rapidly expanding gas may cause burns or frostbite.
Inhalation	:	Acts as a simple asphyxiant.
Ingestion	:	Ingestion is not a normal route of exposure for gases

Potential chronic health effects

Chronic effects	:	May cause target organ damage, based on animal data.
Target organs	:	May cause damage to the following organs: lungs, upper respiratory tract, central nervous system (CNS).
Medical conditions aggravated by over-exposure	:	Pre-existing disorders involving any target organs mentioned in this MSDS as being at risk may be aggravated by over-exposure to this product.

See toxicological information (Section 11)

Section 3. Composition, Information on Ingredients

Name	CAS number	% Volume	Exposure limits
Acetylene	74-86-2	100	**NIOSH REL (United States, 6/2009).** CEIL: 2662 mg/m³ CEIL: 2500 ppm

Section 4. First aid measures

No action shall be taken involving any personal risk or without suitable training.If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus.It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

Eye contact : Check for and remove any contact lenses. Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical attention immediately.

Skin contact : In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. To avoid the risk of static discharges and gas ignition, soak contaminated clothing thoroughly with water before removing it. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention immediately.

Frostbite : Try to warm up the frozen tissues and seek medical attention.

Inhalation : Move exposed person to fresh air. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention immediately.

Ingestion : As this product is a gas, refer to the inhalation section.

Section 5. Fire-fighting measures

Flammability of the product : Flammable.

Auto-ignition temperature : 305°C (581°F)

Flash point : Closed cup: -18.15°C (-0.7°F).

Flammable limits : Lower: 2.5% Upper: 100%

Products of combustion : Decomposition products may include the following materials:
carbon dioxide
carbon monoxide

Fire hazards in the presence of various substances : Extremely flammable in the presence of the following materials or conditions: open flames, sparks and static discharge, heat and oxidizing materials.

Fire-fighting media and instructions : In case of fire, use water spray (fog), foam or dry chemical.

In case of fire, allow gas to burn if flow cannot be shut off immediately. Apply water from a safe distance to cool container and protect surrounding area. If involved in fire, shut off flow immediately if it can be done without risk.

Contains gas under pressure. Flammable gas. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions : Immediately contact emergency personnel. Keep unnecessary personnel away. Use suitable protective equipment (section 8). Shut off gas supply if this can be done safely. Isolate area until gas has dispersed.

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Methods for cleaning up : Immediately contact emergency personnel. Stop leak if without risk. Use spark-proof tools and explosion-proof equipment. Note: see section 1 for emergency contact information and section 13 for waste disposal.

Section 7. Handling and storage

Handling : Use only with adequate ventilation. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. High pressure gas. Do not puncture or incinerate container. Use equipment rated for cylinder pressure. Close valve after each use and when empty. Keep container closed. Keep away from heat, sparks and flame. To avoid fire, eliminate ignition sources. Protect cylinders from physical damage; do not drag, roll, slide, or drop. Use a suitable hand truck for cylinder movement.

Storage : Keep container in a cool, well-ventilated area. Keep container tightly closed and sealed until ready for use. Avoid all possible sources of ignition (spark or flame). Segregate from oxidizing materials. Cylinders should be stored upright, with valve protection cap in place, and firmly secured to prevent falling or being knocked over. Cylinder temperatures should not exceed 52 °C (125 °F).

Section 8. Exposure controls/personal protection

Engineering controls : Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.

Personal protection

Eyes : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists or dusts.

Skin : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

The applicable standards are (US) 29 CFR 1910.134 and (Canada) Z94.4-93

Hands : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.

Personal protection in case of a large spill : Self-contained breathing apparatus (SCBA) should be used to avoid inhalation of the product.

Product name

Ethyne

NIOSH REL (United States, 6/2009).
CEIL: 2662 mg/m³
CEIL: 2500 ppm

Consult local authorities for acceptable exposure limits.

Section 9. Physical and chemical properties

Molecular weight : 26.04 g/mole

Molecular formula : C2-H2

Melting/freezing point : Sublimation temperature: -81.8°C (-115.2 to °F)

Critical temperature : 35.3°C (95.5°F)

Vapor pressure : 635 (psig)

Vapor density : 0.907 (Air = 1)

Specific Volume (ft ³/lb) : 14.7058

Gas Density (lb/ft ³) : 0.0691 (-80°C / -112 to °F)

Section 10. Stability and reactivity

Stability and reactivity : The product is stable.

Incompatibility with various substances : Extremely reactive or incompatible with the following materials: oxidizing materials.

Hazardous decomposition products : Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Hazardous polymerization : Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 11. Toxicological information

Toxicity data

Chronic effects on humans : May cause damage to the following organs: lungs, upper respiratory tract, central nervous system (CNS).

Other toxic effects on humans : No specific information is available in our database regarding the other toxic effects of this material to humans.

Specific effects

Carcinogenic effects : No known significant effects or critical hazards.

Mutagenic effects : No known significant effects or critical hazards.

Reproduction toxicity : No known significant effects or critical hazards.

Section 12. Ecological information

Aquatic ecotoxicity

Not available.

Products of degradation : Products of degradation: carbon oxides (CO, CO_2) and water.

Environmental fate : Not available.

Environmental hazards : This product shows a low bioaccumulation potential.

Toxicity to the environment : Not available.

Section 13. Disposal considerations

Product removed from the cylinder must be disposed of in accordance with appropriate Federal, State, local regulation.Return cylinders with residual product to Airgas, Inc.Do not dispose of locally.

UPCF (Rev. 12/2007)

MATERIAL SAFETY DATA SHEET FOR ODORIZED PROPANE

1. Chemical Product and Company Identification

Product Name: Odorized Commercial Propane
Chemical Name: Propane
Chemical Family: Paraffinic Hydrocarbon
Formula: C_3H_8
Synonyms: Dimethylmethane, LP-Gas, Liquefied Petroleum Gas (LPG), Propane, Propyl Hydride

Name & Address:
AmeriGas Propane, L.P.
P. O. Box 965
Valley Forge, PA. 19482

Transportation Emergency Number:
CHEMTREC 1-800-424-9300

For General Information, Call:
1-610-337-1000, Safety Dept.

2. Composition / Information on Ingredients

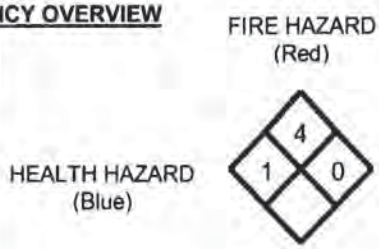
INGREDIENT NAME /CAS NUMBER	PERCENTAGE	OSHA PEL	ACGIH TLV
Propane / 74-98-6	87.5 -100		Simple asphyxiant
Ethane / 74-84-0	0 - 7.0	1,000 ppm	Simple asphyxiant
Propylene / 115-07-1	0 - 5.0		Simple asphyxiant
Butanes / 106-97-8	0 - 2.5		Simple asphyxiant
Ethyl Mercaptan / 75-08-1	0 - 50 ppm	0.5 ppm	0.5 ppm

WARNING: The intensity of the chemical odorant (e.g., ethyl mercaptan) may "fade" or diminish due to chemical oxidation, adsorption or absorption. Individuals with nasal perception problems may not be able to smell the odorant. Leaking propane from underground gas lines may lose its odor as it passes through certain soils. No odorant is effective 100% of the time. Therefore, circumstances can exist when individuals are in the presence of leaking propane and not be alerted by the smell. Contact AmeriGas for more information about odor, propane gas detectors and other safety considerations associated with the handling, storage and use of propane.

3. Hazards Identification

EMERGENCY OVERVIEW

DANGER! Flammable liquefied gas under pressure. Keep away from heat, sparks, flame, and all other ignition sources. Vapor replaces oxygen available for breathing and may cause suffocation in confined spaces. Use only with adequate ventilation. Reliance upon detection of odor may not provide adequate warning of potentially hazardous concentrations. Vapor is heavier than air; may collect at low levels. Liquid can cause freeze burn similar to frostbite. Do not get liquid in eyes, on skin, or on clothing. Avoid breathing vapor. Keep service valve closed when not in use.



Minimal 0 Moderate 2 Severe 4
Slight 1 Serious 3 *(Ref. NFPA 704)

POTENTIAL HEALTH EFFECTS INFORMATION

ROUTES OF EXPOSURE:

Inhalation: Asphyxiation. Before suffocation could occur, the lower flammability limit of propane in air would be exceeded, possibly causing both an oxygen-deficient and explosive atmosphere. Exposure to concentrations >10% may cause dizziness. Exposure to atmospheres containing 19% or less oxygen will bring about unconsciousness without warning. Lack of sufficient oxygen may cause serious injury or death.
Eye Contact: Contact with liquid can cause freezing of tissue.
Skin Contact: Contact with liquid can cause frostbite.
Skin Absorption: None.
Ingestion: Ingestion is not expected to occur in normal use. However, liquid can cause freeze burn similar to frostbite.

CHRONIC EFFECTS: None.

CARCINOGENICITY: Propane is not listed by NTP, OSHA or IARC.

4. First Aid Measures

INHALATION: Individuals suffering from lack of oxygen should be removed to fresh air. If victim is not breathing, administer artificial respiration. If breathing is difficult, administer oxygen. Obtain immediate medical assistance.

EYE CONTACT: Gently flush eyes with lukewarm water. Obtain immediate medical assistance.

SKIN CONTACT: Remove saturated clothes, shoes and jewelry. Immerse affected area in lukewarm water not exceeding 105° F. Keep immersed. Obtain immediate medical assistance.

INGESTION: If swallowed, obtain immediate medical assistance.

5. Fire-Fighting Measures

FLASH POINT: -156°F (-104°C) **AUTOIGNITION**: 842°F (432°C)

IGNITION TEMPERATURE IN AIR: 920°F to 1120°F (493°C to 549°C)

FLAMMABLE LIMITS IN AIR (% by volume): Lower: 2.15% Upper: 9.6%

EXTINGUISHING MEDIA: Dry chemical, CO_2, water spray or fog for surrounding area. Do not attempt to extinguish fire until propane source is isolated.

SPECIAL FIRE-FIGHTING INSTRUCTIONS: Evacuate all unnecessary personnel from the area. Allow only properly trained and protected emergency response personnel in area. A NIOSH approved self-contained breathing apparatus may be required. If gas flow cannot be shut off, do not attempt to extinguish fire. Allow fire to burn itself out. Use high volume water supply to cool exposed pressure containers and nearby equipment. Approach a flame-enveloped container from the sides, never from the ends. Use extreme caution when applying water to a container that has been exposed to heat or flame for more than a short time. For uncontrollable fires and/or when flame is impinging on container, withdraw all personnel and evacuate vicinity immediately.

UNUSUAL FIRE AND EXPLOSION HAZARDS: Propane is heavier than air and can collect in low areas. Flash back along a vapor trail is possible. Pressure in a container can build up due to heat; and, container may rupture suddenly and violently without warning if pressure relief devices fail to function properly. If flames are against the container, withdraw immediately on hearing a rising sound, if venting increases in volume or intensity or if there is discoloration of the container due to fire. Propane released from a properly functioning relief valve on an overheated container can also become ignited.

HAZARDOUS COMBUSTION PRODUCTS: None.

6. Accidental Release Measures

IF MATERIAL IS RELEASED OR SPILLED: Evacuate the immediate area. Eliminate any possible sources of ignition and provide maximum ventilation. Shut off source of propane, if possible. If leaking from container or valve, contact your supplier or AmeriGas immediately.

7. Handling and Storage

HANDLING PRECAUTIONS: Propane vapor is heavier than air and can collect in low areas that are without sufficient ventilation. Conduct system checks for leaks with a leak detector or solution, never with flame. Make certain the container service valve is shut off prior to connecting or disconnecting. If container valve does not operate properly, discontinue use and contact AmeriGas. Never insert an object (e.g., wrench, screwdriver, pry bar, etc.) into pressure relief valve or cylinder valve cap openings. Do not drop or abuse cylinders. Never strike an arc on a gas container or make a container part of an electrical circuit. See Section 16, "OTHER INFORMATION", for additional precautions.

STORAGE PRECAUTIONS: Store in a safe, authorized location (outside, detached storage is preferred) with adequate ventilation. Specific requirements are listed in NFPA 58, LP-GAS CODE. Isolate from heat and ignition sources. Containers should never be allowed to reach temperature exceeding 125°F (52°C). Isolate from combustible materials. Provide separate storage locations for other compressed and flammable gases. Propane containers should be separated from oxygen cylinders or other oxidizers by a minimum distance of 20 feet, or by a barrier of non-combustible material at least 5 feet high having a fire rating of at least 1/2 hour. Full and empty cylinders should be segregated. Keep cylinders in an upright position at all times so that each pressure relief valve communicates with the vapor space. Keep container valve closed and plugged or capped when not in use. Install protective caps when cylinders are not connected for use. Empty containers retain some residue and should be treated as if they were full.

8. Exposure Control / Personal Protection

ENGINEERING CONTROLS

Ventilation: Provide ventilation adequate to ensure propane does not reach a flammable mixture.

RESPIRATORY PROTECTION

General Use: None.

Emergency Use: If concentrations are high enough to warrant supplied-air or NIOSH self-contained breathing apparatus, then the atmosphere may be flammable (See Section 5). Appropriate precautions must be taken regarding flammability.

PROTECTIVE CLOTHING: Avoid skin contact with liquid propane because of possibility of freeze burn. Wear gloves and protective clothing that are impervious to the product for the duration of the anticipated exposure.

EYE PROTECTION: Safety glasses, goggles or face shields are recommended when handling cylinders.

OTHER PROTECTIVE EQUIPMENT: Safety shoes are recommended when handling cylinders.

9. Physical and Chemical Properties

BOILING POINT: @ 14.7 psia = -44° F (@1.00 atm.pressure = -42°C)
SPECIFIC GRAVITY OF VAPOR (Air = 1) at 60° F (15.56°C): 1.50
SPECIFIC GRAVITY OF LIQUID (Water = 1) at 60° F: 0.504
VAPOR PRESSURE: @ 70° F (20°C) = 127 psig; @ 105° F (45°C) = 210 psig; @ 130°F (55°C) = 287 psig
EXPANSION RATIO (From liquid to gas @ 14.7 psia): 1 to 270
SOLUBILITY IN WATER: Slight, 0.1 to 1.0%
APPEARANCE AND ODOR: A colorless and tasteless gas at normal temperature and pressure. An odorant (ethyl mercaptan) is added to provide a strong unpleasant odor. Should a propane-air mixture reach the lower limits of flammability, the ethyl mercaptan concentration will be approximately 0.5 ppm in air.

ODORANT WARNING: Odorant is added to aid in the detection of leaks. One common odorant is ethyl mercaptan, CAS No. 75-08-1. Odorant has a foul smell. The ability of people to detect odors varies widely. Also, the odor level can be reduced by certain chemical reactions with material in the propane system or when fugitive propane gas from underground leaks passes through certain soils. No odorant will be 100% effective in all circumstances. If the presence of the odorant is not obvious, notify AmeriGas immediately.

10. Stability and Reactivity

STABILITY: Stable.
Conditions to Avoid: Keep away from high heat, strong oxidizing agents and sources of ignition.
REACTIVITY:
Hazardous Decomposition Products: Under fire conditions, fumes, smoke, carbon monoxide, aldehydes and other decomposition products. In most applications where there is inadequate venting to the outside air, incomplete combustion will produce carbon monoxide (a toxic gas) and potentially develop concentrations that can create a serious health hazard.
Hazardous Polymerization: Will not occur.

11. Toxicological Information

Propane is non-toxic and is a simple asphyxiant. It has slight anesthetic properties. Higher concentrations may cause dizziness.

IRRITANCY OF MATERIAL: None.
SENSITIZATION TO MATERIAL: None
REPRODUCTIVE EFFECTS: None
MUTAGENICITY: None
TERATOGENICITY: None
SYNERGISTIC MATERIALS: None

12. Ecological Information

No adverse ecological effects are expected. Propane does not contain any Class I or Class II ozone-depleting chemicals (40 CFR Part 82). Propane is not listed as a marine pollutant by DOT (49 CFR Part 171).

13. Disposal Considerations

WASTE DISPOSAL METHOD: Do not attempt to dispose of residual or unused product in the container; return it to your supplier or contact AmeriGas for safe disposal. Residual product within a process system may be burned at a controlled rate if a suitable burning unit is available on site, and is done in accordance with federal, state and local regulations.

14. Transport Information

DOT SHIPPING NAME: Liquefied Petroleum Gas
IDENTIFICATION NUMBER: UN 1075
IMO SHIPPING NAME: Propane
IMO IDENTIFICATION NUMBER: UN 1978
HAZARD CLASS: 2.1 (Flammable Gas)
PRODUCT RQ: None
SHIPPING LABEL (S): Flammable Gas
PLACARD (WHEN REQUIRED): Flammable Gas
SPECIAL SHIPPING INFORMATION: Container must be transported in a well-ventilated vehicle, secured, and in a position such that the pressure relief device is in communication with the vapor space.

15. Regulatory Information

The following information concerns U.S. Federal regulatory requirements potentially applicable to this product. Not all such requirements are identified. Users of this product are responsible for their own regulatory compliance on a federal, state [provincial] and local level.

U.S. FEDERAL REGULATIONS

Environmental Protection Agency (EPA)

Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) - 40 CFR Parts 117 and 302

Reportable Quantity (RQ): None

Superfund Amendment and Reauthorization Act (SARA)

- Sections 302/304: Relates to emergency planning on threshold planning quantities (TPQ) and release reporting based on reportable quantities (RQ) of EPA's extremely hazardous substances (40 CFR Part 355).

  Extremely Hazardous Substances: None **Threshold Planning Quantity (TPQ):** None

- Sections 311/312: Relates to submission of material safety data sheets (MSDSs) and chemical inventory reporting with identification of EPA-defined hazard classes (40 CFR Part 370). The hazard classes for this product are:
  IMMEDIATE: No **PRESSURE:** Yes **DELAYED:** No **REACTIVITY:** No **FLAMMABLE:** Yes

- Section 313: Relates to submission of annual reports of release of toxic chemicals that appear in 40 CFR Part 372. Propane does not require reporting under Section 313.

Toxic Substance Control Act (TSCA)

Propane is listed on the TSCA inventory.

Occupational Safety and Health Administration (OSHA)

The following 29 CFR Parts may apply to propane:

29 CFR 1910.110: *Storage and Handling of Liquefied Petroleum Gases*
29 CFR 1910.119: *Process Safety Management of Highly Hazardous Chemicals*
29 CFR 1910.1200: *Hazardous Communications*

Food and Drug Administration (FDA)

21 CFR 184.1655: Generally recognized as safe (GRAS) as a direct human food ingredient when used as a propellant, aerating agent and gas.

16. Other Information

SPECIAL PRECAUTIONS: Use piping and equipment adequately designed to withstand pressure to be encountered. NFPA 58, LP-GAS CODE and OSHA 29 CFR 1910.10 require that all persons employed in handling LP-gases be trained in proper handling and operating procedures, which the employer shall document. Contact your propane supplier or AmeriGas to arrange for the required training. Allow only trained and qualified persons to install and service propane containers and systems.

BUSINESS EMERGENCY/CONTINGENCY PLAN COVER SHEET

I. IDENTIFICATION

For Dept Use Only – Log In/Date Stamp

RECEIVED
MAR 08 2012
S.B. CO. FIRE DEPT.

FACILITY ID # F A

BUSINESS NAME (Same as FACILITY NAME or DBA): Full Circle

BUSINESS SITE ADDRESS: 4831 Newton Rd | CITY: Yucca Valley | ZIPCODE: 92284

II. SUBMISSION CHECKLIST

(Complete this Section if submitting an entire Business Emergency/Contingency Plan whether new or revised)

Submission Checklist ☒

- ☐ Business Activities Form
- ☐ Business Owner/Operator Identification Form
- ☐ Supplemental Emergency Contact Page
- ☐ Emergency Response Plans and Procedures
- ☐ Hazardous Materials Inventory Summary Form for the facility listing materials (including wastes) by item number
- ☐ One Hazardous Materials Inventory Form for each hazardous material (including wastes) which meet reporting criteria
- ☐ Material Safety Data Sheets attached to the inventory form of each material not listed in Appendix I
- ☐ Facility map (using grid form provided) consisting of all required features including the location of each inventoried item
- ☐ Site map (using grid form provided) consisting of all required features including surrounding facilities and areas.
- ☐ Area map - photocopied city map with location of site indicated
- ☐ Owner/Operator has signed and dated the plan and all required individual pages of the plan
- ☐ Submit the original and 1 copy to the Hazardous Materials Division. One is for distribution to the local fire jurisdiction
- ☐ ***Retain one copy of the business emergency/contingency plan at the facility.***

III. UPDATE/CERTIFICATION

(Complete this Section if submitting a partial update or re-certifying an existing Plan)

Check the appropriate boxes below and sign the certification statement. Submit 2 copies of all update information.

- ☐ Please incorporate the following into my Business Emergency/Contingency Plan
  - ☐ New Business Owner/Operator Identification Form
  - ☐ New Inventory Forms and new Inventory Summary Form (and maps, if affected)
  - ☐ New Supplemental Emergency Contact Page
- ☐ Other: _____

Brief explanation of changes: _____

- ☒ There have been no changes to the inventory. In place of submitting the annual inventory, I hereby attest to all of the following:
  - The information contained in the inventory most recently submitted to the CUPA is complete, accurate and up to date.
  - There has been no change in the quantity, storage, or handling of hazardous materials (including waste) reported in the most recently submitted inventory.
  - No hazardous materials (including waste) subject to inventory requirements are being handled that are not listed on the most recently submitted inventory.
  - This certification is not being made to meet annual inventory submission requirements of EPCRA. (EPCRA requires complete annual submission)

IV. SIGNATURE

(Complete this Section for all submissions)

Certification - Based on my inquiry of those individuals responsible for obtaining the information, I certify under penalty of law that I have personally examined and am familiar with the information submitted on this document and believe the information is true, accurate and complete.

II. SUBMISSION CHECKLIST

(Complete this Section if submitting an entire business emergency/contingency plan whether new or revised)

Submission Checklist ☒

Items with an ' * ' are considered "Inventory" under State disclosure laws

- ☒ * Business Activities Form
- ☒ * Business Owner/Operator Identification Form
- ☒ * Supplemental Emergency Contact Page
- ☒ Emergency Response Plans and Procedures
- ☒ * Hazardous Materials Inventory Summary Form for the facility listing materials (including wastes) by item number.
- ☒ * One Hazardous Materials Inventory Form for each hazardous material (including wastes) which meet reporting criteria
- ☒ * Material Safety Data Sheets attached to the inventory form of each material not listed in Appendix I.
- ☒ * Facility map (using grid form provided) consisting of all required features including the location of each inventoried item.
- ☒ Site map (using grid form provided) consisting of all required features including surrounding facilities and areas.
- ☒ Area map - photocopied city map with location of site indicated
- ☒ Owner/Operator has signed and dated the plan and all required individual pages of the plan.
- ☒ Submit 2 copies to the Hazardous Materials Division. One is for distribution to the local fire jurisdiction.
- ☒ ***Retain one copy of the business emergency/contingency at the facility.***

III. UPDATE/CERTIFICATION

(Complete this Section if submitting a partial update or re-certifying an existing Plan)

Check the appropriate boxes below and sign the certification statement. Submit 2 copies of all update information.

☐ Please incorporate the following into my business emergency/contingency plan.

- ☐ New Business Owner/Operator Identification Form
- ☐ New Inventory Forms and new Inventory Summary Form (and maps, if affected).
- ☐ New Supplemental Emergency Contact Page.

☐ Other: _____

Brief explanation of changes: _____

☐ There have been no changes to the inventory. In place of submitting the annual inventory, I hereby attest to all of the following:

- The information contained in the inventory most recently submitted to the CUPA is complete, accurate and up to date.
- There has been no change in the quantity, storage, or handling of hazardous materials (including waste) reported in the most recently submitted inventory.
- No hazardous materials (including waste) subject to inventory requirements are being handled that are not listed on the most recently submitted inventory.
- This certification is not being made to meet annual inventory submission requirements of EPCRA. (EPCRA requires complete annual submission)

IV. SIGNATURE

(Complete this Section for all submissions)

Certification - Based on my inquiry of those individuals responsible for obtaining the information, I certify under penalty of law that I have personally examined and am familiar with the information submitted on this document and believe the information is true, accurate and complete.

II. ACTIVITIES DECLARATION

Does your facility...		If YES, please complete these portions of the application...
A. HAZARDOUS MATERIALS		
1. Have onsite (for any purpose) hazardous materials at or above 55 gallons for liquids, 500 pounds for solids or 200 cubic feet for compressed gases; or the applicable Federal threshold quantity for an extremely hazardous substance; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70; or handle ANY amount of Class 1 or 2 explosives; or ANY amount Category I or II pesticides.	☒ YES ☐ NO	**BUSINESS EMERGENCY/CONTINGENCY PLAN** (Used in place of OES Form 2730 and 2731)
2. Have extremely hazardous substances above threshold planning quantities or hazardous substances in quantities greater than 10,000 lbs (except retail gas stations up to 75,000 gallons of gasoline or 100,000 gallons of diesel fuel in upgraded USTs) or otherwise subject to EPCRA 311-312 reporting requirements.	☐ YES ☒ NO	**BUSINESS EMERGENCY/CONTINGENCY PLAN** (Must file annually according to EPCRA instructions to meet EPCRA SARA Title III Tier 2 reporting requirements - see instructions, pg i.)
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release Prevention Program (CalARP)?	☐ YES ☒ NO	**BUSINESS EMERGENCY/CONTINGENCY PLAN** (Used in place of OES Form 2730 and 2731) **CalARP REGISTRATION FORM** (See Section V of BP guidelines and forms)
C. UNDERGROUND STORAGE TANKS (USTs)		
1. Own or operate underground storage tanks?	☐ YES ☒ NO	**UST FACILITY** **UST TANK (Pages 1 and 2)** (One set per tank)
2. Intend to upgrade existing or install new USTs?	☐ YES ☒ NO	**UST FACILITY** **UST TANK (Pages 1 and 2)** (One set per tank) **UST INSTALLATION – CERTIFICATE OF COMPLIANCE** (one page per tank)
3. Need to report closing a UST?	☐ YES ☒ NO	**UST FACILITY** **UST TANK (Pages 1 and 2)** (One set per tank) **HAZARDOUS WASTE TANK CLOSURE CERTIFICATION**
D. ABOVE GROUND PETROLEUM STORAGE TANKS (ASTs) Store greater than 1320 gallons of petroleum products (new or used) in aboveground tanks or containers?	☐ YES ☒ NO	**IF YES, PREPARE AND MAINTAIN A SPILL PREVENTION CONTROL & COUNTERMEASURES PLAN (SPCC) TO ADDRESS RELEASES FROM ABOVEGROUND STORAGE OF PETROLEUM AT YOUR FACILITY.**
E. HAZARDOUS WASTE		
1. Generate ANY amount of hazardous waste?	☒ YES ☐ NO	**EPA ID NUMBER—provide at the top of this page** **BUSINESS EMERGENCY/CONTINGENCY PLAN** (Used in place of OES Form 2730 and 2731)
2. Recycle more than 100 kg/month of excluded or exempted recyclable materials (per CHSC §25143.2)?	☐ YES ☒ NO	**RECYCLABLE MATERIALS REPORT (Pages 1 and 2)**
3. Treat hazardous waste on site?	☐ YES ☒ NO	**ONSITE HAZARDOUS WASTE TRT - FACILITY** **ONSITE HAZARDOUS WASTE TRT - UNIT** (one per unit)
4. Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO	**CERTIFICATION OF FINANCIAL ASSURANCE**
5. Consolidated hazardous waste generated at a remote site?	☐ YES ☒ NO	**REMOTE WASTE/CONSOLIDATED SITE ANNUAL NOTIFICATION**
6. Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	☐ YES ☒ NO	**IF YES, OBTAIN FEDERAL EPA ID NUMBER, FILE BIENNIEL REPORT (EPA FORM 8700-13A/B) WITH USEPA, AND SATISFY REQUIREMENTS FOR RCRA LARGE QUANTITY GENERATOR.**

Service Request ID: SR0005368
Facility ID: FA0009441

The Business Emergency/Contingency Plan was received on January 10, 2005 by the Hazardous Materials Division.

For future reference, please note the following Business Emergency/Contingency Plan requirements:

1. The contents of this plan are subject to field verification and a current copy of this plan must be available on site.
2. This plan contains important information on preventing, responding to, and reporting releases of hazardous materials/waste. Employees are expected to be familiar with these portions of the plan.
3. The plan is available for public inspection through this Division, with the exception of substantiated trade secrets, the separate confidential emergency contact page, and maps specifying the precise storage locations of hazardous materials/wastes.
4. Two copies of the plan and/or update is required to be filed with this Division. The second copy will be forwarded to the local fire jurisdiction.
5. The annual deadline for submission of business plan inventory is March 1st. Please note that EPA does not allow EPCRA facilities to file a recertification in place of annual inventory. Also, this Division typically does not send individual notices of this statutory deadline, so please note the March 1st date for future annual submissions.

Within 30 days of any of the following events, an amendment to the Business Emergency/Contingency Plan must be filed:

1. A 100 percent or more increase in quantity of a previously disclosed item.
2. Any handling of a previously undisclosed hazardous material (including waste) required to be inventoried or elimination of a previously inventoried item.
3. Change of business address, business ownership, or business name.
4. Change of emergency contact information or other site conditions that may significantly affect emergency response.

For more information please consult the latest version of the San Bernardino County CUPA Business Emergency/Contingency Plan guidelines and forms, available through our website at www.sbcfire.org or by calling this office at (909) 386-8401.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:		*Coordinates:*

APPENDIX F

Vapor Encroachment Screening Matrix

Phase I ESA Vapor Encroachment Conditions (VEC) matrix includes a (1) Search Radius Test, (2) Chemicals of Concern Test (COC), and (3) a Critical Distance Test [1].

(1) Search Radius Test: Are there any known or suspect contaminated properties in the primary area of concern within the corresponding search radii?

☐ Yes ☒ No — If ***No***, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If ***Yes***, then:

(2) Chemicals of Concern Test: Are COC likely to be present within the area of concern for those known or suspect contaminated sites identified based on the Search Distance Test?

☐ Yes ☐ No — If ***No***, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If ***Yes***, then:

(3) Critical Distance Test: A plume test to determine whether or not COC in the contaminated plume(s) may be within the critical distance.

☐ Yes ☐ No — (3a) Is information related to the contaminated(s) plume available (i.e., isoconcentration maps, site drawings, etc.)?

(3b) If ***No***, then a VEC cannot be ruled out; check ***Yes*** in #4 below indicating it is likely a VEC exists. If ***Yes***, then:

☐ Yes ☐ No — (3c) Is the site less than 100 feet to the nearest edge of a contaminated [non-petroleum hydrocarbon] plume(s)? If ***Yes***, then check ***Yes*** in #4 below indicating it is likely a VEC exists.

☐ Yes ☐ No — (3d) Is the site less than 30 feet to the nearest edge of a dissolved petroleum hydrocarbon plume(s)? If ***Yes***, then check ***Yes*** in #4 below indicating it is likely a VEC exists.

If the distance from the nearest edge of a contaminated plume to the nearest existing or planned structure on the site is less than 100 feet for non-petroleum hydrocarbon COC, or less than 30 feet for dissolved petroleum hydrocarbons, then it is presumed that a VEC *currently* exists beneath the site. If the distance from the nearest edge of the contaminated plume is greater than or equal to 100 feet for non-petroleum hydrocarbons, or 30 feet for dissolved petroleum hydrocarbon chemicals of concern, then it is presumed unlikely that a VEC *currently* exists beneath the site.

(4) Is it likely that a VEC *currently* exists beneath the site?

☐ Yes ☒ No — If ***No***, then the VEC screening is complete and no further investigation is recommended at this time. If ***Yes***, Ninyo & Moore recommends performing additional assessment, such as a Tier 2 VEC assessment according to ASTM E 2600-15.

[1] Based on guidance presented in the ASTM E 2600-15 Standard.

APPENDIX G

Qualification of the Environmental Professionals

Gabriel A. Haro, GIT, LRC ST

Senior Staff Geologist

EDUCATION

B.S., Geology, 2018, University of California Davis

CERTIFICATIONS

GIT 1655 (California)

CDPH Lead-Related Construction Sampling Technician, No. 9869

AHERA Building Inspector, No. 0522BII190562

40-Hour OSHA HAZWOPER Certification (with annual updates)

As a Senior Staff Geologist, Gabriel manages projects (e.g., Phase I ESAs); prepares technical reports; provides field services (e.g., groundwater/soil/soil vapor sampling, construction oversight, drilling, well installation and development, etc.); schedules and works with sub-consultants onsite (e.g., drillers, utility locaters, etc.); and assists senior staff with other project-related tasks. Gabriel also performs Hazardous Building Materials (HBMs) Surveys to identify HBMs within buildings and prepares tables/figures for the final report.

REPRESENTATIVE EXPERIENCE

San Diego Unified School District, Grant Elementary School Burned Waste Dump, San Diego, California: Staff Geologist for a burned waste removal project at Grant Elementary School. Monitored the excavation of burned waste material and segregation of materials into waste and burned waste stockpiles to reduce disposal costs to offsite facilities, Class II and III landfills. Performed Community Health and Safety monitoring during excavation activities. Characterized the stockpiles for disposal and collected confirmation samples. Oversaw and documented the loading and transport of exported material.

San Diego Unified School District, Correia Middle School/Famosa Blvd Solar PV, San Diego, California: Staff Geologist for the Solar PV installation project at Correia Middle School. Provided oversight and implemented Community Health and Safety monitoring during trenching and drilling activities. Segregated excavated materials based off anticipated disposal requirements associated with Class II and Class III landfills. Characterized the stockpiles for disposal and collected confirmation samples. Oversaw and documented the loading and transport of exported material.

City of San Diego, Rose Canyon Operation Yard Phase II ESA, San Diego, California: Staff Geologist for a Phase II ESA at the Rose Canyon Operation Yard to evaluate the extent of diesel-impacted soil beneath a vehicle refueling island. One angled boring was advanced to vertical depth equivalent of approximately 10.5 feet and two soil samples were collected. Based on the findings of the investigation, diesel-impacted soil did not appear to extend vertically to the depths explored.

County of San Diego Department of Public Works, Cole Grade Road Bridge Over Keys Creek, Valley Center, California: Staff Geologist for the groundwater studies performed for the Cole Grade Road bridge replacement project. Provided support services for preparation of the Groundwater Dewatering Study and Groundwater Resources Investigation Reports and provided assistance with the following project tasks: geophysical surveying; drilling, soil and groundwater sampling, and chemical analysis; well installation and development; aquifer testing (e.g., slug, step and constant rate); and waste management and disposal (e.g., soil cuttings, fluids generated by well development and aquifer testing).

San Diego Unified School District, Bell Junior High School/Sweetwater II Landfill, San Diego, California: Staff Geologist for a project concerning post closure maintenance and the groundwater detection and evaluation monitoring program for thirteen groundwater wells at Bell Junior High School. Performs annual gauging and sampling and assists with preparing the annual reports summarizing the data and evaluating the trends.

Gabriel A. Haro
Senior Staff Geologist

Wayfarer Bread & Pastry, Property Purchase Phase I ESA, La Jolla, California: Senior Staff Geologist for a Phase I ESA performed for an approximately 0.1-acre property located in La Jolla, California. A release case was identified at an adjoining property so regulatory agency files were requested to ascertain the nature of the release, status of the cleanup, and potential impacts to the site. This assessment was performed in accordance with ASTM E1527-21 Standard Practice for ESAs and revealed no evidence of RECs in connection with the property.

Port of San Diego, National City Marine Terminal (NCMT) Electrical Line Installation, National City, California: Staff Geologist for the NCMT electrical line installation project. The project included the advancement of 33 hand-augered borings along 1,200 linear feet of proposed electrical trenches. Services included collection of discrete soil samples, preparation of a Health and Safety Plan, and preparation of a technical memorandum summarizing the sampling procedures and the analytical results.

Imperial County Office of Education, Agricultural Property Acquisition Phase I ESA, El Centro, California: Senior Staff Geologist for a Phase I ESA performed for an approximately 22-acre property, located along West McCabe Road in El Centro, California. The site was zoned for agricultural use and during the historical review, it was identified that the residential structure previously located at the site was lost to fire. Based on information obtained during the site reconnaissance, RECs included a suspected improperly abandoned well and burned debris/rubble located at the former building footprint. This assessment was performed in accordance with ASTM E1527-21 Standard Practice for ESAs and a Phase II ESA proposal is being prepared for the site.

Port of San Diego, Tenth Avenue Marine Terminal (TAMT) Phase III Electrical Distribution System Upgrade, San Diego, California: Staff Geologist for the TAMT electrical system upgrade project. The project included the advancement of seven drilled borings and 14 hand-augered borings along 6,500 linear feet of proposed electrical trenches. Services included collection of discrete soil samples, preparation of a Health and Safety Plan, and preparation of a technical memorandum summarizing the sampling procedures and the analytical results.

Otay Water District, Salt Creek Golf Course Phase I ESA, Chula Vista, California: Staff Geologist for a Phase I ESA performed for an approximately 164-acre property, located at the northern terminus of Hunte Parkway. Based on the historical records review and interviews, the property was used as a farmstead since at least 1928. The Otay Water District acquired 509 acres of property in 1970, which included the subject site and adjacent properties to the north, east, and west for recycled water disposal. At the time of the reconnaissance, the property was vacant and formerly occupied by a golf course. This assessment was performed in accordance with ASTM E1527-13 Standard Practice for ESAs and revealed two RECs in connection with the property.

County of San Diego Department of Public Works, Don Dussault Park Expansion Phase I ESA, Fallbrook, California: Staff Geologist for a Phase I ESA performed for an approximately 4.6-acre property, located on the east side of Alturas Road. Historical records indicated that the property functioned as an orchard from at least 1938 until the 1950s and remained undeveloped after the 1950s. Agricultural land was present in the general vicinity from until the 1970s (e.g., orchard, nursery, etc.). This assessment was performed in accordance with ASTM E1527-13 Standard Practice for ESAs and revealed no evidence of RECs in connection with the property.

Otay Water District, Salt Creek Golf Course Phase I ESA, Chula Vista, California: Staff Geologist for a Phase I ESA performed for an approximately 164-acre property, located at the northern terminus of Hunte Parkway. Based on the historical records review and interviews, the property was used as a farmstead since at least 1928. The Otay Water District acquired 509 acres of property in 1970, which included the subject site and adjacent properties to the north, east, and west for recycled water disposal. At the time of the reconnaissance, the property was vacant and formerly occupied by a golf course. This assessment was performed in accordance with ASTM E1527-13 Standard Practice for ESAs and revealed two RECs in connection with the property.

University of California, Irvine, Anza-Borrego Parcel Acquisition Phase I ESA, Borrego Springs, California: Staff Geologist for a Phase I ESA performed for an approximately 9.6-acre property, located west of the Tilting T Drive terminus. According to a historical review, the property remained undeveloped since as early as 1939. The property was apparently used by research groups who study the local flora and fauna and by recreational hikers. This assessment was performed in accordance with ASTM E1527-13 Standard Practice for ESAs and revealed no evidence of RECs in connection with the property.

Gabriel A. Haro

Senior Staff Geologist

County of Placer, Dowd Road at Coon Creek Bridge Replacement Project, Placer County, California: Construction Monitor for a bridge replacement project along Dowd Road in Placer County. The project required monitoring and oversight of the removal of live oak trees and willows prior to construction, and the installation of the Environmentally Sensitive Area perimeter fencing. This project also included pre-construction surveys for sensitive species and required that worker environmental awareness training be delivered to all construction personnel working onsite.

Sacramento Municipal Utility District (SMUD), Franklin Substation and Transmission Line Project, Sacramento County, California: Construction Monitor for a high-voltage transmission lines upgrade project to support the newly constructed Franklin Substation. The purpose of the project was to verify and document compliance with all avoidance and minimization measures as required by permits and the mitigation monitoring and reporting program. The project included pre-construction surveys for special-status species and the preparation of daily monitoring logs documenting monitoring activities and wildlife observations, including photo documentation.

Port of San Diego, 1220 Pacific Highway Phase I & II ESAs and HBMs Survey, San Diego, California: Staff Geologist for a Phase I ESA performed for a Navy-occupied property on the San Diego Bay waterfront. A prior release on the site and other environmental concerns identified during the Phase I review prompted the Phase II ESA which consisted of soil, groundwater, and soil vapor sampling at specific locations across the site. Additional services included sampling building materials to identify HBMs present in each of the site buildings. Activities included field services, report preparation, and project coordination.

East Bay Regional Park District (EBRPD), Seaborg Trail Culvert Replacement Project, Contra Costa County, California: Construction Monitor for the rehabilitation of the side slope along Seaborg Trail resulting from heavy storm damage in 2017. The project included monitoring construction of erosion control measures and performing pre-construction surveys.

Travis W. Meier, QISP

Principal Environmental Scientist

EDUCATION

M.S., Environmental & Earth Science, California State University, San Bernardino

B.S., Environmental & Earth Science, University of Redlands

REGISTRATIONS/CERTIFICATIONS

QISP No. 00213 (California)

OSHA 40 Hour Construction Certification

Mr. Meier has over over 22 years of environmental experience including environmental site assessments; investigation, assessment, and evaluation of hazardous materials; soil and groundwater contamination evaluations; and regulatory compliance. Mr. Meier has provided these services for a variety of public works clients, educational entities, and others.

REPRESENTATIVE EXPERIENCE

Fixed Base Operator (FBO) Facility, San Diego International Airport, Construction Monitoring Oversight, San Diego, San Diego County, California: Field Team Lead acting as the primary field team lead and inspector in relation to oversight of construction of a new private airplane service at the San Diego International Airport. Prior industrial operations on the property resulted in soil and groundwater contamination with potential sources remaining on the property. During his tenure on the project, Mr. Meier screened excavation soils, identified and directed segregation of impacted versus non-impacted soils to limit disposal/export costs, provided guidance and support in relation to the discovery and removal of an underground storage tank (UST), and provided oversight of application of vapor reducing products (Liquid Boot™) and the installation of a passive soil vapor mitigation system beneath structures. Following completion of construction, Mr. Meier and associated Kleinfelder staff, performed routine (semi-annual) sampling of vapors from both indoor air and also exhaust vents from the passive vapor mitigation system in accordance with regulator requirements. The soil vapor sampling requirements were discontinued after multiple rounds of sampling in circa 2018.

High Speed Rail, Burbank to Palmdale, Hazardous Materials Technical Study and EIR/EIS Section, Burbank, California: Lead Author acting as the lead/primary author for the Hazardous Material Technical Study and assisted with writing the associated section in the EIR/EIS document. The project consisted of evaluation of historical hazardous material release sites with potential impacts to a proposed rail line with several proposed alternatives.

County of San Diego Campus Redevelopment Phase 3, Crime Laboratory Environmental Services, San Diego County, California: Project Manager providing management, oversight, and coordination for characterization, delineation, and disposal of reuse of excavated impacted soil from the prior County Fleet Maintenance facility. Planned redevelopment of the site consisted of installation of a crime lab containing a subterranean evidence vault extending to an approximate excavation to a depth of thirty feet below ground surface. Impacted material was encountered during the initial excavation and consequently required delineation, assessment, and off-site disposal of approximately 30,000 cubic yards of impacted material. Coordination and management for export of the impacted material and observation of the excavation was performed using a team of Kleinfelder personnel. An on-site chemical laboratory was used during critical phases of the excavation for immediate characterization and waste disposal decisions and avoidance of excavation delays. over several months. Collected information was used to facilitate reuse of non-impacted material and keep the project on schedule and within budget. Soil vapor intrusion modeling was also performed based on historic and collected soil sample information to confirm the project did not pose an issue for occupants and soil vapor

mitigation was not necessary. In addition, National Pollution Discharge Elimination System groundwater sampling was performed during development of the site. Combined work on the project, including change orders, totals in excess of $360,000.00 to date. Close coordination of our work with the excavation contractor facilitated the excavation work to be completed ahead of schedule.

Caltrans District 11, On-Call, Multiple Provider, Hazardous Substances Emergency Services Contracts (11A2631/11A3007), San Diego and Imperial Counties, California: Deputy Contract Manager responsible for project management and coordination for on-call needed services in relation to emergency hazardous materials sampling, delineation, and disposal/reuse. To date, Work Requests (WRs) in relation to the contract has included multiple aerially deposited lead (ADL) characterization and reuse projects, a vibration monitoring and consultation project, multiple asbestos containing material (ACM) characterization, abatement oversight (areas under negative pressure and pipe removal), and disposal projects, update of multiple Spill, Prevention, Control, and Countermeasure (SPCC) Plans projects, and a soil characterization (via drilling and sample collection) project for relocation and reuse along the Pacific Ocean shoreline. Combined projects include over 40 WRs with a total value of approximately $814,000.00.

Caltrans District 11, Site Assessment Activities (Contracts 11A2340 and 11A2880), San Diego and Imperial Counties, California: Served multiple roles including Environmental Scientist, Project Manager, and Deputy Contract Manager on TOs under the related contracts. Managed and provided oversight of multiple TOs for ISAs and SI services, including preparing work plans, sampling and analysis plans, performance of assessments, and preparation of reports. Mr. Meier was the lead for the SR 94/I-805 HOV Connector Project which was a priority Caltrans project and involved both environmental and geotechnical components (completed). Work involved advancement of approximately 65 boreholes within median, shoulder, and adjacent surficial roadway locations requiring lane closures and usage of up to four drill-rigs concurrently in a high traffic area. The field work was completed ahead of schedule and below budget. Work took place on an extremely busy freeway, and Mr. Meier performed the environmental services safely and without incident. Combined projects include over 80 TOs totaling $5,980,617.31.

METRO, Stormwater and Industrial Wastewater Compliance Services, Los Angeles, California: Project Manager providing oversight, coordination, and sampling for over 20 industrial facilities located in Los Angeles, California. Oversight included management of monthly inspections, coordination and sample collection guidance for numerous sub-consultants during rain events, and related agency regulatory compliance work. Management was provided for a team of over 15 members to facilitate coordinated storm water sample collection.

1.2. Location:

The project site is located at the southeast corner of Sun Mesa Drive and Newton Lane in the Town of Yucca Valley, California. The project site consists of a single parcel that is formally identified by the County of San Bernardino as APN 0597-111-67. The parcel occupies approximately 4.34 acres of land and is undeveloped. Local surface gradients descend to the southeast at inclinations of approximately ten horizontal to one vertical (10H:1V) and less. The site is near the elevation of the adjacent properties and roadways and is located at approximately 34.1669 degrees north latitude and 116.4207 degrees west longitude (Figure 1). The subject property is bounded by Sun Mesa Drive to the north, undeveloped property to the east, commercial property to the south, and Newton lane to the west.

1.3 Proposed Development:

a) It is our understanding that the proposed project will consist of constructing a self-storage facility and a 400 square foot manager's office on the subject property. Concrete flatwork, landscape areas, and various associated site improvements are also anticipated. The new office building will be serviced by an onsite sewage disposal system consisting of a septic tank and leach lines.

1.4 Description of Site and Surroundings:

a) Overall surface gradients descend to the east at inclinations of ten horizontal to one vertical and less (10H:1V). The project site is located at an elevation of approximately 3,725 feet above mean sea level (MSL)[1].

[1] United States Geological Survey (USGS), 2021, Yucca Valley North Quadrangle, California-San Bernardino County, 7.5 Minute Series.

b) No natural ponding of water or surface seeps were observed at or near the site during our investigations conducted on December 3, 2024. Site drainage appears to be controlled via sheet flow and surface infiltration. The closest "blue line" stream is located approximately 0.35 miles to the northwest of the property (USGS, 2021).

c) It is assumed that the properties within the vicinity of the project site are utilizing individual on-site sewage disposal systems consisting of septic tanks and leach lines or seepage pits.

d) No water wells were identified on-site during our field investigation The site vicinity is serviced by the Hi-Desert Water District

e) No bedrock outcrops were observed on the subject property or in the immediate site vicinity. The underlying earth materials consists of fine to coarse-grained silty sand (SM) and sand (SW).

f) Bedrock was not encountered within the exploratory bores and test holes that were excavated to a maximum depth of approximately 21.5 feet bgs.

g) Groundwater was not encountered within our exploratory bores or test holes that extended to a maximum explored depth of approximately 21.5 feet bgs. Information regarding the approximate depth to groundwater provided by the California Department of Water Resources online database indicates that the depth to groundwater is in excess of 80 feet below the existing ground surface in the immediate vicinity of the site. The following table provides a summary of the historic high groundwater depths reported in the project vicinity.

TABLE 1
GROUNDWATER DEPTHS

STATE WELL	LAT/LONG	DISTANCE (KM)	DATE	DEPTH (FT)
01N05E14J001S	34.1697/-116.4255	0.50	01/23/1958	167
01N05E14Q001S	34.1661/-116.43	0.85	02/12/1958	100
01N05E24B001S	34.1625/-116.4122	0.95	02/12/1958	131.54
01N05E14P001S	34.1661/-116.4344	1.25	01/01/1958	82
01N05E24F001S	34.1589/-116.4167	1.00	02/12/1958	Dry Well
01N05E24K001S	34.1553/-116.4122	1.50	01/24/1958	Dry Well

h) Site geologic features are not expected to have a significant impact on sewage disposal system design.

i) It appears that there will be sufficient area for the on-site sewage disposal system and the required expansion area on the subject site.

2.0 EQUIPMENT

a) Two (2) exploratory bores and four (4) test holes were excavated on the subject property using a truck-mounted drill-rig (Mobile B-61) equipped with 8-inch outside diameter augers.

b) Tools used during testing consisted of a water level measuring device, a multi-timer application, and a 500-gallon truck-mounted water tank.

3.0 METHODOLOGY AND PROCEDURES

3.1 The exploratory bore and test hole locations were determined by Global Positioning System (GPS). The approximate locations of the exploratory bore and test holes are indicated in the attached Exploration Location Plan (Figure 3).

3.2 The test results and soil conditions encountered during our site exploration indicated "favorable" conditions. The percolation test rates determined by testing were consistent with the alluvial soil conditions observed throughout the subject parcel. The surface gradient throughout the site is less than 30 percent.

3.3 The soil encountered in our exploratory bores and test holes consisted primarily of fine- to coarse-grained silty sand (SM) and sand (SW).

3.4 Test procedures for leach lines:

a) Prior to testing, the County of San Bernardino DEHS was notified of the intent to perform percolation testing.
b) Two (2) exploratory bores and four (4) leach line percolation test holes were excavated on the site to depths between approximately 5 and 15 feet bgs. Percolation testing was performed at a depth of approximately 5 feet bgs within each of the test holes. Two (2) inches of ½ inch gravel was placed on the bottom of the test holes to prevent scouring when water was added.
c) Twelve inches of water (10 inches above gravel) of water was placed in the test holes and the drop in the water level was recorded over two consecutive 10-minute readings.
d) Percolation testing was performed by filling each test hole with approximately 8 inches of water and recording the time required to drop (minimum of 1-inch drop, maximum of 3-inch drop) in accordance with San Bernardino County OWTS guidelines[2].

3.4 Leach Line Test Results

TABLE 2
LEACH LINE TEST RESULTS

Test Hole No.	Depth (Ft.)	Q gal/sq. ft/day	Q minutes/inch	Minimum Square Feet of Absorption Area Per Gallon Per Day
P-1	5.0	----	2.22	0.83
P-2	5.0	----	1.67	0.83
P-3	5.0	----	2.38	0.83
P-4	5.0	----	2.10	0.83

[2] San Bernardino Public Health, Environmental Health Services, Percolation Testing and Reporting Standards for Onsite Wastewater Treatment Systems, Revised September 2019.

4.0 DISCUSSION OF RESULTS

4.1 Testing indicates percolation rates between 1.67 and 2.38 minutes per inch that are consistent with the alluvium encountered with our exploratory bore and test holes.

4.2 The recorded measurements are considered accurate, and the consistency of the individual test results indicates accuracy.

5.0 DESIGN

5.1 Criteria:

a) Leach lines may be designed based on an application rate of 0.83 square feet per gallon per day in accordance with San Bernardino County DEHS guidelines.

TABLE 3
FIXTURE COUNT

PLUMBING FIXTURE	NUMBER	F/U	TOTAL
Water Closet	1	6	6
Lavatory	1	2	2
Sink	1	2	2

b) The estimated flow has been determined in accordance with CPC Table H201.1(4). Based on information provided by the design team, type of occupancy has been based on "Offices – per employee (20 gal)".

Based on the estimated wastewater flows and the provided fixture units, the new septic system should be sized based on the fixture units. The following information is considered applicable for use in septic system design:

a) The septic tank size should be based on the CPC Table H 201.1 for fixture units as follows:

- Fixture Units = 10
- Septic Tank Capacity = **750 gallons septic tank capacity**

b) The estimated waste/sewage flow rate was calculated based on the septic tank capacity of **750 gallons** with the following equation:

- Flow x 1.5 = Septic Tank Size
- Flow = Septic Tank Size / 1.5
- Flow = **500 gal/day**

c) Design Rate: The following calculation may be utilized to determine the design rate in square feet (ft^2) per 100 gallons of septic tank capacity (gstc):

= Application Rate (ft^2/gal/day)* Flow (gal)/(Septic Tank Size/100 gal)

=(0.83 ft^2/gal/day*500 gal)/(750 gal/100 gal)= **55.3 ft^2 per 100 gstc**

d) Information to assist in the design of the on-site sewage disposal system is presented below:

OWTS DESIGN
Standard Design (Three (3) Feet of Gravel @ Bottom of Leach Lines)
Fixture Units Served: 10
Design Rate (ft^2 per 100 gstc): 55.3
Application Rate (square feet/gal/day): 0.83
Estimated Gallons of Effluent Per Day: 500
Gallons of Septic Tank Capacity: 750
Absorption Area (square feet): 415
Trench Credit (square feet per ft): 7
Leach Line Length (ft): 60
Number of Leach Lines: 2 at 30 Feet Each

6.0 SEE ATTACHED EXPLORATION LOCATION PLAN AND OWTS PLAN

7.0 GENERAL DISCUSSION AND CONCLUSIONS

7.1 Based on the data presented in the report, it is the judgment of this engineer that leach lines may be used for the sewage disposal on this property.

7.2 Based on the data presented in this report and the tested information accumulated, it is the judgment of the engineer that the groundwater table should not encroach with the allowable limit set forth by County and State requirements, when the recommendations of this report are followed. Also, there appears to be sufficient area for the proposed on-site sewage disposal systems and future expansion.

7.3 All minimum setback distances shall be maintained for the proposed sewage disposal system in accordance with San Bernardino County guidelines[3].

[3] San Bernardino Public Health, Environmental Health Services, Percolation Testing and Reporting Standards for Onsite Wastewater Treatment Systems, Revised September 2019; Appendix D.

8.0 GENERAL

The findings and recommendations presented in this report are based upon interpolating the soil conditions between bore locations and extrapolating the conditions throughout the sewage disposal system area. Should conditions encountered during grading (or excavation) appear different than those indicated in this report, this office should be notified.

This report is considered applicable for use by the client for the specific site and project described herein. The use of this report by other parties or for other projects is not authorized.

We appreciate the opportunity to provide service to you on this project. If you have any questions regarding this report, please contact the undersigned.

Respectfully submitted,

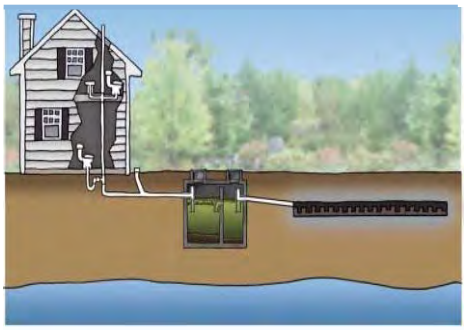
Where is My Septic System?. 10

Save These Important Septic System Records. 11

Reading this brochure could save you a lot of money, time, and trouble. By learning how to take care of your septic system, you can protect your family's health and the value of your home. You can also protect the environment, including your drinking water, from contamination caused by your septic system.

What Is A Septic System?

A septic system is made up of a septic tank and a leachline or seepage pit (dispersal soil absorption area) buried in the ground near your home. This system treats wastewater and sewage from your toilets, showers, washing machines, garbage disposals, kitchens, etc., where public sewer systems are not available.



The septic tank is a concrete, fiberglass, Polyethylene or steel box about nine feet long and five feet deep and wide. The tank is usually buried about five feet from the house under one to three feet of soil. The leachline is a gravel-filled underground trench, whereas a seepage pit is a vertical hole in the ground with a concrete block lid and walls that are covered with soil. The pit measures 4-6 feet in diameter and 15-40 feet deep.

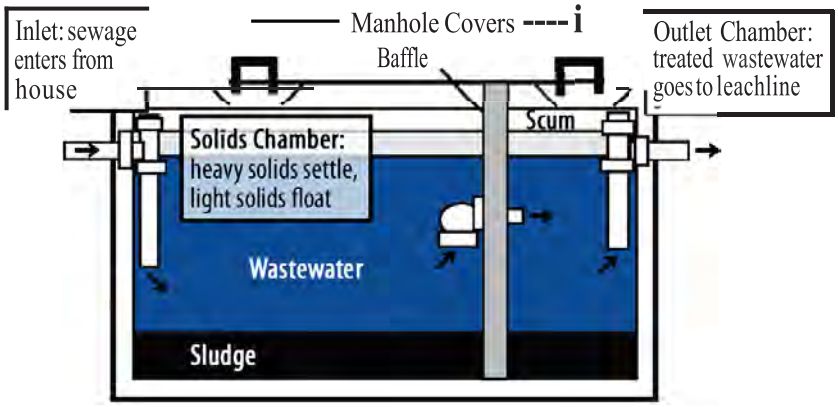
What Does A Septic System Do?

A septic tank has three main functions to:

1) Remove and treat greases and solids in the wastewater;
2) Store greases and solids until they are removed by a professional septic tank pumper; and
3) Slowly release wastewater to a dispersal system so it can be absorbed by the soil.

Wastewater from your home flows into a two-chamber septic tank. In the first solids chamber, greases and light solids in the water rise to the surface of the liquid, forming a scum layer, while heavier materials sink to the bottom and form a sludge layer. Anaerobic bacteria digest (break down) solids in the sludge layer to reduce sludge buildup. The third layer is the clarified wastewater which flows to the second liquids chamber where further settling occurs.

Typical Concrete Septic Tank



The treated wastewater flows from the liquid chamber to the dispersal soil absorption area, where it seeps down into the soil. Bacteria trapped in the soils continue treating the wastewater. Every time raw sewage flows into the tank, an equal amount of treated wastewater flows out.

What Could *Go* Wrong?

Septic Tank Failure

Ignoring your septic system could cost you thousands of dollars for repair or replacement. If your tank is not pumped regularly, scum and sludge will fill up the tank, overflow into the dispersal

area and plug up the soil. This causes the leachline to fail and the wastewater to rise to the surface of the ground. Failure of a leachline means a new leachline or seepage pit must be constructed with a permit from the County or City Building and Safety Department.

Other factors can also cause septic system failure. Wasting water, or even too many people living in the house, can cause a septic system to fail. Your septic system was designed according to the number of bedrooms in the home with an average of two people per bedroom. Because the soil can only absorb a limited amount of water, conserving water can help you stay under the daily limit.

This chart shows how much wastewater your tank can process in a 24-hour period:

Bedrooms	Estimated Gallons of Wastewater per Day	Septic Tank Capacity in Gallons
1-2	500	750
3	670	1000
4	800	1200
5-6	1000	1500

Water draining into the leachline from gutters, or even heavy rains, can overload the system and cause it to fail.

Health Hazard

Failure of a septic system is a serious health hazard and could threaten the health of your family and neighbors. Children and adults could come in contact with raw (untreated) sewage. Pets, insects, rodents, and birds could pick up and carry disease causing organisms to you and your family. Furthermore, it usually stinks.

Water Contamination

The first sign of failure is sewage where you don't want it, such as:

- Sewage running into the tub when you flush the toilet
- Sewage rising to the surface of the ground above the leachline, especially after storms
- Slow draining toilets/drains or toilets that won't flush
- Gurgling sounds in pipes and drains
- Mushy ground or lush, green grass near septic system area
- Strong sewage odors and possible complaints from your neighbors

What Can I Do? Important Ways to Keep Your Septic System Running Well

Do **have your tank pumped by a County-licensed septic tank pumper every two to four years.** Have both compartments pumped. To see if your tank needs to be pumped, remove the manhole cover at the inlet end (the end closest to the house). Use a shovel to push the scum layer away from the side of the tank to estimate its thickness. If the scum layer is more than one foot thick, have your tank pumped immediately! Replace the manhole cover and wash your hands and shovel. Yearly inspection of the septic tank is strongly recommended. Check your phone book yellow pages for a licensed Septic Tank Pumper. If your tank does not have risers to grade, install them over both chambers.

Do **keep a record of all pumpings, inspections, installations and other maintenance.** Keep this brochure and use the back page to record this information. This record should remain in the

house, even if you move. If you buy a house with a septic system, make sure you get a record and layout from the owner. They are responsible for keeping the records.

Do **call your City or County Building and Safety Department if your system fails within five years of the installation date.** This could mean your system was not designed, constructed or installed properly. DEHS does not have final plans on what was installed.

Do **find out where your septic tank and leachline are.** Your licensed pumper can help you draw a sketch of the septic system layout, including the location of the manholes, tank, piping and leachline. Remember, pumping your tank or installing a new leachline will cost more if the pumpers or contractors have to dig and search for the tank or leachline. Also, install an effluent filter on the outlet line to prevent solids from plugging the soil.

Do **conserve water.** Repair dripping faucets and leaking toilets. Avoid taking long showers and use water saving toilets, shower heads and faucets. Don't leave faucets running for long periods of time. Use your dishwasher or clothes washer only when the machine has a full load. Using your garbage disposal will also fill up your septic tank much faster.

Do **use bleach, disinfectants, and drain/toilet bowl cleaners sparingly and according to labels.** Take your leftover household hazardous chemicals to a Household Hazardous Waste Collection Center. For more information on household hazardous waste disposal call (909) 382-5401.

Do **reserve additional land equal to or larger than your present septic system area for future use.** This is needed when the original system fails. Do not build over the existing system or expansion area.

Tips to Avoid Trouble

Do Not **wait until your septic system fails to have your tank pumped.** It is cheaper and easier to prevent system failure than to correct a failed system or to install a new system. Remember, once the leachline is clogged, cleaning the tank will do little good. You will need a new leaching area.

Do Not **waste money on chemical, yeast, bacteria or enzyme additives.** These products have been evaluated by the EPA and it has been determined that they usually don't prevent problems. These products could hurt your system in the long run, or even contaminate groundwater. Only regular tank pumpings by professional licensed septic tank pumpers can help.

Do Not **destroy an old, failed leachline.** It may be used again by letting the old leachline dry out, or rest, for three to five years. DEHS recommends installing a diversion valve when your new leachline is built to change the flow of wastewater from the new line to the old line. After the three to five year waiting period, you can release the wastewater to the new line on even-numbered years and to the old line on odd-numbered years. If you let a leaching area rest every other year and have your septic tank pumped regularly, the leachline(s) should last the life of your home or building.

Do Not **allow anyone to drive, park or pave over any part of the system.** Traffic vibration or heavy weight could damage pipes and your seepage pits. The area over the leachline should be left undisturbed with only a mowed grass cover. Keep trees and shrubs away from your septic system area. Their roots could clog or damage your leachline(s).

Do Not **use your toilet and sink as a trash can to dump non- degradable (things that do not dissolve).** Keep things like vegetable trimmings, cooking oils, greases, coffee grounds, cigarette butts, Kleenex, paper towels, disposable diapers, and sanitary pads out of your septic tank. Use good quality white toilet paper that breaks up easily when wet. Dyes from colored toilet paper can hurt the bacteria.

Do Not **contaminate the groundwater or harm your septic system by pouring harmful chemicals down the drain or toilet.** Large amounts of cleaning products can kill the good bacteria in your septic tank that treat wastewater. Read the instructions on the labels and use only as directed.

KEEP THESE MATERIALS OUT OF YOUR SEPTIC SYSTEMS!

Non-degradable: grease, paper towels, plastics, coffee grounds, cigarette butts, disposable diapers, etc.

Hazardous Waste: paints and paint thinners, used motor oil, pesticides, antifreeze, weed killers, etc.

WHERE IS MY SEPTIC SYSTEM?

One method to locate a septic tank is by probing with a metal rod or by listening to the noise a plumber's snake makes when it contacts the tank inlet. Care must be utilized during the probing as it may damage the inlet fitting or piping.

Another method is by making a water probe with *W'* X 6' galvanized water pipe or PVC, threaded on one end. Purchase a pipe-to-hose fitting or use duct tape as a temporary fitting. Turn the water on and sink the probe into the ground. The water will do the digging. Set up a grid pattern and probe every 1 to 2 feet until the tank is found. The top of the septic tank is usually 2 to 4 feet beneath the surface. Legally, septic tanks can be no closer than 5 feet from the house so begin probing 6 to 7 feet from the house. Typically, the septic tank is in the front yard but the system might be in the rear yard or even under a patio slab.

1.Purpose and Scope

A drainage study is required for developments exceeding 10,000 square feet or 0.23 acre as part of the Conditional Use Permit process. This report summarizes the hydrologic analyses conducted to determine the necessary drainage improvements needed to provide flood protection for the proposed development and to safely convey runoff through the site during a 100-year storm event. The study also assesses whether the 100-year storm flows from the on-site projected development will create any significant runoff.

2. Background

2.1. Site Description

Location: The project site encompasses approximately 4.34 acres and includes parcel APN 059711167, owned by the Robert Billings. It is situated in a desert area near Sun Mesa Road in Yucca Valley, California.

Soil Classification (See Exhibit E): According to the San Bernardino County (SBC) Hydrology Manual Soil Group Map, the project site is classified as **"Group B"** soil. In the absence of detailed site-specific soil data, this classification is applied to ensure accurate analysis. Group B soils are characterized by moderate infiltration rates when thoroughly wetted, consisting primarily of moderately deep to deep, moderately well-drained to well-drained sandy-loam soils with moderately fine to moderately coarse textures. These soils also exhibit a moderate rate of water transmission.

Flood Plain Information (See Exhibit O and Exhibit P): Per Firmette No. 06071C8120H, issued by the Federal Emergency Management Agency (FEMA) on June 28, 2008, the project site is designated as FEMA **"Zone X,"** indicating minimal flood hazard. Although not located within the 100-year floodplain according to the Department of Water Resources (DWR) Map, the site may have some flood risk due to the presence of levees, as outlined by the National Flood Insurance Program. Additional details are provided in Exhibit O and Exhibit P.

Zoning and Land Use (See Attachment 2 and Attachment 3): The project site is located within the Industrial Zone of the Town of Yucca Valley. According to Section 9.10.030 of the Yucca Valley, California Code of Ordinances, the development standards for this zoning district require a minimum lot area of 5 acres, with a minimum width of 60 feet and a depth of 100 feet.

2.2. Existing Condition (See Exhibit A)

The project site is located in a semi-arid region with rugged desert terrain, featuring irregular slopes and varying topographic features. The soil gradient across the site varies, with the steepest slopes observed in the middle section, ranging from 6.10% to 12.50%, and in the southern section, where slopes range from 2.60% to 14.0%. The flatter areas of the site have more gradual slopes, ranging from 0.1% to 5.0%. The property spans approximately 4.34 acres, with the natural flow path directing runoff from the northwest toward the east and southeast, as shown in Exhibit A.

As depicted in Exhibit A, the basin flows into the site, splitting into two sub-basins that direct flow into the area. These sub-basins include Basin A (6.94 acres) and Basin B (10.0 acres). Additionally, the off-site portions of these sub-basins, Off-A (4.48 acres) and Off-B (7.89 acres), channel stormwater from the northwest and west toward the project site.

3. Hydrology

3.1. Purpose

This hydrological analysis aims to evaluate stormwater flow patterns within the existing site, as well as its contributing off-site areas. A flow path has been established, and the contributing basin has been divided into smaller sub-basin to gain a clearer understanding of localized stormwater runoff behavior. Each sub-watershed was analyzed to determine its individual contribution to the overall flow path. The peak flow for each sub-basin has been estimated in accordance with the SBC Hydrology Manual, utilizing the 100-year peak flow.

3.2. Methodology

Area Delineation

The project site and its surrounding area were delineated into two basins, Basin A and Basin B, which extend beyond the project boundary. Basin A and Basin B required separate analyses for both off-site and on-site areas. This study primarily aimed to determine the on-site discharge and assess the potential impact of storm events on the project area. The contour and Digital Elevation Model (DEM) data used for this analysis were obtained from the United States Geological Survey (USGS), which provided critical elevation information for accurate hydrological modeling.

Discharge Calculation

To determine the on-site discharge, the following equation was applied: the discharge of the basin (Q) minus the off-site inflow (Qoffsite). This approach considers the total discharge generated by the larger basins that extend beyond the project site (Basin-A and Basin-B). The off-site inflow, representing the portion of runoff originating from areas outside the project boundary, was subtracted from the overall basin discharge. This calculation isolates the on-site discharge, providing an accurate representation of how much runoff will affect the project area during the 100-year storm event.

By using this method, the discharge values for both on-site and off-site areas were distinguished, allowing for a focused analysis of the direct hydrological impact on the project site.

Time of Concentration

The Time of Concentration (Tc) and Peak Flow rates were calculated based on SBC Hydrology Manual sections D.3 and E. Section D.3 was used for drainage areas less than 640 acres, while Section E applied to areas larger than 640 acres. The methods and equations employed for these calculations are detailed in subsequent sections.

This comprehensive methodology ensured that both on-site and off-site hydrological effects were thoroughly analyzed, providing a reliable basis for understanding potential stormwater impacts on the project area.

Areas Less than 640 acres

1. Determine the area (A, acres) of the total watershed tributary to the point of concentration.
2. Determine the Initial time of concentration, Tc, using Figure D-1. Initial Sub-area should be less than 10 acres, have a flow path of less than 1,000 feet.
3. Using the time of concentration, determine the Intensity of rainfall in inches per hour (I) from the appropriate intensity-duration curve for the particular area using Figure D-3.
4. Calculate the area-averaged maximum loss rate, F_m, which corresponds to the soil group, cover complex, and imperviousness of the drainage subarea. Loss rates for the pervious area, F_p, follow from section C.6.4.
5. Compute Peak flow, Q for the point of concentration

The modified rational method formula is expressed as:

$$\boldsymbol{Q = CIA}$$

$$\boldsymbol{C = 0.90\left\{a_i + \left[\frac{(I - F_p)(a_p)}{I}\right]\right\}, for\ I\ greater\ than\ F_p}$$
$$\boldsymbol{= 0.90 a_i, for\ I\ less\ than\ or\ equal\ to\ F_p}$$

Where,

Q = Peak discharge, in cubic feet per second (cfs)

C = Runoff Coefficient, portion of rainfall that runs off the surface (no units)

I = Average Rainfall Intensity (in inches/hour) for a duration equal to the Tc for the area

A = Area of Lot in acre

Note: If the computed Tc is less than 5 minutes, use 5 minutes for the peak discharge, Q.

3.3. Existing Condition

Basin Hydrology

Refer to Existing condition drainage patterns in Exhibit A.

Each basin was evaluated for the 100-year storm event, with peak flow rates and times of concentration (Tc) calculated to assess their contribution to the site's overall drainage and potential flood risk.

Basin-A, spanning 6.94 acres, has a flow path of 979 feet with an elevation difference of 29.70 feet. The time of concentration (Tc) for the 100-year storm event was calculated to be 9.50 minutes, resulting in a peak flow rate of 24.05 cubic feet per second (cfs). The relatively short Tc and moderate elevation change highlight the basin's potential for swift runoff response during intense storm events.

Basin-B, the largest basin, covers an area of 10 acres and features a flow path of 1,000 feet with an elevation difference of 22.80 feet. Its time of concentration (Tc) was determined to be 10 minutes for the 100-year storm event, producing a peak flow rate of 33.40 cubic feet per second (cfs). The size of this basin and its peak flow rate emphasize the importance of comprehensive flood management strategies to handle substantial runoff contributions.

Each basin was carefully analyzed to understand the flow dynamics during major storm events. The results emphasize the differing contributions of each basin, with Basin-B being the largest runoff contributor. This hydrologic analysis is crucial for designing effective flood mitigation strategies and ensuring the site's drainage system can manage stormwater runoff efficiently.

Detailed calculations are provided in the following subsection.

Parameters and Calculations

Time of Concentration, minutes: Time of concentration (Tc) calculations were performed using Nomograph for Determination of Time of Concentration (Tc) (based in Kirpich Formula) or Travel Time (Tt) for Natural Watersheds (**See** – **Exhibit F**).

Table 1 – Basin Time of Concentration

Drainage Area	Area (AC)	Flow Path (ft)	Elevation Diff (ft)	Soil Runoff Index Value	Infiltration Rate, F_p	Time of Conct. (min)
Basin-A	6.94	979	29.70	56	0.268	25.90
Basin-B	10.00	1000	22.80	56	0.268	24.40

Soil Group: San Bernardino County Hydrology Manual was used to determine soil types. Based on San Bernardino County Hydrology Manual (**Exhibit E**), the project site is classified as '**soil type B**'.

Cover Type: The site's land cover type was identified using Exhibit G and Exhibit H, which classifies the existing pervious land cover as "Urban Cover, Residential or Commercial Landscape." Additionally, Exhibit I recommends an impervious cover of 90% for the site.

Rainfall Depth: Rainfall depth are obtained from Exhibit K and Exhibit L for 100-year and 10-year 1-hour precipitation. These are then used for the estimation of 25-year rainfall depth, 1-hour using Exhibit M.

Table 2 – Basin Rainfall Depth

Storm Event	Rainfall Depth (in)
100-Year 1 hour	1.40
10-Year 1 hour	0.90

Table 3 – On-site Rainfall depth and Rainfall Intensity

Drainage Area	Impervious Cover	Slope of Intensity (Desert Area)	Rainfall Intensity (I), in/hr
Basin-A	0.90	0.70	3.92
Basin-B	0.90	0.70	3.79

Infiltration Rate: From the manual's Figures B-9 and B-10 (see Exhibit J) rainfall depth was estimated.

Peak Flow, cfs: The value for the peak flow was determined once Rainfall Data and Runoff Coefficient values were calculated using the parameters.

For Basin-A:

100-Yr 1-hour Precipitation depth = 1.40 inch **(**Exhibit K)

10-Yr 1-hour Precipitation depth = 0.90 inch (Exhibit L)

So, 25-Yr 1-hour Precipitation depth = 1.08 inch (Exhibit M)

So, 25-Yr Rainfall intensity for 9.50 min storm, I = 1.3.92 in/hr (Exhibit N)

As we discussed, 100-Yr 'existing' conditions is based on 25-Yr storm using AMC II

So, Basin-A 100-Year peak flow, $Q = C \times I \times A = 0.90(a_i + ((I-F_p)a_p)/I) \times I \times A$

$Q_A = 0.90x(0.90+((3.92-0.745 \times 0.10)/3.92)x\ 3.92 \times 6.94 = 24.05$ cfs

$Q_B = 33.40$ cfs

The summary of the calculations of the peak flow of on-site drainage is presented below.

Table 4 – Peak Flow Rate

Drainage Area	Area (ac)	Runoff Index Values	F_P	a_i (%Impervious)	a_p (% Perv)	Rainfall Intensity, I (in/hr)	Peak Flow, Qs (cfs)
Basin-A	6.94	56	0.745	0.90	0.10	3.92	24.05
Basin-B	6.149	86	0.268	0.90	0.10	3.79	33.40

Off-site Hydrology

Refer to Existing condition drainage patterns in Exhibit A**.**

For the off-site hydrology analysis, the watershed was divided into two primary sections: Basin-A and Basin-B. These basins extend beyond the project site, and both the on-site and off-site portions were analyzed to determine the impact of stormwater inflow on the site. The off-site inflows, designated as Off-A and Off-B, were evaluated using the principle of conservation of energy (Q-Qin), where off-site inflow (Qin) is subtracted from the total basin discharge (Q) to isolate the on-site discharge (Qout).

Off-A (Off-site of Basin-A)

Off-A, the off-site portion of Basin-A, encompasses a watershed area of 4.48 acres. The flow path extends 593 feet with an elevation difference of 14.60 feet, resulting in a calculated time of concentration (Tc) of 8.0 minutes. For the 100-year storm event, the peak flow rate is determined to be 17.54 cubic feet per second (cfs), indicating a relatively rapid response to precipitation due to the short flow path and moderate elevation change. This highlights the significance of managing runoff efficiently to mitigate potential flooding or erosion impacts downstream.

Off-B (Off-Site Basin-B)

Off-B, the off-site portion of Basin-B, covers a watershed area of 7.89 acres. It features a flow path of 695 feet with an elevation difference of 19.90 feet, resulting in a calculated time of concentration (Tc) of 8.30 minutes. For the 100-year storm event, the peak flow rate was estimated to be 30.09 cubic feet per second (cfs). The relatively short Tc and significant peak flow underscore the importance of implementing effective stormwater management strategies to address potential runoff impacts and mitigate downstream risks.

By subtracting the off-site inflows from Off-A and Off-B from the total discharge of Basin-A and Basin-B, the on-site discharge was calculated. This method allowed for a focused analysis of how the off-site portions of these watersheds affect the project site, ensuring that inflows from external areas were properly accounted for in the overall drainage design.

This off-site hydrology analysis is crucial for developing appropriate stormwater management strategies, as the inflows from surrounding areas directly influence the volume of runoff that must be managed within the project boundary.

The calculations can be seen in detail in the following sub-section.

Parameters and Calculations

Time of Concentration in minutes see Exhibit F. Table below shows the parameters needed to estimate time of concentration.

Table 5 – Existing Condition: Off-A and Off-B Time of Concentration

Drainage Area	Area (AC)	Flow Path (ft)	Elevation Diff (ft)	Soil Runoff Index Value	Infiltration Rate, F_p	Time of Conct. (min)
Off-A	4.48	593	14.60	56	0.745	8.00
Off-B	7.89	695	19.90	56	0.745	8.30

Soil Group: San Bernardino County Hydrology Manual was used to determine soil types. Based on San Bernardino County Hydrology Manual (Exhibit E), the project site is classified as '**soil type B**'.

Cover Type: The site's land cover type was identified using Exhibit G and Exhibit H, which classifies the existing pervious land cover as "Urban Cover, Residential or Commercial Landscape." Additionally, Exhibit I recommends an impervious cover of 90% for the site.

Rainfall Depth: Rainfall depth are obtained from Exhibit K and Exhibit L for 100-year and 10-year 1-hour precipitation. These are then used for the estimation of 25-year rainfall depth, 1-hour using Exhibit M.

Table 6 – Existing Condition: Off-A and Off-B Rainfall Depth

Storm Event	Rainfall Depth (in)
100-Year 1 hour	1.40
10-Year 1 hour	0.90

Table 7 – Existing Condition: Off-A and Off-B Rainfall depth and Rainfall Intensity

Drainage Area	Impervious Cover	Slope of Intensity (Desert Area)	Rainfall Intensity (I), in/hr
Off-A	1.0	0.70	2.71
Off-B	1.0	0.70	2.53

Infiltration Rate: From the manual's Figures B-9 and B-10 (see Exhibit J) rainfall depth was estimated.

Peak Flow, cfs: The value for the peak flow was determined once Rainfall Data and Runoff Coefficient values were calculated using the parameters.

100-Yr 1-hour Precipitation depth = 1.40 inch (Exhibit K)

10-Yr 1-hour Precipitation depth = 0.90 inch (Exhibit L)

So, 25-Yr 1-hour Precipitation depth = 1.08 inch (Exhibit M)

For Off-A:

So, 25-Yr Rainfall intensity for 8.0 min storm, I = 4.43 in/hr (Exhibit N)

As we discussed, 100-Yr 'existing' conditions is based on 25-Yr storm using AMC II

So, Off-A 100-Year peak flow, $Q = C \times I \times A = 0.90(a_i + ((I-F_p)a_p)/I) \times I \times A$

$Q_A = 0.90x(0.90 +((4.43-0.745) \times 0.10)/ 4.43) \times 4.43 \times 4.48 = 17.54$ cfs

$Q_B = 30.09$ cfs

The summary of the off-site discharge calculations is provided below.

Table 8 – Existing Condition: Off-A and Off-B Peak Flow Rate

Drainage Area	Area (AC)	Runoff Index Values	F_P	a_i (% Impervious)	a_p (% Perv)	Rainfall Intensity, I (in/hr)	Peak Flow, Qs (cfs)
Off-A	4.48	56	0.745	0.90	0.90	4.43	17.54
Off-B	2.73	56	0.745	0.90	0.90	4.31	30.09

***On-site Hydrology* (See *Exhibit A*)**

For **Basin-A**, the total discharge was calculated to be 24.05 cubic feet per second (cfs). The inflow from the off-site portion of this basin, Off-A, was determined to be 17.54 cfs. After applying the conservation principle (Q - Qin), the on-site discharge for Basin-A is calculated at 6.51 cfs.

For **Basin-B**, the total discharge was calculated at 33.40 cfs, with an inflow from Off-B of 30.09 cfs. Using the same principle, the resulting on-site discharge for Basin-B is 3.30 cfs.

This analysis highlights that only **Basin-A** and **Basin-B** have both inflow and outflow components, meaning they significantly influence the on-site hydrology.

A summary of the peak flow rates is provided in Exhibit B, illustrating that the on-site discharges for Basin-A and Basin-B are the primary concerns for drainage management, while Basin-C and Basin-D are considered minor contributors to the overall hydrologic impact of the site. This thorough evaluation is critical for designing stormwater management strategies that effectively handle both internal and external runoff contributions.

Table 9 – Summary of Peak Flow of all Basin

Drainage Area	Discharge, cfs	Off-site Flow, cfs	On-site Flow, cfs
Basin-A	24.05	17.54	6.51
Basin-B	33.40	30.09	3.30

4. Hydraulic Analysis

4.1. Purpose

The purpose of this section is to evaluate and present the hydraulic measures necessary for effective stormwater management on-site, ensuring compliance with local and regulatory standards. This includes the assessment of required volume mitigation to control runoff and prevent flooding, with a focus on determining the design capture volume (DCV) and implementing appropriate on-site retention systems, such as infiltration basins.

Additionally, the section will incorporate the analysis of HEC-RAS results for the on-site runoff. The goal is to assess potential impacts from regional stormwater flows and evaluate how the site interacts with broader hydrological systems, particularly under critical storm events. This analysis will inform both the on-site mitigation strategies and any necessary adjustments to manage off-site drainage contributions effectively.

4.2. On-site Volume Mitigation Required

The method outlined in the San Bernardino County Hydrology Manual for estimating runoff volume from a design storm event employs an empirical factor known as the runoff curve number (CN). This factor is crucial for determining the portion of rainfall depth that converts to runoff.

For this analysis, the 2-year, 24-hour rainfall depth from NOAA is 1.53 inches. The curve number (CN) for existing conditions is 56, as specified in the San Bernardino County Hydrology Manual. Additionally, the soil storage capacity is noted to be 7.86 inches, with an initial abstraction determined to be 1.57 inches.

Using these values, the calculated runoff volume for the existing on-site conditions is approximately 4.34 acre-feet, which converts to 189,050 square feet.

See sub-section below for the detailed calculations.

Calculations

So, P2-Yr 24-hour Precipitation depth = 1.53 inch (Exhibit Q)

S = (1000/CN) - 10 = (1000/56) - 10
S = 7.86

Ia = 0.2S = 0.20*7.86
Ia = 1.57

Runoff Volume pre-developed, Vpre-dev = (A/12)*{[(P2-yr 24-hr -Ia)^2]/(P2-yr 24-hr – Ia + S}

= (4.34/12)*{[(1.53 – 1.57)^2]/ (1.53 – 1.57+ 7.86)

= 0.001 ac-ft = 3.46 cf

4.3. Design Capture Volume

In accordance with Section E.12.e of the Phase 2 MS4 Permit issued by the California State Water Resources Control Board, four alternatives are provided for calculating the Design Capture Volume (DCV) when sizing Low Impact Development (LID) features and other Best Management Practices (BMPs). For the Mojave River Watershed, the Technical Guidance for Water Quality Management Plans (WQMP) specifies that the 24-hour, 85th percentile storm event is used to calculate the DCV.

For a given site with an area of 189,050 square feet, 90% impervious surface for the recommended value for Industrial Land use by the SBC Hydrology Manual, and constants specific to the site's climatic region (1.2371) and 48-hour drawdown rate (1.963), the Design Capture Volume (as per the Mojave River Watershed guidance) is calculated to be 13,243.12 cubic feet (cf).

See calculations in detail below.

Calculations

DMA-A Area, A = 189,050 ft^2

Project Imperviousness, Imp% = 90% = 0.90

Runoff Coefficient, (R_c) = 0.858(Imp%)^3-0.78(Imp%)^2+0.774(Imp%)+0.04 = 0.73

1-hour rainfall depth for a 2-year return period (in), P_{1hr} = 0.474 in

Mean 6-hr Precipitation (inches), $P_6 = P_{1hr}$ *C1 (where C1 is a function of site climatic region = 1.2371)

P_6 = 0.586 in

Design capture volume, DCV (ft^3) = 1/12 * [A * R_c * P_6 * C2],

where C2 is a function of drawdown rate (48-hr = 1.963)

So, DCV = 1/12 * [189,050 * 0.73 * 0.586 * 1.963] = 13,243.12 ft^3

So, DCV > Runoff Volume Pre-dev

4.4. HEC-RAS Result (See Exhibit B and Exhibit C)

Basin-A Hydraulic Results

The hydraulic simulation for Basin A, encompassing a drainage area of 6.94 acres, was performed using a manual approach based on the San Bernardino County (SBC) Hydrology Manual to evaluate flow dynamics and channel behavior. Six cross-sections were strategically placed along the flow path at station points STA 383, STA 332, STA 259, STA 176, STA 94, and STA 54 to ensure detailed representation of the basin's topography. The peak discharge for the 100-year storm event was calculated to be 24.05 cubic feet per second (cfs).

Channel velocities varied across the cross-sections, ranging from 0.76 feet per second at STA 94, the slowest point, to 1.81 feet per second at STA 332, where the velocity was highest. Water surface elevations (W.S. Elevations) exhibited variability as well, with the highest elevation recorded at STA 383, reaching 3724.52 feet. The critical water surface elevation (Crit. W.S.) peaked at STA 259 with a value of 3720.76 feet, while the lowest critical elevation was observed at STA 54 at 3715.92 feet.

The variability in channel velocities and water surface elevations reflects the influence of the basin's topography on flow dynamics. Slower velocities at flatter or wider sections and faster velocities in steeper or narrower areas underscore the importance of site-specific hydraulic considerations. The elevated water surface at STA 383 identifies this section as a critical area for potential flooding during peak flow conditions. Similarly, the high critical water surface elevation at STA 259 highlights its sensitivity to flow changes, making it another point of concern.

These results suggest the need for targeted flood mitigation measures, such as structural reinforcements or flow diversion strategies, to manage peak flow events effectively and reduce the risk of flooding in Basin A's critical areas.

Basin-B Hydraulic Results

The hydraulic simulation for Basin B, encompassing a drainage area of 10 acres, was conducted using a manual approach based on the San Bernardino County (SBC) Hydrology Manual to evaluate flow dynamics and channel behavior. Six cross-sections were strategically identified along the flow path at station points STA 291, STA 246, STA 196, STA 120, STA 71, and STA 28 to ensure accurate representation of the basin’s topographic and hydraulic characteristics. The analysis yielded a peak discharge of 33.40 cubic feet per second (cfs) for the 100-year storm event.

Channel velocities ranged from 1.45 feet per second at STA 120, the slowest section, to 2.15 feet per second at STA 28, the fastest section, reflecting variations in flow dynamics influenced by changes in the channel's geometry and slope. The highest water surface elevation (W.S. Elevation) was recorded at STA 291, reaching 3718.23 feet, while the critical water surface elevation (Crit. W.S.) was noted at STA 9, with a value of 3710.65 feet.

The results highlight the variability in flow conditions, with slower velocities observed in flatter or wider sections of the channel and faster velocities in steeper or narrower areas. The elevated water surface at STA 291 suggests a potential area of concern for high water levels during peak flow conditions, while the critical water surface elevation at STA 9 underscores the sensitivity of this location to changes in flow depth and velocity.

These findings indicate the necessity for site-specific flood mitigation measures to address peak flow conditions effectively. Targeted interventions, such as structural reinforcements or slope modifications, may be required to mitigate flooding risks and manage flow dynamics along Basin B's critical points.

5. Summary and Conclusion

5.1. Hydrology

Basin Hydrology

Each basin was evaluated for the 100-year storm event, with the times of concentration (Tc) and peak flow rates calculated to assess their impact on the site's drainage and flood risk.

Basin-A:
Covering 6.94 acres, Basin-A has a flow path of 979 feet and an elevation change of 29.70 feet. The recalculated Tc is 9.50 minutes, producing a peak flow rate of 24.05 cfs. It has a moderate elevation change, indicating swift runoff.

Basin-B:
The largest basin, covering 10 acres, with a flow path of 1,000 feet and an elevation difference of 22.80 feet. Its Tc is 10.0 minutes, with a peak flow rate of 33.40 cfs. Larger runoff contribution, emphasizing the need for flood management.

Off-site Hydrology

The off-site hydrology was divided into two main sections: Off-A (off-site of Basin-A) and Off-B (off-site of Basin-B), and their inflows were analyzed to understand the impact of external runoff on the site.

Off-A:
Covers 4.48 acres with a flow path of 593 feet and an elevation change of 14.60 feet. Its Tc is 8.0 minutes, and its peak flow rate is 17.54 cfs, which flows into Basin-A of project-site.

Off-B:
Covers 7.89 acres with a flow path of 695 feet and an elevation change of 19.90 feet. Its Tc is 8.30 minutes, with a peak flow rate of 30.09 cfs, contributing significantly to Basin-B.

On-site Hydrology

For on-site hydrology, the contributions from both internal and external runoff were analyzed by subtracting off-site inflows from the total discharge of each basin.

Basin-A:
The total discharge was calculated as 33.40 cfs, with 17.54 cfs coming from Off-A, resulting in an on-site discharge of 6.51 cfs.

Basin-B:
The total discharge was 33.40 cfs, with 30.09 cfs from Off-B, leaving an on-site discharge of 3.30 cfs.

5.2. Hydraulics

On-site Volume Mitigation

Based on the San Bernardino County Hydrology Manual, the design runoff for the on-site portion is calculated using the Curve Number (CN) method. For this site, the 2-year, 24-hour rainfall depth is 1.53 inches, and the 2-year, 1-hour rainfall depth is 0.474 inches, and the CN is 56. The soil storage capacity is 7.86 inches, with an initial abstraction of 1.57 inches. These values result in a calculated runoff volume of approximately 0.0001 **acre-feet (3.46 cubic feet)** under existing conditions.

Design Capture Volume (DCV)

According to the Phase 2 MS4 Permit and the Mojave River Watershed Technical Guidance for Water Quality Management Plans, the Design Capture Volume (DCV) was calculated for a site area of 189,050 square feet, assuming 90% impervious surface. Using a 24-hour, 85th percentile storm event, the DCV is **13,243.12 cubic feet** for Industrial land use.

HEC-RAS Results

Basin-A

The hydraulic simulation for Basin A, with a drainage area of 6.94 acres, indicated a peak discharge of 24.05 cfs for the 100-year storm event. Channel velocities ranged from 0.76 ft/s at STA 94 to 1.81 ft/s at STA 332. Water surface elevations varied from 3716.01 feet at STA 54 to 3724.52 feet at STA 383, with the highest critical water surface elevation at STA 259 at 3720.76 feet. These results highlight critical areas like STA 383 and STA 259 that may be vulnerable to flooding during peak flow events, suggesting the need for flood mitigation measures.

Basin-B

For Basin B, covering 10 acres, the peak discharge was 33.40 cfs during the 100-year storm event. Channel velocities ranged from 1.45 ft/s at STA 120 to 2.15 ft/s at STA 28. Water surface elevations ranged from 3710.65 feet at STA 9 to 3718.23 feet at STA 291. The critical water surface elevation at STA 9 was 3710.65 feet. Similar to Basin A, critical areas like STA 291 and STA 9 require attention for potential flooding, indicating the need for targeted flood mitigation measures.

The hydrologic and hydraulic analysis of the site reveals crucial insights for effective flood risk management and runoff control. Both **Basin-A** and **Basin-B** are significant contributors to runoff, with Basin-B being the largest in terms of flow rate. The analysis indicates that both on-site and off-site contributions must be considered in flood mitigation strategies, especially as off-site inflows, such as those from Off-A and Off-B, also significantly affect the peak flows in the basins. The **on-site volume mitigation** required, calculated to be 4.34 acre-feet, must be addressed with the recommended **Design Capture Volume (DCV)** of 13,243.12 cubic feet to ensure efficient runoff management and avoid potential flooding.

Hydraulic simulations suggest that both basins have sections with critical water surface elevations that could lead to flooding during peak storm events. Specifically, **Basin-A** shows elevated water levels at STA 383 and STA 259, while **Basin-B** shows similar risks at STA 291. These results highlight the need for targeted flood mitigation measures such as structural reinforcements, slope modifications, or flow diversion to manage peak flow events and protect the site from potential flooding. The findings emphasize the importance of an integrated approach to hydrology and hydraulics in designing a sustainable drainage system for the site.

6. Recommendation

Based on the hydrology and hydraulic conclusions, the results highlight specific areas of concern and necessary mitigation strategies to address both on-site and off-site stormwater challenges.

To effectively manage stormwater runoff and reduce the flood risk in the area, it is recommended to install on-site stormwater mitigation measures, such as detention or retention basins, to capture and store runoff water, ensuring it meets the required Design Capture Volume (DCV). Upgrading the drainage systems, particularly in critical areas, will be essential to accommodate higher peak flow rates and prevent potential flooding. In addition, implementing green infrastructure solutions like permeable pavements, swales, and green roofs can help reduce runoff and promote water infiltration. Regular hydrological monitoring should also be set up to track water levels, flow rates, and stormwater behavior, offering early flood warnings and improving future resilience.

The implications of these measures are significant. Without effective stormwater management, the site could experience considerable flooding, especially in areas with high peak flow rates. Addressing these concerns through both on-site and off-site solutions is vital to prevent future flood damage. Additionally, implementing green infrastructure will not only help reduce runoff but also contribute to long-term environmental sustainability. Finally, these measures are crucial for compliance with local regulations and ensuring public safety, preventing potential legal or financial issues down the line.

	Good	67	78	85	89
Small grain (Wheat, oats, barley, etc.)	Poor	65	76	84	88
	Good	63	75	83	87

Notes:

1. All curve numbers are for Antecedent Moisture Condition (AMC) II.
2. Quality of cover definitions:

   Poor-Heavily grazed, regularly burned areas, or areas of high burn potential. Less than 50 percent of the ground surface is protected by plant cover or brush and tree canopy.

   Fair-Moderate cover with 50 percent to 75 percent of the ground surface protected.

   Good-Heavy or dense cover with more than 75 percent of the ground surface protected.
3. See Figure C-2 for definition of cover types.

ACTUAL IMPERVIOUS COVER

Land Use (1)	Range-Percent	Recommended Value For Average Conditions-Percent (2)
Natural or Agriculture	0 - 0	0
Public Park	10 - 25	15
School	30 - 50	40
Single Family Residential: (3)		
2.5 acre lots	5 - 15	10
1 acre lots	10 - 25	20
2 dwellings/acre	20 - 40	30
3-4 dwellings/acre	30 - 50	40
5-7 dwellings/acre	35 - 55	50
8-10 dwellings/acre	50 - 70	60
More than 10 dwellings/acre	65 - 90	80
Multiple Family Residential:		
Condominiums	45 - 70	65
Apartments	65 - 90	80
Mobile Home Park	60 - 85	75
Commercial, Downtown Business or Industrial	80 - 100	90

Site Impervious Cover

Notes:

1. Land use should be based on ultimate development of the watershed. Long range master plans for the County and incorporated cities should be reviewed to insure reasonable land use assumptions.

2. Recommended values are based on average conditions which may not apply to a particular study area. The percentage impervious may vary greatly even on comparable sized lots due to differences in dwelling size, improvements, etc. Landscape practices should also be considered as it is common in some areas to use ornamental gravels underlain by impervious plastic materials in place of lawns and shrubs. A field investigation of a study area shall always be made, and a review of aerial photos, where available, may assist in estimating the percentage of impervious cover in developed areas.

3. For typical equestrian subdivisions increase impervious area 5 percent over the values recommended in the table above.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 11/13/2024 at 1:53 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

MEMORANDUM

DATE: September 13, 2024

TO: Jared Jerome, Associate Planner

FROM: Jason Lui, Associate/Senior Noise Specialist

SUBJECT: Noise and Vibration Impact Analysis for the Sun Mesa (Billings) Mini Storage Project, Yucca Valley, San Bernardino County, California

INTRODUCTION

This noise and vibration impact analysis has been prepared to evaluate the potential noise and vibration impacts and reduction measures associated with the Sun Mesa (Billings) Mini Storage Project (project) in Yucca Valley, San Bernardino County, California. This memorandum is intended to satisfy the Town of Yucca Valley's (Town) requirements and the California Environmental Quality Act for a project-specific noise and vibration impact analysis by examining the impacts from the proposed uses on the project site and evaluating mitigation measures that the project requires. All references cited in this memorandum are included in Attachment A.

PROJECT LOCATION

The proposed Sun Mesa (Billings) Mini Storage development project site is located on Assessor's Parcel Number 0597-111-67-0000, which is east of State Route 247 (SR-247) and north of Buena Vista Drive in the Town of Yucca Valley in San Bernardino County, California. The 4.34-acre project site is currently undeveloped. Access to the project site is provided by Buena Vista Drive, Sun Mesa Drive, and Newton Lane. Figure 1 (all figures provided in Attachment B) shows the project location.

PROJECT DESCRIPTION

The proposed project would involve the development of a 20-building, 94,500 total square foot (sf) mini storage facility. The site would be bounded by a maximum 10 foot (ft) high security fence and would consist of 17 storage buildings each 4,800 sf in size evenly distributed around the site. Along the eastern property line, two linear storage buildings (one 5,000 sf in floor area and the other 7,500 sf in floor area) would run the length of the project site. Two entrances would be located on the west side of the site and would be gated. A 400 sf manager's unit would be located at the northern entry gate. Additionally, outdoor parking stalls would be located on the north and east sides of the proposed manager's unit building. These parking areas would accommodate approximately 10 vehicles. A 9,600 sf retention basin would be located on the southwest corner of the project site. The proposed project would include associated site improvements including new internal roadways and utility improvements. Access to the proposed project site would be between the hours of 6:00 a.m. and 10:00 p.m. 7 days per week.

The maximum depth of excavation for construction would be approximately 7 ft below the ground surface. Connections to utilities may require additional excavation up to 15 ft below the ground surface at limited locations on site. Construction is anticipated to begin in the fall of 2024 and is anticipated to be completed within 12 months. Figure 2 shows the site plan.

CHARACTERISTICS OF SOUND

Noise is usually defined as unwanted sound. Noise consists of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, and sleep.

To the human ear, sound has two significant characteristics: pitch and loudness. Pitch is generally an annoyance, while loudness can affect the ability to hear. Pitch is the number of complete vibrations, or cycles per second, of a wave resulting in the tone's range from high to low. Loudness is the strength of a sound that describes a noisy or quiet environment and is measured by the amplitude of the sound wave. Loudness is determined by the intensity of the sound waves combined with the reception characteristics of the human ear. Sound intensity refers to how hard the sound wave strikes an object, which in turn produces the sound's effect. This characteristic of sound can be precisely measured with instruments. The analysis of a project defines the noise environment of the project area in terms of sound intensity and its effect on adjacent sensitive land uses.

Measurement of Sound

Sound intensity is measured through the A-weighted scale to correct for the relative frequency response of the human ear. That is, an A-weighted noise level de-emphasizes low and very high frequencies of sound similar to the human ear's de-emphasis of these frequencies. Decibels (dB), unlike the linear scale (e.g., inches or pounds), are measured on a logarithmic scale, which is a scale based on powers of 10.

For example, 10 dB is 10 times more intense than 0 dB, 20 dB is 100 times more intense than 0 dB, and 30 dB is 1,000 times more intense than 0 dB. Thirty decibels (30 dB) represents 1,000 times as much acoustic energy as 0 dB. The decibel scale increases as the square of the change, representing the sound pressure energy. A sound as soft as human breathing is about 10 times greater than 0 dB. The decibel system of measuring sound gives a rough connection between the physical intensity of sound and its perceived loudness to the human ear. A 10 dB increase in sound level is perceived by the human ear as only a doubling of the loudness of the sound. Ambient sounds generally range from 30 dB (very quiet) to 100 dB (very loud).

Sound levels are generated from a source, and their decibel level decreases as the distance from that source increases. Sound dissipates exponentially with distance from the noise source. For a single point source, sound levels decrease approximately 6 dB for each doubling of distance from the source. This drop-off rate is appropriate for noise generated by stationary equipment. If noise is produced by a line source (e.g., highway traffic or railroad operations), the sound decreases 3 dB for each doubling of distance in a hard site environment; however, line source noise in a relatively flat environment with absorptive vegetation decreases 4.5 dB for each doubling of distance.

There are many ways to rate noise for various time periods, but an appropriate rating of ambient noise affecting humans also accounts for the annoying effects of sound. The equivalent continuous sound

level (L_{eq}) is the total sound energy of time-varying noise over a sample period. However, the predominant rating scales for human communities in the State of California are the L_{eq} and community noise equivalent level (CNEL) or the day-night average noise level (L_{dn}) based on A-weighted decibels (dBA). CNEL is the time-varying noise over a 24-hour period, with a 5 dBA weighting factor applied to the hourly L_{eq} for noises occurring from 7:00 p.m. to 10:00 p.m. (defined as relaxation hours), and a 10 dBA weighting factor applied to noises occurring from 10:00 p.m. to 7:00 a.m. (defined as sleeping hours). L_{dn} is similar to the CNEL scale but without the adjustment for events occurring during the evening hours. CNEL and L_{dn} are within 1 dBA of each other and are normally interchangeable. The Town uses the CNEL noise scale for long-term noise impact assessment.

Other noise rating scales of importance when assessing the annoyance factor include the maximum noise level (L_{max}), which is the highest exponential time-averaged sound level that occurs during a stated time period. The noise environments discussed in this analysis for short-term noise impacts are specified in terms of maximum levels denoted by L_{max}, which reflects peak operating conditions and addresses the annoying aspects of intermittent noise. L_{max} is often used together with another noise scale, or noise standards in terms of percentile noise levels, in noise ordinances for enforcement purposes. For example, the L_{10} noise level represents the noise level exceeded 10 percent of the time during a stated period. The L_{50} noise level represents the median noise level. Half the time the noise level exceeds this level, and half the time it is less than this level. The L_{90} noise level represents the noise level exceeded 90 percent of the time and is considered the background noise level during a monitoring period. For a relatively constant noise source, the L_{eq} and L_{50} are approximately the same.

Noise impacts can be described in three categories. The first category includes audible impacts that refer to increases in noise levels noticeable to humans. Audible increases in noise levels generally refer to a change of 3 dB or greater because this level has been found to be barely perceptible in exterior environments. The second category, potentially audible, refers to a change in the noise level between 1 dB and 3 dB. This range of noise levels has been found to be noticeable only in laboratory environments. The last category includes changes in noise levels of less than 1 dB, which are inaudible to the human ear. Only audible changes in existing ambient or background noise levels are considered potentially significant.

Physiological Effects of Noise

Physical damage to human hearing begins at prolonged exposure to noise levels higher than 85 dBA. Exposure to high noise levels affects the entire system, with prolonged noise exposure in excess of 75 dBA increasing body tensions, thereby affecting blood pressure and functions of the heart and the nervous system. In comparison, extended periods of noise exposure above 90 dBA would result in permanent cell damage. When the noise level reaches 120 dBA, a tickling sensation occurs in the human ear, even with short-term exposure. This level of noise is called the threshold of feeling. As the sound reaches 140 dBA, the tickling sensation is replaced by the feeling of pain in the ear (the threshold of pain). A sound level of 160–165 dBA will result in dizziness or loss of equilibrium. The ambient or background noise problem is widespread and generally more concentrated in urban areas than in outlying, less developed areas. Table A lists definitions of acoustical terms, and Table B shows common sound levels and their sources.

Table A: Definitions of Acoustical Terms

Term	Definitions
Decibel, dB	A unit of measurement that denotes the ratio between two quantities that are proportional to power; the number of decibels is 10 times the logarithm (to the base 10) of this ratio.
Frequency, Hz	Of a function periodic in time, the number of times that the quantity repeats itself in 1 second (i.e., number of cycles per second).
A-Weighted Sound Level, dBA	The sound level obtained by use of A-weighting. The A-weighting filter deemphasizes the very low- and very high-frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise. (All sound levels in this report are A-weighted, unless reported otherwise.)
L_{01}, L_{10}, L_{50}, L_{90}	The fast A-weighted noise levels that are equaled or exceeded by a fluctuating sound level 1%, 10%, 50%, and 90% of a stated time period.
Equivalent Continuous Noise Level, L_{eq}	The level of a steady sound that, in a stated time period and at a stated location, has the same A-weighted sound energy as the time-varying sound.
Community Noise Equivalent Level, CNEL	The 24-hour A-weighted average sound level from midnight to midnight, obtained after the addition of 5 dBA to sound levels occurring in the evening from 7:00 PM to 10:00 PM and after the addition of 10 dBA to sound levels occurring in the night between 10:00 PM and 7:00 AM.
Day/Night Noise Level, L_{dn}	The 24-hour A-weighted average sound level from midnight to midnight, obtained after the addition of 10 dBA to sound levels occurring in the night between 10:00 PM and 7:00 AM.
L_{max}, L_{min}	The maximum and minimum A-weighted sound levels measured on a sound level meter, during a designated time interval, using fast time averaging.
Ambient Noise Level	The all-encompassing noise associated with a given environment at a specified time; usually a composite of sound from many sources at many directions, near and far; no particular sound is dominant.
Intrusive	The noise that intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content, as well as the prevailing ambient noise level.

Table B: Common Sound Levels and Their Noise Sources

Noise Source	A-Weighted Sound Level in Decibels	Noise Environments	Subjective Evaluations
Near Jet Engine	140	Deafening	128 times as loud
Civil Defense Siren	130	Threshold of Pain	64 times as loud
Hard Rock Band	120	Threshold of Feeling	32 times as loud
Accelerating Motorcycle at a Few Feet Away	110	Very Loud	16 times as loud
Pile Driver; Noisy Urban Street/Heavy City Traffic	100	Very Loud	8 times as loud
Ambulance Siren; Food Blender	95	Very Loud	—
Garbage Disposal	90	Very Loud	4 times as loud
Freight Cars; Living Room Music	85	Loud	—
Pneumatic Drill; Vacuum Cleaner	80	Loud	2 times as loud
Busy Restaurant	75	Moderately Loud	—
Near Freeway Auto Traffic	70	Moderately Loud	—
Average Office	60	Quiet	One-half as loud
Suburban Street	55	Quiet	—
Light Traffic; Soft Radio Music in Apartment	50	Quiet	One-quarter as loud
Large Transformer	45	Quiet	—
Average Residence without Stereo Playing	40	Faint	One-eighth as loud
Soft Whisper	30	Faint	—
Rustling Leaves	20	Very Faint	—
Human Breathing	10	Very Faint	Threshold of Hearing
—	0	Very Faint	—

FUNDAMENTALS OF VIBRATION

Vibration refers to ground-borne noise and perceptible motion. Ground-borne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem outdoors, where the motion may be discernible, but without the effects associated with the shaking of a building there is less adverse reaction. Vibration energy propagates from a source through intervening soil and rock layers to the foundations of nearby buildings. The vibration then propagates from the foundation throughout the remainder of the structure. Building vibration may be perceived by occupants as the motion of building surfaces, the rattling of items on shelves or hanging on walls, or a low-frequency rumbling noise. The rumbling noise is caused by the vibration of walls, floors, and ceilings that radiate sound waves. Annoyance from vibration often occurs when the vibration exceeds the threshold of perception by 10 vibration velocity decibels (VdB) or less. This is an order of magnitude below the damage threshold for normal buildings. Typical sources of ground-borne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment), steel-wheeled trains, and occasional traffic on rough roads. Ground-borne vibration and noise from these sources are usually localized to areas within approximately 100 ft from the vibration source, although there are examples of ground-borne vibration causing interference out to distances greater than 200 ft (see the Federal Transit Administration's [FTA] 2018 *Transit Noise and Vibration Impact Assessment Manual*). When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible. It is assumed for most projects that the roadway surface will be smooth enough that ground-borne vibration from street traffic will not exceed the impact criteria; however, both construction of a project and freight train operations on railroad tracks could result in ground-borne vibration that may be perceptible and annoying.

Ground-borne noise is not likely to be a problem because noise arriving via the normal airborne path will usually be greater than ground-borne noise. Ground-borne vibration has the potential to disturb people and damage buildings. Although it is very rare for train-induced ground-borne vibration to cause cosmetic building damage, it is not uncommon for heavy duty construction processes (e.g., blasting and pile driving) to cause vibration of sufficient amplitudes to damage nearby buildings (FTA 2018). Ground-borne vibration is usually measured in terms of vibration velocity, either the root-mean-square (RMS) velocity or peak particle velocity (PPV). The RMS is best for characterizing human response to building vibration, and PPV is used to characterize potential for damage. Decibel notation acts to compress the range of numbers required to describe vibration. Vibration velocity level in decibels is defined as:

$$L_v = 20 \log_{10} [V/V_{ref}]$$

where "L_v" is the VdB, "V" is the RMS velocity amplitude, and "V_{ref}" is the reference velocity amplitude, or 1×10^{-6} inches/second (in/sec) used in the United States.

REGULATORY SETTING

Federal Guidelines

Federal Transit Administration

Noise. The construction noise criteria included in the *Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual* (2018) was used to evaluated potential construction noise impacts because Section 9.34.080(F)(3) of the Town's Municipal Code does not have daytime

construction noise level limits for activities that occur within the specified hours. Table C shows the FTA's Detailed Assessment Daytime Construction Noise Criteria based on the composite noise levels for each construction phase.

Table C: Detailed Assessment Daytime Construction Noise Criteria

Land Use	Daytime 1-hour L_{eq} (dBA)
Residential	80
Commercial	85
Industrial	90

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).
dBA = A-weighted decibels
L_{eq} = equivalent continuous sound level

Vibration. Vibration standards included in the FTA *Transit Noise and Vibration Impact Assessment Manual* (2018) were used to evaluate construction vibration impacts even though the Town exempts vibration levels generated from construction between the hours of 7:00 a.m. and 10:00 p.m. based on Section 9.34.090(C) of the Town's Municipal Code. Table D lists the potential vibration building damage criteria associated with construction activities.

Table D: Construction Vibration Damage Criteria

Building Category	PPV (in/sec)
Reinforced concrete, steel, or timber (no plaster)	0.50
Engineered concrete and masonry (no plaster)	0.30
Nonengineered-timber and masonry buildings	0.20
Buildings extremely susceptible to vibration damage	0.12

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).
FTA = Federal Transit Administration
in/sec = inches per second
PPV = peak particle velocity

Local Regulations

Town of Yucca Valley

General Plan. The Town's General Plan Noise Element (Town of Yucca Valley 2014) has established policies to meet the Town's noise-related goal. The applicable policies for the proposed project are listed below.

Goal N1: A noise environment where excessive noise from stationary, transportation-related, and temporary sources of noise are appropriately managed.

Policy N 1-3: Require daytime only truck deliveries to commercial and industrial uses adjacent to residential uses and other sensitive receptors unless there is no feasible alternative.

Policy N 1-13: Enforce Town noise standards and monitor compliance with noise standards.

Policy N 1-18: Enforce standards on the hours of operation for nonemergency construction.

Municipal Code. Section 9.34.080(B) of the Town's Municipal Code establishes noise standards for stationary and mobile noise sources affecting adjacent properties. Table E shows the exterior noise standards for stationary noise sources, and Table F shows the exterior and interior noise standards for mobile noise sources.

Table E: Noise Standards for Stationary Noise Sources

Affected Land Uses	Time Period	Noise Level (dBA)				
		L_{50}	L_{25}	L_8	L_2	L_{max}
Residential	7:00 a.m. to 10:00 p.m.	55	60	65	70	75
	10:00 p.m. to 7:00 a.m.	45	50	55	60	70
Professional Services	Anytime	55	60	65	70	75
Other Commercial	Anytime	60	65	70	75	80
Industrial	Anytime	70	75	80	85	90

Source: Town of Yucca Valley Municipal Code, Section 9.34.080(C) (Town of Yucca Valley 2024).
Note: No person shall operate or cause to be operated a source of sound at a location or allow the creation of noise on property owned, leased, occupied, or otherwise controlled by the person, which causes the noise level, when measured on another property, either incorporated or unincorporated, to exceed any one of the following:

L_{50} = The noise standard for a cumulative period of more than 30 minutes in any hour.
L_{25} = The noise standard plus 5 dBA for a cumulative period of more than 15 minutes in any hour.
L_8 = The noise standard plus 10 dBA for a cumulative period of more than 5 minutes in any hour.
L_2 = The noise standard plus 15 dBA for a cumulative period of more than 1 minute in any hour.
L_{max} = The noise standard plus 20 dBA for any period of time.

dBA = A-weighted decibel

Table F: Noise Standards for Mobile Noise Sources

Categories	Uses	Noise Standard (dBA L_{dn} or CNEL)	
		Interior[1]	Exterior[2,3]
Residential	Single-family, multi-family, duplex, mobile homes	45	60
Commercial	Amphitheater, concert hall, auditorium, movie theater	45	N/A
	Commercial retail, bank, restaurant	50	N/A
	Hotel, motel, transient housing	45	60
	Office building, research and development, professional offices	45	65
Institutional/Public	Hospital, nursing home, school classroom, religious institution, library	45	65
Open Space	Park	N/A	65

Source: Town of Yucca Valley Municipal Code, Section 9.34.080(C) (Town of Yucca Valley 2024).

1 The indoor environment shall exclude bathrooms, kitchens, toilets, closets, and corridors.

2 The outdoor environment shall be limited to: hospital/office building patios, hotel and motel recreation areas, mobile home parks, multi-family private patios or balconies, park picnic areas, private yard of single-family dwellings, and school playgrounds.

3 An exterior noise level of up to 65 dBA CNEL shall be allowed provided exterior noise levels have been substantially mitigated through a reasonable application of the best available noise reduction technology, and interior noise exposure does not exceed 45 dBA CNEL with windows and doors closed. Requiring that windows and doors remain closed to achieve an acceptable interior noise level shall necessitate the use of air conditioning or mechanical ventilation.

CNEL = Community Noise Equivalent Level
dBA = A-weighted decibel
L_{dn} = day-night average noise level
N/A = not applicable

Section 9.34.080(F)(3) of the Town's Municipal Code exempts noise from temporary construction, maintenance, repair, or demolition activities between 7:00 a.m. and 10:00 p.m., except Sundays and federal holidays.

Section 9.34.090(C) of the Town's Municipal Code limits ground vibration that can be felt without the aid of instruments at or beyond the lot line, nor shall any vibration be allowed which produces a particle velocity greater than or equal to 0.2 inch per second measured at or beyond the lot line.

Also, vibration from motor vehicles not under the control of the subject use and temporary construction maintenance or demolition activities between 7:00 a.m. and 10:00 p.m. are exempt.

THRESHOLDS OF SIGNIFICANCE

Based on the *Guidelines for the Implementation of the California Environmental Quality Act* (*State CEQA Guidelines*), Appendix G, Public Resources Code, Sections 15000–15387, a project will normally have a significant effect on the environment related to noise if it will substantially increase the ambient noise levels for adjoining areas or conflict with adopted environmental plans and the goals of the community in which it is located. The following are the thresholds for potential noise impacts.

The *State CEQA Guidelines* indicate that a project would have a significant impact on noise if it would result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generation of excessive ground-borne vibration or ground-borne noise levels; or
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels.

EXISTING SETTING

Overview of the Existing Noise Environment

The primary existing noise sources in the project area are transportation facilities and industrial activities. Traffic on SR-247, Buena Vista Drive, Sun Mesa Drive, and Newton Lane contributes to the ambient noise levels in the project vicinity. Industrial uses are located immediately west and south of the project site.

Land Uses in the Project Vicinity

Existing land uses within the project area include single-family residences, vacant land, and industrial uses. Single-family residences are located southeast of the project site. Industrial uses are located south and west of the project site. Vacant land is located north and east of the project site.

Ambient Noise Measurements

Two long-term (24-hour) noise level measurements were conducted from July 9 to July 10, 2024, and one long-term (24-hour) noise level measurement was conducted from July 10 to July 11, 2024, using Larson Davis Spark 706RC dosimeters to document the existing noise environment within the project area. Table G summarizes the results of the long-term noise level measurements along with a description of the measurement locations and noise sources that occurred during the measurements. As shown in Table G, daytime noise levels ranged from 40.7 to 63.1 dBA L_{eq} and nighttime noise levels ranged from 43.1 to 53.5 dBA L_{eq}. Also, the calculated CNEL levels at LT-1, LT-2, and LT-3 were 57.3, 57.7, and 57.9 dBA, respectively. The long-term noise level measurement survey sheets along with the hourly L_{eq}, L_{max}, and L_{min} results are provided in Attachment C. Figure 3 shows the long-term monitoring locations.

Table G: Long-Term Ambient Noise Monitoring Results

Monitor No.	Location Description	Noise Levels (dBA)		
		L_{eq}		CNEL
		Daytime[1]	Nighttime[2]	
LT-1	4831 Newton Lane. On a chain-link fence on the northwest corner of the property. Approximately 650 ft north of Buena Vista Drive, 318 ft east of Newton Lane, and 680 ft south of Sun Mesa Drive.	41.9–63.1	43.1–50.7	57.3
LT-2	West side of Newton Lane. On chain-link fence. Approximately 550 ft east of State Route 247 and 430 ft south of Sun Mesa Drive.	43.2–60.5	44.0–53.5	57.7
LT-3	West side of Newton Lane. On chain-link fence. Approximately 640 ft east of State Route 247 and 130 ft south of Sun Mesa Drive.	40.7–62.1	44.0–51.2	57.9

Source: Compiled by LSA (2024).
Note: LT-1 and LT-3 were conducted from July 9 to July 10, 2024. LT-2 was conducted from July 10 to July 11, 2024.
[1] Daytime = Hours between 7:00 a.m. and 10:00 p.m.
[2] Nighttime = Hours between 10:00 p.m. and 7:00 a.m.
CNEL = Community Noise Equivalent Level
dBA = A-weighted decibels
ft = foot/feet
L_{eq} = equivalent continuous sound level

Existing Aircraft Noise

The closest public airport to the project site is the Yucca Valley Airport, which is 2.6 miles southeast of the project site. Based on the *Airport Comprehensive Land Use Plan for Yucca Valley Airport* (San Bernardino County 1992), the project site is well beyond the 60 dBA CNEL noise contour. Also, there are no private airstrips within 2 miles of the project site. Therefore, the project would not expose people working in the project vicinity to aviation-related excessive noise levels, and this topic is not further discussed.

IMPACTS

Short-Term Construction Noise Impacts

Two types of short-term noise impacts would occur during project construction. The first type would be from construction crew commutes and the transport of construction equipment and materials to the project site and would incrementally raise noise levels on roadways leading to the site. The pieces of construction equipment for construction activities would move on site, would remain for the duration of each construction phase, and would not add to the daily traffic volume in the project vicinity. Although there would be a relatively high single-event noise exposure potential causing intermittent noise nuisance (passing trucks at 50 ft would generate up to a maximum of 84 dBA), the effect on longer-term ambient noise levels would be small because the number of daily construction-related vehicle trips is small compared to existing daily traffic volume on SR-247, Buena Vista Drive, and Sun Mesa Drive. The building construction phase and architectural coating phase would overlap that would generate the most trips out of all of the other construction phases, at 144 trips per day based on the California Emissions Estimator Model (CalEEMod) (Version 2022.1) results contained in Attachment B of the *Air Quality, Energy, and Greenhouse Gas Technical Memorandum for the Sun Mesa Mini Storage Project* (LSA 2024a). Roadways that would be used to access the project site are SR-247, Buena Vista Drive, and Sun Mesa Drive. The existing average daily traffic (ADT) volume on SR-247 ranges between 2,950 and 11,837 based on the 2022 California Department of Transportation (Caltrans) Annual Average Daily Truck Traffic for Truck Traffic on California State Highways (Caltrans 2022). Also, the existing ADT volume on Buena Vista Drive is 3,643 based on the *Yucca Valley General Plan Update Environmental Impact Report* (Town of Yucca Valley 2013). In addition, Sun Mesa Drive, is a two-lane road similar to Buena Vista Drive and would experience a similar noise increase. Based

on the information above, construction-related traffic would increase noise by up to 0.2 dBA. A noise level increase of less than 1 dBA would not be perceptible to the human ear. Therefore, short-term construction-related noise impacts associated with worker commute and equipment transport to the project site would be less than significant. No mitigation measures are required.

The second type of short-term noise impact is related noise generated from construction activities. Construction is performed in discrete steps, each of which has its own mix of equipment and, consequently, its own noise characteristics. The proposed project anticipates site preparation, grading, building construction, paving, and architectural coating phases of construction. These various sequential phases change the character of the noise generated on a project site. Therefore, the noise levels vary as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. Table H lists the L_{max} recommended for noise impact assessments for typical construction equipment included in the Federal Highway Administration (FHWA) *Highway Construction Noise Handbook* (2006), based on a distance of 50 ft between the equipment and a noise receptor.

Table H: Typical Construction Equipment Noise Levels

Equipment Description	Acoustical Usage Factor (%)[1]	Maximum Noise Level (L_{max}) at 50 ft[2]
Backhoes	40	80
Compactor (ground)	20	80
Compressor (air)	40	80
Concrete Mixer Truck	40	85
Cranes	16	85
Dozers	40	85
Dump Trucks	40	84
Excavators	40	85
Flat Bed Trucks	40	84
Manlift (Forklift)	20	85
Front-end Loaders	40	80
Generator	50	82
Graders	40	85
Jackhammers	20	85
Pavement Scarifier	20	85
Paver	50	77
Pickup Truck	40	55
Pneumatic Tools	50	85
Pumps	50	77
Rock Drills	20	85
Rollers	20	85
Scrapers	40	85
Tractors	40	84
Welder/Torch	40	73

Source: Table 1, *FHWA Roadway Construction Noise Model User's Guide* (FHWA 2006).
Note: Noise levels reported in this table are rounded to the nearest whole number.
[1] Usage factor is the percentage of time during a construction noise operation that a piece of construction equipment is operating at full power.
[2] Maximum noise levels were developed based on Specification 721.560 from the Central Artery/Tunnel program to be consistent with the City of Boston's Noise Code for the "Big Dig" project.
FHWA = Federal Highway Administration
L_{max} = maximum instantaneous sound level
ft = foot/feet

Table I lists the anticipated construction equipment for each construction phase based on the CalEEMod (Version 2022.1) results contained in Attachment B of the *Air Quality, Energy, and Greenhouse Gas Technical Memorandum for the Sun Mesa Mini Storage Project* (LSA 2024a). Table I shows the combined noise level at 50 ft from all of the equipment in each phase and the L_{eq} noise level for each equipment at 50 ft based on the quantity, reference instantaneous maximum (L_{max}) noise level at 50 ft, and the acoustical usage factor. As shown in Table I, construction noise levels would reach up to 88.5 L_{eq} at a distance of 50 ft.

Table I: Summary of Construction Phase, Equipment, and Noise Levels

Construction Phase	Construction Equipment	Quantity	Reference Noise Level at 50 ft (dBA L_{max})	Acoustical Usage Factor[1] (%)	Noise Level at 50 ft (dBA L_{eq})	Combined Noise Level at 50 ft (dBA L_{eq})
Site Preparation	Dozer	3	85	40	85.8	87.3
	Front-End Loader	4	80	40	82.0	
Grading	Grader	1	85	40	81.0	87.0
	Excavator	1	85	40	81.0	
	Front-End Loaders	3	80	40	80.8	
	Dozer	1	85	40	81.0	
Phase 1 and 2 Trenching	Excavator	1	85	40	81.0	82.2
	Front-End Loaders	1	80	40	76.0	
Phase 1 Building Construction	Crane	1	85	16	77.0	86.5
	Forklifts	3	85	20	82.8	
	Generator	1	82	50	79.0	
	Welders	1	73	40	69.0	
	Front-End Loaders	3	80	40	80.8	
Paving	Front-End Loaders	1	80	40	76.0	88.5
	Concrete Mixer Truck	2	85	40	84.0	
	Paver	1	85	50	82.0	
	Pavement Scarafier	2	85	20	81.0	
	Roller	2	85	20	81.0	
Phase 2 Building Construction	Crane	1	85	16	77.0	86.5
	Forklifts	3	85	20	82.8	
	Generator	1	82	50	79.0	
	Front-End Loaders	3	80	40	80.8	
	Welders	1	73	40	69.0	
Architectural Coating	Air Compressors	1	80	40	76.0	76.0

Source: Compiled by LSA (2024).

[1] The acoustical usage factor is the percentage of time during a construction noise operation that a piece of construction equipment operates at full power.

dBA = A-weighted decibels
L_{eq} = equivalent continuous sound level
ft = foot/feet
L_{max} = maximum instantaneous noise level

The closest residential property line is approximately 375 ft from the center of the project site and may be subject to short-term construction noise reaching 71.0 dBA L_{eq} generated by construction activities in the project area. Construction noise is temporary and would stop once project construction is completed. Compliance with the Town's hours of construction pursuant to Section 9.34.080(F)(3) of the Town's Municipal Code listed below would ensure construction-related noise would not be generated during the more sensitive nighttime hours. Furthermore, construction related noise levels would be below the FTA noise level standard of 80 dBA L_{eq} for residential uses.

Therefore, noise levels generated from project construction would be less than significant. No mitigation measures are required.

- The construction contractor shall limit construction activities to between the hours of 7:00 a.m. and 10:00 p.m. Monday through Saturday pursuant to Sections 9.34.080(F)(3) and 9.34.090(C) of the Town's Municipal Code (Town of Yucca Valley 2024). Construction is prohibited outside these hours and anytime on Sundays and federal holidays.

Short-Term Construction Vibration Impacts

Although vibration levels from construction-related activities between the hours of 7:00 a.m. and 10:00 p.m. Monday through Saturday is exempt pursuant to Sections 9.34.080(F)(3) and 9.34.090(C) of the Town's Municipal Code (Town of Yucca Valley 2024), this construction vibration impact analysis assesses the potential for building damage using vibration levels in PPV (in/sec). Vibration levels calculated in PPV are best for characterizing damage potential.

Table J shows the reference vibration levels at a distance of 25 ft for each type of standard construction equipment from the *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018). Project construction is expected to require the use of large bulldozers and loaded trucks, which would generate ground-borne vibration levels of up to 0.089 PPV (in/sec) and 0.076 PPV (in/sec), respectively, when measured at 25 ft.

Table J: Vibration Source Amplitudes for Construction Equipment

Equipment	Reference PPV (in/sec) at 25 ft
Pile Driver (Impact), Typical	0.644
Pile Driver (Sonic), Typical	0.170
Vibratory Roller	0.210
Hoe Ram	0.089
Large Bulldozer[1]	**0.089**
Caisson Drilling	0.089
Loaded Trucks[1]	**0.076**
Jackhammer	0.035
Small Bulldozer	0.003

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).
[1] The equipment shown in **bold** is expected to be used on site.
ft = foot/feet
FTA = Federal Transit Administration
in/sec = inches per second
PPV = peak particle velocity

The greatest vibration levels are anticipated to occur during the site preparation and grading phase. All other phases are expected to result in lower vibration levels. The distance to the nearest buildings for vibration impact analysis is measured between the nearest off-site buildings and the project boundary (assuming the construction equipment would be used at or near the project boundary) because vibration impacts normally occur within the buildings.

The formula for vibration transmission is provided below:

$$PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$$

Table K lists the projected vibration levels from various construction equipment expected to be used on the project site at the project construction boundary to the nearest buildings in the project

vicinity. As shown in Table K, the residential and industrial buildings to the southeast and south of the project site are approximately 200 ft and 80 ft from the project construction boundary and would experience a vibration level of up to 0.004 PPV (in/sec) and 0.016 PPV (in/sec), respectively. These vibration levels would not result in building damage because residential and industrial buildings would be constructed equivalent to or better than nonengineered timber and masonry and vibration levels would not exceed the FTA vibration damage threshold of 0.20 PPV (in/sec). Other building structures that surround the project site would experience lower vibration levels because they are farther away and would be constructed equivalent to or better than

Table K: Potential Construction Vibration Damage

Land Use	Direction	Equipment/ Activity	Reference Vibration Level at 25 ft	Distance to Structure (ft)[1]	Vibration Level
			PPV (in/sec)		PPV (in/sec)
Residence	Southeast	Large bulldozers	0.089	200	0.004
		Loaded trucks	0.076	200	0.003
Industrial	South	Large bulldozers	0.089	80	0.016
		Loaded trucks	0.076	80	0.016

Source: Compiled by LSA (2024).
Note: The FTA-recommended building damage threshold is 0.20 PPV (in/sec) at the receiving nonengineered timber and masonry building.
[1] Distance from the project construction boundary to the building structure.
ft = foot/feet
in/sec = inches per second
FTA = Federal Transit Administration
PPV = peak particle velocity

nonengineered timber and masonry. Also, compliance with the Town's hours of construction pursuant to Sections 9.34.080(F)(3) and 9.34.090(C) of the Town's Municipal Code (Town of Yucca Valley 2024) discussed above would ensure that vibration levels generated from construction-related activities would be exempt. Therefore, construction vibration impacts during project construction would be less than significant. No mitigation measures are required.

Long-Term Traffic Noise Impacts

The project is estimated to generate an ADT volume of 137 based on the *Sun Mesa Mini Storage Project Trip Generation and Vehicle Miles Traveled Memorandum* (LSA 2024b). The existing ADT volume on SR-247 ranges between 2,950 and 11,837 based on the *2022 Caltrans Annual Average Daily Truck Traffic for Truck Traffic on California State Highways* (Caltrans 2022). Also, the existing ADT volume on Buena Vista Drive is 3,643 based on the *Yucca Valley General Plan Update Environmental Impact Report* (Town of Yucca Valley 2013). In addition, Sun Mesa Drive is two-lane road similar to Buena Vista Drive and would experience a similar noise increase . It takes a doubling of traffic to increase traffic noise levels by 3 dBA. Based on the information above, project-related traffic on SR-247, Buena Vista Drive, and Sun Mesa Drive would increase traffic noise levels by up to 0.2 dBA. A noise level increase of less than 1 dBA would not be perceptible to the human ear. Therefore, no traffic noise impacts from project-related traffic on off-site sensitive receptors would occur. No mitigation measures are required.

Long-Term Stationary Source Noise Impacts

Operation of the proposed project would include parking activities and heating, ventilation, and air conditioning (HVAC) equipment that would result in stationary noise impacts as described below.

Access to the proposed storage facility would be between the hours of 6:00 a.m. and 10:00 p.m. 7 days per week. The following provides a detailed noise analysis and discussion of each stationary noise source.

Parking Activities

The proposed project would include 10 parking spaces, and parking activities would occur during access hours described above. Noise generated from parking lot activities would include noise generated by vehicles traveling at slow speeds, engine start-up noise, car door slams, car horns, car alarms, and tire squeals. Representative parking activities would generate a noise level of 76.3 dBA L_8 at 20 ft, based on measurements conducted by LSA (LSA 2016). At a distance of 50 ft, noise levels would be 68.2 dBA L_8. It is estimated that parking activities would generate the maximum noise level for a cumulative period of 4 minutes in any hour during daytime hours and 2 minutes in any hour during nighttime hours based on the project's trip generation (LSA 2024b), which would be 56.4 dBA and 53.4 dBA L_{eq} at a distance of 50 ft, respectively.

Heating, Ventilation, and Air Conditioning

The proposed project would include an HVAC unit for the manager's unit building. The HVAC equipment could operate 24 hours per day. The specifications of the HVAC equipment, including the reference noise level, are provided in Attachment D. The HVAC unit would generate a noise level of 44.4 dBA L_{eq} at a distance of 50 ft.

Stationary Noise Impact Summary

Tables L and M list the individual stationary noise sources from daytime and nighttime, respectively, project operations at each of the surrounding adjacent uses and show the reference noise levels at 50 ft and combined noise levels. As shown in Tables L and M, noise levels generated from project operations during daytime and nighttime hours at the closest residential property line would reach up to a combined stationary noise level of 38.2 and 35.4 dBA L_{eq}, respectively. These noise levels would not exceed the Town's daytime and nighttime 30-minute noise standard of 55 dBA and 45 dBA for residential uses, respectively. Also, maximum noise levels generated from project operations during both daytime and nighttime hours at the closest residential property line would reach up to 51.5 dBA L_{max}. This maximum noise level would not exceed the Town's daytime and nighttime maximum noise standards of 75 dBA and 70 dBA for residential uses, respectively.

Tables L and M shows that noise levels generated from project operations during daytime and nighttime hours at the closest industrial property line would reach up to a combined stationary noise level of 51.9 and 49.1 dBA L_{eq}, respectively. These noise levels would not exceed the Town's 30-minute noise standard of 70 dBA for industrial uses. Also, maximum noise levels generated from project operations during both daytime and nighttime hours at the closest industrial property line would reach up to 65.4 dBA L_{max}. This maximum noise level would not exceed the Town's maximum noise standard of 90 dBA for industrial uses, respectively. Therefore, noise generated from project operations would be less than significant. No mitigation measures are required.

Long-Term Vibration Impacts

The proposed project would not generate vibration. In addition, vibration levels generated from project-related traffic on the roadways (SR-247, Buena Vista Drive, Sun Mesa Drive, and Newton

Lane) leading to the project site are unusual for on-road vehicles because the rubber tires and suspension systems of on-road vehicles provide vibration isolation. Vibration generated from operations of the project would be minimal to negligible and would not exceed the Town's vibration standard of 0.2 in/sec. Therefore, vibration impacts from project-related operations would be less than significant. No mitigation measures are required.

Table L: Stationary Daytime Noise Levels

Land Use	Direction	Noise Source	Reference Noise Level at 50 ft (dBA)		Distance (ft)	Distance Attenuation (dBA)	Noise Level (dBA)		Combined Noise Level (dBA L_{eq})
			L_{max}	L_{eq}			L_{max}	L_{eq}	
Residence	Southeast	Parking Activity	70.0	56.4	420	18.5	51.5	37.9	38.2
		HVAC	--	44.4	430	18.7	--	25.7	
Industrial	South	Parking Activity	70.0	56.4	85	4.6	65.4	51.8	51.9
		HVAC	--	44.4	120	7.6	--	36.8	
Industrial	West	Parking Activity	70.0	56.4	365	17.3	52.7	39.1	39.4
		HVAC	--	44.4	370	17.4	--	27.0

ft = foot/feet
HVAC = heating, ventilation, and air conditioning
L_{eq} = equivalent continuous sound level
L_{max} = maximum instantaneous noise level

REGULATORY COMPLIANCE MEASURES

Compliance with the following measure would ensure that construction noise would be generated only during allowable times:

- The construction contractor shall limit construction activities to between the hours of 7:00 a.m. and 10:00 p.m. Monday through Saturday pursuant to Sections 9.34.080(F)(3) and 9.34.090(C) of the Town's Municipal Code (Town of Yucca Valley 2024). Construction is prohibited outside these hours and anytime on Sundays and federal holidays.

NOISE SURVEY SHEETS

Noise Measurement Survey – 24 HR

Project Number: 20231230
Project Name: Sun Mesa Mini Storage

Test Personnel: Amber Hazelrigg
Equipment: Spark 706RC (SN: 17815)

Site Number: LT-1 Date: 7/9/24

Time: From 1:00 p.m. To 1:00 p.m.

Site Location: 4831 Newton Lane. On a chain-linked fence on the northwest corner of the property. Approximately 650 ft north of Buena Vista Drive, 318 ft east of Newton Lane, and 680 ft south of Sun Mesa Drive.

Primary Noise Sources: No primary are secondary noises were observed.

Comments: To the east are a few residential homes.

Rheem *Classic*® Series Air Conditioners

RA14 Series

Efficiencies up to 14 SEER/11.5 EER
Nominal Sizes 1½ to 5 Ton [5.28 to 17.6 kW]
Cooling Capacities 17.3 to 60.5 kBTU
[5.7 to 17.7 kW]

"Proper sizing and installation of equipment is critical to achieve optimal performance. Split system air conditioners and heat pumps must be matched with appropriate coil components to meet Energy Star. Ask your Contractor for details or visit www.energystar.gov."

- Composite base pan – dampens sound, captures louver panels, eliminates corrosion and reduces number of fasteners needed
- Powder coat paint system – for a long lasting professional finish
- Scroll compressor – uses 70% fewer moving parts for higher efficiency and increased reliability
- Modern cabinet aesthetics – increased curb appeal with visually appealing design
- Curved louver panels – provide ultimate coil protection, enhance cabinet strength, and increased cabinet rigidity
- Optimized fan orifice – optimizes airflow and reduces unit sound
- Rust resistant screws – confirmed through 1500-hour salt spray testing
- PlusOne™ **Expanded Valve Space** – 3"-4"-5" service valve space – provides a minimum working area of 27-square inches for easier access
- PlusOne™ **Triple Service Access** – 15" wide, industry leading corner service access – makes repairs easier and faster. The two fastener removable corner allows optimal access to internal unit components. Individual louver panels come out once fastener is removed, for faster coil cleaning and easier cabinet reassembly
- Diagnostic service window with two-fastener opening – provides access to the high and low pressure.
- External gauge port access – allows easy connection of "low-loss" gauge ports
- Single-row condenser coil – makes unit lighter and allows thorough coil cleaning to maintain "out of the box" performance
- 35% fewer cabinet fasteners and fastener-free base – allow for faster access to internal components and hassle-free panel removal
- Service trays – hold fasteners or caps during service calls
- QR code – provides technical information on demand for faster service calls
- Fan motor harness with extra long wires allows unit top to be removed without disconnecting fan wire.

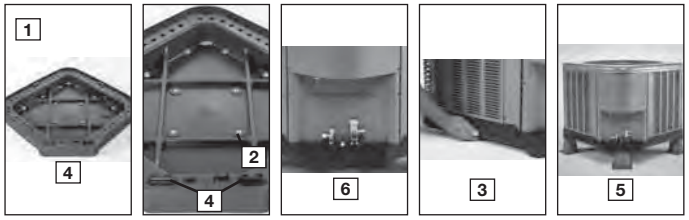
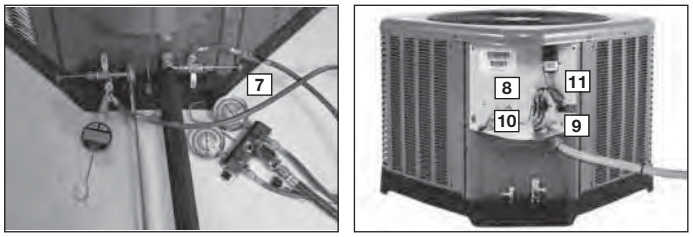
Introduction to RA14 Air Conditioner

The RA14 is our 14 SEER air conditioner and is part of the Rheem air conditioner product line that extends from 13 to 20 SEER. This highly featured and reliable air conditioner is designed for years of reliable, efficient operation when matched with Rheem indoor aluminum evaporator coils and furnaces or air handler units with aluminum evaporators.

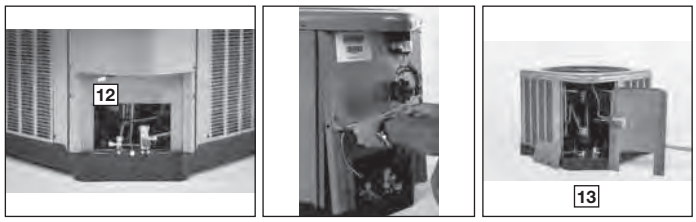
Our unique composite base (1) reduces sound emission, eliminates rattles, significantly reduces fasteners, eliminates corrosion and has integrated brass compressor attachment inserts (2). Furthermore it has incorporated into the design, water management features, means for hand placement (3) for unit maneuvering, screw trays (4) and inserts for lifting off unit pad. (5)



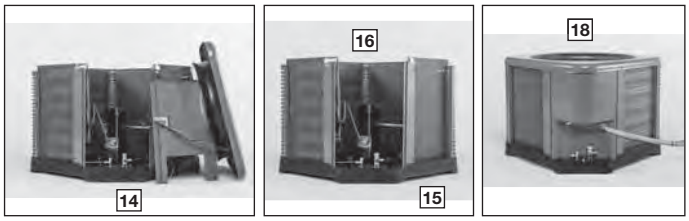
Service Valves (6) are rigidly mounted in the composite base with 3" between suction and discharge valves, 4" clearance below service valves and a minimum of 5" above the service valves, creating industry leading installation ease. The minimum 27 square-inches around the service valves allows ample room to remove service valve schrader prior to brazing, plenty of clearance for easy brazing of the suction and discharge lines to service valve outlets, easy access and hookup of low loss refrigerant gauges (7), and access to the service valve caps for opening. For applications with long-line lengths up to 250 feet total equivalent length, up to 200 feet condenser above evaporator, or up to 80 feet evaporator above condenser, the long-line instructions in the installation manual should be followed.



Controls are accessed from the corner of the unit by removing only two fasteners from the control access cover, revealing the industry's largest 15" wide and 14" tall control area (8). With all this room in the control area the high voltage electrical whip (9) can easily be inserted through the right size opening in the bottom of the control area. Routing it leads directly to contractor lugs for connection. The low voltage control wires (10) are easily connected to units low voltage wiring. If contactor or capacitor (11) needs to be replaced there is more than adequate space to make the repair. Furthermore, if high pressure and low pressure model was not purchased but is desired to be installed in the field, the service window (12) can be removed by removing two screws, to access the high and low side schrader fittings for easy field installation. The entire corner can be removed providing ultimate access to install the high and low pressure switch. (13)



If in the rare event, greater access is needed to internal components, such as the compressor, the entire corner of the unit can be removed along with the top cover assembly to have unprecedented access to interior of the unit (14). Extra wire length is incorporated into each outdoor fan and compressor so top cover and control panel can be positioned next to the unit. With minimal effort the plug can be removed from the compressor and the outdoor fan wires can be removed from the capacitor to allow even more uncluttered access to the interior of the unit (15). Outdoor coil heights range from as short as 22" to 32", aiding access to the compressor. Disassembly to this degree and complete reassembly only takes a first time service technician less than 10 minutes. (15)

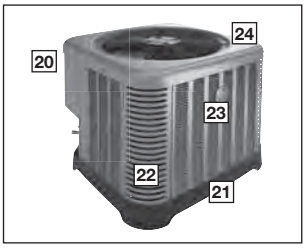


All units utilize strong formed louver panels which provide industry leading coil protection. Louver removal for coil cleaning is accomplished by removing one screw and lifting the panel out of the composite base pan. (17) All RA14 units utilize single row coils (16) making cleaning easy and complete, restoring the performance of the air conditioner back to out of the box performance levels year after year.

The outdoor fan motor has sleeve bearings and is inherently protected. The motor is totally enclosed for maximum protection from weather, dust and corrosion. Access to the outdoor fan is made by removing four fasteners from the fan grille. The outdoor fan can be removed from the fan grille by removing 4 fasteners in the rare case outdoor fan motor fails.

Each cabinet has optimized composite (19) fan orifice assuring efficient and quiet airflow.

The entire cabinet has powder post paint (20) achieving 1000 hour salt spray rating, allowing the cabinet to retain its aesthetics throughout its life.



Scroll compressors with standard internal pressure relief and internal thermal overload are used on all capacities assuring longevity of high efficient and quiet operation for the life of the product.

Each unit is shipped with filter drier for field installation and will trap any moisture or dirt that could contaminate the refrigerant system.

All cabinets have industry leading structural strength due to the composite base pan (21), interlocking corner post (22), formed curved louver panels (23) and drawn top cover (24) making it the most durable cabinet on the market today.

Each RA14 capacity has undergone rigorous psychometric testing to assure performance ratings of capacity, SEER and EER per AHRI Standard 210/240 rating conditions. Also each unit bears the UL mark and each unit is certified to UL 1995 safety standards.

Each unit has undergone specific strain and modal testing to assure tubing (25) is outside the units natural frequency and that the suction and discharge lines connected to the compressor withstand any starting, steady state operation or shut down forces imposed by the compressor.

All units have been sound tested in sound chamber to AHRI 270 rating conditions, and A-weighted Sound Power Level tables produced, assuring units have acceptable noise qualities (see page 9). Each unit has been ran in cooling operation at 95°F and 82°F and sound ratings for the RA14 range from as low as 74 dBA to 77 dBA.

All units have been ship tested to assure units meet stringent “over the road” shipping conditions.

As manufactured all units in the RA14 family have cooling capability to 55 °F. Addition of low ambient control will allow the unit to operate down to 0°F. Factory testing is performed on each unit. All component parts meet well defined specification and continually go through receiving inspections. Each component installed on a unit is scanned, assuring correct component utilization for a given unit capacity and voltage. All condenser coils are leak tested with pressurization test to 550#’s and once installed and assembled, each units’ complete refrigerant system is helium leak tested. All units are fully charged from the factory for up to 15 feet of piping. All units are factory run tested. The RA14 has a 10-year conditional compressor and parts warranty (registration required).

Optional Accessories
(Refer to accessory chart for model #)

Compressor Crankcase Heater
Protects against refrigerant migration that can occur during low ambient operation

Compressor Sound Cover
- Reinforced vinyl compressor cover containing a 1½ inch thick batt of fiberglass insulation
- Open edges are sealed with a one-inch wide hook and loop fastening tape

Compressor Hard Start Kit
- Single-phase units are equipped with a PSC compressor motor, this type of motor normally does not need a potential relay and start capacitor
- Kit may be required to increase the compressor starting torque, in conditions such as low voltage

Low Ambient Kit
- Air conditioners operate satisfactorily in the cooling mode down to 55°F outdoor air temperature without any additional controls
- This Kit can be added in the field enabling unit to operate properly down to 0° in the cooling mode
- Crankcase heater and freezestat should be installed on compressors equipped with a low ambient kit

3"/6"/12"
- Gray high density polyethylene feet are available to raise unit off of mounting surface away from moisture

Low Pressure
- Can be added in field enabling the unit to shut off compressor on loss of charge

NOTE: Unit can be purchased with high and low pressure installed at factory. (Refer to SKU list)

High Pressure
- Can be added in field enabling unit to shut off compressor if unit loses outdoor fan operation.

NOTE: Unit can be purchased with high and low pressure installed at factory. (Refer to SKU list)

Decorative Top
- Can be installed on fan grille

[1]Refrigerant charge sufficient for 15 ft. length of refrigerant lines. For longer line set requirements see the installation instructions for information about set length and additional refrigerant charge required.
[2]HACR type circuit breaker of fuse.
[3]Refer to National Electrical Code manual to determine wire, fuse and disconnect size requirements.

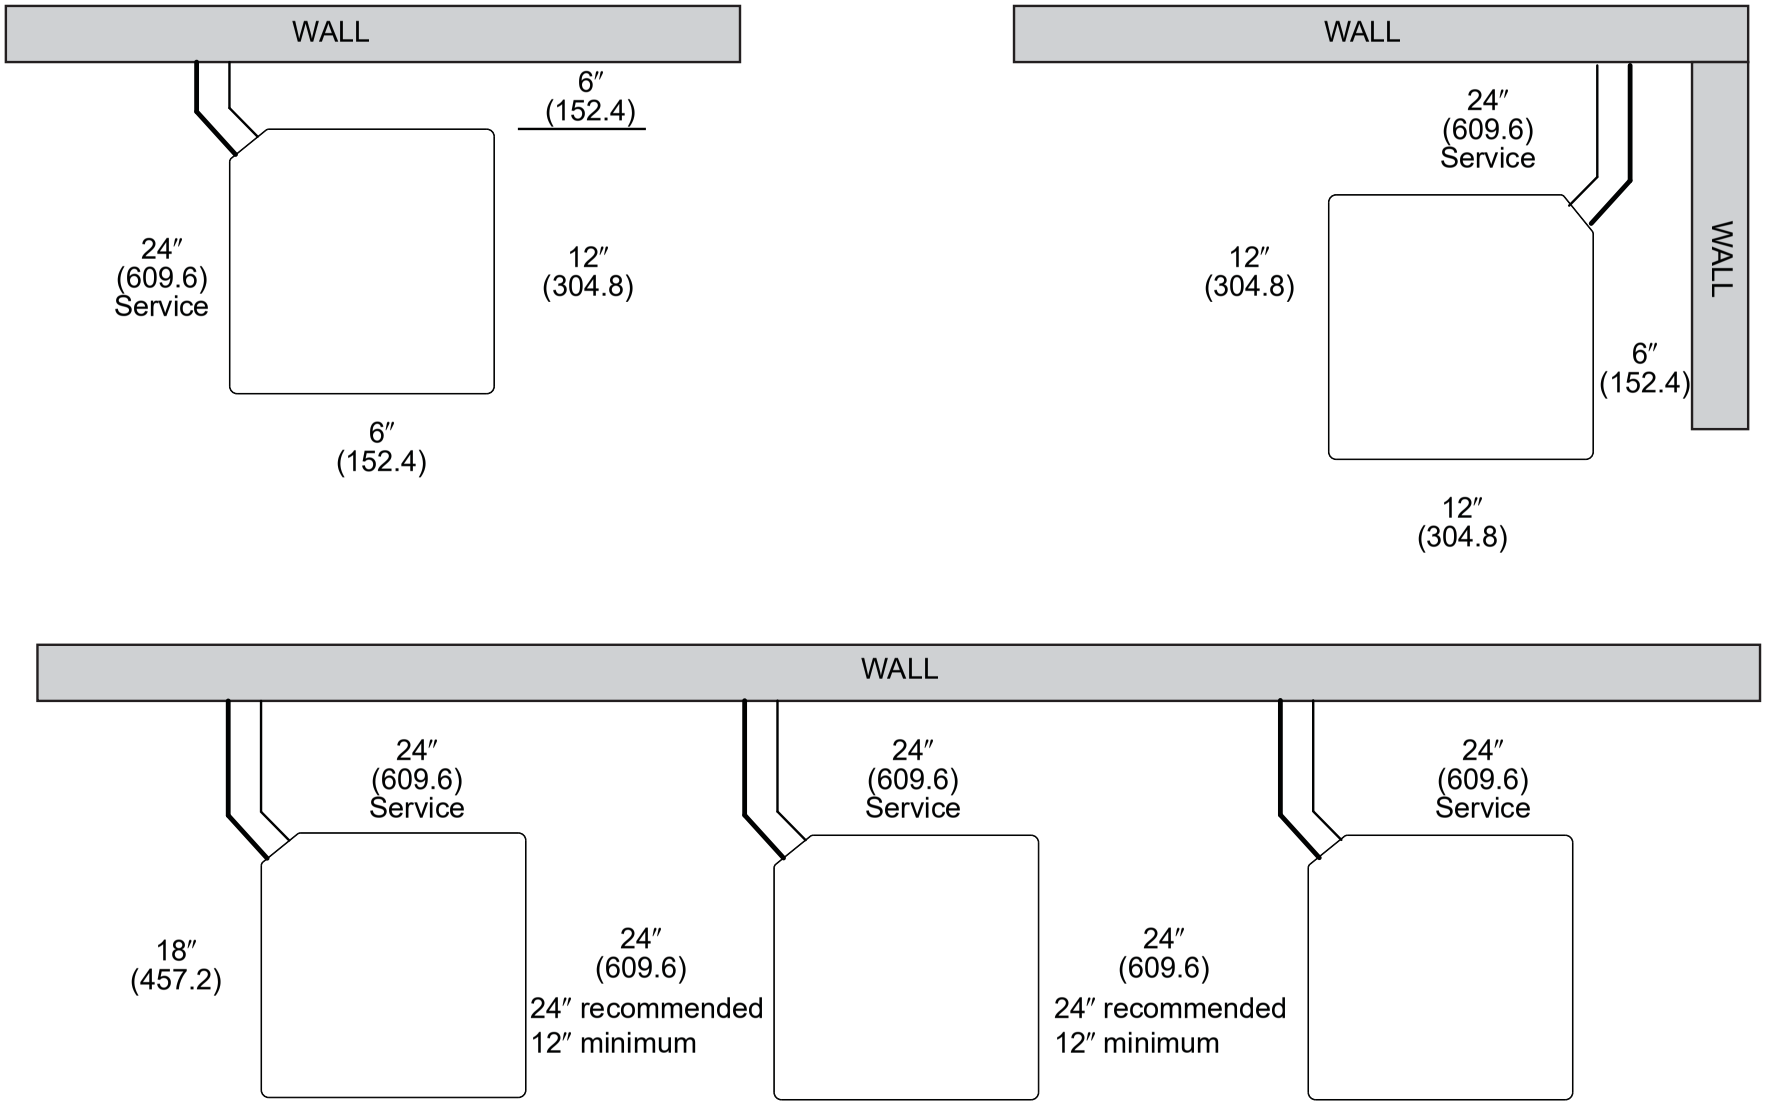
CLEARANCES



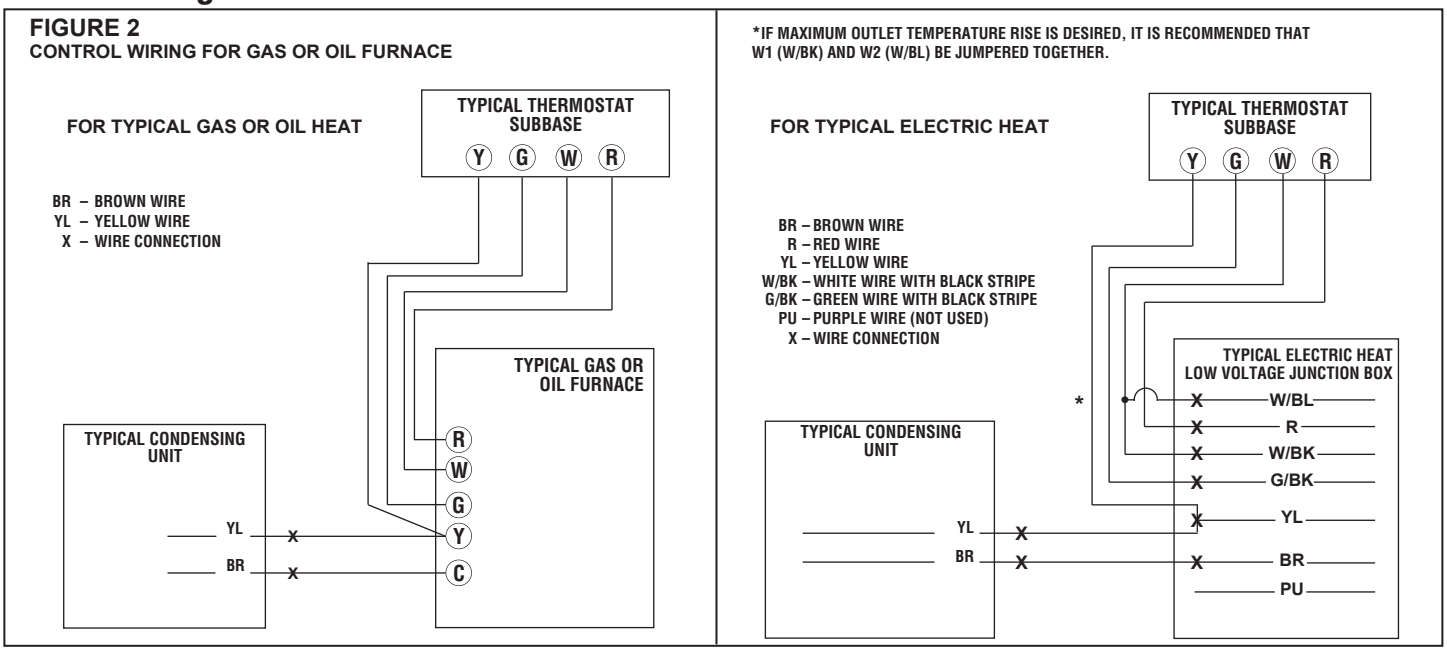
NOTE: NUMBERS IN () = mm

IMPORTANT: When installing multiple units in an alcove, roof well or partially enclosed area, ensure there is adequate ventillation to prevent re-circulation of discharge air.

ST-A1225-01-00

Control Wiring

FIGURE 2
CONTROL WIRING FOR GAS OR OIL FURNACE



Application Guidelines

1. Intended for outdoor installation with free air inlet and outlet. Outdoor fan external static pressure available is less than 0.01 -in. wc.
2. Minimum outdoor operation air temperature for cooling mode without low-ambient operation accessory is 55°F (12.8°C).
3. Maximum outdoor operating air temperature is 125°F (51.7°C).
4. For reliable operation, unit should be level in all horizontal planes.
5. Use only copper wire for electric connections at unit. Aluminum and clad aluminum are not acceptable for the type of connector provided.
6. Do not apply capillary tube indoor coils to these units.
7. Factory – supplied filter drier must be installed.

NOTES:
1. Do not exceed 200 ft linear line length.
2. *Do not exceed 100 ft vertical separation if outdoor unit is above indoor unit.
3. **3/4" suction line should only be used for 1.5 ton systems if outdoor unit is below or at same level as indoor to assure proper oil return.
4. Always use the smallest liquid line allowable to minimize refrigerant charge.
5. Applications shaded in light gray indicate capacity multipliers between 0.90 and 0.96 which are not recommended, but are allowed.
6. Applications shaded in dark gray are not recommended due to excessive liquid or suction pressure drop.

NOTE: Values based on 105°F liquid temperature and 45°F evaporator temperature in cooling mode depending on size

NOTES:
1. Do not exceed 61 meters linear line length.
2. *Do not exceed 30 meters vertical separation if outdoor unit is above indoor unit.
3. **19.05 mm [3/4 in.] suction line should only be used for 1.5 ton systems if outdoor unit is below or at same level as indoor to assure proper oil return.
4. Always use the smallest liquid line allowable to minimize refrigerant charge.
5. Applications shaded in light gray indicate capacity multipliers between 0.90 and 0.96 which are not recommended, but are allowed.
6. Applications shaded in dark gray are not recommended due to excessive liquid or suction pressure drop.

GUIDE SPECIFICATIONS

General

System Description

Outdoor-mounted, air-cooled, split-system air conditioner composite base pan unit suitable for ground or rooftop installation. Unit consists of a hermetic compressor, an air-cooled coil, propeller-type condenser fan, suction and legend line service valve, and a control box. Unit will discharge supply air upward as shown on contract drawings. Unit will be used in a refrigeration circuit to match up to a coil unit.

Quality Assurance

- Unit will be rated in accordance with the latest edition of AHRI Standard 210.
- Unit will be certified for capacity and efficiency, and listed in the latest AHRI directory.
- Unit construction will comply with latest edition of ANSI/ASHRAE and with NEC.
- Unit will be constructed in accordance with UL standards and will carry the UL label of approval. Unit will have c-UL-us approval.
- Unit cabinet will be capable of withstanding ASTM B117 1000-hr salt spray test.
- Air-cooled condenser coils will be leak tested at 150 psig and pressure tested at 550 psig.
- Unit constructed in ISO9001 approved facility.

Delivery, Storage, and Handling

- Unit will be shipped as single package only and is stored and handled per unit manufacturer's recommendations.

Warranty (for inclusion by specifying engineer) — U.S. and Canada only.

Products

Equipment

Factory assembled, single piece, air-cooled air conditioner unit. Contained within the unit enclosure is all factory wiring, piping, controls, compressor, refrigerant charge R-410A, and special features required prior to field start-up.

Unit Cabinet

- Unit cabinet will be constructed of galvanized steel, bonderized, and coated with a powder coat paint.
- All units constructed with louver coil protection and corner post. Louver can be removed by removing one fastener per louver panel.

AIR-COOLED, SPLIT-SYSTEM AIR CONDITIONER
RA14
1-1/2 TO 5 NOMINAL TONS

Fans

- Condenser fan will be direct-drive propeller type, discharging air upward.
- Condenser fan motors will be totally enclosed, 1-phase type with class B insulation and permanently lubricated bearings. Shafts will be corrosion resistant.
- Fan blades will be statically and dynamically balanced.
- Condenser fan openings will be equipped with coated steel wire safety guards.

Compressor

- Compressor will be hermetically sealed.
- Compressor will be mounted on rubber vibration isolators.

Condenser Coil

- Condenser coil will be air cooled.
- Coil will be constructed of aluminum fins mechanically bonded to copper tubes.

Refrigeration Components

- Refrigeration circuit components will include liquid-line shutoff valve with sweat connections, vapor-line shutoff valve with sweat connections, system charge of R-410A refrigerant, and compressor oil.
- Unit will be equipped with filter drier for R-410A refrigerant for field installation.

Operating Characteristics

- The capacity of the unit will meet or exceed _____ Btuh at a suction temperature of _____ °F/°C. The power consumption at full load will not exceed _____ kW.
- Combination of the unit and the evaporator or fan coil unit will have a total net cooling capacity of _____ Btuh or greater at conditions of _____ CFM entering air temperature at the evaporator at _____ °F/°C wet bulb and _____ °F/°C dry bulb, and air entering the unit at _____ °F/°C.
- The system will have a SEER of _____ Btuh/watt or greater at DOE conditions.

Electrical Requirements

- Nominal unit electrical characteristics will be _____ v, single phase, 60 hz. The unit will be capable of satisfactory operation within voltage limits of _____ v to _____ v.
- Nominal unit electrical characteristics will be _____ v, three phase, 60 hz. The unit will be capable of satisfactory operation within voltage limits of _____ v to _____ v.
- Unit electrical power will be single point connection.
- Control circuit will be 24v.

Special Features

- Refer to section of this literature identifying accessories and descriptions for specific features and available enhancements.

GENERAL TERMS OF LIMITED WARRANTY*

Rheem will furnish a replacement for any part of this product which fails in normal use and service within the applicable period stated, in accordance with the terms of the limited warranty.

***For complete details of the Limited and Conditional Warranties, including applicable terms and conditions, contact your local contractor or the Manufacturer for a copy of the product warranty certificate.**

Conditional Parts
(Registration Required) .....Ten (10) Years

In keeping with its policy of continuous progress and product improvement, Rheem reserves the right to make changes without notice.

Subject: Sun Mesa Mini Storage Project Trip Generation and Vehicle Miles Traveled Memorandum (LSA Project No. 20231230)

Dear Jared:

LSA Associates, Inc. (LSA) has prepared this Trip Generation and Vehicle Miles Traveled (VMT) Analysis memorandum (Memo) for the proposed Sun Mesa Mini Storage Project (project) in the Town of Yucca Valley (Town) in San Bernardino County (County). The project consists of an approximately 94,500-square foot (4.34-acre) mini storage facility and associated parking facilities. The project site is located southeast of the intersection of Newton Lane/Sun Mesa Drive, with site access provided along Newton Lane. The project is consistent with the Town's General Plan land use and zoning designation. Figure 1 (all figures and table attached) illustrates the regional and project location. Figure 2 illustrates the conceptual site plan for the project.

The objectives of this Memo are as follows:

- To estimate the trip generation for the proposed project and determine whether a Transportation Impact Study (TIS) will be required for the project; and
- To determine whether a VMT analysis will be required for the proposed project.

TRIP GENERATION ANALYSIS

It is LSA's understanding that the Town of Yucca Valley does not have their own TIS guidelines. As such, this analysis has been prepared based on requirements included in the *San Bernardino County Transportation Impact Study Guidelines*, dated July 2019 (TIS Guidelines) for traffic analysis purposes. According to the County's TIS Guidelines, a detailed LOS study may not be required if the project is estimated to generate less than 100 peak hour trips.

The trip generation for the project was developed using rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition) for Land Use 151 – "Mini-Warehouse (Self-Storage)". Table A summarizes the project trip generation and shows that the proposed project is anticipated to generate 9 trips in the a.m. peak hour, 15 trips in the p.m. peak hour, and 137 daily trips.

As per the County's TIS Guidelines, a TIS may not be required for the proposed project if it generates less than 100 peak hour trips. The anticipated number of peak hour trips generated by the proposed

project is less than the 100-trip threshold. Furthermore, to determine the study area, the proposed project would need to add 50 or more peak hour trips to the arterial roadway system. Since the project does not generate 50 peak hour trips, a TIS may not be required for this project.

VEHICLE MILES TRAVELED ANALYSIS

On December 28, 2018, the California Office of Administrative Law cleared the revised California Environmental Quality Act (CEQA) Guidelines for use. Among the changes to the guidelines was the removal of vehicle delay and level of service as the sole basis of determining CEQA impacts. With the implementation of the adopted guidelines, transportation impacts are to be evaluated based on a project's effect on VMT. The County's TIS Guidelines includes significant thresholds, requirements, recommended methodologies, and procedures for VMT analysis for projects within the County.

Based on the County's TIS Guidelines Section 4.1 "Analysis Methodology", a project can be screened out from a VMT analysis if it is located within a low VMT zone.

According to the County's Guideline, the significance threshold for a project is 4 percent below the unincorporated county's baseline VMT per capita/employee. Therefore, this threshold has been used to determine whether a project is located within a low VMT zone. Additionally, given that the project is not located within unincorporated county, the low VMT zone was determined by evaluating whether the project Traffic Analysis Zone (TAZ) VMT is 4 percent below the entire County's baseline VMT profile.

As recommended in the County's TIS Guidelines, the San Bernardino County Transportation Authority (SBCTA) screening tool was used to evaluate whether the project is in a low-VMT area, using VMT per worker as the VMT metric. Based on the results obtained from the SBCTA screening tool, the baseline VMT of the proposed project's TAZ is 9.6, which is 43.19 percent below the baseline County average of 16.9 VMT/worker. As such, the project is located within a low-VMT zone using VMT per worker/employee metric. Appendix A illustrates the output of the tool. Therefore, the project could be potentially screened out from a detailed VMT analysis and is anticipated to have a less than significant VMT impact.

ACTIVE TRANSPORTATION AND PUBLIC TRANSIT ANALYSIS

According to the County's TIS Guidelines, a significant impact occurs when a project conflicts with adopted plans, policies, or programs regarding active transportation or public transit facilities, or otherwise decreases the performance or safety of such facilities.

Currently, there are no existing bicycle facilities adjacent to project site. Based on the Circulation Element of Yucca Valley General Plan (GP), adopted February 2014, a proposed Class II bicycle lanes will be added along Buena Vista Drive. These future bicycle facilities will connect south of the project site to an extensive planned bicycle network. As such, the project will not decrease the performance or safety of any existing or proposed bicycle facilities.

According to the Circulation Element, limited continuous sidewalks are provided along major routes in the Town and most roads throughout Yucca Valley do not have sidewalks. Currently, there are no paved and continuous sidewalk facilities available within the project vicinity. As such, the project will

not decrease the performance or safety of the existing pedestrian facilities near the project frontage.

Morongo Basin Transit Authority (MBTA) is the public transit agency serving the Town of Yucca Valley. MBTA currently has five fixed routes in the region. Fixed bus route 21 operates the closest to the project vicinity. However, there are no bus stops that operates within the project vicinity. It provides services with bus stops located on Arrow Boulevard and Juniper Avenue. At present, there are no proposed service changes in MBTA transit network due to implementation of the project. As such, the project will not decrease the performance or safety of any existing or proposed public transit facilities.

As summarized above, the project does not conflict with any existing or proposed bicycle, pedestrian, and public transit facilities. Therefore, it can be considered to conform to all adopted policies, plans, or programs concerning these facilities and will not have a significant impact.

If you have any questions, please do not hesitate to contact me at (951) 781-9310 or Ambarish.Mukherjee@lsa.net.

Sincerely,

LSA

Ambarish Mukherjee, AICP, PE

Planning Commission Staff Report

To: Planning Commission

From: Jared Jerome, Senior Planner

Date: April 6, 2026

Meeting Date: April 14, 2026

Subject: Environmental Assessment, EA 03-25; Conditional Use Permit, CUP 02-25, Resolution PC 26-03, Dutch Bros Coffee, the proposed construction of a 1,025 square-foot Dutch Bros Coffee with a drive through service window and a covered walk-up service window and incidental site improvements. The approximately 1.01-acre vacant Project Site is located at 58121 Twentynine Palms Highway (APN: 0601-416-05), approximately 275' southwest of the intersection of Twentynine Palms Highway and Balsa Avenue.

Recommendation:

Environmental Assessment 03-25:

That the Planning Commission adopts the Resolution, the Mitigated Negative Declaration and Mitigation Monitoring Report for Environmental Assessment 03-25.

Conditional Use Permit 02-25:

That the Planning Commission approves CUP 02-25, the proposed construction of a 1,025 square-foot Dutch Bros Coffee with a drive through service window and a covered walk-up service window and incidental site improvements.

Prior Review:

The Commission has had no prior review of this application.

PROJECT ANALYSIS:

PROJECT DESCRIPTION: The Project proposes the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee shop with a dual-lane drive-through facility and associated

site improvements. The drive-through is designed to accommodate 23 queued vehicles. In addition to on-site improvements, the Project would contribute in-lieu fees toward off-site roadway improvements

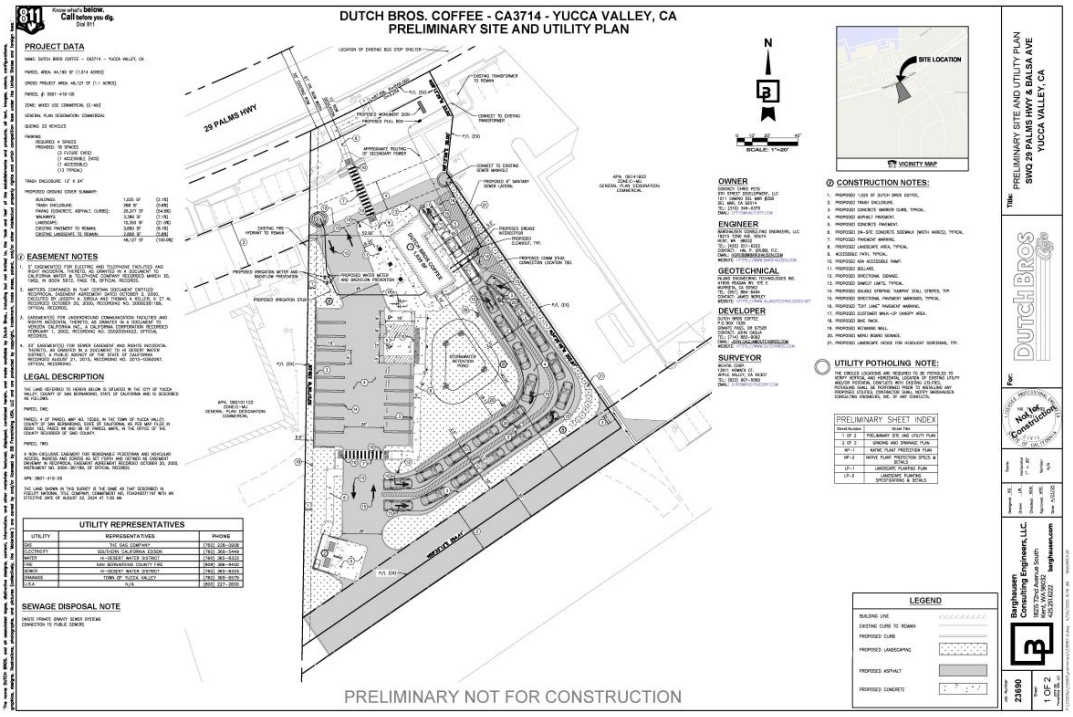
consistent with the Town's circulation plans, specifically, the widening of Twentynine Palms

Highway to an ultimate half-width of 67 feet along the Project frontage. The future widening of Twentynine Palms Highway

would be undertaken at a later date by the Town of Yucca Valley Public Works/Engineering Department and the San Bernardino County Transportation Authority. Construction of the Project would also necessitate

the removal of existing Western Joshua Trees (Yucca brevifolia) on-site.

The typical business hours for Dutch Bros Coffee are from 5:00a.m. to 11:00p.m. each day of the week. There are typically six to eight employees during a shift, and a total of 24 to 32 employees.



PROJECT AREA: 1.01 acres

BUILDING AREA: 1,025 square-feet

SETBACKS:

Front: 15' minimum required by Code. 80' proposed.

Rear: 0' minimum required by Code. 140.95' proposed.

Interior Side (West): 0' minimum required by Code. 52.92'' proposed.

Interior Side (East): 0' minimum required by Code. 29.5' proposed

MAX BUILDING HEIGHT: Maximum 40' allowed by Code. 24' proposed at top of parapet.

BUILDING ELEVATIONS: The proposed building is of varying heights, materials, and colors, including light and dark tan stucco, "El Dorado" stone veneer, blue cement, dark gray metal

awnings, dark gray doors,
and dark gray window trim.

SIGNAGE: Permits for signage are to be processed under a separate sign permit application and approval.

FAR: 0.5 Maximum allowed by Code. 0.02 proposed

PHASED CONSTRUCTION: Phased construction is not proposed.

FLOOD ZONE:N/A

ALQUIST PRIOLO/EARTHQUAKE FAULT HAZARD ZONE: N/A

ACCESS/PARKING: Code requires 1 space per 50 square feet of seating area (including outdoor dining). The site plan illustrates a drive-through and a customer walk-up canopy area. No indoor or outdoor customer seating area is proposed. A total of eighteen (18) parking spaces are proposed. Access to the site is gained through two existing driveways. One driveway is located to the northwest of Big 5, off of Twentynine Palms Highway. A second driveway is located to the east of Walgreens, off of Balsa Avenue.

ADA: One (1) van accessible ADA compliant parking space is required. The site plan illustrates one (1) ADA parking space and one (1) van accessible ADA parking space. The code requires a minimum 5’ loading aisle

width for a standard ADA parking space and an 8’ passenger side loading aisle for a van accessible ADA parking space. The site plan shall be corrected to comply with the loading aisle standard per Condition of Approval

P6. ADA access from a public roadway to the building is required.

AIRPORT COMPREHENSIVE LAND USE PLAN: The project is located within the Part 77 Imaginary Surface - Horizontal Surface and Safety Review Area 3 of the Airport Comprehensive Land Use Plan.

LANDSCAPING:

The preliminary landscaping for the proposed project includes the following plants, identified by scientific name, common name, size, and quantity proposed, and other decorative ground cover:

Olea Europaea/Swan Hill Fruitless Olive (15 GAL) - (QUANTITY 3)

Parkinsonia Aculeata/Mexican Palo Verde (15 GAL) - (QUANTITY 1)

Agave Deserti/Desert Agave (5 GAL) - (QUANTITY 9)

Aristida Purpurea/Purple Threeawn (1 GAL) - (QUANTITY 13)

Dasylirion Wheeleri/Grey Desert Spoon (5 GAL) - (QUANTITY 4)

Eriogonum Fasciculatum/California Buckwheat (5 GAL) - (QUANTITY 5)

Leucophyllum Frutescens/Texas Sage (5 GAL) -(QUANTITY 46)

Muhlenbergia Rigens/Deer Grass (5 GAL) - (QUANTITY 15)

Simmondsia Chinensis/Jojoba (5 GAL) - (QUANTITY 12)

Decorative Cobble (3-6" Local Cobble Over Fabric) - (1,498 square-feet)

Existing landscaping (trees and shrubs) along Twentynine Palms Highway is proposed to remain as-is, undisturbed. Existing landscaping is recommended to be maintained and rehabilitated in accordance with Condition of Approval P7.

TRASH ENCLOSURE:

Project includes a trash enclosure located to the southwest of the drive-through entrance, which shall accommodate three (3) bins for landfill, recycling, and organic waste in compliance with SB 1383.

RIGHT OF WAY DEDICATION REQUIRED:

Existing road easement adjacent to the project site for Twentynine Palms Highway, 55' half-width, an additional dedication of 12' is required to meet the ultimate 67' half-width required, per Condition of Approval E3.

OFF SITE IMPROVEMENTS REQ

Yes. However, pursuant to Section 9.30.050, in-lieu of fees shall be accepted per Condition of Approval E1.

ASSESSMENT DISTRICTS REQ: N/A.
STREET LIGHTS: N/A

CAL TRANS PERMIT REQUIRED: Yes. Required if work is in Caltrans right-of-way. Site plan illustrates on-site ADA walkway to encroach into Caltrans right-of-way.

UTILITY UNDERGROUNDING: Yes, in accordance with Ordinance 233.

ON-SITE LIGHTING: All lighting shall be shielded to comply with Development Code Chapter 8.70, Outdoor Lighting. Condition of Approval P4 is recommended, requiring 0.3-foot. candles or less of lighting output at each

property line, to be reviewed by Planning Division staff.

AIRPORT INFLUENCE AREA: Yes. A deed notice shall be recorded based on the proximity of Yucca Valley Airport.

TRAILS AND BIKE LANE MASTER PLAN: N/A

PUBLIC FACILITY MASTER PLAN: N/A

PARKS AND REC MASTER PLAN: N/A

MASTER PLAN OF DRAINAGE: N/A

SPECIFIC PLAN/PLANNED DEVELOPMENT: N/A

GATEWAY REIMBURSEMENT DISTRICT: N/A

AVALON SIGNAL REIMBURSEMENT DISTRICT: N/A

HDWD SEWER CONNECTION: Yes.

FUTURE PLANNING COMMISSION ACTION REQ. No, unless requested by the Planning Commission or Director.

TOWN COUNCIL ACTION REQUIRED: No, the project would be reviewed by Town Council only if an appeal is filed.

GENERAL PLAN CONSIDERATION:

The project site is designated Mixed Use (MU) within the Town Center Special Policy Area. The description below is provided from the Yucca Valley General Plan, Land Use Element, for reference to the

Mixed Use designation and Town Center Special Policy Area.

Intended for a mix of uses, including commercial, professional office, recreational, and high density residential land uses along SR-62 corridor in concentrated nodes. Its purpose is to allow

highly integrated commercial, residential, and office uses that facilitate pedestrian access and walkability. Proximity of residential uses near employment and activity centers can reduce vehicle trips

and greenhouse gas emissions. Housing opportunities are also encouraged in these areas, providing walkable accessibility to services and facilities. Development in this designation will require the

preparation of a Specific Plan or compliance with a new mixed use zoning designation and associated development standards.

The Town Center SPA is envisioned to be a regional commercial destination and employment hub that is characterized by integrated public spaces and complementary office and residential uses.

The Town Center SPA provides an opportunity for new commercial businesses that residents otherwise must travel "down the hill" to patronize. Uses in this area are assumed to build out at

60 percent retail, 20 percent office (0.50 FAR), and 20 percent residential (18 du/ac) mix.

The area was designated as a SPA because of its prominent location on SR-62 and the economic opportunities it provides in conjunction with the other SPAs and Mixed Use properties along the

corridor. All properties in the SPA are designated Mixed Use, which should provide places for people to gather, common design themes, and linkages to other uses in areas where the Town would like

to promote a concentration of community activity.

The proposed commercial use is consistent with the General Plan designation, and is complimentary to surrounding retail uses. A Specific Plan or Conceptual Master Plan is not recommended at this

time, as the project's proposed location, between two existing retail businesses, does not produce disjointed or piecemeal development, and development standards are established by code for the

Mixed Use district.

DEVELOPMENT CODE CONSIDERATION

The property has a zoning designation of Mixed Use Commercial (C-MU).

This designation allows for uses such as Fast food (with drive-through, delivery) per Section 9.09.020 of the Town's Development Code, subject to additional standards located in Section 9.14.030 of the

Town's Development Code.

ENVIRONMENTAL CONSIDERATIONS

An Initial Study/Mitigated Negative Declaration (IS/MND) was prepared for the proposed project to the California Code of Regulations, Title 14, Sections 15072 and 15105.

The IS/MND identified potentially significant environmental impacts to the following resc Biological Resources, Geology and Soils, Cultural Resources, and Tribal Cultural Resources.

Mitigation measures are incorporated to mitigate those potentially significant impacts to a leve less than significant with mitigation incorporated. Please see attached IS/MND for a

detailed analysis of potential impacts and required mitigation measures.

CONCLUSION

Based upon the facts on record, the project is consistent with the Town's General Plan, and Development Code, as recommended and conditioned. Commercial development was anticipated
for this site with the adoption of the General Plan. With approval from the Planning Commission, the development meets and satisfies the goals, policies and implementation strategies of the
General Plan.

CONDITIONAL USE PERMIT FINDINGS

A. That the location, size, design, density and intensity of the proposed development is consistent with the General Plan, the purpose of the land use district in which the site is located, and the
development policies and standards of the Town;

The proposed project site is located in the Mixed Use General Plan Designation and Mixed Use Commercial (C-MU) zoning district. The proposed size, design, and land use are consistent with the
General Plan and Development Code requirements.

B. That the location, size, design and architectural design features of the proposed structures

and improvements are compatible with the site's natural landform, surrounding sites, structures and
streetscapes;

The proposed development features varying heights, materials, and colors, including light and dark tan stucco, "El Dorado" stone veneer, blue cement, dark gray metal awnings, dark gray doors, and
dark gray window trim, and is substantially consistent with the Town's Commercial Design Guidelines.

C. That the proposed development produces compatible transitions in the scale, bulk, coverage, density and character of the development between adjacent land uses;

The proposed structure is not anticipated to result in any architectural incompatibilities in terms of scale, bulk coverage, density, or character of surrounding land uses. The proposed single-story structure
is set back from the highway and adjacent structures and does not result in any architectural incompatibilities with its surroundings.

D. That the building site and architectural design is accomplished in an energy efficient manner;

The proposed project is required to meet all California Building Code requirements for the type of commercial structure including the CALGreen requirements. As such, the building is anticipated to accomplish
energy efficiency.

E. That the materials, textures and details of the proposed construction, to the extent feasible, are compatible with the adjacent and neighboring structures.

The proposed development features varying materials and colors, including light and dark tan stucco, "El Dorado" stone veneer, blue cement, dark gray metal awnings, dark gray doors, and dark gray window trim,
and is substantially consistent with the Town's Commercial Design Guidelines. The proposed single-story structure is set back from the highway and adjacent structures and does not result in any architectural incompatibilities
with its surroundings.

F. That the development proposal does not unnecessarily block views from other buildings or from public ways, or visually dominate its surroundings with respect to mass and scale to an extent unnecessary and
inappropriate to the use.

The proposed development is 24' at the top of the parapet. Due to its limited height and setback from the adjoining right-of-way, the proposed project is not anticipated to visually dominate its surroundings or block views
from other buildings or the public right of way.

G. That the amount, location, and design of open space and landscaping conforms to the requirements of the Development Code, enhances the visual appeal and is compatible with the design and functions of the structure(s),
site and surrounding area;

The preliminary landscaping for the proposed project includes the following plants, identified by scientific name, common name, size, and quantity proposed, and other decorative ground cover: Olea Europaea/Swan Hill
Fruitless Olive (15 GAL) - (QUANTITY 3), Parkinsonia Aculeata/Mexican Palo Verde (15 GAL) - (QUANTITY 1), Agave Deserti/Desert Agave (5 GAL) - (QUANTITY 9), Aristida Purpurea/Purple Threeawn (1 GAL) - (QUANTITY 13),
Dasylirion Wheeleri/Grey Desert Spoon (5 GAL) - (QUANTITY 4), Eriogonum Fasciculatum/California Buckwheat (5 GAL) - (QUANTITY 5), Leucophyllum Frutescens/Texas Sage (5 GAL) -(QUANTITY 46),
Muhlenbergia Rigens/Deer Grass (5 GAL) - (QUANTITY 15), Simmondsia Chinensis/Jojoba (5 GAL) - (QUANTITY 12), and Decorative Cobble (3-6" Local Cobble Over Fabric) - (1,498 square-feet). Existing landscaping (trees and shrubs)
along Twentynine Palms Highway is proposed to remain as-is, undisturbed.

Pursuant to Chapter 9.32.070 of the Town's Development Code, the front and street-side yard setback areas shall also be landscaped using xeriscape landscaping techniques, which combines drought tolerant plant and
hardscape materials in a variety of aesthetically pleasing designs. The proposed project landscaping is required to comply with the California Model Water Efficiency Landscape Ordinance (MWELO). The proposed project therefore
conforms to the requirements in the Town's Development Code.

H. That quality in architectural design is maintained in order to enhance the visual environment of the Town and to protect the economic value of existing structures;

The structures are consistent with the Development Code and provide quality in architectural design consistent with the Commercial Design Guidelines.

I. That there are existing public facilities, services, and utilities available at the appropriate levels and/or that new or expanded facilities, services and utilities shall be required to be installed at the appropriate time to serve
the project as they are needed;

The project is located in an area of developed commercial properties. Each utility provider charges connection and service fees which are designed to include the need for additional facilities as growth occurs. The project
applicant will be required to pay these fees as applicable.

Electrical services are provided by Southern California Edison. Water services are provided by the Hi Desert Water District (HDWD). Solid Waste Services are provided by Burrtec, Inc. The

Town of Yucca Valley requires mandatory
solid waste services, and the project will be served by Burrtec.

J. That access to the site and circulation on and off-site is required to be safe and convenient for pedestrians, bicyclists, equestrians and motorists;

On-site circulation as proposed includes two existing points of ingress/egress from Twentynine Palms Highway and Balsa Avenue. ADA access is required to be provided to the public right-of-way and from the vehicle
parking lot to the structures. The future installation of off-site improvements, in the form of paved roadways and sidewalks, are anticipated to enhance convenience for both motor vehicles and other roadway users such
as pedestrians and cyclists. At this time, in-lieu fees are recommended for highway widening improvmeents.

K. That traffic generated from the proposed project has been sufficiently addressed and mitigated and will not adversely impact the capacity and physical character of surrounding streets;

The traffic analysis for the proposed project identified up to 358 daily vehicle trips. Based on the anticipated traffic generation, adverse traffic impacts are not anticipated.

L. That traffic improvements and/or mitigation measures have been applied or required in a manner adequate to maintain a Level of Service C or better on arterial roads, where applicable, and are consistent with the
Circulation Element of the Town General Plan;

The traffic analysis and IS/MND for the proposed project identified up to 358 daily vehicle trips. Based on the traffic analysis and required roadway improvements, no significant traffic impacts were identified and mitigation
measures are not required.

M. That there will not be significant harmful effects upon environmental quality and natural resources including endangered, threatened, rare species, their habitat, including but not limited to plants, fish, insects, animals, birds or reptiles;

The IS/MND identified potentially significant environmental impacts to Biological Resources. Mitigation measures are incorporated in the IS/MND to mitigate those potentially significant impacts to a level considered less than
significant with mitigation incorporated. Please see attached IS/MND for a detailed analysis of potential biological impacts and required mitigation measures.

N. That there are no other relevant or anticipated negative impacts of the proposed use that cannot be mitigated and reduced to a level of non-significance in conformance with CEQA, the California Environmental Quality Act;

An Initial Study/Mitigated Negative Declaration (IS/MND) was prepared for the proposed project pursuant to the California Code of Regulations, Title 14, Sections 15072 and 15105.

The IS/MND identified potentially significant environmental impacts to the following resc Biological Resources, Geology and Soils, Cultural Resources, and Tribal Cultural Resources measures are

*incorporated to mitigate those potentially significant impacts to a level considered less than sig mitigation incorporated. Please see attached IS/MND for a detailed analysis of potential i required mitigation measur*es.

O. That the impacts which could result from the proposed development, and the proposed location, size, design and operating characteristics of the proposed development, and the conditions under which it would be operated or
maintained will not be detrimental to the public health, safety and welfare of the community or be materially injurious to properties or improvements in the vicinity or be contrary to the adopted General Plan;

An Initial Study/Mitigated Negative Declaration (IS/MND) was prepared for the proposed project the California Code of Regulations, Title 14, Sections 15072 and 15105.

The IS/MND identified potentially significant environmental impacts to the following resc Biological Resources, Geology and Soils, Cultural Resources, and Tribal Cultural Resources measures are incorporated

*to mitigate those potentially significant impacts to a level considered less than significant wit incorporated. Please see attached IS/MND for a detailed analysis of potential impacts a mitigation measur*es.

P. That the proposed development will comply with each of the applicable provisions of this code, and applicable Town policies; except approved variances.

The project, as conditioned, complies with the standards and requirements of the Development Code and the policies and procedures of the Yucca Valley General Plan.

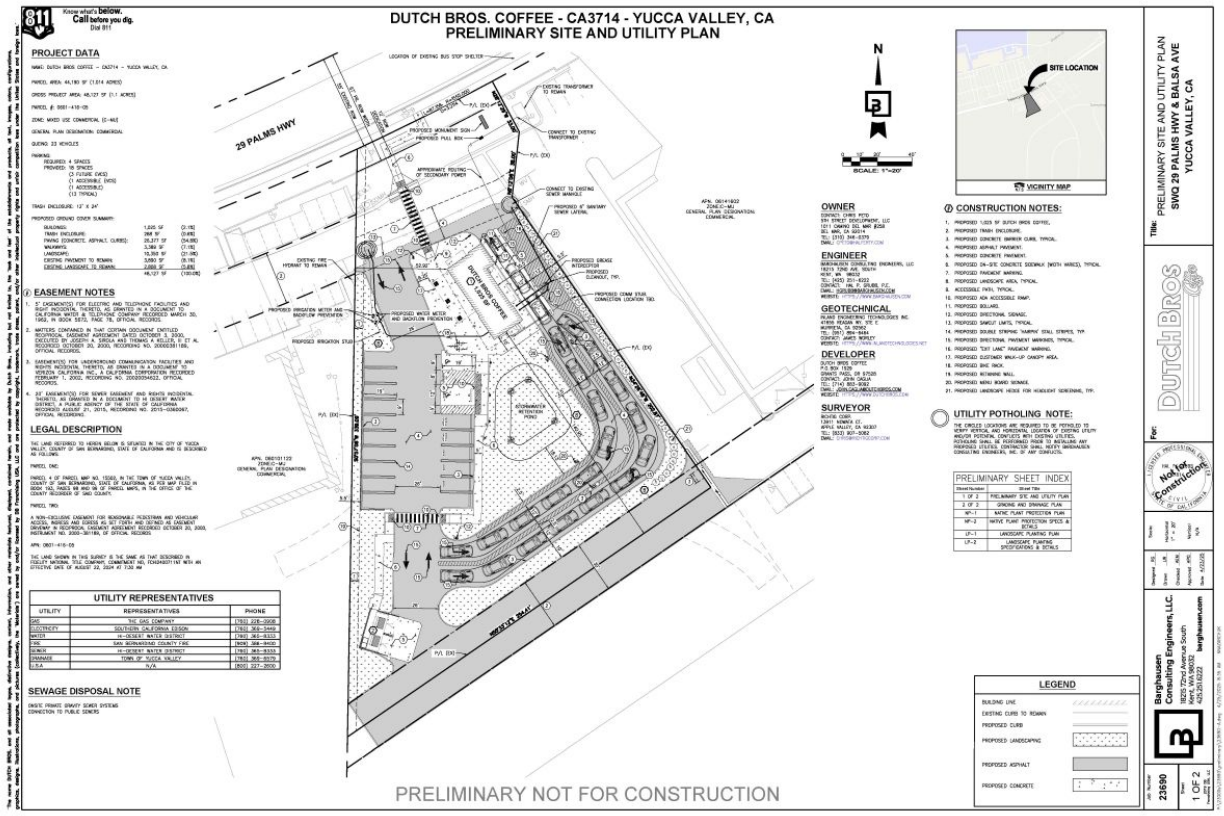
TOWN OF YUCCA VALLEY
CONDITIONS OF APPROVAL
ENVIRONMENTAL ASSESSMENT, EA 03-25
CONDITIONAL USE PERMIT, CUP 02-25
DUTCH BROS COFFEE SHOP

A request for the construction and development of a 1,025 square foot Dutch Bros coffee shop that is 24' in height, with a dual drive-through and covered walk-up service window, and parking lot with 18 vehicle stalls, located on an approximately 1.01 acre property. The project is located approximately 350 feet to the southwest of the intersection of Twentynine Palms Highway and Balsa Avenue at 58121 Twentynine Palms Highway and is also identified as APN: 0601-416-05.



GENERAL CONDITIONS

G1. The applicant shall agree to defend, indemnify and hold harmless the Town of Yucca Valley, its agents, officers and employees, at his sole expense, against any action, claim or proceedings brought against the Town or its agents, officers or employees, to attack, set aside, void, or annul this approval or because of the issuance of such approval, or in the alternative, to relinquish such approval, in compliance with the Town of Yucca Valley Development Code. The applicant shall reimburse the Town, its agents, officers, or employees for any court costs, and attorney's fees which the Town, its agents, officers or employees may be required by a court to pay as a result of such action. The Town may, at its sole discretion, participate at its own expense in the defense of any such action but such participation shall not relieve applicant of his obligations under this condition. The Town shall promptly notify the applicant of any claim, action or proceeding arising from the Town's approval of this project, and the Town shall cooperate in the defense.

Applicant Initials_____

G2. This Conditional Use Permit shall become null and void if construction has not commenced within three (3) years of the Town of Yucca Valley date of approval. Extensions of time may be granted by the Planning Commission, in conformance with the Town of Yucca Valley Development Code. The applicant is responsible for the initiation of an extension request.

Approval Date: April 14, 2026
Expiration Date: April 14, 2029

G3. The applicant shall ascertain and comply with requirements of all State, County, Town and local agencies as are applicable to the project. These include, but are not limited to, County of San Bernardino Environmental Health Services, County of San Bernardino Transportation/Flood Control, County of San Bernardino Fire Department, Yucca Valley Building and Safety, Caltrans, High Desert Water District, Airport Land Use Commission, California Regional Water Quality Control Board, Colorado River Region, the Federal Emergency Management Agency, MDAQMD-Mojave Desert Air Quality Management District, Community Development, Engineering, and all other Town Departments.

G4. All conditions are continuing conditions. Failure of the applicant to comply with any or all of said conditions at any time may result in the revocation of any construction permits for the project.

G5. No on-site or off-site work shall commence without obtaining the appropriate permits for the work required by the Town and the appropriate utilities. The approved permits shall be readily available on the job site for inspection by Town personnel.

G6. The applicant shall pay all fees charged by the Town as required for application processing, plan checking, construction and/or inspections. The fee amounts shall be those which are applicable and in effect at the time work is undertaken and accomplished. Fees for entitlement prior to construction permits are based on estimated costs for similar projects. Additional fees may be incurred, depending upon the specific project. If additional fees for services are incurred, they must be paid prior to any further processing, consideration, or approval(s).

G7. One (1) representative for the project applicant shall coordinate and submit all permit applications required by the Town as appropriate. Multiple representatives submitting permit applications are highly discouraged.

G8. All improvements shall be inspected by the Town as appropriate. Any work completed without proper inspection may be subject to removal and replacement under proper inspection.

DRAFT

Applicant Initials_____

G9. All refuse shall be removed from the premises in conformance with Town of Yucca Valley Municipal Code Chapter 8.03, Construction Site Maintenance and Trash Containment.

G10. During construction, the Applicant shall be responsible to sweep public paved roads adjacent to the project as necessary and as requested by the Town to eliminate any site related dirt and debris within the roadways. During business activities, the applicant shall keep the public right-of-way adjacent to the property in a clean and sanitary condition.

G11. No staging of construction equipment or parking of worker's vehicles shall be allowed within the public right-of-way of streets or other public improvements that have been accepted into the Town's maintained system

G12. All existing street and property monuments within or abutting this project site shall be preserved consistent with AB 1414. If during construction of onsite or offsite improvements monuments are damaged or destroyed, the applicant shall retain a qualified licensed land surveyor or civil engineer to reset those monuments per Town Standards and file the necessary information with the County Recorder's office as required by law (AB 1414).

G13. Each phase of the project shall function independently of all other phases. All improvements shall be completed for each phase to ensure that each phase functions separate from the remainder of the project, and shall include, but not be limited to, street improvements, drainage and retention/detention facilities, water delivery systems, fire suppressions systems, post construction erosion and sediment control systems, all utilities necessary to serve the project, and those improvements deemed necessary by the Town. All phasing plans shall be illustrated on rough and precise grading plans, erosion and sediment control plans, all plan required for obtaining native plant plan approval, and on any other plan as deemed necessary by the Town.

G14. At the time of permit issuance the applicant shall be responsible for the payment of fees associated with electronic file storage of documents

G15. The Applicant shall reimburse the Town for the Town's costs incurred in monitoring the developer's compliance with the Conditions of Approval including, but not limited to, inspections and review of developer's operations and activities for compliance with all applicable dust and noise operations. This condition of approval is supplemental and in addition to normal building permit and public improvement permits that may be required pursuant to the Yucca Valley Municipal Code.

DRAFT

Applicant Initials_____

G16. Prior to the issuance of a Certificate of Occupancy for any habitable structure in each phase of the project, all improvements shall be constructed, final inspection performed, punch-list items completed, and all installations approved by the appropriate agency.

G17. After final plan check by the Town, original mylars (4 mil) shall be submitted to the Town for signature by the Town Engineer. All original mylars submitted for Town Engineer's signature must contain the design engineer's wet signature and stamp and all other required signatures.

G18. For any import or export of material, the Project proponent shall provide the following for review by the Town Engineer: the route of travel, number of trucks, daily schedule, and length of time required. No hauling of material shall begin without the Town Engineer's approval.

G19. Prior to any work being performed within the public right-of-way, the Project proponent shall provide the name, address, telephone, facsimile number, and e-mail address of the Contractor to perform the work. A description of the location, purpose, method of construction, and surface and subsurface area of the proposed work shall be supplied. A plat showing the proposed location and dimensions of the excavation and the facilities to be installed, maintained, or repaired in connection with the excavation, shall be provided and such other details as may be required by the Town Engineer.

G20. The site shall be developed in accordance with the approved plans on file with the Town of Yucca Valley, in accordance with the Conditions of Approval approved for the project, and in accordance with the General Plan and Development Code. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Town.

G21. Prior to issuances of building permits, all site plans, grading plans, landscape and irrigation plans, drainage/flood control plans, public improvement plans, erosion and sediment control plans, shall be coordinated for consistency with this approval.

G22. The Town may allow phased constructed of the project provided that the improvements necessary to adequately serve or mitigate the impacts of each phase of development are completed prior to the issuance of a Certificate of Occupancy for that phase.

G23. The applicant or the applicant's successor-in-interest shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust.

G24. If archaeological, paleontological or historical resources are uncovered during excavation or construction activities at the project site, work in the affected area will

DRAFT

Applicant Initials_____

cease immediately and a qualified person with appropriate expertise shall be consulted by the applicant regarding mitigation measures to preserve or record the find. Recommendations by the consultant shall be implemented as deemed necessary and feasible by the Town before work commences in the affected area. If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains might be those of a Native American, the California Native American Heritage Commission shall be notified and appropriate measures provided by State law shall be implemented.

G25. All street dedications shall be irrevocably offered to the public and shall continue in force until the Town accepts or abandons such offers. All dedications shall be free of all encumbrances as approved by the Town Engineer.

G26. The street design and circulation pattern of this project shall be coordinated with adjoining developments.

G27. The final conditions of approval issued by the approving authority shall be photographically or electronically placed on bond (blue/black line) paper and included in the Grading and Street Improvement plan sets on 24" x 36" bond (blue/ black line) paper and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field and during construction. Plan check fees shall not be charged for sheets containing the Conditions of Approval.

G28. Prior to issuance of a certificate of occupancy, the applicant shall submit all improvement plans on compact disks in digital format acceptable to the Town Engineer.

G29. Violations of any condition or restriction or prohibition set forth in these conditions, including all approved construction plans, public and private, for this project and subject to the Town's overall project approval and these conditions of approval, shall subject the owner, applicant, developer or contractor(s) to the remedies as noted in the Municipal Code. In addition, the Town Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

G30. After commencement of business operations, the applicant shall be responsible for daily removal of all windblown trash and debris and shall maintain the property in a clean condition.

G31. A bicycle parking and locking rack, for a minimum of three (3) bicycles, shall be placed on site in close proximity to building access.

DRAFT

Applicant Initials_____

PLANNING CONDITIONS

P1. All mitigation measures identified in the Initial Study/Mitigated Negative Declaration and included in the Mitigation Monitoring and Reporting Program are included as conditions of approval by this reference.

P2. This approval does not include signage. The signage for the project shall be approved by the Planning Commission prior to issuance of any permits.

P3. Utilities shall be underground in conformance with Ordinance 233, or as amended by Town Council.

P4. All exterior lighting shall comply with Development Code chapter 8.70, Outdoor Lighting and shall be illustrated on all construction plans. The proposed project shall cause no light trespass at all property lines. Light trespass shall be defined as exceeding 0.3 foot candles at any property lines.

P5. Prior to the issuance of any permits the applicant/owner shall provide three (3) copies of a landscape and irrigation plan showing the size, type and location of all plant and irrigation systems. Said irrigation system shall incorporate a permanent automatic irrigation system, and all landscaping and irrigation systems shall be maintained in good condition at all times. All ground within proposed landscape planter areas shall be provided with approved ground cover. This shall include but not be limited to drought-tolerant plant materials or colored desert rock.

P6. Parking and on-site circulation requirements shall be provided and maintained as identified on the approved site plan. Areas reserved for access drive and/or fire lanes shall be clearly designated.

a. All paved parking stalls shall be clearly striped and permanently maintained with double or hairpin lines with the two lines being located an equal 9 inches on either side of the stall sidelines. All regular parking stalls be a minimum 9’ x 19’.

b. All marking to include parking spaces, directional designation, no parking designation and fire lane designations shall be clearly defined and said marking shall be maintained in good condition at all times. The Town Traffic Engineer shall approve all signage and markings for the circulation related signage.

c. All two-way drive aisles shall be at least 26 feet in width.

DRAFT

Applicant Initials_____

d. ADA parking stalls shall have a minimum loading aisle of five feet (5'). Van accessible ADA parking stall(s) shall have a minimum passenger side loading aisle of eight feet (8').

P7. Existing landscaping (trees and shrubs) located at the project frontage along Twentynine Palms Highway shall be maintained and rehabilitated.

P8. Applicant shall construct a trash enclosure in compliance with Ordinance 42 of the Town's Development Code.

P9. All roof top mechanical equipment shall be screened from ground and street vistas. This information shall be included on the building plan submittal.

P10. Pursuant to Ordinance 156, Sign Regulations, wall signs are based upon one square foot of signage per one linear foot of lease space oriented towards a street, parking lot or alley. Freestanding signs are based upon one square foot of signage per five linear feet of property frontage.

DRAFT

Applicant Initials_____

ENGINEERING CONDITIONS

E1. **Pay in lieu fees of $48,658 for future widening of SR 62.**

E2. **Per Town Standard Drawing No. 213 commercial driveways shall be located 150 feet from the curb return.**

E3. **Dedicate, or show there exists, sufficient right of way for a Highway (6 lanes divided) with 67-foot half street right of way per Town Standard Drawing No. 106. It appears that the existing highway right of way along the project frontage is 55 feet so and additional twelve (12) feet may be required.**

E4. **It appears that a portion of the southerly drive aisle is on the parcel to the south. A reciprocal access easement will be required for construction of the southerly half of the drive aisle.**

E5. Prior to the issuance of a Grading Permit, a Grading Plan prepared by a recognized professional Civil Engineer shall be submitted, and the corresponding fees shall be paid to the Town prior to any grading activity. The rough and precise Grading Plans shall be reviewed and approved by the Town Engineer prior to issuance of grading permits. The applicant/owner is responsible for all fees incurred by the Town. Prior to Certificate of Occupancy, the Engineer-of-Record shall survey and certify that the site grading was completed in substantial conformance with the approved Grading Plans.

E6. All manufactured slopes over the height of 3 feet shall be irrigated and landscaped immediately following grading. Prior to issuance of a grading permit for any portion of the site, the applicant/owner shall submit, for review and approval, an irrigation and landscaping plan or other appropriate treatment for all slope areas.

E7. The rough/precise grading shall be certified by a civil engineer that it was completed in substantial conformance with the approved Grading Plans. Prior to the issuance of any building permits the project Engineer shall certify the finished lot was graded in conformance to approved plans.

E8. The Engineer-of-Record or other civil engineer shall survey and provide pad certification for the site prior to issuance of building permits.

E9. Prior to the issuance of Permits, the Applicant shall comply with the recommendations of a site-specific Geotechnical and Soils Report which shall be reviewed and subject to Town approval. The report shall include recommendations for any onsite and offsite grading, foundations, compaction, structures, drainage, and existence of fault zones. It shall include recommendations for retention basins, slope stability and erosion control.

DRAFT

The soils engineering report shall include data regarding the nature, distribution and strength of existing soils, conclusions and recommendations for grading procedures and design criteria for corrective measures, when necessary and opinions and recommendation covering the adequacy of sites for development. The report shall identify if the site contains any areas susceptible to landslide risk, liquefaction potential and/or subsidence potential on the project site. The report shall identify and include the location of major geologic features, topography and drainage, distribution and general nature of rock and soils, a reasonable evaluation and prediction of the performance of any proposed cut or fill in relation to geological conditions, and the capability of soils and substrata to support structures.

E10. All property corners, lots, easements, street centerlines, and curve radii shall be monumented and horizontally tied to identified control points. A copy of the monumentation survey and centerline tie notes shall be provided to the Town Engineer prior to certificate of occupancy.

E11. All recommended approved measures identified in the Soils Report shall be incorporated into the project design.

E12. A retention basin **and/or underground storage system** shall be constructed and functional prior to the issuance of certificate of occupancy for the any structure within the project. The applicant shall provide on-site retention for the incrementally larger flows caused by development of the site, pursuant to a final drainage report, subject to review and approval by the Town Engineer.

E13. A **final** drainage report, prepared by a registered Civil Engineer, shall be prepared to determine the flows exiting the site under current undeveloped conditions compared to the incrementally larger flows due to the development of the site. The retention basin size will be determined, per County of San Bernardino Flood Control methodology, such that incremental 100 year 24-hour storm volume, plus 10%, 20% preferred, is retained on-site.

E14. In lieu of an engineered drainage report the retention basin and/or underground storage system shall be sized to retain 100 cubic feet of storm water for each 1,000 square feet, and increments thereof, of impervious area proposed (structures, driveways, parking areas, etc.).

E15. Basin(s) shall be designed to fully dissipate storm waters within a 48 hour period.

E16. A pre-filtration system shall be installed for all drain lines connected to any underground storage system to collect sediment and hydrocarbon material prior to discharge into the underground system.

DRAFT

Applicant Initials_____

E17. Any grading or drainage onto private off-site or adjacent property shall require a written permission to grade and/or a permission to drain letter from the affected property owner.

E18. In conjunction with precise grading certification, all retention/detention basins shall be certified by a civil engineer that they have been constructed in substantial conformance with the approved plans, and shall be certified that they have the required capacity and will operate in accordance with the approved drainage reports for the project.

E19. In conjunction with precise grading certification, all drainage systems, both public and private, shall be certified by a civil engineer that they have been constructed in substantial conformance with the approved plans, and shall be certified that they have the required capacity and will operate in accordance with the approved drainage reports for the project.

E20. No on-site or off-site work shall commence without obtaining the appropriate permits for the work involved from the Town. The approved permits shall be readily available on the job-site for inspection by the Town personnel.

E21. All grading activities shall minimize dust through compliance with MDAQMD Rules 402 and 403.

E22. Prior to issuance of a grading permit, a Fugitive Dust and Erosion and Sediment Control Plan shall be submitted and approved by the Town Engineer. The Fugitive Dust and Erosion and Sediment Control Plan shall illustrate all proposed phasing for construction of the project.

E23. Prior to any work being performed in the public right-of-way, fees shall be paid and an encroachment permit shall be obtained from the Town. The Applicant shall apply for an encroachment permit from the Town for utility trenching, utility connection, or any other encroachment onto public right-of-way. The Applicant shall be responsible for the associated costs and arrangements with each public utility.

E24. The Applicant shall restore any pavement cuts required for installation or extension of utilities for his project within the public right-of-way. In all cases where cuts are allowed, the Applicant is required to patch the cuts to Town standards and the approval of the Town Engineer. The patching shall include a grinding of the pavement to a width 4 feet beyond the edge of the trench on each side, or as determined by the Town Engineer, and replacement with a full-depth asphalt concrete recommended by the Soils Engineer.

DRAFT

Applicant Initials_____

E25. In conjunction with the rough/precise grading plan submittal, street plans prepared by a recognized professional Civil Engineer shall be submitted, and the corresponding fees shall be paid to the Town. The final street plans shall be reviewed and approved by the Town Engineer. The applicant/owner is responsible for all fees incurred by the Town. Prior to Certificate of Occupancy, the Engineer-of-Record shall survey and certify that the site grading was completed in substantial conformance with the approved Grading Plans.

E26. The Applicant shall accept and properly dispose of all off-site drainage flowing onto or through the site.

E27. The Applicant shall construct the replacement of any identified damaged curb and gutter, sidewalk, drive approach, asphalt concrete pavement, meter boxes, and other infrastructure that may be required by the Town Engineer or another Agency.

E28. The Applicant shall install all water and sewer systems required to serve the project. All water and sewer systems shall be completed to the requirements of the Hi Desert Water District.

E29. The Applicant shall observe the construction of this project to make certain that no damage or potential for damage occurs to adjacent roadway, existing improvements, adjacent property and other infrastructure. The applicant shall be responsible for the repair of any damage occurring to offsite infrastructure and/or property damage as determined by the Town Engineer. The applicant shall repair any such damage prior to certificate of occupancy. If the damage is such that it is not repairable within a reasonable amount of time as determined by the Town Engineer, the applicant may petition the Town Engineer for additional conditions that may allow him the time, amount of surety and other requirements to repair the damage.

E30. The Applicant shall be responsible for all improvements constructed within the public right-of-way as required by the conditions of approval. The improvements shall be constructed to the standards and requirements as determined and approved by the Town Engineer. Any improvements not considered to be to the required standards shall be replaced by the Applicant. The Applicant shall be required to maintain and repair those improvements prior to and after acceptance by the Town Council for the length of time required by the applicable conditions, standards and ordinances.

E31. All improvement plans shall be designed by a Registered Civil Engineer.

E32. Any area which remains undeveloped for a period of more than 30 days shall be stabilized using either chemical stabilizers or a desert wildflower mix hydroseed on the affected portion of the site.

DRAFT

Applicant Initials_____

E33. Prior to the issuance of any grading permit to disturb, expose or stockpile an aggregate of more than one acre of land, an erosion and sediment control plan for the project shall be submitted to and approved by the Town Engineer and securities meeting the requirements contained herein shall be posted with the Town. The amount of the security shall be equal to one hundred (100) percent of the total estimated cost of the erosion and sediment control system(s). The permittee's estimate of such cost shall be subject to the review and approval of the Town engineer. The erosion and sediment control security shall be in the form of a Cash Deposit.

E34. The Applicant shall be responsible for inspection, modification, and proper maintenance of the erosion control devices as necessary. If the Applicant fails or refuses to properly maintain the erosion control devices, the Town official may cause emergency maintenance work to be done in order to protect potentially impacted property. The cost shall be deducted from the erosion control security posted for the project and shall include all costs related to the emergency maintenance including initial mobilization and performance of the work in addition to applicable administrative costs.

E35. If the Applicant fails or refuses to properly maintain the erosion control devices, the Town Engineer may cause emergency maintenance work to be done in order to protect potentially impacted property. The cost shall be deducted from the erosion control security posted for the project and shall include all costs related to the emergency maintenance including initial mobilization and performance of the work in addition to applicable administrative costs.

E36. If construction of erosion control systems outside of the project boundaries is necessary, permission to construct such systems from the owner of such off-site property is required. Plans for the off-site system shall be included with the on-site plans submitted to the Town Engineer. The plans for the off-site erosion control system shall include permission to grade and maintain the erosion control system from all affected property owners and letters of clearance and/or permits from all appropriate governmental entities.

E37. The Applicant shall submit a post construction erosion and sediment control plan which identifies and illustrates all necessary improvements to prevent the movement and or loss of any soil and sediment materials from the project site, including all individual lots for construction of habitable structures, all slope banks, and all areas of the site capable of resulting in the deposit of soils and sediments with the street or storm drain system. The post construction erosion and sediment improvements shall be certified by a civil engineer that they were constructed in substantial conformance with the approved plans and specifications.

DRAFT

Applicant Initials_____

E38. It is understood that the proposed site plan plans correctly shows all existing easements, traveled ways and drainage courses, and that their omission may require the improvement plans to be resubmitted for further consideration.

E39. Private drainage easements for cross-lot drainage shall be dedicated and delineated on the final map (if required).

E40. A construction area traffic control plan, including temporary and final permanent striping, shall be designed by a registered Civil Engineer or Traffic Engineer for review and approval by the Town Engineer for any street construction, closure, detour or other disruption to traffic circulation.

E41. All street closures must be approved by Town Council action.

E42. The following shall information regarding the presence of the Marine Corps Air Ground Combat Center (MGAGCC) shall be recorded on the title of each property contained within the boundaries of the Conditional Use Permit.

> "The Marine Corps Air Ground Combat Center is located in the Morongo Basin. To prepare Marines for future conflicts, the MGAGCC carries out realistic training with military munitions, both day and night. As a result, Military aircraft fly over the area, and military vehicles drive on and off the base every day. This property is located directly under two aircraft flying routes and is located approximately 13 miles from the installation boundary. Consequently, you should expect to hear military training, see low-flying military aircraft, and encounter other experiences associated with the important mission of the MCAGCC".

E43. After final plan check by the Town, original mylars (4 mil) shall be submitted to the Town for signature by the Town Engineer. All original mylars submitted for the Town Engineer's signature must contain the design engineer's wet signature and stamp and all other required signatures.

E44. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patters with respect to tributary drainage area and outlet points. Unless otherwise approved by the Town Engineer, lot lines shall be located at the top of slopes.

E45. Improvement plans shall be based upon a centerline profile, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the Town Engineer.

E46. **Handicapped access to the site shall meet all applicable ADA requirements.**

DRAFT

Applicant Initials_____

E47. All existing street and property monuments within or abutting this project site shall be preserved consistent with AB 1414. If during construction of onsite or offsite improvements monuments are damaged or destroyed, the Applicant/ Developer shall retain a qualified licensed land surveyor or civil Engineer to reset those monuments per Town Standards and file the necessary information with the County Surveyor's office as required by law (AB 1414).

E48. All improvement plans shall be designed by a Registered Civil Engineer.

E49. The Applicant shall restore any pavement cuts required for installation or extension of utilities for his project within the public right-of-way. In all cases where cuts are allowed, the Applicant is required to patch the cuts to Town standards and the approval of the Town Engineer. The patching shall include a grinding of the pavement to a width 4 feet beyond the edge of the trench on each side, or as determined by the Town Engineer, and replacement with a full-depth asphalt concrete recommended by the Soils Engineer.

E50. The Applicant shall construct the replacement of any identified damaged curb and gutter, sidewalk, drive approach, asphalt concrete pavement, meter boxes, and other infrastructure that may be required by the Town Engineer or another Agency.

E51. The Applicant shall install all water and sewer systems required to serve the project. The location of the proposed septic system(s) shall be shown on the project grading plan(s).

E52. The Developer and his Contractor(s) shall observe the construction of this project to make certain that no damage or potential for damage occurs to adjacent roadway, existing improvements, adjacent property and other infrastructure. The Developer shall be responsible for the repair of any damage occurring to offsite infrastructure and/or property damage as determined by the Town Engineer. The Developer shall repair any such damage prior to certificate of occupancy. If the damage is such that it is not repairable within a reasonable amount of time as determined by the Town Engineer, the Developer may petition the Town Engineer for additional conditions that may allow him the time, amount of surety and other requirements to repair the damage.

E53. The Developer and his Contractor(s) shall be responsible for all improvements that he has constructed within the public right-of-way as required by the conditions of approval. The improvements shall be constructed to the standards and requirements as determined and approved by the Town Engineer. Any improvements not considered to be to the required standards shall be replaced by the Developer. The Developer shall be required to maintain and repair those improvements prior to and after acceptance by the Town Council for the length of time required by the applicable conditions, standards and ordinances.

DRAFT

Applicant Initials_____

E54. The developer shall reimburse the Town for the Town's costs incurred in monitoring the developer's compliance with the Conditions of Approval including, but not limited to, inspections and review of developer's operations and activities for compliance with all applicable dust and noise operations. This condition of approval is supplemental and in addition to normal building permit and public improvement permits that may be required pursuant to the Yucca Valley Municipal Code.

DRAFT

Applicant Initials_____

BUILDING AND SAFETY CONDITIONS

B1. All construction plans must comply with the most current adopted California Building Codes. Including the 2025 California Wildland Urban Interface Code.

B2. All buildings require sprinklers compliant with the 2025 California Fire Code.

B3. All common areas and designated areas are required to comply with Ch. 11B of the 2025 California Building Code.

B4. All solar and electrical storage means are to comply with the 2025 California Energy Code, 2025 California Green Code and 2025 California Electrical Code.

B5. A pre-construction meeting is to be established and completed after issuance of grading and building permits.

B6. Applicant/developer shall provide plans and obtain the required permits that comply with applicable provisions of the 2025 California Building, Plumbing, Electrical, and Mechanical Codes, the 2025 California Green Building Standards Code, and Title 24 Energy Code, Part 6.

B7. All Plans to be stamped and wet signed by California Licensed Engineer or Architect.

B8. Provide all required ADA access plan (Parking, path of travel, building access, restroom, ADA workspace, etc.) per 2025 CBC.

B9. Obtain San Bernardino County Fire approval for building and site improvements.

B10. Obtain will serve letter from Hi-Desert Water.

B11. Prior to final certificate of occupancy, as required by California State Health and Safety Code Section 19850, the applicant shall provide 1 copy of the stamped approved plans and revisions on CD in PDF format to the Town of Yucca Valley Building and Safety Division to serve as the official file copy of the approved building plans.

B12. Submit 3 complete sets of plans and provide 1 electronic copy of all plans and all calculations at the initial plan review submittal.

I HEREBY CERTIFY THAT THE APPROVED CONDITIONS OF APPROVAL WILL BE SATISFIED PRIOR TO OR AT THE TIMEFRAMES SPECIFIED AS SHOWN ABOVE. I UNDERSTAND THAT FAILURE TO SATISFY ANY ONE OF THESE CONDITIONS WILL PROHIBIT THE ISSUANCE OF ANY PERMIT OR ANY FINAL MAP APPROVAL.

Environmental Assessment

1. Property boundaries, dimensions and area (also attach an 8 ½ x 11" site plan):

2. Existing site zoning: Mixed Use

3. Existing General Plan designation: Commercial

4. Precisely describe the existing use and condition of the site:
   The subject property is an undeveloped vacant property.

5. Existing Zoning of adjacent parcels:

   North C-N South C-MU East C-MU West C-MU

6. Existing General Plan designation of adjacent parcels:

   North C South C East C West C

7. Precisely describe existing uses adjacent to the site:

   North Directly North is Twenty Nine Palms Highway. Across the Highway is a shopping center with Stater Bros Grocery

   South Undeveloped

   East Retail Store - Walgreens

   West Retail Store - Big 5 Sporting Goods

8. Describe the plant cover found on the site, including the number and type of all protected plants:

Docusign Envelope ID: 18C56616-90B4-4148-B43D-7F1746E58C5D

Note: Explain any "Yes" or '"Maybe" responses to questions below. If the information and responses are insufficient or not complete, the application may be determined incomplete and returned to the applicant.

Yes	Maybe	No	
☐	☐	☑	9. Is the Site on filled or slopes of 15% or more or in a canyon? (A geological and/or soils Investigation report is required with this application.)
☐	☑	☐	10. Has the site been surveyed for historical, paleontological or archaeological resources? (If yes, a copy of the survey report is to accompany this application.)
☐	☐	☐	11. Is the site within a resource area as identified in the archaeological and historical resource element?
☐	☐	☑	12. Does the site contain any unique natural, ecological, or scenic resources?
☐	☐	☑	13. Do any drainage swales or channels border or cross the site?
☐	☐	☑	14. Has a traffic study been prepared? (If yes, a copy of the study is to accompany this application.)
☐	☐	☑	15. Is the site in a flood plain? (See appropriate FIRM)

Docusign Envelope ID: 18C56616-90B4-4148-B43D-7F1746E58C5D

Project Description

Complete the items below as they pertain to your project. Attach any other supplemental information that will assist in the review of the proposed project pursuant to CEQA.

1. **Commercial, Industrial, or Institutional Projects:**

   A. Specific type of use proposed: Drive through coffee stand

   B. Gross square footage by each type of use: 980 square foot

   C. Gross square footage and number of floors of each building: N/A

   D. Estimate of employment by shift: 6 to 8

   E. Planned outdoor activities: Walk up service

2. **Percentage of project site covered by:**

   Paving 52.9 % Building 2.2 % Landscaping 26.1 % Parking 8.2 %

3. **Maximum height of structures** _____

4. **Amount and type of off street parking proposed**: 18 (3 future EVCS, 1 accessible EVCS, 1 Accessible, and 13 typical)

5. **How will drainage be accommodated?** All storm water will directed to a retention pond to be constructed in the center of the property approximately 18550 square feet in size.

6. **Off-site construction (public or private) required to support this project:**
   No off - site improvement are anticipated except connection to sewer and water.

7. **Preliminary grading plan estimate of cut and fill** _____

8. **Description of project phasing if applicable:** N/A

9. **Is this project part of a larger project previously reviewed by the Town? If yes, identify the review process and associated project title(s)** _____

Docusign Envelope ID: 18C56616-90B4-4148-B43D-7F1746E58C5D

11. During construction, will the project: (Explain any "yes" or "maybe" responses to questions below – attach extra pages if necessary.)

Yes	Maybe	No	
☐	☐	☑	A. Emit dust, ash, smoke, fumes or odors?
☐	☐	☑	B. Alter existing drainage patterns?
☐	☐	☑	C. Create a substantial demand for energy or water?
☐	☐	☑	D. Discharge water of poor quality?
☐	☐	☑	E. Increase noise levels on site or for adjoining areas?
☐	☐	☑	F. Generate abnormally large amounts of solid waste or litter?
☐	☐	☑	G. Use, produce, store, or dispose of potentially hazardous materials such as toxic or radioactive substances, flammable or explosives?
☐	☐	☑	H. Require unusually high demands for such services as police, fire, sewer, schools, water, public recreation, etc.
☐	☐	☑	I. Displace any residential occupants?

Docusign Envelope ID: 18C56616-90B4-4148-B43D-7F1746E58C5D

Environmental Assessment

1. Property boundaries, dimensions and area (also attach an 8 ½ x 11" site plan):

2. Existing site zoning: Mixed Use

3. Existing General Plan designation: Commercial

4. Precisely describe the existing use and condition of the site:
   The subject property is an undeveloped vacant property.

5. Existing Zoning of adjacent parcels:

   North C-N South C-MU East C-MU West C-MU

6. Existing General Plan designation of adjacent parcels:

   North C South C East C West C

7. Precisely describe existing uses adjacent to the site:

   North Directly North is Twenty Nine Palms Highway. Across the Highway is a shopping center with Stater Bros Grocery

   South Undeveloped

   East Retail Store - Walgreens

   West Retail Store - Big 5 Sporting Goods

8. Describe the plant cover found on the site, including the number and type of all protected plants: Only Protective plant is Joshua Trees. There are 19 alive and 3 dead trees.

Owner/Applicant Authorization

Applicant/Representative: I/We have reviewed this completed application and the attached material. The information included with this application is true and correct to the best of my/our knowledge. I/We further understand that the Town may not approve the application as submitted, and may set conditions of approval. Further, I/We understand that all documents, maps, reports, etc., submitted with this application are deemed to be public records. This application does not guarantee approval or constitute a building permit application. Additional fees may be required depending on additional administrative costs.

Signature: _____

Name: John Caglia

Date: 1/30/25

Property Owner: I/We certify that I/We are presently the legal owner(s) of the above described property (If the undersigned is different from the legal property owner, a letter of authorization must accompany the form). Further, I/We acknowledge the filing of this application and certify that all of the above information is true and accurate. I/We understand that I/We are responsible for ensuring compliance with conditions of approval. I/We hereby authorize the Town of Yucca Valley and or/its designated agent(s) to enter onto the subject property to confirm the location of existing conditions and proposed improvements including compliance with applicable Town Code Requirements. Further, I/We understand that all documents, maps, reports, etc., submitted with this application are deemed to be public records. This application does not guarantee approval or constitute a building permit application. Additional fees may be required depending on additional administrative costs. I am hereby authorizing

Dutch Bros (John Caglia)

to act as my agent and is further authorized to sign any and all documents on my behalf.

1. FABRIC: 4 FOOT HIGH ORANGE PLASTIC FENCING AS SHOWN ON THE PLANS AND SHALL BE WOVEN WITH 2 INCH MESH OPENINGS SUCH THAT IN A VERTICAL DIMENSION OF 23 INCHES ALONG THE DIAGONALS OF THE OPENINGS THERE SHALL BE AT LEAST 7 MESHES.
2. POSTS: POSTS SHALL BE A MINIMUM OF 72 INCHES LONG AND STEEL "T" SHAPED WITH A MINIMUM WEIGHT OF 1.3 POUNDS PER LINEAR FOOT.
3. TIE WIRE: WIRE FOR ATTACHING THE FABRIC TO THE T-POSTS SHALL BE NOT LESS THAN NO. 12 GAUGE GALVANIZED WIRE.
4. USED MATERIALS: PREVIOUSLY-USED MATERIALS, MEETING THE ABOVE REQUIREMENTS AND WHEN APPROVED BY THE OWNER, MAY BE USED.

CONSTRUCTION METHODS

1. ALL TREES AND SHRUBS SHOWN TO REMAIN WITHIN THE PROXIMITY OF THE CONSTRUCTION SITE SHALL BE PROTECTED PRIOR TO BEGINNING ANY DEVELOPMENT ACTIVITY.
2. EMPLOY THE SERVICES OF AN ISA (INTERNATIONAL SOCIETY OF ARBORICULTURE) CERTIFIED ARBORIST AND OBTAIN ALL REQUIRED PERMITS TO PRUNE THE EXISTING TREES FOR CLEANING, RAISING AND THINNING, AS MAY BE REQUIRED.
3. PROTECTIVE FENCING SHALL BE ERECTED OUTSIDE THE CRITICAL ROOT ZONE (CRZ, EQUAL TO 1' FROM THE TRUNK FOR EVERY 1" OF DBH) AT LOCATIONS SHOWN IN THE PLANS OR AS DIRECTED BY THE LANDSCAPE CONSULTANT AND/OR CITY ARBORIST, AND IN ACCORDANCE WITH THE DETAILS SHOWN ON THE PLANS. FENCING SHALL BE MAINTAINED AND REPAIRED BY THE CONTRACTOR DURING SITE CONSTRUCTION. TREES IN CLOSE PROXIMITY SHALL BE FENCED TOGETHER, RATHER THAN INDIVIDUALLY.
4. PROTECTIVE FENCE LOCATIONS IN CLOSE PROXIMITY TO STREET INTERSECTIONS OR DRIVES SHALL ADHERE TO THE APPLICABLE JURISDICTION'S SIGHT DISTANCE CRITERIA.
5. THE PROTECTIVE FENCING SHALL BE ERECTED BEFORE SITE WORK COMMENCES AND SHALL REMAIN IN PLACE DURING THE ENTIRE CONSTRUCTION PHASE.
6. THE INSTALLATION POSTS SHALL BE PLACED EVERY 6 FEET ON CENTER AND EMBEDDED TO 18 INCHES DEEP. MESH FABRIC SHALL BE ATTACHED TO THE INSTALLATION POSTS BY THE USE OF SUFFICIENT WIRE TIES TO SECURELY FASTEN THE FABRIC TO THE T-POSTS TO HOLD THE FABRIC IN A STABLE AND UPRIGHT POSITION.
7. WITHIN THE CRZ:
   a. DO NOT CLEAR, FILL OR GRADE IN THE CRZ OF ANY TREE.
   b. DO NOT STORE, STOCKPILE OR DUMP ANY JOB MATERIAL, SOIL OR RUBBISH UNDER THE SPREAD OF THE TREE BRANCHES.
   c. DO NOT PARK OR STORE ANY EQUIPMENT OR SUPPLIES UNDER THE TREE CANOPY.
   d. DO NOT SET UP ANY CONSTRUCTION OPERATIONS UNDER THE TREE CANOPY (SUCH AS PIPE CUTTING AND THREADING, MORTAR MIXING, PAINTING OR LUMBER CUTTING).
   e. DO NOT NAIL OR ATTACH TEMPORARY SIGNS METERS, SWITCHES, WIRES, BRACING OR ANY OTHER ITEM TO THE TREES.
   f. DO NOT PERMIT RUNOFF FROM WASTE MATERIALS INCLUDING SOLVENTS, CONCRETE WASHOUTS, ASPHALT TACK COATS (MC-30 OIL), ETC. TO ENTER THE CRZ. BARRIERS ARE TO BE PROVIDED TO PREVENT SUCH RUNOFF SUBSTANCES FROM ENTERING THE CRZ WHENEVER POSSIBLE, INCLUDING IN AN AREA WHERE RAIN OR SURFACE WATER COULD CARRY SUCH MATERIALS TO THE ROOT SYSTEM OF THE TREE.
8. ROUTE UNDERGROUND UTILITIES TO AVOID THE CRZ. IF DIGGING IS UNAVOIDABLE, BORE UNDER THE ROOTS, OR HAND DIG TO AVOID SEVERING THEM.
9. WHERE EXCAVATION IN THE VICINITY OF TREES MUST OCCUR, SUCH AS FOR IRRIGATION INSTALLATION, PROCEED WITH CAUTION, AND USING HAND TOOLS ONLY.
10. THE CONTRACTOR SHALL NOT CUT ROOTS LARGER THAN ONE INCH IN DIAMETER WHEN EXCAVATION OCCURS NEAR EXISTING TREES. ALL ROOTS LARGER THAN ONE INCH IN DIAMETER ARE TO BE CUT CLEANLY. FOR OAKS ONLY, ALL WOUNDS SHALL BE PAINTED WITH WOUND SEALER WITHIN 30 MINUTES
11. REMOVE ALL TREES, SHRUBS OR BUSHES TO BE CLEARED FROM PROTECTED ROOT ZONE AREAS BY HAND.
12. TREES DAMAGED OR KILLED DUE TO CONTRACTOR'S NEGLIGENCE DURING CONSTRUCTION SHALL BE MITIGATED AT THE CONTRACTOR'S EXPENSE AND TO THE PROJECT OWNER'S AND LOCAL JURISDICTION'S SATISFACTION.
13. ANY TREE REMOVAL SHALL BE APPROVED BY THE OWNER AND LOCAL JURISDICTION PRIOR TO ITS REMOVAL, AND THE CONTRACTOR SHALL HAVE ALL REQUIRED PERMITS FOR SUCH ACTIVITIES.
14. COVER EXPOSED ROOTS AT THE END OF EACH DAY WITH SOIL, MULCH OR WET BURLAP.
15. IN CRITICAL ROOT ZONE AREAS THAT CANNOT BE PROTECTED DUING CONSTRUCTION AND WHERE HEAVY TRAFFIC IS ANTICIPATED, COVER THE SOIL WITH EIGHT INCHES OF ORGANIC MULCH TO MINIMIZE SOIL COMPACTION. THIS EIGHT INCH DEPTH OF MULCH SHALL BE MAINTAINED THROUGHOUT CONSTRUCTION.
16. WATER ALL TREES IMPACTED BY CONSTRUCTION ACTIVITIES, DEEPLY ONCE A WEEK DURING PERIODS OF HOT DRY WEATHER. SPRAY TREE CROWNS WITH WATER PERIODICALLY TO REDUCE DUST ACCUMULATION ON THE LEAVES.
17. WHEN INSTALLING CONCRETE ADJACENT TO THE ROOT ZONE OF A TREE, USE A PLASTIC VAPOR BARRIER BEHIND THE CONCRETE TO PROHIBIT LEACHING OF LIME INTO THE SOIL.
18. CONTRACTOR SHALL REMOVE AND DISPOSE OF ALL TREE PROTECTION FENCING WHEN ALL THREATS TO THE EXISTING TREES FROM CONSTRUCTION-RELATED ACTIVITIES HAVE BEEN REMOVED.

TREE PROTECTION GENERAL NOTES

(A) PRIOR TO THE LAND CLEARING STAGE OF DEVELOPMENT, THE CONTRACTOR SHALL CLEARLY MARK ALL PROTECTED TREES FOR WHICH A TREE REMOVAL PERMIT HAS NOT BEEN ISSUED AND SHALL ERECT BARRIERS FOR THE PROTECTION OF THE TREES ACCORDING TO THE FOLLOWING:
(1) AROUND AN AREA AT OR GREATER THAN A SIX-FOOT RADIUS OF ALL SPECIES OF MANGROVES AND PROTECTED CABBAGE PALMS;
(2) AROUND AN AREA AT OR GREATER THAN THE FULL DRIPLINE OF ALL PROTECTED NATIVE PINES;
(3) AROUND AN AREA AT OR GREATER THAN TWO-THIRDS OF THE DRIPLINE OF ALL OTHER PROTECTED SPECIES.

(B) NO PERSON SHALL ATTACH ANY SIGN, NOTICE OR OTHER OBJECT TO ANY PROTECTED TREE OR FASTEN ANY WIRES, CABLES, NAILS OR SCREWS TO ANY PROTECTED TREE IN ANY MANNER THAT COULD PROVE HARMFUL TO THE PROTECTED TREE, EXCEPT AS NECESSARY IN CONJUNCTION WITH ACTIVITIES IN THE PUBLIC INTEREST.

(C) DURING THE CONSTRUCTION STAGE OF DEVELOPMENT, THE CONTRACTOR SHALL NOT CAUSE OR PERMIT THE CLEANING OF EQUIPMENT OR MATERIAL WITHIN THE OUTSIDE PERIMETER OF THE CROWN (DRIPLINE) OR ON THE NEARBY GROUND OF ANY TREE OR GROUP OF TREES WHICH IS TO BE PRESERVED. WITHIN THE OUTSIDE PERIMETER OF THE CROWN (DRIPLINE) OF ANY TREE OR ON NEARBY GROUND, THE CONTRACTOR SHALL NOT CAUSE OR PERMIT STORAGE OF BUILDING MATERIAL AND/OR EQUIPMENT, OR DISPOSAL OF WASTE MATERIAL SUCH AS PAINTS, OIL, SOLVENTS, ASPHALT, CONCRETE, MORTAR OR ANY OTHER MATERIAL HARMFUL TO THE LIFE OF THE TREE.

(D) NO PERSON SHALL PERMIT ANY UNNECESSARY FIRE OR BURNING WITHIN 30 FEET OF THE DRIPLINE OF A PROTECTED TREE.

(E) ANY LANDSCAPING ACTIVITIES WITHIN THE BARRIER AREA SHALL BE ACCOMPLISHED WITH HAND LABOR.

(F) PRIOR TO ISSUING A CERTIFICATE OF OCCUPANCY OR COMPLIANCE FOR ANY DEVELOPMENT, BUILDING OR STRUCTURE, ALL TREES DESIGNATED TO BE PRESERVED THAT WERE DESTROYED DURING CONSTRUCTION SHALL BE REPLACED BY THE CONTRACTOR WITH TREES OF EQUIVALENT DIAMETER AT BREAST HEIGHT TREE CALIPER AND OF THE SAME SPECIES AS SPECIFIED BY THE TOWN OF YUCCA VALLEY NATIVE PLANT ORDINANCE, BEFORE OCCUPANCY OR USE, UNLESS APPROVAL FOR THEIR REMOVAL HAS BEEN GRANTED UNDER PERMIT.

(G) THE TOWN OF YUCCA VALLEY MAY CONDUCT PERIODIC INSPECTIONS OF THE SITE DURING LAND CLEARANCE AND CONSTRUCTION.

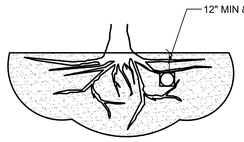
(H) IF, IN THE OPINION OF THE TOWN OF YUCCA VALLEY, DEVELOPMENT ACTIVITIES WILL SO SEVERELY STRESS SLASH PINES OR ANY OTHER PROTECTED TREE SUCH THAT THEY ARE MADE SUSCEPTIBLE TO INSECT ATTACK, PREVENTATIVE SPRAYING OF THESE TREES BY THE CONTRACTOR MAY BE REQUIRED.

TREE RELOCATION GUIDELINES

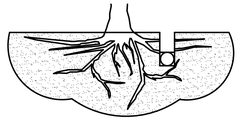
1. TREES SHALL NOT BE UNNECESSARILY DAMAGED DURING REMOVAL, TRANSPORT OR REPLANTING OF THE TREE.
2. IF THE TREE HAS A DORMANT PERIOD, THEY SHOULD BE TRANSPLANTED DURING THAT TIME. TREES SHOULD NOT BE TRANSPLANTED DURING PERIODS OF STRONG WINDS, DRY WINTER WINDS OR DURING DROUGHT.
3. ADEQUATE SPACES FOR ROOT AND CROWN DEVELOPMENT SHALL BE PROVIDED.
4. TREES SHALL BE ROOT AND CANOPY PRUNED IN ACCORDANCE WITH SOUND ARBORICULTURAL STANDARDS PRIOR TO TRANSPLANTING.
5. DURING AND FOLLOWING TRANSPLANTING, THE ROOT BALL AND TRUNK SHALL BE PROTECTED. THE ROOT BALL MUST BE KEPT MOIST AT ALL TIMES.
6. TRANSPLANTED TREES SHALL BE BRACED FOR A MINIMUM OF ONE (1) YEAR.
7. TRANSPLANTED TREES SHALL NOT BE FERTILIZED AT PLANTING TIME, BUT SHALL BE WATERED SUFFICIENTLY UNTIL THE TREE GROWTH IS REESTABLISHED.
8. ALL CROWN PRUNING SHALL BE DONE IN ACCORDANCE WITH "THE AMERICAN NATIONAL STANDARDS INSTITUTE A-300, TREE SHRUB AND OTHER WOODY PLANT MAINTENANCE-STANDARD PRACTICES", AND "Z-133.1 PRUNING, REPAIRING, MAINTAINING AND REMOVING TREES, AND CUTTING BRUSH-SAFETY REQUIREMENTS" OR PALM PRUNING IN ACCORDANCE WITH THE STANDARDS IN, RICHARD HARRIS, "ARBORICULTURE INTEGRATED MANAGEMENT OF LANDSCAPE TREES, SHRUBS AND VINES", AS AMENDED.
9. CONTRACTOR IS RESPONSIBLE FOR REGULAR WATERING AND MAINTENANCE OF TRANSPLANTED TREES DURING STORAGE PERIOD.

TREES THAT ARE MARKED TO BE PRESERVED ON A SITE PLAN AND FOR WHICH UTILITIES MUST PASS TROUGH THEIR ROOT PROTECTION ZONES MAY REQUIRE TUNNELING AS OPPOSED TO OPEN TRENCHES. THE DECISION TO TUNNEL WILL BE DETERMINED ON A CASE BY CASE BASIS BY THE ENGINEER.

TUNNELS SHALL BE DUG THROUGH THE ROOT PROTECTION ZONE IN ORDER TO MINIMIZE ROOT DAMAGE.



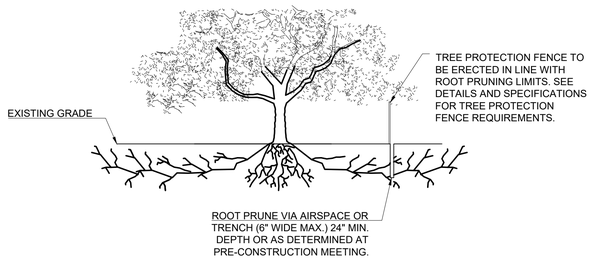
TUNNEL TO MINIMIZE ROOT DAMAGE (TOP) AS OPPOSED TO SURFACE-DUG TRENCHES IN ROOT PROTECTION ZONE WHEN THE 5' MINIMUM DISTANCE FROM TRUNK CAN NOT BE ACHIEVED.



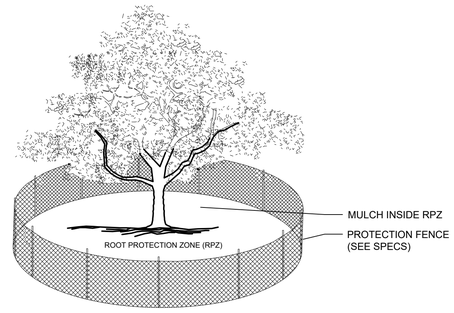
OPEN TRENCHING MAY BE USED IF EXPOSED TREE ROOTS DO NOT EXCEED 3" OR ROOTS CAN BE BENT BACK.

C BORING THROUGH ROOT PROTECTION ZONE
SCALE: NOT TO SCALE

NOTES
1. RETENTION AREAS WILL BE SET AS PART OF THE REVIEW PROCESS AND PRE-CONSTRUCTION MEETING.
2. BOUNDARIES OF RETENTION AREAS MUST BE STAKED AT THE PRE-CONSTRUCTION MEETING AND FLAGGED PRIOR TO ROOT PRUNING.
3. EXACT LOCATION OF ROOT PRUNING SHALL BE DETERMINED IN THE FIELD IN COORDINATION WITH THE FORESTRY INSPECTOR.
4. TRENCH SHOULD BE IMMEDIATELY BACKFILLED WITH EXCAVATED SOIL OR OTHER ORGANIC SOIL AS SPECIFIED PER PLAN OR BY THE FORESTRY INSPECTOR.
5. ROOTS SHALL BE CLEANLY CUT USING VIBRATORY KNIFE OR OTHER ACCEPTABLE EQUIPMENT. ROT PRUNING METHODS AND MEANS MUST BE IN ACCORDANCE WITH ANSI STANDARD A3000.
6. ALL PRUNING MUST BE EXECUTED AT LOD SHOWN ON PLANS OR AS AUTHORIZED IN WRITING BY THE FORESTRY INSPECTOR.
7. SUPPLEMENTAL WATERING MAY BE REQUIRED FOR ROOT PRUNED TREES THROUGHOUT THE GROWING SEASON DURING CONSTRUCTION AND SUBSEQUENT WARRANTY AND MAINTENANCE PERIOD.

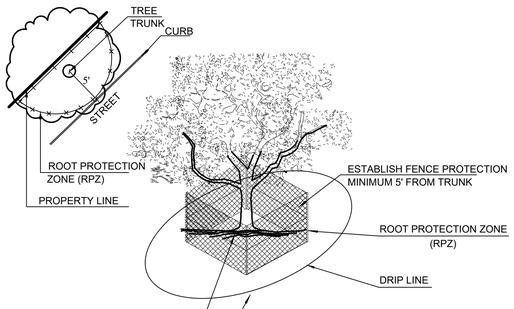


D ROOT PRUNING DETAIL
SCALE: NOT TO SCALE



NOTES:
1. THE FENCING LOCATION SHOWN ABOVE IS DIAGRAMATIC ONLY AND WILL CONFORM TO THE DRIP LINE AND BE LIMITED TO PROJECT BOUNDARY. WHERE MULTIPLE ADJACENT TREES WILL BE ENCLOSED BY FENCING, THE FENCING SHALL BE CONTINUOUS AROUND ALL TREES.
2. FOR ACCEPTABLE FENCING MATERIALS SEE SPECIFICATIONS.

A TREE PROTECTION FENCE
SCALE: NOT TO SCALE



NOTES:
1. OPTION USED FOR TIGHT CONSTRUCTION AREAS OR WHEN CONSTRUCTION OCCURS IN ROOT PROTECTION ZONE.
2. FOR ACCEPTABLE FENCING MATERIALS SEE SPECIFICATIONS.

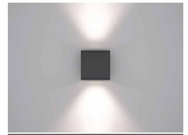
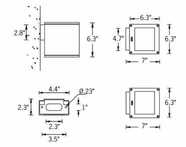
LIGMAN LIGHTING USA

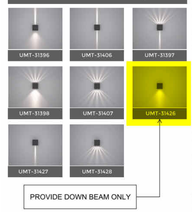


Length - 7" | Height - 6.3" | Weight 4.8 lbs
IP65 • Suitable For Wet Locations
IK04 • Impact Resistant (Vandal Resistant)



Mounting Detail

Matrix Product Family



Construction

Aluminum
Less than 0.1% copper content – Marine Grade 6060 extruded & LM6 Aluminum High Pressure die casting provides excellent mechanical strength , clean detailed product lines and excellent heat dissipation.

Pre paint
8 step degrease and phosphate process that includes deoxidizing and etching as well as a zinc and nickel phosphate process before product painting.

Memory Retentive -Silicon Gasket
Provided with special injection molded "fit for purpose" long life high temperature memory retentive silicon gaskets. Maintains the gaskets exact profile and seal over years of use and compression.

Thermal management
LM6 Aluminum is used for its excellent mechanical strength and thermal dissipation properties in low and high ambient temperatures. The superior thermal heat sink design by Ligman used in conjunction with the driver, controls thermals below critical temperature range to ensure maximum luminous flux output, as well as providing long LED service life and ensuring less than 10% lumen depreciation at 50,000 hours.

Surge Suppression
Standard 10kv surge suppressor provided with all fixtures.

BUG Rating
B1 - U5 - G0

Finishing
All Ligman products go through an extensive finishing process that includes fettling to improve paint adherence.

Paint
UV Stabilized 4.9Mil thick powder coat paint and baked at 200 Deg C.
This process ensures that Ligman products can withstand harsh environments.
Rated for use in natatoriums.

Hardware
Provided Hardware is Marine grade 316 Stainless steel.

Anti Seize Screw Holes
Tapped holes are infused with a special anti seize compound designed to prevent seizure of threaded connections, due to electrolysis from heat, corrosive atmospheres and moisture.

Crystal Clear Low Iron Glass Lens
Provided with tempered, impact resistant crystal clear low iron glass ensuring no green glass tinge.

Optics & LED
Precise optic design provides exceptional light control and precise distribution of light. LED CRI > 80

Lumen - Maintenance Life
L80 /B10 at 50,000 hours (This means that at least 90% of the LED still achieve 80% of their original flux)

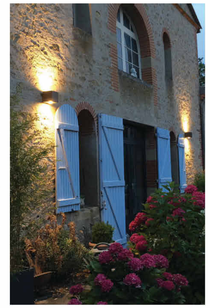
Square surface wall-mounted architectural lighting range. Family of lighting effects sanctioning imagination and inspiration to reign in designs.

A small profile wall mounted compact cubic luminaire with up and downward light distributions. The Matrix is designed with five light distribution options, namely narrow, medium, wide, very wide and spike.

The Matrix uses high efficiency, long life LEDs and is designed to illuminate the wall and surfaces in front of the wall, as well as light accents on vertical and horizontal surfaces. The Matrix is suitable for indoor and outdoor applications.

This luminaire is available with decorative spikes and can be used with various combinations of light distribution optics.

This luminaire can be mounted at different angles to produce interesting decorative lighting effects on the side of the building facade.
The standard Matrix is designed to mount over a 3" octagonal j-box, a 4" j-box cover plate is available upon request.



Ligman Lighting USA reserves the right to change specifications without prior notice, please contact factory for latest information. Due to the continual improvements in LED technology data and components may change without notice.

LED Info

Technical Specifications

Other

Battery Backup:
Minimum starting temperature is 0°C/32°F.

Patents:
The WPLED design is protected by U.S. Patent D634878 and Patents pending in the U.S., Canada, China, Taiwan and Mexico.

Equivalency:
Equivalent to 175W Metal Halide.

FTC Country of Origin:
This product was assembled in the USA by RAB using imported components.

Buy American Act Compliance:
This product complies with the Buy American Act.

Listings

DLC Listed:
This product is on the Design Lights Consortium (DLC) Qualified Products List and is eligible for rebates from DLC Member Utilities.
DLC Product Code: P0000175O

UL Listing:
Suitable for Wet Locations as downlight, Wall Mount Only. Battery Backup UL 924 Listed Emergency Lighting Power Supply.

LED Characteristics

Lifespan:
100,000-hour LED lifespan based on IES LM-80 results and TM-21 calculations.

LED:
Two (2) 13W high-output, long-life LEDs.

Color Consistency:
3-step MacAdam Ellipse binning to achieve consistent fixture-to-fixture color.

Color Stability:
LED color temperature is warrantied to shift no more than 200K in CCT over a 5 year period.

Color Uniformity:
RAB's range of CCT (Correlated Color Temperature) follows the guidelines of the American National Standard for Specifications for the Chromaticity of Solid State Lighting (SSL) Products, ANSI C78.377-2017.

Electrical

Battery Mode:
Light output use LLD of.76 to simulate light output during battery mode operation.

Driver:
Constant Current, Class 2, 50/60 Hz, 120 - 277VAC 0.4 Amps.

Battery Backup

Backup Battery:
Two field-replaceable, high-temperature, maintenance-free, nickel-cadmium batteries.

Construction

Ambient Temperature:
Suitable for use in 35°C (95°F) ambient temperatures.

Gaskets:
High temperature silicone.

Housing:
Precision die-cast aluminum housing, lens frame and mounting arm

Finish:
Formulated for high-durability and long lasting color.

Green Technology:
Mercury and UV free. RoHS compliant components. Polyester powder coat finish formulated without the use of VOC or toxic heavy metals.

Optical

BUG Rating:
B1 U0 G0

2 WALL PACK FIXRTURE AT REAR DOOR
NTS

Imperial Lighting | P | Job: Dutch Bros | Descr: Pole Head - Prototype Selection Dec, 2019

AREA LIGHTING

NV-1-ASA

FORM AND FUNCTION
- Sleek, low profile housing
- Spec grade performance
- Engineered for optimum thermal management
- Low depreciation rate
- Reduces energy consumption and costs up to 65%
- Exceeds IES foot candle levels utilizing the least number of poles and fixtures per project
- Optical system designed for:
  - Parking Lots
  - Auto Dealerships
  - General Area Lighting

CONSTRUCTION
- Die Cast Aluminum
- External cooling fins, Finite Element Analysis (FEA) designed
- Corrosion resistant external hardware
- One-piece silicone gasket ensures IP-65 seal for electronics compartment
- One-piece Optics Plate™ mounting silicone Micro Optics
- Two-piece silicone Micro Optic system ensures IP-67 level seal around each PCB
- Grade 2 Clear Anodized Optics Plate™ standard

FINISH
- 3-5 mils electrostatic powder coat.
- NLS' standard high-quality finishes prevent corrosion protects against and extreme environmental conditions

WARRANTY
Five-year limited warranty for drivers and LEDs.

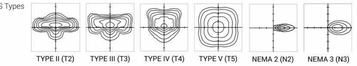
LISTINGS
- Certified to UL 1598
- UL 8750
- CSA C22.2 No. 250.0
- DesignLights Consortium® (DLC)
- DesignLights Consortium Premium® (DLCP)
- IP65/ IP67 Rated
- 3G Vibration Rated per ANSI C136.31-2010

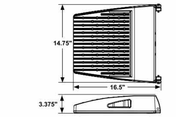
ELECTRICAL
- 120-277 Volts (UNV) or 347-480 Volts (HV)
- 0-10V dimming driver by Philips Advance
- Driver power factor at maximum load is ≥ .95, THD maximum load is 15%
- All internal wiring UL certified for 600 VAC and 105°C
- All drivers, controls, and sensors housed in enclosed IP-65 compartment
- Lumileds Luxeon MX LED's
- CRI >70
- Color temperatures: 3000K, 4000K, 5000K

OPTIONS
- **BIRD DETERRANT (BD)**—offers effective and humane deterrent for larger bird species and provides cost-effective long-term solution to nuisance bird infestations and protect your property.
- **MARINE GRADE FINISH (MGF)**—A multi-step process creating protective finishing coat against harsh environments.
  - Chemically washed in a 5 stage cleaning system.
  - Pre-baked
  - Powder coated 3-5 mils of Zinc Rich Super Durable Polyester Primer.
  - 1-2 feet inside pole coverage top and bottom.
  - Oven Baked.
  - Finished Powder Coating of Super Durable Polyester Powder Coat 3-5 mil thickness.
- **SHIELDS (HSS, AHS)**—House Side Shield (HSS) is designed for full property line cut-off. Automotive House Side Shield (AHS) is a single-sided shield allowing partial cut-off on either side or front of luminaire.
- **ROUND POLE ADAPTER (RPA)–** When using round poles, specify Round Pole Adapter (RPA). Specify RPA4 when installing on 3"-4" round poles, and RPA5 when installing on 5"-6" round poles.

CONTROLS
- **FSP-211 (FSP-X)**—Passive infrared (PIR) sensor providing multi-level control based on motion/daylight contribution.
  - All control parameters adjustable via wireless configuration remote storing and transmitting sensor profiles.
  - FSP-20 mounting heights 9-20 feet
  - FSP-40 mounting heights 21-40 feet.
  - Includes 5 dimming event cycles, 0-10V dimming with motion sensing, reprogrammable in the field.
- **NEMA 7-PIN RECEPTACLE (PE7)**—An ANSI C136.41-2013 receptacle provides electrical and mechanical interconnection between photo control cell and luminaire. Dimming receptacle available two or four dimming contacts supports 0-10 VDC dimming methods or Digital Addressable Lighting Interface (DALI), providing reliable power interconnect.

OPTICS
Silicone optics high photothermal stability and light output provides higher powered LEDs with minimized lumen depreciation LED life. UV and thermal stability with scratch resistance increases exterior application durability.
- IES Types





RPA4 / RPA5

GETTING STARTED L5

Following these few simple steps will ensure a successful installation each time. Remember: No more than 48 boards per power supply.

1. **Read ALL instructions, before starting installation.**
2. **Inspect the boxes for damage and check the parts against the supplied parts list.**

   NOTE: Report damaged parts or shortages immediately to prevent job slowdown/stoppage to 1-800-634-4059 ext. 0
3. **Refer to attached provided print and confirm job measurements.**
4. **Layout your job on paper, making note of power supply placement.**

Power supplies can be placed at the end of runs or side by side to power allowable linear footage in each direction.

NOTE: If job measurements do not correspond to provided drawing, call Lektron Immediately at 1-800-634-4059.

CONTENTS

Getting Started, Component Identification & Required Tools

SECTION	PAGE
1. 48 Board Track Mounting Bracket Layout	2
2. Installing Track into Mounting Brackets	3
3. Custom Cut to Fit End of Runs & Corners	4
4. Mounting Track on an Incline	5
5. Frame Border Installation	6
6. Connecting Power Supplies	7
7. Testing Each Section	8

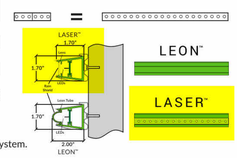
COMPONENT IDENTIFICATION & REQUIRED TOOLS

DETAILS

Input	120-277 VAC
Output	24 VDC (Philips Advance)
Max. Load Footage	64 Lineal ft. 20L 48 Lineal ft. 30L & 24L
Watts per Foot	1.50 (If 20L)
Dimming Capable	Yes
Bending Parameters	Factory bends available
Limited Warranty Terms	7 Years
Materials	PVC, UV and impact resistant
Dimensions	Laser 1.70 x 1.70, Leon 2.00 x 1.70
Certification	cULus E174914

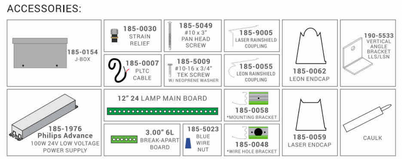
LED SPECIFICATIONS

12" LED boards pull close to the same voltage as shorter break-apart boards. Maximum of 3-3" Boards per circuit. No more than 48 boards on a circuit. Do not connect more than one power supply per circuit.



The LEDS come pre-installed in the 24 Lamp LASER & LEON System.

ACCESSORIES:



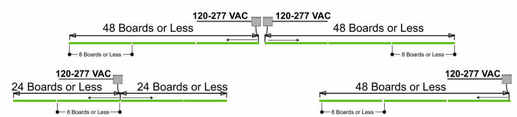
REQUIRED TOOLS:

- 25' Measuring Tape
- 100' Measuring Tape
- Framing Square
- Square - (1')
- Portable Rechargable Drill 5/16" Hexbit and unibit Masonry bits (if brick wall)
- Extension Cord
- Sawzall or Compound Saw
- Carpenter Pencil
- Caulk Gun
- Box Knife
- Wire Strippers
- Wire Snips
- Laser Tool or Chalk Line
- Substitute Fasteners for the Application if Applicable

SEC. 1 48 BOARD TRACK MOUNTING BRACKET LAYOUT

1. Using a chalk line, gauge, laser level, or other means to be certain run is straight, marking locations for brackets.
2. Border / perimeter of sign cabinets should always have orientation of Laser/Leon housing raised lip outboard on vertical or diagonal. Orient brackets so that the drain holes will be on the bottom side of the horizontal runs.
3. Install mounting brackets, 6 per 8' section including shared brackets. Use pre-drilled wire hole mounting brackets at power supply locations.

NOTE: Track sections share a bracket at the ends to keep ends together and straight there MUST BE A SPACE left between 8' plastic track sections (NOT LEDS) of 3/16"



Tip: Install end bracket after housing has been installed into previous brackets by sliding over end to ensure bracket is centered between sections. Place mounting brackets 3" on center from corners.

NOTE: MAXIMUM 48 BOARDS PER POWER SUPPLY. SHOWN 3 CONFIGURATIONS.

SUMMARY

LED: Optimized LED array

SHAPE: 4" Round, 4" Square

MODULE LUMENS: 750 lm (9.0W), 1000 lm (12.0W)

COLOR QUALITY: 90+ CRI, less than 3-step SDCM

CCT: 2700K, 3000K, 3500K

INPUT VOLTAGE: 120/277V

DIMMING: Down to less than 5% for TRIAC/ELV at 120V, 1% for 0-10V at 120/277V

MAX INPUT CURRENT (120V): 0.075 amps, 0.1047 amps

MAX INPUT CURRENT (277V): 0.034 amps, 0.047 amps

POWER FACTOR: Greater than 0.9

TOTAL HARMONIC DISTORTION: Less than 20%

AMBIENT OPERATING TEMPERATURE: -20°C to 40°C

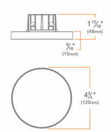
PHOTOMETRIC TESTING: Tested in accordance to IESNA LM-79-2008

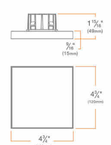
TRIM: Edgeless die-cast aluminum

LISTINGS: ENERGY STAR® qualified, California Title 24 2016 JA8 compliant, UL Listed for Wet Location, cULus Listed

LIFETIME: 50,000 hours at 70% lumen maintenance

WARRANTY: 5 year limited warranty





© 2016 DMF Lighting. All Rights Reserved. Specifications subject to change without notice. See website for U.S. and international patent information.

DUTCH BROS. COFFEE - CA3714 - YUCCA VALLEY, CA
PRELIMINARY GRADING AND DRAINAGE PLAN

PROJECT DATA

NAME: DUTCH BROS COFFEE – CA3714 – YUCCA VALLEY, CA

PARCEL AREA: 44,190 SF (1.014 ACRES)

DISTURBED PROJECT AREA: 48,127 SF (1.1 ACRES)

PARCEL #: 0601-416-05

ZONE: MIXED USE COMMERCIAL (C-MU)

GENERAL PLAN DESIGNATION: COMMERCIAL

QUEING: 23 VEHICLES

BASIS OF BEARINGS:

THE BEARING BEARINGS N 53° 33' 05" E ALONG BALSA AVENUE AS SHOWN ON PARCEL MAP NO. 15502, FILED IN BOOK 193, PAGES 98 AND 99 OF PARCEL MAPS.

EASEMENT NOTES

1. 5' EASEMENT(S) FOR ELECTRIC AND TELEPHONE FACILITIES AND RIGHT INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT TO CALIFORNIA WATER & TELEPHONE COMPANY RECORDED MARCH 30, 1962, IN BOOK 5672, PAGE 78, OFFICIAL RECORDS.
2. MATTERS CONTAINED IN THAT CERTAIN DOCUMENT ENTITLED RECIPROCAL EASEMENT AGREEMENT DATED OCTOBER 3, 2000, EXECUTED BY JOSEPH A. SIROLA AND THOMAS A KELLER, III ET AL RECORDED OCTOBER 20, 2000, RECORDING NO. 20000381189, OFFICIAL RECORDS.
3. EASEMENT(S) FOR UNDERGROUND COMMUNICATION FACILITIES AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT TO VERIZON CALIFORNIA INC., A CALIFORNIA CORPORATION RECORDED FEBRUARY 1, 2002, RECORDING NO. 20020054622, OFFICIAL RECORDS.
4. 20' EASEMENT(S) FOR SEWER EASEMENT AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT TO HI DESERT WATER DISTRICT, A PUBLIC AGENCY OF THE STATE OF CALIFORNIA RECORDED AUGUST 21, 2015, RECORDING NO. 2015-0360067, OFFICIAL RECORDING.

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF YUCCA VALLEY, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA AND IS DESCRIBED AS FOLLOWS:

PARCEL ONE:

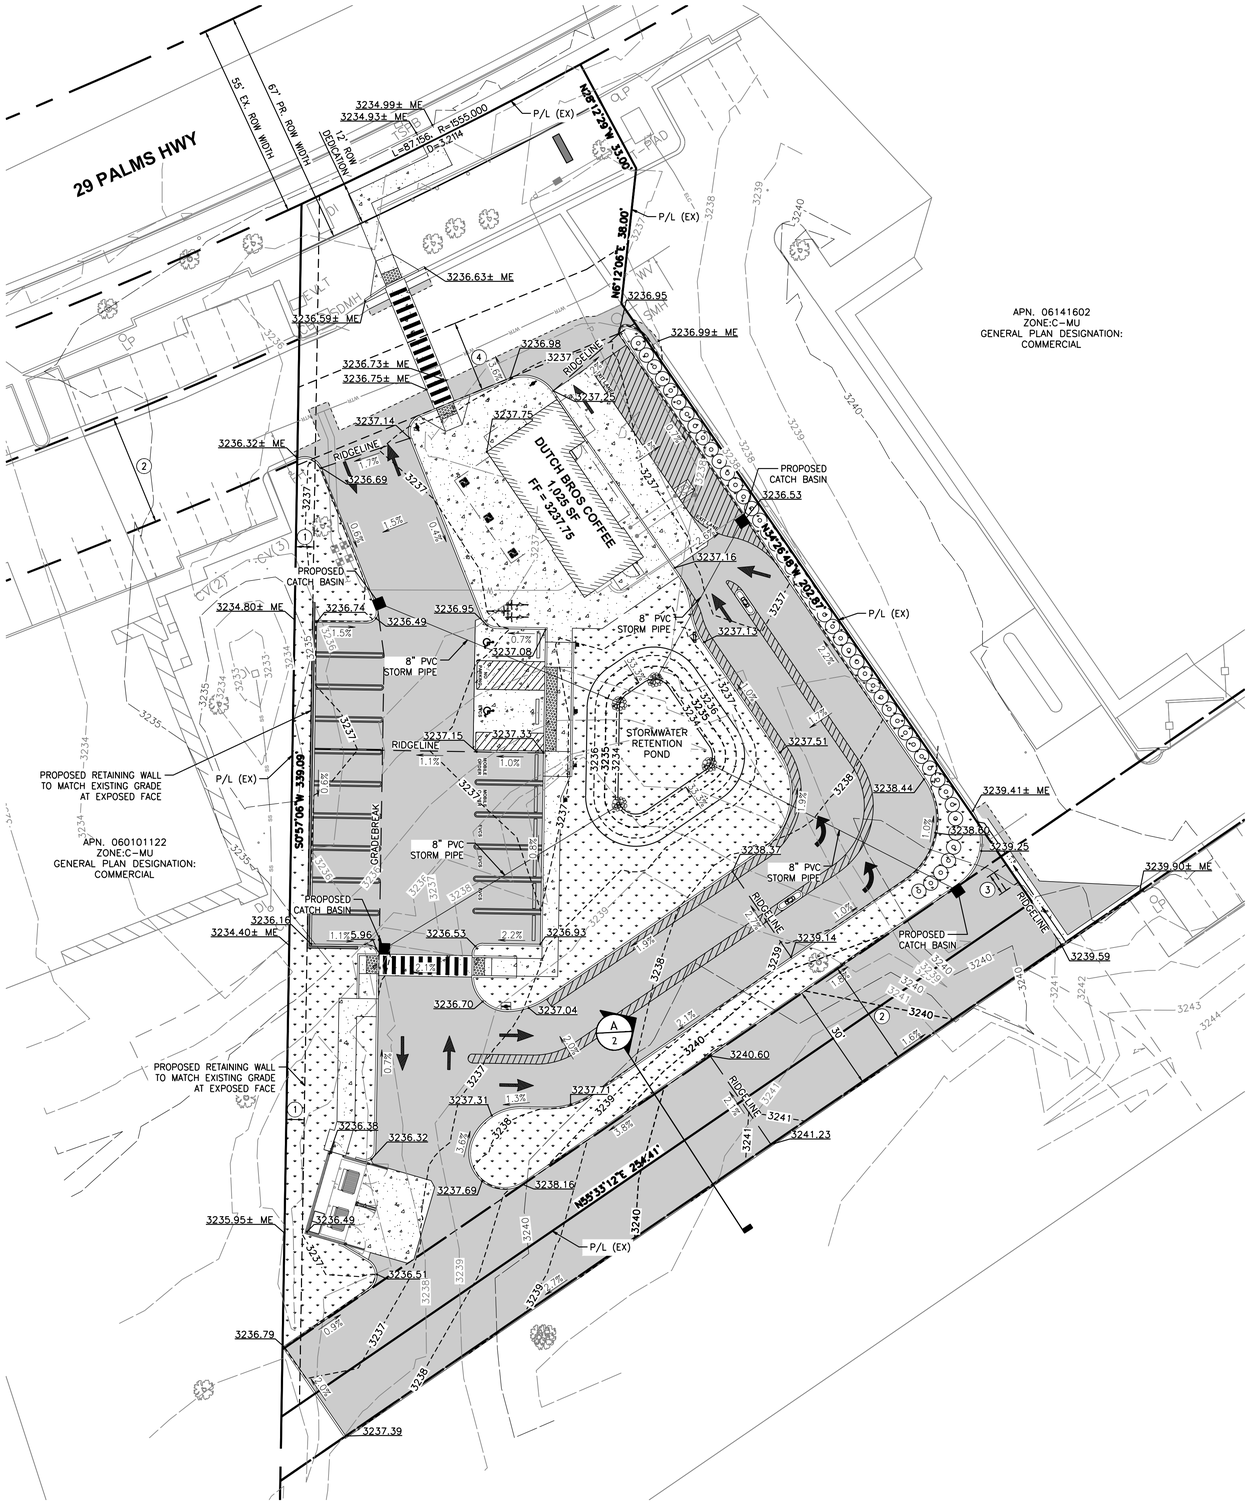
PARCEL 4 OF PARCEL MAP NO. 15502, IN THE TOWN OF YUCCA VALLEY, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP FILED IN BOOK 193, PAGES 98 AND 99 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL TWO:

A NON-EXCLUSIVE EASEMENT FOR REASONABLE PEDESTRIAN AND VEHICULAR ACCESS, INGRESS AND EGRESS AS SET FORTH AND DEFINED AS EASEMENT DRIVEWAY IN RECIPROCAL EASEMENT AGREEMENT RECORDED OCTOBER 20, 2000, INSTRUMENT NO. 2000-381189, OF OFFICIAL RECORDS

APN: 0601-416-05

THE LAND SHOWN IN THIS SURVEY IS THE SAME AS THAT DESCRIBED IN FIDELITY NATIONAL TITLE COMPANY, COMMITMENT NO, FCHI2400711NT WITH AN EFFECTIVE DATE OF AUGUST 22, 2024 AT 7:30 AM



N

0 10' 20' 40'

SCALE: 1"=20'

GRADING GENERAL NOTES:

1. ALL GRADING SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE PROVISIONS OF THE CURRENT CITY ORDINANCE AND STANDARD PLANS. THE GRADING IS SUBJECT TO THE OBSERVATION AND APPROVAL OF THE PUBLIC WORKS DEPARTMENT.
2. CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING ALL PROPOSED GRADES IN RELATIONSHIP TO SURVEYED BASIS OF ELEVATION.
3. ALL EXISTING UTILITY STRUCTURES AND ASSOCIATED LIDS THAT FALL WITHIN THE AREA OF WORK SHALL BE ADJUSTED TO FINISHED GRADE ELEVATIONS. CONTRACTOR SHALL CONFIRM THE FEASIBILITY OF ADJUSTING EXISTING UTILITY STRUCTURE LIDS TO FINISHED GRADE PRIOR TO CONSTRUCTION AND NOTIFY ENGINEER OF ANY DISCREPANCIES.
4. CONTRACTOR TO PROTECT AND MAINTAIN EROSION CONTROL FACILITIES DURING GRADING OPERATIONS.
5. CONTRACTOR TO OBTAIN ANY NECESSARY RIGHT-OF-WAY PERMITS IF REQUIRED FOR WORK SHOWN ON PLANS.
6. CONTRACTOR SHALL MATCH EXISTING ELEVATIONS AT ALL SAWCUT LOCATIONS.
7. ALL SPOT ELEVATIONS SHOWN ARE TO FINISH SURFACE (TOP OF ASPHALT OR TOP OF CONCRETE PAVEMENT, NOT TOP OF CURB/SIDEWALK) UNLESS OTHERWISE NOTED.

GRADING PLAN LEGEND:

FF – FINISHED FLOOR
ME – MATCH EXISTING
LP – LOW POINT
EXISTING CONTOURS

UTILITY POTHOLING NOTE:

THE CIRCLED LOCATIONS ARE REQUIRED TO BE POTHOLED TO VERIFY VERTICAL AND HORIZONTAL LOCATION OF EXISTING UTILITY AND/OR POTENTIAL CONFLICTS WITH EXISTING UTILITIES. POTHOLING SHALL BE PERFORMED PRIOR TO INSTALLING ANY PROPOSED UTILITIES. CONTRACTOR SHALL NOTIFY BARGHAUSEN CONSULTING ENGINEERS, INC. OF ANY CONFLICTS.

MULCH

AFTER ALL PLANTING IS COMPLETE, CONTRACTOR SHALL INSTALL 4" LAYER OF CALIFORNIA GOLD DECOMPOSED GRANITE MULCH, IN ALL PLANTING AREAS (EXCEPT FOR TURF AREAS). ABSOLUTELY NO EXPOSED GROUND SHALL BE LEFT SHOWING ANYWHERE ON THE PROJECT AFTER MULCH HAS BEEN INSTALLED (SUBJECT TO THE CONDITIONS AND REQUIREMENTS OF THE "GENERAL GRADING AND PLANTING NOTES" AND SPECIFICATIONS).

ROOT BARRIERS

THE CONTRACTOR SHALL INSTALL ROOT BARRIERS NEAR ALL NEWLY-PLANTED TREES THAT ARE LOCATED WITHIN FIVE (5) FEET OF PAVING OR CURBS. ROOT BARRIERS SHALL BE "CENTURY" OR "DEEP-ROOT" 24" DEEP PANELS (OR EQUAL). BARRIERS SHALL BE LOCATED IMMEDIATELY ADJACENT TO HARDSCAPE. INSTALL PANELS PER MANUFACTURER'S RECOMMENDATIONS. UNDER NO CIRCUMSTANCES SHALL THE CONTRACTOR USE ROOT BARRIERS OF A TYPE THAT COMPLETELY ENCIRCLE THE ROOTBALL.

SOILS

FOR SOILS LESS THAN 6% ORGANIC MATTER IN THE TOP 6 INCHES OF SOIL, COMPOST AT A RATE OF A MINIMUM OF FOUR CUBIC YARDS PER 1,000 SQUARE FEET OF PERMEABLE AREA SHALL BE INCORPORATED TO A DEPTH OF SIX INCHES INTO THE SOIL EXCEPT WITHIN THE TPZ OF PROTECTED TREES, WHICH SHALL RECEIVE 4 - 6" OF HARDWOOD CHIP MULCH.

LANDSCAPE CALCULATIONS

GENERAL AREAS:

PARCEL AREA:	48,127 SF
PROJECT AREA:	48,127 SF

PARKING LOT:

PARKING SPACES PROPOSED:	18 SPACES
PARKING LOT TREES PROPOSED:	4 TREES
TRASH ENCLOSURE SCREEN:	PROVIDED W/ SHRUBS
HEADLIGHT SCREEN:	PROVIDED W/ SHRUBS

DECLARATION OF WATER EFFICIENT LANDSCAPE ORDINANCE

I HAVE COMPLIED WITH THE CRITERIA OF THE WATER EFFICIENT LANDSCAPE ORDINANCE AND APPLIED SUCH CRITERIA FOR THE EFFICIENT USE OF WATER IN THE LANDSCAPE DESIGN PLAN.

BLAKE TOMILLOSO-RHINEHART, LANDSCAPE ARCHITECT — 4.21.2025 DATE

CA LICENSE #6255 — 8-31-26 EXP. DATE

REGISTRATION

MWELO NOTES

1. A DIAGRAM OF THE IRRIGATION PLAN SHOWING HYDROZONES SHALL BE KEPT WITH THE IRRIGATION CONTROLLER FOR SUBSEQUENT MANAGEMENT PURPOSES.
2. A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFIED BY EITHER THE DESIGNER OF THE LANDSCAPE PLANS, IRRIGATION PLANS, OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT.
3. AN IRRIGATION AUDIT REPORT BY A DISINTERESTED THIRD PARTY SHALL BE COMPLETED AT THE TIME OF FINAL INSPECTION
4. THE CONTRACTOR SHALL PREPARE A SOILS MANAGEMENT REPORT. THE SOIL MANAGEMENT REPORT SHALL BE BOTH INTEGRATED INTO THE PLANS AND SUBMITTED AS A SEPARATE DOCUMENT.
5. PRESSURE REGULATING DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE OF THE SPECIFIED IRRIGATION DEVICES.
6. CHECK VALVES OR ANTI-DRAIN VALVES ARE REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE COULD OCCUR.

GENERAL GRADING AND PLANTING NOTES

1. BY SUBMITTING A PROPOSAL FOR THE LANDSCAPE PLANTING SCOPE OF WORK, THE CONTRACTOR CONFIRMS THAT HE HAS READ, AND WILL COMPLY WITH, THE ASSOCIATED NOTES, SPECIFICATIONS, AND DETAILS WITH THIS PROJECT.
2. THE GENERAL CONTRACTOR IS RESPONSIBLE FOR REMOVING ALL EXISTING VEGETATION (EXCEPT WHERE NOTED TO REMAIN).
3. IN THE CONTEXT OF THESE PLANS, NOTES, AND SPECIFICATIONS, "FINISH GRADE" REFERS TO THE FINAL ELEVATION OF THE SOIL SURFACE (NOT TOP OF MULCH) AS INDICATED ON THE GRADING PLANS.
   a. BEFORE STARTING WORK, THE LANDSCAPE CONTRACTOR SHALL VERIFY THAT THE ROUGH GRADES OF ALL LANDSCAPE AREAS ARE WITHIN +/-0.1" OF FINISH GRADE. SEE SPECIFICATIONS FOR MORE DETAILED INSTRUCTION ON TURF AREA AND PLANTING BED PREPARATION.
   b. CONSTRUCT AND MAINTAIN FINISH GRADES AS SHOWN ON GRADING PLANS, AND CONSTRUCT AND MAINTAIN SLOPES AS RECOMMENDED BY THE GEOTECHNICAL REPORT. ALL LANDSCAPE AREAS SHALL HAVE POSITIVE DRAINAGE AWAY FROM STRUCTURES AT THE MINIMUM SLOPE SPECIFIED IN THE REPORT AND ON THE GRADING PLANS, AND AREAS OF POTENTIAL PONDING SHALL BE REGRADED TO BLEND IN WITH THE SURROUNDING GRADES AND ELIMINATE PONDING POTENTIAL.
   c. THE LANDSCAPE CONTRACTOR SHALL DETERMINE WHETHER OR NOT THE EXPORT OF ANY SOIL WILL BE NEEDED, TAKING INTO ACCOUNT THE ROUGH GRADE PROVIDED, THE AMOUNT OF SOIL AMENDMENTS TO BE ADDED (**BASED ON A SOIL TEST**, PER SPECIFICATIONS), AND THE FINISH GRADES TO BE ESTABLISHED.
   d. ENSURE THAT THE FINISH GRADE IN SHRUB AREAS IMMEDIATELY ADJACENT TO WALKS AND OTHER WALKING SURFACES, AFTER INSTALLING SOIL AMENDMENTS, IS 3" BELOW THE ADJACENT FINISH SURFACE, IN ORDER TO ALLOW FOR PROPER MULCH DEPTH. TAPER THE SOIL SURFACE TO MEET FINISH GRADE, AS SPECIFIED ON THE GRADING PLANS, AT APPROXIMATELY 18" AWAY FROM THE WALKS.
   e. ENSURE THAT THE FINISH GRADE IN TURF AREAS IMMEDIATELY ADJACENT TO WALKS AND OTHER WALKING SURFACES, AFTER INSTALLING SOIL AMENDMENTS, IS 1" BELOW THE FINISH SURFACE OF THE WALKS. TAPER THE SOIL SURFACE TO MEET FINISH GRADE, AS SPECIFIED ON THE GRADING PLANS, AT APPROXIMATELY 18" AWAY FROM THE WALKS.
   f. SHOULD ANY CONFLICTS AND/OR DISCREPANCIES ARISE BETWEEN THE GRADING PLANS, GEOTECHNICAL REPORT, THESE NOTES AND PLANS, AND ACTUAL CONDITIONS, THE CONTRACTOR SHALL IMMEDIATELY BRING SUCH ITEMS TO THE ATTENTION OF THE LANDSCAPE ARCHITECT, GENERAL CONTRACTOR, AND OWNER.
4. ALL PLANT LOCATIONS ARE DIAGRAMMATIC. ACTUAL LOCATIONS SHALL BE VERIFIED WITH THE LANDSCAPE ARCHITECT OR DESIGNER PRIOR TO PLANTING. THE LANDSCAPE CONTRACTOR SHALL ENSURE THAT ALL REQUIREMENTS OF THE PERMITTING AUTHORITY ARE MET (I.E., MINIMUM PLANT QUANTITIES, PLANTING METHODS, TREE PROTECTION METHODS, ETC.).
   a. THE LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR DETERMINING PLANT QUANTITIES; PLANT QUANTITIES SHOWN ON LEGENDS AND CALLOUTS ARE FOR GENERAL INFORMATION ONLY. IN THE EVENT OF A DISCREPANCY BETWEEN THE PLAN AND THE PLANT LEGEND, THE PLANT QUANTITY AS SHOWN ON THE PLAN (FOR INDIVIDUAL SYMBOLS) OR CALLOUT (FOR GROUNDCOVER PATTERNS) SHALL TAKE PRECEDENCE.
   b. **NO SUBSTITUTIONS OF PLANT MATERIALS SHALL BE ALLOWED WITHOUT THE WRITTEN PERMISSION OF THE LANDSCAPE ARCHITECT.** IF SOME OF THE PLANTS ARE NOT AVAILABLE, THE LANDSCAPE CONTRACTOR SHALL NOTIFY THE LANDSCAPE ARCHITECT IN WRITING (VIA PROPER CHANNELS).
   c. THE CONTRACTOR SHALL, AT A MINIMUM, PROVIDE REPRESENTATIVE PHOTOS OF ALL PLANTS PROPOSED FOR THE PROJECT. THE CONTRACTOR SHALL ALLOW THE LANDSCAPE ARCHITECT AND THE OWNER/OWNER'S REPRESENTATIVE TO INSPECT, AND APPROVE OR REJECT, ALL PLANTS DELIVERED TO THE JOBSITE. REFER TO SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS FOR SUBMITTALS.
5. THE CONTRACTOR SHALL MAINTAIN THE LANDSCAPE IN A HEALTHY CONDITION FOR 90 DAYS AFTER ACCEPTANCE BY THE OWNER. REFER TO SPECIFICATIONS FOR CONDITIONS OF ACCEPTANCE FOR THE START OF THE MAINTENANCE PERIOD, AND FOR FINAL ACCEPTANCE AT THE END OF THE MAINTENANCE PERIOD.
6. SEE SPECIFICATIONS AND DETAILS FOR FURTHER REQUIREMENTS.

IRRIGATION CONCEPT

1. AN AUTOMATIC IRRIGATION SYSTEM SHALL BE INSTALLED AND OPERATIONAL BY THE TIME OF FINAL INSPECTION. THE ENTIRE IRRIGATION SYSTEM SHALL BE INSTALLED BY A LICENSED AND QUALIFIED IRRIGATION CONTRACTOR.
2. THE IRRIGATION SYSTEM WILL OPERATE ON POTABLE WATER, AND THE SYSTEM WILL HAVE APPROPRIATE BACKFLOW PREVENTION DEVICES INSTALLED TO PREVENT CONTAMINATION OF THE POTABLE SOURCE.
3. ALL NON-TURF PLANTED AREAS SHALL BE DRIP IRRIGATED. SODDED AND SEEDED AREAS SHALL BE IRRIGATED WITH SPRAY OR ROTOR HEADS AT 100% HEAD-TO-HEAD COVERAGE.
4. ALL PLANTS SHARING SIMILAR HYDROZONE CHARACTERISTICS SHALL BE PLACED ON A VALVE DEDICATED TO PROVIDE THE NECESSARY WATER REQUIREMENTS SPECIFIC TO THAT HYDROZONE.
5. THE IRRIGATION SYSTEM SHALL BE DESIGNED AND INSTALLED, TO THE MAXIMUM EXTENT POSSIBLE, TO CONSERVE WATER BY USING THE FOLLOWING DEVICES AND SYSTEMS: MATCHED PRECIPITATION RATE TECHNOLOGY ON ROTOR AND SPRAY HEADS (WHEREVER POSSIBLE), RAIN SENSORS, AND MULTI-PROGRAM COMPUTERIZED IRRIGATION CONTROLLERS FEATURING SENSORY INPUT CAPABILITIES.

DUTCH BROS. COFFEE - CA3714 - YUCCA VALLEY, CA

PLANTING SPECIFICATIONS

GENERAL

A. QUALIFICATIONS OF LANDSCAPE CONTRACTOR
1. ALL LANDSCAPE WORK SHOWN ON THESE PLANS SHALL BE PERFORMED BY A SINGLE FIRM SPECIALIZING IN LANDSCAPE PLANTING.
2. A LIST OF SUCCESSFULLY COMPLETED PROJECTS OF THIS TYPE, SIZE AND NATURE MAY BE REQUESTED BY THE OWNER FOR FURTHER QUALIFICATION MEASURES.
3. THE LANDSCAPE CONTRACTOR SHALL HOLD A VALID C-27 LANDSCAPE CONTRACTOR'S LICENSE ISSUED BY THE STATE OF CALIFORNIA'S CONTRACTOR STATE LICENSE BOARD.

B. SCOPE OF WORK
1. WORK COVERED BY THESE SECTIONS INCLUDES THE FURNISHING AND PAYMENT OF ALL MATERIALS, LABOR, SERVICES, EQUIPMENT, LICENSES, TAXES AND ANY OTHER ITEMS THAT ARE NECESSARY FOR THE EXECUTION, INSTALLATION AND COMPLETION OF ALL WORK, SPECIFIED HEREIN AND / OR SHOWN ON THE LANDSCAPE PLANS, NOTES, AND DETAILS.
2. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH ALL APPLICABLE LAWS, CODES AND REGULATIONS REQUIRED BY AUTHORITIES HAVING JURISDICTION OVER SUCH WORK, INCLUDING ALL INSPECTIONS AND PERMITS REQUIRED BY FEDERAL, STATE AND LOCAL AUTHORITIES IN SUPPLY, TRANSPORTATION AND INSTALLATION OF MATERIALS.
3. THE LANDSCAPE CONTRACTOR SHALL VERIFY THE LOCATION OF ALL UNDERGROUND UTILITY LINES (WATER, SEWER, ELECTRICAL, TELEPHONE, GAS, CABLE, TELEVISION, ETC.) PRIOR TO THE START OF ANY WORK.

PRODUCTS

A. ALL MANUFACTURED PRODUCTS SHALL BE NEW.
B. CONTAINER AND BALLED-AND-BURLAPPED PLANTS:
1. FURNISH NURSERY-GROWN PLANTS COMPLYING WITH ANSI Z60.1-2014. PROVIDE WELL-SHAPED, FULLY BRANCHED, HEALTHY, VIGOROUS STOCK FREE OF DISEASE, INSECTS, EGGS, LARVAE, AND DEFECTS SUCH AS KNOTS, SUN SCALD, INJURIES, ABRASIONS, AND DISFIGUREMENT. ALL PLANTS WITHIN A SPECIES SHALL HAVE SIMILAR SIZE, AND SHALL BE OF A FORM TYPICAL FOR THE SPECIES. ALL TREES SHALL BE OBTAINED FROM SOURCES WITHIN 200 MILES OF THE PROJECT SITE, AND WITH SIMILAR CLIMACTIC CONDITIONS.
2. ROOT SYSTEMS SHALL BE HEALTHY, DENSELY BRANCHED ROOT SYSTEMS, NON-POT-BOUND, FREE FROM ENCIRCLING AND/OR GIRDLING ROOTS, AND FREE FROM ANY OTHER ROOT DEFECTS (SUCH AS J-SHAPED ROOTS).
3. TREES MAY BE PLANTED FROM CONTAINERS OR BALLED-AND-BURLAPPED (B&B), UNLESS SPECIFIED ON THE PLANTING LEGEND. BARE-ROOT TREES ARE NOT ACCEPTABLE.
4. ANY PLANT DEEMED UNACCEPTABLE BY THE LANDSCAPE ARCHITECT OR OWNER SHALL BE IMMEDIATELY REMOVED FROM THE SITE AND SHALL BE REPLACED WITH AN ACCEPTBLE PLANT OF LIKE TYPE AND SIZE AT THE CONTRACTOR'S OWN EXPENSE. ANY PLANTS APPEARING TO BE UNHEALTHY, EVEN IF DETERMINED TO STILL BE ALIVE, SHALL NOT BE ACCEPTED. THE LANDSCAPE ARCHITECT AND OWNER SHALL BE THE SOLE JUDGES AS TO THE ACCEPTABILITY OF PLANT MATERIAL.
5. ALL TREES SHALL BE STANDARD IN FORM, UNLESS OTHERWISE SPECIFIED. TREES WITH CENTRAL LEADERS WILL NOT BE ACCEPTED IF LEADER IS DAMAGED OR REMOVED. PRUNE ALL DAMAGED TWIGS AFTER PLANTING.
6. CALIPER MEASUREMENTS FOR STANDARD (SINGLE TRUNK) TREES SHALL BE AS FOLLOWS: SIX INCHES ABOVE THE ROOT FLARE FOR TREES UP TO AND INCLUDING FOUR INCHES IN CALIPER, AND TWELVE INCHES ABOVE THE ROOT FLARE FOR TREES EXCEEDING FOUR INCHES IN CALIPER.
7. MULTI-TRUNK TREES SHALL BE MEASURED BY THEIR OVERALL HEIGHT, MEASURED FROM THE TOP OF THE ROOT BALL. WHERE CALIPER MEASUREMENTS ARE USED, THE CALIPER SHALL BE CALCULATED AS ONE-HALF OF THE SUM OF THE CALIPER OF THE THREE LARGEST TRUNKS.
8. ANY TREE OR SHRUB SHOWN TO HAVE EXCESS SOIL PLACED ON TOP OF THE ROOT BALL, SO THAT THE ROOT FLARE HAS BEEN COMPLETELY COVERED, SHALL BE REJECTED.

C. TOPSOIL: SANDY TO CLAY LOAM TOPSOIL, FREE OF STONES LARGER THAN ½ INCH, FOREIGN MATTER, PLANTS, ROOTS, AND SEEDS.
D. COMPOST: WELL-COMPOSTED, STABLE, AND WEED-FREE ORGANIC MATTER, pH RANGE OF 5.5 TO 8; MOISTURE CONTENT 35 TO 55 PERCENT BY WEIGHT; 100 PERCENT PASSING THROUGH 3/4-INCH SIEVE; SOLUBLE SALT CONTENT OF 5 TO 10 DECISIEMENS/M; NOT EXCEEDING 0.5 PERCENT INERT CONTAMINANTS AND FREE OF SUBSTANCES TOXIC TO PLANTINGS. NO MANURE OR ANIMAL-BASED PRODUCTS SHALL BE USED.
E. FERTILIZER: GRANULAR FERTILIZER CONSISTING OF NITROGEN, PHOSPHORUS, POTASSIUM, AND OTHER NUTRIENTS IN PROPORTIONS, AMOUNTS, AND RELEASE RATES RECOMMENDED IN A SOIL REPORT FROM A QUALIFIED SOIL-TESTING AGENCY (SEE BELOW).
F. MULCH: SIZE AND TYPE AS INDICATED ON PLANS, FREE FROM DELETERIOUS MATERIALS AND SUITABLE AS A TOP DRESSING OF TREES AND SHRUBS.
G. TREE STAKING AND GUYING
1. STAKES: 6' LONG GREEN METAL T-POSTS.
2. GUY AND TIE WIRE: ASTM A 641, CLASS 1, GALVANIZED-STEEL WIRE, 2-STRAND, TWISTED, 0.106 INCH DIAMETER.
3. STRAP CHAFING GUARD: REINFORCED NYLON OR CANVAS AT LEAST 1-1/2 INCH WIDE, WITH GROMMETS TO PROTECT TREE TRUNKS FROM DAMAGE.
L. STEEL EDGING: PROFESSIONAL STEEL EDGING, 14 GAUGE THICK X 4 INCHES WIDE, FACTORY PAINTED DARK GREEN. ACCEPTABLE MANUFACTURERS INCLUDE COL-MET OR APPROVED EQUAL.
M. PRERGENT HERBICIDES: ANY GRANULAR, NON-STAINING PRE-EMERGENT HERBICIDE THAT IS LABELED FOR THE SPECIFIC ORNAMENTALS OR TURF ON WHICH IT WILL BE UTILIZED. PRE-EMERGENT HERBICIDES SHALL BE APPLIED PER THE MANUFACTURER'S LABELED RATES.

METHODS

A. SOIL PREPARATION
1. BEFORE STARTING WORK, THE LANDSCAPE CONTRACTOR SHALL VERIFY THAT THE GRADE OF ALL LANDSCAPE AREAS ARE WITHIN +/-0.1' OF FINISH GRADE. THE CONTRACTOR SHALL NOTIFY THE OWNER IMMEDIATELY SHOULD ANY DISCREPANCIES EXIST.
2. SOIL TESTING:
a. AFTER FINISH GRADES HAVE BEEN ESTABLISHED, CONTRACTOR SHALL HAVE SOIL SAMPLES FROM THE PROJECT'S LANDSCAPE AREAS TESTED BY AN ESTABLISHED SOIL TESTING LABORATORY. EACH SAMPLE SUBMITTED TO THE LAB SHALL CONTAIN NO LESS THAN ONE QUART OF SOIL, TAKEN FROM BETWEEN THE SOIL SURFACE AND 6" DEPTH. IF NO SAMPLE LOCATIONS ARE INDICATED ON THE PLANS, THE CONTRACTOR SHALL TAKE A MINIMUM OF THREE SAMPLES FROM VARIOUS REPRESENTATIVE LOCATIONS FOR TESTING.
b. THE CONTRACTOR SHALL HAVE THE SOIL TESTING LABORATORY PROVIDE RESULTS FOR THE FOLLOWING: SOIL TEXTURAL CLASS, GENERAL SOIL FERTILITY, pH, ORGANIC MATTER CONTENT, SALT (CEC), LIME, SODIUM ADSORPTION RATIO (SAR) AND BORON CONTENT.
c. THE CONTRACTOR SHALL ALSO SUBMIT THE PROJECT'S PLANT LIST TO THE LABORATORY ALONG WITH THE SOIL SAMPLES.
d. THE SOIL REPORT PRODUCED BY THE LABORATORY SHALL CONTAIN RECOMMENDATIONS FOR THE FOLLOWING (AS APPROPRIATE): SEPARATE SOIL PREPARATION AND BACKFILL MIX RECOMMENDATIONS FOR GENERAL ORNAMENTAL PLANTS, XERIC PLANTS, TURF, AND NATIVE SEED, AS WELL AS PRE-PLANT FERTILIZER APPLICATIONS AND RECOMMENDATIONS FOR ANY OTHER SOIL RELATED ISSUES. THE REPORT SHALL ALSO PROVIDE A FERTILIZER PROGRAM FOR THE ESTABLISHMENT PERIOD AND FOR LONG-TERM MAINTENANCE.
3. THE CONTRACTOR SHALL INSTALL SOIL AMENDMENTS AND FERTILIZERS PER THE SOILS REPORT RECOMMENDATIONS. ANY CHANGE IN COST DUE TO THE SOIL REPORT RECOMMENDATIONS, EITHER INCREASE OR DECREASE, SHALL BE SUBMITTED TO THE OWNER WITH THE REPORT.
4. FOR BIDDING PURPOSES ONLY, THE SOIL PREPARATION SHALL CONSIST OF THE FOLLOWING:
a. TREES, SHRUBS, AND PERENNIALS: INCORPORATE THE FOLLOWING AMENDMENTS INTO THE TOP 8" OF SOIL BY MEANS OF ROTOTILLING AFTER CROSS-RIPPING:
i. NITROGEN STABILIZED ORGANIC AMENDMENT - 4 CU. YDS. PER 1,000 S.F.
ii. 12-12-12 FERTILIZER (OR SIMILAR, ORGANIC, SLOW RELEASE) - 10 LBS. PER CU. YD.
iii. "CLAY BUSTER" OR EQUAL - USE MANUFACTURER'S RECOMMENDED RATE
iv. IRON SULPHATE - 2 LBS. PER CU. YD.
5. IN THE CONTEXT OF THESE PLANS, NOTES, AND SPECIFICATIONS, "FINISH GRADE" REFERS TO THE FINAL ELEVATION OF THE SOIL SURFACE (NOT TOP OF MULCH) AS INDICATED ON THE GRADING PLANS.
a. BEFORE STARTING WORK, THE LANDSCAPE CONTRACTOR SHALL VERIFY THAT THE ROUGH GRADES OF ALL LANDSCAPE AREAS ARE WITHIN +/-0.1' OF FINISH GRADE. SEE SPECIFICATIONS FOR MORE DETAILED INSTRUCTION ON TURF AREA AND PLANTING BED PREPARATION.
b. CONSTRUCT AND MAINTAIN FINISH GRADES AS SHOWN ON GRADING PLANS, AND CONSTRUCT AND MAINTAIN SLOPES AS RECOMMENDED BY THE GEOTECHNICAL REPORT. ALL LANDSCAPE AREAS SHALL HAVE POSITIVE DRAINAGE AWAY FROM STRUCTURES AT THE MINIMUM SLOPE SPECIFIED IN THE REPORT AND ON THE GRADING PLANS, AND AREAS OF POTENTIAL PONDING SHALL BE REGRADED TO BLEND IN WITH THE SURROUNDING GRADES AND ELIMINATE PONDING POTENTIAL.
c. THE LANDSCAPE CONTRACTOR SHALL DETERMINE WHETHER OR NOT THE EXPORT OF ANY SOIL WILL BE NEEDED, TAKING INTO ACCOUNT THE ROUGH GRADE PROVIDED, THE AMOUNT OF SOIL AMENDMENTS TO BE ADDED (**BASED ON A SOIL TEST**, PER SPECIFICATIONS), AND THE FINISH GRADES TO BE ESTABLISHED.
d. ENSURE THAT THE FINISH GRADE IN SHRUB AREAS IMMEDIATELY ADJACENT TO WALKS AND OTHER WALKING SURFACES, AFTER INSTALLING SOIL AMENDMENTS, IS 1" BELOW THE ADJACENT FINISH SURFACE, IN ORDER TO ALLOW FOR PROPER MULCH DEPTH. TAPER THE SOIL SURFACE TO MEET FINISH GRADE, AS SPECIFIED ON THE GRADING PLANS, AT APPROXIMATELY 18" AWAY FROM THE WALKS.
e. SHOULD ANY CONFLICTS AND/OR DISCREPANCIES ARISE BETWEEN THE GRADING PLANS, GEOTECHNICAL REPORT, THESE NOTES AND PLANS, AND ACTUAL CONDITIONS, THE CONTRACTOR SHALL IMMEDIATELY BRING SUCH ITEMS TO THE ATTENTION OF THE LANDSCAPE ARCHITECT, GENERAL CONTRACTOR, AND OWNER.
6. ONCE SOIL PREPARATION IS COMPLETE, THE LANDSCAPE CONTRACTOR SHALL ENSURE THAT THERE ARE NO DEBRIS, TRASH, OR STONES LARGER THAN 1" REMAINING IN THE TOP 6" OF SOIL.

B. SUBMITTALS
1. THE CONTRACTOR SHALL PROVIDE SUBMITTALS AND SAMPLES, IF REQUIRED, TO THE LANDSCAPE ARCHITECT, AND RECEIVE APPROVAL IN WRITING FOR SUCH SUBMITTALS BEFORE WORK COMMENCES.
2. SUBMITTALS SHALL INCLUDE PHOTOS OF PLANTS WITH A RULER OR MEASURING STICK FOR SCALE, PHOTOS OR SAMPLES OF ANY REQUIRED MULCHES, AND SOIL TEST RESULTS AND PREPARATION RECOMMENDATIONS FROM THE TESTING LAB (INCLUDING COMPOST AND FERTILIZER RATES AND TYPES, AND OTHER AMENDMENTS FOR TREE/SHRUB, TURF, AND SEED AREAS AS MAY BE APPROPRIATE).
3. SUBMITTALS SHALL ALSO INCLUDE MANUFACTURER CUT SHEETS FOR PLANTING ACCESSORIES SUCH AS TREE STAKES AND TIES, EDGING, AND LANDSCAPE FABRICS (IF ANY).
4. WHERE MULTIPLE ITEMS ARE SHOWN ON A PAGE, THE CONTRACTOR SHALL CLEARLY INDICATE THE ITEM BEING CONSIDERED.

C. GENERAL PLANTING
1. REMOVE ALL NURSERY TAGS AND STAKES FROM PLANTS.
2. EXCEPT IN AREAS TO BE PLANTED WITH ORNAMENTAL GRASSES, APPLY PRE-EMERGENT HERBICIDES AT THE MANUFACTURER'S RECOMMENDED RATE.
3. TRENCHING NEAR EXISTING TREES:
a. CONTRACTOR SHALL NOT DISTURB ROOTS 1-1/2" AND LARGER IN DIAMETER WITHIN THE CRITICAL ROOT ZONE (CRZ) OF EXISTING TREES, AND SHALL EXERCISE ALL POSSIBLE CARE AND PRECAUTIONS TO AVOID INJURY TO TREE ROOTS, TRUNKS, AND BRANCHES. THE CRZ IS DEFINED AS A CIRCULAR AREA EXTENDING OUTWARD FROM THE TREE TRUNK, WITH A RADIUS EQUAL TO 1' FOR EVERY 1" OF TRUNK DIAMETER-AT-BREAST-HEIGHT (4.5' ABOVE THE AVERAGE GRADE AT THE TRUNK).
b. ALL EXCAVATION WITHIN THE CRZ SHALL BE PERFORMED USING HAND TOOLS. NO MACHINE EXCAVATION OR TRENCHING OF ANY KIND SHALL BE ALLOWED WITHIN THE CRZ.
c. ALTER ALIGNMENT OF PIPE TO AVOID TREE ROOTS 1-1/2" AND LARGER IN DIAMETER. WHERE TREE ROOTS 1-1/2" AND LARGER IN DIAMETER ARE ENCOUNTERED IN THE FIELD, TUNNEL UNDER SUCH ROOTS. WRAP EXPOSED ROOTS WITH SEVERAL LAYERS OF BURLAP AND KEEP MOIST. CLOSE ALL TRENCHES WITHIN THE CANOPY DRIP LINES WITHIN 24 HOURS.
d. ALL SEVERED ROOTS SHALL BE HAND PRUNED WITH SHARP TOOLS AND ALLOWED TO AIR-DRY. DO NOT USE ANY SORT OF SEALERS OR WOUND PAINTS.

D. TREE PLANTING
1. TREE PLANTING HOLES SHALL BE EXCAVATED TO MINIMUM WIDTH OF TWO TIMES THE WIDTH OF THE ROOTBALL, AND TO A DEPTH EQUAL TO THE DEPTH OF THE ROOTBALL LESS TWO TO FOUR INCHES.
2. SCARIFY THE SIDES AND BOTTOM OF THE PLANTING HOLE PRIOR TO THE PLACEMENT OF THE TREE. REMOVE ANY GLAZING THAT MAY HAVE BEEN CAUSED DURING THE EXCAVATION OF THE HOLE.
3. FOR CONTAINER AND BOX TREES. TO REMOVE ANY POTENTIALLY GIRDLING ROOTS AND OTHER ROOT DEFECTS, THE CONTRACTOR SHALL SHAVE A 1" LAYER OFF OF THE SIDES AND BOTTOM OF THE ROOTBALL OF ALL TREES JUST BEFORE PLACING INTO THE PLANTING PIT. DO NOT "TEASE" ROOTS OUT FROM THE ROOTBALL.
4. INSTALL THE TREE ON UNDISTURBED SUBGRADE SO THAT THE TOP OF THE ROOTBALL IS TWO TO FOUR INCHES ABOVE THE SURROUNDING GRADE.
5. BACKFILL THE TREE HOLE UTILIZING THE EXISTING TOPSOIL FROM ON-SITE. ROCKS LARGER THAN 1" DIA. AND ALL OTHER DEBRIS SHALL BE REMOVED. IF INSUFFICIENT SOIL PRIOR TO THE BACKFILL, SHOULD ADDITIONAL SOIL BE REQUIRED TO ACCOMPLISH THIS TASK, USE STORED TOPSOIL FROM ON-SITE OR IMPORT ADDITIONAL TOPSOIL FROM OFF-SITE AT NO ADDITIONAL COST TO THE OWNER. IMPORTED TOPSOIL SHALL BE OF SIMILAR TEXTURAL CLASS AND COMPOSITION AS THE ON-SITE SOIL.
6. TREES SHALL NOT BE STAKED UNLESS LOCAL CONDITIONS (SUCH AS HEAVY WINDS OR SLOPES) REQUIRE STAKES TO KEEP TREES UPRIGHT. SHOULD STAKING BE REQUIRED, THE TOTAL NUMBER OF TREE STAKES (BEYOND THE MINIMUMS LISTED BELOW) WILL BE LEFT TO THE LANDSCAPE CONTRACTOR'S DISCRETION. SHOULD ANY TREES FALL OR LEAN, THE LANDSCAPE CONTRACTOR SHALL STRAIGHTEN THE TREE, OR REPLACE IT SHOULD IT BECOME DAMAGE BEYOND REPAIR. TREE STAKING SHALL ADHERE TO THE FOLLOWING GUIDELINES:
a. #15 CONT. - 24" BOX TREES TWO STAKES PER TREE
b. 36"-48" BOX TREES THREE STAKES PER TREE
c. OVER 48" BOX TREES GUY AS NEEDED
d. MULTI-TRUNK TREES THREE STAKES PER TREE MINIMUM, QUANTITY AND POSITIONS AS NEEDED TO STABILIZE THE TREE.
7. UPON COMPLETION OF PLANTING, CONSTRUCT AN EARTH WATERING BASIN AROUND THE TREE. COVER THE INTERIOR OF THE TREE RING WITH MULCH (TYPE AND DEPTH PER PLANS).

E. SHRUB, PERENNIAL, AND GROUNDCOVER PLANTING
1. DIG THE PLANTING HOLES TWICE AS WIDE AND 2" LESS DEEP THAN EACH PLANT'S ROOTBALL. INSTALL THE PLANT IN THE HOLE. BACKFILL AROUND THE PLANT WITH SOIL AMENDED PER SOIL TEST RECOMMENDATIONS.
2. WHEN PLANTING IS COMPLETE, INSTALL MULCH (TYPE AND DEPTH PER PLANS) OVER ALL PLANTING BEDS, COVERING THE ENTIRE PLANTING AREA

H. MULCH
1. INSTALL MULCH TOPDRESSING, TYPE AND DEPTH PER MULCH NOTE, IN ALL PLANTING AREAS AND TREE RINGS.
2. DO NOT INSTALL MULCH WITHIN 6" OF TREE ROOT FLARE AND WITHIN 24" OF HABITABLE STRUCTURES, EXCEPT AS MAY BE NOTED ON THESE PLANS. MULCH COVER WITHIN 6" OF CONCRETE WALKS AND CURBS SHALL NOT PROTRUDE ABOVE THE FINISH SURFACE OF THE WALKS AND CURBS. MULCH COVER WITHIN 12" OF WALLS SHALL BE AT LEAST 3" LOWER THAN THE TOP OF WALL.

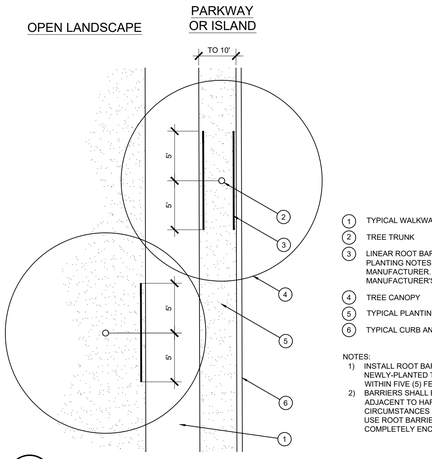
I. CLEAN UP
1. DURING LANDSCAPE PREPARATION AND PLANTING, KEEP ALL PAVEMENT CLEAN AND ALL WORK AREAS IN A NEAT, ORDERLY CONDITION.
2. DISPOSED LEGALLY OF ALL EXCAVATED MATERIALS OFF THE PROJECT SITE.

J. INSPECTION AND ACCEPTANCE
1. UPON COMPLETION OF THE WORK, THE LANDSCAPE CONTRACTOR SHALL PROVIDE THE SITE CLEAN, FREE OF DEBRIS AND TRASH, AND SUITABLE FOR USE AS INTENDED. THE LANDSCAPE CONTRACTOR SHALL THEN REQUEST AN INSPECTION BY THE OWNER TO DETERMINE FINAL ACCEPTABILITY.
2. WHEN THE INSPECTED PLANTING WORK DOES NOT COMPLY WITH THE CONTRACT DOCUMENTS, THE LANDSCAPE CONTRACTOR SHALL REPLACE AND/OR REPAIR THE REJECTED WORK TO THE OWNER'S SATISFACTION WITHIN 24 HOURS.
3. THE LANDSCAPE MAINTENANCE PERIOD WILL NOT COMMENCE UNTIL THE LANDSCAPE WORK HAS BEEN RE-INSPECTED BY THE OWNER AND FOUND TO BE ACCEPTABLE. AT THAT TIME, A WRITTEN NOTICE OF FINAL ACCEPTANCE WILL BE ISSUED BY THE OWNER, AND THE MAINTENANCE AND GUARANTEE PERIODS WILL COMMENCE.

K. LANDSCAPE MAINTENANCE
1. THE LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF ALL WORK SHOWN ON THESE PLANS FOR 90 DAYS BEYOND FINAL ACCEPTANCE OF ALL LANDSCAPE WORK BY THE OWNER. LANDSCAPE MAINTENANCE SHALL INCLUDE WEEKLY SITE VISITS FOR THE FOLLOWING ACTIONS (AS APPROPRIATE): PROPER PRUNING, RESTAKING OF TREES, RESETTING OF PLANTS THAT HAVE SETTLED, WEEDING, TREATING FOR INSECTS AND DISEASES,REPLACEMENT OF MULCH, REMOVAL OF LITTER, REPAIRS TO THE IRRIGATION SYSTEM DUE TO FAULTY PARTS AND/OR WORKMANSHIP, AND THE APPROPRIATE WATERING OF ALL PLANTINGS. THE LANDSCAPE CONTRACTOR SHALL MAINTAIN THE IRRIGATION SYSTEM IN PROPER WORKING ORDER, WITH SCHEDULING ADJUSTMENTS BY SEASON TO MAXIMIZE WATER CONSERVATION.
2. TO ACHIEVE FINAL ACCEPTANCE AT THE END OF THE MAINTENANCE PERIOD, ALL OF THE FOLLOWING CONDITIONS MUST OCCUR:
a. THE LANDSCAPE SHALL SHOW ACTIVE, HEALTHY GROWTH (WITH EXCEPTIONS MADE FOR SEASONAL DORMANCY). ALL PLANTS NOT MEETING THIS CONDITION SHALL BE REJECTED AND REPLACED BY HEALTHY PLANT MATERIAL PRIOR TO FINAL ACCEPTANCE.
b. ALL HARDSCAPE SHALL BE CLEANED PRIOR TO FINAL ACCEPTANCE.

L. WARRANTY PERIOD, PLANT GUARANTEE AND REPLACEMENTS
1. THE LANDSCAPE CONTRACTOR SHALL GUARANTEE ALL TREES, SHRUBS, PERENNIALS, AND IRRIGATION SYSTEMS FOR A PERIOD OF ONE YEAR FROM THE DATE OF THE OWNER'S FINAL ACCEPTANCE (90 DAYS FOR ANNUAL PLANTS). THE CONTRACTOR SHALL REPLACE, AT HIS OWN EXPENSE AND TO THE SATISFACTION OF THE OWNER, ANY PLANTS WHICH DIE IN THAT TIME, OR REPAIR ANY PORTIONS OF THE IRRIGATION SYSTEM WHICH OPERATE IMPROPERLY.
2. AFTER THE INITIAL MAINTENANCE PERIOD AND DURING THE GUARANTEE PERIOD, THE LANDSCAPE CONTRACTOR SHALL ONLY BE RESPONSIBLE FOR REPLACEMENT OF PLANTS WHEN PLANT DEATH CANNOT BE ATTRIBUTED DIRECTLY TO OVERWATERING OR OTHER DAMAGE BY HUMAN ACTIONS.

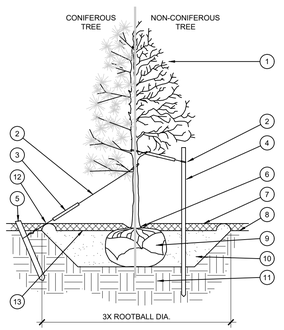
M. PROVIDE A MINIMUM OF (2) COPIES OF RECORD DRAWINGS TO THE OWNER UPON COMPLETION OF WORK. A RECORD DRAWING IS A RECORD OF ALL CHANGES THAT OCCURRED IN THE FIELD AND THAT ARE DOCUMENTED THROUGH CHANGE ORDERS, ADDENDA, OR CONTRACTOR/CONSULTANT DRAWING MARKUPS.



1. TYPICAL WALKWAY OR PAVING
2. TREE TRUNK
3. LINEAR ROOT BARRIER MATERIAL. SEE PLANTING NOTES FOR TYPE AND MANUFACTURER. INSTALL PER MANUFACTURER'S SPECIFICATIONS.
4. TREE CANOPY
5. TYPICAL PLANTING AREA
6. TYPICAL CURB AND GUTTER

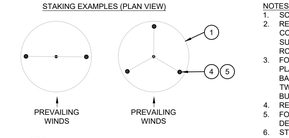
NOTES:
1) INSTALL ROOT BARRIERS NEAR ALL NEWLY-PLANTED TREES THAT ARE LOCATED WITHIN FIVE (5) FEET OF PAVING OR CURBS.
2) BARRIERS SHALL BE LOCATED IMMEDIATELY ADJACENT TO HARDSCAPE. UNDER NO CIRCUMSTANCES SHALL THE CONTRACTOR USE ROOT BARRIERS OF A TYPE THAT COMPLETELY ENCIRCLE THE ROOTBALL.

F ROOT BARRIER - PLAN VIEW
SCALE: NOT TO SCALE



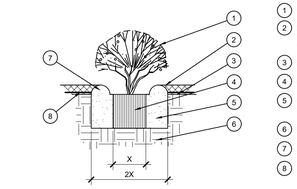
1. TREE CANOPY.
2. CINCH-TIES (24" BOX/2" CAL. TREES AND SMALLER) OR 12 GAUGE GALVANIZED WIRE WITH NYLON TREE STRAPS AT TREE AND STAKE (36" BOX/2.5" CAL. TREES AND LARGER). SECURE TIES OR STRAPS TO TRUNK JUST ABOVE LOWEST MAJOR BRANCHES.
3. 24" X 3/4" P.V.C. MARKERS OVER WIRES.
4. GREEN STEEL T-POSTS. EXTEND POSTS 12" MIN. INTO UNDISTURBED SOIL.
5. PRESSURE-TREATED WOOD DEADMAN, TWO PER TREE (MIN.). BURY OUTSIDE OF PLANTING PIT AND 18" MIN. INTO UNDISTURBED SOIL.
6. TRUNK FLARE.
7. MULCH, TYPE AND DEPTH PER PLANS. DO NOT PLACE MULCH WITHIN 6" OF TRUNK.
8. FINISH GRADE.
9. ROOT BALL.
10. BACKFILL. AMEND AND FERTILIZE ONLY AS RECOMMENDED IN SOIL FERTILITY ANALYSIS.
11. UNDISTURBED NATIVE SOIL.
12. 4" HIGH EARTHEN WATERING BASIN.
13. FINISH GRADE.

STAKING EXAMPLES (PLAN VIEW)



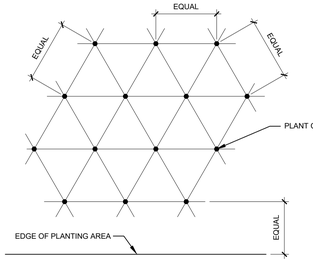
NOTES:
1. SCARIFY SIDES OF PLANTING PIT PRIOR TO SETTING TREE.
2. REMOVE EXCESS SOIL APPLIED ON TOP OF THE ROOTBALL THAT COVERS THE ROOT FLARE. THE PLANTING HOLE DEPTH SHALL BE SUCH THAT THE ROOTBALL RESTS ON UNDISTURBED SOIL, AND THE ROOT FLARE IS 2"-4" ABOVE FINISH GRADE.
3. FOR B&B TREES, CUT OFF BOTTOM 1/3 OF WIRE BASKET BEFORE PLACING TREE IN HOLE, CUT OFF AND REMOVE REMAINDER OF BASKET AFTER TREE IS SET IN HOLE. REMOVE ALL NYLON TIES, TWINE, ROPE, AND OTHER PACKING MATERIAL. REMOVE AS MUCH BURLAP FROM AROUND ROOTBALL AS IS PRACTICAL.
4. REMOVE ALL NURSERY STAKES AFTER PLANTING.
5. FOR TREES 36" BOX/2.5" CAL. AND LARGER, USE THREE STAKES OR DEADMEN (AS APPROPRIATE), SPACED EVENLY AROUND TREE.
6. STAKING SHALL BE TIGHT ENOUGH TO PREVENT TRUNK FROM BENDING, BUT LOOSE ENOUGH TO ALLOW SOME TRUNK MOVEMENT IN WIND.

A TREE PLANTING
SCALE: NOT TO SCALE



1. SHRUB, PERENNIAL, OR ORNAMENTAL GRASS.
2. MULCH, TYPE AND DEPTH PER PLANS. PLACE NO MORE THAN 1" OF MULCH WITHIN 6" OF PLANT CENTER.
3. FINISH GRADE.
4. ROOT BALL.
5. BACKFILL. AMEND AND FERTILIZE ONLY AS RECOMMENDED IN SOIL FERTILITY ANALYSIS.
6. UNDISTURBED NATIVE SOIL.
7. 3" HIGH EARTHEN WATERING BASIN.
8. WEED FABRIC UNDER MULCH.

B SHRUB AND PERENNIAL PLANTING
SCALE: NTS



NOTE: ALL PLANTS SHALL BE PLANTED AT EQUAL TRIANGULAR SPACING (EXCEPT WHERE SHOWN ON PLANS AS INFORMAL GROUPINGS). REFER TO PLANT LEGEND FOR SPACING DISTANCE BETWEEN PLANTS.

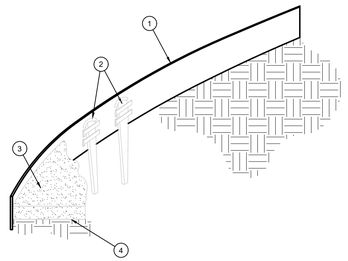
1) STEP 1: DETERMINE TOTAL PLANTS FOR THE AREA WITH THE FOLLOWING FORMULA:
TOTAL AREA / AREA DIVIDER = TOTAL PLANTS

PLANT SPACING	AREA DIVIDER	PLANT SPACING	AREA DIVIDER
6"	0.22	18"	1.95
8"	0.39	24"	3.46
10"	0.60	30"	5.41
12"	0.87	36"	7.79
15"	1.35		

2) STEP 2: SUBTRACT THE ROW (S) OF PLANTS THAT WOULD OCCUR AT THE EDGE OF THE PLANTED AREA WITH THE FOLLOWING FORMULA: TOTAL PERIMETER LENGTH / PLANT SPACING = TOTAL PLANT SUBTRACTION

EXAMPLE: PLANTS AT 18" O.C. IN 100 SF PLANTING AREA, 40 LF PERIMETER
STEP 1: 100 SF/1.95 = 51 PLANTS
STEP 2: 51 PLANTS - (40 LF / 1.95 = 21 PLANTS) = 30 PLANTS TOTAL

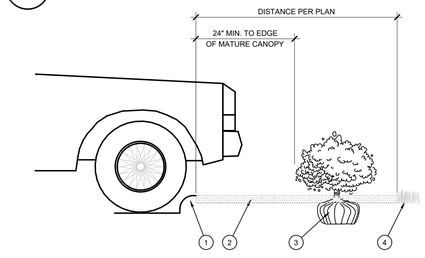
C PLANT SPACING
SCALE: NTS



1. ROLLED-TOP STEEL EDGING PER PLANS.
2. TAPERED STEEL STAKES.
3. MULCH, TYPE AND DEPTH PER PLANS.
4. FINISH GRADE.

NOTES:
1) INSTALL EDGING SO THAT STAKES WILL BE ON INSIDE OF PLANTING BED.
2) BOTTOM OF EDGING SHALL BE BURIED A MINIMUM OF 1" BELOW FINISH GRADE.
3) TOP OF MULCH SHALL BE 1" LOWER THAN TOP OF EDGING.

D STEEL EDGING
SCALE: NOT TO SCALE



1. CURB.
2. MULCH LAYER.
3. PLANT.
4. TURF (WHERE SHOWN ON PLAN).

E PLANTING AT PARKING AREA
SCALE: NOT TO SCALE

PRELIMINARY NOT FOR CONSTRUCTION

This report is providing a Desert Native Plant Specialist Report as required by the Town of Yucca Valley with regard to New Ground Up Construction.

Joshua Tree/Protected Native Plant Census for:

Ground Up Construction

29 Palms Hwy & Balsa Ave,

Yucca Valley, CA 92284

Blake Rhinehart

This report has been created with the following characteristics for the western Joshua Trees located within the property boundaries and that are also within 75' of the Proposed construction activities:

- **Western Joshua Trees current location in relation to the proposed work**
- **Avoidance/Protection recommendations, if applicable**
- **Determination of potential impact**

Subject: Arborist Release Letter for Construction Commencement

Dear Mr. Rhinehart,

I am writing to provide my professional assessment and to formally release the commencement of construction activities at the site located at the intersection of 29 Palms Hwy and Bolsa Ave, Yucca Valley, CA 92284.

Following my review of the job site and discussions with the City of Yucca Valley Planning Department regarding the necessary tree removals, I confirm that there are no pending issues related to the construction and landscape plans involving the remaining 8 Joshua Trees on the property waypoint #1569, 1571, 1574, 1575, 1576, 1577, 1578, and 1582.

Regarding the documented 13 live Joshua Trees, it has been determined that the following 5 trees are to be removed with the appropriate permits obtained: Waypoints #1570, 1572, 1573, 1578, 1583. Furthermore, the removal of 3 dead Joshua Trees at Waypoints #1584, 1585, and 1586 is necessary, with the proper permits also required. Please ensure that all regulations and guidelines related to these removals are strictly followed.

Tree protection measures must be implemented for the remaining Joshua Trees to safeguard them during the construction process. This includes physical barriers and guidelines to ensure their health and preservation throughout the duration of the project.

With this letter, you are authorized to proceed with the construction as planned.

Should you require any further assistance or clarification regarding tree care or maintenance during the construction process, please do not hesitate to contact me.

Thank you for your attention to the preservation of our local environment during this project.

Sincerely,

Warren A. Miller

I. INTRODUCTION

This Initial Study has been prepared to analyze the potential physical environmental impacts from the implementation of a proposed Dutch Bros coffee shop ("Project") at 58121 Twentynine Palms Highway ("Project Site") in the Town of Yucca Valley ("Town"). The Project proposes the construction and operation of a Dutch Bros Coffee shop with a dual-lane drive-through facility and associated site improvements. The Project is discussed in further detail in **Section 2.0, Project Description,** of this report. In accordance with California Environmental Quality Act (CEQA) (Pub. Res. Code [PRC] § 21000 *et seq.*) and *State CEQA Guidelines* (Cal. Code Regs., tit. 14, § 15000 *et seq.*) Section 15367, the Town of Yucca Valley is the Lead Agency under CEQA for the Project.

1.1 PROJECT INFORMATION

Project Title: Yucca Valley Dutch Bros Project

Project Applicant: Dutch Bros Inc.

Project Location: 58121 Twentynine Palms Highway, Yucca Valley, CA 92284

Lead Agency: Town of Yucca Valley
Community Development Department
58928 Business Center Drive
Yucca Valley, CA 92284

1.2 ORGANIZATION OF INITIAL STUDY

This document consists of the Initial Study (IS) for the Project. This IS comprises five sections, as follows:

I. **Introduction**: This section provides introductory information such as the Project title, Project applicant, lead agency for the Project, and background on CEQA.

II. **Project Description**: This section provides a detailed description of the environmental setting and the Project, including Project characteristics and environmental review requirements.

III. **Environmental Initial Study Checklist and Impact Analysis**: This section contains the completed Appendix G Initial Study Checklist. Each environmental issue identified in the Initial Study Checklist contains an assessment and discussion of impacts associated with each subject area.

IV. **References**: This section provides a listing of sources and information cited in this document.

V. **Initial Study Preparers:** This section provides a listing of those involved in the preparation of this document and persons and agencies consulted.

1.3 PURPOSE OF AN INITIAL STUDY

An Initial Study (IS) is a preliminary analysis conducted by the Lead Agency, in consultation with other agencies (responsible or trustee agencies, as applicable), to determine whether there is substantial evidence to support a fair argument that a project may have a significant effect on the environment.

All projects within the State of California are required to undergo an environmental review to determine the environmental impacts associated with implementation of a project in accordance with CEQA. CEQA was enacted in 1970 by the California legislature to disclose to decision makers and the public the significant environmental effects of proposed activities, as well as ways to avoid or reduce the environmental effects by requiring implementation of feasible alternatives or mitigation measures. CEQA applies to all California governmental agencies at all levels, including local agencies, regional agencies, state agencies, boards, commissions, and special districts.

If the IS concludes that the project, with mitigation, may have a significant effect on the environment, an Environmental Impact Report (EIR) should be prepared; otherwise, the Lead Agency may adopt a Negative Declaration (ND) or a Mitigated Negative Declaration (MND). This IS has been prepared in accordance with Section 15063 of the California Environmental Quality Act (CEQA) Guidelines (Title 14, California Code of Regulations, Sections 15000 et seq.). This IS document evaluates potential environmental effects resulting from implementation of the Project.

As shown in this analysis, the Project may cause potentially significant impacts on the environment, but these impacts can be mitigated to a less than significant level.

1.4 NATIVE AMERICAN CONSULTATION

California Native American tribes traditionally and culturally affiliated with the Project area are required to be consulted pursuant to Public Resources Code (PRC) Section 21080.3.1. On March 11, 2025, in accordance with Assembly Bill 52, the Town provided notice to the following Native American groups for consultation on the Project: Morongo Band of Mission Indians, Quechan Indian Tribe of the Fort Yuma Reservation, Serrano Nation of Mission Indians, Twenty-Nine Palms Band of Mission Indians, and the Yuhaaviatam of San Manuel Nation (YSMN). On October 10, 2025, the Agua Caliente Band of Cahuilla Indians was contacted for an opportunity to consult on the Project. A Sacred Lands File (SLF) records search request was submitted to the Native American Heritage Commission (NAHC) for the Project on October 23, 2025, and a response was received on October 24, 2025 (see **Appendix C**). Consultation on the Project

was requested by the YSMN as well as the Agua Caliente Band of Cahuilla Indians. The results of this consultation are discussed further in **Section 3.3.18, Tribal Cultural Resources**.

1.5 SCOPE OF ENVIRONMENTAL ANALYSIS

For evaluation of environmental impacts, each question from the Environmental Initial Study Checklist contained in Appendix G of the *State CEQA Guidelines* is stated, and responses are provided according to the analysis undertaken as part of the IS.

1.5.1 Thresholds of Significance

The Town has not adopted specific thresholds of significance. Instead, it relies on the topical environmental factors listed in Appendix G to the *State CEQA Guidelines* to determine whether an identified impact may be significant. On a case-by-case basis, the Town may apply specific thresholds of significance, consistent with *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884. For air quality and greenhouse gas emissions, the Town relies on thresholds established by the Mohave Desert Air Quality Management District. For transportation impacts, the Town uses the San Bernardino County "Transportation Impact Analysis Guidelines," which establish CEQA thresholds of significance for vehicle miles traveled (VMT).[1]

1.5.2 Impact Levels

There are four possible responses to the threshold of significance questions in each of the topical environmental factors in **Section 3, Environmental Initial Study Checklist and Impact Analysis**.

1. **No Impact**: No substantial evidence exists to support a fair argument that the Project would have an impact on the environment.

2. **Less than Significant Impact**: Environmental impacts have been identified but are less than the thresholds of significance and do not include or require mitigation measures.

3. **Less than Significant Impact with Mitigation Incorporated**: Environmental impacts have been identified but are less than significant with the incorporation of mitigation measures, thereby reducing an impact from Potentially Significant Impact to a Less Than Significant Impact.

4. **Potentially Significant Impact**: Potentially significant project-level impacts have been identified and require preparation of an EIR.

---

1 County of San Bernardino, *Traffic Impact Analysis Guidelines*, July 19, 2019. Available online at: https://www.sbcounty.gov/uploads/DPW/docs/Traffic-Study-Guidelines.pdf, accessed September 23, 2025.

II. PROJECT DESCRIPTION

2.1 PROJECT APPLICANT

The Project Applicant is Dutch Bros Inc. ("Applicant"), which would be responsible for financing, constructing, and operating the proposed facility. The Applicant is a national quick-serve coffee chain specializing in drive-through service.

2.2 ENVIRONMENTAL SETTING

2.2.1 Project Location

The Project Site is located at 58121 Twentynine Palms Highway (State Route 62) in the Town of Yucca Valley, San Bernardino County, California (Assessor's Parcel Number [APN] 0601-416-05). The Project Site encompasses approximately 1.01 gross acres (approximately 44,190 square feet) and is situated along the south side of Twentynine Palms Highway, the primary east-west transportation corridor through the Morongo Basin. **Figure 2.2-1, Regional Vicinity**, illustrates the site's location in a regional context.

The Project Site is currently vacant and undeveloped, except for an existing paved drive aisle at the northern portion of the site that connects two adjacent commercial developments. The topography of the site is generally flat, with no significant slopes, drainage channels, or geologic features. The site supports native desert vegetation, including Western Joshua Trees (*Yucca brevifolia*). As these trees are protected under the California Endangered Species Act, their removal requires an Incidental Take Permit from the California Department of Fish and Wildlife (CDFW). Portions of the site also show evidence of disturbance from illegal off-road vehicle use. **Figure 2.2-2, Aerial Photograph of the Project Site**, shows an aerial photograph of the existing Project Site and surroundings.

2.2.2 Surrounding Land Uses

The Project Site is located along a commercial corridor that includes retail, restaurant, and service-oriented uses. To the east and west, the Project Site is generally bordered by existing commercial development (currently occupied by Walgreens and Big 5 Sporting Goods, respectively). To the north, across Twentynine Palms Highway, is a large commercial development anchored by a grocery store with developed retail outpads, and to the south is undeveloped land, and across Balsa Avenue are single-family residences.

2.2.3 Existing Zoning and Land Use Designations

The Project Site and the parcels directly west, south, and east of the Project Site are zoned Mixed-Use Commercial (C-MU) and designated Mixed Use (MU) by the Town's General Plan. The area to the south across Balsa Avenue is zoned Residential, Single-Family (R-S-2) and designated Rural Residential with half-acre minimum lots (RR-0.5), and the area to the north across Twentynine Palms Highway is zoned for Neighborhood Commercial (C-N) and designated Commercial (C).

2.3 DESCRIPTION OF THE PROJECT

2.3.1 Project Overview

The Project proposes the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee shop with a dual-lane drive-through facility and associated site improvements. The drive-through is designed to accommodate 23 queued vehicles. In addition to on-site improvements, the Project would contribute in-lieu fees toward off-site roadway improvements consistent with the Town's circulation plans, specifically, the widening of Twentynine Palms Highway to an ultimate half-width of 67 feet along the Project frontage. The future widening of Twentynine Palms Highway would be undertaken at a later date by the Town of Yucca Valley Public Works/Engineering Department and the San Bernardino County Transportation Authority. Construction of the Project would also necessitate the removal of existing Western Joshua Trees (*Yucca brevifolia*) on-site. **Figure 2.3-1, Conceptual Site Plan**, illustrates the Project's proposed site plan.

2.3.2 Operation

Operation of the Project would entail a drive-through-focused quick-service coffee shop with limited walk-up service and no indoor seating. Land uses, such as the Project, are conditionally permitted in the C-MU zone. The Project is anticipated to operate daily between the hours of 5:00 AM and 11:00 PM. The Project is expected to employ approximately 24 to 32 people, with 6 to 8 employees working per shift. Supply deliveries would occur via small box trucks during off-peak hours.

2.3.3 Architectural Design

The Project incorporates the contemporary commercial design that is characteristic of recent Dutch Bros Coffee developments. The single-story structure would have a finished floor elevation at grade and a maximum building height of approximately 24 feet at the top of the parapet. A secondary parapet height of approximately 21 feet would also be incorporated into the design to provide articulation and to screen rooftop mechanical equipment. All rooftop mechanical units would be fully screened from public views by

the parapet walls. Canopy projections and awnings would extend over customer service areas. Prefabricated metal awnings would be installed above the drive-thru and walk-up service windows, providing weather protection and architectural articulation.

The interior floor plan would include a production area, a walk-in cooler, a small office, and a restroom. These spaces are arranged to support efficient drive-through and walk-up operations, with the production area centrally located to serve both customer service windows. The walk-in cooler would be positioned for direct access from the production area, while the office and restroom would be located toward the rear of the building. **Figure 2.3-2, Conceptual Floor Plan**, illustrates the Project building's floor plan.

The building exterior would be finished with stucco, fiber cement siding, cultured stone veneer, metal canopy elements, and painted accents, consistent with the Dutch Bros Coffee brand identity of blue, dark gray, classic light buff, and beige. The roofing system would utilize a single-ply membrane, providing a durable, energy-efficient roof surface. **Figure 2.3-3, Conceptual Elevations**, provides renderings of the building elevations.

2.3.4 Access and Circulation

Site access would be provided from two existing driveways that currently serve adjacent commercial developments. One driveway is located along Twentynine Palms Highway and provides access to the Big 5 Sporting Goods store to the west, while the second driveway is located along Balsa Avenue in proximity to the Walgreens store to the east. Project customers and employees would enter the Project Site from the existing internal drive aisle that connects the two commercial developments and integrate circulation with the surrounding uses. In addition, the Project would include a new drive aisle along the southern perimeter of the Project Site, providing direct access to the Project Site from the existing surface parking lot of the Walgreens to the east.

Internal circulation would allow vehicles to either park in the designated parking area or enter the drive-through lanes, which wrap around the southern portion of the site and direct vehicles northward to exit into adjacent parking lots and back to surrounding roadways. The Project would provide a total of 18 parking spaces (3 future electric vehicle charging stations [EVCS], 1 accessible EVCS, 1 accessible, 13 standard).

2.3.5 Landscaping

The Project would incorporate approximately 10,350 square feet of landscaping and would retain 2,808 square feet of existing landscaping near Twentynine Palms Highway. The landscape design emphasizes drought-tolerant, desert-appropriate plantings consistent with Chapter 9.32, Landscaping and Water

Conservation, of the Yucca Valley Municipal Code (YVMC), the State of California's Model Water Efficient Landscape Ordinance (MWELO) as referenced in Section 6.02.580 of the YVMC, and the Water Use Classification of Landscape Species (WUCOLS) guidelines.

Proposed trees include Swan Hill fruitless olive and Mexican palo verde, which can reach mature size of approximately 25 feet in height and width. Shrub and accent plantings would include desert agave, purple threeawn, grey desert spoon, California buckwheat, Texas sage, deer grass, and jojoba. Texas sage would be installed at a height of approximately 36 inches at the time of planting to provide immediate screening and visual structure along the eastern property line, specifically to screen car headlights, and shrubs would be used to screen the trash enclosure.

Groundcover treatments would consist of approximately 1,498 square feet of decorative local cobble placed over landscape fabric. This treatment would provide a low-maintenance, water-efficient groundcover for a desert climate.

2.3.6 Lighting

The Project would include new exterior lighting designed to provide safety and security for customers and employees. The lighting plan incorporates a combination of wall-mounted and canopy-mounted fixtures, generally located at approximately 8 feet above finished grade, along with pole-mounted fixtures where appropriate. All lighting would use energy-efficient technology, be fully shielded, and be directed downward in compliance with Chapter 8.70 of the YVMC to minimize light spillover and skyglow. House-side shielding would further ensure that illumination remains focused on the Project Site and does not intrude into adjacent residential areas to the south. In addition, lighted signage would be installed by a licensed sign contractor and coordinated with electrical service connections.

2.3.7 Utilities and Service Providers

Utility services would be provided by existing infrastructure in the area. Southern California Edison would provide electricity, natural gas (if utilized) would be provided by the Southern California Gas Company, water and sewer services would be provided by the Hi-Desert Water District, and solid waste collection would be provided by Burrtec Waste & Recycling. Telecommunications services would be provided by local carriers serving the area. The Project would connect to existing utility lines that currently serve the adjacent commercial uses.

2.3.8 Stormwater Management

The Project includes an on-site stormwater management system designed to capture, detain, and treat runoff generated during storm events. The system includes a proposed stormwater retention pond located near the center of the Project Site, positioned between the parking lot and the dual drive-through lanes. The retention pond would address water quality and flow control for post-development runoff to not exceed pre-development conditions.

Roof drainage would be managed through downspouts connected to on-site storm drain facilities or trench drains, discharging to the drive aisle. Stormwater from paved areas, including the parking lot and drive-through lanes, would be directed to a series of catch basins and underground storm drainpipes that convey flows to the retention pond. The pond is designed to temporarily hold runoff, allowing sediments and pollutants to settle before water infiltrates into the ground or is released in a controlled manner in compliance with the Town of Yucca Valley's stormwater requirements and the National Pollutant Discharge Elimination System (NPDES) program.

The retention pond would be landscaped with drought-tolerant plantings consistent with the Project's overall landscape plan. Maintenance of the pond would be the responsibility of the Applicant to ensure long-term performance and compliance with applicable stormwater regulations.

2.3.9 Construction

For the purpose of evaluating potential environmental impacts, this report assumes that construction of the Project would begin in 2026 and extend over a period of approximately five (5) months following issuance of the Incidental Take Permit for the removal of the Western Joshua Trees, with full operation anticipated in 2026. This schedule is considered conservative and is intended to capture the maximum potential daily impacts associated with construction activities.

Construction would occur in three primary stages: (1) debris removal, (2) grading and foundation preparation, and (3) building construction. All equipment and construction staging would occur within the boundaries of the Project Site. The grading plan for the Project anticipates approximately 1,000 cubic yards of cut and 200 cubic yards of fill, resulting in a net export of approximately 800 cubic yards of soil.

The debris removal stage would involve clearing the site and preparing it for grading, which would then be immediately followed by grading and foundation preparation. Debris removal and grading/foundation stages are expected to last approximately five (5) weeks. This stage would establish building pads, prepare utility connections, and level the site. The building construction stage would then proceed over approximately four (4) months and would include construction of the coffee shop structure, installation of

utilities, application of architectural coatings, and paving of the Project Site. Architectural coating and paving activities are expected to occur during the final month of the construction stage.

Consistent with the assumptions included within the California Emissions Estimator Model (CalEEMod), the following maximum daily equipment by stage will be assumed.

- Demolition/debris removal: 1 concrete industrial saw, 1 rubber-tired dozer, 2 tractors/loader/backhoes
- Grading: 1 grader, 1 rubber-tired dozer, 1 tractor/loader/backhoe
- Building Construction: 1 crane, 2 forklifts, 2 tractors/loaders/backhoes
- Paving: 4 cement and mortar mixers, 1 paver, 1 roller, 1 tractor/loader/backhoe
- Architectural Coating: 1 air compressor

2.4 DISCRETIONARY ACTIONS AND APPROVALS

To permit development of the Project, the following discretionary actions are required:

2.4.1 Town of Yucca Valley

- Approval of a Conditional Use Permit 02-25 to allow the Project in the C-MU zone.
- Approval of Environmental Assessment 03-25.
- Issuance of ministerial permits, including grading and building permits.

California Department of Fish and Wildlife Region 6

- Incidental Take Permit for the removal of Western Joshua Trees.

2.4.2 State Water Resources Control Board

- NPDES Construction General Permit (SWPPP) for ground disturbance greater than one acre.

III. ENVIRONMENTAL INITIAL STUDY CHECKLIST AND IMPACT ANALYSIS

3.1 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐	Aesthetics	☐	Agriculture and Forestry Resources	☐	Air Quality
☒	Biological Resources	☒	Cultural Resources	☐	Energy
☒	Geology and Soils	☐	Greenhouse Gas Emissions	☐	Hazards and Hazardous Materials
☐	Hydrology and Water Quality	☐	Land Use and Planning	☐	Mineral Resources
☐	Noise	☐	Population and Housing	☐	Public Services
☐	Recreation	☐	Transportation	☒	Tribal Cultural Resources
☐	Utilities and Service Systems	☐	Wildfire	☐	Mandatory Findings of Significance

3.2 DETERMINATION: (TO BE COMPLETED BY THE LEAD AGENCY)

On the basis of this initial evaluation:

I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	☐
I find that, although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the Project. A MITIGATED NEGATIVE DECLARATION will be prepared.	☒
I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.	☐
I find that the Proposed Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.	☐

I find that although the Proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the Proposed Project, nothing further is required.	☐

Jared Jerome	Senior Planner

Signature	Date

3.3 ENVIRONMENTAL IMPACT ANALYSIS

3.3.1 Aesthetics

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Except as provided in Public Resources Code section 21099:				
a. Would the project have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒

No Impact. A scenic vista is generally defined as a view of undisturbed natural characteristics exhibiting a unique feature that comprises an important or dominant portion of the viewshed. Although scenic vistas are identified at the discretion of its jurisdiction, common examples of scenic vistas include open hillsides, mountain ranges, rivers/streambeds, and large bodies of water.

The Town's General Plan Open Space and Conservation Element does not identify specific scenic resources within the Town, but does specify scenic resources that are valued by the Town's residents that are outside the Town Limits and planning area boundary. These areas include the views of the Little San Bernardino Mountains of the Peninsular Ranges, the San Bernardino Mountains on the easternmost of the Transverse ranges surrounding the Town, and Yucca Valley's hillside areas.[2] While the Open Space and Conservation Element does not officially identify any scenic routes or highways in the Town, Yucca Valley does contain one eligible scenic highway and one partially designated scenic highway: State Route 62 (Twentynine Palms Highway) and State Route 247, respectively.[3] A segment of State Route 247, approximately four miles northwest of the Project Site, is officially designated as a State Scenic Highway, while other portions near the Project Site are eligible for designation.

The Project Site is currently vacant and is largely surrounded by existing urban development. Given the existing conditions of the Project Site and its distance from the identified scenic vistas and routes, the Project

---

2 Town of Yucca Valley, *Town of Yucca Valley General Plan: Open Space and Conservation Element*, February 4, 2014. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/2596/637009395718470000, accessed September 30, 2025.

3 California Department of Transportation, "California State Scenic Highway System Map." Available online at: https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa, accessed February 27, 2026.

would not have the potential to substantively alter existing private or public viewsheds, the Project would not have a substantial adverse impact on any scenic resource, and no impacts would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒

No Impact. As previously discussed in **Section 3.3.1a**, above, State Route 62 is eligible for being designated as a Scenic Highway, and State Route 247 is eligible for designation in some segments, while a segment approximately four miles northwest of the Project Site is officially designated as a State Scenic Highway.[4] Access to State Route 247 is approximately one mile west of the Project Site and is not visible from the Project Site; this segment is eligible, but not officially designated as a State Scenic Highway. While the State Route 62 route runs along the northern end of the Project Site, the Project would not damage scenic resources that may be found along this route, as the Project does not propose any curb cuts or driveway changes to State Route 62. There are no scenic resources, trees, rock outcroppings, or historic buildings present within the portion of State Route 62 that would be impacted by the Project. Therefore, no impact would occur.

Mitigation Measures: No mitigation measures are required.

4 *Ibid.*

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Would the project, in non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐

Less Than Significant Impact. The Project Site and the surrounding area are considered an urbanized area.[5] Surrounding properties include commercial uses as well as single-family housing. Although the construction activities associated with the Project would result in changes to the visual quality of the Project Area, these activities would be temporary and would cease upon completion of the Project. The Project would be constructed in accordance with the Town's design regulations for commercial uses. The height and scale of the facility would be consistent with the surrounding commercial development. Therefore, impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Less than Significant Impact. Light emanating from building interiors that pass through windows and light from exterior sources (i.e., street lighting, building illumination, security lighting, and landscape lighting) serve as primary sources of light.

5 According to *State CEQA Guidelines* Section 15387 an "urbanized area" means a central city or a group of contiguous cities with a population of 50,000 or more, together with adjacent densely populated areas having a population density of at least 1,000 persons per square mile.

The Project involves the construction of a new Dutch Bros coffee shop with a drive-through. The Project Site is located within an urban and developed area of the Town and is largely surrounded by commercial uses. Due to the exterior nighttime lighting of these uses, along with the existing light poles around the northern perimeter of the Project Site, a moderate level of ambient nighttime light already exists. Given that the Project Site is undeveloped, the proposed Project would introduce new sources of light. However, this new source of light and glare would be similar to existing conditions from nearby uses. Further, the installation and use of onsite lighting would be required to comply with Section B of Section 8.70.030, *Outdoor Lighting Fixtures*, of the YVMC, which states that there any new construction located in any commercial or industrial land use district shall be fully shielded or recessed in such a manner as to preclude adverse impacts to adjacent property as a result of light trespass, or to any member of the public who may be traveling on adjacent roadways or rights of way.[6] Therefore, impacts from light and glare from the proposed Project would be less than significant.

Mitigation Measures: No mitigation measures are required.

---

6 Town of Yucca Valley, Yucca Valley Municipal Code Section 8.70.030: *Outdoor Lighting Fixtures*. Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-2483, accessed September 30, 2025.

3.3.2 Agricultural Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒

No Impact. According to the California Department of Conservation's California Important Farmland Finder, the Project Site does not contain any land classified as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.[7] Further, the Project Site is zoned for Mixed Use Commercial, which generally does not allow agricultural uses.[8] Thus, the Project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use. No impact would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒

No Impact. Only land located within an agricultural preserve is eligible for enrollment under a Williamson Act contract. According to the California Department of Conservation, California Williamson Act Enrollment Finder,[9] there is no land in the Town enrolled under a Williamson Act contract. There is currently no land within the Town zoned for agricultural use nor enrolled under a Williamson Act contract.

---

8 Town of Yucca Valley, *Yucca Valley Municipal Code*, Chapter 9.09: Commercial Districts. Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-14867, accessed October 1, 2025.

9 California Department of Conservation, "Williamson Act Program." Available online at: https://www.conservation.ca.gov/dlrp/lca, accessed on October 1, 2025.

Therefore, the Project would not conflict with existing agricultural zoning or a Williamson Act Contract, and no impact would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220 (g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104 (g))?	☐	☐	☐	☒

No Impact. The Town does not contain any forest land (as defined by PRC § 12220(g)), timberland (as defined by PRC § 4526), or timberland zoned for Timberland Production (as defined by Government Code § 51104(g)).[10] Approval of the Project would not conflict with the General Plan, existing zoning, or cause rezoning of forest land, timberland, or timberland zoned Timberland Production. No impact would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. Would the project result in the loss of forest land or conversion of forest land to a non-forest use?	☐	☐	☐	☒

No Impact. See response to **Section 3.3.2.c**, above.

Forest land is defined as "...land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits."[11] Timberland is defined as: "land...which is available for, and capable of, growing a crop of trees

10 California Department of Fish and Wildlife, "California Forests and Timberlands." Available online at: https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=109919, accessed October 1, 2025.

11 California Public Resources Code (PRC), Section 12220(g).

of any commercial species used to produce lumber and other forest products, including Christmas trees."[12] There is no identified forest land or timberland within the Town, and implementation of the Project would not result in a loss of forest land or timberland. No impact would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
e. **Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?**	☐	☐	☐	☒

No Impact. Implementation of the Project would not result in the conversion of farmland or forest land to non-agricultural or non-forest land use. No impact would occur.

Mitigation Measures: No mitigation measures are required.

12 PRC, § 4526.

3.3.3. Air Quality

The following is a summary of the Project's Air Quality Technical Report, included as **Appendix A, Air Quality Technical Report,** to this document.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐

Less than Significant Impact. As part of its enforcement responsibilities, the U.S. Environmental Protection Agency (U.S. EPA) requires each state with nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the California Clean Air Act (CCAA) requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the federal and state ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

As previously discussed, according to the Mojave Desert Air Quality Management District (MDAQMD), if a project does not exceed the thresholds established by the MDAQMD, the project would be deemed to be consistent with applicable attainment or maintenance plans. Additionally, if the project is consistent with the existing land use plan designation, it is considered to be consistent with the applicable attainment or maintenance plans. As demonstrated in **AQ Impact b**, below, the Project would not exceed the thresholds established by the MDAQMD; further, the Project is consistent with the land use and zoning for the Project Site. The Project Site is designated as Mixed Use (MU) and is zoned for Mixed-Use Commercial (C-MU). Commercial land uses support local- and regional-serving retail and service uses, including uses such as shopping centers and malls, small commercial centers, hotels, commercial recreation uses such as movie theaters and bowling alleys, restaurants, supermarkets, and personal services. Fast food (with drive-through, delivery) is permitted in the C-MU zone only with a conditional use permit (CUP).[13] Therefore,

13 Town of Yucca Valley, *YVMC: Chapter 9.09: Commercial Districts*. Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-14877, accessed November 10, 2025.

the Project would not conflict with or obstruct the implementation of any air quality plan established by the MDAQMD.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐

Less than Significant Impact. A project may have a significant impact if project-related emissions would result in a cumulatively considerable net increase for a criteria pollutant for which the region is in nonattainment under applicable federal or state ambient air quality standards.

Construction Significance Analysis

For purposes of this analysis, it is estimated that the Project would be constructed in approximately 5 months, with construction beginning in 2026 and project operations commencing in the same year. While construction may begin at a later date and/or take place over a longer period, these assumptions represent the earliest and fastest build-out potential, resulting in a worst-case daily impact scenario for purposes of this analysis. This analysis assumes construction would be undertaken with the following primary construction phases: (1) debris clearing/foundation preparation, (2) grading, and (3) building construction. The Project would also require paving and architectural coatings, which have conservatively been assumed to occur concurrently during the final month of the building construction phase.

The analysis of regional daily construction emissions has been prepared utilizing the CalEEMod computer model. Predicted maximum daily construction-generated emissions for the Project are summarized in **Table 3.3-1, Construction-Related Criteria Pollutant and Precursor Emissions.** These calculations assume that appropriate dust control measures would be implemented as part of the Project during each phase of development, as specified by MDAQMD Rule 403 (Fugitive Dust). As shown in **Table 3.3-1,** the peak daily emissions generated during the construction of the Project would not exceed any of the emission thresholds recommended by the MDAQMD. Therefore, Project construction would not result in a cumulatively considerable net increase of any criteria air pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard.

Table 3.3-1
Construction-Related Criteria Pollutant and Precursor Emissions

**In CalEEMod, criteria pollutants are represented in pounds per day for daily values, and tons per year for annual values. For clarity purposes, a "ton" and a "short ton" are both equivalent to 2,000 pounds.*
Note: Project emissions account for the reductions from MDAQMD Rule 403 (Fugitive Dust).

Operational Significance Analysis

Project-generated emissions would be associated with motor vehicle use, energy use, and area sources, such as the use of natural-gas-fired appliances, landscape maintenance equipment, consumer cleaning products, and architectural coatings associated with the operation of the Project. The operational emissions from the Project were calculated with CalEEMod, and the operational emissions were compared against MDAQMD thresholds to determine Project significance. Long-term operational emissions attributable to the Project are summarized in **Table 3.3-2, Long-Term Operational Emissions**. As shown, the operational emissions generated by the Project would not exceed the regional thresholds of significance set by the MDAQMD.

Table 3.3-2
Long-Term Operational Emissions

Maximum Pounds Per Day						
Source	**ROG**	**NOx**	**CO**	**SO_2**	**PM10**	**PM2.5**
Mobile Source	2.00	2.50	22.00	0.05	4.50	1.20

Exceed?	*No*	*No*	*No*	*No*	*No*	*No*

Source: Impact Sciences, November 2025. See ***Appendix A****. Emissions shown are the highest daily maximum from either the summer or winter season.*
**In CalEEMod, criteria pollutants are represented in pounds per day for daily values, and tons per year for annual values. For clarity purposes, a "ton" and a "short ton" are both equivalent to 2,000 pounds.*

As shown in **Table 3.3-1** and **Table 3.3-2**, the Project's construction and operational emissions would not exceed the MDAQMD's thresholds for any criteria air pollutants. Thus, the Project would also not result in a cumulatively considerable net increase of any criteria air pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard. These impacts are less than significant.

Air Quality Health Impacts

On December 24, 2018, the California Supreme Court published its opinion in *Sierra Club et al. v. County of Fresno et. al.* (Case No. S219783), which determined that an environmental review must adequately analyze a project's potential impacts and inform the public how its bare numbers translate to a potential adverse health impact or explain how existing scientific constraints cannot translate the emissions numbers to the potential health impacts.

Criteria air pollutants are defined as those pollutants for which the federal and state governments have established air quality standards for outdoor or ambient concentrations to protect public health. The

national and state ambient air quality standards have been set at levels to protect human health with a determined margin of safety. As discussed previously, the Basin is in state non-attainment for PM2.5, PM10, and Ozone (O_3) and federal non-attainment for PM10 and O_3. Therefore, an increase in emissions of particulate matter or ozone precursors (ROG and NOx) has the potential to push the region further from reaching attainment status, and, as a result, these pollutants are the greatest concern in the region. As noted in **Table 3.3-1** and **Table 3.3-2** above, the Project will emit criteria air pollutants during construction and operation. However, the Project will not exceed MDAQMD thresholds for ozone precursors (ROG and NOx), PM2.5, PM10, or any other criteria air pollutants, and will not result in a cumulatively significant impact for which the region is in non-attainment. With respect to the Project's increase in criteria pollutant emissions, the Project would not have the potential to cause significant air quality health impacts. Therefore, impacts are less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Would the project expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐

Less Than Significant Impact. Based on the MDAQMD Guidelines, a significant impact may occur if a project were to generate pollutant concentrations to a degree that would significantly affect sensitive receptors.

Project impacts related to increased community risk could occur by introducing a new source of localized pollutants during construction and operation, with the potential to adversely affect existing sensitive receptors in the Project vicinity. According to the MDAQMD, residences, schools, daycare centers, playgrounds, and medical facilities are considered to be sensitive receptor land uses. The following project types proposed for sites within the specified distance to an existing or planned (zoned) sensitive receptor land use must be evaluated using significance threshold criteria number four per MDAQMD Guidelines:[14]

- Any industrial project within 1,000 feet
- A distribution center (40 or more trucks per day) within 1,000 feet
- A major transportation project (50,000 or more vehicles per day) within 1,000 feet

14 MDAQMD, "CEQA and Federal Conformity Guidelines." Available online at: https://www.mdaqmd.ca.gov/home/showpublisheddocument/8510/638126583450270000, accessed November 10, 2025.

- A dry cleaner using perchloroethylene within 500 feet
- A gasoline dispensing facility within 300 feet

The Project is not proposing to develop any of the project types listed above and will not be required to be evaluated against MDAQMD significance threshold criteria number four. The closest air quality sensitive receptors would be the single-family residences 228 feet to the south of the Project Site.

The primary sources of potential TACs under the Project would be construction activity and the associated generation of diesel particulate matter (DPM) emissions from the use of off-road diesel equipment required for grading, paving, and other construction activities. The amount to which nearby sensitive receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk. Health-related risks associated with diesel exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer. Construction of the Project would not have the potential to generate large amounts of DPM since a minimal amount of daily heavy construction equipment will be utilized, and the overall construction duration would be short (approximately 5 months). Furthermore, the low levels of diesel exhaust would primarily be emitted during the grading/foundational preparation phase, which is anticipated to last only one month total. Average daily diesel exhaust emissions generated on-site during the 4 months of building construction would be negligible. Emissions generated from the development of the Project are temporary and localized and would cease upon completion of construction. This impact would be less than significant.

Operation

Project-operation impacts related to increased health risk can occur either by introducing a new source of TACs with the potential to adversely affect existing sensitive receptors, or by introducing a new sensitive receptor, such as a residential use, in proximity to an existing source of TACs.

The Project does not include any stationary sources of TAC emissions, and most vehicles associated with the operation of the Project would run on gasoline and not diesel, which is the primary source of TACs and DPM. Therefore, operation of the Project would not generate TAC or PM2.5 emissions that could affect the health of sensitive receptors. As such, the Project would not contribute to human health risk to nearby receptors during operation, and the Project would not contribute to any cumulative human health risk impact.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

Less Than Significant Impact. According to CARB's CEQA Air Quality Handbook, land uses often associated with odors include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. The Project would not include any of the land uses that have been identified by CARB as odor sources.

Construction activities associated with the Project may generate detectable odors from heavy-duty equipment exhaust and architectural coatings. However, construction-related odors would be short-term in nature and cease upon Project completion. In addition, the Project would be required to comply with the California Code of Regulations, Title 13, sections 2449(d)(3) and 2485, as well as YVMC Section 9.34.040, which minimizes the idling time of construction equipment either by shutting it off when not in use or by reducing the time of idling to no more than five minutes. This would reduce the detectable odors from heavy-duty equipment exhaust. Any odor impacts on existing adjacent land uses would be short-term and not substantial. As such, the Project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. Impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

3.3.4 Biological Resources

The following is a summary of the Project's Biological Resources Assessment, prepared by South Environmental, included as **Appendix B, Biological Resources Assessment,** to this document.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. **Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?**	☐	☒	☐	☐

Less than Significant with Mitigation Incorporated. As detailed in the Biological Resources Assessment prepared by South Environmental (see **Appendix B**), the proposed Project would require potential removal of trees, shrubs, and herbaceous plants in the landscaping that could provide potential nesting habitat for birds and raptors protected by the Migratory Bird Treaty Act (MBTA), Migratory Bird Protection Act (MBPA), and the Fish and Game Code, including special-status birds such as Le Conte's thrashers. If present at the time of vegetation removal, active nests, eggs, or young could be destroyed or otherwise disturbed to a point at which the young do not survive, which would be a violation of the MBTA, MBPA, and the Fish and Game Code. In addition, indirect iinpacts from noise or vibration have the potential to disturb an active bird nest that may occur in adjacent landscaping to the point of failure if the nest is within immediate proximity to Project activities. To avoid impacts to active bird or raptor nests, eggs, or young, preconstruction nesting bird surveys and monitoring are required per the MBTA and Fish and Game Code as described in **Mitigation Measure MM BIO-1**.

In addition to nesting birds, the Biological Resources Assessment identified the coast horned lizard as having potential to occur in the Project vicinity; however, the Project site consists of disturbed Joshua Tree Woodland at the urban interface and provides lower-quality habitat than the undisturbed desert wash located approximately 200 feet southwest of the Project Site, where the species is more likely to occur. Although this species could be present during construction, the likelihood of direct impacts such as injury or mortality is low because of the limited habitat value and low probability of occurrence within the development footprint. The Project would remove approximately 0.88 acres of disturbed, isolated habitat that represents a minor fraction of the available higher-quality habitat in the surrounding area, and

implementation of **Mitigation Measure MM BIO-2** would address impacts related to Joshua tree and Joshua Tree Woodland removal. For these reasons, potential impacts to coast horned lizard would be less than significant under CEQA.

Western Joshua tree occurs in the Project area, and no other special-status plants are expected to occur due to the level of disturbances in the plant community. There are 22 Joshua trees within 15 meters of the proposed Project footprint, and 8 of those would be removed by the Project because they are within the development footprint. Removals include 0 Class A, 8 Class B (#10, #11, #13, #14, #19, #20, #35, D1), and 0 Class C. An additional 2 Joshua trees (#9 and #12) are within the Project Site but will remain within landscaping after the Project is built, and these would be heavily encroached into the 15 meter buffer by development. As shown in the Site Plan, these Joshua trees will be fenced during construction of the Project to protect them from potential inadvertent impacts. Another 12 Joshua trees (#4-#8, #15, #18, #21-#24, D3) are outside the Project Site but will be encroached within a 15-meter buffer by the project construction. Protective fencing shown in the Site Plan will be installed between these Joshua trees and the Project Site during construction to avoid inadvertent impacts to these trees.

Overall, the population of Joshua trees within the survey area is healthy, with very few dead trees, and a mix of size classes and observations of fruits and flowers indicate that the Joshua trees are regenerating naturally on the site. The number of removals proposed by the Project is 18 percent of the number surveyed. Although there are numerous other Joshua trees surrounding the survey area that are contiguous plant communities with those found on the site, and the relative number of removals to those in the region is very small, the Project must compensate for the loss of individual Joshua Trees per the Western Joshua Tree Conservation Act as described in **Mitigation Measure MM BIO-2.**

Paying into the Joshua Tree Conservation Act Incidental Take Permit annual mitigation fees and protecting adjacent Joshua trees and Joshua Tree Woodlands surrounding the Project Site would ensure there is compensation for the loss of Joshua trees from the Project footprint. The in-lieu fee program described in **Mitigation Measure MM BIO-2** would result in the conservation, restoration, or protection of Joshua trees and Joshua Tree Woodlands into perpetuity. With the implementation of **Mitigation Measure MM BIO-2**, the Project's impacts on disturbed Joshua Tree Woodland would be reduced to a level that is considered less than significant per the thresholds of CEQA.

Mitigation Measures:

MM BIO-1 Preconstruction Nesting Bird and Raptor Survey.

- To the extent feasible, ground disturbing activities and vegetation removal should be timed to occur between September 1 and January 31, which is outside the bird and raptor nesting season.

- If ground disturbing activities or vegetation removal (including tree trimming) are scheduled between February 1 and August 31, which is the bird nesting season, a preconstruction survey for nesting birds should be conducted within 72 hours prior to construction activities. The survey should be conducted by a qualified biologist with prior experience conducting nesting bird surveys for construction projects. The study area should include the affected area and suitable habitat within a 500-foot buffer, or a buffer size determined by the qualified biologist based on the level of proposed disturbance and access. If no active nests are found, no additional measures are required.

- If active nests are found, the biologist will map the location and document the species and nesting stage. A no-work buffer will be established around the active nest as determined by the qualified biologist and based on the species' sensitivity to disturbance and the type and duration of the disturbance. Typical buffers would be 300 feet for songbirds, 500 feet for raptors and special-status species, but it can be determined based on the conditions on the site and recommendations of the qualified biologist. No construction activities shall occur within the no-work buffer until the biologist has determined the nest is no longer active.

MM BIO-2 Western Joshua Tree Permitting and Protection

Due to the proposed removal of eight (8) Joshua trees for the Project, the Applicant shall obtain a permit from the CDFW prior to removing the trees. To obtain the permit, the applicant must complete a permit application and submit the application and Joshua tree inventory to the CDFW Region 6 Office via the online permitting system. This permit will require coordination with both the County of San Bernardino and CDFW to determine the number of Joshua trees that the agencies would require for transplanting to areas outside of the development. However, there is an in-lieu fee program that allows for a fee-based mitigation for the removal of Joshua trees, and these same mitigation fees could be applied to all of the Joshua trees that are encroaching within 15 meters, as determined by the

agencies. Therefore, these estimated fees are subject to change per the requirements of the permitting agencies following an assessment of the project's impacts on Joshua trees. The Applicant shall pay the required fees prior to the issuance of a grading permit. The estimated 2025 Western Joshua Tree Conservation Act Incidental Take Permit annual mitigation fees for the proposed removal of eight Joshua trees within the standard fee area are a total of $4,072.00, as follows:

- 0 Class A trees x $346.00 = $0.00
- 8 Class B trees x $509.00 = $4,072.00
- 0 Class C trees x $2,544.75 = $0.00

Joshua Tree Avoidance During Construction

- The Applicant shall install temporary protective fencing between the project workspace and each Joshua tree during construction of the project. The fencing would be high-visibility fencing placed at a minimum 15-meter buffer zone prior to the start of construction (or at the distance that is permitted for trees closer to the site). No work or project activities shall occur within the fenced area, and all work shall occur outside of the proposed Joshua tree buffers. Fencing would help prevent compaction and/or contamination of the soil and root zone.

- During construction, heavy equipment and vehicles shall be operated in accordance with standard Best Management Practices (BMPs). For example, all equipment used in the workspace shall be properly maintained such that no leaks of oil, fuel, or residues will take place. Provisions shall be in place to remediate any accidental spills. Implementation of the BMPs will help minimize the potential for impact to Joshua trees both within and outside the Joshua tree buffer zones.

- Night work should be avoided to ensure no disturbance of pollinators or photoperiods for the remaining Joshua trees.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. **Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?**	☐	☒	☐	☐

Less than Significant with Mitigation Incorporated. Plant communities are considered sensitive biological resources if they have limited distributions, have high wildlife value that includes sensitive species, or are particularly susceptible to disturbance. CDFW ranks sensitive communities as "threatened" or "very threatened."

The Biological Resources Assessment identified 0.88 acres of Joshua Tree Woodland within the Project Site. CDFW considers Joshua Tree Woodland a sensitive natural community (State Rank S3.2). The Project would permanently remove this 0.88-acre community. Although the woodland on-site is heavily disturbed by dirt roads, illegal dumping, and invasive plants, its removal constitutes an impact on a sensitive natural community. However, this impact is reduced to a level that is less than significant through the implementation of **Mitigation Measure MM BIO-2**. Compliance with the Western Joshua Tree Conservation Act includes the payment of in-lieu fees that are deposited into the Western Joshua Tree Conservation Fund. This fund is specifically designated for the acquisition, conservation, and management of Joshua Tree Woodland habitat elsewhere, effectively mitigating the loss of the disturbed habitat on-site.

A riparian habitat is any vegetated habitat that is influenced by a river or stream or is adjacent to a lake or other water body. One jurisdictional feature, a desert wash, occurs in the Project Area approximately 200 feet southwest of the Project Site and outside of the Project impact areas. Since Project impacts are limited to the Project Site, it is not expected that the proposed Project will impact the wash directly. Temporary impacts would not occur from the Project as temporary staging and construction equipment will occur on the Project Site outside of the wash, at a distance greater than 200 feet. Considering the large distance between the Project Site and the wash, and the position of the Project Site between two existing large commercial developments, the Project would have no indirect impacts on the wash.

Therefore, with the implementation of **Mitigation Measure MM BIO-2** for the Joshua Tree Woodland and the avoidance of the off-site desert wash, impacts to sensitive natural communities would be less than significant.

Mitigation Measures: See **MM BIO-2**, above.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒

No Impact. According to the USFWS National Wetlands Inventory Mapper, there are no mapped wetlands located within the Project Site.[15] As previously discussed, a desert wash occurs in the Project Area approximately 200 feet southwest of the Project Site, outside of the Project impact areas. No direct removal, filling, or hydrological interruption of this desert wash is proposed with the Project. Therefore, the Project would result in no impacts to state or federally protected wetlands.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐

Less than Significant. During the South Environmental field visit, the Study Area was assessed for its potential use as a wildlife corridor or habitat linkage. The level of disturbance of the Study Area is by way of development that includes roads, houses, fences, and lighting. The Study Area was assessed for the

15 United States Fish and Wildlife, "National Wetlands Inventory." Available online at: https://fwsprimary.wim.usgs.gov/wetlands/apps/wetlands-mapper/. Accessed November 18, 2025.

presence of a corridor of linkage of habitat that connects the Study Area to adjacent and higher-quality habitat.

The Joshua Tree Woodland in the study area extends west and southwest beyond the Study Area boundary between further developed areas. This large, undeveloped Joshua Tree woodland is bordered on all sides by developments such as roads and businesses, and does not have connectivity to other open spaces or habitats. The Project Site is an endpoint of this community that is highly disturbed and bordered by large-scale commercial developments and major paved roadways. Any large open spaces or habitats are east of the Project Site across several roads and lines of housing developments. Therefore, no wildlife corridors were found in the Study Area as there is no linkage to large habitats. The lack of connectivity limits the potential for special status plants and wildlife to populate the site from areas of high-quality habitats. Therefore, the Project Site is not considered a wildlife movement corridor or habitat linkage area, and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
e. **Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?**	☐	☐	☒	☐

Less than Significant Impact. The Project Site is undeveloped and contains vegetation throughout the site, including multiple western Joshua trees. As previously discussed, the Project would be required to handle the "taking" of the western Joshua trees in accordance with the Western Joshua Tree Conservation Act (WJTCA)/CDFW and the California Endangered Species Act (CESA) via **Mitigation Measure MM BIO-2**. Western Joshua trees that will need to be relocated or removed would be subject to payment for each Western Joshua tree into the Joshua Tree Conservation Act Incidental Take Permit annual mitigation fee.

Additionally, the Project would comply with the Town of Yucca Valley Native Plant Ordinance. Since the Project Site is zoned for Commercial uses, it would also be required to comply with Section 9.09.050 of the YVMC, which requires parcels zoned for Commercial uses to obtain a Native Plant Permit prior to vegetation removal. No other local policies or ordinances are applicable to the Project, and therefore, impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
f. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

No Impact. There are no adopted habitat conservation plans, natural community conservation plans, or other approved local, regional, or state habitat conservation plans applicable to the Project Site; the Project Site is not included in any Habitat Conservation Plan or Natural Community Conservation Plan.[16] As previously discussed, the Project would comply with all regulations pertaining to the protection and preservation of western Joshua trees in accordance with the WJTCA/CDFW and CESA. Therefore, no impact would occur.

Mitigation Measures: No mitigation measures are required.

16 California Department of Fish and Wildlife, *California Natural Community Conservation Plans*, August 2025. Available online at: https://wildlife.ca.gov/Portals/0/Images/Conservation/NCCP/NCCP%20Map%2011%20x%2017_202508.jpg?ver=_DY40O2VlqKMkgF-QwkmpQ%3d%3d, accessed November 18, 2025.

3.3.5 Cultural Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project cause a substantial adverse change in the significance of a historical resource pursuant to *CEQA Guidelines* Section 15064.5?	☐	☐	☒	☐

Less Than Significant Impact. Section 15064.5 of the *State CEQA Guidelines* defines a historical resource as:

1) *a resource listed in or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources;*

2) *a resource listed in a local register of historical resources or identified as significant in an historical resource survey meeting certain state guidelines; or*

3) *an object, building, structure, site, area, place, record or manuscript which a lead agency determines to be significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided that the lead agency's determination is supported by substantial evidence in light of the whole record.*

Generally, a lead agency must consider a property a historical resource under CEQA if it is eligible for listing in the California Register of Historical Resources (CRHR). The CRHR is modeled after the National Register of Historic Places (NRHP). Generally, the initial criteria for properties to be listed on either register include a minimum requirement for the building on the property to be at least 50 years old.[17]

The Project Site is currently vacant and contains no existing structures or buildings; therefore, the Project would not result in the demolition or alteration of any on-site historical built environment resources.

The Open Space and Conservation Element identifies five historic resources in Yucca Valley; these resources include: a historical schoolhouse, Warren's Well, Warren's Ranch/Tanks, Desert Christ Park, and State Route 62.[18] While State Route 62 runs along the north end of the Project Site, the Project's proposed

17 Office of Historic Preservation, *Instructions for Recording Historical Resources*, 1995. Available online at: https://ohp.parks.ca.gov/pages/1054/files/manual95.pdf#:~:text=The%2045%20year%20criteria%20recognizes%20that%20there,and%20the%20date%20that%20planning%20decisions%20are, accessed October 1, 2025.

18 Town of Yucca Valley, *Town of Yucca Valley General Plan: Open Space and Conservation Element*, February 4, 2014. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/2596/637009395718470000, accessed September 30, 2025.

frontage improvements (e.g., driveway access, sidewalk connections) would not alter the historic alignment, location, or character of the highway. Therefore, impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☒	☐	☐

Less than Significant with Mitigation Incorporated. Archaeological resources include material evidence of past human life and culture of previous ages. Section 15064.5 of the *State CEQA Guidelines* states that if an archaeological site does not meet the criteria defined in subdivision (a) but does meet the definition of a unique archeological resource in PRC Section 21083.2, the site shall be treated in accordance with the provisions of Section 21083.2. PRC Section 21083.2(g) defines a unique archeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.

2. Has a special and particular quality, such as being the oldest of its type or the best available example of its type.

3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

The Project Site is currently vacant and undeveloped, but is largely surrounded by developed uses. Although it is unlikely that accidental discovery of archaeological resources would occur due to the Project Site's location in a developed commercial corridor, ground disturbing activities associated with the Project could unearth previously undiscovered archaeological resources. To ensure potential impacts are handled appropriately, the Project would be required to comply with **Mitigation Measures MM CUL-1** and **MM CUL-2** to ensure that the Project would not result in a significant impact on an archaeological or cultural resource. With implementation of **Mitigation Measures MM CUL-1** and **MM CUL-2**, impacts would be reduced to less than significant levels.

Mitigation Measures:

MM CUL-1 In the event that archaeological resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be retained to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period.

MM CUL-2 If significant archaeological resources, as defined by CEQA (Public Resources Code Section 21083.2), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan. The Plan shall outline procedures for data recovery, curation, and reporting consistent with CEQA requirements. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Would the project disturb any human remains, including those interred outside of formal ceremonies?	☐	☒	☐	☐

Less than Significant with Mitigation Incorporated. The Project Site does not include any identified formal cemeteries and is not known to have been used for the disposal of historic or prehistoric human remains, and human remains are not expected to be encountered during construction associated with the proposed Project. In the unlikely event that human remains are uncovered during ground-disturbing activities, adherence to **Mitigation Measure MM CUL-3** will reduce potentially significant impacts regarding the disturbance of human remains, including those interred outside of formal ceremonies, to less than significant levels by ensuring compliance with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98.

Mitigation Measures:

MM CUL-3 If human remains or funerary objects are encountered during any activities associated with the Project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the San Bernardino County Coroner shall be contacted pursuant to State Health and Safety Code Section 7050.5 and that code shall be enforced for the duration of the Project. If the human remains are determined to be of Native American origin, the Coroner shall

notify the Native American Heritage Commission within 24 hours of this identification, pursuant to Public Resources Code Section 5097.98.

3.3.6 Energy

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐

Less than Significant Impact. Southern California Edison (SCE) provides electricity services to most of San Bernardino County, including the Town of Yucca Valley. In 2024, the total electrical generation in California was 216,181 gigawatt-hours (GWh).[19] Statewide electric consumption in 2024 was estimated by the California Energy Commission (CEC) to be 282,013 GWh, with San Bernardino County responsible for consuming approximately 16,206 GWh.[20] Statewide natural gas consumption in 2024 (the most was estimated by the CEC to be 11,083 million therms (MMThm), with San Bernardino County responsible for consuming approximately 547 MMThm.[21]

Neither federal nor state law nor the *State CEQA Guidelines* establishes thresholds that define when energy consumption is considered wasteful, inefficient, and unnecessary. In general, compliance with CCR Title 24 Energy Efficiency Standards would result in energy-efficient buildings.

Construction

Construction activities associated with the Project would consume electricity on a limited basis to power lighting, electrical equipment, and supply and convey water for dust control. Electricity would be supplied to the Project Site from existing electrical lines. The electricity demand at any given time would vary throughout the construction period based on the construction activities being performed and would cease upon completion of construction. Electricity use from construction would be short-term, limited to working

19 California Energy Commission, "2024 Total System Electric Generation." Available online at: https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/2024-total-system-electric-generation, accessed October 1, 2025.

20 California Energy Commission, *Energy Consumption by County*, 2024. Available online at: https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fwww.energy.ca.gov%2Ffilebrowser%2Fdownload%2F8144%3Ffid%3D8144&wdOrigin=BROWSELINK, accessed October 1, 2025.

21 California Energy Commission, *Energy Consumption by County*, 2022. Available online at: https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fwww.energy.ca.gov%2Ffilebrowser%2Fdownload%2F8146%3Ffid%3D8146&wdOrigin=BROWSELINK, accessed October 1, 2025.

hours, used for necessary construction-related activities, and represent a small fraction of the Project's annual operational electricity.

Typically, construction activities do not involve the consumption of natural gas. As such, natural gas would not be supplied to support Project construction activities, and there would be no expected demand generated by construction of the Project. If natural gas is used during construction, it would be in limited amounts and on a temporary basis, and would specifically be used to replace or offset diesel-fueled equipment and, as such, would not result in substantial ongoing demand.

Construction activities associated with the Project would use gasoline and/or diesel-powered equipment and/or vehicles for hauling activities. However, the Project Applicant would use fuel-efficient equipment consistent with State and federal regulations. Furthermore, the Project would comply with all California Code of Regulations, including Title 13, sections 2449(d)(3) and 2485, which minimizes the idling time of construction equipment either by shutting it off when not in use or by reducing the time of idling to no more than five minutes.

Construction equipment would comply with applicable standards, and construction activities and associated fuel consumption and energy use would be temporary and typical of construction sites. It is also reasonable to assume contractors would avoid wasteful, inefficient, and unnecessary fuel consumption during construction to reduce construction costs. Therefore, construction activities associated with the Project would not involve the inefficient, wasteful, and unnecessary use of energy during construction, and the construction-phase impact related to energy consumption would be less than significant.

Operational

The Project involves the construction of a new Dutch Bros coffee shop with a drive-through. This development would result in energy consumption for electricity and the conveyance of water, wastewater, and solid waste disposal. The Project would be required to comply with the State's Building Energy Efficiency Standards (Cal. Code Regs., tit. 24, Part 6), which requires newly constructed buildings to meet energy performance standards set by the Energy Commission to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy, and to enhance the outdoor and indoor environmental quality. In addition, the Project would be required to comply with the mandatory requirements set forth in the California Green Building Standards Code (CBSC) related to energy efficiency, water efficiency and conservation, and material conservation and resource efficiency for new residential buildings.

Energy would also be consumed as a result of vehicle trips. Thus, operation associated with implementation of the Project would result in an increase in the consumption of petroleum-based fuels related to vehicular travel to and from the Project Site. The majority of vehicles visiting the site would

consist of light-duty automobiles and light-duty trucks, which are subject to state fuel efficiency standards, such as the Low Carbon Fuel Standard (LCFS) and Low-Emission Vehicle Program Standards. The Low Carbon Fuel Standard (LCFS), in part, aims to reduce fuel consumption, and providers of transportation fuels must demonstrate that the mix of fuels they supply for use in California meets the LCFS carbon intensity standards for each annual compliance period.

In conclusion, increased energy demand associated with construction activities associated with the Project would be temporary and typical of construction projects and would not result in wasteful use of energy resources. Although operational energy use could increase overall, newly constructed uses would be energy efficient and be in conformance with the latest version of California's Building Energy Efficiency Standards and Green Building Standards Code. This impact would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Less than Significant Impact. The Project would be designed in a manner that is consistent with relevant energy conservation plans designed to encourage development that results in the efficient use of energy resources. As discussed above, the Project would comply with the most current CALGreen Building Code, which ensures the use of energy-efficient features for the proposed Project. As such, the Project would not conflict or obstruct any local or state plans for renewable energy or energy efficiency. For these reasons, this impact would be less than significant.

Mitigation Measures: No mitigation measures are required.

3.3.7 Geology and Soils

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐

Less Than Significant Impact. Fault rupture is the displacement that occurs along the surface of a fault during an earthquake. The California Geological Survey designates Alquist-Priolo Earthquake Fault Zones, which are regulatory zones around active faults. An "active fault" has exhibited surface displacement with Holocene time (within the last 11,000 years), hence constituting a potential hazard to structures that may be located across it.

Although the California Department of Conservation has identified Alquist-Priolo Earthquake Fault Zones within the Town of Yucca Valley, none appear on the Project Site.[22] The San Andreas Fault is approximately 20 miles southwest of the Project Site and is considered the most seismically active fault in the southern California region. The nearest faults to the Project Site include the Pinto Mountain Fault, approximately 0.36 miles north of the Project Site, and the Eureka Peak Fault, located approximately 0.45 miles south of the Project Site.

The Project involves the construction of a new Dutch Bros coffee shop with a drive-through. The proposed Project does not include uses such as fracking that would exacerbate geologic conditions. Therefore, the Project would not directly result in any ground disturbing activities which have the potential to exacerbate existing geologic conditions, including fault rupture. Development of the Project will involve ground-

22 California Department of Conservation, California Geologic Survey, "Earthquake Zones of Required Investigation." Available online at: https://maps.conservation.ca.gov/cgs/EQZApp/app/, South Gate Quad, or https://filerequest.conservation.ca.gov/?q=SOUTH_GATE_EZRIM.pdf, accessed October 1, 2025.

disturbing activities such as grading, clearing, excavation, and paving. However, any such activities would be required to adhere to all relevant building and safety code requirements to reduce potential impacts associated with seismic hazards. Therefore, a less than significant impact would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
ii. Strong seismic ground shaking?	☐	☐	☒	☐

Less than Significant Impact. Southern California is an active seismic region, and moderate to strong earthquakes can occur on numerous faults. As is the case for most areas of California, the Town is situated within a seismically active region. The intensity of ground shaking during a seismic event at any one location is determined by several factors, including: magnitude of the earthquake; distance from the epicenter (source); subsurface material beneath the location; and topography. Ground shaking could result in significant damage to buildings, roads, and other infrastructure, and may also result in associated safety hazards to people living and working in the vicinity. Considering the location of these faults, the potential impact of seismic ground shaking is considered to be low. Development of the Project would be required to adhere to development and code requirements related to seismic ground shaking. Therefore, a less than significant impact would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐

Less than Significant Impact. Liquefaction is the sudden decrease in the strength of cohesionless soils due to dynamic or cyclic shaking. Saturated soils behave temporarily as a viscous fluid (liquefaction) and, consequently, lose their capacity to support the structures founded on them. The potential for liquefaction decreases with increasing clay and gravel content but increases as the ground acceleration and duration of shaking increase. According to the California Natural Resources Agency, the Project Site is not located

within a liquefiable area.[23] Nevertheless, the Project would be required to comply with the California Building Code as adopted in Chapter 8.02 (Building Codes) of the YVMC, and may be amended from time to time, related to building safety, to reduce potential liquefaction impacts. The Building Code includes regulations that pertain to structural stability for new buildings and infrastructure. Therefore, the Project would not expose people or structures to seismic-related ground failure, including liquefaction, and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
iv. Landslides?	☐	☐	☐	☒

No Impact. Landslides are movements of large masses of rock and/or soil. Landslide potential is generally the greatest for areas with steep and/or high slopes, low shear strength, and increased water pressure. Seismically induced landslides and other slope failures are common occurrences during or soon after earthquakes. The topography of the Project Site is relatively flat with no significant slopes existing within its vicinity. Furthermore, there are no identified landslide zones within the Project Site as mapped for Earthquake Zones of Required Investigation by the California Geological Survey.[24] As such, no impacts would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐

23 California Natural Resources Agency, CGS Seismic Hazards Program: Liquefaction Zones. Available online at: https://gis.data.cnra.ca.gov/datasets/cadoc::cgs-seismic-hazards-program-liquefaction-zones/explore?location=33.862742%2C-117.225148%2C9.80, accessed October 1, 2025.

24 California Department of Conservation, California Geologic Survey, "Earthquake Zones of Required Investigation." Available online at: https://maps.conservation.ca.gov/cgs/EQZApp/app/, South Gate Quad, or https://filerequest.conservation.ca.gov/?q=SOUTH_GATE_EZRIM.pdf, accessed October 1, 2025.

Less than Significant Impact. Construction activities associated with the Project would result in ground surface disruption during site preparation, which would temporarily expose soils, allowing for possible erosion. The Project would be required to comply with federal, regional, and local regulations pertaining to soil erosion related-construction activity. As discussed in **Section 3.3.10, Hydrology and Water Quality**, the Project must comply with all applicable requirements contained within Chapter 9.37, Soil Erosion and Dust Control, and Section 9.32.110, Stormwater Management, of the YVMC to minimize runoff.[25] Compliance with these local regulations and implementing applicable BMPs would ensure that the Project would not result in substantial soil erosion or the loss of topsoil, and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. **Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?**	☐	☐	☒	☐

Less than Significant Impact. Impacts related to landslides and liquefaction are addressed under impact discussions **Section 3.3.7(a)(iii)** and **Section 3.3.7(a)(iv)**, above. Lateral spreading occurs as a result of liquefaction; accordingly, liquefaction-prone areas would also be susceptible to lateral spreading. Subsidence occurs at great depths below the surface when subsurface pressure is reduced by the withdrawal of fluids (e.g., groundwater, natural gas, or oil), resulting in sinking of the ground. As stated, the Project Site is not located within a liquefaction zone, nor would the Project be prone to landslides. The Project would be subject to the CBC and Chapter 8.02 (Building Codes) of the Town's Municipal Code in order to minimize geologic hazards during a seismic event. Thus, adherence to local and state regulations would ensure that the Project would not be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse. Less than significant impacts would occur.

Mitigation Measures: No mitigation measures are required.

---

25 Town of Yucca Valley, Yucca Valley Municipal Code: *Chapter 9.37, Soil Erosion and Dust Control;* and *Chapter 9.32, Landscaping and Water Conservation.* Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-1, accessed February 27, 2026.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐

Less than Significant Impact. Expansive soils are characterized by their ability to undergo significant volume changes (shrink or swell) due to variations in moisture content. Changes in soil moisture content can result from precipitation, landscape irrigation, utility leakage, roof drainage, perched groundwater, drought, or other factors, and may result in unacceptable settlement or heave of structures or concrete slabs supported on grade. Depending on the extent and location below finish subgrade, expansive soils can have a detrimental effect on structures.

According to the CGS Geologic Map of California, the Project Site contains General rock types (Q). Based on a soil search with the USDA's Web Soil Survey online database, the Project Site is located in the Mojave Desert Area, West Central Part, with typic torriorthents and typic haplargids soil types present.[26] These soil types' parent material consists of alluvium derived from igneous rock; the natural drainage class is somewhat excessively drained, and the shrink-swell potential is low.[27] The soil in the area is not susceptible to expansion due to its property types. Additionally, as described in **Section 3.3.7(a)**, the proposed Project would be required to comply with the CBC and the Town Code to ensure safety and adequate building construction. Therefore, impacts related to expansive soils would be less than significant.

Mitigation Measures: No mitigation measures are required.

Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact

26 United States Department of Agriculture, Web Soil Survey. Available online at: https://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx, accessed October 2, 2025.

27 United States Department of Agriculture, Web Soil Survey. Available online at: https://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx, accessed October 2, 2025.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
e. Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒

No Impact. The proposed Project would not use septic tanks or alternative wastewater disposal systems; the Project would connect to existing sanitary sewer and wastewater facilities. Compliance with the CBC would ensure that the Project would not result in impacts related to substantial soil erosion, unstable soils, expansive soils, or soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems. Thus, the Project would have no impacts related to soil supporting septic tanks or alternative wastewater systems.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
f. Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

Less than Significant with Mitigation Incorporated. Paleontological resources are the remains of prehistoric plant and animal life and do not include human remains or artifacts. The potential for fossil remains at a location can be predicted based on whether previous fossil finds have been made in the vicinity and the age of the geologic formations. While the likelihood of encountering paleontological resources or unique geologic features is low, new development associated with the Project could include excavation to previously undiscovered depths. Therefore, **Mitigation Measure MM GEO-1** is required to ensure development does not destroy a unique paleontological resource. With **Mitigation Measure MM GEO-1**, impacts would be less than significant.

Mitigation Measures:

MM GEO-1 In the event that paleontological resources are discovered during ground-disturbing activities associated with the Project, all work shall be halted within 50 feet of the discovery, and a qualified paleontologist shall be retained to evaluate the significance of the find. If the resource is determined to be significant, the paleontologist shall develop a Paleontological Resource Mitigation Plan to address the assessment and recovery of the resource and to monitor further ground-disturbing activities associated with the Project.

A final report documenting any found resources, their recovery, and disposition shall be prepared by the qualified paleontologist, and a copy of the report shall be provided to the Town of Yucca Valley Planning Division and an accredited repository/curation facility, such as the San Bernardino County Museum.

3.3.8 Greenhouse Gas Emissions

Project Greenhouse Gas Analysis Methodology

State CEQA Guidelines Section 15064.4 was amended in 2019 to incorporate the holding in the Center for Biological Diversity case[28] as well as others. The Court acknowledged that the scope of global climate change and the fact that greenhouse gases (GHGs), once released into the atmosphere, are not contained in the local area of their emission means that the impacts to be evaluated are global, rather than local. For many air pollutants, the significance of their environmental impact may depend greatly on where they are emitted; for GHG, it does not. For projects that are designed to accommodate long-term growth in California's population and economic activity in a sustainable manner, such as the Project, this fact gives rise to an argument that a certain amount of GHG emissions is as inevitable as population growth. Under this view, a significance criterion framed in terms of efficiency and conservation in land use (as compared to a business-as-usual [BAU] pattern of growth) is superior to a simple numerical threshold because CEQA is not intended as a population control measure. This analysis assesses the Project against the MDAQMD GHG threshold of 100,000 metric tons of carbon dioxide equivalent (MTCO2e) annually or 548,000 pounds per day of CO2e, as well as for consistency with statewide goals (i.e., AB 32, SB 32, and AB 1279) as a significant criterion for project GHG emissions.

Meeting statewide reduction goals does not preclude all new development. Rather, the Scoping Plan, the State's roadmap for meeting the statewide target, assumes continued growth and depends on increased efficiency and conservation in land use and transportation from all Californians. To the extent a project incorporates efficiency and conservation measures sufficient to contribute its portion of the overall GHG reductions necessary for the entire State, one can reasonably argue that its impact is not cumulatively considerable, because it would be helping to solve the cumulative problem of GHG emissions as envisioned by California law. Given the reality of growth, some GHG emissions from new development are inevitable. The critical CEQA question is the cumulative significance of a project's GHG emissions, and, as discussed previously, from a climate change point of view, it does not matter where in the State those emissions are produced. Under these circumstances, evaluating the significance of a project's GHG emissions with respect to their effect on the State's efforts to meet its long-term goals in addition to the numeric threshold established by the MDAQMD is appropriate. As such, the impact analysis contained herein is quantitative as well as cumulative and qualitative in nature.

This analysis assesses the Project against the MDAQMD GHG threshold of 100,000 $MTCO_2e$ annually or 548,000 pounds per day of CO_2e, as well as for consistency with statewide goals in a cumulative context

---

28 California Supreme Court, *Center for Biological Diversity et al. vs. California Department of Fish and Wildlife*, November 30, 2015.

based on its consistency with the state's laws and programs to address climate change. To that end, this analysis assesses the significance of the Project's potential environmental impacts associated with its GHG emissions qualitatively, based on the Project's consistency with AB 32, SB 32, and AB 1279 (through demonstration of conformance with 2022 Scoping Plan); and SB 375 (through demonstration of conformance with Connect SoCal 2024).

Regarding assessing the significance of a project's GHG emissions through consistency with statewide, regional, and local plans, Appendix D, Local Actions, of the 2022 Scoping Plan Update contains guidance for local governments reviewing new land use development projects, including through environmental review under CEQA" (Page 4 of Appendix D).[29]

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐

Less than Significant Impact. *State CEQA Guidelines* Section 15064.4(a) states a lead agency shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe and estimate the amount of greenhouse gas emissions resulting from a project. *State CEQA Guidelines* Section 15064.4(c) states a lead agency may use a model or methodology to estimate greenhouse gas emissions resulting from the project, and that the lead agency has the discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change. Based upon this guidance, GHG emissions were quantified for the Project using CalEEMod, which is the model recommended by the MDAQMD (see **Appendix A** to this IS). Operational emissions include both direct and indirect sources, including mobile sources, water use, solid waste, area sources, natural gas, and electricity use emissions. CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. While the Town does not have or use a numerical threshold for GHG emissions or a methodology that relies on a quantitative analysis in order to determine the significance of a project's GHG emissions, the MDAQMD does provide a numeric

29 CARB, *2022 Scoping Plan for Achieving Carbon Neutrality – Appendix D: Local Actions*, 2022. Available online at: https://ww2.arb.ca.gov/sites/default/files/2022-11/2022-sp-appendix-d-local-actions.pdf, accessed September 13, 2024.

threshold of 100,000 short tons of CO2e annually or 548,000 pounds per day of CO_2e. The Project's GHG emissions are quantified and provided to comply with *State CEQA Guidelines*, Section 15064.4(a), and compared against the MDAQMD threshold for GHG emissions.

Construction Emissions

For purposes of this analysis, it is estimated that the Project would be constructed in approximately 5 months, with construction beginning in 2026 and Project operations commencing in 2026. This analysis assumes construction would be undertaken with the following primary construction phases: (1) debris removal, (2) grading and foundation preparation, and (3) building construction.

With the use of CalEEMod, GHG emissions throughout Project construction were calculated from off-road equipment usage, hauling vehicles, delivery trips, and worker trips to and from the site. The total GHG construction emissions during 2026 would be approximately 97 metric tons of carbon dioxide equivalent (MTCO2e). As GHG emissions impact from construction activities would occur over a relatively short time span, it would contribute a relatively small portion of the lifetime GHG emission impact of the Project. The total construction GHG emissions were divided by 30 years to determine an annual construction emission rate to be amortized over the Project's first 30 years of operations. Amortized over a 30-year period, the Project is anticipated to emit approximately 3.23 MTCO2e/year.

Operational Emissions

The operations of the Project would generate GHG emissions from mobile sources (vehicle trips), area sources, the usage of electricity, natural gas, water, and the generation of solid waste and wastewater. Emissions of operational GHGs are shown in **Table 3.3-3, Project Greenhouse Gas Emissions**. As shown, the total GHG emissions generated by the Project (including amortized construction emissions) would be approximately 447.23 $MTCO_2e$/year.

Table 3.3-3
Proposed Project Greenhouse Gas Emissions

Emissions Source	Metric Tons of Carbon Dioxide Equivalent (per year)
Amortized Construction Emissions	3.23
Mobile Sources	423
Area Sources	0.02
Energy Sources	16.00
Water Sources	1.10
Waste Sources	3.70
Refrigerants	0.27
Total GHG Emissions	**447.32**

Source: Impact Sciences, Inc. See ***Appendix A.***

As shown in **Table 3.3-3**, the Project would generate approximately 447.32 MTCO2e per year, which is well below the 100,000 short ton GHG emissions threshold established by the MDAQMD. Therefore, impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

Less than Significant Impact. As stated above, this analysis evaluates the significance of Project GHG emissions in a cumulative context based on its consistency with State and local laws and programs to address climate change. To that end, this analysis assesses the significance of the Project's potential environmental impacts associated with its GHG emissions qualitatively, based on the Project's consistency with AB 32, SB 32, and AB 1279 (through demonstration of conformance with 2022 Scoping Plan); SB 375 (through demonstration of conformance with Connect SoCal 2024); and the San Bernardino County Greenhouse Gas Reduction Plan.

Consistency with AB 32, SB 32, AB 1279

The Project would be consistent with applicable statewide regulatory programs designed to reduce GHG emissions consistent with AB 32, SB 32, AB 1279, and the 2022 Scoping Plan. In response to the passage of AB 1279 and the identification of the 2045 GHG reduction target, CARB published the 2022 Scoping Plan for Achieving Carbon Neutrality on November 16, 2022, and it was approved on December 15, 2022.[30] The 2022 Scoping Plan lays out the sector-by-sector roadmap for California, the world's fifth-largest economy, to achieve carbon neutrality by 2045 or earlier, outlining a technologically feasible, cost-effective, and equity-focused path to achieve the state's climate target. The 2022 Scoping Plan includes policies to achieve a significant reduction in fossil fuel combustion, further reductions in short-lived climate pollutants, support for sustainable development, increased action on natural and working lands (NWL) to reduce emissions and sequester carbon, and the capture and storage of carbon.

The 2022 Scoping Plan discusses the role of local governments in meeting the state's GHG reduction goals because local governments have jurisdiction and land use authority related to: community-scale planning and permitting processes, local codes and actions, outreach and education programs, and municipal operations. Furthermore, local governments may have the ability to incentivize renewable energy, energy efficiency, and water efficiency measures. As discussed in detail in Appendix D (Local Actions) of the 2022 Scoping Plan, local jurisdictions can do much to enable statewide priorities, such as taking local action to help the state develop the housing, transport systems, and other tools we all need. Indeed, state tools—such as the Cap-and-Trade Program or zero-emission vehicle programs—do not substitute for these local efforts. Multiple legal tools are open to local jurisdictions to support this approach, including the development of a climate action plan (CAP), sustainability plan, or inclusion of a plan for the reduction of GHG emissions and climate actions within a jurisdiction's general plan. Any of these can help to align zoning, permitting, and other local tools with climate action. The County of San Bernardino has fulfilled this local effort through the adoption of the County of San Bernardino Greenhouse Gas Reduction Plan Update on September 21, 2021.

The Project would comply with all regulations adopted in furtherance of the Scoping Plan to the extent required by law and to the extent that they are applicable to the Project. Furthermore, the Project would be consistent with the County's Regional Greenhouse Gas Reduction Plan, which identifies several measures to reduce emissions of GHGs in a manner consistent with the 2022 Scoping Plan. Additionally, as previously discussed, the Project would not exceed the 3,000 $MTCO_2e$ review standard established by the

30 California Air Resources Board, *2022 Scoping Plan Documents, Notice of Decision*. Available online at: https://ww2.arb.ca.gov/sites/default/files/2022-12/2022-sp-appendix-b-notice-of-decision.pdf, accessed November 12, 2025.

GHGRP and would not exceed the significance thresholds established by the MDAQMD. As such, the Project is consistent with Appendix D (Local Actions) of the 2022 Scoping Plan

The Project would be consistent with applicable statewide regulatory programs designed to reduce GHG emissions, consistent with the goals established in AB 32, SB 32, and AB 1279. AB 32 required CARB to adopt a scoping plan indicating how reductions in significant GHG sources will be achieved through regulations, market mechanisms, and other actions. In 2008, CARB released the Climate Change Proposed Scoping Plan that contained an outline of the proposed state strategies to achieve the 2020 greenhouse gas emission limits as outlined in AB 32. In response to SB 32, CARB adopted California's 2017 Climate Change Scoping Plan, which outlines the proposed framework of action for achieving California's SB 32 2030 GHG target: a 40 percent reduction in GHG emissions by 2030 relative to 1990 levels.[31] The 2030 target is intended to ensure that California remains on track to achieve the goal set forth by E.O. B-30-15 to reduce statewide GHG emissions by 2050 to 80 percent below 1990 levels. In response to the passage of AB 1279 and the identification of the 2045 GHG reduction target, CARB published the 2022 Scoping Plan for Achieving Carbon Neutrality. Appendix D, *Local Actions*, of the 2022 Scoping Plan Update includes "recommendations intended to build momentum for local government actions that align with the State's climate goals, with a focus on local GHG reduction strategies (commonly referred to as climate action planning) and approval of new land use development projects, including through environmental review under the California Environmental Quality Act." Appendix D, Local Actions, of the 2022 Scoping Plan Update recommends that jurisdictions that want to take meaningful climate action aligned with the State's climate goals should look to the following three priority areas:

- Transportation Electrification,
- VMT Reduction, and
- Building Decarbonization.

To assist local jurisdictions, the 2022 Scoping Plan Update presents a non-exhaustive list of impactful GHG reduction strategies that can be implemented by local governments within these three priority areas (Priority GHG Reduction Strategies for Local Government Climate Action Priority Areas).[32]

Transportation Electrification. The Project proposes to develop a Dutch Bros coffee shop with a drive-through. The Project would provide a total of 18 parking spaces (3 future electric vehicle charging stations [EVCS], 1 accessible EVCS, 1 accessible, 13 standard). The State and Town have established requirements for transportation electrification, and the Project would not conflict with their implementation. Specifically,

---

31 CARB, *California's 2017 Climate Change Scoping Plan*, November 2017.

32 Table 1 of Appendix D, *2022 Scoping Plan Update*, November 2022.

the State has adopted AB 1236 and AB 970, which require cities to adopt streamlined permitting procedures for EV charging stations. As a result, Chapter 8.10, Electric Vehicle Charging Systems, of the YVMC, facilitates convenient charging of electric vehicles and helps reduce the Town's reliance on fossil fuels, and generates additional employment within the Town and State.[33] Through the provision of EV charging infrastructure, the Project would support the State and the Town's goals of implementing EV chargers throughout the Town to be consistent with the Scoping Plan goals of transitioning to EVs.

VMT Reduction. As detailed in the Traffic Scoping Memorandum prepared for the Project by CR Associates, the Project would generate approximately 358 daily trips, including 89 AM peak hour trips and 30 PM peak hour trips. The Traffic Scoping Memorandum states that after applying a pass-by (existing trips on the main roadway system) reduction factor, the Project would generate 35 net new daily trips. As discussed in **Section 3.3.17(b),** the Project met the Project Type screening criteria. While the Project does not reduce VMT, the Project would be presumed to have a less than significant VMT impact and would not conflict with the Scoping Plan goals of reducing VMT throughout the region.

Building Decarbonization. The Project will be built to meet the most current CALGreen Buildings Standards, Title 24 standards, and the Town's Green Building Code (Section 8.02.100 of the YVMC). Additionally, the Project will incorporate 10,350 square feet of outdoor open space and will retain 2,808 square feet of existing landscaping near Twentynine Palms Highway. As such, the Project would not conflict with the Scoping Plan's goals of building decarbonization.

Consistency with the Southern California Association of Governments Connect SoCal 2024 Regional Transportation Plan / Sustainable Communities Strategy

The State of California has adopted plans and policies designed to reduce regional and local GHG emissions. SB 375 requires that each metropolitan planning organization prepare a Sustainable Communities Strategy (SCS) in the Regional Transportation Plan (RTP) that demonstrates how the region will meet greenhouse gas emissions targets. SB 375 establishes a collaborative relationship between MPOs and CARB to establish GHG emissions targets for each region in the state. Under the guidance of the goals and objectives adopted by the Southern California Association of Governments (SCAG) Regional Council, Connect SoCal 2024 was developed to provide a blueprint to integrate land use and transportation strategies to help achieve a coordinated and balanced regional transportation system. Connect SoCal represents the culmination of several years of work involving dozens of public agencies, 191 cities,

---

33 Town of Yucca Valley, *YVMC: Chapter 8.10: Electric Vehicle Charging Systems*. Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-2418, accessed November 11, 2025.

hundreds of local, county, regional, and state officials, the business community, environmental groups, and various nonprofit organizations.

The primary goal of the SCS is to provide a vision for future growth in Southern California that will decrease per capita GHG emissions from passenger vehicles. However, the strategies contained in the SCS will produce benefits for the region far beyond simply reducing GHG emissions. The SCS integrates the transportation network and related strategies with an overall land use pattern that responds to projected growth, housing needs, changing demographics, and transportation demands. The regional vision of the SCS maximizes current voluntary local efforts that support the goals of SB 375. The SCS focuses the majority of new housing and job growth in high-quality transit corridors and other opportunity areas on existing main streets, in downtowns, and on commercial corridors, resulting in an improved jobs-housing balance and more opportunity for transit-oriented development.

The Project proposes to develop a Dutch Bros coffee shop with a drive-through. Given the commercial nature of the Project, employment would be generated from the Project. Although the Project would increase employment in the area, it is anticipated that employees of the Project would primarily consist of existing residents in the Yucca Valley area, and the Project would not result in a high number of employees permanently relocating to the region. As previously discussed in **Section 3.3.3, Air Quality,** as the Project would employ up to 32 employees, based on the Department of Finance's average household size of 2.41 persons, the Project could result in a maximum population increase of approximately 77 persons.[34] Conservatively assuming that all 77 Project-generated residents relocate from outside of the Town, the Project's potential maximum increase of 77 persons would represent approximately three percent of the Town's projected increase in population between the years 2019 (21,700) and 2050 (24,000). Thus, the potential increase in population resulting from the Project will be nominal. The proposed Project's growth projections would not be considered substantial, and the Project would be consistent with the goals of the Connect SoCal 2024 RTP/SCS.

Consistency with the San Bernardino County Regional Greenhouse Gas Reduction Plan

Published in 2021, the Regional GHG Reduction Plan Update (GHG Plan) includes GHG inventories and local GHG reduction strategies for each of the 25 Partnership jurisdictions, which includes the town of Yucca Valley. The GHG Plan provides information that can be used by Partnership jurisdictions, if they choose to, to develop their own CAPs. The GHG Plan describes the reductions that are possible if the San

---

34 California Department of Finance, Demographic Research Unit, "E-5 Population and Housing Estimates, 1/1/2025." Available online at: https://dof.ca.gov/Forecasting/Demographics/Estimates/estimates-e5-2010-2021/ , accessed November 10, 2025.

Bernardino Council of Governments and every Partnership jurisdiction were to adopt the reduction strategies as described in the document.

The GHG Plan outlines how the goal of "reducing community GHG emissions to a level that is 40 percent below its 2020 GHG emissions level by 2030" can be achieved by the Town. The Town will meet and exceed the goal through a combination of state (approximately 80 percent) and local (approximately 20 percent) efforts. While the majority of the Town's GHG reduction goal will be achieved through state efforts, such as the Pavley vehicle standards, the State's low carbon fuel standard, the RPS, and other state measures to reduce GHG emissions, this goal would also need to be reached through local measures, such as those included in the GHG Plan.

According to the GHG Plan, all development projects, including those otherwise determined to be exempt from CEQA, will be subject to applicable Development Code provisions, including the GHG performance standards, and state requirements, such as the California Building Code requirements for energy efficiency. With the application of GHG performance standards, projects that are exempt from CEQA and small projects that do not exceed 3,000 $MTCO_2e$/year will be considered to be consistent with the GHG Plan.[35] As previously discussed, the Project operational emissions would not exceed the 3,000 $MTCO_2e$/year threshold. Projects that demonstrate consistency with the strategies, actions, and emission reduction targets contained in the Reduction Plan would have a less than significant impact on climate change. The Project would be compliant with the goals established in the GHG Plan and does not exceed the GHG threshold established by the GHG Plan.

Given the Project's relatively small increase in GHG emissions (i.e., less than the County's threshold) and the Project's consistency with all relevant adopted regulatory plans, the Project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. Moreover, the Project would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases, and these impacts would be less than significant.

As demonstrated above, the Project would be consistent with AB 32, SB 32, and AB 1279 (through demonstration of conformance with 2022 Scoping Plan), SB 375 (through demonstration of conformance with Connect SoCal 2024), and local plans and policies to address climate change (County of San Bernardino GHG Reduction Plan). Therefore, impacts with respect to GHG emissions would be less than significant.

---

35 San Bernardino County, *County of San Bernardino Regional Greenhouse Gas Emissions Reduction Plan*, 2021. Available online at: https://www.gosbcta.com/wp-content/uploads/2019/09/San_Bernardino_Regional_GHG_Reduction_Plan_Main_Text_Mar_2021.pdf, accessed November 11, 2025.

Mitigation Measures: No mitigation measures are required.

3.3.9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?	☐	☐	☒	☐

Less than Significant Impact. Exposure of the public or the environment to hazardous materials could potentially occur through improper handling or use of hazardous materials or hazardous wastes during routine use, disposal, and/or transport of hazardous materials. The severity of these potential effects varies with the activity conducted, the concentration and type of hazardous materials or wastes present, and the proximity of sensitive receptors.

Limited amounts of some hazardous materials could be used in the short-term construction phase of the Project and could expose construction workers and the general public, including standard construction materials (e.g., paints and solvents), vehicle fuel, and other hazardous materials. In the event of a release of hazardous material, the Project would be required to notify the following State agencies under the following State statutes, respectively:

- Department of the California Highway Patrol: California Vehicle Code Section 23112.5;
- Office of Emergency Services and the California Public Utilities Commission: Public Utilities Code Section 7673, (PUC General Orders #22-B, 161);
- State Fire Marshal: Government Code Sections 51018
- Office Emergency Services: Water Codes Sections 13271, 13272; and
- Division of Occupational Safety and Health (Cal/OSHA): California Labor Code Section 6409.1 (b)10.

Common hazardous materials would likely be used in the construction and operation of the Project, including the use of standard construction materials (e.g., paints, solvents, and adhesives), cleaning and other maintenance products, diesel and other fuels (used in construction and maintenance equipment and vehicles), and pesticides associated with landscaping. The Project would be required to adhere to existing regulations, standards, and guidelines established by the U.S. EPA, the California Environmental Protection Agency, and the County of San Bernardino related to the storage, use, transport, and disposal

of hazardous materials. With compliance to applicable standards and regulations and adherence to the manufacturer's instructions related to the transport, use, or disposal of hazardous materials, the Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐

Less than Significant Impact. The Project involves the construction of a Dutch Bros coffee shop with a drive-through. Construction equipment utilized during construction activities associated with the Project could result in accidental release of hazardous substances such as petroleum-based fuels or hydraulic fluid used for construction equipment. However, the level of risk associated with this type of accidental release of hazardous substances is not considered significant due to the small volume and low concentration of hazardous materials utilized during construction and operation of the Project. As stated above, Project operations would involve the use of landscaping equipment and consumer cleaning products, which, although minimal, could potentially result in the accidental release of hazardous chemicals. Upon adherence to existing regulations related to chemical safety, impacts pertaining to the potential for accidental conditions during project operations would be less than significant. Lastly, there are no known hazardous sites associated with the Project Site according to the California Department of Toxic Substances Control's (DTSC) EnviroStor database,[36] the California State Water Resources Control Board (SWRCB) GeoTracker database,[37] and DTSC's current "Cortese" list.[38] As such, the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident

---

36 California Department of Toxic Substances Control, *EnviroStor*. Available online at: https://www.envirostor.dtsc.ca.gov/public/map/?myaddress=58111+Twentynine+Palms+Highway+, accessed October 2, 2025.

37 State Water Resources Control Board, *GeoTracker*. Available online at https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=58111+Twentynine%2BPalms+Highway+yucca+valley, accessed October 2, 2025.

38 California Department of Toxic Substances Control, *Hazardous Waste and Substances Site List (Cortese)*. Available online at: http://www.envirostor.dtsc.ca.gov/public/mandated_reports.asp , accessed October 2, 2025.

conditions involving the release of hazardous materials into the environment; impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. **Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?**	☐	☐	☐	☒

No Impact. The closest school to the Project Site is the Onaga Elementary School, located approximately 1.13 miles south of the Project Site at 58001 Onaga Trail in Yucca Valley. As such, the Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of a school; no impacts would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. **Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?**	☐	☐	☐	☒

No Impact. Government Code §65962.5 requires the DTSC, the State Department of Health Services, the SWRCB, and the California Integrated Waste Management Board to compile and annually update lists of hazardous waste sites and land designated as hazardous waste property throughout the state. As previously stated, the Project Site is not included on a list of hazardous materials sites pursuant to

Government Code §65962.5, including the DTSC EnviroStor database,[39] SWRCB's GeoTracker database,[40] and DTSC's current "Cortese" list.[41] As such, no impacts would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
e. **For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?**	☐	☐	☒	☐

Less than Significant Impact. The closest public use airport to the Project Site is the Yucca Valley Airport, located approximately 1.3 miles to the northwest of the Project Site. The Yucca Valley Airport is a public-use airport operated by the Yucca Valley Airport District that supports private flights and does not offer any commercial passenger flight services.[42] According to the San Bernardino County Airport Comprehensive Land Use Plan for the Yucca Valley Airport, the Project Site is located outside of the 60 CNEL contour line.[43] The Noise Element of the Yucca General Plan discusses noise contours near the airport; Policy N 1-2 would require noise-reducing site design and building construction in residential and mixed-use projects in areas with outdoor levels exceeding 65 dBA CNEL. Further, the Noise Element details that there are no portions of the Town located within the 65 CNEL contours of any airport. Despite being

---

39 California Department of Toxic Substances Control, *EnviroStor*. Available online at: https://www.envirostor.dtsc.ca.gov/public/map/?myaddress=58111+Twentynine+Palms+Highway+, accessed October 2, 2025.

40 State Water Resources Control Board, *GeoTracker*. Available online at https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=58111+Twentynine%2BPalms+Highway+yucca+valley, accessed October 2, 2025.

42 Town of Yucca Valley, *Town of Yucca Valley General Plan: Open Space and Conservation Element*, February 4, 2014. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/2594/637009395714400000, accessed October 3, 2025.

43 San Bernardino County, *Airport Comprehensive Land Use Plan: Yucca Valley Airport*, February 1992. Available online at: https://lus.sbcounty.gov/wp-content/uploads/sites/48/Airports/YuccaValley.pdf, accessed October 3, 2025.

within two miles of an airport, the Project would not result in a safety hazard or excessive noise for people residing or working in the Project Area. Therefore, impacts are less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
f. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐

Less than Significant Impact. While the Town does not have an adopted emergency response plan, the Town does have a Local Hazards Mitigation Plan (LHMP). Although the Safety Element of the Town's General Plan states that the LHMP will be updated to include evacuation routes, the most recent update to the LHMP does not include these routes. The Safety Element states that the Town's Circulation Plan routes are considered the backbone routes for evacuation purposes, but this is not explored in depth.[44]

The Project Site would be accessed via the existing driveways along Twentynine Palms Highway and Balsa Avenue. Additionally, internal circulation within the Project Site allows for two-way traffic circulation, providing connections between the parking areas, the drive-through component of the Project, and the internal roadways that link the site to adjacent land uses. As part of the review and approval of the Project, development plans would be reviewed by the San Bernardino Sheriff's Department and the San Bernardino County Fire Department prior to construction to ensure that alternative route planning to facilitate the passage of people and vehicles through/around any temporary required road closures occurs and is implemented, if needed. The Project does not anticipate the required closure of any public or private streets and would not impede emergency vehicle access to the Project Site or vicinity. Construction activities would be limited to the Project Site, and the Project would use the existing on-site driveways as access points for emergency vehicles. Included in such plans would be provisions for any needed signage for detours, training of flagmen, and provision for staging areas for emergency vehicles responding to a call, as required by the Town's sheriff and fire agencies. Thus, emergency access in and out of construction sites, including evacuation routes for construction workers, would remain during the construction process. Thus,

44 Town of Yucca Valley, *Town of Yucca Valley General Plan: Open Space and Conservation Element*, February 4, 2014. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/2596/637009395718470000, accessed September 30, 2025.

the Project would not impair the implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan, and no impacts would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
g. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

No Impact. While the Project Site is vacant and undeveloped, the Project Site is largely surrounded by developed uses and does not include wildlands or high-fire-hazard terrain or vegetation. The California Department of Forestry and Fire Protection (CAL Fire) identifies and maps areas of significant fire hazard based on fuels, terrain, and other relevant factors. Wildfire risks in State Responsibility Areas (SRA) are called Fire Hazard Severity Zones and are grouped into moderate, high, and very high zones.[45] According to CAL Fire, the Town is not located in a Fire Hazard Severity Zone.[46] Therefore, implementation of the proposed Project would not directly or indirectly be subject to any wildfire risks. No impact would occur.

Mitigation Measures: No mitigation measures are required.

45 See Cal. Code Regs., tit. 24, § 702A for a definition of "fire hazard severity zones."

46 CAL FIRE, *Fire Hazard Severity Zone Viewer*, 2024. Available online at: https://experience.arcgis.com/experience/6a9cb66bb1824cd98756812af41292a0, accessed October 3, 2025.

3.3.10 Hydrology and Water Quality

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐

Less than Significant Impact. The U.S. EPA establishes national water quality standards and regulates stormwater discharges through the National Pollutant Discharge Elimination System (NPDES) program pursuant to Section 402 of the Clean Water Act. The NPDES program for the Town is administered by the Colorado River Regional Water Quality Control Board (CRRWQCB); the NPDES permit develops waste discharge requirements that include the preparation and implementation of a Water Quality Management Plan (WQMP). The requirements included in the NPDES permit aim to control pollutants entering storm drain systems, educate the public about stormwater impacts, eliminate illicit discharges, and implement site-specific Best Management Practices (BMPs).

Since the Project Site encompasses approximately 1.01 gross acres and would result in ground disturbance of one acre or more, the Project is subject to the SWRCB NPDES Construction General Permit. Compliance with this permit requires the preparation and implementation of a Stormwater Pollution Prevention Plan (SWPPP) to minimize water quality impacts during construction. Furthermore, grading or construction operations under Town grading or construction permits are prohibited from allowing loose trash, rubbish, or debris to accumulate or to be carried offsite by wind or water; are required to keep trash, rubbish, and debris contained; and are required to provide for waste collection to prevent trash containers from overfilling, by Section 8.03, Construction Site Maintenance and Trash Containment of the YVMC. Additionally, the Project would be required to implement BMPs to address pollutant discharges associated with construction activities in accordance with Chapter 9.37, Soil Erosion and Dust Control, and Section 9.32.110, Stormwater Management, of the YVMC.

Project operations would release typical chemicals related to commercial uses into the Town's stormwater system. Operation of the Project would continue to adhere to the post-construction BMP requirements of Section 9.32.110 of the YVMC. Compliance with state and local regulatory requirements and the implementation of the appropriate BMPs would reduce potential water quality impacts from the Project to a less than significant level.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐

Less than Significant Impact. The Project Site is currently vacant and undeveloped. The Project would introduce new impervious surfaces compared to existing conditions. However, this increase in impervious surfaces from Project implementation would not substantially decrease groundwater supplies or impede groundwater recharge as the Project Site is not used for groundwater recharge activities or extraction. Additionally, the Project includes 10,350 square feet of landscaping as well as a stormwater retention pond to provide permeable surfaces across the Project Site. Impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner, which would:	☐	☐	☒	☐
i. Result in substantial erosion or siltation on-or off-site?				

Less than Significant Impact. The Project site is vacant and undeveloped. No streams or rivers traverse the Project Site. Soil disturbance would temporarily occur during Project construction due to trenching for soil compaction, excavation, and grading activities. As such, disturbed soils would be susceptible to high rates of erosion from wind and rain, resulting in sediment transport via stormwater runoff from the Project Site. However, the Project would be required to implement BMPs to address pollutant discharges associated with construction activities in accordance with Chapter 9.37, Soil Erosion and Dust Control, and Section 9.32.110, Stormwater Management, of the YVMC to minimize the runoff of sedimentation and

siltation pollutants during Project-related construction activities. Compliance with these local regulations would reduce impacts related to erosion and siltation on- or off-site to less than significant levels.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
ii. Result in flooding on-or off-site?	☐	☐	☒	☐

Less than Significant Impact. According to the Federal Emergency Management Agency's Flood Map Service Center, the Project Site is not located within a 100-year flood hazard area.[47] The proposed Project would be required to be constructed in accordance with the California Building Code (as amended by the YVMC) and Section 8.04.050, *Provisions for Flood Hazard Reduction: Standards of Construction* of the YVMC. It is not anticipated that the Project would increase surface runoff in a manner that would result in on- or off-site flooding. Thus, impacts are anticipated to be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
iii. Create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐

Less than Significant Impact. As stated, while Project implementation would result in an increase in impervious area, the Project will be constructed in accordance with the California Building Code as well as Section 9.32.110, Stormwater Management, of the YVMC. Additionally, the Project includes 10,350 square feet of landscaping as well as a stormwater retention pond to provide permeable surfaces across the Project

47 Federal Emergency Management Agency, *FEMA Flood Map Service Center*. Available online at: https://msc.fema.gov/portal/search?AddressQuery=58133%2029%20Palms%20Hwy%2C%20Yucca%20Valley%2C%20CA%2092284, accessed October 10, 2025.

Site. Therefore, the Project is not expected to exceed the capacity of the existing/planned stormwater drainage systems, and less than significant impacts would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
iv. Impede or redirect flood flows?	☐	☐	☒	☐

Less than Significant Impact. As stated above, the Project Site is located outside of a 100-year flood hazard area and is located within an area identified as having little chance of flooding. Moreover, the Project is not of a size or scale that would have the potential to impede or redirect flood flows. Therefore, no impacts would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?	☐	☐	☒	☐

Less than Significant Impact. As stated above, the Project Site is not located within a 100-year flood hazard area. The Project is not subject to the potential effects of a seiche, tsunami, or mudflows caused by a lack of upstream waterbodies. The Project site is located over 85 miles northeast of the Pacific Ocean. As such, the Project is not under threat of a tsunami. Additionally, according to the California Department of Water Resources, the Project Site is not located within a designated dam inundation area.[48] Therefore, the Project would not result in the release of pollutants in a flood hazard, tsunami, or seiche zone due to inundation, and no impacts would occur.

Mitigation Measures: No mitigation measures are required.

48 California Department of Water Resources, "California Dam Breach Inundation Maps." Available online at: https://fmds.water.ca.gov/maps/damim/. Accessed October 10, 2025.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
e. **Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?**	☐	☐	☐	☒

No Impact. As previously discussed, the Project would adhere to the BMP requirements of Section 9.32.110, Stormwater Management, of the YVMC. Further, the Project would be required to comply with the Water Quality Control Plan for the Colorado River Basin (Basin Plan), a master policy document for managing water quality issues in the region. The Project would adhere to the Basin Plan's requirements for BMPs. As such, the proposed Project would not substantially degrade water quality, significantly deplete groundwater supplies or interfere with groundwater recharge. Therefore, no impact related to the Basin Plan or sustainable groundwater management plans would occur.

Mitigation Measures: No mitigation measures are required.

3.3.11 Land Use and Planning

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project physically divide an established community?	☐	☐	☒	☐

Less Than Significant Impact. The physical division of an established community is typically associated with construction of a linear feature, such as a major highway or railroad tracks, or removal of a means of access, such as a local road or bridge, which would impair mobility in an existing community. The Project includes the construction of a Dutch Bros coffee shop with a drive-through. The Project would not introduce any new factors that could physically divide an established community, such as constructing major highways/roadway, storm channel, bridge, or utility transmissions. Therefore, impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

Less Than Significant Impact. The SCAG's Connect SoCal 2024 RTP/SCS is a long-range regional transportation and land use network plan that provides a vision of the region's future mobility and housing needs with economic, environmental, and public health goals. Similarly, the Town's General Plan serves as a blueprint for the Town's planning efforts and vision for the future.

Table 3.3-4, Project Consistency with SCAG's Connect SoCal Land Use Policies, demonstrates the Project's consistency with relevant Connect SoCal's goals. Policies that call for Town actions independent of review and approval or denial of the Project are omitted. The ultimate determination of whether the Project is consistent with applicable general plans lies with the Town of Yucca Valley's decision-making

bodies, specifically the Planning Commission, wherein they will review the Project and either approve or deny it; in the event that the Project is appealed, the appeal would be reviewed by the Town Council.

Table 3.3-4
Project Consistency with SCAG's Connect SoCal Land Use Policies

Connect SoCal 2024 RTP/SCS Goals	Discussion
Communities: Develop, connect, and sustain communities that are livable and thriving	**Consistent.** The proposed Project would develop a Dutch Bros coffee shop with a drive-through. The Project would be built to meet the most current CALGreen Buildings Standards, Title 24 standards, and the Town's Green Building Code (Section 8.02.100 of the YVMC). The development of the Project would be a source of employment for residents in the area, and the Project would also serve residents in the area.
Environment: Create a healthy region for the people of today and tomorrow	
Economy: Support a sustainable, efficient, and productive regional economic environment that provides opportunities for all residents	

Source: Southern California Association of Governments. SCAG 2024 RTP/SCS. Available online at: https://scag.ca.gov/sites/default/files/2024-05/23-2987-connect-socal-2024-final-complete-040424.pdf, accessed October 14, 2025.

The Project Site is designated with a Commercial (C) land use and is zoned for Mixed-Use Commercial (C-MU). Commercial land uses support local and regional serving retail and service uses, including uses such as shopping centers and malls, small commercial centers, hotels, commercial recreation uses such as movie theaters and bowling alleys, restaurants, supermarkets, and personal services. Fast food (with drive-through, delivery) is permitted in the C-MU zone only with a conditional use permit (CUP). The surrounding areas are designated as Commercial and zoned C-MU.

The consistency of the Project with applicable objectives and policies in the General Plan Land Use Element is presented in **Table 3.3-5, Project Consistency with the Land Use Element**. As shown in **Table 3.3-5,** the Project will be consistent with the following applicable policies.

While the Project requires a CUP in order to be approved, the Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. The Project would serve residents and would also be an employment opportunity for residents. Therefore, impacts would be less than significant.

Table 3.3-5
Project Consistency with the Land Use Element

Goals/Policies	Project Consistency
Goal LU 1: A balanced mixture of integrated land uses that provide desirable neighborhoods, vibrant commercial districts, passive and active open spaces, a strong economic and employment base, appropriate public facilities and services, and fiscal sustainability	
LU Policy 1-1: Encourage infill development to maximize the efficiency of existing and planned public services, facilities, and infrastructure.	**Consistent:** The Project would develop a Dutch Bros coffee shop with a drive-through. Fast food with drive-through is permitted in the zone only with a CUP, which the Applicant will be pursuing. The Project is located in close proximity to SR-62, and would take advantage of infrastructure improvements that have been made along the route. The Project would bring a highly desirable fast food business to the area and would contribute greatly to the Town's economic sustainability by serving residents and being a source of employment for the Town.
LU Policy 1-2: Require that adjacent land uses and development types complement one another.	
LU Policy 1-15: Maintain Yucca Valley's position as the economic hub of the Morongo Basin. Support a broad range of commercial retail, service, office, business park, research and development, light industrial, and industrial uses to provide employment opportunities and contribute to the Town's economic sustainability.	
LU Policy 1-20: Focus commercial development along SR-62 to take advantage of infrastructure improvements.	

Source: Town of Yucca Valley Land Use Element, 2014.

3.3.12 Mineral Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒

No Impact. According to the California Department of Conservation (DOC), Division of Mine Reclamation, the Project Site has no active mines.[49] Further, according to the Town's Open Space and Conservation Element of the General Plan, the Town lies outside of areas that have been mapped by the California Geological Survey for mineral resource classification, and the U.S. Geological Survey does not identify any mines, processing plants, or locations of potential mining resources within the Town. The Town of Yucca Valley likely does not contain mineral resources of statewide or regional importance.[50] Implementation of the proposed Project would therefore have no impact on the availability of a known mineral resource that would be of value to the region and residents of the state.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

No Impact. As previously discussed in **Section 3.3.12(a),** above, the Project would not result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No impact would occur.

Mitigation Measures: No mitigation measures are required.

3.3.13 Noise

The following is a summary of the Project's Noise and Vibration Technical Report, included as **Appendix D, Noise and Vibration Technical Report,** to this document.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Will the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐

Less Than Significant.

Construction Impacts

Construction of the Project would require the use of heavy equipment during grading/site preparation, installation of utilities, building fabrication, and finishing. Construction activities would also involve the use of smaller power tools, generators, and other sources of noise. During each stage of construction, several types of equipment could potentially be operating concurrently, and noise levels would vary based on the amount of equipment in operation and the location of the activity. The Federal Highway Administration's (FHWA) Roadway Construction Noise Model (RCNM) has compiled data regarding the noise-generating characteristics of specific types of construction equipment and typical construction activities.

With the use of the RCNM, as detailed in **Appendix D** to this report,[51] the construction noise levels forecasted for the sensitive receptors are presented in **Table 3.3-6, Estimated Exterior Construction Noise at Sensitive Receptors.** Noise levels would diminish notably with distance from the construction site at a rate of 6 dB(A) per doubling of distance (noise from stationary or point sources is reduced by about 6 dB(A) for every doubling of distance at acoustically hard locations). For example, a noise level of 86 dB(A) Leq measured at 50 feet from the noise source to the receptor would decline to 80 dB(A) Leq at 100 feet from the source to the receptor and fall by another 6 dB(A) Leq to 74 dB(A) Leq at 200 feet from the source to the receptor. These noise attenuation rates assume a flat and unobstructed distance between the noise

51 Project construction noise levels were calculated based on the Project's anticipated mix of construction equipment with the FHWA RCNM Version 1.1.

generator and the receptor. Furthermore, it should be noted that increases in noise levels at sensitive receptors during construction would be intermittent and temporary and would not generate continuously high noise levels. In addition, the construction noise experienced at sensitive receptors during the initial periods of construction (i.e., site preparation/grading/foundations) typically would be reduced in the later construction periods (i.e., interior building construction).

Table 3.3-6
Estimated Exterior Construction Noise at Sensitive Receptors

Sensitive Land Uses [a]	Distance to Project Site (feet)	Estimated Construction Noise Levels [dB(A) Leq]	Exceed FTA 90 dB(A) 1-Hour Leq Criteria?
Debris Removal			
1. Residences to the south	228	67.2	No
Grading			
1. Residences to the south	228	66.2	No
Building Construction			
1. Residences to the south	228	63.7	No

[a] *See* ***Figure 4*** *of Appendix D for locations of sensitive receptors.*
[b] *While the project would include construction activities up to the adjacent property lines, consistent with FTA methodology, these calculations are based on distances from the center of the site to the receptors.*
See ***Appendix D.***

Temporary construction, maintenance, and repair activities are exempt from the YVMC regulations regarding noise so long as the temporary construction does not take place between the hours of 10:00 PM and 7:00 AM.[52] As the Project would comply with the daytime construction hours established in the YVMC, this analysis also uses the Federal Transit Administration's (FTA) general construction noise criteria of 90 dB(A) Leq (1-hour) to provide additional context for the Project's potential to generate daytime construction noise impacts. While construction activity would increase noise levels in the vicinity of the Project Site (see **Table 3.3-6**), the Project's construction activities would generally not exceed the FTA's general construction noise criteria of 90 dB(A) Leq (1-hour) at any sensitive receptors. Furthermore, Project construction would not occur during restricted periods, and thus, the Project would be consistent with the criteria set forth in the YVMC. As such, construction noise impacts would be ***less than significant,*** and no mitigation is required.

52 Town of Yucca Valley, *Yucca Valley Municipal Code*. Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-16234, accessed November 5, 2025.

To further minimize construction noise and ensure consistency with General Plan Policy N 1-15,[53] the following best management practices (BMPs) are recommended to be incorporated as Project design features. These measures are not required to reduce a potentially significant impact, since construction noise is exempt under YVMC during permitted hours and modeled levels remain below the FTA's 90 dB(A) Leq threshold, but they provide additional noise control during construction.

1. During all Project grading on-site, construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturer standards.

2. The contractor shall place all stationary construction equipment so that emitted noise is directed away from noise-sensitive receptors nearest the project site.

3. As applicable, all equipment shall be shut off and not left to idle when not in use.

4. The contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise/vibration sources and sensitive receptors nearest the project site during all project construction.

5. Jackhammers, pneumatic equipment and all other portable stationary noise sources shall be shielded and noise shall be directed away from sensitive receptors.

6. The project proponent shall mandate that the construction contractor prohibit the use of music or sound amplification on the project site during construction.

7. The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment.

Operational Noise

Traffic Noise

A traffic analysis for the Project was prepared by CR Associates.[54] Based on the traffic analysis contained therein, the Project is anticipated to generate approximately 358 average daily traffic trips (ADT).[55] The

---

53 Town of Yucca Valley General Plan Policy N 1-15 states: "Require the design and construction of industrial and commercial development to minimize excessive offsite noise impacts to surrounding properties." *Town of Yucca Valley General Plan: Noise Element*, February 4, 2014. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/2594/637009395714400000, accessed February 25, 2026.

54 Chen Ryan Associates, *Traffic Scoping Memorandum – Dutch Bros Coffee Project*, November 2025.

55 Chen Ryan Associates, *Traffic Scoping Memorandum – Dutch Bros Coffee Project*, November 2025.

closest roadway segment with recorded Caltrans average daily traffic volume data is on State Route 62, approximately 3,982 feet west of the Project Site at Joshua Lane. According to Caltrans data, this roadway segment carries approximately 11,700 average daily trips at Joshua Lane.[56] Based on this data, it is clear the Project's maximum of 358 daily trips would not have the potential double traffic volumes on existing roadways in the vicinity of the Project Site. Since it would take a doubling (i.e., a 100 percent increase) of roadway traffic volume to increase noise levels by 3 dB(A), the addition of traffic volume from operation of the Project would not increase traffic to levels capable of producing a 3 dB(A) ambient noise increase. Additionally, the Project is consistent with the surrounding land uses, which currently generate mobile noise sources typical of a commercial use. As such, any noise increase would be imperceptible, and impacts would be less than significant.

Parking & Drive-Thru Noise

Various noise events would occur periodically from the Project's parking uses. Such periodic events would include activation of car alarms, sounding of car horns, slamming of car doors, engine revs, and tire squeals. Automobile movements would comprise the most continuous noise source and would generate a noise level of approximately 65 dB(A) at a distance of 25 feet. Car alarm and horn noise events generate sound levels as high as 75 dB(A) at a reference distance of 25 feet, however these noise sources would be sporadic.

Parking for this Project would be provided in 18 spaces in a surface lot on the Project Site. It should also be noted that the existing urban environment of the Project Site currently generates noise levels associated with parking and vehicular noise sources identified above. Although the Project would increase the number of vehicles parking in the area, the types of noise associated with vehicles accessing the parking lot would be similar to those currently occurring in the vicinity of the Project Site. While periodic noise levels from car alarms, horns, slamming of doors, etc., would increase as a result of the Project, these events would not occur consistently over a 24-hour period and thus would not have the potential to increase ambient noise levels at off-site locations by 5 dB(A) Ldn or more, nor exceed the Town's exterior noise standards at off-site locations. As such, noise impacts from the parking areas would be considered less than significant.

As stated in the Project Description, the Project proposes the operation of a dual-lane drive-through facility designed to accommodate 23 queued vehicles that would operate daily between the hours of 5:00 AM and

---

56 Caltrans, "Annual Average Daily Traffic," available at: https://gisdata-caltrans.opendata.arcgis.com/datasets/d8833219913c44358f2a9a71bda57f76_0/explore?location=34.123058%2C-116.413158%2C18.35

11:00 PM. Based on field data recorded for a similar use,[57] drive-through activities may generate noise levels of approximately 56.1 dBA Leq at a distance of 50 feet. As shown in **Appendix D,** this data was used to estimate exterior noise levels at the nearby residential receptors. **Table 3.3-7, Exterior Noise Levels at Off-Site Receptors**, summarizes the estimated noise levels from parking and drive-through related noise at the nearby residences. As shown, exterior noise levels would not exceed existing noise levels during the daytime or nighttime, and impacts would be less than significant.

Table 3.3-7
Exterior Noise Levels at Off-Site Receptors

Off-Site Receptor [a]	Existing Noise Levels (Daytime/Nighttime)[b]	Estimated Noise Levels (dBA Leq)	Exceed Existing Noise Levels?
1. Residences to the south	48.8/50.7	42.8	No

[a] *See **Figure 4** of **Appendix D,** Noise Monitoring and Sensitive Receptor Location Map*
[b] *See **Appendix D, Noise & Vibration Technical Report***
Source: Impact Sciences, October 2025.

Stationary Noise Sources

As part of the Project, new mechanical equipment, HVAC units, and exhaust fans could be installed on the roof or near the proposed structures. Although the operation of this equipment would generate noise, the design of these on-site HVAC units and exhaust fans would be required to comply with the regulations of the YVMC. Specifically, Chapter 9.34 of the YVMC regulates stationary sources of noise such as HVAC units on neighboring properties. HVAC noise from the Project would also be substantially similar to existing conditions in the Project area and would not be considered a new type of noise source. As such, noise from stationary sources would be less than significant.

Mitigation Measures: No mitigation measures are required.

57 Field data recorded at a commercial retail center with drive-through's for a Panda Express, Taco Bell, and Dutch Bros. Vehicle traffic, parking lot activity, drive-through's and speakers, and truck loading/unloading activities were observed during the measurement. See Appendix D.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project generate excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐

Less than Significant Impact. The FTA provides ground-borne vibration impact criteria with respect to building damage during construction activities. PPV, expressed in inches per second, is used to measure building vibration damage. Construction vibration damage criteria are assessed based on structural category (e.g., reinforced-concrete, steel, or timber). FTA guidelines consider 0.2 inch/sec PPV to be the significant impact level for non-engineered timber and masonry buildings. Structures or buildings constructed of reinforced concrete, steel, or timber have a vibration damage criterion of 0.5 inch/sec PPV pursuant to FTA guidelines. Although the nearby structures appear to be constructed of reinforced concrete, steel, or timber, this analysis conservatively applies the 0.2 inch/sec PPV threshold typically applied to non-engineered timber and masonry buildings.

The vibration levels at nearby structures are shown below in **Table 3.3-8, Vibration Levels at Off-Site Structures from Project Construction.**

Table 3.3-8
Vibration Levels at Off-Site Structures from Project Construction

Sensitive Uses Off-Site [a]	Distance to Project Site (ft.)	Vibration Threshold (PPV)	Estimated PPV (in/sec)
1. Commercial structure to the west	Adjacent [b]	0.2 in/sec	0.191
2. Commercial structure to the east	46	0.2 in/sec	0.036
3. Residences to the south	228	0.2 in/sec	0.003

[a] *See **Figure 4** of **Appendix D** for locations of off-site structures.*
[b] *These calculations are based on distance from the site boundary to the structures. See **Appendix D**.*

The vibration velocities predicted to occur at the nearest off-site structures would be 0.191 in/sec PPV. As shown in **Table 3.3-8**, Project construction vibration levels would not have the potential to exceed the standard 0.2 in/sec threshold established by the FTA. This impact would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**	☐	☐	☒	☐

Less Than Significant Impact. The closest airport is the Yucca Valley Airport, which is located 1.3 miles from the Project Site. However, the Yucca Valley Airport Comprehensive Land Use Plan shows that the Project Site is outside the 60 dBA CNEL noise contour for the airports.[58] While aircraft operations may contribute to the noise in the project area from this airport, the Project Site is not expected to experience airport-related noise levels in excess of the Town's exterior standards. As such, the Project would not expose people residing or working in the project area to excessive airport-related noise levels. This impact would be less than significant.

Mitigation Measures: No mitigation measures are required

58 San Bernardino County Planning Department, *Yucca Valley Airport Comprehensive Land Use Plan*, February 1992. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/2600/637009400192130000, accessed November 5, 2025

3.3.14 Population and Housing

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐

Less than Significant Impact. A Project could induce population growth in an area either directly, through the development of a new business, or indirectly, through the extension of roads or other infrastructure. The Project does not include the addition of housing. Although the Project would increase employment in the area, it is anticipated that employees of the Project would primarily consist of existing residents in the Town or the San Bernardino County area, and the Project would not result in a high number of employees permanently relocating to the region. Estimating the number of future employees who may choose to relocate to the County would be highly speculative, since many factors influence personal housing location decisions (e.g., family income levels and the cost and availability of suitable housing in the local area). Nevertheless, in an effort to present a worst-case population growth scenario, this analysis assumes the Project would employ up to 32 full-time employees, all of whom would permanently relocate to the Town. Based on the Town's average household size of 2.41 persons, the Project could result in a nominal population increase of approximately 77 persons.[59] As of 2025, the Town has an estimated population of 22,027 persons.[60] The Connect SoCal 2024 SCAG growth forecasts estimate the Town's population to reach 24,000 persons by the year 2050, representing a total increase of 1,973 persons.[61] The Project's potential maximum increase of 77 persons would represent approximately 4 percent of the Town's projected increase in population between the years 2025 and 2050. However, this is a conservative estimate that assumes that these persons would be relocating to the Town. Therefore, the Project would not induce substantial unplanned population growth in an area, either directly or indirectly, and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐

Less than Significant Impact. The Project Site is currently vacant. No housing exists on-site. Therefore, the Project would not displace existing people or housing, and no impacts would occur.

Mitigation Measures: No mitigation measures are required.

3.3.15 Public Services

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	☐	☐	☒	☐

i. **Fire Protection?**

Less than Significant Impact. Fire services in the Town are provided by the San Bernardino County Fire Protection District (SBCFPD). The SBCFPD is a community-based, all-hazard emergency services provider that consists of five volunteer stations and more than 30 full-time fire stations in the County.[62] The SBCFPD operates one fire station within the Town limits (i.e., Fire Station No. 41), one in nearby unincorporated Yucca Mesa (i.e., Fire Station No. 42), and another in Joshua Tree (i.e., Fire Station No. 36). The closest fire station to the Project Site is Fire Station No. 41 located at 57201 Twentynine Palms Highway, 1.5 miles southwest of the Project Site.

As discussed in **Section 3.3.14, Population and Housing**, the Project would result in an increase in employees, which could result in an indirect increase in the Town's population. The Project's potential maximum increase of 77 persons would represent four percent of the Town's projected increase in population between the years 2025 and 2050. However, this is a conservative estimate that assumes that these persons would be relocating to the Town. Based on the relatively short distance from Fire Station No. 41 to the Project Site and the small increase in population generated from the Project, fire protection response will be adequate. Additionally, the Project will be required to comply with the California Fire Code (CFC), California Building Code (CBC), and National Fire Protection Association standards. The Project will also be required to include features such as established emergency procedures, an automatic fire-extinguishing system, an automatic smoke detection system, an emergency voice/alarm

62 San Bernardino County Fire Protection District, "Home." Available online at: https://sbcfire.org/, accessed October 3, 2025.

communication system, manual alarm fire boxes, etc. As such, a new fire station will not be needed to serve the Project, and impacts with respect to fire protection will be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
ii. Police protection?	☐	☐	☒	☐

Less than Significant Impact. The San Bernardino County Sheriff's Department (SBCSD) serves the Town of Yucca Valley as well as the unincorporated portions of the County of San Bernardino. The Yucca Valley Patrol Station, located at 63665 Twentynine Palms Highway, approximately 6.93 miles east of the Project Site, is the closest Sheriff station to serve the Project. The Project is not expected to result in a substantial increase in population compared to existing conditions, as discussed in **Section 3.3.14, Population and Housing**. The Project would construct new driveways along Balsa Avenue to provide vehicular access to the Project Site. Upon site plan review and approval, the Project Site would be required to meet the Town/County's emergency access requirements, and thus, would also provide adequate emergency access for the SBCSD. Based on the relatively short distance from the Yucca Valley Patrol Station to the Project Site and the negligible increase in population generated from the Project, the Project will not have the potential to substantially increase the demand on the SBCSD. Further, construction activities associated with the Project would be required to comply with the 2022 CBC, specifically Chapter 33 (Safeguards During Construction), which includes emergency access requirements, minimizing site safety hazards, and potential construction-related impacts on police services. Thus, the Project would not result in the need for new or physically altered police protection facilities and would not adversely impact service ratios and response times of the SBCSD. A less than significant impact would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
iii. Schools?	☐	☐	☒	☐

Less than Significant Impact. The Project Area is served by the Morongo Unified School District (MUSD). According to the 2024-2025 MUSD Local Control and Accountability Plan, the MUSD serves approximately

7,359 students in 18 public schools; these 18 schools consist of 11 elementary schools, two middle schools, two comprehensive high schools, one continuation high school, and two alternative education programs.[63] The closest MUSD school to the Project Site is the Onaga Elementary School, located approximately 1.13 miles south of the Project Site at 58001 Onaga Trail in Yucca Valley.

As stated in **Section 3.3.14, Population and Housing**, the Project could result in a nominal increase within the County's population, conservatively assuming that the Project would not be served by the Town's existing population. As such, pursuant to the California Government Code § 65995,[64] the Project Applicant would be required to pay school fees established by MUSD, payment of which, in accordance with existing rules and regulations regarding the calculation and payment of such fees, would, by law, provide full and complete mitigation for any potential direct and indirect impacts to schools as a result of the Project. Therefore, less than significant impacts would occur.

Therefore, the project's impacts on school services would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
iv. Parks?	☐	☐	☒	☐

Less than Significant Impact. A project could have a significant impact on local parks if the population increases the demand for recreation and park services. The Town's Parks and Recreation Master Plan details that the Town contains a total of 270 acres of community and neighborhood parks, special-use recreational facilities, and open space used for active recreation.[65] Typically, an increase in demand for parks is created by the development of new housing and/or population-generating actions. The proposed Project would develop a Dutch Bros coffee shop with a drive-through. As stated in **Section 3.3.14, Population and Housing**, the Project could result in a nominal increase within the County's population, conservatively assuming that the Project would not be served by the Town's existing population. The

64 Also known as SB 50 – the Leroy F. Greene School Facilities Act of 1998

65 Town of Yucca Valley, *Yucca Valley Parks and Recreation Master Plan Update*, adopted January 15, 2019. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/6499/637823568310100000, accessed October 3, 2025.

Project does not propose unplanned residential development or significantly increase the use of existing neighborhood or regional parks and recreational facilities in a way that would lead to their substantial physical deterioration. Therefore, the Project's impacts on local recreation and park services will be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
v. Other public facilities?	☐	☐	☐	☒

No Impact. A significant impact could occur if a project includes substantial employment or population growth, which increases the demand for library services. The closest public library to the Project Site is the Yucca Valley Branch Library, located approximately 1.3 miles southwest of the Project Site. As stated in **Section 3.3.14, Population and Housing**, the Project could result in a nominal increase within the County's population, conservatively assuming that the Project would not be served by the Town's existing population. This increase would be nominal and is not anticipated to substantially impact the Yucca Valley Branch Library's services or facilities. As such, no impact would occur.

Mitigation Measures: No mitigation measures are required.

3.3.16 Recreation

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐

Less than Significant Impact. The nearest park to the Project Site is the Community Center Park, located 1.3 miles west of the Project Site. As discussed in detail throughout this analysis, given the minimal potential population increase, the Project would be well served by the nearby parks and would not result in a substantial increase in demand for parks or any recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. Therefore, this impact is less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☒	☐

Less than Significant Impact. As previously stated, the Project's minimal potential increase in population would be well served by the Project's proposed open space as well as nearby parks. The Project would not require the construction or expansion of recreational facilities. Therefore, this impact is less than significant.

Mitigation Measures: No mitigation measures are required.

3.3.17 Transportation

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. **Would the project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?**	☐	☐	☒	☐

Less than Significant Impact. The Town's General Plan Mobility Element provides policy direction for the transportation system and links circulation strategies with those of population growth, environmental quality, and economic well-being. The Mobility Element establishes key goals, policies, programs, and requirements for achieving a transportation system that balances the needs of all road users. The Local Transportation Assessment prepared by CR Associates for the Project describes the Project Site's alternative transportation modes and consistency with VMT policies (see **Appendix E, Local Transportation Assessment**).

Pedestrian

Sidewalks are proposed within the Project site to provide pedestrian connectivity between the Project and existing off-site sidewalks immediately adjacent to the site. Continental crosswalks are provided throughout the Project site to enhance driver awareness within internal roadways and parking lot areas. Specifically, the site plan identifies a dedicated accessible path connecting the public right-of-way and parking areas to the walk-up service window, ensuring pedestrian movements are separated from the drive-through queue (see **Figure 2.3-1**). Based on the proposed and existing features, pedestrian facilities are considered adequate to accommodate project-related pedestrian activity.

Bicycle

An existing Class III bicycle facility runs east/west along Twentynine Palms Highway, while no designated bicycle facilities currently exist along Balsa Avenue. The Yucca Valley General Plan Circulation Element identifies a future Class II bicycle lane along Balsa Avenue adjacent to the Project site. The proposed Project site plan would allow bicycle access via adjacent roadways and internal drive aisles and includes a designated bicycle rack for customers. The Project's access driveways are designed to accommodate the future Class II lane on Balsa Avenue without conflict.

Transit

The nearest bus stop is located on the south side of Twentynine Palms Highway, approximately 300 feet walking distance from the Project Site, and provides service for the following Basin Transit bus routes:

- **Route 1** – This bus route is serviced along Twentynine Palms Highway and connects the Yucca Valley Transit Center, Hi-Desert Hospital, Indian Cove, and the Twentynine Palms Transit Center.
- **Route 7A** – This bus route is serviced along Twentynine Palms Highway and connects the Yucca Valley Transit Center, Walmart Center, and Town Hall.
- **Route 21** – This bus route is serviced along Twentynine Palms Highway and connects the Yucca Valley Transit Center, Landers Post Office, Holiday's Market, and Mojave Market.

Based on the preliminary review of the Project's site plan, the proposed Project would not conflict with existing or planned transit facilities. The Project would not make any changes to the public rights-of-way in the project vicinity or generate a substantial number of daily or peak-hour vehicle trips for construction or typical operations to warrant modifications to any transportation facilities (e.g., vehicular, transit, bicycle, or pedestrian). Construction-related traffic would be temporary and limited, involving approximately 800 cubic yards of soil export (roughly 50-80 truck trips total spread over the grading phase), which would not disrupt the circulation system. As such, the Project would not conflict with any program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Therefore, impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Would the project conflict or be inconsistent with *CEQA Guidelines* section 15064.3, subdivision (b)?	☐	☐	☒	☐

Less than Significant Impact. *State CEQA Guidelines* Section 15064.3, Subsection (b), states that "generally, [land use] projects within one- half mile of either an existing major transit stop, or an existing high quality transit corridor should be presumed to cause a less than significant transportation impact;" *State CEQA Guidelines* section 15064.3 (b)(2) requires the use of VMT to evaluate a project's transportation impacts. VMT analyzes the number of trips and miles traveled by motor vehicles associated with a development program or project. A Local Transportation Assessment was prepared by CR Associates in January 2026 (**Appendix**

E) to provide trip-generating characteristics, analysis assumptions, and VMT screening criteria. The Town does not have traffic analysis guidelines to consult; therefore, the traffic analysis and VMT screening criteria for the Project were based on the San Bernardino County Transportation Impact Study (TIS) Guidelines. The County's TIS Guidelines establish procedures to ensure consistency of analysis and the adequacy of information presented regarding development projects.[66] However, not all projects require a TIS. According to the County's TIS Guidelines, the requirement to prepare a TIS should be based upon, but not limited to, one or more of the following criteria:

- If a project generates 100 or more trips without consideration of pass-by-trips during any peak hour.
- If a project is located within 300 feet of
    - The intersection of two streets designated as Collector or higher in the County's General Plan, or the Department's Master Plan or
    - An impacted intersection as determined by the Traffic Division.
- If this project creates safety or operational concerns.
- The project has the potential to generate VMT that could result in a transportation impact as noted in the significance criteria of the County's TIS Guidelines.
- If a project generates less than 100 trips without consideration of pass-by-trips during any peak hour, a study may be required if there are special concerns.

According to the Local Transportation Assessment (**Appendix E**), applicable screening criteria were analyzed to determine if the project would be screened out from conducting a detailed VMT analysis:

- Project Type Screening
    - These projects include: K-12 schools, local-serving retail less than 50,000 square feet, local parks, day care centers, local-serving gas stations, local-serving banks, student housing projects, and local-serving community colleges that are consistent with the assumptions noted in the RTP/SCS.

66 San Bernardino County, *Traffic Impact Study Guidelines*, 2019. Available online at: https://www.sbcounty.gov/uploads/DPW/docs/Traffic-Study-Guidelines.pdf, accessed November 20, 2025.

- The Project is a 1,025 SF coffee shop with a drive-through, which is less than the 50,000 sq. ft. threshold for a local serving retail space. Therefore, the Project Type screening criteria are met for the Project.

- Small Project Screening
  - Projects that generate less than 110 daily vehicle trips can be presumed to cause a less-than-significant impact and would not require a detailed VMT analysis.
    - As indicated in **Appendix E**, the Project is expected to generate approximately 358 daily trips, including 89 AM peak hour trips and 30 PM peak hour trips, more than the threshold of 110 daily vehicle trips. Therefore, the Small Project Screening criteria are not met for the Project.
- Transit Priority Area (TPA) Screening
  - Projects located within a Transit Priority Area (TPA) as determined by the most recent SCAG RTP/SCS can be presumed to cause a less-than-significant impact and would not require a detailed VMT analysis.
    - Based on the SBCTA VMT Screening Tool, the proposed Project is not located within a TPA. Therefore, the Transit Priority Area screening criteria are not met for the Project.

Based on review of the VMT screening criteria noted above, the Project meets the Project Type screening criteria. Therefore, the Project would be presumed to have a less than-significant VMT impact, and no further VMT analysis is required for the Project. As such, the Project would not conflict with *State CEQA Guidelines* section 15064.3 (b). Therefore, impacts are less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐

Less than Significant Impact. A significant impact could occur if a project were to include a new roadway design or introduce a new land use or features into an area with specific transportation requirements and

characteristics that have not been previously experienced in that area, or if access or other features were designed in such a way as to create hazard conditions. The Project Site consists of a vacant, undeveloped parcel. The Project involves the development of a Dutch Bros coffee shop with a dual-lane drive-through. The Project drive-through operations would include the construction of two entrance drive-through lanes that continue to the dual order boards, and then merge to one lane prior to the pay and pickup windows.

The drive-through queue storage length from the drive-through entrance to the pick-up window is approximately 520 feet. Assuming 22 feet per vehicle, the proposed drive-through lane capacity is approximately 23 vehicles. According to the drive-through queueing analysis included in Chapter 7 of the Local Transportation Assessment in **Appendix E**, drive-through queueing data collection was conducted at three existing Dutch Bros coffee shop locations (La Quinta, Cathedral City, and Indio), which are comparable to the proposed Project's location in that the existing locations also have dual drive-through lanes and have limited to no indoor seating. The Local Transportation Assessment determined that the peak observed queue was 23 vehicles between 8:15 and 8:30 AM during the AM peak period on a typical weekday at the existing La Quinta location; however, the average queue length observed across comparable sites was significantly lower at approximately 16-18 vehicles.

As noted previously, the proposed drive-through queuing capacity for the Project would be 23 vehicles. Therefore, the proposed drive-through capacity would accommodate the anticipated peak drive-through demand. The Project's drive-through entrance is set back from the public right-of-way and is accessed via internal drive aisles shared with the adjacent commercial center. In the unlikely event that demand exceeds the 23-vehicle capacity, the queue would extend into the private internal drive aisle rather than the public right-of-way (Twentynine Palms Highway or Balsa Avenue). This internal queuing would not obstruct emergency access or create a hazard for through-traffic on the public highway. Additionally, the site plan incorporates pedestrian safety features, including continental crosswalks and a dedicated accessible path that is separated from the drive-through queuing area to prevent vehicle-pedestrian conflicts (see **Figure 2.3-1**). The Project does not propose any hazardous geometric design features and would not include any incompatible uses. As such, there would be no impacts regarding hazards due to a design feature or incompatible uses.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. Would the project result in inadequate emergency access?	☐	☐	☒	☐

Less than Significant Impact. Project Site access will be provided via the existing driveways along Twentynine Palms Highway and Balsa Avenue. The Local Transportation Assessment prepared for the Project (see **Appendix E**) provides a description of these driveways:

- The driveway situated on Twentynine Palms Highway is located approximately 500 feet west of Balsa Avenue and provides 3/4 access (left-out restricted). This driveway serves as one of the two access points to the retail land uses adjacent to the proposed Project, such as Big 5 Sporting Goods and Walgreens. This driveway provides a secondary emergency ingress/egress point for the site.

- The driveway situated on Balsa Avenue is located approximately 225 feet south of Twentynine Palms Highway and provides full-movement access. This driveway serves as one of the two access points to the retail land uses adjacent to the Project Site. The Local Transportation Assessment confirms that this driveway operates efficiently, ensuring unimpeded access for emergency responders entering from the residential areas to the south or Twentynine Palms Highway.

Internal circulation within the Project Site allows for two-way circulation, providing connections between the parking areas, the drive-through component of the Project, and the internal roadways that link the site to adjacent land uses. Access to the drive-through is provided on the south side of the Project Site and can be reached via the internal roadways from both the southern and northern portions of the site. The drive-through exit is located on the north side of the Project Site and connects to the northern internal roadway.

The Project's drive-through queue storage (approximately 520 feet) is designed to contain vehicle stacking within the Project Site boundaries. As discussed above, the queue capacity (23 vehicles) is sufficient to accommodate peak demand without spilling out onto the public right-of-way. This design ensures that the driveways at both Balsa Avenue and Twentynine Palms Highway remain clear of obstruction, preserving immediate access for emergency vehicles at all times.

The Project would utilize the existing driveways on-site for primary and emergency vehicular access. The Project would incorporate all applicable design and safety standards and regulations outlined in Chapter 33 of the 2025 California Building Code, and Chapter 11 (Construction Requirements for Existing Buildings)

of the California Fire Code, including minimum fire lane widths and turning radii for emergency apparatus.

Construction activities, including equipment staging and material storage, would be contained entirely within the Project Site boundaries. No prolonged lane closures on Twentynine Palms Highway (a primary regional evacuation route) or Balsa Avenue are proposed. Therefore, construction would not impede emergency response times or evacuation procedures.

Further, the Project would submit all Project plans to the Town, the SBCPD, and the SBCFD to confirm that the Project would provide adequate on-site access to emergency services. Therefore, the Project would not result in inadequate emergency access, and impacts would be less than significant.

Mitigation Measures: No mitigation measures are required.

3.3.18 Tribal Cultural Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	☐	☐	☒	☐
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?				

Less Than Significant Impact. On March 11, 2025, in accordance with Assembly Bill 52, the Town provided notice to the following Native American groups for consultation on the Project: Morongo Band of Mission Indians, Quechan Indian Tribe of the Fort Yuma Reservation, Serrano Nation of Mission Indians, Twenty-Nine Palms Band of Mission Indians, and the Yuhaaviatam of San Manuel Nation (YSMN). On October 10, 2025, the Agua Caliente Band of Cahuilla Indians was contacted for an opportunity to consult on the Project.

A Sacred Lands File (SLF) records search request was submitted to the Native American Heritage Commission (NAHC) for the Project on October 23, 2025, and a response was received on October 24, 2025 (see **Appendix C**); this response detailed that the results of the SLF were negative.

Consultation did not result in the identification of any specific tribal cultural resources (TCRs) within the Project site that are listed or eligible for listing in the California Register of Historical Resources (CRHR) or a local register. Given the negative results of the SLF and the absence of identified listed resources during the consultation process, the Project would not cause a substantial adverse change in the significance of a known TCR as defined by PRC Section 21074. Therefore, impacts would be less than significant.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
ii. **A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?**	☐	☒	☐	☐

Less than Significant with Mitigation Incorporated. As previously discussed, an NAHC SLF search was negative for the Project Site. However, through the Assembly Bill 52 consultation process, the Agua Caliente Band of Cahuilla Indians and YSMN identified the potential for undiscovered subsurface tribal cultural resources to be present in the area. Agua Caliente Band of Cahuilla Indians requested that a tribal monitor be present during ground-disturbing activities. YSMN indicated that while they do not currently require a monitor, they requested specific mitigation measures be implemented to address the treatment of any inadvertent discoveries. To address the potential for the Project to impact unknown subsurface TCRs that may be significant under PRC Section 5024.1(c), the Town has agreed to incorporate the tribes' requested protocols.

Implementation of **Mitigation Measures MM TCR-1** and **MM TCR-2** ensures that if any TCRs are encountered during construction, they will be identified, evaluated, and treated in coordination with the consulting tribes. Therefore, impacts to potential TCRs would be reduced to a less than significant level.

Mitigation Measures:

MM TCR-1 The Yuhaaviatam of San Manuel Nation (YSMN) Cultural Resources Management Department and the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office shall be contacted regarding any pre-contact cultural resources discovered during Project implementation. Information regarding the nature of the find shall be provided to the tribes to allow Tribal input with regard to significance and treatment. If the find is deemed significant, a Cultural Resources Monitoring and Treatment Plan shall be prepared in coordination with the consulting tribes, and all

subsequent finds shall be subject to this Plan. If significant Tribal Cultural Resources are found, the consulting tribes may elect to place a tribal monitor on-site for the duration of the ground-disturbing activities in the vicinity of the find.

MM TCR-2 Any archaeological/cultural documents created as a part of the Project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Town of Yucca Valley for dissemination to YSMN and ACBCI. The Town of Yucca Valley and/or Applicant shall consult in good faith with the consulting tribes throughout the Project's ground-disturbing activities and until all cultural resource documentation is finalized.

3.3.19 Utilities and Service Systems

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. **Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?**	☐	☐	☒	☐
b. **Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?**	☐	☐	☒	☐
c. **Would the project result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?**	☐	☐	☒	☐

Less than Significant Impact.

Water

The Hi Desert Water District (HDWD) supplies water services to the Town. HDWD currently has four main sources of water supply—groundwater from Warren Valley Basin, groundwater from Reche/Ames/Means Valley Groundwater Basin, septic system and irrigation return flows to groundwater, and State Water Project (SWP) imports via the Mojave Water Agency (MWA) to recharge the Warren Valley Basin.[67] Groundwater is recharged by natural storm water flows, irrigation and wastewater return flow, and State

67 Town of Yucca Valley, *General Plan Environmental Impact Report*, Part 5, 2014. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/5603/637399893763570000, accessed October 14, 2025.

Water Project imports to recharge the Warren Valley Basin via water deliveries from the Morongo Basin Pipeline to percolation ponds in Yucca Valley.[68]

The HDWD has more than 10,000 connections and serves the Town of Yucca Valley and portions of unincorporated San Bernardino County with water and wastewater services. The District's delivery system infrastructure includes 13 active wells with a 7,000 gallons per minute total capacity, 16 storage tanks which can hold 12.66 million gallons of water, 10 booster stations, 16 pressure reducing valves, and 296 miles of pipeline.[69] The approximately 57 square mile service area is comprised of residential, commercial, and industrial land uses; however, the service area is predominantly residential (94 percent of the total connections). The HDWD is responsible for ensuring that water demand within the Town is met and that State and federal water quality standards are achieved.

According to the HDWD's 2020 Urban Water Management Plan (UWMP), future water use for the year 2020 would be 2,947 acre feet (af), and by 2045, demand would grow to 3,350 af. Under single-dry and multi-dry years, the HDWD is confident that it is capable of meeting the water demands in its service area in normal, single-dry, and five consecutive dry years from 2020 through 2045.[70] According to **Appendix A, Air Quality Technical Report**, the Project would result in an increase in the demand for potable water at a rate of approximately 540,256 gallons per year, or 1.66 AF per year. This would represent less than one percent of the HDWD's anticipated supply of potable water in 2045. As such, the implementation of the Project is not expected to measurably reduce the HDWD's supply projections, and as such, no new or expanded water treatment facilities would be required. The HDWD would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. Therefore, with respect to water treatment facilities, impacts would be less than significant. No mitigation measures are required.

Wastewater

Historically, nearly all land uses in Yucca Valley have relied on individual septic systems to treat wastewater, with wastewater generation being assumed to be 80 gallons per person per day, or about 1.7 million gallons per day (mgd) based on a population of 21,282.[71] However, septic systems are being

69 *Ibid.*

70 *Ibid.*

71 Town of Yucca Valley, *General Plan Environmental Impact Report, Part 5*, 2014. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/5603/637399893763570000, accessed October 14, 2025.

eliminated in order to maintain the quality of the groundwater basins. On November 1, 2011, the Colorado River Basin Regional Water Quality Control Board amended its basin plan to prohibit discharge from septic systems in the Town of Yucca Valley.[72] The elimination of the septic systems will be implemented in three phases, with areas of the Town prohibited from discharging beginning in 2016 (Phase 1), 2019 (Phase 2), and 2022 (Phase 3). At Phase 1, the anticipated wastewater treatment system capacity would be 1.5 to 2.0 mgd, at Phase 2 the capacity would be 3 mgd, and at Phase 3 the capacity would be 4 mgd, with a capacity of 6 mgd at full buildout, which has yet to be determined.[73] Approximately 77 miles of sewers are planned for Phase 1 of the water reclamation system, consisting of approximately 74.7 miles of gravity sewers and 2.3 miles of force mains, that is, pressurized sewers conveying wastewater from a pump station to another gravity sewer. In 2019, the HDWD completed the construction of a Wastewater Reclamation Facility (WRF) and wastewater collection system to service the Town and the unincorporated area of San Bernardino County. At the time of preparing this analysis, based on the most recent Water Reclamation Facility Annual Report from 2021, the plant operated 24/7 in 2021 at an average dry weather (ADWF) flow of 0.441 mgd in 2021.[74] 1,290 connections were installed during 2021 for a total of 3,197, which represents approximately 70 percent of the total connections in Phase 1.[75] The WRF currently has the ability to treat flows from the collection system equal to an average daily flow of 1 mgd.[76]

The Project proposes to connect to an existing sewer manhole on the Site as well as to install a 6" sanitary sewer lateral to be able to connect to the Town's sewer system. As stated above, the Project is estimated to use 1,480 gpd of water, 0.1 percent of the available daily treatment capacity at the WRF. Implementation of the proposed Project would not require, nor would it result in, the construction of new wastewater treatment or collection facilities or the expansion of existing facilities. Additionally, the Project would not result in a generation of wastewater that would exceed the WRF's existing capacity, nor would the Project impact the WRF's ability to meet existing commitments. As such, impacts would be less than significant.

Stormwater

According to the Town's General Plan EIR, development in the Town has occurred in a piecemeal fashion over the years, much of it before the Town was incorporated, and without the benefit of a planned drainage

---

72 *Ibid.*

74 Hi Desert Water District, *Water Reclamation Facility 2021 Annual Report*, January 24, 2022. Available online at: https://www.hdwd.com/DocumentCenter/View/823/2021-WRF-Annual-Monitoring-Report, accessed November 12, 2025.

75 *Ibid.*

76 *Ibid.*

network.[77] Flood control facilities in the Town are limited; some improvements have been made under the direction of the San Bernardino County Flood District (SBFCD), and others have been constructed by developers as a condition of approval. The Project Site is vacant and undeveloped; given the existing state of the Project Site, implementation of the Project would introduce new, impervious surfaces. Presently, water collected on the site either percolates into the ground or leaves the Project Site as runoff into nearby storm drains present along Balsa Avenue. While the proposed Project would introduce new impervious surfaces, the Project Site is served by existing storm drainage infrastructure, and the Project includes a stormwater retention pond to prevent flooding on site. Additionally, the Project Applicant would be subject to the Town's development impact fee for construction and maintenance of general facilities, park facilities, storm drain facilities, and street and traffic facilities, authorized by YVMC Chapter 3.40.[78] Further, the Project proposes to add 10,350 square feet of landscaping and retain 2,808 square feet of existing landscaping, ensuring more pervious surfaces are present on the Project Site. Impacts to stormwater drainage facilities would be less than significant.

Electrical, Natural Gas, and Telecommunication Services

Electrical power for the Project Site will be supplied by Southern California Edison (SCE), and natural gas will be supplied by SoCal Gas Company. As previously mentioned in **Section 3.3.6, Energy,** in 2025, the total electrical generation in California was 216,181 gigawatt-hours (GWh).[79] Statewide electric consumption in 2024 was estimated by the California Energy Commission (CEC) to be 282,013 GWh, with San Bernardino County responsible for consuming approximately 16,206 GWh.[80] Statewide natural gas consumption in 2024 was estimated by the CEC to be 11,083 million therms (MMThm), with San Bernardino County responsible for consuming approximately 547 MMThm.[81] The Project would connect to existing electrical and natural gas infrastructure that serves the Project Area, which includes connecting to an

80 California Energy Commission, *Energy Consumption by County*, 2024. Available online at: https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fwww.energy.ca.gov%2Ffilebrowser%2Fdownload%2F8144%3Ffid%3D8144&wdOrigin=BROWSELINK, accessed October 1, 2025.

81 California Energy Commission, *Energy Consumption by County*, 2022. Available online at: https://view.officeapps.live.com/op/view.aspx?src=https%3A%2F%2Fwww.energy.ca.gov%2Ffilebrowser%2Fdownload%2F8146%3Ffid%3D8146&wdOrigin=BROWSELINK, accessed October 1, 2025.

existing electrical transformer located near the Project Site. The Project would be built to be energy efficient and be in conformance with the latest version of California's Building Energy Efficiency Standards and Green Building Standards Code.

Cable, internet, and telephone services are provided to residents by third-party purveyors, such as Frontier Communications and Spectrum.[82] Telecommunication facilities serve the Project Site and are able to provide the surrounding neighborhood and commercial uses with dependable service. Telecommunications facilities would be sufficient to serve the Project. As such, impacts related to dry utility services and facilities would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐

Less than Significant Impact. Solid waste services for the Town are provided by Burrtec Waste Industries. The closest landfill that would serve the Project Site would be the Landers Sanitary Landfill, located approximately 7 miles north of the Project Site. The Landers Landfill has a maximum permitted throughput of 1,200 tons per day.[83] As of 2023, the remaining capacity of the landfill is 11,063,811 cubic yards; the maximum capacity of the facility is 13,983,500 cubic yards.[84]

The Project will develop a Dutch Bros coffee shop with a drive-through. Construction activities associated with the Project will generate solid waste that will be temporary and will cease upon completion of the Project. The handling of all debris and waste generated during construction of the Project will be subject to the State's (AB 939) and Town's (Chapter 6.02, Solid Waste Collection and Disposal, of the YVMC) requirements for salvaging, recycling, and reuse of materials from construction activity on the Project Site. According to **Appendix A**, the Project's operational activities are expected to generate approximately 12

82 Town of Yucca Valley, Town of Yucca Valley: Services – Utilities. Available online at: https://www.yucca-valley.org/services/utilities, accessed November 13, 2025.

83 CalRecycle, "SWIS Facility/Site Activity Details: Landers Sanitary Landfill." Available online at: https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/1882?siteID=2664, accessed November 13, 2025.

84 *Ibid.*

tons per year of solid waste, or approximately 66 pounds per day. The solid waste generated from Project operations will represent less than one percent of the maximum daily throughput of the remaining capacity of the Landers Sanitary Landfill. Therefore, solid waste impacts from construction and operation of the Project would be less than significant.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
e. Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Less than Significant Impact. As stated above, the Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure. Furthermore, the Project would be required to demonstrate compliance with the California Integrated Waste Management Act of 1989 (Assembly Bill [AB] 939), which requires all California cities to "reduce, recycle, and re-use solid waste generated in the State to the maximum extent feasible." AB 939 requires that at least 50 percent of waste produced be recycled, reduced, or composted. The Project would also comply with the most current CALGreen Building Code, which includes design and construction measures that help reduce construction-related waste through material conservation and other construction-related efficiency measures. Thus, less than significant impacts would occur.

Mitigation Measures: No mitigation measures are required.

3.3.20 Wildfire

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒

No Impact. According to CAL Fire, the Project Site is not located in a Fire Hazard Severity Zone.[85] As previously discussed, development plans would be reviewed by the San Bernardino County Sheriff's Department and the San Bernardino County Fire Protection District prior to construction to ensure that alternative route planning to facilitate the passage of people and vehicles through/around any temporary required road closures occurs and is implemented, if needed. The Project does not anticipate the required closure of any public or private streets and would not impede emergency vehicle access to the Project Site or vicinity. Construction activities would be limited to the Project Site, and the Project would use the existing on-site driveways as access points for emergency vehicles. Included in such plans would be provisions for any needed signage for detours, training of flagmen, and provision for staging areas for emergency vehicles responding to a call, as required by the Town's police and fire agencies. Thus, emergency access in and out of construction sites, including evacuation routes for construction workers, would remain, and no impact would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒

No Impact. Wildfires have the potential to occur not only in fire-prone undeveloped areas, but also in developed areas where existing transmission lines, lightning strikes, lawn equipment operated over dry

85 CAL FIRE, *Fire Hazard Severity Zone Viewer*. Available online at: https://osfm.fire.ca.gov/what-we-do/community-wildfire-preparedness-and-mitigation/fire-hazard-severity-zones, accessed October 3, 2025.

grass, fireworks, and even arson may ignite a wildfire. Wildfires pose a significant public health risk due to their air quality impacts, particularly with regard to smoke and particulate matter exposure. This risk persists even after a wildfire is extinguished because particulate matter from fire ash can be picked up by winds.

As stated above, the Project Site is not located in a Fire Hazard Severity Zone. The Project is vacant and undeveloped with minimal vegetation that would not exacerbate wildfire risks or expose the public to uncontrolled spread. Thus, no impact would occur

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒

No Impact. The Project Site is surrounded by existing infrastructure and would not require the installation or maintenance of roads, fuel breaks, emergency water or other sources that could exacerbate fire risk. As such, no impacts would occur.

Mitigation Measures: No mitigation measures are required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
d. Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

No Impact. As stated above, the Project would not be located in or near a Fire Hazard Severity Zone. Additionally, the Project Site is located on relatively flat terrain, and would not be subject to landslides.

Thus, wildfire impacts involving downslope, downstream flooding, or landslides would not occur, and there would be no impact.

Mitigation Measures: No mitigation measures are required.

21. Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. **Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?**	☐	☒	☐	☐

Less Than Significant with Mitigation Incorporated. As discussed in **Section 3.3.4, Biological Resources**, the Project could potentially disturb and modify critical habitats that may be present on-site for special-status bird species. As such, implementation of **Mitigation Measure BIO-1** and **BIO-2** would ensure that the impacts to the critical habitat of special-status bird species and western Joshua Trees would be reduced to less than significant.

As discussed in **Section 3.3.5, Cultural Resources**, and **Section 3.3.18, Tribal Cultural Resources**, while the results of the NAHC Sacred Land File search were negative, tribes were contacted to provide further input on the Project. The Agua Caliente Tribe and the YSMN Tribe responded with varying interest in consulting on the Project. The YSMN Tribe provided the Town with Tribal Cultural mitigation measures (**MM TCR-1 and MM TCR-2**) to protect previously undiscovered tribal cultural resources. Standard archaeological mitigation measures (**MM CUL-1 through MM CUL-3**) are also incorporated in accordance with CEQA requirements. As analyzed in **Section 3.3.7, Geology and Soils**, ground-disturbing activities associated with Project construction may potentially uncover any cultural, archaeological, or paleontological resources. As such, implementation of **Mitigation Measure GEO-1** would reduce these potential impacts to less than significant levels.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☒	☐	☐

Less Than Significant with Mitigation Incorporated. The Project generally would not contribute to potentially cumulatively considerable impacts. As indicated in the above analysis, with implementation of the required mitigation measures, the Project would not result in any unmitigated significant adverse impacts and/or cumulatively considerable impacts. Specifically, **Mitigation Measures BIO-1, BIO-2, CUL-1, CUL-2, CUL-3, GEO-1,** and **TCR-1, TCR-2,** would reduce potentially significant impacts to less than significant levels. The Project does not include any unmitigated cumulatively considerable impacts when considered in connection with the effects of past, present, and probable future projects. No further analysis is necessary.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

Less than Significant Impact with Mitigation Incorporated. As indicated in the above analysis, with implementation of the required mitigation measures, the Project would not result in any unmitigated significant adverse impacts. Thus, the Project would not have the potential to result in substantial adverse effects on human beings either directly or indirectly, with mitigation measures incorporated.

1.0 INTRODUCTION

This Air Quality Technical Report evaluates air quality impacts associated with the proposed Dutch Bros coffee shop location at 58121 Twentynine Palms Highway in the Town of Yucca Valley (Town) (Project). This report has been prepared by Impact Sciences, Inc., to support the Project's environmental documentation being prepared pursuant to the California Environmental Quality Act (CEQA). This analysis considers both the temporary air quality impacts from Project construction and long-term impacts associated with operation of the Project.

1.1 PROJECT LOCATION

The Project Site is located at 58121 Twentynine Palms Highway (State Route 62) in the Town of Yucca Valley, San Bernardino County, California (Assessor's Parcel Number [APN] 0601-416-05). The Project Site encompasses approximately 1.01 gross acres (44,190 square feet) and is situated along the south side of Twentynine Palms Highway, the primary east-west transportation corridor through the Morongo Basin. **Figure 1, Regional Vicinity**, illustrates the site's location in a regional context.

The Project Site is currently vacant and undeveloped, except for an existing paved drive aisle at the northern portion of the site that connects two adjacent commercial developments. The topography of the site is generally flat, with no significant slopes, drainage channels, or geologic features. The site supports native desert vegetation, including Western Joshua Trees (*Yucca brevifolia*), which are protected under the California Endangered Species Act. Portions of the site also show evidence of disturbance from illegal off-road vehicle use. **Figure 2, Aerial Photograph of the Project Site**, shows an aerial photograph of the existing Project Site and surroundings.

1.2 PROJECT DESCRIPTION

Project Overview

The Project proposes the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee shop with a dual-lane drive-through facility and associated site improvements. The drive-through is designed to accommodate 23 queued vehicles. In addition to on-site improvements, the Project would contribute in-lieu fees toward off-site roadway improvements consistent with the Town's circulation plans, specifically, the widening of Twentynine Palms Highway to an ultimate half-width of 67 feet along the Project frontage. The future widening of Twentynine Palms Highway would be undertaken at a later date by the Town of Yucca Valley Public Works/Engineering Department and the San Bernardino County Transportation Authority. **Figure 3, Conceptual Site Plan**, illustrates the Project's proposed site plan.

FIGURE 3

IMPACT SCIENCES

Conceptual Site Plan

1590.003•10/25

Operation

Operation of the Project would entail a drive-through-focused quick-service coffee shop with limited walk-up service and no indoor seating. Land uses, such as the Project, are conditionally permitted in the C-MU zone. The Project is anticipated to operate daily between the hours of 5:00 AM and 11:00 PM. The Project is expected to employ approximately 24 to 32 people, with 6 to 8 employees working per shift. Supply deliveries would occur via small box trucks during off-peak hours.

Access and Circulation

Site access would be provided from two existing driveways that currently serve adjacent commercial developments. One driveway is located along Twentynine Palms Highway and provides access to the Big 5 Sporting Goods store to the west, while the second driveway is located along Balsa Avenue in proximity to the Walgreens store to the east. Project customers and employees would enter the Project Site from the existing internal drive aisle that connects the two commercial developments and integrate circulation with the surrounding uses. In addition, the Project would include a new drive aisle along the southern perimeter of the Project Site, providing direct access to the Project Site from the existing surface parking lot of the Walgreens to the east.

Internal circulation would allow vehicles to either park in the designated parking area or enter the drive-through lanes, which wrap around the southern portion of the site and direct vehicles northward to exit into adjacent parking lots and back to surrounding roadways. The Project would provide a total of 18 parking spaces (3 future electric vehicle charging stations [EVCS], 1 accessible EVCS, 1 accessible, 13 standard).

Landscaping

The Project would incorporate approximately 10,350 square feet of landscaping and would retain 2,808 square feet of existing landscaping near Twentynine Palms Highway. The landscape design emphasizes drought-tolerant, desert-appropriate plantings consistent with the Town's Water Efficient Landscape Ordinance and the Water Use Classification of Landscape Species (WUCOLS) guidelines.

Proposed trees include Swan Hill fruitless olive and Mexican palo verde, which can reach a mature size of approximately 25 feet in height and width. Shrub and accent plantings would include desert agave, purple threeawn, grey desert spoon, California buckwheat, Texas sage, deer grass, and jojoba. Texas sage would be installed at a height of approximately 36 inches at the time of planting to provide immediate screening and visual structure along the eastern property line, specifically to screen car headlights, and shrubs would be used to screen the trash enclosure.

Groundcover treatments would consist of approximately 1,498 square feet of decorative local cobble placed over landscape fabric. This treatment would provide a low-maintenance, water-efficient groundcover for a desert climate.

1.3 PROJECT CONSTRUCTION SEQUENCING

For the purpose of evaluating potential environmental impacts, this report assumes that construction of the Project would begin in 2026 and extend over a period of approximately five (5) months following issuance of the Incidental Take Permit for the removal of the Western Joshua Trees, with full operation anticipated in 2026. This schedule is considered conservative and is intended to capture the maximum potential daily impacts associated with construction activities.

Construction would occur in three primary stages: (1) debris removal, (2) grading and foundation preparation, and (3) building construction. All equipment and construction staging would occur within the boundaries of the Project Site. The grading plan for the Project anticipates approximately 1,000 cubic yards of cut and 200 cubic yards of fill, resulting in a net export of approximately 800 cubic yards of soil.

The debris removal stage would involve clearing the site and preparing it for grading, which would then be immediately followed by grading and foundation preparation. Debris removal and grading/foundation stages are expected to last approximately five (5) weeks. This stage would establish building pads, prepare utility connections, and level the site. The building construction stage would then proceed over approximately four (4) months and would include construction of the coffee shop structure, installation of utilities, application of architectural coatings, and paving of the Project Site. Architectural coating and paving activities are expected to occur during the final month of the construction stage.

Consistent with the assumptions included within the California Emissions Estimator Model (CalEEMod), the following maximum daily equipment by stage will be assumed.

- Demolition/debris removal: 1 concrete industrial saw, 1 rubber-tired dozer, 2 tractors/loader/backhoes
- Grading: 1 grader, 1 rubber-tired dozer, 1 tractor/loader/backhoe
- Building Construction: 1 crane, 2 forklifts, 2 tractors/loaders/backhoes
- Paving: 4 cement and mortar mixers, 1 paver, 1 roller, 1 tractor/loader/backhoe
- Architectural Coating: 1 air compressor

2.0 ENVIRONMENTAL SETTING

2.1 AIR QUALITY SETTING

Mojave Desert Air Basin

The Project Site is located within the San Bernardino County portion of the Mojave Desert Air Basin ("MDAB" or "Basin). The Basin is composed of a 21,000-square-mile area that includes the eastern portion of Kern County, the eastern portion of Riverside County, the northeastern side of Los Angeles County, and almost all of San Bernardino County. The regional climate within the Basin is characterized by hot, dry summers, mild winters, very infrequent rainfalls, moderate winds, and low humidity. The MDAB is home to many mountain ranges containing long, broad valleys. The Sierra Nevada Mountains provide a natural barrier to the north, inhibiting cold air masses originating from Canada and Alaska from passing through the MDAB. Prevailing winds in the MDAB come from the west and the south, caused by air masses pushed onshore in Southern California by differential heating and channeled inland through mountain passes. The San Gabriel and San Bernardino mountain ranges block the majority of cool, moist air from the south; this results in infrequent rainfall and air pollutants settling in over the region. Local air quality in the Basin is affected by the transport of pollutants from other air basins. The Basin is downwind of the South Coast Air Basin and, though to a lesser extent, is downwind from the San Joaquin Valley Air Basin. Prevailing winds transport ozone and ozone precursors from both regions into and through the MDAB during the summer ozone season.

Air Pollutants of Concern

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards for outdoor concentrations. The federal and state standards have been set at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons, such as children, pregnant women, and the elderly, from illness or discomfort. Criteria air pollutants include ozone (O_3), nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide (SO_2), particulate matter 2.5 microns or less in diameter (PM2.5), particulate matter ten microns or less in diameter (PM10), and lead (Pb). Note that reactive organic gases (ROGs), which are also known as reactive organic compounds (ROCs) or volatile organic compounds (VOCs), and nitrogen oxides (NOx) are not classified as criteria pollutants. However, ROGs and NOx are widely emitted from land development projects and participate in photochemical reactions in the atmosphere to form O_3; therefore, NOx and ROGs are relevant to the Proposed Project and are of concern in the Basin. As such, they are listed below along with the criteria pollutants. Sources and health effects

commonly associated with criteria pollutants are summarized in **Table 1, Criteria Pollutants Summary of Common Sources and Effects.**

Table 1
Criteria Pollutants Summary of Common Sources and Effects

Pollutant	Major Man-Made Sources	Human Health & Welfare Effects
Carbon Monoxide (CO)	An odorless, colorless gas formed when carbon in fuels is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
Nitrogen Dioxide (NO_2)	A reddish-brown gas formed during fuel combustion for motor vehicles and industrial sources. Sources include motor vehicles, electric utilities, and other sources that burn fuel.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Contributes to global warming and nutrient overloading, which deteriorates water quality. Causes brown discoloration of the atmosphere.
Ozone (O_3)	Formed by a chemical reaction between volatile organic compounds (VOC) and nitrous oxides (NOx) in the presence of sunlight. VOCs are also commonly referred to as reactive organic gases (ROGs). Common sources of these precursor pollutants include motor vehicle exhaust, industrial emissions, gasoline storage and transport, solvents, paints, and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing, and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield. Damages rubber, some textiles, and dyes.
Particulate Matter (PM10 & PM2.5)	Produced by power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles, and others.	Increased respiratory symptoms, such as irritation of the airways, coughing or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).
Sulfur Dioxide (SO_2)	A colorless, nonflammable gas formed when fuel containing sulfur is burned, when gasoline is extracted from ore. Examples are petroleum refineries, cement manufacturing, metal processing facilities, locomotives, and ships.	Respiratory irritant; aggravates lung and heart problems. In the presence of moisture and oxygen, sulfur dioxide converts to sulfuric acid, which can damage marble, iron, and steel. Damages crops and natural vegetation. Impairs visibility. Precursor to acid rain.

2.2 AMBIENT AIR QUALITY

Criteria Air Pollutant Monitoring Data

Overseen by the California Air Resources Board (CARB), the California Ambient Air Monitoring Network consists of more than 250 monitoring stations operated by Federal, State, and local agencies.[1] Ambient air quality in Yucca Valley can be inferred from ambient air quality measurements conducted at nearby air quality monitoring stations. Existing levels of ambient air quality and historical trends and projections are documented by measurements made by the Mojave Desert Air Quality Management District (MDAQMD), the air pollution regulatory agency in the Basin. The MDAQMD maintains air quality monitoring stations that process ambient air quality measurements throughout the Basin. While the MDAQMD provides multiple air monitoring stations throughout the Mojave Desert Air Basin, the closest monitoring stations representative of air quality in Yucca Valley are monitored by the South Coast Air Quality Management District.

The purpose of the monitoring station is to measure ambient concentrations of pollutants and determine whether ambient air quality meets the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS). Ozone and particulate matter (PM10 and PM2.5) are pollutants of particular concern in the Basin. The closest active monitoring station to the Project Site and most representative of air quality is CARB Station No. 33137, located at 590 E. Racquet Club Avenue in Palm Springs. However, this station only monitors O_3 and PM2.5. The closest active monitoring station to the Project Site monitoring PM10 is CARB Station No. 33164, located at 200 S. Hathaway Street in Banning. Ambient emission concentrations vary due to localized variations in emission sources and climate and should be considered "generally" representative of ambient concentrations near the Project Site. See **Table 2, Air Monitoring Station Ambient Pollutant Concentrations.**

[2] *The 8-hour federal O_3 standard was revised from 0.075 ppm to 0.070 ppm in 2015. The statistics shown are based on the 2015 standard of 0.070 ppm.*

The attainment status for the Basin region is included in **Table 3, Attainment Status of Criteria Pollutants in the Mojave Desert Air Basin**. Areas that meet ambient air quality standards are classified as attainment areas, while areas that do not meet these standards are classified as nonattainment areas. The Basin region is designated as a partial nonattainment area for federal ozone and PM2.5 standards and is designated as nonattainment for state ozone, PM10, and PM2.5 standards.

Table 3
Attainment Status of Criteria Pollutants in the Mojave Desert Air Basin

Toxic Air Contaminants

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are another group of pollutants of concern. TACs are considered either carcinogenic or noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For regulatory purposes, carcinogenic TACs are assumed to have no safe threshold below which health impacts would not occur, and cancer risk is expressed as excess cancer cases per one million exposed individuals. Noncarcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

There are many different types of TACs, with varying degrees of toxicity. Sources of TACs include industrial processes, such as petroleum refining and chrome-plating operations; commercial operations, such as gasoline stations and dry cleaners; and motor vehicle exhaust. Public exposure to TACs can result from emissions from normal operations, as well as from accidental releases of hazardous materials during upset conditions. The health effects associated with TACs are quite diverse and generally are assessed locally, rather than regionally. TACs can cause long-term health effects such as cancer, birth defects, neurological damage, asthma, bronchitis, or genetic damage, or short-term acute affects such as eye watering, respiratory irritation (a cough), running nose, throat pain, and headaches.

To date, CARB has designated 244 compounds as TACs. Additionally, CARB has implemented control measures for a number of compounds that pose high risks and show potential for effective control. The majority of the estimated health risks from TACs can be attributed to a relatively few compounds.[2]

CARB identified diesel particulate matter (DPM) as a TAC. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particulates and gases produced when an engine burns diesel fuel. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. DPM includes the particle-phase constituents in diesel exhaust. The chemical composition and particle sizes of DPM vary between different engine types (heavy-duty, light-duty), engine operating conditions (idle, accelerate, decelerate), fuel formulations (high/low sulfur fuel), and the year of the engine. Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs. Almost all diesel exhaust particle mass is 10 microns or less in diameter. Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.

Sensitive Receptors

Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiovascular diseases.[3] According to the MDAQMD, residences, schools, daycare centers, playgrounds, and medical facilities are considered to be sensitive receptor land uses; the following project types proposed for sites within the specified distance to an existing or planned (zoned) sensitive receptor land use must be evaluated using significance threshold criteria number four per MDAQMD guidelines:[4]

- Any industrial project within 1,000 feet
- A distribution center (40 or more trucks per day) within 1,000 feet
- A major transportation project (50,000 or more vehicles per day) within 1,000 feet
- A dry cleaner using perchloroethylene within 500 feet

---

4 MDAQMD, *CEQA and Federal Conformity Guidelines*, 2020. Available online at: https://www.mdaqmd.ca.gov/home/showpublisheddocument/8510/638126583450270000, accessed November 10, 2025.

- A gasoline dispensing facility within 300 feet

The Project does not propose any of these uses, and the closest air quality sensitive receptors are the single-family residences located approximately 228 feet to the south of the Project Site.

3.0 REGULATORY FRAMEWORK

3.1 FEDERAL

Clean Air Act

The Clean Air Act (CAA) of 1970 and the CAA Amendments of 1971 required the U.S. Environmental Protection Agency (U.S. EPA) to establish NAAQS, with states retaining the option to adopt more stringent standards or to include other specific pollutants. On April 2, 2007, the Supreme Court found that carbon dioxide is an air pollutant covered by the CAA; however, no NAAQS have been established for carbon dioxide.

These standards are the levels of air quality considered safe, with an adequate margin of safety, to protect public health and welfare. They are designed to protect those "sensitive receptors" most susceptible to further respiratory distress, such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

The U.S. EPA has classified air basins (or portions thereof) as being in attainment, nonattainment, or unclassified for each criteria air pollutant, based on whether or not the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for nonattainment or attainment designations. **Table 3** lists the federal attainment status of the Basin for the criteria pollutants.

National Emissions Standards for Hazardous Air Pollutants Program

Under federal law, 187 substances are currently listed as hazardous air pollutants (HAPs). Major sources of specific HAPs are subject to the requirements of the National Emissions Standards for Hazardous Air Pollutants (NESHAPS) program. The U.S. EPA is establishing regulatory schemes for specific source categories and requires implementation of the Maximum Achievable Control Technologies (MACT) for major sources of HAPs in each source category. State law has established the framework for California's TAC identification and control program, which is generally more stringent than the federal program and is aimed at HAPs that are a problem in California. The state has formally identified 244 substances as TACs and is adopting appropriate control measures for each. Once adopted at the state level, each air district will be required to adopt a measure that is equally or more stringent.

National Ambient Air Quality Standards

The federal CAA required the U.S. EPA to establish NAAQS. The NAAQS sets primary standards and secondary standards for specific air pollutants. Primary standards define limits for the intention of protecting public health, which include sensitive populations such as asthmatics, children, and the elderly. Secondary Standards define limits to protect public welfare to include protection against decreased visibility, damage to animals, crops, vegetation, and buildings. A summary of the federal ambient air quality standards is shown in **Table 4, National Ambient Air Quality Standards**.

Table 4
National Ambient Air Quality Standards

Pollutant		Primary/Secondary	Averaging Time	Level
Carbon monoxide		Primary	8 hours	9 ppm
			1 hour	35 ppm
Lead		Primary and secondary	Rolling 3-month average	0.15 µg/m³
Nitrogen dioxide		Primary	1 hour	100 ppb
		Primary and secondary	Annual	53 ppb
Ozone		Primary and secondary	8 hours	0.070 ppm
Particulate Matter	PM2.5	Primary	Annual	9 µg/m³
		Secondary	Annual	15 µg/m³
		Primary and secondary	24 hours	35 µg/m³
	PM10	Primary and secondary	24 hours	150 µg/m³
Sulfur dioxide		Primary	1 hour	75 ppb
		Secondary	Annual	10 ppb

3.2 STATE

California Clean Air Act of 1988

The California CAA of 1988 (CCAA) allows the state to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. The California Air Resources Board (CARB), a part of the California Environmental Protection Agency (Cal EPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the CAAQS. The CCAA, amended in 1992, requires all air quality management districts (AQMDs) in the state to achieve and maintain the CAAQS. The CAAQS are generally stricter than national standards for the same pollutants and have also established state standards for sulfates, hydrogen sulfide,

vinyl chloride, and visibility-reducing particles, for which there are no national standards. CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB also has primary responsibility for the development of California's State Implementation Plan (SIP), for which it works closely with the federal government and the local air districts.

California Ambient Air Quality Standards

The federal CAA permits states to adopt additional or more protective air quality standards if needed. California has set standards for certain pollutants, such as particulate matter and ozone, which are more protective of public health than the respective federal standards. California has also set standards for some pollutants that are not addressed by federal standards. The state standards for ambient air quality are summarized in **Table 5, California Ambient Air Quality Standards**.

Table 5
California Ambient Air Quality Standards

Pollutant		Averaging Time	Level
Carbon monoxide		8 hours	9 ppm
		1 hour	20 ppm
Lead		30-day average	1.5 μg/m³
Nitrogen dioxide		1 hour	0.180 ppm
		Annual	0.030 ppm
Ozone		8 hours	0.070 ppm
		1 hour	0.09 ppm
Particulate matter	PM2.5	Annual	12 μg/m³
	PM10	24 hours	50 μg/m³
		Annual	20 μg/m³
Sulfur dioxide		1 hour	0.25 ppm
		24 hours	0.04 ppm
Sulfates		24 hours	25 μg/m³
Hydrogen sulfide		1 hour	0.03 ppm
Vinyl chloride		24 hours	0.01 ppm

Source: California Air Resources Board. July 2024. Table of Ambient Air Quality Standards. Available online at: https://ww2.arb.ca.gov/sites/default/files/2024-08/AAQS%20Table_ADA_FINAL_07222024.pdf, accessed September 12, 2025.

California State Implementation Plan

The federal CAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as a State Implementation Plan (SIP). The SIP is a living document that is periodically

modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The CAA Amendments dictate that states containing areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The EPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA.

State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the EPA for approval and publication in the Federal Register. The MDAQMD is responsible for developing, updating, and implementing an air quality attainment plan for the San Bernardino and Riverside County portions of the MDAB, in coordination with the Southern California Association of Governments. The MDAQMD has adopted several plans to attain state and federal standards for ozone and particulate matter within the Western Mojave Desert Ozone Nonattainment Area. The relevant plans for the MDAQMD are listed below:

Ozone Attainment Plans[5]

- 2022 8-Hour Ozone SIP: Western Mojave Desert Nonattainment Area
- 2016 8-Hour Ozone SIP: Western Mojave Desert Nonattainment Area
- 2015 8-Hour Ozone Reasonably Available Control Technology (RACT) SIP Analysis: Mojave Desert Air Quality Management District
- 2014 Updates to the 1997 8-Hour Ozone Standards SIPs: Coachella Valley and Western Mojave Desert 8-Hour Ozone Nonattainment Areas
- 2008 Mojave Desert Air Quality Management District Federal 8-Hour Ozone Attainment Plan (Western Mojave Desert Non-Attainment Area)
- 2004 Mojave Desert Air Quality Management District Ozone Attainment Plan (State & Federal)
- 1994 – Post 1996 Attainment Demonstration and Reasonable Further Progress Plan

---

Particulate Matter Plans

- 1995 Mojave Desert Planning Area PM10 Attainment Plan

California Air Toxics "Hot Spots" Information and Assessment Act (AB 2588)

The California Air Toxics Program is supplemented by the Air Toxics "Hot Spots" program, which became law (AB 2588, Statutes of 1987) in 1987. In 1992, the AB 2588 program was amended by Senate Bill 1731 to require facilities that pose a significant health risk to the community to perform a risk reduction audit and reduce their emissions through implementation of a risk management plan. Under this program, which is required under the Air Toxics "Hot Spots" Information and Assessment Act (Section 44363 of the California Health and Safety Code), facilities are required to report their air toxics emissions, assess health risks, and notify nearby residents and workers of significant risks when present.

Typically, land development projects generate diesel emissions from construction vehicles during the construction phase, as well as some diesel emissions from small trucks during the operational phase. Diesel exhaust is mainly composed of particulate matter and gases, which contain potential cancer-causing substances. Emissions from diesel engines currently include over 40 substances that are listed by EPA as hazardous air pollutants and by CARB as TACs. On August 27, 1998, CARB identified particulate matter in diesel exhaust as a TAC, based on data linking diesel particulate emissions to increased risks of lung cancer and respiratory disease.[6]

In March 2015, the OEHHA adopted "The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments" in accordance with the Health and Safety Code, Section 44300. The Final Guidance Manual incorporates the scientific basis from three earlier developed Technical Support Documents to assess risk from exposure to facility emissions. The 2015 OEHHA Final Guidance has key changes, including greater age sensitivity, particularly for children, decreased exposure durations, and higher breathing rate profiles. Because cancer risk could be up to three times greater using this new guidance, it may result in greater mitigation requirements, more agency backlog, and increased difficulty in getting air permits. Regardless of the change in calculation methodology, actual emissions and cancer risk within the South Coast Air Basin have declined by more than 50 percent since 2005.

The CARB provides a computer program, the Hot Spots Analysis and Reporting Program (HARP), to assist in a coherent and consistent preparation of a Health Risk Assessment (HRA). HARP2, an update to HARP,

---

6 Diesel exhaust is included within pollutants subject to the hotspot program. Please refer to OEHHA's Air Toxics Hot Spot Program Risk Assessment Guidelines. Available online at: https://oehha.ca.gov/air/crnr/notice-adoption-air-toxics-hot-spots-program-guidance-manual-preparation-health-risk-0.

was released in March 2015. HARP2 has a more refined risk characterization in HRA and CEQA documents and incorporates the 2015 OEHHA Final Guidance.

3.3 REGIONAL

Mojave Desert Air Quality Management District (MDAQMD)

The MDAQMD is the air pollution control district for San Bernardino County's High Desert and Riverside County's Palo Verde Valley. The MDAQMD has primary responsibility for regulating stationary sources of air pollution located within its jurisdictional boundaries. The MDAQMD implements air quality programs required by state and federal mandates, enforces rules and regulations based on air pollution laws, and educates businesses and residents about their role in protecting air quality and the risks of air pollution. Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties.[7]

MDAQMD Rules and Regulations

The following is a list of noteworthy MDAQMD rules that are required of construction activities associated with the Project:

- Rule 401 – *Visible Emissions.* A person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any one hour, which is:

    1. As dark or darker in shade as that designated No. 1 on the Ringelmann Chart, as published by the United States Bureau of Mines, or

    2. (b) Of such opacity as to obscure an observer's view to a degree equal to or greater than does smoke described in subsection (a) of this rule.

- Rule 402 – *Nuisance.* A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property

---

7 MDAQMD. *What is MDAQMD?* Available online at: https://www.mdaqmd.ca.gov/about-us, accessed November 10, 2025.

- Rule 403 – *Fugitive Dust.*

(C) Requirements

1. Any person shall not cause or allow the emissions of fugitive dust from any transport, handling, construction or storage activity so that the visible fugitive dust remains visible in the atmosphere beyond the property line of the emission source, except during high winds.

2. A person shall take every reasonable precaution to minimize fugitive dust emissions from wrecking, excavation, grading, clearing of land and solid waste disposal operations.

3. A person shall not cause or allow PM10 to exceed 100 micrograms per cubic meter when determined as the difference between upwind and downwind samples collected on federal reference method samplers at the property line for a minimum of five hours, except during high winds. Installation of samplers or monitors to determine compliance with this subsection shall be required at the Air Pollution Control Officer's (APCO) discretion.

4. Cities, Towns, and the County of San Bernardino shall collectively:

    a) Stabilize sufficient publicly maintained heavily traveled unpaved roads to reduce fugitive dust entrainment and wind erosion by at least 1,541 tons per year of PM10 emissions relative to 1990.

5. The Owner/Operator of a site undergoing weed abatement activity shall not:

    a) Disrupt the soil crust to the extent that visible fugitive dust is created due to wind erosion.

6. The Owner/Operator of any construction/demolition activities subject to this rule in accordance with subsection (A)(2) of this rule shall:

    a) Obtain and maintain a District-approved Dust Control Plan as set forth by Section (D) of this Rule; and

    b) Use periodic watering for short-term stabilization of disturbed surface area to minimize visible fugitive dust emissions. for the purposes of this rule, use of a water truck to maintain moist disturbed surfaces and actively spread water during visible dusting episodes shall be considered sufficient to maintain compliance; and

    c) Take actions sufficient to prevent project-related trackout onto paved surfaces; and;

d) Cover loaded haul vehicles while operating on publicly maintained paved surfaces; and

e) Stabilize graded site surfaces upon completion of grading when subsequent development is delayed or expected to be delayed more than thirty days, except when such delay is due to precipitation that dampens the disturbed surface sufficiently to eliminate visible fugitive dust emissions; and

f) Cleanup project-related trackout or spills on publicly maintained paved surfaces within twenty-four hours; and

g) Reduce non-essential earth-moving activity under high wind conditions. For purposes of this rule, a reduction in earth-moving activity when visible dusting occurs from moist and dry surfaces due to wind erosion shall be considered sufficient to maintain compliance; and

h) Maintain the natural topography to the extent possible during grading and other earth movement; and

i) Provide a construction schedule that specifies construction of parking lots and paved roads first, where feasible, and upwind structures prior to downwind structures; and

j) Cover or otherwise contain bulk material carried on haul trucks operating on paved roads; and

k) Remove bulk material tracked onto paved road surfaces.

- Rule 404: *Particulate Matter Concentration.* A person shall not discharge into the atmosphere from any source, particulate matter except liquid sulfur compounds, in excess of the concentration at standard conditions, shown in Table 404(a). Where the volume discharged is between figures listed in the table, the exact concentration permitted to be discharged shall be determined by linear interpolation.

  1. The provisions of this rule shall not apply to emissions resulting from the combustion of liquid or gaseous fuels in steam generators or gas turbines.

  2. For the purposes of this rule, emissions shall be averaged over one complete cycle of operation or one hour, whichever is the lesser time period. Refer to the official text of the Rule at the MDAQMD website to see Table 404(a).

- Rule 405: *Solid Particulate Matter Weight*

    1. A person shall not discharge into the atmosphere from any source, solid particulate matter including lead and lead compounds, in excess of the rate shown in Table 405 (a). Where the process weight per hour is between figures listed in the table, the exact weight of permitted discharge shall be determined by linear interpolation.

    2. For the purposes of this rule, emissions shall be averaged over one complete cycle of operation or one hour, whichever is the lesser time period. Refer to the official text of the Rule at the MDAQMD website to see Table 405(a).

- Rule 409: *Combustion Contaminants.* A person shall not discharge into the atmosphere from the burning of fuel, combustion contaminants exceeding 0.23 gram per cubic meter (0.1 grain per cubic foot) of gas calculated to 12 percent of carbon dioxide (CO_2) at standard conditions averaged over a minimum of 25 consecutive minutes.

3.4 LOCAL

Yucca Valley General Plan

The Town's Open Space and Conservation Element of the General Plan provides goals and policies that address the balance of development and growth with resource protection and preservation issues related to open space, water resources, air quality, biological resources, cultural and paleontological resources, soils, and scenic resources within the Town limits.[8] The following air quality goals and policies are relevant to the Project:

Goal OSC 10: Preservation and enhancement of the Mojave Desert region's air quality, in order to assure long-term availability of clean and healthful air in the Town of Yucca Valley, for the protection of the health and welfare of the community.

- **Policy OSC 10-3:** Promote the safe and efficient movement of people and materials into and through the Town as a means of reducing the impact of automobiles on local air quality.

- **Policy OSC 10-4:** Coordinate land use planning efforts to assure that sensitive receptors are reasonably separated from polluting point sources.

---

8 Town of Yucca Valley, *Town of Yucca Valley General Plan: Open Space and Conservation Element*, adopted February 4, 2014. Available online at: https://www.yucca-valley.org/home/showpublisheddocument/2596/637009395718470000, accessed September 12, 2025.

- **Policy OSC 10-5:** Provide consistent and effective code enforcement for construction and grading activities to assure ground disturbances do not contribute to blowing sand and fugitive dust emissions.

Yucca Valley Municipal Code

Section 9.34.040 – Air Quality[9]

A. Equipment Permit And Inspection Requirements: Required permits shall be obtained from the Mojave Desert air quality management district. Before the equipment may be constructed, plans and specifications shall be submitted to the MDAQMD for approval.

B. Permits From Air Quality Management Districts: Permits shall be obtained from the Mojave Desert air quality management district. If requested by the director, uses, activities, or processes that require air quality management district approval to operate shall file a copy of the permit with the department within thirty (30) days of its approval.

C. Diesel Exhaust Emissions Control Measures: The following emissions control measures shall apply to all discretionary land use projects approved by the town on or after January 15, 2009:

1. On Road Diesel Vehicles: On-road diesel vehicles are regulated by the California Air Resources Board.

2. Off-Road Diesel Vehicle/Equipment Operations: All business establishments and contractors that use off-road diesel vehicle/equipment as part of their normal business operations shall adhere to the following measures during their operations in order to reduce diesel particulate matter emissions from diesel fueled engines:

    a. Off road vehicles/equipment shall not be left idling on site for periods in excess of five (5) minutes. The idling limit does not apply to:

        1. Idling when queuing;

        2. Idling to verify that the vehicle is in safe operating condition;

        3. Idling for testing, servicing, repairing or diagnostic purposes;

---

9 Town of Yucca Valley, *YVMC: Chapter 9.34.040: Air Quality*. Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-16170, accessed September 12, 2025.

4. Idling necessary to accomplish work for which the vehicle was designed (such as operating a crane) and;

5. Idling required to bring the machine system to operating temperature.

b. Use reformulated ultra-low sulfur diesel fuel in equipment and use equipment certified by the U.S. Environmental Protection Agency (U.S. EPA) or that predates U.S. EPA regulations.

c. Maintain engines in good working order to reduce emissions.

d. Signs shall be posted requiring vehicle drivers to turn off engines when parked.

e. Any requirements or standards subsequently adopted by the Mojave Desert Air Quality Management District or the California Air Resources Board.

f. Provide temporary traffic control during all phases of construction.

g. On-site electrical power connections shall be provided for electric construction tools to eliminate the need for diesel-powered electric generators, where feasible.

h. Maintain construction equipment engines in good working order to reduce emissions. The developer shall have each contractor certify that all construction equipment is properly serviced and maintained in good operating condition.

i. Contractors shall use ultra-low sulfur diesel fuel for stationary construction equipment as regulated by air quality management district rules 431.1 and 431.2 to reduce the release of undesirable emissions.

j. Substitute electric and gasoline powered equipment for diesel powered equipment, where feasible.

4.0 AIR QUALITY ANALYSIS

4.1 THRESHOLDS AND METHODOLOGY

Thresholds of Significance

The impact analysis provided below is based on the application of the following *California Environmental Quality Act (CEQA) Guidelines* Appendix G, which indicates that a Project would have a significant impact on air quality if it would:

1. Conflict with or obstruct implementation of any applicable air quality plan.
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard.
3. Expose sensitive receptors to substantial pollutant concentrations.
4. Result in other emissions (such as those leading to odors), adversely affecting a substantial number of people.

MDAQMD Thresholds

The *MDAQMD CEQA and Federal Conformity Guidelines (MDAQMD Guidelines)* set forth methodologies and quantitative significance thresholds that a lead agency may use to estimate and evaluate the significance of a project's air emissions. According to the MDAQMD, any project is significant if it triggers or exceeds the most appropriate evaluation criteria. The District will clarify upon request which threshold is most appropriate for a given project; in general, the emissions comparison (criteria number 1) is sufficient:

1. Generates total emissions (direct and indirect) in excess of the thresholds given in **Table 6**;
2. Generates a violation of any ambient air quality standard when added to the local background;
3. Does not conform with the applicable attainment or maintenance plan(s);
4. Exposes sensitive receptors to substantial pollutant concentrations, including those resulting in a cancer risk greater than or equal to 10 in a million and/or a Hazard Index (HI) (non-cancerous) greater than or equal to 1.

A project with potentially significant impacts must incorporate mitigation sufficient to reduce its impact to a level that is not significant. A project that cannot be mitigated to a level that is not significant must

incorporate all feasible mitigation. Note that the emission thresholds are given as a daily value and an annual value, so that a multi-phased project (such as a project with a construction phase and a separate operational phase) with phases shorter than one year can be compared to the daily value.[10] See **Table 6, Mojave Desert AQMD Air Quality Significance Thresholds,** below.

Table 6
Mojave Desert AQMD Air Quality Significance Thresholds

Mass Daily Thresholds[a]		
Pollutant	**Annual Threshold (short tons)**	**Daily Threshold (pounds)**
NOx	25	137
VOC	25	137
PM10	15	82
PM2.5	12	65
SOx	25	137
CO	100	548
Lead	0.6	3
Greenhouse Gas (GHG) Thresholds		
GHG	100,000 short tons/yr or 548,000 pounds/day CO_2e	

[a] *Source: MDAQMD CEQA and Federal Conformity Guidelines*, 2020.

Additionally, a project is deemed to be consistent with applicable attainment or maintenance plans if the project is consistent with its land use plan designation.[11]

Methodology

This analysis focuses on the nature and magnitude of the change in the air quality environment due to implementation of the Project. Air pollutant emissions associated with the Project would result from on-site Project operations and from Project-related traffic volumes. Construction activities would also generate air pollutant emissions at the Project Site and on roadways, resulting from construction-related equipment and traffic. The increase in Project Site emissions generated by these activities and other secondary sources

10 MDAQMD, *MDAQMD CEQA and Federal Conformity Guidelines*, 2020. Available online at: https://www.mdaqmd.ca.gov/home/showpublisheddocument/8510/638126583450270000, accessed November 10, 2025.

11 MDAQMD, *MDAQMD CEQA and Federal Conformity Guidelines*, 2020. Available online at: https://www.mdaqmd.ca.gov/home/showpublisheddocument/8510/638126583450270000, accessed November 10, 2025.

has been quantitatively estimated and compared to thresholds of significance recommended by the MDAQMD (see **Project Impacts** subsection below).

Construction Emissions

The regional construction emissions associated with the Project were calculated using the California Emissions Estimator Model (CalEEMod). CalEEMod was developed in collaboration with the air districts of California as a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.

Construction activities associated with site preparation, grading, and building construction would generate pollutant emissions. Specifically, these construction activities would temporarily create emissions of dust, fumes, equipment exhaust, and other air contaminants. These construction emissions were compared to the thresholds established by the MDAQMD.

Operational Emissions

Operational emissions associated with the Project were also calculated using CalEEMod. Operational emissions associated with the Project would comprise mobile source emissions, energy demand, and other area source emissions. Mobile source emissions are generated by the increase in motor vehicle trips to and from the Project Site associated with operation of the Project. Area source emissions are generated by landscape maintenance equipment, application of architectural coatings, and consumer products. To determine if a regional air quality impact would occur, the increase in emissions is compared with the MDAQMD's recommended regional thresholds for operational emissions.

4.2 PROJECT IMPACTS

AQ Impact 1 **Would implementation of the Proposed Project conflict with or obstruct implementation of any applicable air quality plan?** ***(Less than Significant).***

As part of its enforcement responsibilities, the U.S. EPA requires each state with nonattainment areas to prepare and submit a SIP that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the federal and state ambient air quality standards. Air

quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

As previously discussed, according to the MDAQMD, if a project does not exceed the thresholds established in **Table 6**, the project would be deemed to be consistent with applicable attainment or maintenance plans. Additionally, if the project is consistent with the existing land use plan designation, it is considered to be consistent with the applicable attainment or maintenance plans. As demonstrated in **AQ Impact 2**, below, the Project would not exceed the thresholds established in **Table 6**; further, the Project is consistent with the land use and zoning for the Project Site. The Project Site is designated as Mixed Use (MU) and is zoned for Mixed-Use Commercial (C-MU). Commercial land uses support local and regional serving retail and service uses, including uses such as shopping centers and malls, small commercial centers, hotels, commercial recreation uses such as movie theaters and bowling alleys, restaurants, supermarkets, and personal services. Fast food (with drive-through, delivery) is permitted in the C-MU zone only with a conditional use permit (CUP).[12] Therefore, the Project would not conflict with or obstruct the implementation of any air quality plan established by the MDAQMD.

AQ Impact 2 **Would implementation of the Proposed Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard? *(Less than Significant).***

A project may have a significant impact if project-related emissions would result in a cumulatively considerable net increase for a criteria pollutant for which the region in nonattainment under applicable federal or state ambient air quality standards.

Construction Significance Analysis

For purposes of this analysis, it is estimated that the Project would be constructed in approximately 5 months, with construction beginning in 2026 and project operations commencing in the same year. While construction may begin at a later date and/or take place over a longer period, these assumptions represent the earliest and fastest build-out potential, resulting in a worst-case daily impact scenario for purposes of this analysis. This analysis assumes construction would be undertaken with the following primary construction phases: (1) debris clearing/foundation preparation, (2) grading, and (3) building construction.

---

12 Town of Yucca Valley, *YVMC: Chapter 9.09: Commercial Districts*. Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-14877, accessed November 10, 2025.

The Project would also require paving and architectural coatings, which have conservatively been assumed to occur concurrently during the final month of the building construction phase.

The analysis of regional daily construction emissions has been prepared utilizing the CalEEMod computer model. Predicted maximum daily construction-generated emissions for the Project are summarized in **Table 7, Construction-Related Criteria Pollutant and Precursor Emissions.** These calculations assume that appropriate dust control measures would be implemented as part of the Project during each phase of development, as specified by MDAQMD Rule 403 (Fugitive Dust). As shown in **Table 7**, the peak daily emissions generated during the construction of the Project would not exceed any of the emission thresholds recommended by the MDAQMD. Therefore, Project construction would not result in a cumulatively considerable net increase of any criteria air pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard.

Table 7
Construction-Related Criteria Pollutant and Precursor Emissions

Maximum Pounds Per Day						
Construction Year	**ROG**	**NOx**	**CO**	**SO_2**	**PM10**	**PM2.5**
2026	1.60	13.00	15.00	0.02	7.90	4.00
Threshold	**137**	**137**	**548**	**137**	**82**	**65**
Exceed?	*No*	*No*	*No*	*No*	*No*	*No*
Maximum Annual Emissions (short tons)*

Threshold	**25**	**25**	***100***	**25**	**15**	**12**
Exceed?	*No*	*No*	*No*	*No*	*No*	*No*

*Source: Impact Sciences, November 2025. See **Appendix A** to this report. Emissions shown are the highest daily maximum from either the summer or winter season.*
**In CalEEMod, criteria pollutants are represented in pounds per day for daily values, and tons per year for annual values. For clarity purposes, a "ton" and a "short ton" are both equivalent to 2,000 pounds.*
Note: Project emissions account for the reductions from MDAQMD Rule 403 (Fugitive Dust).

Operational Significance Analysis

Project-generated emissions would be associated with motor vehicle use, energy use, and area sources, such as the use of natural-gas-fired appliances, landscape maintenance equipment, consumer cleaning products, and architectural coatings associated with the operation of the Project. The operational emissions from the Project were calculated with CalEEMod, and the operational emissions were compared against MDAQMD thresholds to determine Project significance. Long-term operational emissions attributable to

the Project are summarized in **Table 8, Long-Term Operational Emissions**. As shown, the operational emissions generated by the Project would not exceed the regional thresholds of significance set by the MDAQMD.

Table 8
Long-Term Operational Emissions

Maximum Pounds Per Day						
Source	**ROG**	**NOx**	**CO**	**SO_2**	**PM10**	**PM2.5**
Mobile Source	2.00	2.50	22.00	0.05	4.50	1.20

*Source: Impact Sciences, November 2025. See **Appendix A** to this report. Emissions shown are the highest daily maximum from either the summer or winter season.*
**In CalEEMod, criteria pollutants are represented in pounds per day for daily values, and tons per year for annual values. For clarity purposes, a "ton" and a "short ton" are both equivalent to 2,000 pounds.*

As shown in **Table 7** and **Table 8**, the Project's construction and operational emissions would not exceed the MDAQMD's thresholds for any criteria air pollutants. Thus, the Project would also not result in a cumulatively considerable net increase of any criteria air pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard. These impacts are less than significant.

Air Quality Health Impacts

On December 24, 2018, the California Supreme Court published its opinion on the *Sierra Club et al. v. County of Fresno et. Al.* (Case No. S219783), which determined that an environmental review must adequately analyze a project's potential impacts and inform the public how its bare numbers translate to a potential

adverse health impact or explain how existing scientific constraints cannot translate the emissions numbers to the potential health impacts.

Criteria air pollutants are defined as those pollutants for which the federal and state governments have established air quality standards for outdoor or ambient concentrations to protect public health. The national and state ambient air quality standards have been set at levels to protect human health with a determined margin of safety. As discussed previously, the Basin is in state non-attainment for PM2.5, PM10, and Ozone (O_3) and federal non-attainment for PM10 and O_3. Therefore, an increase in emissions of particulate matter or ozone precursors (ROG and NOx) has the potential to push the region further from reaching attainment status, and, as a result, these pollutants are the greatest concern in the region. As noted in **Table 7** and **Table 8** above, the Project will emit criteria air pollutants during construction and operation. However, the Project will not exceed MDAQMD thresholds for ozone precursors (ROG and NOx), PM2.5, PM10, or any other criteria air pollutants, and will not result in a cumulatively significant impact for which the region is in non-attainment. With respect to the Project's increase in criteria pollutant emissions, the Project would not have the potential to cause significant air quality health impacts. Therefore, impacts are less than significant.

AQ Impact 3 **Would implementation of the Proposed Project expose sensitive receptors to substantial air pollutant concentrations? (*Less than Significant).***

Based on the MDAQMD Guidelines, a significant impact may occur if a project were to generate pollutant concentrations to a degree that would significantly affect sensitive receptors.

Construction

Project impacts related to increased community risk could occur by introducing a new source of localized pollutants during construction and operation, with the potential to adversely affect existing sensitive receptors in the Project vicinity. According to the MDAQMD, residences, schools, daycare centers, playgrounds, and medical facilities are considered to be sensitive receptor land uses. The following project types proposed for sites within the specified distance to an existing or planned (zoned) sensitive receptor land use must be evaluated using significance threshold criteria number four per MDAQMD guidelines:[13]

---

13 MDAQMD, CEQA and Federal Conformity Guidelines. Available online at: https://www.mdaqmd.ca.gov/home/showpublisheddocument/8510/638126583450270000, accessed November 10, 2025.

- Any industrial project within 1,000 feet
- A distribution center (40 or more trucks per day) within 1,000 feet
- A major transportation project (50,000 or more vehicles per day) within 1,000 feet
- A dry cleaner using perchloroethylene within 500 feet
- A gasoline dispensing facility within 300 feet

The Project is not proposing to develop any of the project types listed above and will not be required to be evaluated against MDAQMD significance threshold criteria number four. The closest air quality sensitive receptors would be the single-family residences 228 feet to the south of the Project Site.

The primary sources of potential TACs under the Project would be construction activity and the associated generation of diesel particulate matter (DPM) emissions from the use of off-road diesel equipment required for grading, paving, and other construction activities. The amount to which nearby sensitive receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk. Health-related risks associated with diesel exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer. Construction of the Project would not have the potential to generate large amounts of DPM since a minimal amount of daily heavy construction equipment will be utilized, and the overall construction duration would be short (approximately 5 months). Furthermore, the low levels of diesel exhaust would primarily be emitted during the grading/foundational preparation phase, which is anticipated to last only one month total. Average daily diesel exhaust emissions generated on-site during the 4 months of building construction would be negligible. Emissions generated from the development of the Project are temporary and localized and would cease upon completion of construction. This impact would be less than significant.

Operation

Project-operation impacts related to increased health risk can occur either by introducing a new source of TACs with the potential to adversely affect existing sensitive receptors, or by introducing a new sensitive receptor, such as a residential use, in proximity to an existing source of TACs.

The Project does not include any stationary sources of TAC emissions, and most vehicles associated with the operation of the Project would run on gasoline and not diesel, which is the primary source of TACs and DPM. Therefore, operation of the Project would not generate TAC or PM2.5 emissions that could affect the health of sensitive receptors. As such, the Project would not contribute to human health risk to nearby receptors during operation, and the Project would not contribute to any cumulative human health risk impact.

AQ Impact 4 **Would the Proposed Project include sources that could create other emissions (such as those leading to odors) adversely affecting a substantial number of people? (*Less than Significant).***

According to CARB's CEQA Air Quality Handbook, land uses often associated with odors include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. The Project would not include any of the land uses that have been identified by CARB as odor sources.

Construction activities associated with the Project may generate detectable odors from heavy-duty equipment exhaust and architectural coatings. However, construction-related odors would be short-term in nature and cease upon Project completion. In addition, the Project would be required to comply with the California Code of Regulations, Title 13, sections 2449(d)(3) and 2485, as well as YVMC Section 9.34.040, which minimizes the idling time of construction equipment either by shutting it off when not in use or by reducing the time of idling to no more than five minutes. This would reduce the detectable odors from heavy-duty equipment exhaust. Any odor impacts to existing adjacent land uses would be short-term and not substantial. As such, the Project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. Impacts would be less than significant.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Land Use	Project Site is 1.014 acres. The Project proposes to develop a 1,025 sq ft Dutch Bros coffee shop with drive through, 18 parking spaces, and 10,350 sq ft of landscaping.
Construction: Construction Phases	Debris removal and grading phase anticipated to be five weeks: debris removal (two weeks), grading (three weeks). Building construction anticipated to take 4 months to complete. Paving and architectural coating conservatively assumed to take place during the final month of building construction.
Construction: Off-Road Equipment	Construction mix based on construction schedule
Operations: Vehicle Data	Trip generation based on traffic memo prepared by CR Associates, dated November 12, 2025.

Executive Summary

Introduction: This report includes the findings of a Biological Resources Assessment (BRA) conducted by South Environmental where a development has been proposed (Project Site) in Yucca Valley, San Bernardino County, California.

Proposed Development: The Project proposes the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee shop with a dual-lane drive-through facility and associated site improvements. The drive-through is designed to accommodate 23 queued vehicles. In addition to on-site improvements, the Project also includes off-site roadway improvements consistent with the Town's circulation plans, including the future widening of Twentynine Palms Highway to an ultimate half-width of 67 feet along the Project frontage. The site plan is presented in Appendix D.

Plant Communities/Habitat/Sensitive Natural Communities: The project would permanently remove 0.88 acre of Joshua Tree Woodland. Joshua Tree Woodland is considered a sensitive natural community by California Department of Fish and Wildlife (CDFW) based on the state rarity ranking of 3.2. The Joshua Tree Woodland community is heavily disturbed by dirt roads/paths, illegal dumping, invasive plants, and adjacent developments; however, it still has some potential to support special status wildlife such as coast horned lizard and Le Conte's thrasher. Impacts to sensitive natural communities and habitat for special-status species can be considered significant according to CEQA but 0.88 acre is a minor amount of Joshua Tree Woodland and it is highly disturbed. The project must compensate for the loss of individual Joshua Trees per the Western Joshua Tree Conservation Act as described in Mitigation Measure 2 in Section 3.2.3. Paying into the fund and protecting adjacent Joshua trees and Joshua Tree Woodlands surrounding the project site would ensure there is compensation for the loss of 0.88 acre from the project footprint. The in lieu fee program described in Mitigation Measure BIO-2 would result in the conservation, restoration, or protection of Joshua trees and Joshua Tree Woodlands into perpetuity. With the implementation of that mitigation the project impacts to 0.88 acre of disturbed Joshua Tree Woodland would be reduced to a level that is considered less than significant per the thresholds of CEQA.

Nesting Birds and Raptors: The proposed development would require potential removal of trees, shrubs, and herbaceous plants in the landscaping that could provide potential nesting habitat for birds and raptors protected by the MBTA, MBPA, and the Fish and Game Code, including special-status birds such as Le Conte's thrashers. If present at the time of vegetation removal, active nests, eggs, or young could be destroyed or otherwise disturbed to a point at which the young do not survive, which would be a violation of the MBTA, MBPA, and the Fish and Game Code. In addition, indirect impacts from noise or vibration has the potential to disturb an active bird nest that may

occur in adjacent landscaping to the point of failure if the nest is within immediate proximity to project activities, and this would also be a violation of the MBTA and Fish and Game Code. To avoid impacts to active bird or raptor nests, eggs, or young, preconstruction nesting bird surveys and monitoring is required per the MBTA and Fish and Game Code as described in Mitigation Measure BIO-1.

Special-Status Plants: Western Joshua tree occurs in the project area, and no other special-status plants are expected to occur due to the level of disturbances in the plant community. There are 22 Joshua trees within 15-meters of the proposed project footprint and 8 of those would be removed by the project because they are within the development footprint. An additional 2 Joshua trees are within the project site but will remain within landscaping after the project is built, and these would be heavily encroached into the 15 meter buffer by development. As shown in the Site Plan in Appendix C, these Joshua trees will be fenced during construction of the project to protect them from potential inadvertent impacts. Another 12 Joshua trees are outside the project site but will be encroached within a 15 meter buffer by the project construction. Protective fencing shown in the Site Plan in Appendix C will be installed between these Joshua trees and the project site during construction to avoid inadvertent impacts to these trees.

Overall the population of Joshua trees within the survey area is healthy, with very few dead trees and a mix of size classes and observations of fruits and flowers indicate that the Joshua trees are regenerating naturally on the site. The number of removals proposed by the project is 18% of the number surveyed, however, there are numerous other Joshua trees surrounding the survey area that are contiguous plant communities with that found on the site, and the relative number of removals to those in the region is very small. The removal of 8 Joshua trees is insignificant in relation to the number that are found in the immediate area. To reduce the potential impacts to a less than significant level per the thresholds of CEQA the project will implement Mitigation Measure BIO-2 below that includes permitting for the removal of the Joshua trees and protected the remaining trees.

Special-Status Wildlife: Based on the analysis in this report coast horned lizard and Le Conte's thrasher have the potential to occur within the Joshua Tree Woodland and Desert Willow Woodland habitats on the Project Site and Study Area.

Coast horned lizard have the potential to occur on the project site if it is present within the development area during construction activities they could be crushed and killed or injured. However, the habitat on the site is disturbed and of lower ecological value as a result, and coast horned lizard is more likely to occur in the desert wash outside of the project footprint. The potential for the species to be directly impacted by the project is low as it is has a low potential to occur at this area relative to the desert wash and it is highly disturbed at the urban interface. Coast horned lizard direct impacts would be low as a result. In addition, the loss of 0.88 acre of disturbed Joshua Tree Woodland that is potential habitat for coast horned lizard is less than

significant as it is a very small area that is isolated and between existing developments at the urban interface. This small area is a minor fraction of the available habitat that would remain in the immediate area, including the much higher value habitat within the desert wash 200-feet away from the project as well as in the overall range of the species. In addition, the implementation of Mitigation Measure BIO-2 would ensure that the loss of Joshua trees and Joshua Tree Woodland habitat would be mitigated. For these reasons the project impacts to coast horned lizard would be considered less than significant per the thresholds of CEQA.

Le Conte's thrasher is a CDFW Species of Special Concern that has the potential to nest and forage on the project site. The potential impacts to 0.88 acre of disturbed habitat is less than significant as it is a minor fraction of what would remain available in the immediate area and within the entire species range. To avoid direct and indirect impacts to Le Conte's thrasher birds, Mitigation Measure BIO-1 regarding nesting bird and raptor surveys is recommended. With the implementation of the mitigation measure the project impacts to Le Conte's thrasher would be reduced to a level that is less than significant according to CEQA.

Water Resources: One jurisdictional feature, a desert wash, occurs in the Study Area approximately 200 feet southwest of the Project Site and outside of the project impact areas. Since project impacts are limited to the Project Site it is not expected for the proposed project to impact the wash directly. Temporary Impacts would not occur from the project as temporary staging and construction equipment will occur on the Project Site outside of the wash, at a distance greater than 200-feet. Considering the large distance between the project site and the wash, and the position of the project site between two existing large commercial development, the project would have no indirect impacts on the wash. Therefore, no impacts to water resources would result from the project.

Protected Trees: The study area contains mature western Joshua trees, which are all regulated trees that may require permits before removal under the Yucca Valley Code of Ordinances. The velvet mesquite trees are located outside of the project footprint and would not be impacted by the project as a result. The project will remove 8 Joshua trees as described previously and propose to permit the impacts with Mitigation Measure BIO-2. With the implementation of Mitigation Measure BIO-2 the project would be in compliance with the Ordinance.

Wildlife Movement Corridors and Habitat Linkages: The Joshua Tree Woodland on the study area extends west and southwest beyond the Study Area boundary between further developed areas. This large undeveloped Joshua Tree woodland is bordered on all sides by developments such as roads and businesses and does not have connectivity to other open spaces or habitats. The Project Site is an endpoint of this community that is highly disturbed and bordered by large-scale commercial developments and major paved roadways. Any large open spaces or habitats are east of the Project Site across several roads and lines of housing developments. Therefore, no

wildlife corridors were found in the Study Area as there is no linkage to large habitats. The lack of connectivity limits the potential for special status plants and wildlife to populate the site from areas of high quality habitats. Therefore, the Project Site is not considered a wildlife movement corridor or habitat linkage area. Based on the analysis in this report the Project Site was determined not to be within a wildlife movement area or habitat linkage due to the surrounding disturbances and isolated nature of the Joshua Tree Woodland. Therefore, the project would have no impact on wildlife movement corridors and habitat linkages

1. Introduction

This report includes the findings of a Biological Resources Assessment (BRA) conducted by South Environmental for the Dutch Bros Coffee Project (Project Site) in Yucca Valley (Town), San Bernardino County, California. The purpose of this report is to identify and characterize biological resources that occur on the Project Site and a surrounding 500-foot buffer (Study Area), quantify and assess potential impacts to protected biological resources, and propose measures to reduce impacts to a less than significant level. The scope of this report includes a description of the proposed development, methods used to assess the biological resources, the environmental setting including technical characterizations and maps of vegetation communities, an assessment of the potential for special-status plants and animals to occur on the study area, a description of the regulatory setting, an analysis of the potential for the project to impact biological resources according to the thresholds of the California Environmental Quality Act (CEQA), and detailed recommendations for avoiding or mitigating impacts. Representative photographs of the study area are in Appendix A.

1.1 Project Description

1.1.1 Location and Setting

The Project Site is in the Town of Yucca Valley in San Bernardino County at 58121 Twentynine Palms Highway (State Route 62) (Assessor Parcel Number 0601-416-05). The Project Site is within the U.S. Geological Survey (USGS) Yucca Valley North 7.5 Minute Topographical Quadrangle, and within Section 31 of Township 01 North (01N) and Range 06 East (06E). The Project Site is set within the east side of Yucca Valley, between two large commercial developments. The entire parcel for the Project Site is 1.01-acres in size and on the south of Twentynine Palms Highway (State Route 62) between Big 5 Sporting Goods and Walgreens. The Project Site is approximately 1.02-mile east of State Route 247 and 17.31-mile northeast of Interstate 10. More broadly, the Project Site is within the Morongo Basin region of the High Desert in San Bernardino County, California (attached Figure 1 and Figure 2). The Project Site is currently designated by the Town's General Plan as Mixed Use (MU).

The Project Site is bordered by commercial development to the north, east, and west, and residential development to the south about 100-feet south of the development. Undeveloped land occurs in the southwest Study Area. The Project Site is largely undeveloped with some disturbed dirt road areas from off road vehicles and some areas of illegal dumping of garbage. One area in the extreme north of the Project Site is developed with a sidewalk, ornamental plants, a concrete wall, and a paved roadway that divides the project site from Twentynine Palms Highway and connects the east and west commercial developments.

1.1.2 Proposed Development

The Project proposes the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee restaurant with a dual-lane drive-through facility and associated site improvements. The drive-through is designed to accommodate 23 queued vehicles. In addition to on-site improvements, the Project also includes off-site roadway improvements consistent with the Town's circulation plans, including the future widening of Twentynine Palms Highway to an ultimate half-width of 67 feet along the Project frontage. The Project would incorporate approximately 10,350 square feet of landscaping and would retain 2,808 square feet of existing landscaping near Twentynine Palms Highway. All equipment and construction staging would occur within the boundaries of the Project Site. Current project plans are attached within Appendix D.

1.2 Methodology

This biological resource assessment is based on information compiled through a reconnaissance survey and a literature review involving an assessment of appropriate reference materials and literature regarding the biological resources of the region.

1.2.1 Literature Review

The assessment of the project began with a review of literature relating to the natural resources — flora, fauna, and water resources — that are possibly within the study area and project site. The following were consulted:

Flora and Fauna

- The California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDB) was reviewed to identify special-status plants and animals that have previously recorded in the United States Geological Survey (USGS) North Yucca Valley 7.5" quad in which the proposed development footprint is located, and the eight surrounding USGS 7.5" quads: Joshua Tree North, Joshua Tree South, Yucca Valley South, Bighorn Canyon, Goat Mountain, Rimrock, Morongo Valley, and Landers (CDFW 2025a).
- CDFW California Wildlife Habitat Relationships (CWHR) life history accounts and range maps (CDFW 2025b)
- United States Fish and Wildlife Service (USFWS) Environmental Conservation Online System (ECOS) Information for Planning and Consultation (IPaC) (USFWS 2025a)
- USFWS Designated and Proposed Critical Habitat GIS data (USFWS 2025b)
- California Native Plant Society (CNPS) online Inventory of Rare and Endangered Plants of California (CNPS 2025a)

1.2.2 Field Reconnaissance and Focused Joshua Tree Survey

South Environmental biologist Lucas South conducted a field reconnaissance on October 28, 2025 to record plants and animals observed on the site, characterize and map plant communities, and assess the potential for special-status species to occur. The findings described in the reports are cited in the Literature Review, and results are referenced throughout the analysis in this report. A focused survey for Joshua Trees was also conducted concurrently with the field reconnaissance and the survey report is attached in Appendix E.

2. Environmental Setting

2.1 Topography and Climate

The project site is within the Morongo Basin just south of the Little San Bernardino Mountains of the Transverse Ranges in southern California. Due to being within the High Desert of the Mojave, the region is arid with desert plains, rocky outcrops, and rugged hills with landmarks such as Bartlett Mountains to the northeast, Burnt Mountain to the south, Joshua Tree National Park to the east, and Water Canyon to the west. The Project Site is very flat, though a deep wash occurs in the west Study Area approximately 150-feet to the southwest. The highest elevation for the project site is approximately 3,248 ft. (990 m.) above mean sea level (amsl) near the southeast border. The lowest elevation for the project site is approximately 3,234 ft. (986 m.) amsl near the north border (USGS 2025). The climate in the region is hot and dry, with average summer high temperatures in the mid-90s and average winter lows in the mid 30s. Average yearly rainfall is approximately 4.8-inches, and the wettest months are December - January. There is almost no precipitation between April - July.

2.2 Soils and Surface Geology

Soils in the Study Area from the Online Web Soil Survey Mapper (USDA/NRCS 2025) are 100% Typic Torriorthents and Typic Haplargis, which occurs in fan aprons and is derived from igneous rock. This soil type is gravelly sandy loam, occurs at 2 to 8 percent slopes, and is somewhat excessively drained. The surface geology geologic unit for both the project site and study area contains older alluvium surficial sediments of sedimentary and volcanic rocks from the Pleistocene Epoch (USGS 2025b, Dibblee 1967).

2.3 Plants

A total of 41 plant species were identified on the Project Site and Study Area. The habit of the species consisted of trees, shrubs, succulents, perennial herbs, and annual herbs. A list of the species observed, and their California Rare Plant Rank (CRPR) is presented below in Table 1 (CNPS 2025a). Species listed with an asterisk are considered invasive by the California Invasive Plant Council (Cal-IPC 2025).

Table 1. List of Plant Species Observed at the Project Site and Study Area

Common name	Scientific name	On project site	CRPR	Federal/ State
small Philippine acacia	*Acacia confusa*	No	NR	--

Joshua tree	*Yucca brevifolia*	Yes	NR	State Candidate
**=invasive species; NR=Not Ranked*				

2.4 Plant Communities and Land Cover

There are two land cover types and two plant communities in the study area and the project site. Each is shown in Figure 4 below and the acres of each is summarized in Table 2 below.

Table 2. Summary of Plant Communities on the Study Area and Project Site

Community or Cover Type	Acres on Study Area	Acres on Project Site	Acres Permanently Impacted by Project	Global / State Rank
Joshua Tree Woodland	9.83	0.88	0.88	G4/S3.2
Desert Willow Woodland	1.18	0	0	G4/S3
Developed/Ornamental	18.63	0.14	0	N/A
Ruderal	0.28	0	0	N/A
Total	**29.92**	**1.02**	**0.88**	-

- **Joshua Tree Woodland** (*Yucca brevifolia* Woodland Alliance) (CNPS 2025b) occurs on 9.83-acres of the Study Area and 0.88-acres of the Project Site. It has a global/state rarity ranking of G4/S3.2, which is considered a sensitive community in California. It is dominated by Joshua trees that form a canopy that is open to intermittent over an open shrub canopy containing other species such as common burrobrush, California ephedra, creosote bush, flatspine bur ragweed, and silver cholla, as well as occasional trees including desert willow and cat claw acacia. The herbaceous layer is also open to intermittent with perennial grasses and seasonal annuals observed such as crimson fountain grass, many-bristle chinchweed, and Asian mustard. The groundcover degrades this community with invasive and non-native, and the level of disturbance overall is very high from dirt roads that travel through the project site, illegal dumping of garbage, and the general trash and degradation from human presence associated with the adjacent Walgreens and Big 5 stores. The degraded community is unlikely to support special status species due to the level of disturbances and alterations from the typical natural community. A total of 0.88-acres of Joshua Tree Woodland would be permanently impacted by the proposed development.

SOUTH ENVIRONMENTAL

- **Desert Willow Woodland** (*Chilopsis linearis* Woodland Alliance) (CNPS 2025b) occurs on 1.18-acre of the Study Area and 0-acre of the Project Site. It has a global/state rarity ranking of G4/S3, which is considered a sensitive community in California. This community occurs along and within a dry desert wash in the southwest Study Area. This plant community is dominated in the tree canopy by desert willow trees and shrubs that form an open canopy with other small trees such as cat claw acacia. The shrub layer includes species such as California buckwheat, California ephedra, creosote, and common burrobush. The herbaceous layer is sparse with native perennials such as big galleta and many-bristled chinchweed.

- **Developed/Ornamental** land cover occurred on 18.63-acres of the Study Area and 0.14-acres of the Project Site. Developed land does not have a rarity rating and is unable to support special status species. The developments included single-family houses, commercial developments, and paved roads, which landscaped plants. Among others, common plants observed in the developed areas included blue palo verde, Texas ranger, olive, rosemary, and California black walnut. A total of 0-acres of developed/ornamental land cover would be permanently impacted by the proposed development.

- **Ruderal** land cover occurred on 0.28-acres of the Study Area and is not on the Project Site. Ruderal communities do not have a community sensitivity rating. This land cover type occurs in the north Study Area surrounded by commercial developments. This land cover type was characterized by disturbed soils and a sparse covering of native and non-native annual and perennial herbs. Plant species were dominated by flatspine bur ragweed and tumbleweed. Other species observed included desert broom, desert willow, and Texas ranger.

2.5 Wildlife

Seven common desert wildlife species were observed in the project site and study area during the site visit and are shown in Table 3 below. Although few wildlife were observed during the site visit, most desert species are not active midday, and therefore many more species are expected to occupy the site.

Table 3. Summary of Wildlife Observed within the Study Area

Common name	Scientific name	Taxa	Status
Verdin	*Auriparus flaviceps*	Birds	None
Common raven	*Corvus corax*	Birds	None
Roadrunner	*Geococcyx californianus*	Birds	None
European house sparrow	*Passer domesticus*	Birds	None
California Ground squirrel	*Otospermophilus beecheyi*	Mammals	None

Common name	Scientific name	Taxa	Status
Say's phoebe	*Sayornis saya*	Birds	None
Mourning dove	*Zenaida macroura*	Birds	None

2.6 Special-Status Species

The literature analysis of the CNDDB, CNPS, and IPAC databases for special-status species with the potential to inhabit the project site resulted in 63 special-status species, including 34 plants and 29 animals. The list includes rare, threatened, endangered species at a federal and state level. In the case of plants, it also includes California Rare Plant Rank (CRPR) species with a classification of 1-4.

2.6.1 Special-Status Plants

During the field reconnaissance, western Joshua tree was observed throughout the site. Western Joshua tree is a Candidate species for listing under the CESA and is protected by the Western Joshua Tree Conservation Act. The 34 special-status plant species that CNDDB, CNPS, and IPAC identify as occurring in the region of the project and an assessment of their likelihood to inhabit the project site are presented in Appendix B. The Joshua Tree Woodland on the Project Site has heavy disturbance from non-native herbaceous plants and human activity such as dirt roads and illegal garbage dumping, which reduces the potential for special-status plants to occur on the Project Site. Based on the analyses in Appendix B, no other special-status plants have the potential to occur on the project site due to the high level of disturbance and ecological degradation, and none were observed during the survey.

Western Joshua Tree

Western Joshua tree (*Yucca brevifolia)* is a monocot that is a candidate species for listing under the CESA and is protected by the Western Joshua Tree Conservation Act. The species has a general habitat that includes Joshua tree woodland, montane chaparral, pinyon and juniper woodland, and Sonoran and Mojavean desert scrub. It has been recorded at elevations between 750-2,200 meters (2,461-7,218 feet).

Based on the findings of the Joshua Tree Survey Report in Appendix E, a total of 38 Joshua trees were identified in the survey area (within 100-feet of the project site). These are shown in Figure 5 below and summarized in Table 4. Of the 38 Joshua trees surveyed, 3 were Class A, 32 Class B, and 3 Class C. A total of 3 Joshua trees were dead (labeled D1-D3) and 35 were mature live trees. Of the mature live trees, 25 had fruits or flowers.

Class C >5m	3	3	0	3	3	3	0
Total	**38**	**35**	**3**	**30**	**25**	**22**	**8**

2.6.2 Special-Status Wildlife

The 29 special-status animal species that CNDDB, CNPS, and IPAC identify as occurring in the region of the project and an assessment of their likelihood to inhabit the project site are presented in Appendix B. No special-status animal species were observed during the survey and the degradation of the Project Site from invasive plants, onsite disturbances, and adjacent development limits the potential for special status wildlife to occur. However, based on the analysis in Appendix B, 2 special-status animals have a moderate potential to occur on the project site due to the presence of suitable habitat, which are discussed below:

1. **Coast horned lizard** (*Phrynosoma blainvillii*) is a reptile that is a CDFW Species of Special Concern. This lizard frequents a wide variety of habitats, most commonly in lowlands along sandy washes with scattered low bushes for cover, open areas for sunning, patches of loose soil for burial, and an abundant supply of ants and other insects. There are six CNDDB records within the region of the project and the record nearest the Project Site is located .07 miles to the east. This species has a **moderate** potential to occur in the study area because it contains intact desert habitats and sandy washes with loose soils. This species is less likely to occur on the project site and is most likely to occur in the desert wash outside of the project site.

2. **Le Conte's thrasher** (*Toxostoma lecontei*) is a bird that is a CDFW Species of Special Concern and USFWS Bird of Conservation Concern. This species is primarily found in open desert wash, desert scrub, alkali desert scrub, and desert succulent shrub habitats. Le Conte's thrasher commonly nests in dense, spiny shrub or densely branched cactus in desert wash habitat 2 to 8 feet above the ground. There are twelve CNDDB records within the region of the project and the record nearest the project site is from 2010 and is located 3.31-miles to the east. This species has a **moderate** potential to occur in the study area because it contains desert wash and desert scrub habitats.

2.7 Sensitive Natural Communities

CDFW 2018 *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities* defines sensitive natural communities as those that are "of limited distribution statewide or within a county or region and are often vulnerable to environmental effects of projects." CDFW considers a natural community sensitive if it has a Global or State rarity rank of 1-3, which includes communities that are vulnerable (G3/S3), imperiled (G2/S2), and critically imperiled (G1/S1). CDFW uses the alliances and groups described in the California Natural Community List (CDFW 2025c) and the California Natural Communities List from A Manual of California Vegetation Online (CNPS 2025b) to characterize California's natural communities. The current global and state rarity rank for natural communities of California are listed in these resources.

Developed and disturbed areas do not qualify for CDFW rankings and are not considered sensitive plant communities. The Desert Willow Woodland in the study area has a Global rarity rank of G4 and a State rarity rank of S3; therefore, it is considered a sensitive natural community in California by the CDFW. The Joshua Tree Woodland in the study area has a Global rarity rank of G4 and a State rarity rank of S3.2, which is considered a sensitive natural community in California by the CDFW.

2.8 Protected Trees

The study area is within the incorporated town of Yucca Valley in San Bernardino County. According to the Town of Yucca Valley Code of Ordinances (Yucca Valley 2025), regulated native plants require a Plant Removal Permit, including the following:

- All species of the genus *Prosopis* (mesquites) two (2) inches or more in diameter or six (6) feet or more in height.
- All species yuccas (yucca, Mojave yucca, Our Lord's candle, etc.)
- Creosote Rings, ten feet or greater in diameter
- All Joshua trees (*Yucca brevifolia*)
- California Juniper
- Desert willow
- Pinon pine
- Palo verde
- Manzanita
- All plants protected or regulated by California Desert Native Plants Act

The study area contains western Joshua trees and desert willow.

2.9 Hydrology Features

According to the Environmental Protection Agency (EPA, 2025) the project site is located within Southern Mojave watershed (HUC8) and the Water Canyon subwatershed (HUC12). One unnamed and unmapped desert wash was observed in the Study Area approximately 200 feet southwest of the Project Site border. The wash is a dry streambed that hosts desert riparian plants, with a desert willow plant community. The exact jurisdiction of this wash is not determined however, it is likely under the jurisdiction of the CDFW and the Regional Water Quality Control Board. This feature was dry during the site visit though showed a clear ordinary high-water mark and a difference in vegetation type and soil substrate than the areas outside of the wash. The feature was several feet deep and hosted desert willow, cat claw acacia, California buckwheat, and common burrobush, among other native annuals and shrubs. This feature is an intact desert wash habitat and likely flows intermittently. There are no water features on the project site or impact areas.

2.10 Wildlife Movement Areas

The assessment of the potential for wildlife movement to and from the project site consisted of consulting the following resources:

- United States Fish and Wildlife Service (USFWS) Environmental Conservation Online System (ECOS) Information for Planning and Consultation (IPaC) (USFWS 2025a)
- USFWS Designated and Proposed Critical Habitat GIS data online (USFWS 2025b)
- GreenInfo Network, Park Information online (2025)
- California Protected Areas Database Map online (CPAD 2025)

Aerial photographs were used to assess the level of connectivity of large expanses of habitat to the Project Site. The foremost considerations were whether there was a direct connection of high-quality habitat to the site — without interference from development — and whether the connecting habitat is linked to large habitat tracts or protected habitats. During the South Environmental field visit, the Study Area was assessed for its potential use as a wildlife corridor or habitat linkage. The level of disturbance of the Study Area is by way of development that includes roads, houses, fences, and lighting. The Study Area was assessed for the presence of a corridor of linkage of habitat that connects the Study Area to adjacent and higher-quality habitat.

The Joshua Tree Woodland on the study area extends west and southwest beyond the Study Area boundary between further developed areas. This large undeveloped Joshua Tree woodland is bordered on all sides by developments such as roads and businesses and does not have connectivity to other open spaces or habitats. The Project Site is an endpoint of this community that is highly disturbed and bordered by large-scale commercial developments and major paved roadways. Any large open spaces or habitats are east of the Project Site across several roads and

lines of housing developments. Therefore, no wildlife corridors were found in the Study Area as there is no linkage to large habitats. The lack of connectivity limits the potential for special status plants and wildlife to populate the site from areas of high quality habitats. Therefore, the Project Site is not considered a wildlife movement corridor or habitat linkage area.

3. Impacts Analysis

For the purposes of this report, impacts to protected biological resources are analyzed within the context of the regulatory setting. Below is an overview of the federal, state, and local regulations pertaining to protected biological resources in the study area, and an analysis of impacts to those resources that may occur as a result of the proposed development follows.

3.1 Regulatory Setting

3.1.1 Federal Regulations

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) protects individuals as well as any part, nest, or eggs of any bird listed as migratory. In practice, federal permits issued for activities that potentially impact migratory birds typically have conditions that require pre-disturbance surveys for nesting birds. In the event nesting is observed, a buffer area with a specified radius must be established, within which no disturbance or intrusion is allowed until the young have fledged and left the nest, or it has been determined that the nest has failed. If not otherwise specified in the permit, the size of the buffer area varies with species and local circumstances (e.g., presence of busy roads, intervening topography, etc.), and is based on the professional judgment of a monitoring biologist. A list of migratory bird species protected under the MBTA is published by USFWS.

3.1.2 California Regulations

California Environmental Quality Act (CEQA)

The California Environmental Quality Act (CEQA) is a statute that requires state and local agencies to identify the significant environmental impacts of their actions and to avoid or mitigate those impacts, if feasible. CEQA applies to certain activities of state and local public agencies. A public agency must comply with CEQA when it undertakes an activity defined by CEQA as a "project." A project is an activity undertaken by a public agency or a private activity which must receive some discretionary approval (meaning that the agency has the authority to deny the requested permit or approval) from a government agency which may cause either a direct physical change in the environment or a reasonably foreseeable indirect change in the environment.

An Initial Study (IS) is prepared when a proposed action is determined to be a "project" under CEQA. The IS is a checklist that asks specific questions about the project's level of environmental impacts in many categories, including biological resources. The checklist includes a series of

questions to determine the projects level of potential impacts in each of the categories. The CEQA Checklist includes the following questions regarding biological resources:

- *Would the project:*
    - *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*
    - *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?*
    - *Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*
    - *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*
    - *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance*
    - *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

Potential level of impact choices includes: No Impacts, Less Than Significant Impact, Less Than Significant with Mitigation Incorporated, and Potentially Significant Impact. For projects that have no impact or less than significant impact a Negative Declaration is prepared, for those with Less Than Significant with Mitigation Incorporated prepare a Mitigated Negative Declaration, and for those with a Potentially Significant Impact prepare an Environmental Impact Report (EIR).

California Endangered Species Act

The California ESA mirrors the main tenets of the U.S. ESA with a few exceptions and is legislated through the Fish and Game Code, chapter 1.5, sections 2050-2115.5. One major difference is that under the California ESA, a species can be a "candidate" species for listing, a category that does not exist under the U.S. ESA. Similar to the U.S. ESA, Section 2080 of the Code prohibits the "import into this state, export out of this state, or take, possess, purchase, or sell within this state, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species." The idea of "take" in terms of listed species is defined in Section 2086 of Code as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." In contrast to the U.S. ESA, the Code does not include the idea of "harass" or "harm" in the definition of take. The U.S. ESA uses Habitat Conservation Plans (HCPs) whereas the California ESA uses "Natural Community Conservation Planning (NCCP). Central tents of an NCCPS are to "promote coordination, effectively address cumulative impact concerns, and promote

conservation of un-fragmented habitat areas, promote multispecies and multi-habitat management". Importantly, if a species is listed both under the U.S. ESA and the California ESA, a "consistency determination" can be requested to the California Department of Fish and Wildlife requesting that the federal "take" complies with the California "take" regulations which would effectively avoid further deliberations for the take under the California ESA.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Act requires the adoption of water quality control plans (basin plans) that give direction to managing water pollution in California. The basin plans get adopted and administered by the Regional Water Quality Control Board (RWQCB). The plans incorporate the beneficial uses of the waters of the State and then provide objectives that should be met to maintain and protect these uses. Along with the Regional Water Boards, the State Water Resources Board can issue and enforce permits containing waste discharge requirements to maintain clean surface water and groundwater. Each basin plan identifies the specific beneficial uses of water in their region for the past, present, and future. These basin plans also all have objectives for which the plan clearly states steps that are being taken or will be taken to meet the objectives. These objectives are created for the purpose of keeping the water clean and safe to use beneficially. The Regional Board has the authority to give out permits for the purpose of waste disposal or waste assimilation.

State of California Fish and Game Code Section 1600

Fish and Game Code Section 1602 outlines the Lake and Streambed Alteration Agreement (LSAA) permitting process, and states:

- An entity shall not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake

Fish and Game Code Section 1602 requires any entity (defined as any person, State or local governmental agency, or public utility) to notify the CDFW before beginning any activity that will do one or more of the following:

- substantially divert or obstruct the natural flow of and river, stream, or lake, or
- substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or
- deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake.

A permit, known as a Lake or Streambed Alteration Agreement, from CDFW is required to conduct any of the activities described above.

Western Joshua Tree Conservation Act

The Western Joshua Tree Conservation Act is the current legislation in the State of California for use in protection of the Joshua tree and was passed on 2023. Foremost, the legislation prohibits the importation, export, take, possession, purchase, or sale of any western Joshua tree in California unless authorized by CDFW. The Act currently supersedes the California Endangered Species Act (ESA) and authorizes CDFW to issue permits for the "take" of one or more western Joshua trees if the permittee meets specific conditions. Permittees have the opportunity to relocate a Joshua tree in areas impacted by development or pay a fee in lieu of conducting mitigation activities. The legislation also grants the CDFW the authority to issue permits for the removal of dead western Joshua trees and trimming of live western Joshua trees.

The legislation allow for agreements to be made between the CDFW and any county or city which limit the authority to permit the taking of a Joshua tree associated with developing single-family residences, multifamily residences, accessory structures, and public works projects. A similar agreement between the CDFW and a county or city can also be authorized to limit the authority to permit the removal of dead and trimming of live Joshua trees.

With this legislation, in-lieu fees collected will be deposited into the "Joshua Tree Conservation Fund" for appropriation to CDFW strictly with the goal of acquiring, conserving, and managing Joshua tree conservation lands and carrying out other project to conserve the species.

Additionally, the act mandates the CDFW with development and implementation of a Joshua tree conservation plan in collaboration with governmental agencies, California Native American Tribes, and the public. A draft of the plan must be presented by December 31, 2024, at a public meeting of the Fish and Game Commission for its review and approval. Finally, CDFW must produce annual reports assessing the conservation status of the western Joshua tree (State of California, 2023).

In cases of private development the following is a summary of important conservation measures under the Western Joshua Tree Conservation Act:

The Western Joshua Tree Conservation Act stipulates several measures to assist with the assessment of impacts to and mitigation for western Joshua tree in areas proposed for development. Permittees may mitigate loss or damage to trees by relocating them or by paying specified fees in lieu of conducting mitigation. Under the act, all in-lieu fees collected will be deposited into the Western Joshua Tree Conservation Fund for the purposes of acquiring, conserving, and managing western Joshua tree conservation lands and completing other activities to conserve the western Joshua tree.

Western Joshua Tree Conservation Plan

The Western Joshua Ttree Conservation Act requires the California Department of Fish and Wildlife (CDFW) to develop and implement a Western Joshua Tree Conservation Plan (Conservation Plan) in collaboration with the Commission, governmental agencies, California Native American tribes (Tribes), and the public (Fish & G. Code, § 1927.6, subd. (a)). The plan was approved and finalized in August 2025. The Conservation Plan provides guidelines for western Joshua tree conservation, criteria to help define effectiveness of management actions, monitoring of management outcomes, and a process of adaptive management to refine and improve the management actions over time. The management actions can be incorporated into project approvals by local, state, and federal government agencies that authorize projects or resource management programs in western Joshua tree's range in California.

The Conservation Plan describes the steps required to achieve the vision of conserving western Joshua tree and its habitat in California such that listing under CESA will not be needed. The Conservation Plan can be divided into two parts: The first part summarizes guiding concepts and currently available information, and the second part describes management actions and the implementation approach for conserving western Joshua tree and achieving the vision of the Conservation Plan.

Chapter 5 of the Conservation Plan describes Conservation Management Actions and Effectiveness Criteria, and specifically Section 5.2.1 is focused on Impact Avoidance and Minimization that is often associated with construction projects. According to the section, the first priority for conservation of western Joshua tree and its habitat is to avoid adverse impacts altogether. When complete avoidance cannot be achieved, efforts should be made to minimize impacts on western Joshua tree and its habitat, and the presence of tribal cultural monitors and a trained arborist to minimize these impacts are encouraged. Minimization may include efforts to reduce the number of trees and seeds taken; the area of habitat that is lost or degraded; the severity of impacts on individual trees; impacts on other organisms on which western Joshua tree depends; and indirect impacts on trees, seeds, habitats, and other ecologically related organisms.

The avoidance and minimization actions in this section could be voluntarily adopted and implemented by project proponents and land managers, incorporated into project approvals by local governments and regulatory agencies, or incorporated into voluntary, cooperative agreements between relevant agencies, organizations, and other parties. The Western Joshua Tree Conservation Act (WJTCA) requires the avoidance and minimization of impacts on western Joshua tree to the maximum extent practicable as a condition of obtaining a WJTCA incidental take permit (ITP) (Fish & G. Code, § 1927.3, subd. (a)(2)). WJTCA also states that the Conservation Plan shall include guidance for the avoidance and minimization of impacts on western Joshua trees and protocols for the successful relocation of western Joshua trees (Fish & G. Code, § 1927.6, subd. (a)).

The following Management Actions are Recommended for construction projects:

1. Avoid direct and indirect impacts by project design that retains healthy trees, buffer areas for remaining trees, limit pesticide application, avoid OHV use, and avoid overgrazing.
2. Minimize direct and indirect impacts by avoiding trees, relocating trees, collect and store seeds, and minimizing invasive plants.
3. Minimize impacts from wildlife and wildfire suppression.

State of California Fish and Game Code Section 3500

Section 3503.5 of the California Fish and Game Code states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Activities that result in the abandonment of an active bird of prey nest may also be considered in violation of this code. In addition, California Fish and Game Code, Section 3511 prohibits the taking of any bird listed as fully protected, and California Fish and Game Code, Section 3515 states that is it unlawful to take any non-game migratory bird protected under the MBTA.

California Migratory Bird Protection Act

The California Migratory Bird Protect Act (MBPA) was enacted in September 2019 to reinforce the MBTA at the state level. The Act states:

- "It is unlawful to take or possess any migratory nongame bird as designated in the federal Migratory Bird Treaty Act (16 U.S.C. Sec. 703 et seq.), or any part of a migratory nongame bird described in this section, except as provided by rules and regulations adopted by the United States Secretary of the Interior under that federal act." This section became operative starting on January 20, 2025.

California Desert Native Plants Act

The purpose of the CDNPA is to protect certain species of California desert native plants from unlawful harvesting on both public and privately owned lands. The CDNPA only applies within the boundaries of Imperial, Inyo, Kern, Los Angeles, Mono, Riverside, San Bernardino, and San Diego Counties. Within these counties, the CDNPA prohibits the harvest, transport, sale, or possession of specific native desert plants under many circumstances unless a person has a valid permit or wood receipt, and the required tags and seals. The appropriate permits, tags and seals must be obtained from the sheriff or commissioner of the county where collecting will occur, and the county will charge a fee

3.1.3 Local Regulations

Town of Yucca Valley Joshua Tree Ordinance

This document is an addendum to the Town's General Plan Update certified environmental impact report (EIR), State Clearinghouse No. 2012111021, to address the Town's proposal to enact an urgency ordinance to establish regulations implementing the California Fish and Game Commission's Special Order relating to the take of western Joshua trees during the California Endangered Species Act (CESA) candidacy period and to remove the western Joshua tree from the Town's list of regulated desert native plants during the period the ordinance is effective, by adding new Chapter 9.56 to and amending Sections 9.07.130, 9.09.050 and 9.10.040 of the Town's Development Code (Proposed Project or Urgency Ordinance).

The temporary take authorization and related mitigation provisions of Urgency Ordinance are limited in scope and only apply to the three project types listed in and covered by the Special Order. Specifically, the temporary take authorization is limited to the Town' s approval of single-family residences, accessory structures, and certain public works projects defined by the Special Order as:

- Single Family Residence: Single Family Residence means a single detached building that has been or will be constructed and used as living facilities, including provisions for sleeping, eating, cooking, and sanitation as required by the California Building Code for not more than one household. Nothing in this section shall be construed to authorize take of western Joshua tree for a subdivision or other development that includes more than one single-family residence.
- Accessory Structure: Accessory Structure means a subordinate structure, the use of which is incidental to an existing or contemporaneously constructed single-family residence, and includes: an accessory dwelling unit, addition to an existing single-family residence, garage, carport, swimming pool, patio, greenhouse, storage shed, gazebo, septic tank, sewer connection, solar panels, or gravel or paved driveway.
- Public Works Project: Public Works Project means a project for the erection, construction, alteration, maintenance, or repair, of any public structure, building, or road.

Yucca Valley Municipal Code Chapter 9.56 (Removal of Joshua Tree)

The purpose of this Chapter is to establish permitting standards and process for the issuance of take permits for the Western Joshua Tree as authorized pursuant to the Special Order approved by the California Fish and Game Commission pursuant to Fish and Game Code section 2084 on December 10, 2020 ("Special Order"). The Special Order was subsequently approved by the Office of Administrative Law, and went into effect on January 7, 2021. The requirements set forth in this Chapter are intended to protect the public's health, safety, and welfare by ensuring that take

permits for the Western Joshua Tree are only issued consistent and compliant with the Special Order. (Ord. 291, 1-19-2021). The Planning Commission may authorize the take of western Joshua tree associated with developing single-family residences, accessory structures, and public works projects concurrent with its approval of the project.

Yucca Valley Native Plant Ordinance

The Yucca Valley Native Plant Ordinance was adopted by the Town of Yucca Valley in 2014 and was codified into the Town's Development Code Section 9.09.050 for commercial zoned parcels. The Ordinance stipulates that commercial development projects shall be allowed to transplant on and off site and to remove all regulated desert native plants from their native locations within the property boundaries, pursuant to the development standards and requirements. Regulated desert native plants for all commercial land development projects, include the following: Joshua tree (*Yucca brevifolia*), Mojave yucca (*Yucca schidigera*), Parry's nolina (*Nolina parryi*), California juniper (*Juniperus californica*), Our Lord's candle (*Yucca whipplei*), and Pinon pine (*Pinus monophylla*).

3.2 Project Impacts

3.2.1 Impacts to Plant Communities and Sensitive Natural Communities

As shown in Figure 4 and summarized in Table 2, the project would permanently remove 0.88 acre of Joshua Tree Woodland. Joshua Tree Woodland is considered a sensitive natural community by CDFW based on the state rarity ranking of 3.2. The Joshua Tree Woodland community is heavily disturbed by dirt roads/paths, illegal dumping, invasive plants, and adjacent developments; however, it still has some potential to support special status wildlife such as coast horned lizard and Le Conte's thrasher. Impacts to sensitive natural communities and habitat for special-status species can be considered significant according to CEQA but 0.88 acre is a minor amount of Joshua Tree Woodland and it is highly disturbed. The project must compensate for the loss of individual Joshua Trees per the Western Joshua Tree Conservation Act as describe in Mitigation Measure 2 in Section 3.2.3. Paying into the fund and protecting adjacent Joshua trees and Joshua Tree Woodlands surrounding the project site would ensure there is compensation for the loss of 0.88 acre from the project footprint. The in lieu fee program described in Mitigation Measure BIO-2 would result in the conservation, restoration, or protection of Joshua trees and Joshua Tree Woodlands into perpetuity. With the implementation of that mitigation the project impacts to 0.88 acre of disturbed Joshua Tree Woodland would be reduced to a level that is considered less than significant per the thresholds of CEQA.

3.2.2 Impacts to Nesting Birds and Raptors

The proposed development would require potential removal of trees, shrubs, and herbaceous plants in the landscaping that could provide potential nesting habitat for birds and raptors protected by the MBTA, MBPA, and the Fish and Game Code, including special-status birds such as Le Conte's thrashers. If present at the time of vegetation removal, active nests, eggs, or young could be destroyed or otherwise disturbed to a point at which the young do not survive, which would be a violation of the MBTA, MBPA, and the Fish and Game Code. In addition, indirect impacts from noise or vibration has the potential to disturb an active bird nest that may occur in adjacent landscaping to the point of failure if the nest is within immediate proximity to project activities, and this would also be a violation of the MBTA and Fish and Game Code. To avoid impacts to active bird or raptor nests, eggs, or young, preconstruction nesting bird surveys and monitoring is required per the MBTA and Fish and Game Code as described in Mitigation Measure BIO-1.

Mitigation Measure BIO-1 - Preconstruction Nesting Bird and Raptor Survey

- If possible, ground disturbing activities and vegetation removal should be timed to occur between September 1 – January 31, which is outside the bird and raptor nesting season.

- If ground disturbing activities or vegetation removal (including tree trimming) are scheduled between February 1 – August 31, which is the bird nesting season, a preconstruction survey for nesting birds should be conducted within 72 hours prior to construction activities. The survey should be conducted by a qualified biologist with prior experience conducting nesting bird surveys for construction projects. The study area should include the affected area and suitable habitat within a 500-foot buffer, or a buffer size determined by the qualified biologist based on level of proposed disturbance and access. If no active nests are found, no additional measures are required.

- If active nests are found the biologist will map the location and document the species and nesting stage. A no-work buffer will be established around the active nest as determined by the qualified biologist and based on the species' sensitivity to disturbance and the type and duration of the disturbance. Typical buffers would be 300-feet for songbirds, 500-feet for raptors and special-status species, but it can be determined based on the conditions on the site and recommendations of the qualified biologist. No construction activities shall occur within the no-work buffer until the biologist has determined the nest is no longer active.

3.2.3 Impacts to Special-Status Plants

Western Joshua tree occurs in the project area, and no other special-status plants are expected to occur due to the level of disturbances in the plant community. There are 22 Joshua trees within 15-meters of the proposed project footprint and 8 of those would be removed by the project because they are within the development footprint. Removals include 0 Class A, 8 Class B (#10, #11, #13, #14, #19, #20, #35, D1), and 0 Class C. An additional 2 Joshua trees (#9 and #12) are within the project site but will remain within landscaping after the project is built, and these would be heavily encroached into the 15 meter buffer by development. As shown in the Site Plan in Appendix C, these Joshua trees will be fenced during construction of the project to protect them from potential inadvertent impacts. Another 12 Joshua trees (#4-#8, #15, #18, #21-#24, D3) are outside the project site but will be encroached within a 15 meter buffer by the project construction. Protective fencing shown in the Site Plan in Appendix C will be installed between these Joshua trees and the project site during construction to avoid inadvertent impacts to these trees.

Overall the population of Joshua trees within the survey area is healthy, with very few dead trees and a mix of size classes and observations of fruits and flowers indicate that the Joshua trees are regenerating naturally on the site. The number of removals proposed by the project is 18% of the number surveyed, however, there are numerous other Joshua trees surrounding the survey area that are contiguous plant communities with that found on the site, and the relative number of removals to those in the region is very small. The removal of 8 Joshua trees is insignificant in relation to the number that are found in the immediate area. These findings are in consideration of the guidelines and recommendations from the Western Joshua Tree Conservation Plan impacts avoidance section. To reduce the potential impacts to a less than significant level per the thresholds of CEQA the project will implement Mitigation Measure BIO-2 below that includes permitting for the removal of the Joshua trees and protected the remaining trees.

Mitigation Measure BIO-2 – Western Joshua Tree Permitting and Protection

Due to the proposed removal of eight (8) Joshua trees for the project, it will require a permit from the CDFW prior to removing the trees. To obtain the permit the applicant must complete a permit application and submit the application and Joshua tree inventory to the CDFW Region 6 Office via the online permitting system. This permit will require coordination with both the County of San Bernardino and CDFW to determine the number of Joshua trees that the agencies would require for transplanting to areas outside of the development. However, there is an in-lieu fee program that allows for a fee-based mitigation for removal of Joshua trees and these same mitigation fees could be applied to all of the Joshua trees that are encroached within 15-meters as determined by the agencies. Therefore, these estimated fees are subject to change per the requirements of the permitting agencies following an assessment of the project impacts to Joshua trees. The 2025 Western Joshua Tree Conservation Act Incidental Take Permit annual mitigation

fees for the proposed removal of 8 Joshua trees within the standard fee area is a total of $4,072.00 as follows:

- 0 Class A trees x $346.00 = $0.00
- 8 Class B trees x $509.00 = $4,072.00
- 0 Class C trees x $2,544.75 = $0.00

Joshua Tree Avoidance During Construction

- South Environmental recommends installing temporary protective fencing between the project workspace and each Joshua tree during construction of the project. The fencing would be high-visibility fencing placed at a minimum 15-meter buffer zone prior to start of construction (or at the distance that is permitted for trees closer to the site). No work or project activities shall occur within the fenced area and all work shall occur outside of the proposed Joshua tree buffers. Fencing would help prevent compaction and/or contamination of soil and root zone.
- During construction, heavy equipment and vehicles shall be operated in accordance with standard Best Management Practices (BMPs). For example, all equipment used in the workspace shall be properly maintained such that no leaks of oil, fuel, or residues will take place. Provisions shall be in place to remediate any accidental spills. Implementation of the BMPs will help minimize the potential for impact to Joshua trees both within and outside the Joshua tree buffer zones.
- Night work should be avoided to ensure no disturbance of pollinators or photoperiods for the remaining Joshua trees.

3.2.4 Impacts to Special-Status Wildlife

Based on the analysis in this report coast horned lizard and Le Conte's thrasher have the potential to occur within the Joshua Tree Woodland and Desert Willow Woodland habitats on the Project Site and Study Area.

Coast Horned Lizard

Coast horned lizard have the potential to occur on the project site if it is present within the development area during construction activities they could be crushed and killed or injured. However, the habitat on the site is disturbed and of lower ecological value as a result, and coast horned lizard is more likely to occur in the desert wash outside of the project footprint. The potential for the species to be directly impacted by the project is low as it is has a low potential

to occur at this area relative to the desert wash and it is highly disturbed at the urban interface. Coast horned lizard direct impacts would be low as a result. In addition, the loss of 0.88 acre of disturbed Joshua Tree Woodland that is potential habitat for coast horned lizard is less than significant as it is a very small area that is isolated and between existing developments at the urban interface. This small area is a minor fraction of the available habitat that would remain in the immediate area, including the much higher value habitat within the desert wash 200-feet away from the project as well as in the overall range of the species. In addition, the implementation of Mitigation Measure BIO-2 would ensure that the loss of Joshua trees and Joshua Tree Woodland habitat would be mitigated. For these reasons the project impacts to coast horned lizard would be considered less than significant per the thresholds of CEQA.

Le Conte's Thrasher

Le Conte's thrasher is a CDFW Species of Special Concern that has the potential to nest and forage on the project site. The potential impacts to 0.88 acre of disturbed habitat is less than significant as it is a minor fraction of what would remain available in the immediate area and within the entire species range. To avoid direct and indirect impacts to Le Conte's thrasher birds, Mitigation Measure BIO-1 regarding nesting bird and raptor surveys is recommended. With the implementation of the mitigation measure the project impacts to Le Conte's thrasher would be reduced to a level that is less than significant according to CEQA.

3.2.5 Impacts to Water Resources

One jurisdictional feature, a desert wash, occurs in the Study Area approximately 200 feet southwest of the Project Site and outside of the project impact areas. Since project impacts are limited to the Project Site it is not expected for the proposed project to impact the wash directly. Temporary Impacts would not occur from the project as temporary staging and construction equipment will occur on the Project Site outside of the wash, at a distance greater than 200-feet. Considering the large distance between the project site and the wash, and the position of the project site between two existing large commercial development, the project would have no indirect impacts on the wash. Therefore, no impacts to water resources would result from the project.

3.2.6 Impacts to Protected Trees

The study area contains mature western Joshua trees, which are all regulated trees that may require permits before removal under the Yucca Valley Code of Ordinances. The velvet mesquite trees are located outside of the project footprint and would not be impacted by the project as a result. The project will remove 8 Joshua trees as described previously and propose to permit the impacts with Mitigation Measure BIO-2. With the implementation of Mitigation Measure BIO-2 the project would be in compliance with the Ordinance.

3.2.7 Impacts to Wildlife Movement Corridors and Habitat Linkages

Based on the analysis in this report the Project Site was determined not to be within a wildlife movement area or habitat linkage due to the surrounding disturbances and isolated nature of the Joshua Tree Woodland. Therefore, the project would have no impact on wildlife movement corridors and habitat linkages

Appendix A

Photograph Log

Image 1.) View of the landscaped and developed area at the north of the Project Site, connecting the adjacent commercial developments.

Image 2.) View of the Project Site from the access road, featuring Joshua tree woodlands and native shrubs.

Image 3.) Depicts a large burrow found on the Project Site.

Image 4.) Depicts the Project Site from the dirt road in the middle. Housing developments can be seen in the background.

Image 5.) View of Balsa Avenue facing northeast, within the south Study Area. Housing developments can be seen on the right, Joshua Tree Woodland on the left.

Image 6.) View of the dry desert wash in the southwest Study Area, featuring Desert Willow Woodland.

Image 7.) View of the Project Site frontage along 29 Palms Highway facing west, featuring native and ornamental trees.

Image 8.) View of a ruderal, undeveloped area within the north study area, found within an outdoor mall.

Appendix B

Special-Status Species Analysis

December 2025

Special-Status Species

Special-status species are those plants and animals that, because of their recognized rarity or vulnerability to various causes of habitat loss or population decline, are recognized by federal, state, or other agencies as under threat from human-associated developments. Some of these species receive specific protection that is defined by federal or state endangered species legislation. Others have been designated as special-status based on adopted policies and expertise of state resource agencies or organizations with acknowledged expertise, or policies adopted by local governmental agencies such as counties, cities, and special districts to meet local conservation objectives. Special-status species include:

- Plants or wildlife listed or proposed for listing as threatened or endangered, or are candidates for possible future listing as threatened or endangered, under the federal Endangered Species Act or the California Endangered Species Act;
- Plants or wildlife that meet the definitions of rare or endangered under CEQA Guidelines Section 15380.
- Plants or wildlife covered under an adopted NCCP/HCP;
- Plants considered by the California Native Plant Society (CNPS) to be rare, threatened, or endangered (List 1A, 1B and 2 plants) in California;
- Plants listed by the CNPS as plants in which there is limited information about distribution (List 3);
- Plants listed as rare under the California Native Plant Protection Act (Fish and Game Code 1900 et seq.);
- Wildlife designated by CDFW as species of special concern;
- Wildlife "fully protected" in California (California Fish and Game Code Sections 3511, 4700, and 5050); and
- Wildlife protected by the Migratory Bird Treaty Act (MTBA).

Federally-Protected Status

All references to Federally-protected species in this BRA include the most current published status or candidate category to which each species has been assigned by USFWS. For purposes of this assessment the following acronyms are used for Federal status species, as applicable:

FE Federally-listed as Endangered
FT Federally-listed as Threatened
FPE Federally proposed for listing as Endangered
FPT Federally proposed for listing as Threatened
FPD Federally proposed for delisting
FC Federal candidate species (former C1 species)

State-Protected Status

For the purposes of this BRA, the following acronyms are used for State status species, as applicable:

SE State-listed as Endangered
ST State-listed as Threatened
SR State-listed as Rare
SCE State candidate for listing as Endangered
SCT State candidate for listing as Threatened
SFP State Fully Protected
SSC California Species of Special Concern

California Rare Plant Rank

The CNPS is a private plant conservation organization dedicated to the monitoring and protection of special-status species in California. CNPS has compiled an inventory comprised of the information focusing on geographic distribution and qualitative characterization of Rare, Threatened, or Endangered vascular plant species of California (CNPS 2018). The list serves as the candidate list for listing as Threatened and Endangered by CDFW. CNPS has developed six categories of rarity known as the California Rare Plant Rank (CRPR), of which Ranks 1A, 1B, 2A, and 2B are particularly considered sensitive:

Rank 1A Presumed extinct in California.
Rank 1B Plants Rare, Threatened, or Endangered in California and elsewhere.
Rank 2A Presumed extinct in California, but more common elsewhere.
Rank 2B Plants Rare, Threatened, or Endangered in California, but more common elsewhere.
Rank 3 Plants about which we need more information – a review list.
Rank 4 Plants of limited distribution – a watch list.

The CNPS recently added "threat ranks" which parallel the ranks used by the CNDDB. These ranks are added as a decimal code after the CNPS List (e.g., Rank 1B.1). The threat codes are as follows:

.1 Seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat);

.2 Moderately threatened in California (20-80% occurrences threatened);

.3 Not very threatened in California (<20% of occurrences threatened or no current threats known).

Potential to Occur Assessment

Special-status species that **present** or are **likely** (high or medium potential) to occur within the parcel are a based on one or more of the following:

- the direct observation of the species within the parcel during any field surveys;
- a record reported in the CNDDB, CNPS, or IPAC; and
- the parcel is within known distribution of a species and contains appropriate habitat.

Special-status species that are **unlikely** (low potential) to occur are based on one of the following:

- the parcel has the general habitat types but lacks necessary habitat elements such as suitable microhabitat or soils; or
- the parcel is outside the known elevation range or distribution of the species, and has otherwise suitable habitats;

Special-status species that have no potential to occur on the parcel are labeled as **none** due to the absence of suitable habitat.

Special-Status Animals

Scientific Name	Common Name	Taxonomic Group	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study Area
Anniella stebbinsi	Southern California legless lizard	Reptiles	None	None	CDFW_SSC-Species of Special Concern | USFS_S-Sensitive	Generally south of the Transverse Range, extending to northwestern Baja California. Occurs in sandy or loose loamy soils under sparse vegetation. Disjunct populations in the Tehachapi and Piute Mountains in Kern County.	Variety of habitats; generally in moist, loose soil. They prefer soils with a high moisture content.	**None:** Study Area lacks habitat for this species.
Antrozous pallidus	pallid bat	Mammals	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFS_S-Sensitive	Deserts, grasslands, shrublands, woodlands and forests. Most common in open, dry habitats with rocky areas for roosting.	Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	**Low:** Study Area contains woodland and desert wash habitats, though no rocky areas for roosting sites are available.
Asio otus	long-eared owl	Birds	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Riparian bottomlands grown to tall willows and cottonwoods; also, belts of live oak paralleling stream courses.	Require adjacent open land, productive of mice and the presence of old nests of crows, hawks, or magpies for breeding.	**None:** Study Area lacks habitat for this species.
Astur cooperii	Cooper's hawk	Birds	None	None	CDFW_WL-Watch List | IUCN_LC-Least Concern	Woodland, chiefly of open, interrupted or marginal type.	Nest sites mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also, live oaks.	**None:** Study Area lacks preferred habitats
Athene cunicularia	burrowing owl	Birds	None	Candidate Endangered	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation.	Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	**Low:** Study Area contains habitat and cover sites, such as burrows but this species is not known to occur in Yucca Valley and has not been observed there before. The nearest records in the CNDDB are 6 miles to the northwest, and there are no other records in the region on this side of the mountains. The

Scientific Name	Common Name	Taxonomic Group	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study Area
								project site is also between two existing developments and lacks a lot of foraging area on the project site itself. It is highly unlikely that this species would occur based on known range of the species and the limited ability to forage at the project site due to adjacent developments.
Bombus crotchii	Crotch's bumble bee	Insects	None	Candidate Endangered	IUCN_EN-Endangered	Coastal California east to the Sierra-Cascade crest and south into Mexico.	Food plant genera include Antirrhinum, Phacelia, Clarkia, Dendromecon, Eschscholzia, and Eriogonum.	**Low:** Study Area contains habitat and some preferred food plants but is just outside of the known range for this species.
Chaetodipus fallax pallidus	pallid San Diego pocket mouse	Mammals	None	None		Desert border areas of San Diego, Riverside, San Bernardino, and Los Angeles counties in desert wash, desert scrub, desert succulent scrub, pinyon-juniper, etc.	Sandy, herbaceous areas, usually in association with rocks or coarse gravel.	**Low:** Desert washes occur on the Study Area, though they are not rocky. There are no rocky or coarse gravelly areas on the project site or Study Area and there is a low potential for this species to occur as a result.
Crotalus ruber	red-diamond rattlesnake	Reptiles	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFS_S-Sensitive	Chaparral, woodland, grassland, and desert areas from coastal San Diego County to the eastern slopes of the mountains.	Occurs in rocky areas and dense vegetation. Needs rodent burrows, cracks in rocks or surface cover objects.	**Low:** Study Area contains woodland and rodent burrows, however lacks microhabitat.
Eremarionta morongoana	Morongo (=Colorado) desertsnail	Mollusks	None	None	IUCN_NT-Near Threatened	Found in the eastern San Bernardino Mountains, the Little San Bernardino Mountains, and Mecca Hills along the the edge of the Coachella Valley and southern Mojave Desert.	Occur in rockslides with deep talus surrounded by desert scrub, or under beds of fallen palm fronds where tumbled rocks are present at palm oases.	**None:** Study Area lacks habitat for this species.
Gopherus agassizii	desert tortoise	Reptiles	Threatened	Endangered	IUCN_CR-Critically Endangered	Most common in desert scrub, desert wash, and Joshua tree habitats; occurs in	Require friable soil for burrow and nest construction. Creosote bush habitat with large	**Low:** Study Area contains both habitat and microhabitat for this species but no burrows were observed, the habitat is degraded,

Scientific Name	Common Name	Taxonomic Group	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study Area
						almost every desert habitat.	annual wildflower blooms preferred.	and habitat is isolated from areas where tortoise could form a home range.
Icteria virens	yellow-breasted chat	Birds	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses.	Nests in low, dense riparian, consisting of willow, blackberry, wild grape; forages and nests within 10 ft of ground.	**None:** Study Area lacks riparian areas.
Lasiurus cinereus	hoary bat	Mammals	None	None	IUCN_LC-Least Concern	Prefers open habitats or habitat mosaics, with access to trees for cover and open areas or habitat edges for feeding.	Roosts in dense foliage of medium to large trees. Feeds primarily on moths. Requires water.	**None:** Study Area lacks habitat for this species.
Lasiurus xanthinus	western yellow bat	Mammals	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats.	Roosts in trees, particularly palms. Forages over water and among trees.	**Low:** Study Area contains desert wash habitats, however, no consistent water or palm trees are available.
Myiarchus tyrannulus	brown-crested flycatcher	Birds	None	None	CDFW_WL-Watch List | IUCN_LC-Least Concern	Inhabits desert riparian areas along the Colorado River, as well as other desert oases and riparian areas NW to Victorville.	Requires riparian thickets, trees, snags, and shrubs for foraging perches, nesting cavities, and cover.	**None:** Study Area lacks habitat for this species.
Neotoma lepida intermedia	San Diego desert woodrat	Mammals	None	None	CDFW_SSC-Species of Special Concern	Coastal scrub of Southern California from San Diego County to San Luis Obispo County.	Moderate to dense canopies preferred. They are particularly abundant in rock outcrops, rocky cliffs, and slopes.	**None:** Study Area lacks habitat for this species.
Ovis canadensis nelsoni	desert bighorn sheep	Mammals	None	None	BLM_S-Sensitive | CDFW_FP-Fully Protected | USFS_S-Sensitive	Widely distributed from the White Mtns in Mono Co. to the Chocolate Mts in Imperial Co.	Open, rocky, steep areas with available water and herbaceous forage.	**None:** Study Area lacks habitat for this species.
Paranomada californica	California cuckoo bee	Insects	None	None			Known only from two locations in San Bernardino County; the type locality near Yucca Valley, and a 1971 collection from 9.5 miles NW of Pioneertown, on	**Low:** Flowering for foraging occur on the Study Area. The project site occurs near the previous records of this species. However, the site is degraded and of low ecological value for this species.

Scientific Name	Common Name	Taxonomic Group	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study Area
							Burns Canyon Rd (CNDDB 2006).	
Parnopes borregoensis	Borrego parnopes cuckoo wasp	Insects	None	None		Known from San Diego, San Bernardino, and Inyo counties.	Desert dry washes and core habitats for desert tortoises.	**Low:** Study Area contains dry desert washes and suitable tortoise habitat. The site is degraded and not considered core habitat for desert tortoise.
Perognathus longimembris bangsi	Palm Springs pocket mouse	Mammals	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern	Desert riparian, desert scrub, desert wash and sagebrush habitats. Most common in creosote-dominated desert scrub.	Rarely found on rocky sites. Occurs in all canopy coverage classes.	**Low:** Study Area occurs outside of the species distribution.
Phrynosoma blainvillii	coast horned lizard	Reptiles	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes.	Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	**High:** Study Area contains both habitat and microhabitat for this species.
Piranga rubra	summer tanager	Birds	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Summer resident of desert riparian along lower Colorado River, and locally elsewhere in California deserts.	Requires cottonwood-willow riparian for nesting and foraging; prefers older, dense stands along streams.	**none:** Willow desert wash habitat occurs on the Study Area, but the stands are not dense or along the Colorado River.
Pyrocephalus rubinus	vermilion flycatcher	Birds	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	During nesting, inhabits desert riparian adjacent to irrigated fields, irrigation ditches, pastures, and other open, mesic areas.	Nest in cottonwood, willow, mesquite, and other large desert riparian trees.	**None:** Study Area is not adjacent to irrigated areas.
Setophaga petechia	yellow warbler	Birds	None	None	CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Riparian plant associations in close proximity to water. Also nests in montane shrubbery in open conifer forests in Cascades and Sierra Nevada.	Frequently found nesting and foraging in willow shrubs and thickets, and in other riparian plants including cottonwoods, sycamores, ash, and alders.	**None:** Study Area lacks habitat for this species.
Taxidea taxus	American badger	Mammals	None	None	CDFW_SSC-Species of Special Concern |	Most abundant in drier open stages of most shrub, forest, and	Needs sufficient food, friable soils and open, uncultivated ground.	**None:** Lack of large open rangeland.

Scientific Name	Common Name	Taxonomic Group	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study Area
					IUCN_LC-Least Concern	herbaceous habitats, with friable soils.	Preys on burrowing rodents. Digs burrows.	
Toxostoma bendirei	Bendire's thrasher	Birds	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_VU-Vulnerable | USFWS_BCC-Birds of Conservation Concern	Migratory; local spring/summer resident in flat areas of desert succulent shrub/Joshua tree habitats in Mojave Desert.	Nests in cholla, yucca, palo verde, thorny shrub, or small tree, usually 0.5 to 20 feet above ground.	**Low:** Study Area contains both habitat and microhabitat for this species but is outside the typical range and the habitat is degraded and of low value due to isolation.
Toxostoma lecontei	Le Conte's thrasher	Birds	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern | USFWS_BCC-Birds of Conservation Concern	Desert resident; primarily of open desert wash, desert scrub, alkali desert scrub, and desert succulent scrub habitats.	Commonly nests in a dense, spiny shrub or densely branched cactus in desert wash habitat, usually 2-8 feet above ground.	**Moderate:** Study Area contains desert wash habitats.
Uma inornata	Coachella Valley fringe-toed lizard	Reptiles	Threatened	Endangered	IUCN_EN-Endangered	Limited to sandy areas in the Coachella Valley, Riverside County.	Requires fine, loose, windblown sand (for burrowing), interspersed with hardpan and widely-spaced desert shrubs.	**None:** Study Area lacks habitat for this species.
Uma scoparia	Mojave fringe-toed lizard	Reptiles	None	None	BLM_S-Sensitive | CDFW_SSC-Species of Special Concern | IUCN_LC-Least Concern	Fine, loose, wind-blown sand in sand dunes, dry lakebeds, riverbanks, desert washes, sparse alkali scrub and desert scrub.	Shrubs or annual plants may be necessary for arthropods found in the diet.	**None:** Study Area contains desert wash habitats and shrubs and annuals but is distant from records of this species.
Vireo bellii pusillus	least Bell's vireo	Birds	Endangered	Endangered		Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft.	Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite.	**None:** Study Area is outside of the elevation range for this species.

Special-Status Plants

Scientific Name	Common Name	Lifeform	CRPR	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study area
Allium parishii	Parish's onion	perennial bulbiferous herb	4.3	None	None		Joshua tree "woodland", Mojavean desert scrub, Pinyon and juniper woodland	Rocky	**Low:** The Study Area lacks microhabitat for this species.
Astragalus bernardinus	San Bernardino milk-vetch	perennial herb	1B.2	None	None	BLM_S; SB_CalBG/RSABG; USFS_S	Joshua tree "woodland", Pinyon and juniper woodland	Carbonate (often), Granitic (often)	**None:** The Study Area has low value habitat for this species but it is heavily degraded and unlikely to support this species. This perennial was not observed on the site during the survey.
Astragalus lentiginosus var. coachellae	Coachella Valley milk-vetch	annual/perennial herb	1B.2	FE	None	SB_CalBG/RSABG; SB_USDA	Desert dunes, Sonoran desert scrub (sandy)		**None:** Study Area is outside of the elevation range for this species.
Astragalus nutans	Providence Mountains milk-vetch	annual herb	4.3	None	None	SB_CalBG/RSABG	Joshua tree "woodland", Mojavean desert scrub, Pinyon and juniper woodland, Sonoran desert scrub	Gravelly (sometimes), Sandy (sometimes)	**None:** The Study Area is outside the typical range for this species.
Astragalus tricarinatus	triple-ribbed milk-vetch	perennial herb	1B.2	FE	None	SB_CalBG/RSABG	Joshua tree "woodland", Sonoran desert scrub	Gravelly (sometimes), Sandy (sometimes)	**None:** The Study Area is outside the known range for this species
Berberis fremontii	Fremont barberry	perennial evergreen shrub	2B.3	None	None	SB_CalBG/RSABG	Joshua tree "woodland", Pinyon and juniper woodland	Granitic (sometimes), Rocky	**None**: Study Area is outside of the elevation range for this species.
Boechera dispar	pinyon rockcress	perennial herb	2B.3	None	None	SB_CalBG/RSABG	Joshua tree "woodland", Mojavean desert scrub, Pinyon and juniper woodland	Granitic, Gravelly	**None:** Study Area is outside of the elevation range for this species.
Boechera lincolnensis	Lincoln rockcress	perennial herb	2B.3	None	None	BLM_S	Chenopod scrub, Mojavean desert scrub	Carbonate	**None:** Study Area is outside of the elevation range for this species.
Boechera shockleyi	Shockley's rockcress	perennial herb	2B.2	None	None	SB_CalBG/RSABG; USFS_S	Pinyon and juniper woodland (carbonate, gravelly, quartzite, rocky)		**None:** Study Area lack habitat for this species.

Scientific Name	Common Name	Lifeform	CRPR	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study area
Calochortus palmeri var. palmeri	Palmer's mariposa-lily	perennial bulbiferous herb	1B.2	None	None	BLM_S; SB_CalBG/RSABG; SB_SBBG; USFS_S	Chaparral, Lower montane coniferous forest, Meadows and seeps	Mesic	**None:** Study Area lack habitat for this species.
Camissonia kernensis ssp. kernensis	Kern County evening-primrose	annual herb	4.3	None	None		Chaparral, Joshua tree "woodland", Pinyon and juniper woodland	Granitic, Gravelly (sometimes), Sandy (sometimes)	**None**: The Study Area is outside the known range for this species.
Canbya candida	white pygmy-poppy	annual herb	4.2	None	None	SB_CalBG/RSABG; USFS_S	Joshua tree "woodland", Mojavean desert scrub, Pinyon and juniper woodland	Granitic, Gravelly, Sandy	**Low:** The Study Area is heavily degraded and unlikely to support this species.
Chorizanthe xanti var. leucotheca	white-bracted spineflower	annual herb	1B.2	None	None	BLM_S; SB_CalBG/RSABG; SB_USDA; USFS_S	Coastal scrub (alluvial fans), Mojavean desert scrub, Pinyon and juniper woodland	Gravelly (sometimes), Sandy (sometimes)	**Low:** The Study Area is heavily degraded and unlikely to support this species.
Cordylanthus eremicus ssp. eremicus	desert bird's-beak	annual herb (hemiparasitic)	4.3	None	None	SB_CalBG/RSABG	Joshua tree "woodland", Mojavean desert scrub, Pinyon and juniper woodland		**Low:** The Study Area has habitat for this species, but the Study Area is outside the elevation range for this species.
Cymopterus multinervatus	purple-nerve cymopterus	perennial herb	2B.2	None	None		Mojavean desert scrub, Pinyon and juniper woodland	Gravelly (sometimes), Sandy (sometimes)	**Low:** The Study Area lacks preferred habitat for this species.
Eriastrum harwoodii	Harwood's eriastrum	annual herb	1B.2	None	None	BLM_S; SB_CalBG/RSABG; SB_USDA	Desert dunes		**None:** The Study Area lacks habitat for this species.
Erigeron parishii	Parish's daisy	perennial herb	1B.1	FT	None	SB_CalBG/RSABG	Mojavean desert scrub, Pinyon and juniper woodland	Carbonate (usually), Granitic (sometimes)	**Low:** The Study Area lack microhabitat for this species.
Eschscholzia androuxii	Joshua Tree poppy	annual herb	4.3	None	None		Joshua tree "woodland", Mojavean desert scrub	Flats, Gravelly, Rocky, Sandy, Slopes, Washes	**Low:** The Study Area is degraded and unlikely to support this species.
Euphorbia vallis-mortae	Death Valley sandmat	perennial herb	4.2	None	None	SB_CalBG/RSABG	Mojavean desert scrub (gravelly, sandy)		**None:** The Study Area lacks preferred habitat for this species.
Funastrum utahense	Utah vine milkweed	perennial herb	4.2	None	None		Mojavean desert scrub, Sonoran desert scrub	Gravelly (sometimes),	**None:** The Study Area lacks preferred habitat for this species.

Scientific Name	Common Name	Lifeform	CRPR	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study area
								Sandy (sometimes)	
Galium angustifolium ssp. gracillimum	slender bedstraw	perennial herb	4.2	None	None	SB_CalBG/RSABG	Joshua tree "woodland", Sonoran desert scrub	Granitic, Rocky	**Low:** The Study Area lacks micro habitat for this species.
Galium johnstonii	Johnston's bedstraw	perennial herb	4.3	None	None	SB_CalBG/RSABG	Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland, Riparian woodland		**None:** Study Area is outside of the elevation range for this species.
Grusonia parishii	Parish's club-cholla	perennial stem	2B.2	None	None		Joshua tree "woodland", Mojavean desert scrub, Sonoran desert scrub	Rocky, Sandy	**None**: The Study Area is outside the known range of this species.
Hulsea vestita ssp. parryi	Parry's sunflower	perennial herb	4.3	None	None	SB_CalBG/RSABG	Lower montane coniferous forest, Pinyon and juniper woodland, Upper montane coniferous forest	Carbonate (sometimes), Granitic (sometimes), Openings, Rocky	**None:** Study Area is outside of the elevation range for this species.
Linanthus bernardinus	Pioneertown linanthus	annual herb	1B.2	None	None	BLM_S; SB_CalBG/RSABG	Joshua tree "woodland", Pinyon and juniper woodland		**None:** Study Area is outside of the elevation range for this species.
Linanthus maculatus ssp. maculatus	Little San Bernardino Mtns. linanthus	annual herb	1B.2	None	None	BLM_S; SB_CalBG/RSABG	Desert dunes, Joshua tree "woodland", Mojavean desert scrub, Sonoran desert scrub	Sandy	**None:** The Study Area is outside the known range for this species.
Lycium torreyi	Torrey's box-thorn	perennial shrub	4.2	None	None		Mojavean desert scrub, Sonoran desert scrub	Rocky, Sandy, Streambanks, Washes	**Low**: The Study Area lacks rocky streambanks.
Monardella robisonii	Robison's monardella	perennial rhizomatous herb	1B.3	None	None	BLM_S; SB_CalBG/RSABG	Pinyon and juniper woodland		**None:** The Study Area lacks habitat for this species.
Muilla coronata	crowned muilla	perennial bulbiferous herb	4.2	None	None		Chenopod scrub, Joshua tree "woodland", Mojavean desert scrub, Pinyon and juniper woodland		**Low:** The Study Area is outside the known range for this species.
Penstemon clevelandii var. mohavensis	Mojave beardtongue	perennial herb	1B.2	None	None		Mojavean desert scrub, Pinyon and juniper woodland	Granitic (often), Rocky	**Low:** The Study Area lack microhabitat for this species.

Scientific Name	Common Name	Lifeform	CRPR	Federal Listing	State Listing	Other Status	General Habitat	Microhabitat	Potential to Occur on Study area
Phacelia mohavensis	Mojave phacelia	annual herb	4.3	None	None	SB_CalBG/RSABG; SB_USDA	Cismontane woodland, Lower montane coniferous forest, Meadows and seeps, Pinyon and juniper woodland	Gravelly (sometimes), Sandy (sometimes)	**None:** Study Area is outside of the elevation range for this species.
Saltugilia latimeri	Latimer's woodland-gilia	annual herb	1B.2	None	None	BLM_S; SB_CalBG/RSABG; SB_USDA; USFS_S	Chaparral, Mojavean desert scrub, Pinyon and juniper woodland	Granitic (often), Rocky (sometimes), Sandy (sometimes), Washes (sometimes)	**Low:** The Study Area lacks the preferred habitat for this species.
Streptanthus campestris	southern jewelflower	perennial herb	1B.3	None	None	BLM_S; SB_CRES; USFS_S	Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland	Rocky	**None:** The Study Area lacks habitat for this species.
Tetracoccus hallii	Hall's tetracoccus	perennial deciduous shrub	4.3	None	None	SB_CalBG/RSABG	Mojavean desert scrub, Sonoran desert scrub		**Low:** The Study Area lacks the preferred habitat for this species.
Yucca brevifolia	Western Joshua tree	Monocotyledonous tree	CBR	None	Candidate Threatened	Western Joshua Tree Conservation Act (WJTCA)	Mojavean desert scrub, pinyon and juniper woodland, Joshua tree woodland	Hot, dry sites on flats, mesas, bajadas, and gentle slopes in the Mojave Desert	**Present.** This species was observed throughout the study area and project site and create a Joshua Tree Woodland.

Matthew South

PRINCIPAL BIOLOGIST

Matthew South founded South Environmental in 2018. He is a certified wildlife biologist with over 17 years of professional experience providing natural resources consulting services for a wide variety of clients that include residential, commercial, government, utility, infrastructure, research, and non-profit projects. For the last 14 years, Mr. South has been an environmental consultant in southern California acting as a Wildlife Biologist and Geographic Information System (GIS) Analyst. In early 2018 he started South Environmental and has since been supporting clients in Los Angeles, Ventura, Santa Barbara, San Bernardino, and Riverside Counties.

Mr. South's background in ecology has led to a passion for conservation planning and resources assessments for the purpose of preservation and management. The integration of the latest technologies such as advanced GIS systems, mobile computing, and drone sensing allows him to innovate new data collection, analysis, and collaboration tools for the environmental sciences that produce more accurate data and better-informed resource managers.

EXPERTISE

- **Conservation and Management Planning.** Mr. South's has extensive experience preparing mitigation and monitoring plans, habitat conservation plans, and technical biological resources management plans that are compliant with federal, state, and local regulations. Mr. South is the only active NRCS TSP for Fish and Wildlife Plans Certified in California.
- **Biological Resources Assessment.** Mr. South has completed dozens of biological resources assessments throughout southern California.
- **Rare Plants and Arborist Services.** Mr. South has surveyed and assessed thousands of native and landscaped trees in southern California. He is a certified arborist with 5-years of tree survey experience working closely with some of the most experienced arborists in California. In addition, he has performed hundreds of hours of rare plant surveys and habitat assessments.
- **Wetland & Jurisdictional Delineations.** Mr. South has conducted dozens of jurisdictional and wetland delineations per the guidelines and methods from the US Army Corps of Engineers (USACE), California Department of Fish and Wildlife (CDFW), and the state Regional Water Quality Control Boards (RWQCB).
- **GIS.** Mr. South is an expert at spatial data collection and analysis using ESRI mobile and desktop software products and Trimble hardware.

EDUCATION

B.S., Wildlife Ecology, University of Wisconsin-Madison, 2004

CERTIFICATIONS

Certified Wildlife Biologist, The Wildlife Society 2014

Certified Technical Service Provider (TSP) for Fish and Wildlife Management Plans, USDA NRCS 2017

Authorized Desert Tortoise Biologist – Numerous BOs

Unmanned Aircraft System Pilot Certification, FAA #4177603

TRAINING

Wetland Delineation Training Course – The Wetland Institute (2014)

Southwest Willow Flycatcher Workshop, 2017

USGS Desert Tortoise Health Assessment and Tissue Collection Techniques Training, 2009

SELECT PROJECT EXPERIENCE

EVMWD Rice Canyon Reservoir Access Road and New Conduit Project, City of Lake Elsinore, Riverside County, California (2022). South Environmental was retained to complete biological and cultural resources services. Biological resources work included a Jurisdictional Delineation Report, a Biological Resources Assessment/MSHCP Consistency Analysis, Rare Plant Surveys, Burrowing Owl Surveys, and mitigation planning. Matthew South was the Principal Biologist on the project.

Wendy's in Calimesa Project, Riverside County, California (2023). South Environmental was retained to complete a Biological Resources Assessment and Western Riverside County MSHCP Consistency Analysis Report. Mr. South served as the Principal Biologist on the Project.

Southern California Gas (SCG) As-Needed Biological and Cultural Resources Services (2022-ongoing). As a subconsultant on this contract Mr. South has overseen the assessment numerous resources from single point locations to many miles of pipelines. More recently he has begun to conduct biological assessment in the coastal zone in Santa Barbara County as well as endangered species Biological Assessments (BAs) in support of Coastal Development Permits for SCG. Wetland delineation and permitting, biological resources assessments, and resources surveys and monitoring are services that Mr. South both provides personally and oversees a team of specialists that support the environmental impacts analysis and permitting for SCG.

Southern California Edison (SCE) As-Needed Natural and Cultural Resources Services (2021-ongoing). As a subconsultant on this contract for multiple Primes (SWCA, EI, Rincon, Cardno, and ERM), South Environmental has focused its biological resources services on wetland delineations and permitting efforts for SCE throughout all its regions. From single pole delineations in roadside ditches to several hundred poles through miles of wet meadows in the Sierras, the projects vary in size and complexity as well as location. Primarily, delineations have been in the Sierras with the largest and most complex projects in Inyo and Mono Counties and several in Kern and Tulare. A few of the specific projects include

- Pickle Meadow: Aquatic Resources Delineation Report and Permitting for 300-poles located in a wet meadow behind Bridgeport Reservoir.
- Kern River: Wetland Delineation and Permitting for 15 pole replacements in Kernville.
- June Lake to Tom's Place: Wetland Delineation and Permitting for 40 poles spread through Inyo and Mono Counties.
- Cajon Wash: Jurisdictional Delineation and SBKR Assessment and Permitting for 10 pole replacements and realignment for a capital project located in SBKR Critical Habitat.
- Pipes Wash: Delineation and Permitting for 25-poles that are within Pipes Wash, a large ephemeral wash in the San Bernardino desert.

City of Palmdale - Palmdale Warehouse Project (2022-on going). South Environmental prepared a jurisdictional delineation and permit applications to CDFW and RWQCB for the project. Services included EPIMS application and RWQCB Dredge and Fill Application and coordination including for mitigation management and alternatives analysis. Currently South Environmental is overseeing the compliance monitoring for the project.

City of Los Angeles Recreation and Parks Department Controlled Burn Project Burrowing Owl Surveys and Mitigation (2022). Mr. South planned and implemented a large scale burrowing owl protocol survey at

a model airfield park in the Sepulveda Basin. The survey was conducted over 1,300-acres and two burrowing owls were identified. Mr. South prepared a mitigation plan for conducting the controlled burn and avoiding impacts to burrowing owls.

California Coastal Zone Experience (2018-2024).

- Old Chimney Road Development, Santa Monica Mountains LCP (2018-present). Completed a BRA and oak tree survey per the LCP guidelines and presented to the Environmental Review Board (ERB).
- Gold Stone Road Development, Santa Monica Mountain LCP (2019-present). Completed a BRA, oak tree survey, and native tree survey per the LCP guidelines.
- Entrada Road Development, Santa Monica Mountains LCP (2020). Completed a BRA and oak tree survey per the LCP guidelines.
- Schueren Road Development, Santa Monica Mountains LCP (2019-2020). Completed a wetland delineation according to the California Coastal Commission guidelines.
- Decker Edison Road Development, City of Malibu (2020). Completed a BRA per the City of Malibu LCP guidelines.
- Malibou Lake Developments, North Santa Monica Mountains SEA (2020). Completed a biological resources map per the updated SEA guidelines.
- Medley Lane Development, Santa Monica Mountains LCP (2020). Completed a biological inventory per the guidelines of the Santa Monica Mountains LCP.
- Stunt Road Development, Santa Monica Mountains LCP (2018). Completed a BRA per the LCP guidelines.
- Malibou Lake Mountain Club, North Santa Monica Mountains SEA (2018). Completed permit packages for routine maintenance dredging of the lake, including a BRA, Section 404 CWA permit application, and CDFW Lake and Streambed Alteration Agreement.

Lucas South

BIOLOGIST

Lucas South is a biologist conducting compliance monitoring and biological resources assessments in southern California. They are a graduate of the University of Rochester, with a Bachelor of Science in Astrophysics. During their degree they gained extensive lab experience in experimental data collection and technical writing (3 years), winning 3 grants for their work in granular physics. More recently they have endeavored to apply their skills to the area of biological monitoring and conservation. They have experience in avian biological monitoring for a major environmental consulting firm during which they conducted field biological research in the Midwestern region. Since relocating to southern California, Lucas has focused on compliance monitoring and nesting bird surveys and has been the lead monitor for several large-scale projects, including City of Los Angeles and Southern California Gas projects.

Mr. South's educational background in physics and planetary science has led to an interest in researching environmental impacts on earth, especially in the context of continuing climate change. Their professional experience in biological monitoring has created a specific interest in avian species. They also seek to apply skills of data analytical techniques with Python and technical writing toward facilitating different research projects centered around the conservation of critical natural resources.

EXPERTISE

- **Compliance Monitoring.** Mr. South has extensive experience monitoring utilities and large-scale construction projects for environmental compliance measures, as well as providing environmental training for construction personnel. Mr. South is cross-trained in paleontological monitoring.
- **Biological Resource Assessment.** Mr. South is experienced in conducting resources assessments, nesting bird surveys, and small mammal surveys.
- **Bird and Bat Identification.** Mr. South has experience in identifying migratory and resident bird and bat species throughout the Midwestern region and southern California, including identification of endangered species.
- **Data Acquisition.** Mr. South has experience with data acquisition systems that utilize GIS, as well as laboratory data management systems.
- **Scientific Writing.** Mr. South has expertise in writing scientific reports, presentations, and grant proposals, having contributed to 3 journal publications, and acquired 3 grants, as well as having written dozens of technical reports detailing survey results.

SELECT PROJECT EXPERIENCE

Jackson Street Improvements Paleontological Monitoring (2025). Lucas was the lead paleontological monitor for a street improvement project in Indio, California. The project site required monitoring for paleontological resources such as fossils found during excavation. Lucas trained construction crew in fossil find procedures, documented onsite compliance, and documented more than 5 nonsignificant paleontological finds.

Highway 74 Sewer Extension Project Monitoring (2025). Lucas was a primary monitor for a sewer extension project in Perris, California. The project site required monitoring for burrowing owls, nesting birds, and jurisdictional resources. Lucas assisted in training construction crew in environmental procedures, documenting onsite compliance, ensuring resource avoidance, and conducting preconstruction surveys for burrowing owl and nesting birds.

Desert Hot Springs Project Viento Monitoring (2024). Lucas was a primary monitor for a warehouse construction project in Desert Hot Springs, California. The project site hosted 3 burrowing owl nests with both adult burrowing owls and their young. Lucas assisted in establishing Environmentally Sensitive Areas around the burrows, training construction crew in environmental procedures, documenting onsite compliance, and submitting project compliance reports. The monitor's main duty was to observe and analyze owl behavior to determine whether any change of work method was required.

Trader Joe's Palmdale Warehouse Project (2023-2024). Lucas was the lead monitor for a long-term monitoring project in Palmdale California. The project constructed a Trader Joe's distribution Center on 130-acres in the City of Palmdale. The project had an ITP and LSAA that covered Mohave Ground Squirrel, western Joshua tree, 2 streams on the site, special-status reptiles, rare plants, Crotch's bumble bee, Swainson's hawk, and several other species. Lucas oversaw compliance with all of the permitting documents on a full-time basis and conducted preconstruction rare plant and Mojave ground squirrel surveys. Lucas conducted Worker Environmental Awareness Programs for 300+ workers over the course of the project and worked with the Designated Biologist to monitor several active bird nests on the site and relocate several small mammals.

Aliso Canyon Emergency Monitoring Project Southern California Gas (2023). Lucas was a monitor for a long-term project that included the removal of sediment from catch basins where sensitive wetlands and wildlife such as coast range newt occurs. Lucas was responsible for conducting monitoring, daily reports, and project compliance. Lucas conducted surveys in wetlands for coast range newt and conducted compliance monitoring during the project. Lucas relocated 19 coast range newt larvae for the project.

Southern California Gas (SCG) On-Call Biological and Cultural Services (2023). Lucas was a biologist on the contract and typically performed construction and compliance monitoring for projects such as the L133 DeRate Project, State Street Valve Project, and the Glen Oaks Pipeline Maintenance Project. Other duties include preconstruction surveys for nesting birds and other special-status species and monitoring reports that include BMP and photoplates for preconstruction and post construction compliance reports. For these projects Lucas has identified and protected numerous species such San Joaquin antelope squirrel, San Joaquin kit fox, several kangaroo rats, blunt-nosed leopard lizard, and pocket mice, as well as general compliance monitoring for BMPs.

City of LA Recreation and Parks City Park Brush Clearance Monitoring within Riparian Areas (2023). Lucas was the primary monitor that conducted nesting bird surveys and compliance monitoring at 5 parks where brush clearance is performed annually to meet LA Fire Department requirements. The work was within and near riparian areas and wetland and riparian vegetation and wildlife were the target species.

City of Los Angeles Biological Resources Assessments (2023 – present). Lucas conducts site assessments for biological resources, surveys for special-status plants and animals, maps and characterizes plant communities and wetlands/streams, and assesses potential impacts to biological resources from proposed developments. Lucas has worked on the following reports:

- 4933 Cerrillos Drive
- Bakersfield Commerce Center
- 434 Chautauqua Boulevard
- Colton Truck and Trailer Repair Project
- 18942 Arminta Street SB9 Report
- 1851 Stanley Avenue SB9 Report
- Brookside Golf Course Lighting Impact Assessment
- 1903 Hanscom Drive Biological Constraints Analysis
- 4875 Onteora Sensitive Natural Community Assessment
- 2526 Briarcrest Road BRA
- 64 Beverly Park Biologist's Statement
- 360 S Mapleton Biologist's Statement
- 700 Paseo Del Mar Biologist's Statement
- 4119 & 4123 Rolle Street Biologist's Statement
- 13433 Newcomb Drive Biologist's Statement
- Sunset Jewelbox Lighting Impact Assessment

Appendix C: Site Plan

1.Introduction

This report includes results of a western Joshua tree (*Yucca brevifolia)* inventory conducted by South Environmental for the Yucca Valley Dutch Bros Project located in the town of Yucca Valley, San Bernardino County, California. There is a proposal to develop the parcel to create a drive through Dutch Bros Coffee restaurant on 1.01-acre (Assessor Parcel Number 0601-416-05) located at 58121 Twentynine Palms Highway. The purpose of this report is to create an inventory of western Joshua trees on the site and assess potential impacts to them from the proposed development. The scope of this report includes a description of the survey area; methods used to survey the trees involving assessment of structure, health, and mapping; the results of the survey including photographs of each tree; a description of the laws and regulations pursuant to Joshua tree protection; and the potential development impacts to Joshua trees on the site. Recommendations for mitigation are also included in the report.

1.1 Project Location and Setting

The project site is in the Town of Yucca Valley in an unincorporated area of San Bernardino County at 58121 Twentynine Palms Highway (State Route 62). The project is within the U.S. Geological Survey (USGS) Yucca Valley North 7.5 Minute Topographical Quadrangle, and within Section 31 of Township 01 North (01N) and Range 06 East (06E). The site is set between two commercial developments on the east side of the town of Yucca Valley. The site is entirely undeveloped apart from a small dirt road through the middle. The plant community is Joshua Tree Woodland dominated by western Joshua tree in the canopy and Joshua tree and desert shrubs in the sub-canopy. The soil is sandy and the overall vegetative cover on the site is moderate (40-60%). The areas adjacent to the site are mostly developed with housing and commercial businesses to the north, east, and south. The area to the west is undeveloped and contains a desert wash. The survey area is bordered by 29 Palms Highway on the north and Balsa Avenue on the south.

1.2 Proposed Development

The Project proposes the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee restaurant with a dual-lane drive-through facility and associated site improvements. The drive-through is designed to accommodate 23 queued vehicles. In addition to on-site improvements, the Project also includes off-site roadway improvements consistent with the Town's circulation plans, including the future widening of Twentynine Palms Highway to an ultimate half-width of 67 feet along the Project frontage

2.Methodology

2.1 Field Survey

South Environmental biologist Lucas South conducted a survey of each western Joshua tree on the proposed project site and within a 100-foot buffer zone on October 28, 2025. Data were collected on each tree's height, canopy width, structure, and condition (health). The surveys were conducted in accordance with California Fish and Game Code section 1927.3, subdivision (a)(1). During the survey, each observed Joshua tree was given a unique identification number, and its location was recorded using a ESRI FieldMaps mobile phone application. The biologist evaluated the structure and general health of each tree, and a digital photograph was taken of each tree. The following highlights the parameters used in the structural and health evaluation of the trees.

2.1.1 Structural Evaluation

An evaluation of the physical structure of each tree included the following:

- **Height of main stem** was measured using a visual estimation
- **Canopy spread** was measured using a visual estimation by estimating the distance across the entire canopy of the tree (main stem and rhizome stems) where that distance was greatest,
- **Structure/Architecture** included describing in general structure of each tree
- **Structural Height Rating** – each Joshua tree were classified by their height by 3 groups:
    - <1m tall (Class A)
    - >1-<5m tall (Class B)
    - Greater than or equal to 5m tall (Class C)

2.1.2 Condition/Health Assessment

Condition/Health Rating – each Joshua tree received a single number health rating based on its similarity to an archetypal Joshua tree in excellent condition:

- 5 – Maximum health: has flowers or regrowth
- 4 – Healthy: Overall good health
- 3 – Fair health: Trees that had bad (dead or dying) branches, but overall structure was okay
- 2 – Poor health: no new foliage, leaf yellowing, expected to the dying soon
- 1 – Dead: all foliage dead or dying (yellow or brown)

Each tree was assessed for it's **maturity**, and those trees with at least one branch were considered mature, while those without branching were immature.

Flowers and/or **fruits** were noted for each tree.

2.2 Regulatory Setting

2.2.1 State Regulations

California Endangered Species Act (ESA)

In 2022, the CDFW developed a status review report for western Joshua tree assessing whether listing the species as endangered or threatened under the California Endangered Species Act would be warranted. And in 2023, the Western Joshua Tree Conservation Act was passed, which acted to postpone a further analysis of the species under the California ESA until at least 2033 when the CDFW is mandated with preparation of an updated status review of the species, unless the Fish and Game Commission directs CDFW to complete the update sooner. In the interim period, protection of the species in California, including take of the species, is pursuant to the Western Joshua Tree Conservation Act.

Western Joshua Tree Conservation Act

The Western Joshua Tree Conservation Act is the current legislation in the State of California for use in protection of the Joshua tree and was passed on 2023. Foremost, the legislation prohibits the importation, export, take, possession, purchase, or sale of any western Joshua tree in California unless authorized by CDFW. The Act currently supersedes the California Endangered Species Act (ESA) and authorizes CDFW to issue permits for the "take" of one or more western Joshua trees if the permittee meets specific conditions. Permittees have the opportunity to relocate a Joshua tree in areas impacted by development or pay a fee in lieu of conducting mitigation activities. The legislation also grants the CDFW the authority to issue permits for the removal of dead western Joshua trees and trimming of live western Joshua trees.

The legislation allow for agreements to be made between the CDFW and any county or city which limit the authority to permit the taking of a Joshua tree associated with developing single-family residences, multifamily residences, accessory structures, and public works projects. A similar agreement between the CDFW and a county or city can also be authorized to limit the authority to permit the removal of dead and trimming of live Joshua trees.

With this legislation, in-lieu fees collected will be deposited into the "Joshua Tree Conservation Fund" for appropriation to CDFW strictly with the goal of acquiring, conserving, and managing Joshua tree conservation lands and carrying out other project to conserve the species.

Additionally, the act mandates the CDFW with development and implementation of a Joshua tree conservation plan in collaboration with governmental agencies, California Native American Tribes, and the public. A draft of the plan must be presented by December 31, 2024, at a public meeting of the Fish and Game Commission for its review and approval. Finally, CDFW must produce annual reports assessing the conservation status of the western Joshua tree (State of California, 2023).

In cases of private development the following is a summary of important conservation measures under the Western Joshua Tree Conservation Act:

The Western Joshua Tree Conservation Act stipulates several measures to assist with the assessment of impacts to and mitigation for western Joshua tree in areas proposed for development. Permittees may mitigate loss or damage to trees by relocating them or by paying specified fees in lieu of conducting mitigation. Under the act, all in-lieu fees collected will be deposited into the Western Joshua Tree Conservation Fund for the purposes of acquiring, conserving, and managing western Joshua tree conservation lands and completing other activities to conserve the western Joshua tree.

Western Joshua Tree Conservation Plan

The Western Joshua Ttree Conservation Act requires the California Department of Fish and Wildlife (CDFW) to develop and implement a Western Joshua Tree Conservation Plan (Conservation Plan) in collaboration with the Commission, governmental agencies, California Native American tribes (Tribes), and the public (Fish & G. Code, § 1927.6, subd. (a)). The plan was approved and finalized in August 2025. The Conservation Plan provides guidelines for western Joshua tree conservation, criteria to help define effectiveness of management actions, monitoring of management outcomes, and a process of adaptive management to refine and improve the management actions over time. The management actions can be incorporated into project approvals by local, state, and federal government agencies that authorize projects or resource management programs in western Joshua tree's range in California.

The Conservation Plan describes the steps required to achieve the vision of conserving western Joshua tree and its habitat in California such that listing under CESA will not be needed. The Conservation Plan can be divided into two parts: The first part summarizes guiding concepts and currently available information, and the second part describes management actions and the implementation approach for conserving western Joshua tree and achieving the vision of the Conservation Plan.

Chapter 5 of the Conservation Plan describes Conservation Management Actions and Effectiveness Criteria, and specifically Section 5.2.1 is focused on Impact Avoidance and Minimization that is often associated with construction projects. According to the section, the first priority for conservation of western Joshua tree and its habitat is to avoid adverse impacts altogether. When complete avoidance cannot be achieved, efforts should be made to minimize impacts on western Joshua tree and its habitat, and the presence of tribal cultural monitors and a trained arborist to minimize these impacts are encouraged. Minimization may include efforts to reduce the number of trees and seeds taken; the area of habitat that is lost or degraded; the severity of impacts on individual trees; impacts on other organisms on which western Joshua tree depends; and indirect impacts on trees, seeds, habitats, and other ecologically related organisms.

The avoidance and minimization actions in this section could be voluntarily adopted and implemented by project proponents and land managers, incorporated into project approvals by local governments and regulatory agencies, or incorporated into voluntary, cooperative agreements between relevant agencies, organizations, and other parties. The Western Joshua Tree Conservation Act (WJTCA) requires the avoidance and minimization of impacts on western Joshua tree to the maximum extent practicable as a condition of obtaining a WJTCA incidental take permit (ITP) (Fish & G. Code, § 1927.3, subd. (a)(2)). WJTCA also states that the Conservation Plan shall include guidance for the avoidance and minimization of impacts on western Joshua trees and protocols for the successful relocation of western Joshua trees (Fish & G. Code, § 1927.6, subd. (a)).

The following Management Actions are Recommended for construction projects:

1. Avoid direct and indirect impacts by project design that retains healthy trees, buffer areas for remaining trees, limit pesticide application, avoid OHV use, and avoid overgrazing.
2. Minimize direct and indirect impacts by avoiding trees, relocating trees, collect and store seeds, and minimizing invasive plants.
3. Minimize impacts from wildlife and wildfire suppression.

2.2.2 Local Regulations

Town of Yucca Valley Joshua Tree Ordinance

This document is an addendum to the Town's General Plan Update certified environmental impact report (EIR), State Clearinghouse No. 2012111021, to address the Town's proposal to enact an urgency ordinance to establish regulations implementing the California Fish and Game Commission's Special Order relating to the take of western Joshua trees during the California Endangered Species Act (CESA) candidacy period and to remove the western Joshua tree from the Town's list of regulated desert native plants during the period the ordinance is effective, by adding

new Chapter 9.56 to and amending Sections 9.07.130, 9.09.050 and 9.10.040 of the Town's Development Code (Proposed Project or Urgency Ordinance).

The temporary take authorization and related mitigation provisions of Urgency Ordinance are limited in scope and only apply to the three project types listed in and covered by the Special Order. Specifically, the temporary take authorization is limited to the Town' s approval of single-family residences, accessory structures, and certain public works projects defined by the Special Order as:

- Single Family Residence: Single Family Residence means a single detached building that has been or will be constructed and used as living facilities, including provisions for sleeping, eating, cooking, and sanitation as required by the California Building Code for not more than one household. Nothing in this section shall be construed to authorize take of western Joshua tree for a subdivision or other development that includes more than one single-family residence.
- Accessory Structure: Accessory Structure means a subordinate structure, the use of which is incidental to an existing or contemporaneously constructed single-family residence, and includes: an accessory dwelling unit, addition to an existing single-family residence, garage, carport, swimming pool, patio, greenhouse, storage shed, gazebo, septic tank, sewer connection, solar panels, or gravel or paved driveway.
- Public Works Project: Public Works Project means a project for the erection, construction, alteration, maintenance, or repair, of any public structure, building, or road.

Yucca Valley Municipal Code Chapter 9.56 (Removal of Joshua Tree)

The purpose of this Chapter is to establish permitting standards and process for the issuance of take permits for the Western Joshua Tree as authorized pursuant to the Special Order approved by the California Fish and Game Commission pursuant to Fish and Game Code section 2084 on December 10, 2020 ("Special Order"). The Special Order was subsequently approved by the Office of Administrative Law, and went into effect on January 7, 2021. The requirements set forth in this Chapter are intended to protect the public's health, safety, and welfare by ensuring that take permits for the Western Joshua Tree are only issued consistent and compliant with the Special Order. (Ord. 291, 1-19-2021). The Planning Commission may authorize the take of western Joshua tree associated with developing single-family residences, accessory structures, and public works projects concurrent with its approval of the project.

Yucca Valley Native Plant Ordinance

The Yucca Valley Native Plant Ordinance was adopted by the Town of Yucca Valley in 2014 and was codified into the Town's Development Code Section 9.09.050 for commercial zoned parcels.

The Ordinance stipulates that commercial development projects shall be allowed to transplant on and off site and to remove all regulated desert native plants from their native locations within the property boundaries, pursuant to the development standards and requirements. Regulated desert native plants for all commercial land development projects, include the following: Joshua tree (*Yucca brevifolia*), Mojave yucca (*Yucca schidigera*), Parry's nolina (*Nolina parryi*), California juniper (*Juniperus californica*), Our Lord's candle (*Yucca whipplei*), and Pinon pine (*Pinus monophylla*).

Joshua Tree Community Action Plan

The Joshua Tree Community Action Plan was adopted in 2016 and provides overarching goals to protect desert habitat in the area including Joshua tree woodland. There are two overarching "action statements" in the Plan that apply to conservation of Joshua trees: 1) Partner with organizations such as Mojave Desert Land Trust to conserve natural desert habitats and wildlife corridors and to protect native plants and animals, and 2) Promote respect for local ecosystems and be stewards of the environment. While the Plan does not contain detailed specific actions related to these goals, it does embody the spirit and general intent of Joshua tree conservation in the area (San Bernardino County, 2016).

3.Results

A total of 38 Joshua trees were identified in the survey area. Detailed findings are detailed in the data matrix in Appendix A, including the latitude and longitude, size class, health, maturity, flowers/fruits, impacts, if is within 15-meters of the development, tree heights, canopy width, and structure. Table 1 below summarizes the results of the survey and the tree locations are shown in Figure 1. Photographs of the trees are in Appendix B.

Table 1. Summary of Western Joshua Tree Inventory

Size Class (height)	# of Joshua Trees	Live	Dead	Mature	Fruits/Flowers	Within 15m of project	Removals
Class A <1m	3	3	0	0	0	0	0
Class B 1m-5m	32	29	3	27	22	19	8
Class C >5m	3	3	0	3	3	3	0
Total	**38**	**35**	**3**	**30**	**25**	**22**	**8**

Of the 38 Joshua trees surveyed, 3 were Class A, 32 Class B, and 3 Class C. A total of 3 Joshua trees were dead (labeled D1-D3) and 35 were mature live trees. Of the mature live trees, 25 had fruits or flowers. There are 22 Joshua trees within 15-meters of the proposed project footprint and 8 of those would be removed by the project because they are within the development footprint. Removals include 0 Class A, 8 Class B (#10, #11, #13, #14, #19, #20, #35, D1), and 0 Class C. An additional 2 Joshua trees (#9 and #12) are within the project site but will remain within landscaping after the project is built, and these would be heavily encroached into the 15 meter buffer by development. As shown in the Site Plan in Appendix C, these Joshua trees will be fenced during construction of the project to protect them from potential inadvertent impacts. Another 12 Joshua trees (#4-#8, #15, #18, #21-#24, D3) are outside the project site but will be encroached within a 15 meter buffer by the project construction. Protective fencing shown in the Site Plan in Appendix C will be installed between these Joshua trees and the project site during construction to avoid inadvertent impacts to these trees.

Overall the population of Joshua trees within the survey area is healthy, with very few dead trees and a mix of size classes and observations of fruits and flowers indicate that the Joshua trees are regenerating naturally on the site. The number of removals proposed by the project is 18% of the number surveyed, however, there are numerous other Joshua trees surrounding the survey area that are contiguous plant communities with that found on the site, and the relative number of removals to those in the region is very small. The removal of 8 Joshua trees is insignificant in relation to the number that are found in the immediate area.

4.Recommendations and Conclusions

4.1 Permitting and Mitigation Fees

Due to the proposed removal of eight (8) Joshua trees for the project, it will require a permit from the California Department of Fish and Wildlife (CDFW) prior to removing the trees. To obtain the permit the applicant must complete a permit application and submit the application and Joshua tree inventory to the CDFW Region 6 Office via the online permitting system. This permit will require coordination with both the County of San Bernardino and CDFW to determine the number of Joshua trees that the agencies would require for transplanting to areas outside of the development. However, there is an in-lieu fee program that allows for a fee-based mitigation for removal of Joshua trees and these same mitigation fees could be applied to all of the Joshua trees that are encroached within 15-meters as determined by the agencies. Therefore, these estimated fees are subject to change per the requirements of the permitting agencies following an assessment of the project impacts to Joshua trees.. The 2025 Western Joshua Tree Conservation Act Incidental Take Permit annual mitigation fees for the proposed removal of 8 Joshua trees within the standard fee area is a total of $4,072.00 as follows:

- 0 Class A trees x $346.00 = $0.00
- 8 Class B trees x $509.00 = $4,072.00
- 0 Class C trees x $2,544.75 = $0.00

4.1.1 Joshua Tree Avoidance During Construction

- South Environmental recommends installing temporary protective fencing between the project workspace and each Joshua tree during construction of the project. The fencing would be high-visibility fencing placed at a minimum 15-meter buffer zone prior to start of construction (or at the distance that is permitted for trees closer to the site). No work or project activities shall occur within the fenced area and all work shall occur outside of the proposed Joshua tree buffers. Fencing would help prevent compaction and/or contamination of soil and root zone.
- During construction, heavy equipment and vehicles shall be operated in accordance with standard Best Management Practices (BMPs). For example, all equipment used in the workspace shall be properly maintained such that no leaks of oil, fuel, or residues will take place. Provisions shall be in place to remediate any accidental spills. Implementation of

the BMPs will help minimize the potential for impact to Joshua trees both within and outside the Joshua tree buffer zones.

- Night work should be avoided to ensure no disturbance of pollinators or photoperiods for the remaining Joshua trees.

4.2 Conclusion

A total of 38 Joshua trees were identified by South Environmental within the project survey area. A total of 8 Joshua trees are proposed for removal by the project, which would require a permit from CFDW. In-lieu fees for the loss of the 8 Joshua trees would be a minimum of $4,072.00, but overall mitigation would be determined by CDFW and San Bernardino County and could include relocation of some or all of the trees that are proposed for removal. The project would need to obtain the permit prior to removal of the trees and prior to start of construction of the project. Additional mitigation is recommended by South Environmental including installation of protected fencing around the remaining Joshua Trees during construction, BMPs to avoid damaging trees or root zones, and limiting construction to daytime hours.

If you have any questions regarding the information in this report, please contact Matthew South by email: msouth@southenvironmental.com or by mobile phone: 303-818-3632.

Sincerely,

Matthew R. South
Principal Biologist

DUTCH BROS. COFFEE - CA3714 - YUCCA VALLEY, CA

TREE PROTECTION SPECIFICATIONS

MATERIALS

1. FABRIC: 4 FOOT HIGH, ORANGE PLASTIC FENCING AS SHOWN ON THE PLANS AND SHALL BE WOVEN WITH 2 INCH MESH OPENINGS SUCH THAT IN A VERTICAL DIMENSION OF 23 INCHES ALONG THE DIAGONALS OF THE OPENINGS THERE SHALL BE AT LEAST 7 MESHES.
2. POSTS: POSTS SHALL BE A MINIMUM OF 72 INCHES LONG AND STEEL 'T' SHAPED WITH A MINIMUM WEIGHT OF 1.3 POUNDS PER LINEAR FOOT.
3. TIE WIRE: WIRE FOR ATTACHING THE FABRIC TO THE T-POSTS SHALL BE NOT LESS THAN NO. 12 GAUGE GALVANIZED WIRE.
4. USED MATERIALS: PREVIOUSLY USED MATERIALS MEETING THE ABOVE REQUIREMENTS AND WHEN APPROVED BY THE OWNER, MAY BE USED.

CONSTRUCTION METHODS

1. ALL TREES AND SHRUBS SHOWN TO REMAIN WITHIN THE PROXIMITY OF THE CONSTRUCTION SITE SHALL BE PROTECTED PRIOR TO BEGINNING ANY DEVELOPMENT ACTIVITY.
2. EMPLOY THE SERVICES OF A ISA (INTERNATIONAL SOCIETY OF ARBORICULTURE) CERTIFIED ARBORIST AND OBTAIN ALL REQUIRED PERMITS TO PRUNE THE EXISTING TREES FOR CLEARING, RAISING AND THINNING, AS MAY BE REQUIRED.
3. PROTECTIVE FENCING SHALL BE ERECTED OUTSIDE THE CRITICAL ROOT ZONE (CRZ, EQUAL TO 1' FROM THE TRUNK FOR EVERY 1" OF DBH) AT LOCATIONS SHOWN IN THE PLANS OR AS DIRECTED BY THE LANDSCAPE CONSULTANT AND/OR CITY ARBORIST, AND IN ACCORDANCE WITH THE DETAILS SHOWN ON THE PLANS. FENCING SHALL BE MAINTAINED AND REPAIRED BY THE CONTRACTOR DURING SITE CONSTRUCTION. TREES IN CLOSE PROXIMITY SHALL BE FENCED TOGETHER, RATHER THAN INDIVIDUALLY.
4. PROTECTIVE FENCE LOCATIONS IN CLOSE PROXIMITY TO STREET INTERSECTIONS OR DRIVES SHALL ADHERE TO THE APPLICABLE JURISDICTION'S SIGHT DISTANCE CRITERIA.
5. THE PROTECTIVE FENCING SHALL BE ERECTED BEFORE SITE WORK COMMENCES AND SHALL REMAIN IN PLACE DURING THE ENTIRE CONSTRUCTION PHASE.
6. THE INSTALLATION POSTS SHALL BE PLACED EVERY 6 FEET ON CENTER AND EMBEDDED TO 18 INCHES DEEP. MESH FABRIC SHALL BE ATTACHED TO THE INSTALLATION POSTS BY THE USE OF SUFFICIENT WIRE TIES TO SECURELY FASTEN THE FABRIC TO THE T-POSTS TO HOLD THE FABRIC IN A STABLE AND UPRIGHT POSITION.
7. WITHIN THE CRZ
   a. DO NOT GRADE, FILL OR GRADE IN THE CRZ OF ANY TREE.
   b. DO NOT STORE, STOCKPILE OR CLEAN ANY JOB MATERIAL, SOIL OR RUBBISH UNDER THE SPREAD OF THE TREE BRANCHES.
   c. DO NOT PARK OR STORE ANY EQUIPMENT OR SUPPLIES UNDER THE TREE CANOPY.
   d. DO NOT SET UP ANY CONSTRUCTION OPERATIONS UNDER THE TREE CANOPY (SUCH AS WIRE CUTTING AND THREADING, MORTAR MIXING, PAINTING OR LUMBER CUTTING).
   e. DO NOT NAIL OR ATTACH TEMPORARY SIGNS, METERS, SWITCHES, VARES, BRACING OR ANY OTHER ITEM TO THE TREES.
   f. DO NOT PERMIT RUNOFF FROM WASTE MATERIALS INCLUDING EQUIVALENT, CONCRETE WASHOUTS, ASPHALT TACK COATS (MC-30 OR L-STE) TO ENTER THE CRZ. BARRIERS ARE TO BE PROVIDED TO PREVENT SUCH RUNOFF. SUMP AREAS FROM ENTERING THE CRZ WHENEVER POSSIBLE, INCLUDING IN AN AREA WHERE RAIN OR SURFACE WATER COULD CARRY SUCH MATERIALS TO THE ROOT SYSTEM OF THE TREE.
8. ROUTE UNDERGROUND UTILITIES TO AVOID THE CRZ. IF DIGGING IS UNAVOIDABLE, BORE UNDER THE ROOTS, OR HAND DIG TO AVOID severing THEM.
9. WHERE EXCAVATION IN THE VICINITY OF TREES MUST OCCUR, SUCH AS FOR IRRIGATION INSTALLATION, PROCEED WITH CAUTION, AND USING HAND TOOLS ONLY.
10. THE CONTRACTOR SHALL NOT CUT ROOTS LARGER THAN ONE INCH IN DIAMETER WHEN EXCAVATION OCCURS NEAR EXISTING TREES. ALL ROOTS LARGER THAN ONE INCH IN DIAMETER ARE TO BE CUT CLEANLY. FOR CUTS ONLY, ALL WOUNDS SHALL BE PAINTED WITH WOUND SEALER WITHIN 30 MINUTES.
11. REMOVE ALL TREES, SHRUBS OR BUSHES TO BE CLEARED FROM PROTECTED ROOT ZONE AREAS BY HAND.
12. TREES DAMAGED OR KILLED DUE TO CONTRACTOR'S NEGLIGENCE DURING CONSTRUCTION SHALL BE MITIGATED AT THE CONTRACTOR'S EXPENSE AND TO THE PROJECT OWNERS AND LOCAL JURISDICTION'S SATISFACTION.
13. ANY TREE REMOVAL SHALL BE APPROVED BY THE OWNER AND LOCAL JURISDICTION PRIOR TO ITS REMOVAL AND THE CONTRACTOR SHALL HAVE ALL REQUIRED PERMITS FOR SUCH ACTIVITIES.
14. COVER EXPOSED ROOTS AT THE END OF EACH DAY WITH BURLAP, MULCH OR WET BURLAP.
15. IN CRITICAL ROOT ZONE AREAS THAT CANNOT BE PROTECTED DURING CONSTRUCTION AND WHERE HEAVY TRAFFIC IS ANTICIPATED, COVER THE SOIL WITH EIGHT INCHES OF ORGANIC MULCH TO MINIMIZE SOIL COMPACTION. THIS EIGHT INCH DEPTH OF MULCH SHALL BE MAINTAINED THROUGHOUT CONSTRUCTION.
16. WATER ALL TREES IMPACTED BY CONSTRUCTION ACTIVITIES, DEEPLY ONCE A WEEK DURING PERIODS OF HOT DRY WEATHER. SPRAY TREES CROWNS WITH WATER PERIODICALLY TO REDUCE DUST ACCUMULATION ON THE LEAVES.
17. WHEN MIXING CONCRETE ADJACENT TO THE ROOT ZONE OF A TREE, USE A PLASTIC VAPOR BARRIER BEHIND THE CONCRETE TO PROHIBIT LEACHING OF LIME INTO THE SOIL.
18. CONTRACTOR SHALL REMOVE AND DISPOSE OF ALL TREE PROTECTION FENCING WHEN ALL THREATS TO THE EXISTING TREES FROM CONSTRUCTION-RELATED ACTIVITIES HAS BEEN REMOVED.

TREE PROTECTION GENERAL NOTES

(A)
(B)
(C)
(D)
(E)
(F)

TREE RELOCATION GUIDELINES

1. TREES SHALL NOT BE UNNECESSARILY DAMAGED DURING REMOVAL, TRANSPORT OR REPLANTING OF THE TREE.
2. IF THE TREE HAS A DORMANT PERIOD, THEY SHOULD BE TRANSPLANTED DURING THAT TIME. TREES SHOULD NOT BE TRANSPLANTED DURING PERIODS OF STRONG WINDS, DRY WINTER WINDS OR DURING DROUGHT.
3. ADEQUATE SPACES FOR ROOT AND CROWN DEVELOPMENT SHALL BE PROVIDED.
4. TREES SHALL BE ROOT AND CANOPY PRUNED IN ACCORDANCE WITH ISA/ARBORICULTURAL STANDARDS PRIOR TO TRANSPLANTING.
5. DURING AND FOLLOWING TRANSPLANTING, THE ROOT BALL AND TRUNK SHALL BE PROTECTED. THE ROOT BALL MUST BE KEPT MOIST AT ALL TIMES.
6. TRANSPLANTED TREES SHALL BE BRACED FOR A MINIMUM OF ONE (1) YEAR.
7. TRANSPLANTED TREES SHALL NOT BE FERTILIZED AT PLANTING TIME, BUT SHALL BE WATERED SUFFICIENTLY UNTIL THE TREE GROWTH IS RETSET ASSUMED.
8. ALL CROWN PRUNING SHALL BE DONE IN ACCORDANCE WITH "THE AMERICAN NATIONAL STANDARDS INSTITUTE A-300, TREE SHRUB AND OTHER WOODY PLANT MAINTENANCE-STANDARD PRACTICES", AND "Z-133.1 PRUNING, REPAIRING, MAINTAINING AND REMOVING TREES, AND CUTTING BRUSH-SAFETY REQUIREMENTS" OR PALM PRUNING IN ACCORDANCE WITH THE STANDARDS IN "RICHARD HARRIS, "ARBORICULTURE: INTEGRATED MANAGEMENT OF LANDSCAPE TREES, SHRUBS AND VINES", AS AMENDED.
9. CONTRACTOR IS RESPONSIBLE FOR REGULAR WATERING AND MAINTENANCE OF TRANSPLANTED TREES DURING STORAGE PERIOD.

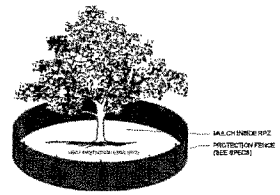
TREES THAT ARE INVICED TO BE PRESERVED ON A SITE PLAN AND FOR WHICH UTILITIES MUST PASS THROUGH THEIR ROOT PROTECTION ZONES MAY REQUIRE TUNNELING AS OPPOSED TO OPEN TRENCHING. THE DECISION TO TUNNEL WILL BE DETERMINED ON A CASE BY CASE BASIS BY THE ENGINEER.

TUNNELS SHALL BE DUG THROUGH THE ROOT PROTECTION ZONE IN ORDER TO MINIMIZE ROOT DAMAGE.

TUNNEL TO MINIMIZE ROOT DAMAGE (TOP) AS OPPOSED TO BURST ADJACENT TRENCHES IN ROOT PROTECTION ZONE WHEN THE 2' MINIMUM DISTANCE FROM TRUNK CAN NOT BE ACHIEVED.

OPEN TRENCHING MAY BE USED IF EXPOSED TREE ROOTS DO NOT EXCEED 2" OR ROOTS CAN BE BENT BACK.

C BORING THROUGH ROOT PROTECTION ZONE
NOT TO SCALE

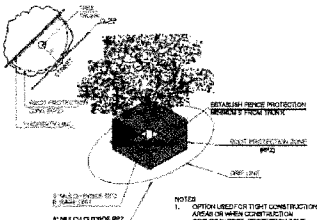


NOTES
1. THE FENCING LOCATION SHOWN ABOVE IS DIAGRAMATIC ONLY AND WILL CONFORM TO THE DRIP LINE AND BE LIMITED TO PROJECT BOUNDARY. WHERE MULTIPLE ADJACENT TREES WILL BE ENCLOSED BY FENCING, THE FENCING SHALL BE CONTINUOUS AROUND ALL TREES.
2. FOR ACCEPTABLE FENCING MATERIALS SEE SPECIFICATIONS.

A TREE PROTECTION FENCE
NOT TO SCALE

NOTES
1. RETENTION AREAS WILL BE SET AS PART OF THE REVIEW PROCESS AND PRE-CONSTRUCTION MEETING.
2. BOUNDARIES OF RETENTION AREAS MUST BE STAKED AT THE PRE-CONSTRUCTION MEETING AND PLACED PRIOR TO ROOT PRUNING.
3. EXACT LOCATION OF ROOT PRUNING SHALL BE DETERMINED IN THE FIELD IN COORDINATION WITH THE FORESTRY INSPECTOR.
4. TRENCH SHALL BE IMMEDIATELY BACKFILLED WITH EXCAVATED SOIL OR OTHER ORGANIC SOIL AS SPECIFIED PRIOR BY ARBORIST/ THE FORESTRY INSPECTOR.
5. ROOTS SHALL BE CUT ANY CUT USING VERY SHARP KNIFE OR OTHER ACCEPTABLE EQUIPMENT. ROT PRUNING METHODS AND MEANS MUST BE IN ACCORDANCE WITH ANSI STANDARD A300.
6. ALL PRUNING MUST BE EXECUTED AT LOCATIONS SHOWN ON PLANS OR AS AUTHORIZED IN WRITING BY THE FORESTRY INSPECTOR.
7. SUPPLEMENTAL WATERING MAY BE REQUIRED FOR ROOT PRUNED TREES THROUGHOUT THE GROWING SEASON DURING CONSTRUCTION AND SUBSEQUENT WORK ARTY AND MAINTENANCE PERIOD.

D ROOT PRUNING DETAIL
NOT TO SCALE



NOTES
1. OPTION USED FOR TIGHT CONSTRUCTION AREAS OR WHEN CONSTRUCTION OCCURS IN ROOT PROTECTION ZONE.
2. FOR ACCEPTABLE FENCING MATERIALS SEE SPECIFICATIONS.

Email: bperrine@impactsciences.com

Project Description: The proposed Yucca Valley Dutch Bros Coffee project is located at 58121 Twentynine Palms Highway (SR-62) in the Town of Yucca Valley, San Bernardino County, California (APN 0601-416-05), and encompasses approx. one acre of vacant but disturbed land between two existing commercial developments. The project involves construction and operation of a 1,025-square-foot, single-story coffee shop designed primarily as a dual-lane drive-through with capacity for 23 vehicles, limited walk-up service, and no indoor seating. The project includes site improvements, landscaping with drought-tolerant plantings, shielded energy-efficient lighting, 18 parking spaces, and off-site roadway widening along SR-62. Operations would run daily from early morning to late evening. Stormwater would be managed through a landscaped on-site retention pond designed to capture, detain, and treat runoff in compliance with Town and NPDES requirements. Construction is anticipated to begin in 2026 and last about 16 months, involving debris removal, grading with a net soil export of approx. 800 cubic yards, and building development. Required approvals include a CUP from the Town of Yucca Valley, an Incidental Take Permit from CDFW for Western Joshua Tree removal, and a Caltrans encroachment permit for improvements to SR-62.

Re: Yucca Valley Dutch Bros Coffee Project, San Bernardino County

To Whom It May Concern:

As requested, a search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed based on information submitted for the above referenced project. The results were negative. Be aware that tribes do not always record their sacred sites in the SLF, nor are they required to do so. As such, an SLF search is not a substitute for consultation with all tribes that are traditionally and culturally affiliated with a project's geographic area.

Attached is a list of Native American tribes that are traditionally and culturally affiliated with the project's geographic area. Please contact all of the listed tribes as they may have information about sacred sites within the project area that is not listed with the NAHC.

If within two weeks of notification, a response has not been received, the Commission requests that you follow up with a telephone call or email to ensure that the project information was received.

If you receive notification of a change of address or phone number from a tribe, please inform the NAHC so that we can assure that our lists contain current information.

In addition to engaging in tribal consultation, you should consult the appropriate regional California Historical Research Information System (CHRIS) information center to determine whether it has information regarding the presence of recorded archaeological sites within the project area.

If you have any questions or need additional information, please contact me at: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

Dear Ms. Walker,

Pursuant to Assembly Bill (AB) 52 and Section 21080.3.1 of the California Environmental Quality Act (CEQA), the Town of Yucca Valley is hereby providing formal notification of the proposed private land development "Drive-Thru Coffee Shop" project. Enclosed please find a brief description of the proposed project and its location.

If you wish to begin consultation on this project pursuant to AB 52 and Sections 21080.3.1 **and 21080.3.2 of CEQA, please request such consultation as soon as possible, but no later than 30 days from the date of this letter. The Town of Yucca Valley's (lead agency's)** contact person for this project is:

Re: CUP 02-25 and EA 03-25

Dear Jared Jerome,

The Agua Caliente Band of Cahuilla Indians (ACBCI) appreciates your efforts to include the Tribal Historic Preservation Office (THPO) in the Dutch Bros Coffee Shop project. The project area is not located within the boundaries of the ACBCI Reservation. However, it is within the Tribe's Traditional Use Area. For this reason, the ACBCI THPO requests the following:

*Formal government to government consultation under California Assembly Bill No. 52 (AB-52).

*A cultural resources inventory of the project area by a qualified archaeologist prior to any development activities in this area.

*Copies of any cultural resource documentation (report and site records) generated in connection with this project.

*A copy of the records search with associated survey reports and site records from the information center.

Again, the Agua Caliente appreciates your interest in our cultural heritage. If you have questions or require additional information, please call me at (760) 423-3485. You may also email me at ACBCI-THPO@aguacaliente.net.

Cordially,

Re: Dutch Bros Coffee Shop

Dear Jared Jerome,

The Agua Caliente Band of Cahuilla Indians (ACBCI) appreciates your efforts to include the Tribal Historic Preservation Office (THPO) in the Dutch Bros Coffee Shop project. We have reviewed the documents and have the following comments:

*The presence of an approved Cultural Resource Monitor(s) from a Consulting Tribe during any ground disturbing activities (including archaeological testing and surveys). Should buried cultural deposits be encountered, the Monitor may request that destructive construction halt and the Monitor shall notify a Qualified Archaeologist (Secretary of the Interior's Standards and Guidelines) to investigate and, if necessary, prepare a mitigation plan for submission to the State Historic Preservation Officer.

*The Mitigated Negative Declaration document included standard mitigation measures to address impacts to cultural resources. We found these measures to be sufficient.

Again, the Agua Caliente appreciates your interest in our cultural heritage. If you have questions or require additional information, please call me at (760) 413-5836. You may also email me at ACBCI-THPO@aguacaliente.net.

1.0 INTRODUCTION

This Noise & Vibration Technical Report describes the potential for noise and vibration impacts resulting from implementation of the proposed Dutch Bros coffee shop location at 58121 Twentynine Palms Highway (Project) in the Town of Yucca Valley (Town). This report includes an evaluation of potential impacts associated with changes in ambient noise levels in the vicinity of the Project Site due to excessive noise; and whether exposure is in excess of standards established in the Town's General Plan or Noise Ordinance. This report has been prepared by Impact Sciences, Inc., in support of the environmental documentation being prepared pursuant to the California Environmental Quality Act (CEQA).

1.1 PROJECT LOCATION

The Project Site is located at 58121 Twentynine Palms Highway (State Route 62) in the Town of Yucca Valley, San Bernardino County, California (Assessor's Parcel Number [APN] 0601-416-05). The Project Site encompasses approximately 1.01 gross acres (44,190 square feet) and is situated along the south side of Twentynine Palms Highway, the primary east-west transportation corridor through the Morongo Basin. **Figure 1, Regional Vicinity**, illustrates the site's location in a regional context.

The Project Site is currently vacant and undeveloped, except for an existing paved drive aisle at the northern portion of the site that connects two adjacent commercial developments. The topography of the site is generally flat, with no significant slopes, drainage channels, or geologic features. The site supports native desert vegetation, including Western Joshua Trees (*Yucca brevifolia*), which are protected under the California Endangered Species Act. Portions of the site also show evidence of disturbance from illegal off-road vehicle use. **Figure 2, Aerial Photograph of the Project Site**, shows an aerial photograph of the existing Project Site and surroundings.

1.2 PROJECT DESCRIPTION

Project Overview

The Project proposes the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee shop with a dual-lane drive-through facility and associated site improvements. The drive-through is designed to accommodate 23 queued vehicles. In addition to on-site improvements, the Project would contribute in-lieu fees toward off-site roadway improvements consistent with the Town's circulation plans, specifically, the widening of Twentynine Palms Highway to an ultimate half-width of 67 feet along the Project frontage. The future widening of Twentynine Palms Highway would be undertaken at a later date

by the Town of Yucca Valley Public Works/Engineering Department and the San Bernardino County Transportation Authority. **Figure 3, Conceptual Site Plan**, illustrates the Project's proposed site plan.

Operation

Operation of the Project would entail a drive-through-focused quick-service coffee shop with limited walk-up service and no indoor seating. Land uses, such as the Project, are conditionally permitted in the C-MU zone. The Project is anticipated to operate daily between the hours of 5:00 AM and 11:00 PM. The Project is expected to employ approximately 24 to 32 people, with 6 to 8 employees working per shift. Supply deliveries would occur via small box trucks during off-peak hours.

FIGURE 3

IMPACT SCIENCES

Conceptual Site Plan

1590.003•10/25

Access and Circulation

Site access would be provided from two existing driveways that currently serve adjacent commercial developments. One driveway is located along Twentynine Palms Highway and provides access to the Big 5 Sporting Goods store to the west, while the second driveway is located along Balsa Avenue in proximity to the Walgreens store to the east. Project customers and employees would enter the Project Site from the existing internal drive aisle that connects the two commercial developments and integrate circulation with the surrounding uses. In addition, the Project would include a new drive aisle along the southern perimeter of the Project Site providing direct access to the Project Site from the existing surface parking lot of the Walgreens to the east.

Internal circulation would allow vehicles to either park in the designated parking area or enter the drive-through lanes, which wrap around the southern portion of the site and direct vehicles northward to exit into adjacent parking lots and back to surrounding roadways. The Project would provide a total of 18 parking spaces (3 future electric vehicle charging stations [EVCS], 1 accessible EVCS, 1 accessible, 13 standard).

Landscaping

The Project would incorporate approximately 10,350 square feet of landscaping and would retain 2,808 square feet of existing landscaping near Twentynine Palms Highway. The landscape design emphasizes drought-tolerant, desert-appropriate plantings consistent with the Town's Water Efficient Landscape Ordinance and the Water Use Classification of Landscape Species (WUCOLS) guidelines.

Proposed trees include Swan Hill fruitless olive and Mexican palo verde, which can reach mature size of approximately 25 feet in height and width. Shrub and accent plantings would include desert agave, purple threeawn, grey desert spoon, California buckwheat, Texas sage, deer grass, and jojoba. Texas sage would be installed at a height of approximately 36 inches at the time of planting to provide immediate screening and visual structure along the eastern property line specifically to screen car headlights, and shrubs would be used to screen the trash enclosure.

Groundcover treatments would consist of approximately 1,498 square feet of decorative local cobble placed over landscape fabric. This treatment would provide a low-maintenance, water-efficient groundcover for a desert climate.

1.3 PROJECT CONSTRUCTION SEQUENCING

For the purpose of evaluating potential environmental impacts, this report assumes that construction of the Project would begin in 2026 and extend over a period of approximately five (5) months following issuance of the Incidental Take Permit for the removal of the Western Joshua Trees, with full operation anticipated in 2026. This schedule is considered conservative and is intended to capture the maximum potential daily impacts associated with construction activities.

Construction would occur in three primary stages: (1) debris removal, (2) grading and foundation preparation, and (3) building construction. All equipment and construction staging would occur within the boundaries of the Project Site. The grading plan for the Project anticipates approximately 1,000 cubic yards of cut and 200 cubic yards of fill, resulting in a net export of approximately 800 cubic yards of soil.

Debris removal stage would involve clearing the site and preparing it for grading, which would then be immediately followed by grading and foundation preparation. Debris removal and grading/foundation stages are expected to last approximately five (5) weeks. This stage would establish building pads, prepare utility connections, and level the site. The building construction stage would then proceed over approximately four (4) months and would include construction of the coffee shop structure, installation of utilities, application of architectural coatings, and paving the Project Site. Architectural coating and paving activities are expected to occur during the final month of the construction stage.

Consistent with the assumptions included within the California Emissions Estimator Model (CalEEMod), the following maximum daily equipment by stage will be assumed.

- Debris removal: 1 concrete industrial saw, 1 rubber tired dozer, 2 tractors/loader/backhoes
- Grading: 1 grader, 1 rubber tired dozer, 1 tractor/loader/backhoe
- Building Construction: 1 crane, 2 forklifts, 2 tractors/loaders/backhoes
- Paving: 4 cement and mortar mixer, 1 paver, 1 roller, 1 tractor/loader/backhoe
- Architectural Coating: 1 air compressor

2.0 ENVIRONMENTAL SETTING

2.1 FUNDAMENTALS OF NOISE & VIBRATION

Noise

Noise is usually defined as unwanted sound that is an undesirable byproduct of society's normal day-to-day activities. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, and/or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). The human ear does not respond uniformly to sounds at all frequencies. For example, the human ear is less sensitive to low and high frequencies than medium frequencies, which more closely correspond with human speech. In response to the sensitivity of the human ear to different frequencies, the A-weighted noise level (or scale), which corresponds better with people's subjective judgment of sound levels, has been developed. This A-weighted sound level, referenced in units of dB(A), is measured on a logarithmic scale such that a doubling of sound energy results in a 3 dB(A) increase in noise level. Typically, changes in a community noise level of less than 3 dB(A) are not noticed by the human ear.[1] Changes from 3 to 5 dB(A) may be noticed by some individuals who are sensitive to changes in noise. A greater than 5 dB(A) increase is readily noticeable, while the human ear perceives a 10 dB(A) increase in sound level to be a doubling of sound.

On the A-weighted scale, the range of human hearing extends from approximately 3 to 140 dB(A). **Table 1, A-Weighted Decibel Scale**, provides examples of A-weighted noise levels from common sources. Noise sources occur in two forms: (1) point sources, such as stationary equipment or individual motor vehicles; and (2) line sources, such as a roadway with a large number of point sources (motor vehicles). Sound generated by a point source typically diminishes (attenuates) at a rate of 6 dB(A) for each doubling of distance from the source to the receptor at acoustically "hard" sites and 7.5 dB(A) at acoustically "soft" sites.[2] For example, if a noise source produces a noise level of 89 dB(A) at a reference distance of 50 feet, the noise level would be 83 dB(A) at a distance of 100 feet from the noise source, 77 dB(A) at a distance of 200 feet, and so on. Noise generated by a mobile source will decrease by approximately 3 dB(A) over hard surfaces and 4.5 dB(A) over soft surfaces for each doubling of distance.

2 Federal Highway Administration, *Highway Noise Fundamentals*, (1980) 97. Examples of "hard" or reflective sites include asphalt, concrete, and hard and sparsely vegetated soils. Examples of acoustically "soft" or absorptive sites include soft, sand, plowed farmland, grass, crops, heavy ground cover, etc.

Table 1
A-Weighted Decibel Scale

Typical A-Weighted Sound Levels	Sound Level (dB(A), Leq)
Threshold of Pain	140
Jet Takeoff at 100 Meters	125
Jackhammer at 15 Meters	95
Heavy Diesel Truck at 15 Meters	85
Conversation at 1 Meter	60
Soft Whisper at 2 Meters	35

Source: United States Occupational Safety & Health Administration, Noise and Hearing Conservation Technical Manual, 1999.

Sound levels also can be attenuated by man-made or natural barriers (e.g., sound walls, berms, and ridges), as well as elevational differences. Noise is most audible when traveling by direct line-of-sight, an interrupted visual path between the noise source and noise receptor. Barriers, such as walls or buildings that break the line-of-sight between the source and the receiver, can greatly reduce noise levels from the source since sound can only reach the receiver by diffraction. However, if a barrier is not high or long enough to break the line-of-sight from the source to the receiver, its effectiveness is greatly reduced.

Solid walls and berms may reduce noise levels by 5 to 10 dB(A) depending on their height and distance relative to the noise source and the noise receptor.[3] Sound levels may also be attenuated 3 dB(A) by a first row of houses and 1.5 dB(A) for each additional row of houses.[4] The minimum noise attenuation provided by typical structures in California is provided in **Table 2, Building Noise Reduction Factors.**

Sound Rating Scales

Various rating scales approximate the human subjective assessment to the "loudness" or "noisiness" of a sound. Noise metrics have been developed to account for additional parameters, such as duration and cumulative effect of multiple events. Noise metrics are categorized as single event metrics and cumulative metrics, as summarized below.

In order to simplify the measurement and computation of sound loudness levels, frequency weighted networks have obtained wide acceptance. The A-weighted scale, discussed above, has become the most prominent of these scales and is widely used in community noise analysis. Its advantages are that it has shown good correlation with community response and is easily measured. The metrics used in this analysis are all based upon the dB(A) scale.

Equivalent Noise Level

Equivalent Noise Level (Leq) is the sound level corresponding to a steady-state A-weighted sound level containing the same total energy as several single event noise exposure level events during a given sample period. Leq is the "acoustic energy" average noise level during the period of the sample. It is based on the observation that the potential for noise annoyance is dependent on the total acoustical energy content of the noise. The equivalent noise level is expressed in units of dB(A). Leq can be measured for any period, but is typically measured for 15 minutes, 1 hour, or 24 hours. Leq for a 1-hour period is used by the Federal Highway Administration (FHWA) for assessing highway noise impacts. Leq for 1 hour is referred to as the Hourly Noise Level (HNL) in the California Airport Noise Regulations and is used to develop Community

Noise Equivalent Level values for aircraft operations. Construction noise levels and ambient noise measurements in this section use the Leq scale.

Community Noise Equivalent Level

Community Noise Equivalent Level (CNEL) is a 24-hour, time-weighted energy average noise level based on the A-weighted decibel. It is a measure of the overall noise experienced during an entire day. The term "time-weighted" refers to the penalties attached to noise events occurring during certain sensitive periods. In the CNEL scale, 5 decibels (dB) are added to measured noise levels occurring between the hours of 7 P.M. and 10 P.M. For measured noise levels occurring between the hours of 10 P.M. and 7 A.M., 10 dB are added. These decibel adjustments are an attempt to account for the higher sensitivity to noise in the evening and nighttime hours and the expected lower ambient noise levels during these periods. Existing and projected future traffic noise levels in this section use the CNEL scale.

Day-Night Average Noise Level

The day-night average sound level (Ldn) is another average noise level over a 24-hour period. Noise levels occurring between the hours of 10 P.M. and 7 A.M. are increased by 10 dB. This noise is weighted to take into account the decrease in community background noise of 10 dB(A) during this period. Noise levels measured using the Ldn scale are typically similar to CNEL measurements.

Adverse Effects of Noise Exposure

Noise is known to have several adverse effects on humans, which has led to laws and standards being set to protect public health and safety, and to ensure compatibility between land uses and activities. Adverse effects of noise on people include hearing loss, communication interference, sleep interference, physiological responses, and annoyance. Each of these potential noise impacts on people is briefly discussed in the following narrative.

Hearing Loss

Hearing loss is generally not a community noise concern, even near a major airport or a major freeway. The potential for noise-induced hearing loss is more commonly associated with occupational noise exposures in heavy industry, very noisy work environments with long-term exposure, or certain very loud recreational activities (e.g., target shooting and motorcycle or car racing). The Occupational Safety and Health Administration (OSHA) identifies a noise exposure limit of 90 dB(A) for 8 hours per day to protect from hearing loss (higher limits are allowed for shorter duration exposures). Noise levels in neighborhoods, even in very noisy neighborhoods, are not sufficiently loud enough to cause hearing loss.

Communication Interference

Communication interference is one of the primary concerns in environmental noise. Communication interference includes speech disturbance and intrusion with activities such as watching television. Noise can also interfere with communications such as within school classrooms. Normal conversational speech is in the range of 60 to 65 dB(A) and any noise in this range or louder may interfere with speech.

Sleep Interference

Noise can make it difficult to fall asleep, create momentary disturbances of natural sleep patterns by causing shifts from deep to lighter stages, and cause awakening. Noise may even cause awakening that a person may or may not be able to recall.

Physiological Responses

Physiological responses are those measurable effects of noise on people that are realized as changes in pulse rate, blood pressure, and other physical changes. Studies to determine whether exposure to high noise levels can adversely affect human health have concluded that, while a relationship between noise and health effects seems plausible, there is no empirical evidence of the relationship.

Annoyance

Annoyance is an individual characteristic and can vary widely from person to person. Noise that one person considers tolerable can be unbearable to another of equal hearing capability. The level of annoyance depends both on the characteristics of the noise (including loudness, frequency, time, and duration), and how much activity interference (such as speech interference and sleep interference) results from the noise. However, the level of annoyance is also a function of the attitude of the receiver. Attitudes may also be affected by the relationship between the person affected and the source of noise, and whether attempts have been made to abate the noise.

Vibration

Vibration consists of waves transmitted through solid material. Groundborne vibration propagates from a source through the ground to adjacent buildings by surface waves. Vibration may comprise a single pulse, a series of pulses, or a continuous oscillatory motion. The frequency of a vibrating object describes how rapidly it is oscillating and is measured in hertz (Hz). Most environmental vibrations consist of a composite, or "spectrum" of many frequencies, and are generally classified as broadband or random vibrations. The normal frequency range of most groundborne vibration that can be felt generally starts from a low frequency of less than one Hz to a high of about 200 Hz. Vibration is often measured in terms of the peak

particle velocity (PPV) in inches per second (in/sec) when considering impacts on buildings or other structures, as PPV represents the maximum instantaneous peak of vibration that can stress buildings. Because it is a representation of acute vibration, PPV is often used to measure the temporary impacts of short-term construction activities that could instantaneously damage-built structures. Vibration is often also measured by the root mean squared (RMS) because it best correlates with human perception and response. Specifically, RMS represents "smoothed" vibration levels over an extended period of time and is often used to gauge the long-term chronic impact of a Project's operation on the adjacent environment. RMS amplitude is the average of a signal's squared amplitude. It is most commonly measured in decibel notation (VdB).

Vibration energy attenuates as it travels through the ground, causing the vibration amplitude to decrease with distance away from the source. High frequency vibrations reduce much more rapidly than low frequencies, so that in the far-field from a source, the low frequencies tend to dominate. Soil properties also affect the propagation of vibration. When groundborne vibration interacts with a building, there is usually a ground-to-foundation coupling loss (i.e., the foundation of the structure does not move in sync with the ground vibration), but the vibration can also be amplified by the structural resonances of the walls and floors. Vibration in buildings is typically perceived as rattling of windows or items on shelves, or the motion of building surfaces. At high levels, vibration can result in damage to structures.

Manmade groundborne vibration is generally limited to areas within a few hundred feet of certain types of construction activities, especially pile driving. Road vehicles rarely create enough groundborne vibration to be perceptible to humans unless the road surface is poorly maintained and there are potholes or bumps. If traffic induces perceptible vibration in buildings, such as window rattling or shaking of small loose items (typically caused by heavy trucks in passing), then it is most likely an effect of low-frequency airborne noise or ground characteristics. Human annoyance by vibration is related to the number and duration of events. The more events or the greater the duration, the more annoying it will be to humans.

2.2 NOISE SENSITIVE RECEPTORS

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as parks, historic sites, cemeteries, and recreation areas are considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses. The closest noise-sensitive receptors to the Project Site are the single-

family residences 228 feet to the south of the Project Site. See **Figure 4, Noise Monitoring and Sensitive Receptor Location Map.**

2.3 EXISTING CONDITIONS

Measured Ambient Noise Levels

To establish baseline noise conditions, existing noise levels were monitored at four locations in the vicinity of the Project Site. The locations of where the noise measurements were taken are depicted in **Figure 4, Noise Monitoring and Sensitive Receptor Location Map**. The noise survey was conducted in October 2025 using the Larson Davis Sound Expert 821 (Type 1) sound level meter, which conforms to industry standards set forth in ANSI S1.4-1983 (R2006) – Specification for Sound Level Meters/Type 1. This instrument was calibrated and operated according to the manufacturer's written specifications. At the measurement sites, the microphone was placed at a height of approximately five feet above grade. The results of the measurements are summarized in **Table 3, Existing Noise Levels in the Vicinity of the Project Site**. As shown in **Table 3**, the ambient daytime noise levels ranged from 48.8 dB(A) Leq to 54.9 dB(A) Leq in the vicinity the Project Site. The existing ambient day-night noise level on the Project Site fronting Twenty-Nine Palms Highway (Noise Monitoring Location 1) is estimated to be 60.8 dB(A) Ldn. The existing ambient day-night noise level at the residences to the south (Noise Monitoring Location 2) is estimated to be 56.9 dB(A) Ldn. See **Appendix A** to this report.

Table 3
Existing Noise Levels in the Vicinity of the Project Site

Noise Monitoring Locations	Primary Noise Sources	Noise Levels [dB(A)]		
		Leq	Lmin	Lmax
Daytime (7AM – 10 PM)				
1. Project Site	Vehicle Traffic, Parking Lot Activity	54.9	46.5	67.9
2. Residences to the south	Vehicle Traffic, Neighborhood Activity	48.8	38.8	68.3
Night (10 PM – 7AM)				
1. Project Site	Vehicle Traffic	54.3	48.0	64.1
2. Residences to the south	Vehicle Traffic, Neighborhood Activity	50.7	42.1	65.6

*Source: Impact Sciences, Inc., October 2025 See **Appendix A, Noise Data**. As shown therein, 15-minute Leq data was collected for all locations.*

3.0 REGULATORY FRAMEWORK

3.1 REGULATORY FRAMEWORK

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding noise at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Occupational Safety and Health Act of 1970
- Noise Control Act of 1972
- Office of Planning and Research Guidelines for Noise Compatible Land Use
- Town of Yucca Valley General Plan
- Town of Yucca Valley Municipal Code

Federal

Occupational Safety and Health Act of 1970

Under the Occupational Safety and Health Act of 1970 (29 U.S.C. §1919 et seq.), the Occupational Safety and Health Administration (OSHA) has adopted regulations designed to protect workers against the effects of occupational noise exposure. These regulations list permissible noise level exposure as a function of the amount of time during which the worker is exposed. The regulations further specify a hearing conservation program that involves monitoring noise to which workers are exposed, ensuring that workers are made aware of overexposure to noise, and periodically testing the workers' hearing to detect any degradation.[5]

Noise Control Act of 1972

Under the authority of the Noise Control Act of 1972, the United States Environmental Protection Agency (U.S. EPA) established noise emission criteria and testing methods published in Parts 201 through 205 of Title 40 of the Code of Federal Regulations (CFR) that apply to some transportation equipment (e.g., interstate rail carriers, medium trucks, and heavy trucks) and construction equipment. In 1974, U.S. EPA issued guidance levels for the protection of public health and welfare in residential areas of an outdoor L_{dn} of 55 dBA and an indoor L_{dn} of 45 dBA. These guidance levels are not standards or regulations and were developed without consideration of technical or economic feasibility. There are no federal noise standards

5 United States Department of Labor. OSH Act of 1970. https://www.osha.gov/laws-regs/oshact/completeoshact. Accessed November 5, 2025.

that directly regulate environmental noise related to the construction or operation of the Project. Moreover, the federal noise standards are not reflective of urban environments that range by land use, density, proximity to commercial or industrial centers, etc. As such, for purposes of determining acceptable sound levels to determine and evaluate intrusive noise sources and increases, this document utilizes the Town of Yucca Valley Noise Regulations, discussed below.

Federal Transit Administration Vibration Standards

There are no federal vibration standards or regulations adopted by any agency that are applicable to evaluating vibration impacts from activities associated with the Project. However, the Federal Transit Administration (FTA) has adopted vibration criteria for use in evaluating vibration impacts from construction activities. The vibration damage criteria adopted by the FTA are shown in **Table 4, Construction Vibration Damage Criteria.**

Table 4
Construction Vibration Damage Criteria

Building Category	PPV (in/sec)
I. Reinforced-concrete, steel, or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

Source: FTA, Transit Noise and Vibration Impact Assessment Manual, 2018.

State

Office of Planning and Research Guidelines for Noise Compatible Land Use

The State of California has not adopted statewide standards for environmental noise, but the Governor's Office of Planning and Research (OPR) has established guidelines for evaluating the compatibility of various land uses as a function of community noise exposure. The Town has developed its own compatibility guidelines in the Noise Element of the General Plan based in part on OPR Guidelines, see **Table 5, Land Use Compatibility for Community Noise Environments** later in this report. California Government Code Section 65302 requires each county and city or town in the State to prepare and adopt a comprehensive long-range general plan for its physical development, with Section 65302(f) requiring a noise element to be included in the general plan. The noise element must: (1) identify and appraise noise

problems in the community; (2) recognize Office of Noise Control guidelines; and (3) analyze and quantify current and projected noise levels.

Local

Yucca Valley General Plan

The Town of Yucca Valley General Plan (General Plan) contains a Noise Element outlining the Town's policies and programs aiming to achieve and maintain noise levels compatible with various types of land uses. The noise goals and policies from the General Plan that are relevant to the Project are listed below:

Goal N1 A noise environment where excessive noise from stationary, transportation-related, and temporary sources of noise are appropriately managed.

Policy N 1-1: Separate excessive noise-generating uses from residential uses and other sensitive receptors through building design and noise-minimizing buffers such as landscaping, berms, and setbacks.

Policy N 1-2: Require noise-reducing site design and building construction in residential and mixed-use projects in areas with outdoor CNEL levels in excess of 65 dBA.

Policy N 1-3: Require daytime only truck deliveries to commercial and industrial uses adjacent to residential uses and other sensitive receptors unless there is no feasible alternative.

Policy N 1-15: Require the design and construction of industrial and commercial development to minimize excessive offsite noise impacts to surrounding properties.

The General Plan also includes **Table 5 Land Use Compatibility for Community Noise Environments**, presented below, which shows a land use compatibility chart for community noise prepared by the California Office of Noise Control. It identifies "normally acceptable," "conditionally acceptable," "normally unacceptable," and "clearly unacceptable" exterior noise levels for various land uses. A "conditionally acceptable" designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a "normally acceptable" designation indicates that standard construction can occur with no special noise reduction requirements.

Yucca Valley Municipal Code

The Town has jurisdiction over noise and vibration regulation, as stated in the Town's Municipal Code, Section 9.34 Noise. Section 9.34 establishes standards concerning acceptable noise and vibration levels for both sensitive land uses and for noise generating land uses. Section 9.34 states the following:

Noise Standards For Stationary Noise Sources: "Noise Standards For Stationary Noise Sources", of this section describes the noise standard for emanations from a stationary noise source, as it affects adjacent properties:

Affected Land Uses	7:00 A.M. To 10:00 P.M. Leq	10:00 P.M. To 7:00 A.M. Leq
Residential	55 dB(A)	45 dB(A)
Professional services	55 dB(A)	55 dB(A)
Other commercial	60 dB(A)	60 dB(A)
Industrial	70 dB(A)	70 dB(A)

Noise Limit Categories: No person shall operate or cause to be operated a source of sound at a location or allow the creation of noise on property owned, leased, occupied, or otherwise controlled by the person, which causes the noise level, when measured on another property, either incorporated or unincorporated, to exceed any one of the following:

a. The noise standard for the receiving land use as specified in subsection B, "Noise Impacted Areas", of this section, for a cumulative period of more than thirty (30) minutes in any hour.

b. The noise standard plus five (5) dB(A) for a cumulative period of more than fifteen (15) minutes in any hour.

c. The noise standard plus ten (10) dB(A) for a cumulative period of more than five (5) minutes in any hour.

d. The noise standard plus fifteen (15) dB(A) for a cumulative period of more than one minute in any hour.

e. The noise standard plus twenty (20) dB(A) for any period of time.

Noise Standards For Adjacent Mobile Noise Sources: Noise from mobile sources may affect adjacent properties adversely. When it does, the noise shall be mitigated for any new development to a level that shall not exceed the standards described below.

Categories	Uses	Ldn (Or CNEL) dB(A)	
		Interior	Exterior
Residential	Single-family, multi-family, duplex, mobile homes	45	60
Commercial	Amphitheater, concert hall, auditorium, movie theater	45	n/a
	Commercial retail, bank, restaurant	50	n/a
	Hotel, motel, transient housing	45	60
	Office building, research and development, professional offices	45	65
Institutional/public	Hospital, nursing home, school classroom, religious institution, library	45	65
Open space	Park	n/a	65

An exterior noise level of up to 65 dB(A) (or CNEL) shall be allowed provided exterior noise levels have been substantially mitigated through a reasonable application of the best available noise reduction technology, and interior noise exposure does not exceed 45 dB(A) (or CNEL) with windows and doors closed. Requiring that windows and doors remain closed to achieve an acceptable interior noise level shall necessitate the use of air conditioning or mechanical ventilation.

Exempt Noise: The following sources of noise shall be exempt from the regulations of this section:

1. Motor vehicles not under the control of the commercial or industrial use.
2. Emergency equipment, vehicles, and devices.
3. Temporary construction, maintenance, repair, or demolition activities between seven o'clock (7:00) A.M. and ten o'clock (10:00) P.M., except Sundays and federal holidays.

Vibration Standard: No ground vibration shall be allowed that can be felt without the aid of instruments at or beyond the lot line, nor shall any vibration be allowed which produces a particle velocity greater than or equal to 0.2 inch per second measured at or beyond the lot line.

Exempt Vibrations: The following sources of vibration shall be exempt from the regulations of this section:

- Motor vehicles not under the control of the subject use.
- Temporary construction maintenance or demolition activities between seven o'clock (7:00) A.M. and ten o'clock (10:00) P.M. (Ord. 254, 12-16-2014)

Table 5
Land Use Compatibility for Community Noise Environments

Land Use Category	Community Noise Exposure (dB, L_{dn} or CNEL)						
	55	60	65	70	75	80	
Residential - Low Density Single-Family, Duplex, Mobile Homes							
Residential - Multi-Family							
Transient Lodging - Motels Hotels							
Schools, Libraries, Churches, Hospitals, Nursing Homes							
Auditoriums, Concert Halls, Amphitheaters							
Sports Arena, Outdoor Spectator Sports							
Playgrounds, Neighborhood Parks							
Golf Courses, Riding Stables, Water Recreation, Cemeteries							
Office Buildings, Business Commercial and Professional							
Industrial, Manufacturing, Utilities, Agriculture							

Normally Acceptable - Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

Conditionally Acceptable - New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system or air conditioning will normally suffice.

Normally Unacceptable - New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Clearly Unacceptable - New construction or development should generally not be undertaken.

4.0 NOISEANALYSIS

4.1 THRESHOLDS OF SIGNIFICANCE

The impacts of the Project related to noise would be considered significant if they would exceed any of the following Thresholds of Significance, in accordance with Appendix G of the *California Environmental Quality Act (CEQA) Guidelines*:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project Site in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generation of excessive ground-borne vibration or ground-borne noise levels; and
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels.

The *State CEQA Guidelines* do not define the levels at which groundborne vibration or groundborne noises are considered "excessive." Thus, in terms of construction-related vibration impacts on buildings, the adopted guidelines and recommendations by the FTA to limit groundborne vibration based on the age and/or condition of the structures that are located in close proximity to construction activity are used in this analysis to evaluate potential groundborne vibration impacts. Based on the FTA criteria, construction impacts relative to groundborne vibration would be considered significant if the following were to occur:

- Project construction activities would cause a PPV groundborne vibration level to exceed 0.5 inches per second at any building that is constructed with reinforced-concrete, steel, or timber;
- Project construction activities would cause a PPV groundborne vibration level to exceed 0.3 inches per second at any engineered concrete and masonry buildings;
- Project construction activities would cause a PPV groundborne vibration level to exceed 0.2 inches per second at any non-engineered timber and masonry buildings; or
- Project construction activities would cause a PPV ground-borne vibration level to exceed 0.12 inches per second at any historical building or building that is extremely susceptible to vibration damage.

The *State CEQA Guidelines* do not define the levels at which noise would be considered substantial increases. Thus, for purposes of this analysis, the Project would normally have a significant impact on noise

levels from project operations if the project causes the ambient noise level measured at the property line of affected uses to increase by 3 dB(A) if the total ambient noise levels without the Project exceed the Town's General Plan exterior noise standards, or any 5 dB(A) or greater noise increase when total ambient noise levels without the Project are within the Town's exterior noise standards.

4.2 METHODOLOGY

Noise levels associated with Project-related construction activities were calculated using the FHWA Roadway Construction Noise Model (RCNM). Noise levels were also compared to the Town's noise ordinance, which includes provisions regarding construction noise levels. Specifically, YVMC Section 9.34 prohibits construction activity except within the hours of 7:00 a.m. and 10:00 p.m. As the Project would comply with the daytime construction hours established in the YVMC, this analysis also uses the FTA's general construction noise criteria of 90 dB(A) Leq (1-hour)[6] to provide additional context for the Project's potential to generate daytime construction noise impacts.

An analysis of traffic noise was conducted to determine if the Project would have a perceptible increase in traffic-related noise. Studies have shown that a 3 dB(A) increase in sound level pressure is barely detectable by the human ear. A 3 dB(A) increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.[7]

The Project's potential to result in significant noise impacts from on-site operational noise sources was assessed by identifying sources of on-site noise sources and considering the impact that they could produce given the nature of the source (i.e., loudness and whether noise would be produced during daytime or more-sensitive nighttime hours), distances to nearby sensitive receptors, surrounding ambient noise levels, the presence of similar noise sources in the vicinity, and maximum allowable noise levels permitted by the YVMC.

4.3 IMPACT ANALYSIS

Impact NOI-1 **Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of**

---

6 Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, Table 7-2 (General Assessment Construction Noise Criteria), September 2018.

7 California Department of Transportation (Caltrans), *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, 2013. Available online at: https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tens-sep2013-a11y.pdf

standards established in the local general plan or noise ordinance, or applicable standards of other agencies? ***(Less than Significant).***

Construction Impacts

Construction of the Project would require the use of heavy equipment during grading/site preparation, installation of utilities, building fabrication, and finishing. Construction activities would also involve the use of smaller power tools, generators, and other sources of noise. During each stage of construction, several types of equipment potentially could be operating concurrently, and noise levels would vary based on the amount of equipment in operation and the location of the activity. The Federal Highway Administration's (FHWA) Roadway Construction Noise Model (RCNM) has compiled data regarding the noise-generating characteristics of specific types of construction equipment and typical construction activities.

With the use of the RCNM, as detailed in **Appendix A** to this report,[8] the construction noise levels forecasted for the sensitive receptors are presented in **Table 6, Estimated Exterior Construction Noise at Sensitive Receptors.** Noise levels would diminish notably with distance from the construction site at a rate of 6 dB(A) per doubling of distance (noise from stationary or point sources is reduced by about 6 dB(A) for every doubling of distance at acoustically hard locations). For example, a noise level of 86 dB(A) Leq measured at 50 feet from the noise source to the receptor would decline to 80 dB(A) Leq at 100 feet from the source to the receptor and fall by another 6 dB(A) Leq to 74 dB(A) Leq at 200 feet from the source to the receptor. These noise attenuation rates assume a flat and unobstructed distance between the noise generator and the receptor. Furthermore, it should be noted that increases in noise levels at sensitive receptors during construction would be intermittent and temporary and would not generate continuously high noise levels. In addition, the construction noise experienced at sensitive receptors during the initial periods of construction (i.e., site preparation/grading/foundations) typically would be reduced in the later construction periods (i.e., interior building construction).

8 Project construction noise levels were calculated based on the Project's anticipated mix of construction equipment with the FHWA RCNM Version 1.1.

Table 6
Estimated Exterior Construction Noise at Sensitive Receptors

Sensitive Land Uses [a]	Distance to Project Site (feet)	Estimated Construction Noise Levels [dB(A) Leq]	Exceed FTA 90 dB(A) 1-Hour Leq Criteria?
Debris Removal			
1. Residences to the south	228	67.2	No
Grading			
1. Residences to the south	228	66.2	No
Building Construction			
1. Residences to the south	228	63.7	No

[a] *See **Figure 4** for locations of sensitive receptors.*
[b] *While the project would include construction activities up to the adjacent property lines, consistent with FTA methodology, these calculations are based on distances from the center of the site to the receptors.*
*See **Appendix A** to this report.*

Temporary construction, maintenance, and repair activities are exempt from the YVMC regulations regarding noise so long as the temporary construction does not take place between the hours of 10:00 p.m. and 7:00 a.m.[9] As the Project would comply with the daytime construction hours established in the YVMC, this analysis also uses the FTA's general construction noise criteria of 90 dB(A) Leq (1-hour) to provide additional context for the Project's potential to generate daytime construction noise impacts. While construction activity would increase noise levels in the vicinity of the Project Site (see **Table 6**), the Project's construction activities would generally not exceed the FTA's general construction noise criteria of 90 dB(A) Leq (1-hour) at any sensitive receptors. Furthermore, Project construction would not occur during restricted periods, and thus, the Project would be consistent with the criteria set forth in the YVMC. As such, construction noise impacts would be ***less than significant*** and no mitigation is required.

In addition to adherence to YVMC, which limits the construction hours, the following best management practices (BMPs) are recommended in accordance with General Plan Noise Element Policy N 1-15 that would further reduce noise levels associated with the construction of the Project.

9 Town of Yucca Valley, Municipal Code. Available online at: https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/yuccavalley_ca/0-0-0-16234, accessed November 5, 2025.

1. During all Project grading on-site, construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturer standards.

2. The contractor shall place all stationary construction equipment so that emitted noise is directed away from noise sensitive receptors nearest the project site.

3. As applicable, all equipment shall be shut off and not left to idle when not in use.

4. The contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise/vibration sources and sensitive receptors nearest the project site during all project construction.

5. Jackhammers, pneumatic equipment and all other portable stationary noise sources shall be shielded and noise shall be directed away from sensitive receptors.

6. The project proponent shall mandate that the construction contractor prohibit the use of music or sound amplification on the project site during construction.

7. The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment.

Operational Noise

Traffic Noise

A traffic analysis for the Project was prepared by CR Associates.[10] Based on the traffic analysis contained therein, the Project is anticipated to generate approximately 358 average daily traffic trips (ADT).[11] The closest roadway to the Project Site with a recorded average daily traffic volume is along State Route 62, approximately 3,982 feet west of the Project Site. According to Caltrans data, this roadway segment carries approximately 11,700 average daily trips at Joshua Lane.[12] Based on this data, it is clear the Project's maximum of 358 daily trips would not have the potential double traffic volumes on existing roadways in the vicinity of the Project Site. Since it would take a doubling (i.e., a 100% increase) of roadway traffic volume to increase noise levels by 3 dB(A), the addition of traffic volume from operation of the Project

10 Chen Ryan Associates, *Traffic Scoping Memorandum – Dutch Bros Coffee Project,* November 2025.

11 Chen Ryan Associates, *Traffic Scoping Memorandum – Dutch Bros Coffee Project,* November 2025.

12 Caltrans, "Annual Average Daily Traffic," available at: https://gisdata-caltrans.opendata.arcgis.com/datasets/d8833219913c44358f2a9a71bda57f76_0/explore?location=34.123058%2C-116.413158%2C18.35

would not increase traffic to levels capable of producing a 3 dB(A) ambient noise increase. Additionally, the Project is consistent with the surrounding land uses, which currently generate mobile noise sources typical of a commercial use. As such, any noise increase would be imperceptible, and impacts would be ***less than significant.***

Parking & Drive-Thru Noise

Various noise events would occur periodically from the Project's parking uses. Such periodic events would include activation of car alarms, sounding of car horns, slamming of car doors, engine revs, and tire squeals. Automobile movements would comprise the most continuous noise source and would generate a noise level of approximately 65 dB(A) at a distance of 25 feet. Car alarm and horn noise events generate sound levels as high as 75 dB(A) at a reference distance of 25 feet, however these noise sources would be sporadic.

Parking for this Project would be provided in 18 spaces in a surface lot on the Project Site. It should also be noted that the existing urban environment of the Project Site currently generates noise levels associated with parking and vehicular noise sources identified above. Although the Project would increase the number of vehicles parking in the area, the types of noise associated with vehicles accessing the parking lot would be similar to those currently occurring in the vicinity of the Project Site. While periodic noise levels from car alarms, horns, slamming of doors, etc., would increase as a result of the Project, these events would not occur consistently over a 24-hour period and thus would not have the potential to increase ambient noise levels at off-site locations by 5 dB(A) Ldn or more, nor exceed the Town's exterior noise standards at off-site locations. As such, noise impacts from the parking areas would be considered less than significant.

As stated in the Project Description, the Project proposes the operation of a dual-lane drive-through facility designed to accommodate 23 queued vehicles that would operate daily between the hours of 5:00 AM and 11:00 PM. Based on field data recorded for a similar use,[13] drive-through activities may generate noise levels of approximately 56.1 dBA Leq at a distance of 50 feet. As shown in **Appendix A**, this data was used to estimate exterior noise levels at the nearby residential receptors. **Table 5, Exterior Noise Levels at Off-Site Receptors**, summarizes the estimated noise levels from parking and drive-through related noise at the nearby residences. As shown, exterior noise levels would not exceed existing noise levels during the daytime or nighttime and impacts would be ***less than significant***

---

13 Field data recorded at a commercial retail center with drive-through's for a Panda Express, Taco Bell, and Dutch Bros. Vehicle traffic, parking lot activity, drive-through's and speakers, and truck loading/unloading activities were observed during the measurement. See Appendix A.

Stationary Noise Sources

As part of the Project, new mechanical equipment, HVAC units, and exhaust fans could be installed on the roof or near the proposed structures. Although the operation of this equipment would generate noise, the design of these on-site HVAC units and exhaust fans would be required to comply with the regulations of the YVMC. Specifically, Chapter 9.34 of the YVMC regulates stationary sources of noise such as HVAC units on neighboring properties. HVAC noise from the Project would also be substantially similar to existing conditions in the Project area and would not be considered a new type of noise source. As such, noise from stationary sources would be ***less than significant.***

Impact NOI-2 **Would the Proposed Project result in the generation of excessive groundborne vibration or groundborne noise levels? *(Less than Significant).***

The FTA provides ground-born vibration impact criteria with respect to building damage during construction activities. PPV, expressed in inches per second, is used to measure building vibration damage. Construction vibration damage criteria are assessed based on structural category (e.g., reinforced-concrete, steel, or timber). FTA guidelines consider 0.2 inch/sec PPV to be the significant impact level for non-engineered timber and masonry buildings. Structures or buildings constructed of reinforced concrete, steel, or timber have a vibration damage criterion of 0.5 inch/sec PPV pursuant to FTA guidelines. Although the nearby structures appear to be constructed of reinforced concrete, steel, or timber, this analysis conservatively applies the 0.2 inch/sec PPV threshold typically applied to non-engineered timber and masonry buildings.

The vibration levels at nearby structures are shown below in **Table 7, Vibration Levels at Off-Site Structures from Project Construction.**

Table 7
Vibration Levels at Off-Site Structures from Project Construction

Sensitive Uses Off-Site [a]	Distance to Project Site (ft.)	Vibration Threshold (PPV)	Estimated PPV (in/sec)
1. Commercial structure to the west	Adjacent [b]	0.2 in/sec	0.191
2. Commercial structure to the east	46	0.2 in/sec	0.036
3. Residences to the south	228	0.2 in/sec	0.003

[a] *See **Figure 4** for locations of off-site structures.*
[b] *These calculations are based on distance from the site boundary to the structures. See **Appendix A** to this report.*

The vibration velocities predicted to occur at the nearest off-site structures would be 0.191 in/sec PPV. As shown in **Table 7**, Project construction vibration levels would not have the potential to exceed the standard 0.2 in/sec threshold established by the FTA. This impact would be ***less than significant***.

Impact NOI-3 **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels? (Less than Significant Impact).**

The closest airport is the Yucca Valley Airport, which is located 1.3 miles from the Project Site. However, the Yucca Valley Airport Comprehensive Land Use Plan shows that the Project Site is outside the 60 dBA CNEL noise contour for the airports.[14] While aircraft operations may contribute to the noise in the project area from this airport, the Project Site is not expected to experience airport-related noise levels in excess of the Town's exterior standards. As such, the Project would not expose people residing or working in the project area to excessive airport-related noise levels. This impact would be less than significant.

NOISE MONITORING FIELD REPORT

Project Name: Demaree Travel Plaza

Monitoring Location: 821 South Akers Street plaza, City of Visalia

Date: 11/7/2023 **Site Number:** REFERENCE

Measured By: Annalie Sarrieddine

Start Time: 4 46 PM

Measurement End Time: 5 01 PM

Total Measurement Time: 15 min.

Noise Meter Model: Larson Davis Soundtrack LxT

Meter Setting: A-Weighted Sound Level (SLOW)

Session File Name: LxT Data

A reference noise measurement was taken approximately 50 feet from a fast food drive through, with truck loading/unloading also occurring approximately 50 feet away.

Calibration: 94.0 (dBA)

Primary Noise Sources: Vehicle Traffic, Fast food drive through speaker, truck loading

Data Summary

Noise Scale	Noise Level (dBA)
L_{eq}	56.1
L_{max}	72.1
L_{min}	48.9

Executive Summary

Project Description and Setting

Balsa Avenue in the Town of Yucca Valley, California. The shopping center currently consists of a Big 5 Sporting Goods store located to the west of the Project site and a Walgreens located to the east. Access to the shopping center is provided via an existing left-out restricted driveway on 29 Palms Highway and a full-access, stop-controlled driveway along Balsa Avenue.

The Project consists of a 1,025-square-foot building with dual drive-through lanes and 18 parking spaces and will connect to the existing shopping center parking lot with site access provided via the two existing driveways described above.

Project Trip Generation

The trip generation estimates for the Project were developed using average trip rates and pass-by reduction factors from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, September 2021).

Based on the ITE Trip Generation Manual and the proposed Project land use, the Project is expected to generate approximately 358 daily trips, including 89 (44-in/45-out) AM peak hour trips and 30 (15-in/15-out) PM peak hour trips. It should be noted that after applying a pass-by (existing trips on the main roadway system) reduction factor, the project would generate 35 net new daily trips, with 8 net new trips in the AM peak hour and 2 net new trips in the PM peak hour on the existing adjacent roadway network. As a conservative approach, pass-by reductions were not applied to the traffic analysis.

Project Study Area

The Town of Yucca Valley does not have traffic analysis guidelines. As a result, traffic analysis criteria and assumptions were based on the San Bernardino County *Transportation Impact Study Guidelines* (TIS Guidelines: July 9, 2019), as well as coordination with Town staff through a traffic scoping process. Per the San Bernardino County TIS Guidelines, the study area was defined using the following criteria:

> Intersections in which the Project would add 50 or more trips during any peak hour
> Site access driveways

Based on the San Bernardino County TIS Guidelines and the Traffic Scoping Memorandum approved by Town of Yucca Valley staff, the following three (3) intersections were included for analysis:

Intersections

1. Balsa Avenue & 29 Palms Highway (Signalized)
2. Balsa Avenue & Project Driveway/Sonic Driveway (TWSC)
3. Balsa Avenue & Sunnyslope Drive (TWSC)

Note:
TWSC =Two-Way Stop-Controlled

As a conservative approach, the traffic analysis assumes that all Project traffic will enter and exit via the full-access driveway on Balsa Avenue. This location is represented as a worst-case scenario due to the higher number of turning movement conflicts (left turns out of the driveway) at the Balsa Avenue driveway, compared to the 29 Palms Highway driveway.

Intersection Analysis Summary

Table ES.1 displays the intersection level of service (LOS) results under Existing, Opening Year 2027 Cumulative, and Opening Year 2027 Cumulative with Project conditions.

Table ES.1 Intersection LOS Results

			Avg. Delay (Sec.)	LOS	Avg. Delay (Sec.)	LOS	Avg. Delay (Sec.)	LOS
1	Balsa Avenue & 29 Palms Highway	AM	18.8	B	19.1	B	20.0	C
		PM	22.4	C	22.8	C	23.1	C
2	Balsa Avenue & Project Driveway/Sonic Driveway	AM	10.0	B	10.1	B	10.8	B
		PM	11.7	B	12.1	B	12.6	B
3	Balsa Avenue & Sunnyslope Drive	AM	10.1	B	10.2	B	10.5	B
		PM	11.5	B	11.8	B	12.0	B

Source: CR Associates (2026)

LOS Impacts and Improvement Thresholds

Based on the San Bernardino County TIS Guidelines and the analysis presented in this report, the addition of Project traffic would not cause deficiencies nor create adverse effects on traffic operations at the study intersections. Therefore, no traffic-related improvements at the study intersections would be required for the Project.

Drive Through Queueing Analysis Summary

Drive-through queuing data collection was conducted at the following three (3) existing Dutch Bros coffee shop locations, which are comparable to the proposed location in that the existing locations have dual-drive-through lanes and have limited to no indoor seating:

44175 Jefferson Street, La Quinta, CA 92253
34051 Date Palm Drive, Cathedral City, CA 92234
81-776 Highway 111, Indio, CA 92201

Table ES.2 displays the peak queue, as well as the average and 85th percentile queue, for the peak 15-minute interval during the AM and PM peak operation conditions for both weekday and weekend.

Table ES.2 Drive Through Queuing Analysis Results

		TOD	Avg. Queue	85th Percentile	Peak Queue	TOD	Avg. Queue	85th Percentile	Peak Queue
44175 Jefferson Stree, La Quinta, CA	AM	8:15	20	22	23	8:15	15	17	17
	PM	3:15	13	15	15	4:30	13	13	13
34051 Date Palm Dr, Cathedral City, CA	AM	8:30	16	18	18	9:00	3	9	9
	PM	2:00	14	16	16	2:15	18	20	20
81-776 Highway 111, Indio, CA	AM	8:15	15	16	16	7:45	9	10	10
	PM	4:45	9	10	10	4:45	11	12	12

Source: CR Associates (2026)

Notes:
TOD = Time of Day

Based on the data collection, the peak observed queue was 23 vehicles between 8:15 8:30 AM during the AM peak period on a typical weekday at the existing La Quinta location. The proposed drive-through queuing capacity for the Project would be 23 vehicles. Therefore, the proposed drive-through capacity would accommodate the anticipated peak drive-through demand. It should be noted that if the drive-through queue were to spill out of the drive-through lane, the queue would be able to be accommodated by internal drive aisles and is not expected to spill out into the public right-of-way.

1.0 Introduction

The purpose of this Local Transportation Assessment (LTA) is to evaluate the traffic-related effects the proposed Dutch Bros Coffee would have on the surrounding transportation network and determine if additional improvements should be provided, as necessary.

Project Description

Balsa Avenue in the Town of Yucca Valley, California. The shopping center currently consists of a Big 5 Sporting Goods store located to west of the Project site and a Walgreens located to the east. Access to the shopping center is provided by an existing left-out restricted driveway on 29 Palms Highway and a full-access, stop-controlled driveway along Balsa Avenue.

The Project consists of a 1,025-square-foot building with dual drive-through lanes and 18 parking spaces and will connect to the existing shopping center parking lot with site access provided via the two existing driveways described above.

Based on discussions with Town of Yucca Valley staff during the traffic scoping process and as a conservative approach, the traffic analysis assumes that all Project traffic will enter and exit via the full-access driveway on Balsa Avenue. This location is represented as a worst-case scenario due to the higher number of turning movement conflicts (left turns out of the driveway) at the Balsa Avenue driveway, compared to the 29 Palms Highway driveway.

Figure 1.1 Figure 1.2 displays the site plan for the proposed Project.

Report Organization

Following this introductory chapter, this report is organized into the following chapters:

2. Analysis Methodology This chapter reviews the methods utilized to evaluate any potential Town General Plan inconsistencies associated with the implementation of the proposed Project.
3. Project Traffic - This chapter describes the p
   generation. Additional information such as trip distribution patterns and project trip assignment are also included in this chapter, which is used to determine the project study area.
4. Existing Conditions This chapter describes and evaluates the existing transportation network. Vehicular operations and LOS analysis results are provided within the study area for existing vehicular traffic conditions.
5. Opening Year 2027 Cumulative Conditions This chapter describes and establishes an Opening Year 2027 baseline, incorporating ambient growth and Cumulative Projects in the project vicinity. LOS results are provided for Opening Year 2027 Cumulative conditions, with and without Project traffic, along with improvement recommendations, if necessary.
6. Site Access & Circulation This chapter addresses access to the Project site and discusses the functionality of the p
7. Drive-Through Queue Analysis This chapter describes and evaluates the queue associated with the drive-through operations of the proposed Project.

2.0 Analysis Methodology

This study was performed in accordance with the standards and requirements in the San Bernardino County TIS Guidelines and approved Traffic Scoping Memorandum for the Project, which is provided in Appendix A.

Level of Service (LOS) Definition

Level of Service (LOS) is a quantitative measure describing operational conditions within a traffic

describes these conditions in terms of such factors as delay, speed, travel time, freedom to maneuver, interruptions in traffic flow, queuing, comfort, and convenience. Table 2.1 describes generalized definitions of the various LOS categories (A through F) as applied to roadway and intersection operations.

Table 2.1 - LOS Definitions

A	This LOS represents a completely free-flow condition, where the operation of vehicles is virtually unaffected by the presence of other vehicles and only constrained by the geometric features of the highway and by driver preferences.
B	This LOS represents a relatively free-flow condition, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS A, but drivers have slightly less freedom to maneuver.
C	At this LOS, the influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles.
D	At this LOS, the ability to maneuver is notably restricted due to traffic congestion, and only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
E	This LOS represents operations at or near capacity. LOS E is an unstable level, with vehicles operating with minimum spacing for maintaining uniform flow. At LOS E, disruptions cannot be dissipated readily thus causing deterioration down to LOS F.
F	At this LOS, forced or breakdown of traffic flow occurs, although operations appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

Source: Highway Capacity Manual 7th Edition

Peak Hour Intersection LOS Standards and Thresholds

This section presents the methodologies used to perform peak hour intersection analyses at both signalized and unsignalized intersections within the study area. The following assumptions were utilized in conducting all intersection LOS analyses:

Peak Hour Factor (PHF) Field-collected PHF for all scenarios.

Lane Utilization Factor HCM 7th Edition defaults were used for all scenarios.

Heavy Vehicle Factor A 2% heavy vehicle factor was assumed for all scenarios.

Signal Timing Based on existing signal timing plans provided in Appendix B.

2.2.1 Signalized Intersections

The analysis of signalized intersections utilized the operational analysis procedure as outlined in the Highway Capacity Manual (HCM) 7th Edition signalized (Chapter 19) intersection analysis methodology. This method defines LOS in terms of delay, or more specifically, average stopped delay per vehicle. Delay is a measure of driver and/or passenger discomfort, frustration, fuel consumption and lost travel time. This technique applies a maximum vehicles per hour per lane (VPHPL) as the maximum intersection saturation volume, consistent with adopted saturation flow rates under the San Bernardino County Transportation Authority Congestion Management Program. This saturation volume is adjusted to account for lane width, on street parking, pedestrians, traffic composition (i.e., percentage of trucks) and shared lane movements (i.e., through and right turn movements originating from the same lane). The LOS criteria used for the analysis of signalized intersections are described in Table 2.2, identifying the thresholds of control delays and the associated LOS. The computerized analysis of intersection operations was performed utilizing the Synchro Version 12 traffic analysis software by Trafficware Ltd.

Table 2.2 - Signalized Intersection LOS Operational Analysis Method

<10	LOS A describes operations with very low delay. This occurs when progression is extremely favorable, and most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
>10 20	LOS B describes operations with generally good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.
>20 35	LOS C describes operations with higher delays, which may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
>35 55	LOS D describes operations with high delay, resulting from some combination of unfavorable progression, long cycle lengths, or high volumes. The influence of congestion becomes more noticeable, and individual cycle failures are noticeable.
>55 80	LOS E is considered the limit of acceptable delay. Individual cycle failures are frequent occurrences.
>80	LOS F describes a condition of excessively high delay, considered unacceptable to most drivers. This condition often occurs when arrival flow rates exceed the LOS D capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes to such delay.

Source: Highway Capacity Manual 7th Edition

2.2.2 Unsignalized Intersections

Unsignalized intersections were analyzed using the Highway Capacity 7th Edition side-street stop (Chapter 20) and all-way stop (Chapter 21) intersection analysis methodology. The computerized analysis of intersection operations was performed utilizing the Synchro Version 12 traffic analysis software by Trafficware Ltd.

LOS was determined as follows:

All-way stop intersections: Reported for the entire intersection as an average value
Side-street stop intersections: Reported for the worst-case movement

The LOS thresholds used for the analysis of unsignalized intersections are shown in Table 2.3.

Table 2.3 - LOS Criteria for Stop-Controlled Unsignalized Intersections

0 10	A
>10 15	B
>15 25	C
>25 35	D
>35 50	E
> 50	F

Source: Highway Capacity Manual 7th Edition

Determination of Project Study Area

Per the San Bernardino County TIS Guidelines, the study area was defined using the following criteria:

Intersections in which the Project would add 50 or more trips during any peak hour
Site access driveways

Based on discussions with Town of Yucca Valley staff, a roadway segment analysis was not required, therefore a roadway segment analysis was not included as part of this study.

LOS Thresholds and Significance Criteria

The San Bernardino County General Plan establishes acceptable LOS criteria for the Desert, Valley, and Mountain regions. The Town of Yucca Valley is located in the Desert region of the County. Consistent with the San Bernardino County TIS Guidelines, LOS for the Desert region should consider the following thresholds and improvement requirements for both signalized and unsignalized intersections:

Signalized Intersections

Any signalized intersection in the Desert region that is operating at an acceptable LOS C or better without project traffic in which the addition of project traffic causes the intersection to degrade to an LOS D, E, or F shall identify improvements to improve operations to at least LOS C.

Any signalized study intersection in the Desert region that is operating at LOS D, E, or F without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

Unsignalized Intersections

An improvement would be required if section a) or both sections b) and c) occur:

a) The addition of Project traffic causes the intersection to degrade from a LOS C or better to an LOS D or worse in the Desert region.

OR

b) The Project adds 5.0 seconds or more of delay to an intersection that is already projected to operate without project traffic at an LOS D, E, or F in the Desert region.

AND

c) One or both of the following conditions are met:

1) The Project adds ten (10) or more trips to any minor street approach.

2) The intersection meets the peak hour traffic signal warrant after the addition of project traffic.

In the Desert region, improvements should be identified that would achieve LOS C or better for case a) above or to pre-project conditions LOS and delay for case b) above.

3.0 Project Traffic

This chapter describes the estimated trip generation, trip distribution patterns, and trip assignment for the Project.

Project Trip Generation

Trip generation estimates for the Project were developed using average trip rates from the Institute of Transportation Engineer (ITE) *Trip Generation* Manual (11th Edition). Excerpts from the ITE Trip Generation Manual are provided in Appendix C.

Table 3.1 displays the

Table 3.1 - Proposed Project Trip Generation

				Trips	Split (%)	In	Out	Trips	Split (%)	In	Out
Coffee Shop with Drive-Through Window and No Indoor Seating (938)	2 Drive-Through Lanes	179 / Drive-Through Lane	358	89	50:50	44	45	30	50:50	15	15
Pass-By Reductions[1]		*90%*	*-323*	*-81*	–	*-40*	*-41*	*28*	–	*-14*	*-14*
Total Net			35	8	–	4	4	2	–	1	1

Source: ITE Trip Generation Manual (11th Edition)

Notes:
[1] Pass-by reductions were estimated based on the ITE Trip Generation Manual, 11th Edition: Vehicle Pass-By Rates by Land Use.

As shown in Table 3.1, the Project is expected to generate approximately 358 daily trips, including 89 (44-in/45-out) AM peak hour trips and 30 (15-in/15-out) PM peak hour trips. It should be noted that after applying a pass-by (existing trips on the main roadway system) reduction factor, the project would generate 35 net new daily trips, with 8 net new trips in the AM peak hour and 2 net new trips in the PM peak hour on the existing adjacent roadway network. As a conservative approach, pass-by reductions were not applied to the traffic analysis.

Project Trip Distribution and Assignment

The project trip distribution was developed using engineering judgement based upon project land use characteristics, location, and corresponding land uses in the vicinity of the project site. Figure 3.1 displays the regional trip distribution for the Project. Based upon AM/PM peak hour project trip generation and the project trip distribution, project trips were assigned to the study intersections. Figure 3.2

Figure 3.3
Project Study Area

4.0 Existing Conditions

This chapter provides a qualitative description of the transportation facilities located in the Project study area. A LOS analysis of the existing operations of the local transportation network facilities is also provided for study intersections.

Existing Transportation Network

Access to the Project from the regional transportation network will be provided via an existing full-movement driveway on Balsa Avenue (near Walgreens drug store) and one existing left-out restricted driveway on 29 Palms Highway (near Big 5 Sporting Goods store). These facilities provide a direct connection to the Project, via project driveways. The existing active transportation facilities are displayed in Figure 4.1. Table 4.1 summarizes the existing physical characteristics of roadways within the study area, while Figure 4.2 displays the study intersection geometrics under Existing conditions.

Table 4.1 - Existing Transportation Network Characteristics

29 Palms Highway	West of Balsa Avenue	5	TWLTL	Contiguous on both sides	Class III	Routes: 1, 7A, 7B, 15, and 21	40 mph
29 Palms Highway	East of Balsa Avenue	4	Raised/TWLTL	South side only	Class III	Routes: 1, 7A, 7B, 15 and 21	40 mph
Balsa Avenue	North of 29 Palms Highway	4	Raised	East side only	None	Routes: 7A and 21	35 mph
Balsa Avenue	Between 29 Palms Highway and Sunnyslope Drive	3	Striped	Contiguous on both sides	None	None	35 mph

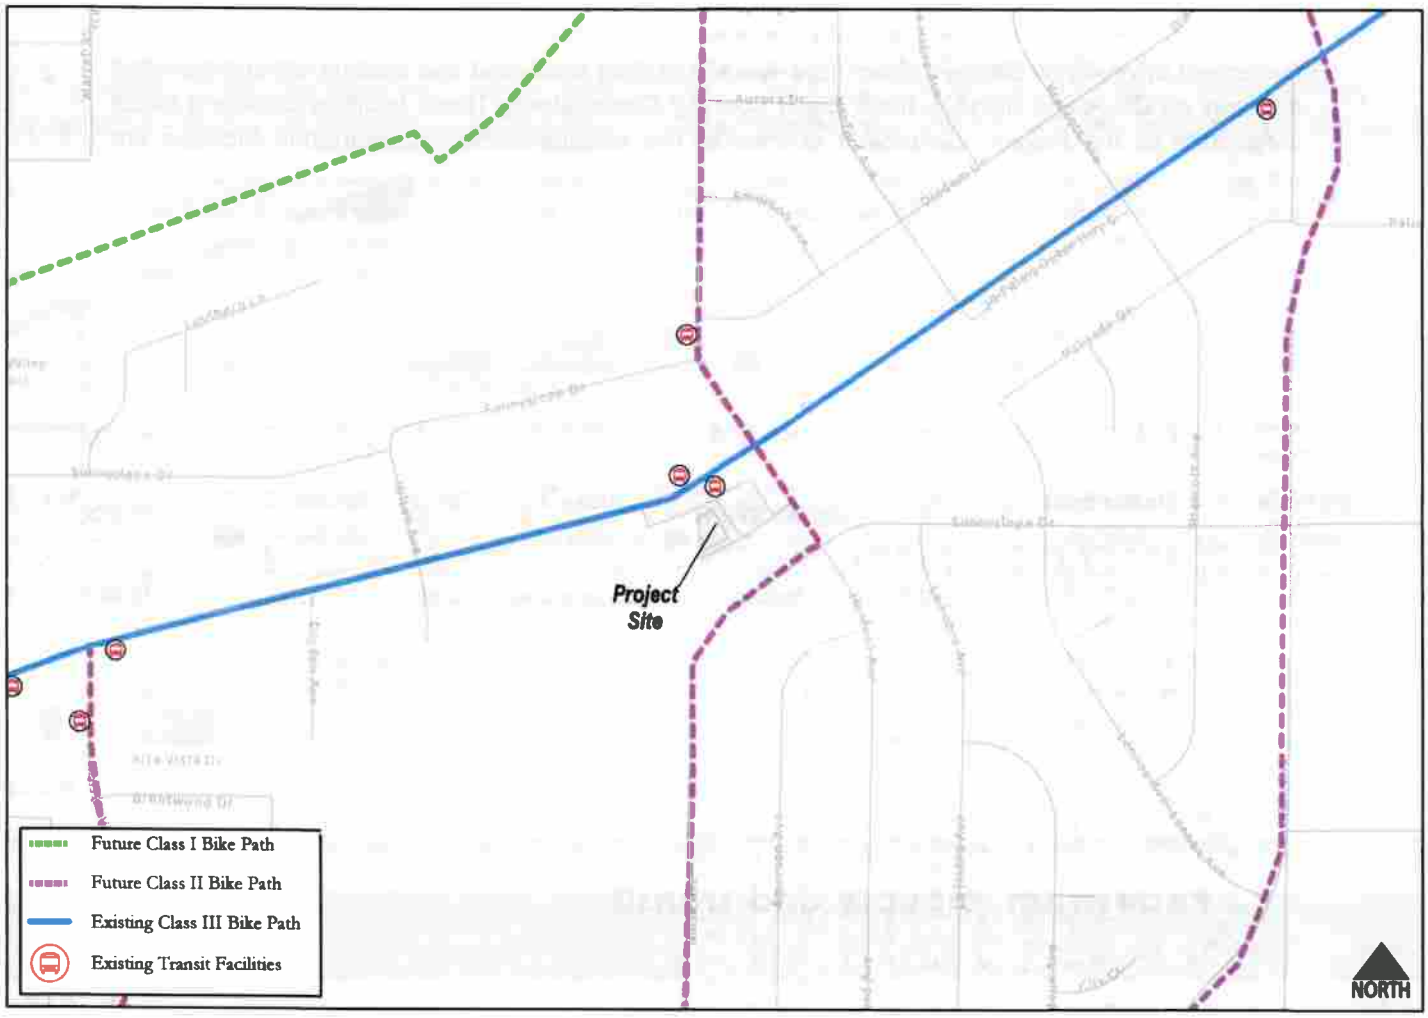
Source: CR Associates (2026)

Notes:
TWLTL = Two-Way Left-Turn Lane

Pedestrian, Bicycle and Transit

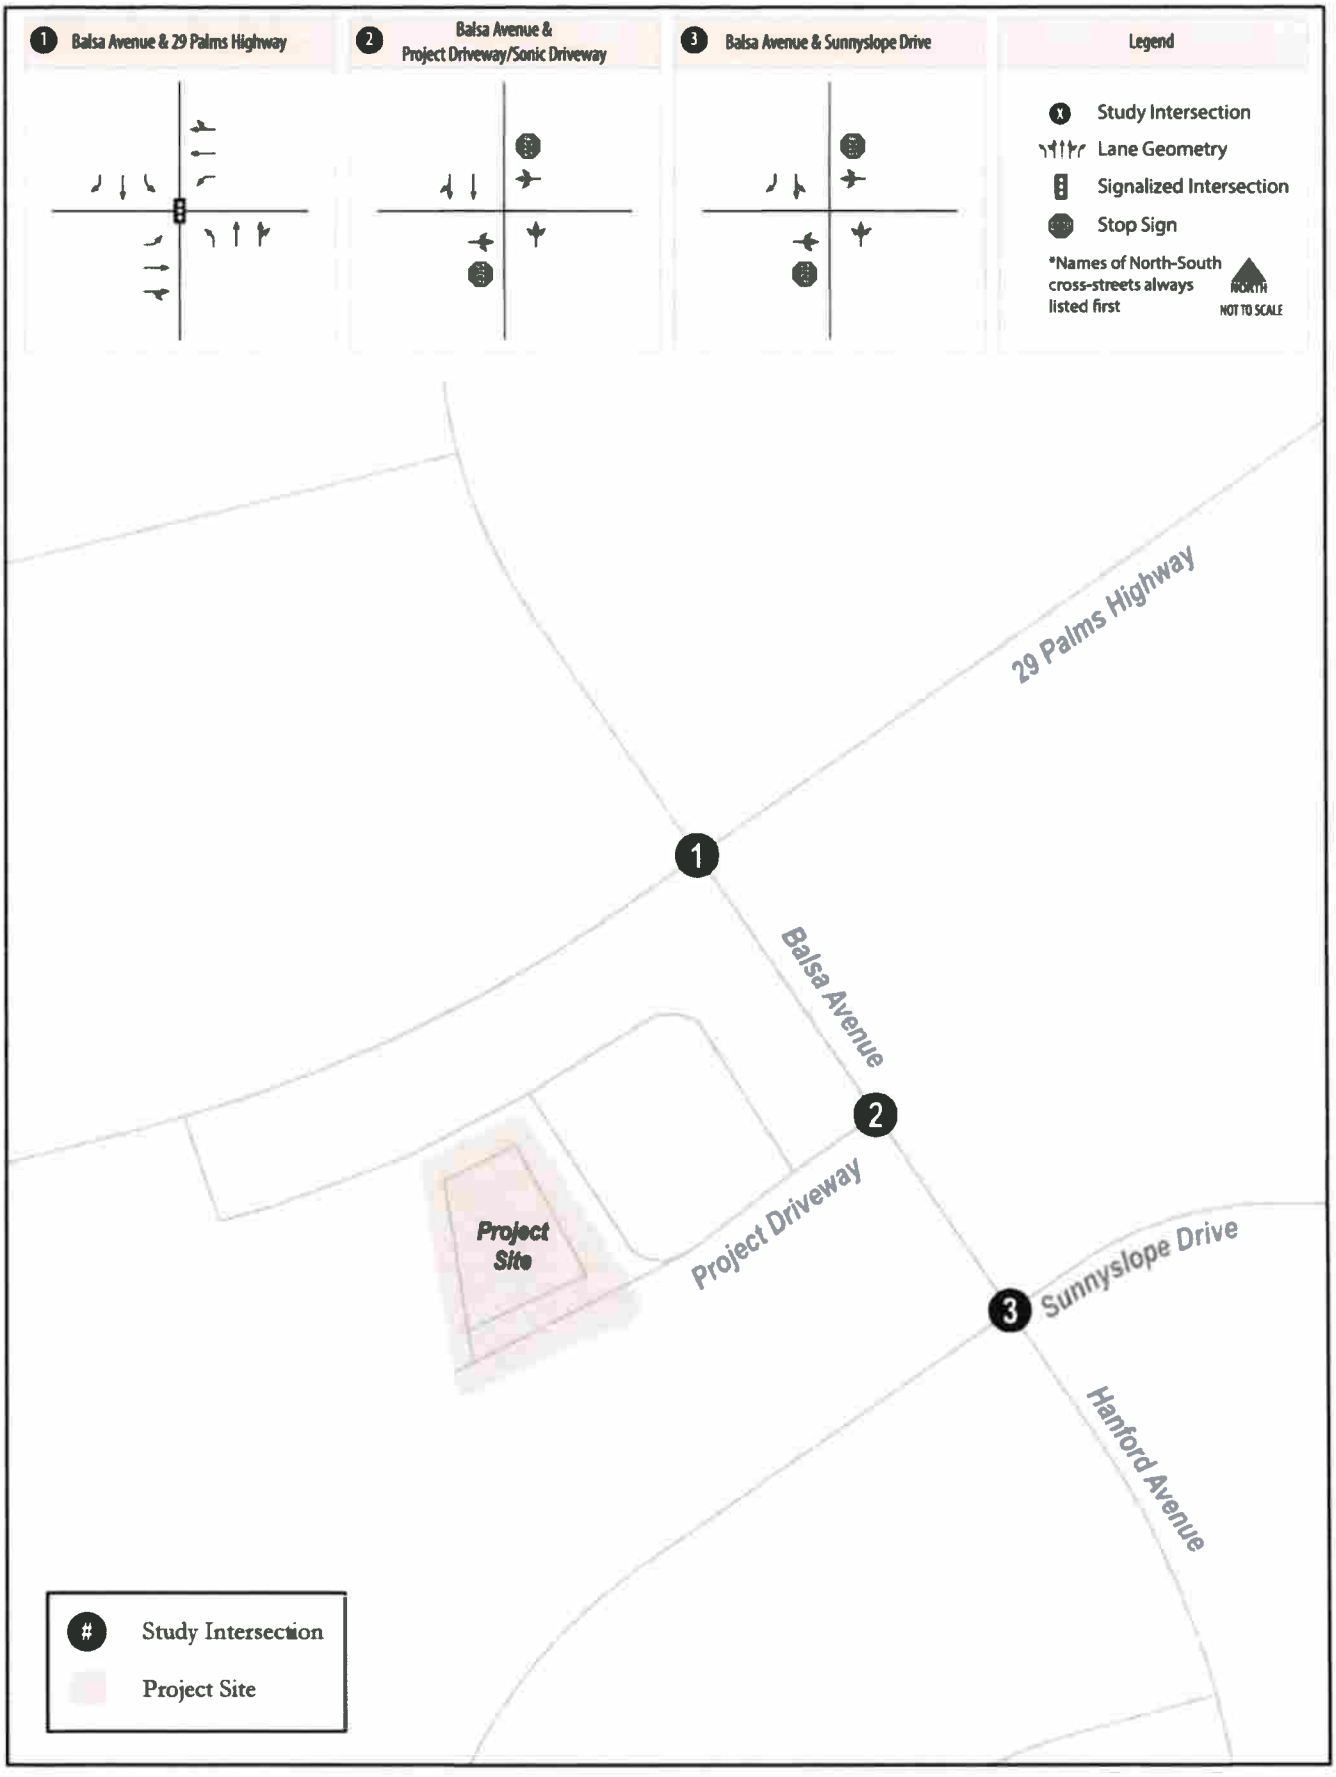
4.2.1 Pedestrian

Sidewalks are proposed within the Project site to provide pedestrian connectivity between the Project and existing off-site sidewalks immediately adjacent to the site. Continental crosswalks are provided throughout the Project site to enhance driver awareness within internal roadways and parking lot areas. Based on the proposed and existing features, pedestrian facilities are considered adequate to accommodate project-related pedestrian activity.



Yucca Valley Dutch Bros Project
Local Transportation Assessment
C R

Figure 4.1
Active Transportation Facilities



Dutch Bros Coffee Project
Local Transportation Assessment
C R

Figure 4.2
Intersection Geometrics
Existing Conditions

4.2.2 Bicycle

An existing Class III bicycle facility runs east/west along 29 Palms Highway, while no designated bicycle facilities currently exist along Balsa Avenue. The Yucca Valley General Plan Circulation Element identifies a future Class II bicycle lane along Balsa Avenue adjacent to the Project site. The proposed Project site plan would allow bicycle access via adjacent roadways and internal drive aisles.

4.2.3 Transit

The nearest bus stop is located on the south side of 29 Palms Highway, approximately 300 feet walking distance from the project site and provides service for the following Basin Transit bus routes:

Route 1 This bus route is serviced along 29 Palms Highway and connects the Yucca Valley Transit Center, Hi-Desert hospital, Indian Cove, and the 29 Palms Transit Center.

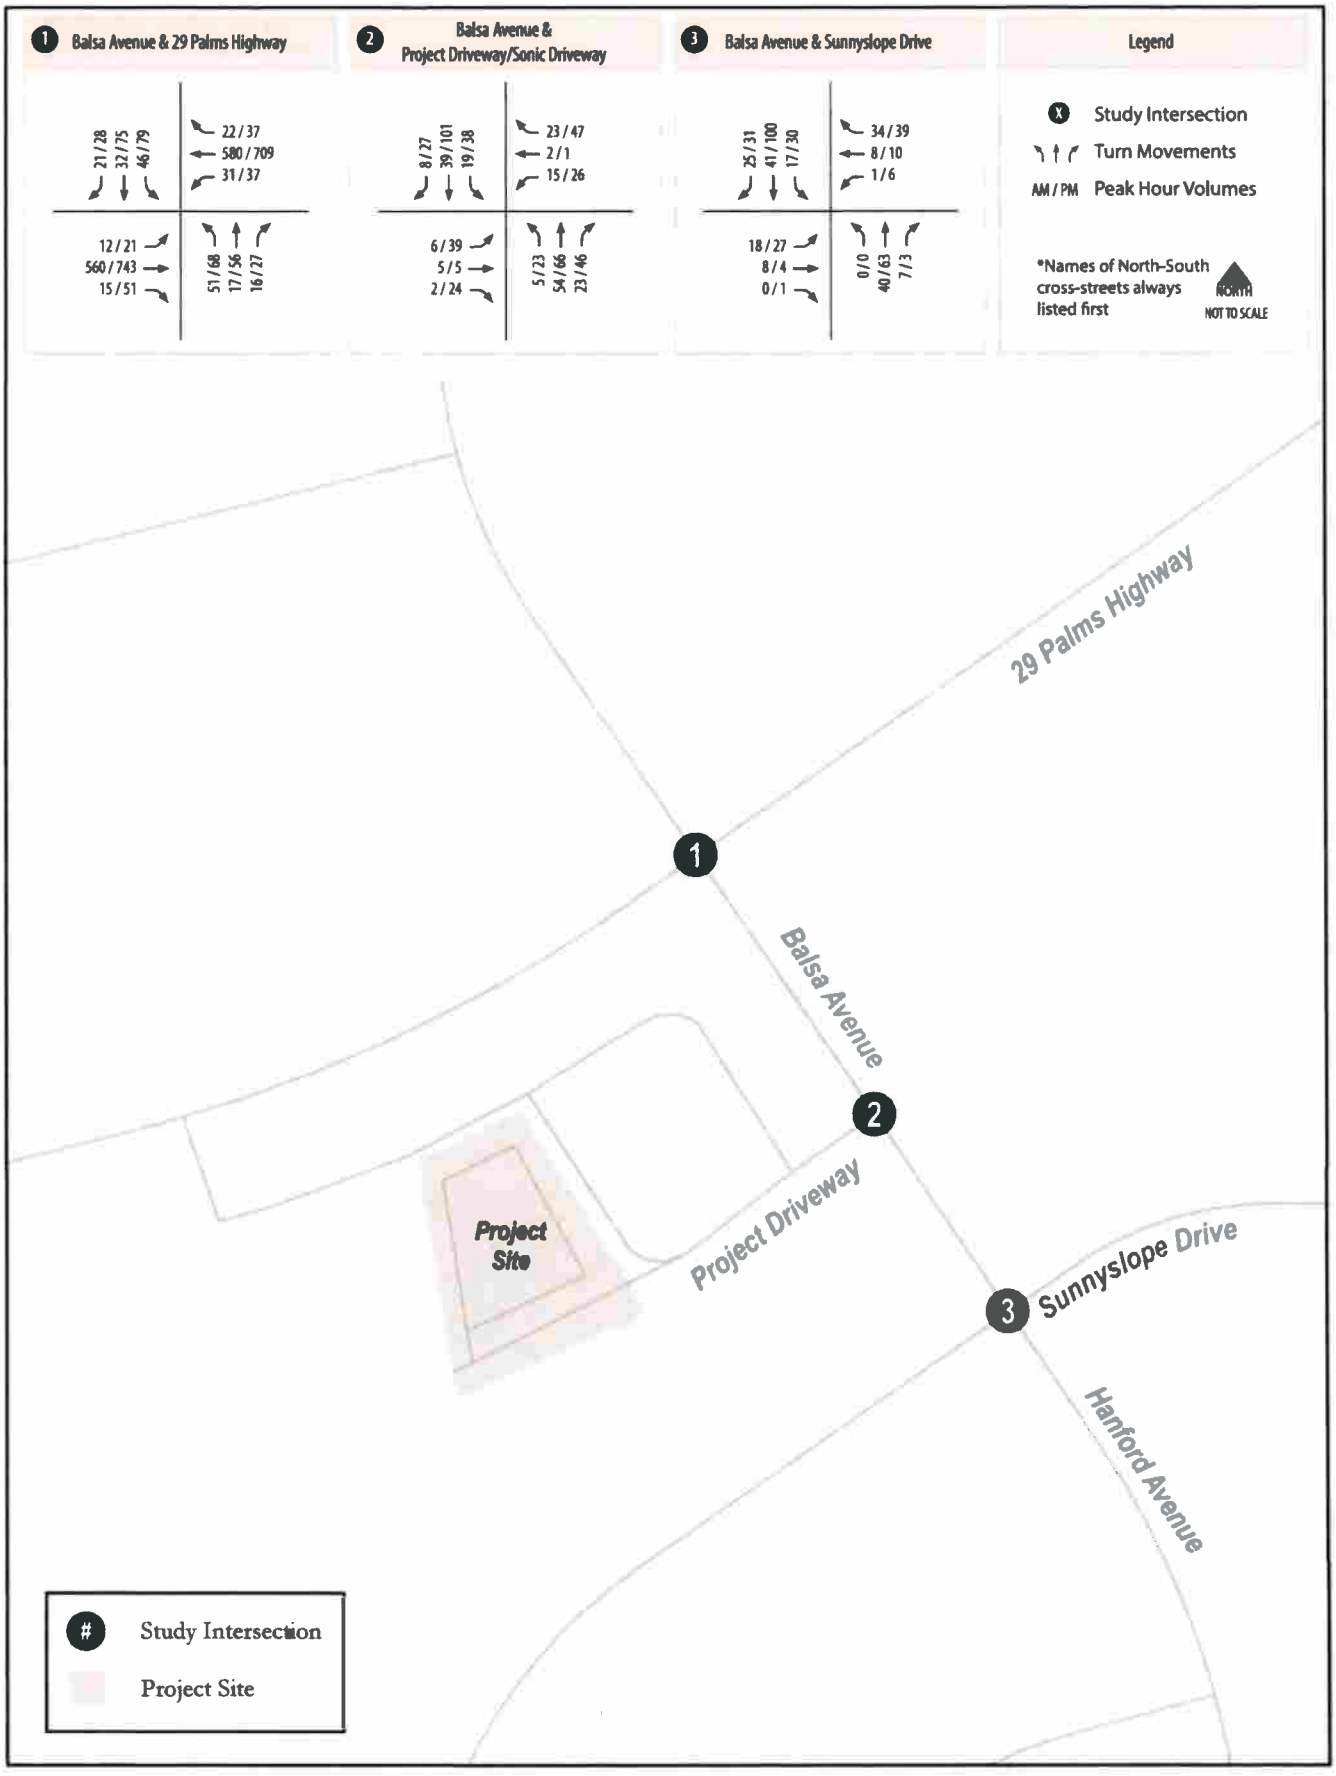
Route 7A This bus route is serviced along 29 Palms Highway and connects the Yucca Valley Transit Center, Walmart Center, and Town Hall.

Route 21 This bus route is serviced along 29 Palms Highway and connects the Yucca

proposed Project would not conflict with existing or planned transit facilities.

Existing Intersection Volumes

Traffic counts for the study intersections were conducted in June 2025 and November 2025, when schools were in session. Traffic count sheets are provided in Appendix D. Existing AM/PM peak hour intersection turning movements for the study intersections are displayed in Figure 4.3.



Dutch Bros Coffee Project
Local Transportation Assessment

Figure 4.3

Existing Conditions

Existing Traffic Conditions

LOS analyses under Existing conditions were conducted using the methodologies described in Chapter 2. Intersection LOS analysis results are discussed below.

4.4.1 Intersection Analysis

Table 4.2 displays intersection LOS and average vehicle delay results for the study intersections under Existing conditions. LOS calculation worksheets for Existing conditions are provided in Appendix E.

Table 4.2 - Peak Hour Intersection LOS Results Existing Conditions

			Avg. Delay (Sec.)	LOS	Avg. Delay (Sec.)	LOS
1	Balsa Avenue & 29 Palms Highway	Signal	18.8	B	22.4	C
2	Balsa Avenue & Project Driveway/Sonic Driveway	TWSC	10.0	B	11.7	B
3	Balsa Avenue & Sunnyslope Drive	TWSC	10.1	B	11.5	B

Source: CR Associates (2026)

Note:
TWSC = Two-Way Stop-Controlled. For TWSC, the delay shown is the worst delay experienced by any of the approaches.

As shown in Table 4.2, all study intersections currently operate at an acceptable LOS under Existing conditions.

5.0 Opening Year 2027 Cumulative Conditions

This section provides an analysis of Opening Year 2027 Cumulative conditions, both with and without the proposed Project. The scenarios analyzed in this section include:

Opening Year 2027 Cumulative
Opening Year 2027 Cumulative with Project

Opening Year 2027 Cumulative Roadway Network and Traffic Volumes

Intersection geometrics under Opening Year 2027 Cumulative conditions were assumed to be identical to Existing conditions, as previously shown in Figure 4.2.

The Opening Year Cumulative 2027 conditions traffic volumes were derived by using the formula below. For the Opening Year 2027 Cumulative scenario, an ambient annual growth rate of three (3) percent per year was applied over two (2) years for Opening Year 2027.

where

Future Volume = future year projected traffic volume (veh/hr)
Existing Volume = current year traffic volume counts, typically peak hour (veh/hr)
Rate = average yearly growth factor, expressed as a decimal
# years = number of years projected out in the future

The Opening Year 2027 growth scenario traffic volumes were developed by applying the total ambient growth factor of 6% to existing traffic volumes. Figure 5.1 displays the resulting growth volumes.

Cumulative Project Traffic

Cumulative Projects that are anticipated to contribute traffic within the Project study area, per the Yucca Valley November 2025 Land Development Update Report, were included as part of the analysis. As a conservative approach, no trip credits were applied to these projects, and their full trip generation was included as Cumulative Project traffic.

The Cumulative Projects traffic was assigned to the project study area as identified within their respective traffic study. The trip generation assumptions for Cumulative Projects without completed traffic studies were developed and assigned to the project study area utilizing the same methodology used for the Project described in Chapter 3. Figure 5.2 displays the location of the Cumulative Projects. Table 5.1 displays the projected trip generation for the ten (10) Cumulative Projects identified.

Opening Year 2027 Cumulative Conditions

Opening Year 2027 Cumulative Conditions

LOS analyses under Opening Year 2027 Cumulative conditions were conducted using the methodologies described in Chapter 2. Intersection analysis results are discussed below.

5.3.1 Intersection Analysis

Table 5.2 displays intersection LOS and average vehicle delay results for the study intersections under Opening Year 2027 Cumulative conditions. LOS calculation worksheets for Opening Year 2027 Cumulative conditions are provided in Appendix F.

Table 5.2 - Peak Hour Intersection LOS Results Opening Year 2027 Cumulative Conditions

			Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS
1	Balsa Avenue & 29 Palms Highway	Signal	19.1	B	22.8	C
2	Balsa Avenue & Project Driveway/Sonic Driveway	TWSC	10.1	B	12.1	B
3	Balsa Avenue & Sunnyslope Drive	TWSC	10.2	B	11.8	B

Source: CR Associates (2026)

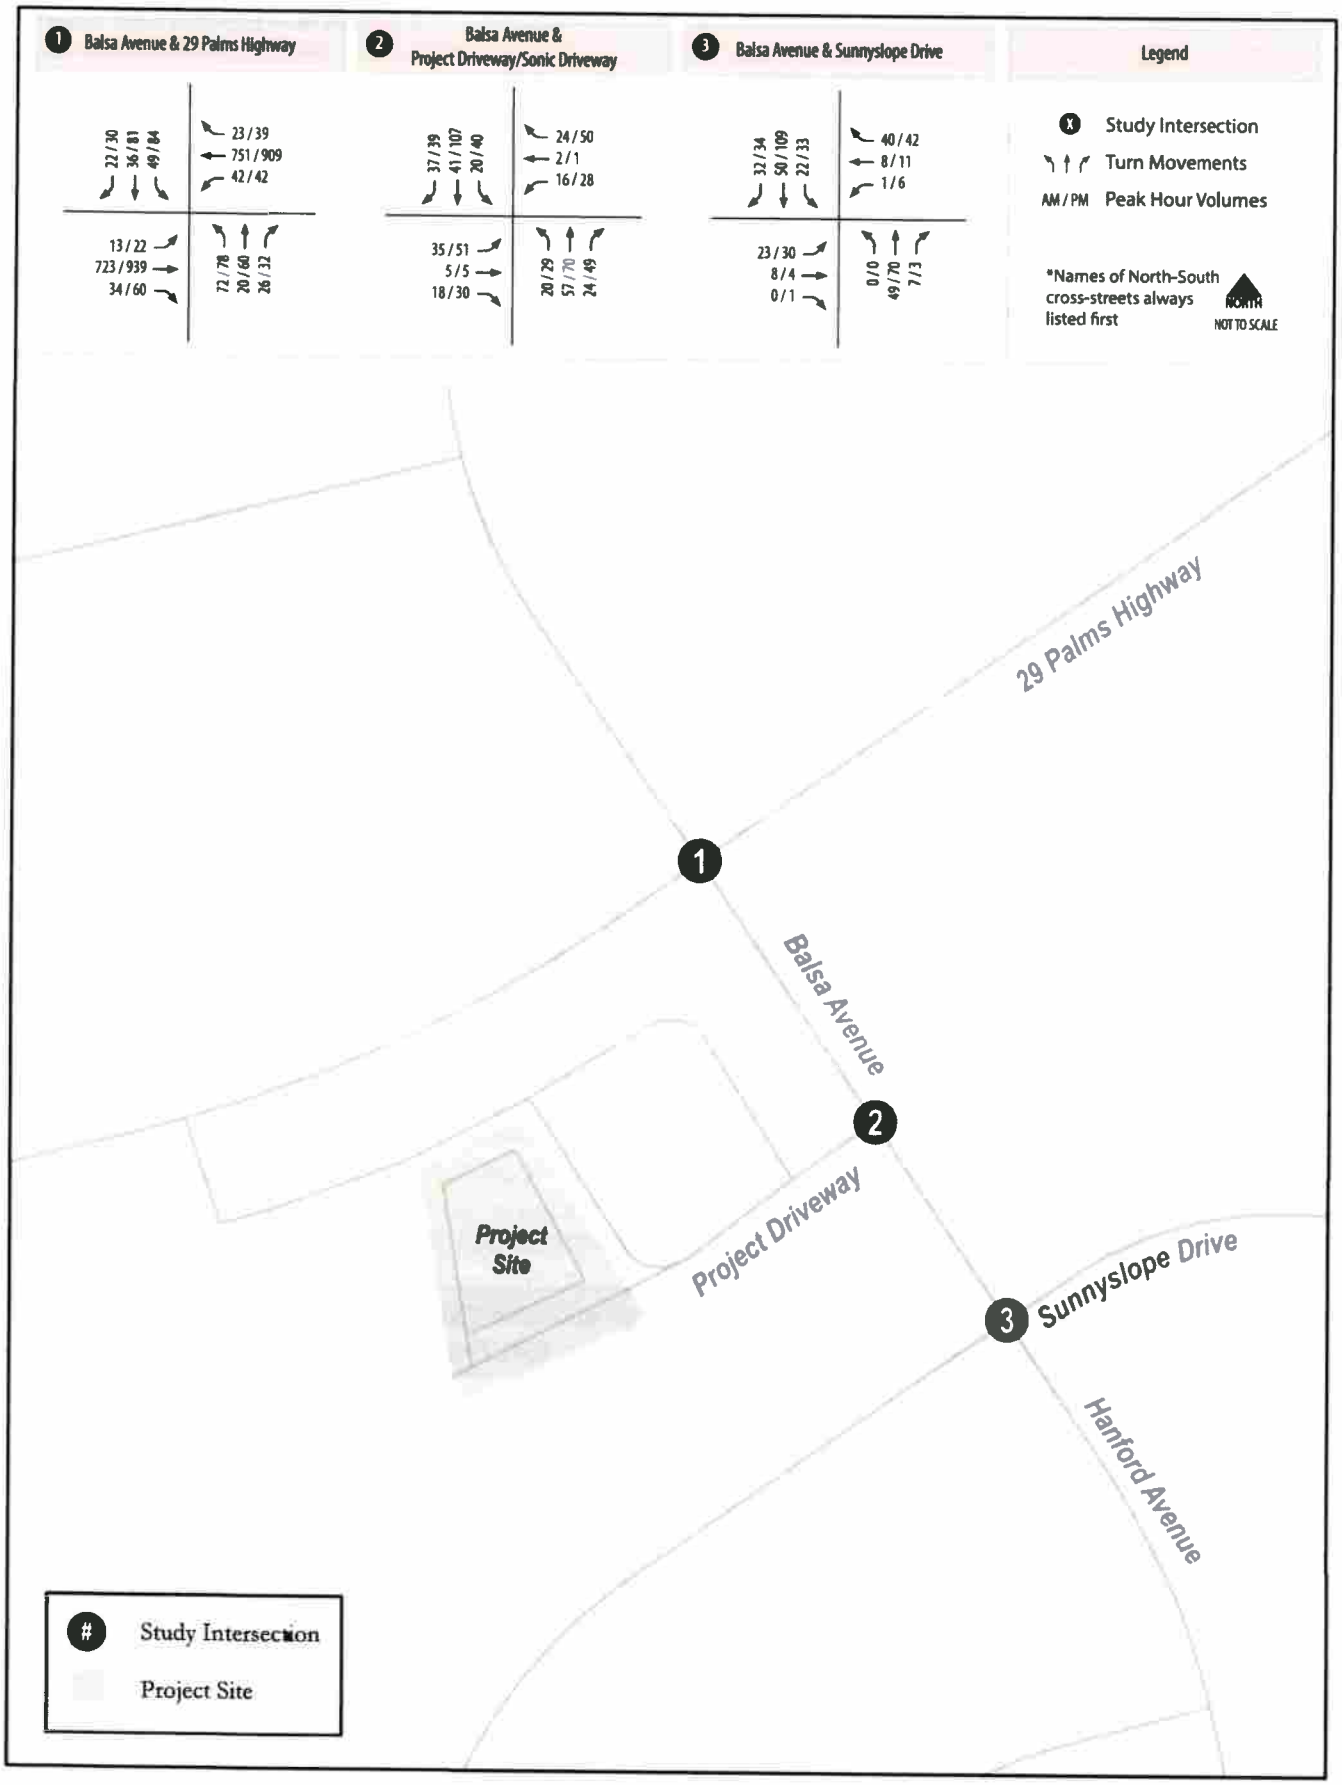
Notes:
TWSC = Two-Way Stop Controlled. For TWSC intersections, the delay shown is the worst delay experienced by any of the movements.

As shown in Table 5.2, all study intersections currently operate at an acceptable LOS under Opening Year 2027 Cumulative conditions.

Opening Year 2027 Cumulative with Project Roadway Network and Traffic Volumes

Intersection geometrics under the Opening Year 2027 Cumulative with Project conditions were assumed to be identical to the Opening Year 2027 Cumulative conditions geometrics.

Peak hour intersection volumes for the Opening Year 2027 Cumulative with Project conditions were derived by combining the Project trips (as previously shown in Figure 3.2) to the Opening Year 2027 Cumulative traffic volumes (as previously shown in Figure 5.4). Peak hour intersection volumes for this scenario are displayed in Figure 5.5.



Dutch Bros Coffee Project
Local Transportation Assessment

Figure 5.5
Traffic Volumes
Opening Year 2027 Cumulative with Project Conditions

Opening Year 2027 Cumulative with Project Traffic Conditions

LOS analyses under Opening Year 2027 Cumulative with Project conditions were conducted using the methodologies described in Chapter 2. Intersection analysis results are discussed below.

5.5.1 Intersection Analysis

Table 5.3 displays intersection LOS and average vehicle delay results for the study intersections under Opening Year 2027 Cumulative with Project conditions. LOS calculation worksheets for Opening Year 2027 Cumulative with Project conditions are provided in Appendix G.

As shown in Table 5.3, all the study intersections would continue to operate at an acceptable LOS during both the AM and PM peak hours under Opening Year 2027 Cumulative with Project conditions.

Determination of the Need for Off-Site Improvements

This section identifies the recommended off-site improvements under Opening Year 2027 Cumulative with Project conditions, consistent with the San Bernardino County TIS Guidelines.

Intersection Improvements

Based on the San Bernardino County TIS Guidelines and the analysis presented in this report, the addition of Project traffic would not trigger improvements at any of the study intersections. Therefore, no intersection improvements are required or recommended.

Table 5.3 - Peak Hour Intersection LOS Results – Opening Year 2027 Cumulative with Project Conditions

#	Intersection	Control Type	AM Peak Hour		PM Peak Hour		Delay w/o Project (AM / PM)	LOS w/o Project (AM / PM)	Δ in Delay (AM / PM)	I?
			Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS

Notes:
TWSC = Two-Way Stop Controlled. For TWSC intersections, the delay shown is the worst delay experienced by any of the movements.
I? = Improvement Required?

6.0 Site Access & Circulation

This chapter addresses access to the project site and discusses the functionality of the P internal circulation.

Driveway Access

Project site access will be provided via the existing driveways along 29 Palms Highway and Balsa Avenue. A brief description of each driveway is provided below:

The driveway situated on 29 Palms Highway is located approximately 500 feet west of Balsa Avenue and provides 3/4 access (left-out restricted). This driveway serves as one of the two access points to the retail land uses adjacent to the proposed Project, such as Big 5 Sporting Goods and Walgreens. The intersection analysis focused on access points that provided full access movements to vehicles. Therefore, this intersection was not a part of the analysis; however, the intersection is expected to operate at an acceptable LOS due to the existing left-out restricted access.

The driveway situated on Balsa Avenue is located approximately 225 feet south of 29 Palms Highway and provides full-movement access. This driveway serves as one of the two access points to the retail land uses adjacent to the proposed Project. This driveway was included as part of the intersection analysis and is projected to operate at an acceptable LOS under all analysis scenarios.

Internal Circulation

The Project site allows for two-way traffic circulation, providing connections between the parking areas, the drive-through component of the Project, and the internal roadways that link the site to adjacent land uses.

Access to the drive-through is provided on the south side of the Project site and can be reached via the internal roadways from both the southern and northern portions of the site. The drive-through exit is located on the north side of the Project site and connects to the northern internal roadway.

7.0 Drive-Through Queuing Analysis

This chapter addresses the adequacy of the proposed drive-through lane for the Project.

Proposed Drive-Through Capacity

The Project drive-through operations would include the construction of two entrance drive-through lanes that continue to the dual order boards, and then merges to one lane prior to the pay and pick-up windows. The drive-through queue storage length from the drive-through entrance to the pick-up window is approximately 520 feet. Assuming 22-feet per vehicle, the proposed drive-through lane capacity is approximately 23 vehicles.

Drive-Through Data Collection

Drive-through queuing data collection was conducted at the following three (3) existing Dutch Bros coffee shop locations, which are comparable to the proposed location in that the existing locations have dual-drive-through lanes and have limited to no indoor seating:

44175 Jefferson Street, La Quinta, CA 92253
34051 Date Palm Drive, Cathedral City, CA 92234
81-776 Highway 111, Indio, CA 92201

Data collection occurred on one typical weekday and one typical weekend day at each location. Observations were conducted during the morning (6:00 9:00 AM) and afternoon (2:00 5:00 PM) peak periods, which are representative of the highest customer demand. Queuing data was recorded at 5-minute intervals to capture fluctuations in drive-through demand and to document queue dynamics throughout each period. Table 7.1 notes the peak queue, as well as the average and 85th percentile queue, for the peak 15-minute interval during the AM and PM peak operation conditions for both weekday and weekend. Data collection worksheets are provided in Appendix H.

Table 7.1 - Drive Through Queuing Analysis Results

		TOD	Avg. Queue	85th Percentile	Peak Queue	TOD	Avg. Queue	85th Percentile	Peak Queue
44175 Jefferson Stree, La Quinta, CA	AM	8:15	20	22	23	8:15	15	17	17
	PM	3:15	13	15	15	4:30	13	13	13
34051 Date Palm Dr, Cathedral City, CA	AM	8:30	16	18	18	9:00	3	9	9
	PM	2:00	14	16	16	2:15	18	20	20
81-776 Highway 111, Indio, CA	AM	8:15	15	16	16	7:45	9	10	10
	PM	4:45	9	10	10	4:45	11	12	12

Source: CR Associates (2026)

Notes:
TOD = Time of Day

As shown in Table 7.1, the peak observed queue was 23 vehicles between 8:15-8:30 AM during the AM peak period on a typical weekday at the existing La Quinta location. As noted previously, the proposed drive-through queuing capacity for the Project would be 23 vehicles. Therefore, the proposed drive-through capacity would accommodate the anticipated peak drive-through demand. It should be noted that if the drive-through queue were to spill out of the drive-through lane, the queue would be able to be accommodated by internal drive aisles and is not expected to spill out into the public right-of-way.

Appendix A - Project Traffic Scoping Memorandum

TO: Jared Jerome, Town of Yucca Valley

FROM: Trevor Briggs, PE; CR Associates

DATE: November 21, 2025

RE: Traffic Scoping Memorandum – Dutch Bros Coffee Project – Town of Yucca Valley

The purpose of this Traffic Scoping Memorandum is to document the trip-generating characteristics, analysis assumptions, and vehicle miles traveled (VMT) screening criteria for the proposed Dutch Bros Coffee project (the "Project") in the Town of Yucca Valley, California. The Town of Yucca Valley does not have traffic analysis guidelines; therefore, the traffic analysis assumptions and VMT screening criteria for the Project will be based on the San Bernardino County *Transportation Impact Study Guidelines* (TIA Guidelines; July 9, 2019).

Project Description

The Project (APN 060141605) is located near the southwest corner of the intersection of 29 Palms Highway (SR-62) and Balsa Avenue, in the Town of Yucca Valley, California. The Project seeks approval to construct a 1,025 square foot (SF) Dutch Bros coffee shop building, with dual drive-through lanes and 18 parking spaces, on existing vacant land.

Access to the proposed Project would be provided via one existing full-movement driveway on Balsa Avenue (near Walgreens drug store) and one existing left-out restricted driveway on 29 Palms Highway (near Big 5 Sporting Goods store). Based on discussions with Town staff, the traffic analysis will focus on all Project traffic entering and exiting via the full-movement driveway on Balsa Avenue as a worst-case scenario due to the higher number of turning movement conflicts (left turns out of the driveway) at the Balsa Avenue driveway, compared to the 29 Palms Highway driveway.

Figure 1 displays the Project's regional location. **Figure 2** displays the Project site plan.

Project Trip Generation

The trip generation estimates for the Project were developed using average trip rates and pass-by reduction factors from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, September 2021; see ***Attachment 1***). **Table 1** displays the Project's trip generation estimates for a typical weekday.

Table 1 - Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM Peak Hour				PM Peak Hour			
				Trips	Split (%)	In	Out	Trips	Split (%)	In	Out
Coffee Shop with Drive-Through Window and No Indoor Seating (938)	2 Drive-Through Lanes	179 / Drive-Through Lane	358	89	50:50	44	45	30	50:50	15	15
Pass-By Reductions		*90%*	*-323*	*-81*	–	*-40*	*-41*	*28*	–	*-14*	*-14*
Total Net			**35**	**8**	–	**4**	**4**	**2**	–	**1**	**1**

Traffic Scoping Memorandum

Figure 1
Project Regional Location

PRELIMINARY SITE AND UTILITY PLAN

SWQ 29 PALMS HWY & BALSA AVE

YUCCA VALLEY, CA

23690

1 OF 2

As shown in Table 1, the Project is expected to generate approximately 358 daily trips, including 89 (44-in/45-out) AM peak hour trips and 30 (15-in/15-out) PM peak hour trips. It should be noted that after applying a pass-by (existing trips on the main roadway system) reduction factor, the project would generate 35 net new daily trips, with 8 net new trips in the AM peak hour and 2 net new trips in the PM peak hour on the existing adjacent roadway network. As a conservative approach, pass-by reductions were not applied to the traffic analysis

Project Trip Distribution

The project trip distribution was developed based on a review of existing travel patterns within the project vicinity. **Figure 3** displays the project trip distribution and intersection movement trip distribution.

Project Trip Assignment

Based upon AM/PM peak hour project trip generation and the project trip distribution, project trips were assigned to the adjacent roadway network and study area intersections. **Figure 4** displays the daily project trip assignment and intersection peak hour trip assignment.

Study Area

Based on criteria outlined in the County TIA Guidelines, the following study intersections were selected for analysis and are shown on **Figure 5**:

Intersections

1. Balsa Avenue & 29 Palms Highway (Signalized)
2. Balsa Avenue & Project Driveway/Sonic Driveway (SSSC)
3. Balsa Avenue & Sunnyslope Drive (SSSC)

Note:
SSSC = Side-Street Stop-Controlled

Study Scenarios

The traffic study will provide Level of Service (LOS) analysis for the following scenarios to determine the Project's potential effects on the surrounding transportation network:

- Existing Conditions
- Opening Year Cumulative (Existing + Ambient Growth + Cumulative Projects)
- Opening Year Cumulative Plus Project

Volume Development

For Opening Year conditions, an annual ambient growth rate of 3% per year will be applied to existing volumes to develop Opening Year Base traffic volumes. Also, traffic volumes from Cumulative Projects will be added to Opening Year Base traffic volumes to develop Opening Year Cumulative traffic volumes. Town staff will provide a list of Cumulative Projects to include in the traffic analysis.

Project Study Area

Vehicle Miles Traveled (VMT) Screening

As of July 1, 2020, with the implementation of Senate Bill 743 (SB 743) and for California Environmental Quality Act (CEQA) purposes, the metric for evaluating transportation impacts shifted from Level of Service (LOS) to Vehicle Miles Traveled (VMT). VMT measures the total miles traveled by vehicles associated with a project and better aligns with California's climate, air quality, and public health goals. The shift to VMT supports policies that reduce greenhouse gas emissions, provide land use guidance for local jurisdictions, and encourage more sustainable transportation modes (like walking, biking, and transit) to reduce VMT.

Lead agencies are now required to evaluate whether a project will result in a significant increase in VMT. The San Bernadino County TIA Guidelines provide VMT analysis screening criteria to determine whether a project would be presumed to have a less-than-significant VMT impact without requiring further VMT analysis or modeling.

The following applicable screening criteria were analyzed to determine if the Project would be screened out from conducting a detailed VMT analysis:

- Project Type Screening
- Small Project Screening
- Transit Priority Area (TPA) Screening
- Low VMT Generating Area Screening

An evaluation of the above noted VMT screening criteria for the Project is provided below.

Project Type Screening

Projects which serve the local community and have the potential to reduce VMT should not be required to complete a VMT assessment. These projects are noted below:

- K-12 schools
- Local-serving retail less than 50,000 sq. ft.
- Local parks
- Day care centers
- Local serving gas stations
- Local serving banks
- Student housing projects
- Local serving community colleges that are consistent with the assumptions noted in the
- RTP/SCS

As noted above, the Project is a 1,025 SF coffee shop with a drive-through, which is less than the 50,000 sq. ft. threshold for a local serving retail space. Therefore, the Project Type screening criteria is met for the Project.

Small Project Screening

Based on the County TIA Guidelines, projects that generate less than 110 daily vehicle trips can be presumed to cause a less-than-significant impact and would not require a detailed VMT analysis. As noted previously on Table 1, the proposed Project is expected to generate more than 110 daily vehicle trips. Therefore, the Small Project screening criteria is not met for this Project.

Transit Priority Area Screening

Projects located within a Transit Priority Area (TPA) as determined by the most recent SCAG RTP/SCS can be presumed to cause a less-than-significant impact and would not require a detailed VMT analysis. Based on the SBCTA VMT Screening Tool (see **Attachment B**), the proposed Project is not located within a TPA. Therefore, the Transit Priority Area screening criteria is not met for this Project.

Low VMT Generating Area Screening

Based on the County TIA Guidelines, projects that are located in a low VMT generating area (4% below the County average VMT) can be presumed to have a less-than-significant impact and would not require further VMT analysis. Based on the SBCTA VMT Screening Tool (see Attachment B), the County average VMT per worker is 16.9. The VMT per worker in the Project's TAZ is 12.3, which is 27.2% lower than the County's average. Therefore, the Low VMT Generating Area screening criteria is met for this Project.

VMT Screening Findings and Conclusions

Based on review of the VMT screening criteria noted above, the Project meets the Project Type and Low VMT Generating Area screening criteria. Therefore, the Project would be presumed to have a less-than-significant VMT impact and no further VMT analysis is required for the Project.

Drive-Through Queuing Analysis Methodology

Drive-through queuing data collection will be collected at the following three existing Dutch Bros Coffee locations, which are comparable to the proposed location in that the existing locations have dual-drive-through lanes and have limited to no indoor seating:

- 44175 Jefferson Street, La Quinta, CA 92253
- 34051 Date Palm Drive, Cathedral City, CA 92234
- 81-776 Highway 111, Indio, CA 92201

Data collection will occur on one typical weekday and one typical weekend day at each location. Observations will be conducted during the morning (6:00–9:00 AM) and afternoon (2:00–5:00 PM) peak periods, which are representative of the highest customer demand. Queuing data will be recorded at 5-minute intervals to capture fluctuations in drive-through demand and to document queue dynamics throughout each period. Observers will record the maximum queue lengths observed during each interval.

The collected data will be used to determine the average, 85th-percentile, and maximum queue length for each location and each period to determine whether the proposed on-site queue storage is sufficient to accommodate observed peak demand. Findings will be summarized for each location, with supporting recommendations for operational or geometric improvements, if needed, to mitigate queuing or circulation issues.

Summary of Findings

The proposed Dutch Bros Coffee project is expected to generate approximately 358 daily trips, including 89 (44-in/45-out) AM peak hour trips and 30 (15-in/15-out) PM peak hour trips. As requested by Town staff, an intersection Level of Service (LOS) analysis will be conducted for the proposed Project.

Based on review of the VMT screening criteria in the County TIA Guidelines, the Project meets the Project Type and Low VMT Generating Area screening criteria. Therefore, the Project would be presumed to have a less-than-significant VMT impact and no further VMT analysis is required for the Project.

A drive-through queuing analysis will be conducted for the Project to determine whether the proposed on-site queue storage is sufficient to accommodate observed peak demand. Drive-through queuing data collection will conducted at three existing Dutch Bros Coffee locations.

Attachment A - Trip Rates and Pass-By Reduction Factors from the ITE Trip Generation Manual (11th Edition)

This land use includes any coffee and donut restaurant that has only drive-through window service. A patron cannot walk into the shop and purchase items. The restaurant sells freshly brewed coffee (along with coffee-related accessories) and a variety of food/drink products such as donuts, bagels, breads, muffins, cakes, sandwiches, wraps, salads, and other hot and cold beverages. The restaurant marketing and sales may emphasize coffee beverages over food (or vice versa).

The coffee/donut shops contained in this land use typically hold long store hours (more than 15 hours) with an early morning opening.

Coffee/donut shop without drive-through window (Land Use 936) and coffee/donut shop with drive-through window (Land Use 937) are related uses.

The sites were surveyed in the 1990s, the 2000s, and the 2010s in Arizona, New Hampshire, Oregon, and Washington.

Appendix C - ITE Trip Generation Rates and Reduction Excerpts

Coffee/Donut Shop with Drive-Through Window and No Indoor Seating (938)

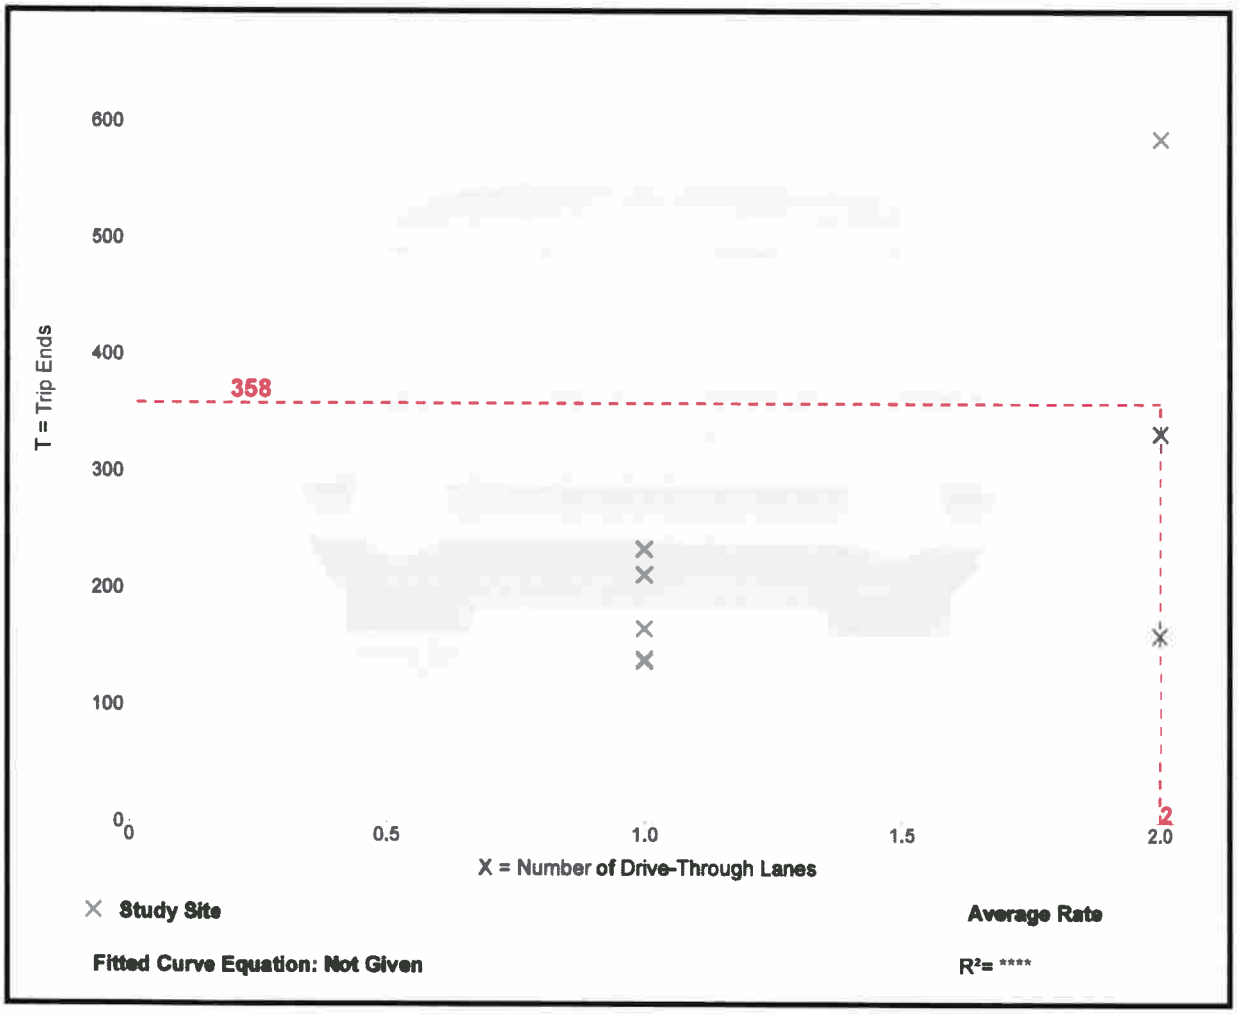
Vehicle Trip Ends vs: **Drive-Through Lanes**
On a: **Weekday**

Setting/Location: **General Urban/Suburban**
Number of Studies: 8
Avg. Num. of Drive-Through Lanes: 1
Directional Distribution: 50% entering, 50% exiting

Vehicle Trip Generation per Drive-Through Lane

Average Rate	Range of Rates	Standard Deviation
179.00	80.00 - 293.00	74.48

Data Plot and Equation



Trip Gen Manual, 12th Edition • Institute of Transportation Engineers

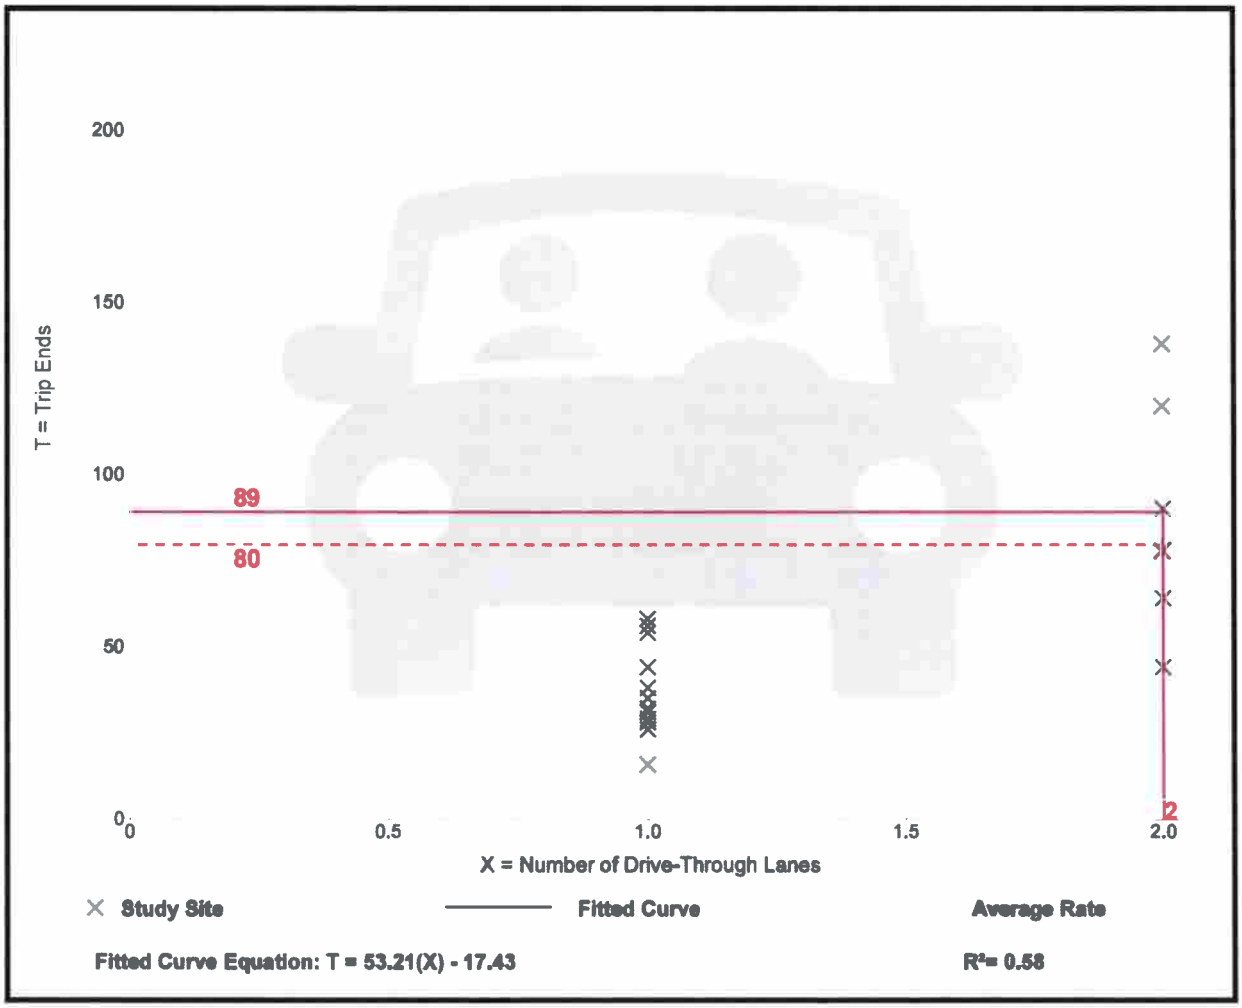
Coffee/Donut Shop with Drive-Through Window and No Indoor Seating (938)

Vehicle Trip Ends vs: **Drive-Through Lanes**
On a: **Weekday,**
Peak Hour of Adjacent Street Traffic,
One Hour Between 7 and 9 a.m.
Setting/Location: **General Urban/Suburban**
Number of Studies: 20
Avg. Num. of Drive-Through Lanes: 1
Directional Distribution: 50% entering, 50% exiting

Vehicle Trip Generation per Drive-Through Lane

Average Rate	Range of Rates	Standard Deviation
39.81	16.00 - 69.00	15.44

Data Plot and Equation



Trip Gen Manual, 12th Edition • Institute of Transportation Engineers

Coffee/Donut Shop with Drive-Through Window and No Indoor Seating (938)

Vehicle Trip Ends vs: **Drive-Through Lanes**
On a: **Weekday,**
Peak Hour of Adjacent Street Traffic,
One Hour Between 4 and 6 p.m.
Setting/Location: **General Urban/Suburban**
Number of Studies: 8
Avg. Num. of Drive-Through Lanes: 2
Directional Distribution: 50% entering, 50% exiting

Vehicle Trip Generation per Drive-Through Lane

Average Rate	Range of Rates	Standard Deviation
15.08	2.50 - 55.00	19.41

Data Plot and Equation

1.0 INTRODUCTION

1.1. PROJECT SUMMARY

The proposed Yucca Valley Dutch Bros Project (Project) involves the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee shop on a 1.01-acre vacant site located at 58121 Twentynine Palms Highway (State Route 62/SR-62) in the Town of Yucca Valley (Town), San Bernardino County, California on Assessor's Parcel Number 0601-416-05 (Project Site). The Project Site is designated Mixed Use (MU) and zoned Mixed-Use Commercial (C-MU) by the Town's General Plan.

The proposed coffee shop is designed as a dual-lane drive-through facility with a queuing capacity of up to 23 vehicles, limited walk-up service, and no indoor seating. The Project includes 18 surface parking spaces (including accessible and future electric vehicle charging spaces), drought-tolerant landscaping, shielded exterior lighting, and an on-site stormwater retention pond designed to capture, detain, and treat runoff in compliance with the Town's stormwater requirements and the National Pollutant Discharge Elimination System (NPDES) program.

Site access would be provided via two existing shared driveways that currently serve the adjacent Big 5 Sporting Goods and Walgreens properties, one driveway located on SR-62 (left-out restricted) and one full-access driveway on Balsa Avenue. No new curb cuts or modifications to SR-62 are proposed. In addition to on-site improvements, the Project would contribute in-lieu fees toward future off-site roadway improvements, specifically the widening of Twentynine Palms Highway to an ultimate half-width of 67 feet, to be undertaken at a later date by the Town and the San Bernardino County Transportation Authority (SBCTA).

Development of the Project Site requires removal of existing Western Joshua Trees (*Yucca brevifolia*), which are protected under the California Endangered Species Act (CESA). Construction is anticipated to commence in 2026 and extend over a period of approximately five (5) months following issuance of an Incidental Take Permit from the California Department of Fish and Wildlife (CDFW).

The following agencies are involved in discretionary approvals and permits required for the Project:

- Town of Yucca Valley (Conditional Use Permit No. CUP 02-25; Environmental Assessment No. EA 03-25; grading and building permits)
- California Department of Fish and Wildlife, Region 6 (Incidental Take Permit [ITP] for Western Joshua Tree removal)

- State Water Resources Control Board (NPDES Construction General Permit/Stormwater Pollution Prevention Plan)
- California Department of Transportation, District 8 (Encroachment Permit, if applicable)

1.2. PURPOSE OF THE FINAL IS/MND

The Town, as the Lead Agency under the California Environmental Quality Act (CEQA), has prepared this Final Initial Study/Mitigated Negative Declaration (Final IS/MND) for the proposed Project. This document, in conjunction with the Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) dated March 2026, comprises the complete Final IS/MND for the Project.

As described in Sections 15073 and 15074 of the *State CEQA Guidelines*, the Lead Agency must consider all comments received on the Draft IS/MND before approving the Project. This Final IS/MND has been prepared to satisfy that requirement and to present the Town's responses to all comments received during the 30-day public review period.

The Final IS/MND for the Project is comprised of two parts as follows:

- Part 1: Final IS/MND (this document)
- Part 2: Draft IS/MND and Technical Appendices (March 2026)

1.3. OVERVIEW OF THE CEQA PUBLIC REVIEW PROCESS FOR THE FINAL IS/MND

In compliance with the *State CEQA Guidelines*, the Town provided opportunities for the public to participate in the environmental review process. Throughout the environmental review process, an effort was made to inform, contact, and solicit input from the public and various state, regional, and local government agencies and other interested parties regarding the proposed Project.

Notice of Intent to Adopt a Mitigated Negative Declaration

In compliance with Public Resources Code Section 21092 and *State CEQA Guidelines* Section 15073, a Notice of Intent to Adopt a Mitigated Negative Declaration (NOI) was prepared by the Town. The Town filed the NOI with the San Bernardino County Clerk of the Board of Supervisors and the State Clearinghouse (SCH No. 2026030324). The 30-day public comment period began on March 6, 2026, and ended on April 6, 2026. An electronic copy of the Draft IS/MND and all documents referenced therein were made available for public review via the State Clearinghouse (ceqanet.lci.ca.gov) and at the Town website at:

https://www.yucca-valley.org/our-town/departments/community-development/planning/land-development/cup-02-25-ea-03-25-dutch-bros

The hardcopy was available for review at the Town's Community Development Department during normal business hours at 58928 Business Center Drive, Yucca Valley, CA 92284.

The purpose of the NOI was to formally convey that the Town had prepared a Draft IS/MND for the Project and to solicit input regarding the content of the environmental analysis. The Town received three (3) comment letters during the 30-day public review period, consisting of one (1) letter from a state agency and two (2) letters from Native American tribes. Refer to **Table 2.0-1, List of Commenters on the Draft IS/MND**, in **Chapter 2.0, Comment Letters and Responses**, of this Final IS/MND for a comprehensive listing of all comments received.

Final Initial Study/Mitigated Negative Declaration and Notice of Determination

Before approving the Project, CEQA requires the Lead Agency to consider the Final IS/MND together with all comments received during the public review process and to adopt the IS/MND. The Final IS/MND will be submitted to the Town of Yucca Valley Planning Commission, and Town Council, if necessary, for consideration and adoption in connection with action on the Project.

Following Project approval, the Town is required to file a Notice of Determination (NOD) with the San Bernardino County Clerk of the Board of Supervisors and the State Clearinghouse within five (5) working days of Project approval, pursuant to *State CEQA Guidelines* Section 15075.

Organization of the Final IS/MND

The Final IS/MND consists of the following four chapters:

Chapter 1.0, Introduction: This chapter describes the purpose of the Final IS/MND, provides a summary of the Project, summarizes the public review process for the Draft and Final IS/MND, and presents the organization of the Final IS/MND.

Chapter 2.0, Comment Letters and Responses: This chapter presents all comment letters received by the Town during the 30-day public review period for the Draft IS/MND, as well as the Town's responses to all comments. All letters received during the public comment period are reproduced in full in this chapter.

Chapter 3.0, Corrections and Additions: This chapter provides text changes and revisions to the Draft IS/MND made in response to public comments received during the 30-day public review period and tribal

consultation conducted pursuant to Assembly Bill 52. Added text is shown in underline format and deleted text is shown in ~~strikethrough~~ format.

Chapter 4.0, Mitigation Monitoring and Reporting Program: This chapter presents the Mitigation Monitoring and Reporting Program (MMRP), which will be used by the Town and other responsible enforcement and monitoring agencies to ensure implementation of all Project mitigation measures. Mitigation measures are organized by environmental topic area.

2.0 COMMENT LETTERS AND RESPONSES

As discussed in **Chapter 1.0, Introduction**, the Town received three (3) comment letters during the Draft IS/MND public review period. A list of commenters on the Draft IS/MND is shown in **Table 2.0-1**. The original bracketed comment letters are provided below, followed by a numbered response to each bracketed comment. Where a letter contains multiple individual comments, each comment is separately bracketed and assigned a number, and the response is given a matching designation.

Although *State CEQA Guidelines* Section 15088 mandates written responses only for environmental impact reports (EIRs), *State CEQA Guidelines* Section 15074(b) requires the Lead Agency to consider all comments received during the public review period prior to adopting the IS/MND. The Town has prepared written responses to ensure full compliance with this requirement, to provide a complete administrative record, and to assist the decision-making body in its review. Revisions to the Draft IS/MND resulting from these comments are detailed in **Chapter 3.0, Corrections and Additions**.

Table 2.0-1

Subject: Re: [EXTERNAL]:Notice of Intent to Adopt an IS/MND – Yucca Valley Dutch Bros Project

Good morning,
This email is to inform you that the Historic Preservation Office of the Ft. Yuma Quechan Tribe does not wish to provide comments on this project. We defer to the local Tribes and support their determinations on this matter. 1

Jill

Letter 1 **Ft. Yuma Quechan Indian Tribe**
H. Jill McCormick, M.A.
P.O. Box 1899
Yuma, AZ 85366
March 6, 2026

Response 1-1

The Tribe stated that it does not wish to provide comments on the proposed Project and defers to the determinations of local tribes. A formal AB 52 consultation was conducted with tribes traditionally and culturally affiliated with the Project area, and that tribal input received during that process is reflected in the Tribal Cultural Resources analysis and mitigation measures set forth in Section 3.3.18 of the IS/MND. Because this correspondence is informational in nature and does not raise any substantive issues regarding the adequacy of the environmental analysis in the Draft IS/MND, no revisions to the document are warranted in response to this comment.

Subject: Feedback for IS/MND: Yucca Valley Dutch Bros Project, Town of Yucca Valley, San Bernardino county; [CIT-YV-2025-2]

Hello Jared,

Thank you for sending the NOI to adopt MND, YSMN appreciates the opportunity to review IS/MND.

I just reviewed the IS/MND and noticed that Agua Caliente requested tribal monitoring but I didn't see any mitigation measures mentioning there will be monitoring. Will they still be monitoring the project?

1

Best,
Raylene

Response 2-1

The commenter is correct that the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office (THPO) requested tribal monitoring during ground-disturbing activities. Specifically, in its December 3, 2025, consultation letter, the ACBCI THPO stated that it requires "the presence of an approved Cultural Resource Monitor from a Consulting Tribe during any ground disturbing activities," with a directive to halt and notify a qualified archaeologist if buried cultural deposits are encountered. The ACBCI further noted that the mitigation measures in the Draft IS/MND were otherwise sufficient. The original Draft IS/MND's **Mitigation Measure MM TCR-1** addressed notification and data-sharing requirements but did not explicitly require the presence of a tribal cultural resource monitor during ground-disturbing activities. This omission has been identified and corrected.

In response to the ACBCI's consultation requests dated October 10 and December 3, 2025, and the Yuhaaviatam of San Manuel Nation's (YSMN) public comment received during the 30-day public review period, **MM TCR-1** has been revised in the Final IS/MND to require retention of an approved ACBCI THPO cultural resource monitor during all ground-disturbing activities, with the YSMN serving as the monitoring tribe if ACBCI is unable to confirm availability or declines to provide a monitor within the required notice period. Both tribes shall be notified in writing within 24 hours of any discovery of pre-contact cultural resources or tribal cultural resources.

Accordingly, the second threshold checklist question analysis for tribal cultural resources and **MM TCR-1** are revised on pages 101-102 to read as follows:

> **Less than Significant with Mitigation Incorporated.** As previously discussed, an NAHC SLF search was negative for the Project Site. However, through the Assembly Bill 52 consultation process, the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office (THPO) and YSMN identified the potential for undiscovered subsurface tribal cultural resources to be present in the Project area. ~~Agua Caliente Band of Cahuilla Indians requested that a tribal monitor be present during ground-disturbing activities. YSMN indicated that while they do not currently require a monitor, they requested specific mitigation measures be implemented to address the treatment of any inadvertent discoveries. To address the potential for the Project to impact unknown subsurface TCRs that may be significant under PRC Section 5024.1(c), the Town has agreed to incorporate the tribes' requested protocols.~~ In its consultation letters dated October 10 and December 3, 2025, the ACBCI THPO

requested that an approved cultural resource monitor from a consulting tribe be present during all ground-disturbing activities, and that a halt-and-notify protocol be implemented in the event of an inadvertent discovery. The ACBCI further reviewed the Project and found the standard mitigation measures to be otherwise sufficient. During the 30-day public review period, the YSMN submitted a comment noting that the Draft IS/MND's **Mitigation Measure MM TCR-1** did not explicitly require the presence of a tribal monitor during ground-disturbing activities, notwithstanding ACBCI's consultation request. In response to this comment and the ACBCI's consultation requests, **MM TCR-1** has been revised in this Final IS/MND to require retention of an approved ACBCI THPO cultural resource monitor during all ground-disturbing activities, with YSMN serving as the designated monitoring tribe if ACBCI is unable to confirm availability or declines to provide a monitor within the required notice period. The revised **MM TCR-1** is set forth in **Chapter 3.0, Corrections and Additions**, of this Final IS/MND and supersedes the version presented in the Draft IS/MND.

Implementation of revised **Mitigation Measures MM TCR-1** and **Mitigation Measure MM TCR-2** ensures that: (1) a tribal cultural resource monitor from a consulting tribe will be present during all Project-related ground-disturbing activities; (2) ground-disturbing activities will be halted immediately in the vicinity of any inadvertent discovery of potential pre-contact cultural resources or tribal cultural resources; (3) both the ACBCI THPO and the YSMN Cultural Resources Management Department will be notified in writing within 24 hours of any such discovery; and (4) the significance of any find will be determined jointly by the tribal monitor, a qualified archaeologist, and the Lead Agency, with a Cultural Resources Monitoring and Treatment Plan prepared if the find is determined to be significant. ~~if any TCRs are encountered during construction, they will be identified, evaluated, and treated in coordination with the consulting tribes.~~ Therefore, impacts to potential TCRs would be reduced to a less than significant level.

Mitigation Measures:

MM TCR-1: ~~The Yuhaaviatam of San Manuel Nation (YSMN) Cultural Resources Management Department and the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office shall be contacted regarding any pre-contact cultural resources discovered during Project implementation. Information regarding the nature of the find shall be provided to the tribes to allow Tribal input with regard to significance and treatment. If the find is deemed significant, a Cultural Resources Monitoring and Treatment Plan shall be prepared in coordination with the consulting tribes, and all subsequent finds shall be subject to this Plan. If significant Tribal Cultural Resources are found, the consulting tribes may elect to place a tribal monitor on site for the duration of the ground-disturbing activities in the vicinity of the find.~~

Prior to the commencement of ground-disturbing activities, the Applicant shall provide written notice to the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office (THPO) at least 15 business days prior to the start of ground-disturbing activities to retain a qualified ACBCI cultural resource monitor. If ACBCI does not confirm availability in writing or declines to provide a monitor within 10 business days of receiving such written notice, the Applicant shall provide written notice to the Yuhaaviatam of San Manuel Nation (YSMN) Cultural Resources Management Department offering the monitoring opportunity. If YSMN similarly does not confirm availability in writing within 10 business days of receiving such notice, the Applicant shall document its good-faith outreach efforts to both tribes in writing and provide such documentation to the Town of Yucca Valley prior to the commencement of ground-disturbing activities. The retained tribal monitor shall be present on-site during all project-related ground-disturbing activities.

In the event that potential pre-contact cultural resources or Tribal Cultural Resources are encountered during ground-disturbing activities, the tribal monitor shall have the authority to direct an immediate halt to all ground-disturbing activities within a 60-foot buffer of the find, consistent with MM CUL-1. The Applicant and project contractor shall comply with any stop-work directive issued by the tribal monitor.

Upon discovery of any potential pre-contact cultural resources or Tribal Cultural Resources, the Applicant shall notify both the ACBCI THPO and the YSMN Cultural Resources Management Department in writing within 24 hours of the discovery. Information regarding the nature of the find shall be provided to both tribes to allow tribal input with regard to significance and treatment. The significance of the find shall be determined jointly by the tribal monitor, a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards, and the Lead Agency. If the find is determined to be significant, a Cultural Resources Monitoring and Treatment Plan shall be prepared in coordination with the consulting tribe(s) prior to the resumption of any ground-disturbing activities in the vicinity of the find, and all subsequent finds shall be subject to this Plan. If significant Tribal Cultural Resources are found, the consulting tribe that did not serve as the primary monitor at the start of ground-disturbing activities (whether ACBCI or YSMN, depending on which tribe is actively monitoring) may elect to place a tribal monitor on-site for the duration of the ground-disturbing activities in the vicinity of the find.

The revision to **MM TCR-1** directly addresses the YSMN's concern by ensuring that tribal monitoring is explicitly required as a Project condition, not merely as a response to an unanticipated discovery. The revised measure also formally recognizes the YSMN's role in the Project's cultural resource protection program, both as the designated fallback monitoring tribe and as a party with independent notification rights and co-determination authority upon any discovery of pre-contact cultural resources or tribal cultural resources.

Subject: Comments on the Initial Study Mitigated Negative Declaration (IS/MND) for Yucca Valley Dutch Bros Project.

Dear Jared Jerome,

Thank you for including The California Department of Transportation (Caltrans), District 8, Local Development Review (LDR) branch in the review process. We are committed to ensuring that impacts to the State's multimodal transportation system and to our natural environment are identified and mitigated to support a safe, sustainable, integrated and efficient transportation system.

The 1.01-acre vacant site located at 58121 Twentynine Palms Highway (APN: 0601-416-05) is in a commercial corridor, bordered by retail stores and nearby residential areas. The project site is designated Mixed Use (MU) and zoned Mixed-Use Commercial (C-MU) by the Town's General Plan, with surrounding zoning consisting of Commercial (C-N) to the north and Residential (R-S-2) to the south and east.

The proposed project involves the construction and operation of an approximately 1,025 square-foot Dutch Bros Coffee shop featuring dual-lane drive-through designed to accommodate up to 23 vehicles, along with 18 surface parking spaces. Development of the site would require removal of the existing Western Joshua Street alignment. Site access would be provided via an existing shared driveway serving the adjacent Big 5 Sporting Goods and Walgreen properties, with internal circulation connecting to these neighboring uses. In addition to the site improvements, the project would contribute in-lieu fees toward future off-site roadway improvements, specifically the widening of Twentynine Palms Highway to an ultimate half-width of 67 feet, to be undertaken at a later date by the Town and The San Bernardino County of Transportation Authority. 1

The following comments are based on our review of the Initial Study Mitigated Negative Declaration (IS/MND) and related environmental Documents for the Yucca Valley Dutch Bros

Project.

Traffic Operations:

Local Transportation Assessment:

1. Please include a Horizon Year study scenario for all analysis (refer to San Bernardino County Transportation Impact Study Guidelines). 1
2. Please include site access driveway on State Route 62 (Twentynine Palms Highway) in all Traffic Analysis documents. 2
3. Opening Year Cumulative 2007 Conditions Traffic Volume formula appears to be missing on Page 28 of Appendix E - LTA PDF. 3
4. Please correct formatting on pages 43 and 44 of Appendix E – LTA PDF displaying the project Regional Location and Preliminary Site/Utility Plan as they do not have clear imagery. 4

Safety Review:

5. The proposed project will generate additional trips on the Highway System, we recommend preparing a traffic safety review as a stand-alone report for the proposed land use project. Refer to the Local Development Review (LDR) Safety Review Practitioners Guidance in February 2024.
   Please follow the steps below:
   a. To request crash data on the State Highway System, please submit your request via our California Public Records Act (CPRA) portal following the link (Support Home Page (mycusthelp.com)). 5
   b. Please analyze the existing crash data and discuss the project's impact on safety as needed.
   c. Please provide appropriate countermeasures to mitigate/ reduce project's safety impact if applicable.

Equitable Access:

If any Caltrans facilities are impacted by the project, they must comply with the American Disabilities Act (ADA) Standards upon project completion. Additionally, the project must ensure the maintenance of bicycle and pedestrian access throughout the construction phase. These access considerations align with Caltrans' equity mission to provide a safe, sustainable, and equitable transportation network for all users. 6

Caltrans Encroachment Permit:

Please be advised that any permanent work or temporary traffic control that encroaches onto Caltrans' Right-of-Way (R/W) requires a Caltrans-issued encroachment permit. 7

For information regarding the Encroachment Permit application and submittal requirements, contact: 8

Caltrans Office of Encroachment Permits
464 West 4th Street, Basement, MS 619
San Bernardino, CA 92401-1400
(909) 383-4526
D8.E-permits@dot.ca.gov
https://dot.ca.gov/programs/traffic-operations/ep
Important Note: All permit applications must now be submitted through our CEPS Online Portal at: https://ceps.dot.ca.gov/

Please be advised that LDR's point of contact role will conclude upon the completion of the development entitlement process. Once the project is entitled, the Encroachment Permit Office will serve as the primary point of contact moving forward.

Thank you again for including Caltrans in the review process. Should you have any questions regarding this letter, or for future notifications and requests for review of new projects, please email LDR-D8@dot.ca.gov or call 909-963-8604.

Sincerely,

Janki Patel

Response 3-1

The commenter summarizes the Project's location, existing land use designation, zoning, proposed site characteristics, and planned off-site roadway improvement contributions, which is consistent with the Project description in Section II of the Draft IS/MND. The comment references the removal of the "Western Joshua Street alignment." However, this is understood to refer to the removal of existing Western Joshua Trees located on the Project Site, which is addressed in the IS/MND under Biological Resources (Section 3.3.4) and is subject to an Incidental Take Permit from the California Department of Fish and Wildlife (CDFW). No public street alignment is proposed for removal as part of the Project.

Regarding the request to include a Horizon Year study scenario for all analysis pursuant to the San Bernardino County Transportation Impact Study (TIS) Guidelines, the Project's LTA (Appendix E of the IS/MND) was prepared in accordance with the Traffic Scoping Agreement approved by the Town, which did not require a Horizon Year analysis. As documented in Section 1.0 and Appendix A of the LTA, the analysis scope, including study intersections and required scenarios, was established through a Traffic Scoping Memorandum reviewed and approved by Town staff prior to preparation of the LTA. The approved scope defined the required scenarios as: (1) Existing Conditions; (2) Opening Year 2027 Cumulative Conditions; and (3) Opening Year 2027 Cumulative with Project Conditions.

A Horizon Year analysis is further not warranted given the *de minimis* traffic impact of the proposed Project. As documented in Table 3.1 of the LTA, after application of ITE pass-by reduction factors, the Project would contribute only 35 net new daily trips to the adjacent roadway network, with 8 net new AM peak hour trips and 2 net new PM peak hour trips. Even under the conservative approach of not applying pass-by reductions to the intersection LOS analysis, the addition of Project traffic does not cause any study intersection to degrade in LOS or exceed applicable significance thresholds. All three study intersections operate at LOS B or C under Existing, Opening Year Cumulative, and Opening Year Cumulative with Project conditions (LTA, Table ES.1). Considering the Project's negligible trip generation and the absence of any significant traffic impacts under the Opening Year Cumulative scenario, the Project would not cause or contribute to deficiencies at any study intersection under a Horizon Year scenario.

Moreover, and most critically, pursuant to Senate Bill 743 and *State CEQA Guidelines* Section 15064.3, vehicle delay and Level of Service (LOS) are no longer considered significant environmental impacts under CEQA. The required metric for evaluating transportation impacts under CEQA is Vehicle Miles Traveled

(VMT). As documented in Section 3.3.17 (Transportation) of the Draft IS/MND, the Project generates a net increase of only 35 daily trips and screened out of a detailed VMT analysis entirely. Because LOS is not a CEQA significance criterion and the Project screens out for VMT, a Horizon Year LOS scenario is not required for CEQA compliance. No revisions to the IS/MND or LTA are warranted in response to this comment.

Response 3-2

The commenter requests to include the existing site access driveway on State Route 62 (SR-62/Twentynine Palms Highway) in all traffic analysis documents. The driveway is already addressed in the LTA, and its exclusion from the quantitative intersection LOS analysis was intentional, conservative, and consistent with the Town-approved Traffic Scoping Agreement.

As documented in Sections 1.0, 1.1, and 6.1 of the LTA, the Project Site is served by two existing driveways: (1) a full-access, stop-controlled driveway on Balsa Avenue, shared with the adjacent Walgreens property; and (2) a left-out restricted driveway on SR-62 (Twentynine Palms Highway), shared with the adjacent Big 5 Sporting Goods property. Both driveways are identified and described in the LTA. The SR-62 driveway is depicted in the Project Site plan (Figure 1.2 of the LTA) and is referenced in the Site Access and Circulation chapter (Section 6.1) in the context of the existing shared shopping center access configuration.

As detailed in Section 1.0 of the LTA, the study area and specific intersections evaluated were established through a Traffic Scoping Memorandum reviewed and approved by the Town prior to preparation of the LTA. The approved scope focused the analysis on the full-access, stop-controlled driveway along Balsa Avenue to provide a conservative, worst-case assessment of localized intersection operations. By routing all Project trips through the Balsa Avenue driveway the LTA captured the maximum potential delay and queuing at the site's most heavily utilized access point, since the Balsa Avenue driveway is the access point accommodating a greater number of turning movement conflicts, including left turns out, compared to the right-out-only driveway to SR-62. Including the SR-62 driveway in the quantitative LOS analysis would result in a redistribution of the Project's 35 net new daily trips between the two access points, reducing (not increasing) traffic volumes and delay at the Balsa Avenue/SR-62 intersection (Intersection 1), which already operates at an acceptable LOS B (AM) and LOS C (PM) under all analyzed scenarios (LTA, Table ES.1). No new significant impact findings would result.

Furthermore, as discussed in Response to Comment 3-1, intersection LOS and operational delay, which includes localized driveway operations, are no longer considered significant environmental impacts under CEQA pursuant to Senate Bill 743 and *State CEQA Guidelines* Section 15064.3. The Project's transportation impacts were properly evaluated using the required VMT metric, for which the Project screened out of detailed analysis due to its negligible trip generation. The intersection operational analysis provided in the

LTA is for local planning and informational purposes only. Because driveway operational analysis is not a CEQA requirement and the LTA was prepared in strict accordance with the Town-approved Traffic Scoping Agreement, no revisions to the IS/MND or LTA are warranted in response to this comment.

Response 3-3

The commenter states there is a missing formula for "Opening Year Cumulative 2007 Conditions" traffic volumes on page 28 of the LTA. The Town understands that the commenter is referring to Opening Year 2027 Cumulative Conditions, as 2007 is a historical year and is not analyzed in the LTA.

The traffic volume formula is not missing from the LTA. The methodology and equations used to develop the Opening Year 2027 Cumulative Background Conditions traffic volumes are fully provided in Section 5.1 (Opening Year 2027 Cumulative Roadway Network and Traffic Volumes) on page 20 of the LTA (Appendix E of the IS/MND). That section presents the ambient growth formula and supporting assumptions. An ambient annual growth rate of three (3) percent per year was applied over two (2) years, yielding a total growth factor of six (6) percent, which was applied to existing traffic volumes to derive the Opening Year 2027 Cumulative volumes displayed in Figure 5.1 of the LTA.

The commenter may have been looking at a different section or an appendix attachment as page 28 of the LTA corresponds to Section 5.5.1 (Intersection Analysis) and Section 5.6 (Determination of the Need for Off-Site Improvements), which present Table 5.3, which is the intersection LOS results for the Opening Year 2027 Cumulative with Project scenario, rather than the formula presentation in Section 5.1. No revisions to the IS/MND or LTA methodology are warranted in response to this comment.

Response 3-4

The Town acknowledges the commenter's observation regarding the image clarity of the Project Regional Location map (Figure 2) and Project Site Plan (Figure 2) as they appear on pages 43 and 44 of the publicly circulated LTA PDF.

The Town clarifies that the original graphics produced for the LTA by CR Associates (January 2026) were clear and legible at full resolution. The degraded image quality observed by Caltrans was an inadvertent artifact of the Optical Character Recognition (OCR) and PDF optimization process applied to the document prior to electronic submittal. This processing is required to ensure document accessibility and compliance with the State Clearinghouse formatting protocols for electronic document submittal via CEQAnet and this same file version was used for the Town's webpage.

To resolve this administrative formatting issue, a clean, high-resolution version of the LTA with corrected imagery will replace the draft appendix in the Final IS/MND. Moreover, these two figures are provided at

the end of this chapter for visual reference. Because this is solely a document reproduction issue and does not alter the data, methodology, or conclusions of the LTA or IS/MND, no revisions are warranted in response to this comment.

Response 3-5

The commenter includes Safety Review recommendations and acknowledges their agency's commitment to ensuring safe operations on the State Highway System. The Town has carefully considered the recommendation to prepare a standalone traffic safety review pursuant to Caltrans' Local Development Review (LDR) Safety Review Practitioners Guidance (February 2024).

Under CEQA, specifically Appendix G of the *State CEQA Guidelines*, a project may have a significant transportation safety impact if it would "substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)." As evaluated in Section 3.3.17 (Transportation) of the Draft IS/MND, the proposed Project does not include any alterations to the geometric design of the surrounding public roadway network, nor does it introduce incompatible uses to the established commercial corridor. The Project would utilize existing driveways that currently serve the adjacent commercial uses, and no new access points or geometric modifications to SR-62 are proposed. As documented in Sections 1.1 and 6.1 of the LTA, the existing left-out restricted driveway on SR-62 serving the shopping center predates the Project and would remain unchanged.

Furthermore, as established in the LTA and discussed in Responses to Comments 3-1 and 3-2, the Project would generate a *de minimis* amount of traffic, that is, only 35 net new daily trips, with 8 net new trips in the AM peak hour and 2 net new trips in the PM peak hour. The Project's conservative traffic analysis routes all net new trips through the Balsa Avenue driveway, assigning zero net new project trips to the SR-62 driveway or SR-62 mainline. This nominal increase in vehicle trips does not constitute substantial evidence that the Project would substantially exacerbate any existing safety hazard or create a new safety hazard on the State Highway System, and a causal nexus between the proposed Project and changes in SR-62 crash frequency or severity cannot be established.

Regarding Step (a) — Crash Data Request: The Town acknowledges Caltrans' direction to request crash data via the California Public Records Act (CPRA) portal. As noted above, the Project proposes no new access points, curb cuts, or geometric modifications to SR-62. Given the absence of any SR-62 design changes and the assignment of zero net new Project trips to the state highway, a crash data request is not warranted for this Project.

Regarding Step (b) — Crash Data Analysis: Since the Project does not alter SR-62 access, geometry, or operations, and does not add meaningful traffic volumes to the state highway, no causal relationship

between the proposed Project and changes in SR-62 safety conditions can be established. A crash data analysis would not yield findings that alter the IS/MND's less than significant determination for transportation hazards.

Regarding Step (c) — Safety Countermeasures: Since no Project-related safety impacts on the State Highway System have been identified, no Project-specific safety countermeasures are warranted. The Project does, however, incorporate internal pedestrian and bicycle safety features, including ADA-compliant pedestrian pathways, as discussed in Section 4.2 of the LTA.

The LDR Safety Review Practitioners Guidance represents Caltrans' internal advisory guidance and does not establish mandatory CEQA significance thresholds or procedural requirements for the Town as Lead Agency. Considering the Project's negligible trip generation, its reliance on existing access points, and the absence of any proposed geometric alterations to the SR-62 right-of-way, a standalone traffic safety report is not warranted for CEQA compliance. No revisions to the IS/MND or LTA are warranted in response to this comment.

Response 3-6

The commenter addresses equitable access, compliance with ADA, and the maintenance of bicycle and pedestrian access during the construction phase. The Town confirms that the proposed Project is consistent with ADA standards and applicable accessibility requirements, and that bicycle and pedestrian access would be maintained throughout construction to the extent feasible, as further detailed below.

Regarding ADA compliance, compliance with ADA standards and the accessibility requirements of the California Building Code is a mandatory regulatory requirement for all new commercial development. The proposed Project does not impact any existing Caltrans facilities. The Project Site is located south of SR-62 (Twentynine Palms Highway) and does not propose any new curb cuts, driveway modifications, or permanent improvements within the Caltrans right-of-way. The Town will verify ADA compliance through the standard building plan check and permitting process prior to the issuance of a certificate of occupancy. To the extent any incidental construction activity occurs within or immediately adjacent to the Caltrans right-of-way, the Project would be required to comply with ADA standards as a condition of any required Caltrans Encroachment Permit. Because ADA compliance is a statutory building code requirement and does not constitute a physical environmental impact under CEQA, no further environmental analysis is required.

Regarding pedestrian and bicycle access during construction, the Project applicant would be required by the Town to ensure the safe routing of vehicular, pedestrian, and bicycle traffic around the active construction zone to maintain continuous and safe access throughout the construction phase. As

documented in Section 2.3.9 of the IS/MND, all construction equipment and staging would occur within the boundaries of the Project Site. No construction staging or activity is proposed within the SR-62 right-of-way that would disrupt existing pedestrian or bicycle facilities along SR-62, which include sidewalks on both sides of the highway west of Balsa Avenue and an existing Class III bicycle facility running east-west along the corridor, as documented in Section 4.2 of the LTA. To the extent that construction activities or temporary traffic control measures encroach into the SR-62 right-of-way, the Project would be subject to Caltrans Encroachment Permit requirements, which would provide Caltrans with direct oversight of construction phase access within its jurisdiction.

The proposed Project also incorporates internal pedestrian and bicycle access features, including ADA-compliant pathways connecting the building's walk-up window and parking areas to existing off-site sidewalk facilities, continental crosswalks throughout the Project Site to enhance driver awareness, and a bicycle rack to support non-motorized access, as documented in Section 4.2.1 of the LTA.

Because these comments address standard regulatory compliance and construction management protocols rather than the adequacy of the CEQA environmental analysis, no revisions to the IS/MND are warranted in response to this comment.

Response 3-7

The commenter advises that any permanent work or temporary traffic control encroaching onto the Caltrans right-of-way requires a Caltrans-issued Encroachment Permit. This requirement is noted.

As discussed above, the proposed Project does not include any permanent improvements, new access points, or physical modifications within the SR-62 (Twentynine Palms Highway) right-of-way. The Project would utilize the existing driveway configuration, and the existing restricted driveway on SR-62 shared with the adjacent Big 5 Sporting Goods property would remain unchanged. However, the Town acknowledges that if construction activities or temporary traffic control measures, such as the placement of advanced warning signs, necessitate temporary encroachment into the Caltrans right-of-way, the Project applicant would be required to obtain a Caltrans-issued Encroachment Permit prior to the commencement of those specific activities.

The Project Applicant would be advised to coordinate directly with the Caltrans District 8 Office of Encroachment Permits via the CEPS Online Portal, as directed in the comment. Because this comment outlines a standard regulatory permitting procedure and does not raise a substantive issue regarding the adequacy of the CEQA environmental analysis, no revisions to the IS/MND are warranted in response to this comment.

Response 3-8

The Town acknowledges the contact information provided for the Caltrans District 8 Office of Encroachment Permits and notes the requirement that all permit applications must be submitted through the CEPS Online Portal. As discussed in Response to Comment 3-7, the Project Applicant would be advised of these procedures and directed to coordinate with the Encroachment Permit Office for any temporary or permanent encroachments into the Caltrans right-of-way. The Town acknowledges the LDR branch's role as primary point of contact would conclude upon completion of the entitlement process, at which time the Encroachment Permit Office would assume that role.

These concluding remarks are informational and administrative in nature and does not raise environmental issues or challenge the adequacy of the IS/MND; accordingly, no revisions to the document are warranted in response to this comment.

3.0 CORRECTIONS AND ADDITIONS

The following corrections and additions to the Draft IS/MND are made as a result of comments received during the 30-day public review period and tribal consultation conducted pursuant to Assembly Bill (AB) 52. Added text is shown in underline format and deleted text is shown in ~~strikethrough~~ format.

Pursuant to *State CEQA Guidelines* Section 15073.5, a Lead Agency is required to recirculate a Negative Declaration only when the document must be "substantially revised." A substantial revision occurs when: (1) a new, avoidable significant effect is identified and mitigation measures or project revisions must be added to reduce the effect to less than significance; or (2) the Lead Agency determines that mitigation measures originally included in the proposed Negative Declaration are infeasible and the Lead Agency instead proposes new alternatives or mitigation measures.

The revisions presented in this chapter do not trigger recirculation. Pursuant to *State CEQA Guidelines* Sections 15073.5(c)(2) and 15073.5(c)(4), these revisions serve to clarify, amplify, and make insignificant modifications to the Draft IS/MND, and to add project revisions in response to public comments that do not involve new significant effects. Specifically:

- The revision to Mitigation Measure **MM TCR-1** clarifies and strengthens the tribal cultural resource monitoring requirements applicable to ground-disturbing activities. This revision is consistent with consultation requests received from the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office and public comment received from the Yuhaaviatam of San Manuel Nation (YSMN).

- Administrative corrections have been made to the Local Transportation Assessment (LTA) (Appendix E of the IS/MND) to replace inadvertently degraded imagery with high-resolution figures and to clarify text references (see pages 2.0-19 and 2.0-20 of **Chapter 2.0**). These corrections do not affect any analytical findings, methodologies, or significance determinations in the IS/MND.

These revisions do not identify any new significant environmental impacts, nor do they demonstrate that any previously proposed mitigation measures are inadequate. Accordingly, recirculation of the IS/MND is not required pursuant to *State CEQA Guidelines* Section 15073.5.

Tribal Cultural Resources

Pages 101-102 – The analysis for the second threshold and mitigation measure are revised to read:

> **Less than Significant with Mitigation Incorporated.** As previously discussed, an NAHC SLF search was negative for the Project Site. However, through the Assembly Bill 52 consultation process, the Agua

Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office (THPO) and YSMN identified the potential for undiscovered subsurface tribal cultural resources to be present in the Project area. ~~Agua Caliente Band of Cahuilla Indians requested that a tribal monitor be present during ground-disturbing activities. YSMN indicated that while they do not currently require a monitor, they requested specific mitigation measures be implemented to address the treatment of any inadvertent discoveries. To address the potential for the Project to impact unknown subsurface TCRs that may be significant under PRC Section 5024.1(c), the Town has agreed to incorporate the tribes' requested protocols.~~ In its consultation letters dated October 10 and December 3, 2025, the ACBCI THPO requested that an approved cultural resource monitor from a consulting tribe be present during all ground-disturbing activities, and that a halt-and-notify protocol be implemented in the event of an inadvertent discovery. The ACBCI further reviewed the Project and found the standard mitigation measures to be otherwise sufficient. During the 30-day public review period, the YSMN submitted a comment noting that the Draft IS/MND's **Mitigation Measure MM TCR-1** did not explicitly require the presence of a tribal monitor during ground-disturbing activities, notwithstanding ACBCI's consultation request. In response to this comment and the ACBCI's consultation requests, **MM TCR-1** has been revised in this Final IS/MND to require retention of an approved ACBCI THPO cultural resource monitor during all ground-disturbing activities, with YSMN serving as the designated monitoring tribe if ACBCI is unable to confirm availability or declines to provide a monitor within the required notice period. The revised **MM TCR-1** is set forth in **Chapter 3.0, Corrections and Additions**, of this Final IS/MND and supersedes the version presented in the Draft IS/MND.

Implementation of revised **Mitigation Measures MM TCR-1** and **Mitigation Measure MM TCR-2** ensures that: (1) a tribal cultural resource monitor from a consulting tribe will be present during all Project-related ground-disturbing activities; (2) ground-disturbing activities will be halted immediately in the vicinity of any inadvertent discovery of potential pre-contact cultural resources or tribal cultural resources; (3) both the ACBCI THPO and the YSMN Cultural Resources Management Department will be notified in writing within 24 hours of any such discovery; and (4) the significance of any find will be determined jointly by the tribal monitor, a qualified archaeologist, and the Lead Agency, with a Cultural Resources Monitoring and Treatment Plan prepared if the find is determined to be significant. ~~if any TCRs are encountered during construction, they will be identified, evaluated, and treated in coordination with the consulting tribes.~~ Therefore, impacts to potential TCRs would be reduced to a less than significant level.

Mitigation Measures:

MM TCR-1: ~~The Yuhaaviatam of San Manuel Nation (YSMN) Cultural Resources Management Department and the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic~~

~~Preservation Office shall be contacted regarding any pre-contact cultural resources discovered during Project implementation. Information regarding the nature of the find shall be provided to the tribes to allow Tribal input with regard to significance and treatment. If the find is deemed significant, a Cultural Resources Monitoring and Treatment Plan shall be prepared in coordination with the consulting tribes, and all subsequent finds shall be subject to this Plan. If significant Tribal Cultural Resources are found, the consulting tribes may elect to place a tribal monitor on site for the duration of the ground-disturbing activities in the vicinity of the find.~~

Prior to the commencement of ground-disturbing activities, the Applicant shall provide written notice to the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office (THPO) at least 15 business days prior to the start of ground-disturbing activities to retain a qualified ACBCI cultural resource monitor. If ACBCI does not confirm availability in writing or declines to provide a monitor within 10 business days of receiving such written notice, the Applicant shall provide written notice to the Yuhaaviatam of San Manuel Nation (YSMN) Cultural Resources Management Department offering the monitoring opportunity. If YSMN similarly does not confirm availability in writing within 10 business days of receiving such notice, the Applicant shall document its good-faith outreach efforts to both tribes in writing and provide such documentation to the Town of Yucca Valley prior to the commencement of ground-disturbing activities. The retained tribal monitor shall be present on-site during all project-related ground-disturbing activities.

In the event that potential pre-contact cultural resources or Tribal Cultural Resources are encountered during ground-disturbing activities, the tribal monitor shall have the authority to direct an immediate halt to all ground-disturbing activities within a 60-foot buffer of the find, consistent with MM CUL-1. The Applicant and project contractor shall comply with any stop-work directive issued by the tribal monitor.

Upon discovery of any potential pre-contact cultural resources or Tribal Cultural Resources, the Applicant shall notify both the ACBCI THPO and the YSMN Cultural Resources Management Department in writing within 24 hours of the discovery. Information regarding the nature of the find shall be provided to both tribes to allow tribal input with regard to significance and treatment. The significance of the find shall be determined jointly by the tribal monitor, a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards, and the Lead Agency. If the find is determined to be significant, a Cultural Resources Monitoring and Treatment

Plan shall be prepared in coordination with the consulting tribe(s) prior to the resumption of any ground-disturbing activities in the vicinity of the find, and all subsequent finds shall be subject to this Plan. If significant Tribal Cultural Resources are found, the consulting tribe that did not serve as the primary monitor at the start of ground-disturbing activities (whether ACBCI or YSMN, depending on which tribe is actively monitoring) may elect to place a tribal monitor on-site for the duration of the ground-disturbing activities in the vicinity of the find.

4.0 MITIGATION MONITORING AND REPORTING PROGRAM

4.1. INTRODUCTION

CEQA requires that a Lead Agency establish a program to monitor and report on mitigation measures adopted as part of the environmental review process to avoid or reduce the severity and magnitude of potentially significant environmental impacts associated with project implementation. Public Resources Code Section 21081.6(a)(1) requires that a Mitigation Monitoring and Reporting Program (MMRP) be adopted at the time the Lead Agency determines to carry out a project for which an IS/MND has been prepared, to ensure that the mitigation measures identified in the IS/MND are fully implemented.

4.2. DESCRIPTION OF THE MMRP

Compliance

The Town of Yucca Valley (Town), as the Lead Agency, is responsible for coordinating monitoring activities and documenting the implementation of mitigation measures for the Project. Per *State CEQA Guidelines* Section 15097(d), Lead and Responsible Agencies may coordinate their mitigation monitoring or reporting programs where possible.

For purposes of this MMRP, the "Applicant" refers to the Project applicant, including their designated representatives, construction contractors, successors, and assigns, who are responsible for financing, constructing, and operating the proposed Project. The Applicant shall ensure that all mitigation measures assigned to it are implemented in accordance with the timing and requirements set forth in this MMRP. In instances where implementing responsibility is shared between the Applicant and construction contractors, the Applicant is responsible for ensuring that all applicable mitigation requirements are incorporated into construction contracts and are fully implemented. Implementation of certain mitigation measures may require the Applicant to retain qualified specialist consultants, including but not limited to a qualified archaeologist, biological monitor, and tribal cultural resource monitor(s), as specified in the individual mitigation measures.

Field Monitoring of Mitigation Measures

Prior to the issuance of grading and building permits, the Town will review Project plans and specifications to verify that applicable pre-construction mitigation requirements have been satisfied and that mitigation measures have been incorporated into Project design and permit conditions as appropriate.

During construction, the Town will monitor implementation of mitigation measures through its standard building inspection and grading inspection processes. The Applicant is responsible for ensuring that construction contractors are fully informed of all applicable mitigation measures and that on-site implementation is consistent with the requirements of this MMRP. The Town retains the authority to suspend construction activities that are found to be out of compliance with adopted mitigation measures.

Following project completion, the Town will verify that all post-construction mitigation requirements have been satisfied prior to the issuance of a certificate of occupancy or final inspection approval, as applicable.

Changes to Mitigation Measures

The Town, as Lead Agency, may permit minor, administrative changes to this MMRP post-adoption (such as updates to responsible party contact information, permit numbers, or implementation scheduling that do not alter the substance or scope of any mitigation measure), subject to one of the following findings, supported by evidence in the record:

a. The mitigation measure is no longer required because the significant environmental impact identified in the IS/MND has been found not to exist, or to occur at a level that makes the impact less than significant, as a result of changes in the project, changes in conditions of the environment, or other factors; or

b. The modified or substitute mitigation measure: (i) provides a level of environmental protection equal to or greater than that afforded by the original mitigation measure; (ii) does not result in significant adverse environmental effects beyond those considered in the IS/MND and the MMRP; and (iii) is feasible and enforceable through the Town's standard permitting and inspection procedures or other mechanisms included in this MMRP.

Any modifications must not trigger the requirements for a subsequent environmental document pursuant to *State CEQA Guidelines* Section 15162. Findings and supporting documentation related to any modifications to mitigation measures shall be maintained in the Project file with the MMRP and shall be made available to the public upon request.

Mitigation Monitoring and Reporting Program Structure

Table 4.0-1, Yucca Valley Dutch Bros Project Mitigation Monitoring and Reporting Program, presented on the following pages, provides the MMRP for the Project. The MMRP identifies the following for each mitigation measure:

1. The mitigation measure number and environmental topic area;

2. The full text of the mitigation measure;
3. The timing of implementation (Project Phase);
4. The party responsible for implementation (Mitigation Responsibility);
5. The agency responsible for monitoring and enforcement (Monitoring/Enforcement Agency); and
6. A designated space for compliance verification (Date/Initials).

The Town, in conjunction with any appropriate responsible or trustee agencies, will determine the adequacy of any proposed change or modification to this MMRP. The flexibility to modify the MMRP is necessary to protect the environment through a workable and enforceable program while accommodating changes in project conditions, scheduling, or regulatory requirements that may arise during Project implementation.

Table 4.0-1
Yucca Valley Dutch Bros Project
Mitigation Monitoring and Reporting Program

Mitigation Measure	Project Phase / Timing	Mitigation Responsibility	Monitoring / Enforcement	Compliance Verification (Date/Initials)
MM BIO-1 Preconstruction Nesting Bird and Raptor Survey. • To the extent feasible, ground disturbing activities and vegetation removal shall be timed to occur between September 1 and January 31, which is outside the bird and raptor nesting season. • If ground disturbing activities or vegetation removal (including tree trimming) are scheduled between February 1 and August 31, which is the bird nesting season, a preconstruction survey for nesting birds shall be conducted within 72 hours prior to construction activities. The survey shall be conducted by a qualified biologist with prior experience conducting nesting bird surveys for construction projects. The study area shall include the affected area and suitable habitat within a 500-foot buffer, or a buffer size determined by the qualified biologist based on the level of proposed disturbance and access. If no active nests are found, no additional measures are required. • If active nests are found, the biologist will map the location and document the species and nesting stage. A no-work buffer will be established around the active nest as determined by the qualified biologist and based on the species' sensitivity to disturbance and the type and duration of the disturbance. Typical buffers shall be 300 feet for songbirds, 500 feet for raptors and special-status species, but it shall be determined based on the conditions on the site and recommendations of the qualified biologist. No construction activities shall occur within the no-work buffer until the biologist has determined the nest is no longer active.	**Pre-construction:** Within 72 hours prior to ground-disturbing activities scheduled during the nesting season (February 1–August 31). **Construction:** Ongoing if active nests are identified; no-work buffer maintained until nest is determined inactive by qualified biologist.	Applicant; Construction Contractor; Qualified Avian Biologist	Town of Yucca Valley	
MM BIO-2 Western Joshua Tree Permitting and Protection Due to the proposed removal of eight (8) Joshua trees for the Project, the Applicant shall obtain a permit from the CDFW prior to removing the trees. To obtain the permit, the applicant must complete a permit application and submit the application and Joshua tree inventory to	**Pre-construction:** ITP application submitted and fees paid prior to issuance of grading permit; protective fencing installed prior to	Applicant; Construction Contractor; California Department of Fish and Wildlife, Region 6 (ITP issuance)	Town of Yucca Valley; California Department of Fish and Wildlife, Region 6	

Mitigation Measure	Project Phase / Timing	Mitigation Responsibility	Monitoring / Enforcement	Compliance Verification (Date/Initials)
the CDFW Region 6 Office via the online permitting system. This permit will require coordination with both the County of San Bernardino and CDFW to determine the number of Joshua trees that the agencies shall require for transplanting to areas outside of the development. However, there is an in-lieu fee program that allows for a fee-based mitigation for the removal of Joshua trees, and these same mitigation fees could be applied to all of the Joshua trees that are encroaching within 15 meters, as determined by the agencies. Therefore, these estimated fees are subject to change per the requirements of the permitting agencies following an assessment of the project's impacts on Joshua trees. The Applicant shall pay the required fees prior to the issuance of a grading permit. The estimated 2025 Western Joshua Tree Conservation Act Incidental Take Permit annual mitigation fees for the proposed removal of eight Joshua trees within the standard fee area are a total of $4,072.00, as follows:[1] • 0 Class A trees x $346.00 = $0.00 • 8 Class B trees x $509.00 = $4,072.00 • 0 Class C trees x $2,544.75 = $0.00 Joshua Tree Avoidance During Construction • The Applicant shall install temporary protective fencing between the project workspace and each Joshua tree during construction of the project. The fencing shall be high-visibility fencing placed at a minimum 15-meter buffer zone prior to the start of construction (or at the distance that is permitted for trees closer to the site). No work or project activities shall occur within the fenced area, and all work shall occur outside of the proposed Joshua tree buffers. Fencing is required to prevent compaction and/or contamination of the soil and root zone. • During construction, heavy equipment and vehicles shall be operated in accordance with standard Best Management Practices (BMPs). For example, all equipment used in the workspace shall be properly maintained such that no leaks of oil, fuel, or residues will take place. Provisions shall be in place to remediate any accidental spills. Implementation of the BMPs will help minimize the potential for impact to Joshua trees both within and outside the Joshua tree buffer zones.	commencement of ground-disturbing activities. **Construction:** Ongoing; BMP compliance and no-work buffer maintained throughout construction.			

Mitigation Measure		Project Phase / Timing	Mitigation Responsibility	Monitoring / Enforcement	Compliance Verification (Date/Initials)
• Night work shall be avoided to ensure no disturbance of pollinators or photoperiods for the remaining Joshua trees.					
MM CUL-1	In the event that archaeological resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be retained to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period.	**Construction:** Ongoing during ground-disturbing activities; immediate halt and retention of qualified archaeologist upon discovery.	Applicant; Construction Contractor; Qualified Archaeologist	Town of Yucca Valley	
MM CUL-2	If significant archaeological resources, as defined by CEQA (Public Resources Code Section 21083.2), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan. The Plan shall outline procedures for data recovery, curation, and reporting consistent with CEQA requirements. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.	**Construction:** If triggered by discovery of significant archaeological resources per MM CUL-1; Monitoring and Treatment Plan prepared prior to resumption of ground-disturbing activities in vicinity of find; ongoing monitoring through project completion.	Applicant; Construction Contractor; Qualified Archaeologist	Town of Yucca Valley; California State Historic Preservation Office (SHPO), if applicable	
MM CUL-3	If human remains or funerary objects are encountered during any activities associated with the Project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the San Bernardino County Coroner shall be contacted pursuant to State Health and Safety Code Section 7050.5 and that code shall be enforced for the duration of the Project. If the human remains are determined to be of Native American origin, the Coroner shall notify the Native American Heritage Commission within 24 hours of this identification, pursuant to Public Resources Code Section 5097.98.	**Construction:** Ongoing during ground-disturbing activities; immediate halt and notification of San Bernardino County Coroner upon discovery.	Applicant; Construction Contractor; San Bernardino County Coroner (upon discovery)	Town of Yucca Valley; San Bernardino County Coroner; Native American Heritage Commission (NAHC), if applicable	
MM GEO-1	In the event that paleontological resources are discovered during ground-disturbing activities associated with the Project, all work shall be halted within 50 feet of the discovery, and a qualified paleontologist shall be retained to evaluate the significance of the find. If the resource is determined to be significant, the paleontologist shall develop a	**Construction:** Ongoing during ground-disturbing activities; immediate halt and retention of qualified paleontologist upon discovery; Paleontological Resource Mitigation Plan prepared prior to resumption of activities in vicinity of	Applicant; Construction Contractor; Qualified Paleontologist	Town of Yucca Valley	

	Mitigation Measure	Project Phase / Timing	Mitigation Responsibility	Monitoring / Enforcement	Compliance Verification (Date/Initials)
	Paleontological Resource Mitigation Plan to address the assessment and recovery of the resource and to monitor further ground-disturbing activities associated with the Project. A final report documenting any found resources, their recovery, and disposition shall be prepared by the qualified paleontologist, and a copy of the report shall be provided to the Town of Yucca Valley Planning Division and an accredited repository/curation facility, such as the San Bernardino County Museum.	find if resource is significant; final report submitted upon project completion.			
MM TCR-1	Prior to the commencement of ground-disturbing activities, the Applicant shall provide written notice to the Agua Caliente Band of Cahuilla Indians (ACBCI) Tribal Historic Preservation Office (THPO) at least 15 business days prior to the start of ground-disturbing activities to retain a qualified ACBCI cultural resource monitor. If ACBCI does not confirm availability in writing or declines to provide a monitor within 10 business days of receiving such written notice, the Applicant shall provide written notice to the Yuhaaviatam of San Manuel Nation (YSMN) Cultural Resources Management Department offering the monitoring opportunity. If YSMN similarly does not confirm availability in writing within 10 business days of receiving such notice, the Applicant shall document its good-faith outreach efforts to both tribes in writing and provide such documentation to the Town of Yucca Valley prior to the commencement of ground-disturbing activities. The retained tribal monitor shall be present on-site during all project-related ground-disturbing activities. In the event that potential pre-contact cultural resources or Tribal Cultural Resources are encountered during ground-disturbing activities, the tribal monitor shall have the authority to direct an immediate halt to all ground-disturbing activities within a 60-foot buffer of the find, consistent with MM CUL-1. The Applicant and	**Pre-construction:** Written notice to ACBCI THPO at least 15 business days prior to commencement of ground-disturbing activities; good-faith outreach documentation provided to Town if neither tribe confirms availability. **Construction:** Tribal cultural resource monitor present on-site during all ground-disturbing activities; immediate halt and written notification to ACBCI THPO and YSMN within 24 hours of any discovery; Cultural Resources Monitoring and Treatment Plan prepared prior to resumption of activities if find is significant.	Applicant; Construction Contractor; Qualified Archaeologist (upon discovery)	Town of Yucca Valley; ACBCI THPO (primary tribal monitor); YSMN Cultural Resources Management Department (designated alternate tribal monitor)	

	Mitigation Measure	Project Phase / Timing	Mitigation Responsibility	Monitoring / Enforcement	Compliance Verification (Date/Initials)
	project contractor shall comply with any stop-work directive issued by the tribal monitor. Upon discovery of any potential pre-contact cultural resources or Tribal Cultural Resources, the Applicant shall notify both the ACBCI THPO and the YSMN Cultural Resources Management Department in writing within 24 hours of the discovery. Information regarding the nature of the find shall be provided to both tribes to allow tribal input with regard to significance and treatment. The significance of the find shall be determined jointly by the tribal monitor, a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards, and the Lead Agency. If the find is determined to be significant, a Cultural Resources Monitoring and Treatment Plan shall be prepared in coordination with the consulting tribe(s) prior to the resumption of any ground-disturbing activities in the vicinity of the find, and all subsequent finds shall be subject to this Plan. If significant Tribal Cultural Resources are found, the consulting tribe that did not serve as the primary monitor at the start of ground-disturbing activities (whether ACBCI or YSMN, depending on which tribe is actively monitoring) may elect to place a tribal monitor on-site for the duration of the ground-disturbing activities in the vicinity of the find.				
MM TCR-2	Any archaeological/cultural documents created as a part of the Project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the Applicant and Town of Yucca Valley for dissemination to YSMN and ACBCI. The Town of Yucca Valley and/or Applicant shall consult in good faith with the consulting tribes throughout the Project's ground-disturbing activities and until all cultural resource documentation is finalized.	**Construction and Post-construction:** Ongoing throughout all ground-disturbing activities and continuing through finalization of all cultural resource documentation generated in connection with the Project.	Applicant; Town of Yucca Valley	Town of Yucca Valley; ACBCI THPO; YSMN Cultural Resources Management Department	

1 *Fee amounts are based on the 2025 CDFW Western Joshua Tree Conservation Act fee schedule and are subject to change at the time of ITP application and permit issuance. The Applicant shall pay the fee amounts established by CDFW at the time of permit issuance.*

NOTICE OF PUBLIC HEARING
YUCCA VALLEY PLANNING COMMISSION
TUESDAY, APRIL 14, 2026
BEGINNING AT 6:00 P.M.
YUCCA VALLEY COMMUNITY CENTER
57090 TWENTYNINE PALMS HIGHWAY
YUCCA VALLEY, CALIFORNIA 92284

A PUBLIC HEARING HAS BEEN SCHEDULED BEFORE THE YUCCA VALLEY PLANNING COMMISSION TO CONSIDER THE FOLLOWING DESCRIBED APPLICATION:

CASE NUMBER: Conditional Use Permits (CUP) 02-25 and Environmental Assessment (EA) 03-25

APPLICANT: John Caglia
P.O. Box 1929
Grants Pass, OR 97528

PROPOSAL: A Conditional Use Permit (CUP) 02-25; Environmental Assessment (EA) 03-25; A Proposal to develop a 1-acre parcel with a drive-through coffee shop. The drive-through coffee shop will be a 1,025-square-foot building with a drive-through window on the east side and a covered walk-up service window on the western side. The walk-up window will serve pedestrians and bicyclists. The building will be in the front of the parcel and close to the frontage access. Access to the subject parcel comes from access easements to the north and south of the proposed project.

LOCATION: 58121 Twentynine Palms Highway
Yucca Valley, CA 92284
Assessor Parcel Number (APN): 0601-416-05

ENVIRONMENTAL DETERMINATION: The project was reviewed under the California Environmental Quality Act (CEQA) and the Town's Guidelines to implement same. A Mitigated Negative Declaration will be prepared pursuant to Section 15070 to 15075 of CEQA.

Any person affected by the application(s) may appear and be heard in support of or opposition to the proposal at the time of the hearing. The environmental findings, along with the proposed project application(s) are available and may be reviewed at the Town of Yucca Valley Planning Division, 58928 Business Center Drive, Yucca Valley, CA 92284 from 7.30 a.m. to 5:30 p.m., Monday through Thursday or obtain information at (760)369-6579.

The Planning Commission in its deliberation could recommend approval of the project, deny the project, or approve the project in an alternative form. If you challenge any of the projects in court, you may be limited to raising only those issues you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the Town Planning Division at, or prior to the Public Hearing.

NOTICE OF INTENT TO ADOPT
A MITIGATED NEGATIVE DECLARATION

Project Title: Yucca Valley Dutch Bros Project
Lead Agency: Town of Yucca Valley
Applicant: Dutch Bros Inc.
Review Period: March 6, 2026, to April 6, 2026 (32 days)

Purpose of the Notice
In accordance with California Environmental Quality Act (CEQA) Guidelines Section 15072, the Town of Yucca Valley has prepared an Initial Study/Mitigated Negative Declaration (IS/MND) for the proposed Yucca Valley Dutch Bros Project. This Notice of Intent (NOI) informs agencies and interested parties about the Project and provides instructions for reviewing and submitting comments

Project Location
The approximately 1.01-acre vacant Project Site is located at 58121 Twentynine Palms Highway (APN: 0601-416-05). The site is situated within an existing commercial corridor, bordered by Big 5 Sporting Goods to the west, Walgreens to the east, a commercial center to the north across Twentynine Palms Highway, and undeveloped land to the south. Single-family residences are located farther east and south across Balsa Avenue. The Project Site is designated Mixed Use (MU) and zoned Mixed-Use Commercial (C-MU) by the Town's General Plan, with surrounding zoning consisting of Commercial (C-N) to the north and Residential (R-S-2) to the south and east.

Project Description
The Project proposes the construction and operation of an approximately 1,025-square-foot Dutch Bros Coffee shop with a dual-lane drive-through facility designed to accommodate 23 queued vehicles, along with 18 surface parking spaces. Construction of the Project would necessitate the removal of existing Western Joshua Trees (Yucca brevifolia) on-site.

Site access would be provided via existing driveways serving the adjacent Big 5 Sporting Goods (to the west) and Walgreens (to the east) commercial developments, with internal circulation connecting to these surrounding uses. In addition to on-site improvements, the Project would contribute in-lieu fees toward future off-site roadway improvements, specifically the widening of Twentynine Palms Highway to an ultimate half-width of 67 feet, to be undertaken at a later date by the Town and the San Bernardino County Transportation Authority.

Hazardous Waste Sites Disclosure
In accordance with Section 15072 of the State CEQA Guidelines, the Project Site is not included on any of the lists of hazardous waste sites enumerated under Government Code Section 65962.5.

Environmental Determination & Document Availability
In accordance with Section 15070 of the California Code of Regulations, the Planning Division of the Town of Yucca Valley has determined that there is no substantial evidence that the proposed Project would have a significant effect on the environment, and that a mitigated negative declaration may be adopted.

The IS/MND is available at the Town's Community Development Department located at 58928 Business Center Drive, Yucca Valley, California 92284. The document is also available online at: https://www.yucca-valley.org/our-town/departments/community-development/planning/land-development/cup-02-25-ea-03-25-dutch-bros.

Public Review and Comment Period
The 32-day public review period begins **March 6, 2026,** and ends **April 6,** 2026. Comments must be provided in writing and received before **5:00 p.m.** on **April 6, 2026.** Comments will be considered by the decision-making body in accordance with State CEQA Guidelines Section 15074(b).

Please send all comments or inquiries by either U.S. mail or electronic mail to:

Jared Jerome, Senior Planner
Town of Yucca Valley
Community Development Department - Planning Division
58928 Business Center Drive
Yucca Valley, CA 92284
Email: jjerome@yucca-valley.org

For comments submitted via email, please include "Yucca Valley Dutch Bros" in the subject line and your name in the body of the email.

Public Hearing
The Project is scheduled to be considered by the Town of Yucca Valley Planning Commission on **Tuesday, April 14, 2026, at 6:00 PM.** The hearing will take place in the Yucca Room at the Yucca Valley Community Center, located at 57090 Twentynine Palms Highway, Yucca Valley, CA 92284.

Pub. S.: 03/04/2026

RESOLUTION NO. PC 26-03

RESOLUTION OF THE PLANNING COMMISSION OF THE TOWN OF YUCCA VALLEY APPROVING EA 03-25 AND CUP 02-25 (PROJECT), FOR WHICH AN INITIAL STUDY/MITIGATED NEGATIVE DECLARATION WAS PREPARED IN ACCORDANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AND ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM

WHEREAS, prior to the adoption of this Resolution, the Town of Yucca Valley prepared an Initial Study and adopted a Mitigated Negative Declaration for the EA 03-25 and Conditional Use Permit CUP 02-25 (Project) in accordance with the requirements of the California Environmental Quality Act of 1970, as amended ("CEQA"), and state guidelines implementing CEQA; and

WHEREAS, the Project analyzed under the Initial Study/Mitigated Negative Declaration consisted of the construction and development of an approximate 1,025 square foot coffee shop that is 24' in height, with dual-lane drive-through facility and associate site improvements. The project is located at 58121 Twentynine Palms Highway and is also identified as APN: 0601-416-05; and

WHEREAS, the Initial Study/Mitigated Negative Declaration concluded that implementation of the Project could result in a number of significant effects on the environment and identified mitigation measures that would reduce the significant effects to a less-than-significant level; and

WHEREAS, in connection with the approval of a project involving the preparation of an initial study/mitigated negative declaration that identifies one or more significant environmental effects, CEQA requires the decision-making body of the lead agency to incorporate feasible mitigation measures that would reduce those significant environment effects to a less-than-significant level; and

WHEREAS, whenever a lead agency approves a project requiring the implementation of measures to mitigate or avoid significant effects on the environment, CEQA also requires a lead agency to adopt a Mitigation Monitoring and Reporting Program to ensure compliance with the mitigation measures during project implementation; and

WHEREAS, the Town of Yucca Valley is the lead agency on the Project, and the Planning Commission is the decision-making body for the proposed Project; and

WHEREAS, the Planning Commission has reviewed and considered the Initial Study/Mitigated Negative Declaration and related Mitigation Monitoring and Reporting Program for the Project and intends to take actions on the Project in compliance with CEQA and state guidelines implementing CEQA; and

WHEREAS, the Initial Study/Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program for the Project are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, the Project will not individually or cumulatively have an adverse effect on wildlife resources, as defined in Section 711.2 of the California Department of Fish and Game Code.

NOW THEREFORE BE IT RESOLVED BY THE PLANNING COMMISSION OF THE TOWN OF YUCCA VALLEY AS FOLLOWS:

THAT THE PLANNING COMMISSION does hereby make the following findings: (1) it has independently reviewed and analyzed the Initial Study/Mitigated Negative Declaration and other information in the record and has considered the information contained therein, prior to acting upon or approving the Project, (2) the Initial Study/Mitigated Negative Declaration prepared for the Project has been completed in compliance with CEQA and consistent with state and local guidelines implementing CEQA, and (3) the Initial Study/Mitigated Negative Declaration represents the independent judgment and analysis of the Town as lead agency for the Project.

THAT THE PLANNING COMMISSION does hereby approve construction of the Project (Planning File No. EA 03-25 and CUP 02-25) and adopt the Mitigation Monitoring and Reporting Program prepared for the Project. The Initial Study/Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are: (1) on file in the Community Development Department Office, located at 58928 Business Center Drive, Yucca Valley, CA, 92284 (2) and area available for inspection by any interested person.

ADOPTED this 14th day of April, 2026.

Mathew Thomas, Chairperson

ATTEST:

Janet Yochmowitz, Secretary

Town of Yucca Valley
Planning Commission Staff Report

To: Planning Commission

From: Jared Jerome, Senior Planner

Date: April 6, 2026

Meeting Date: April 14, 2026

Subject: Environmental Assessment, EA 02-25; Specific Plan 01-04 Amendment #2, Conditional Use Permit, CUP 01-25, Resolution No. 26-XX, Ordinance No. XX, Walmart Fuel Station. A request to amend the existing Specific Plan to allow for the construction and operation of a fuel station with six (6) fueling pumps, twelve (12) fuel dispensers, a 4,950 square foot fuel station canopy, and a 1,556 square foot convenience store. The project site is located at 58501 Twentynine Palms Highway and is also identified as APN: 0601-201-54.

Recommendation:

Environmental Assessment 02-25:

That the Planning Commission recommends approval of EA 02-25, and adoption of the resolution, to the Town Council, for Addendum #1 to the previously adopted Environmental Impact Report.

Conditional Use Permit 01-25:

That the Planning Commission recommends approval of CUP 01-25, a request to construct and operate a six (6) pump gasoline station, twelve (12) fuel dispensers, 4,950 square foot fuel station canopy, and a 1,556 square foot convenience store.

Ordinance No. XX, Specific Plan 01-04, Amendment #2:

That the Planning Commission recommends approval of Ordinance No. XX, Specific Plan 01-04 Amendment #2 to the Town Council, a request to amend the adopted Specific Plan by Ordinance, to allow a gasoline station as an approved land use and to allow for additional signage for the gasoline station and convenience store.

Prior Review:

The Planning Commission recommended approval of Specific Plan 01-04 at their meeting of April 15, 2008. The Town Council adopted Specific Plan 01-04 at their meeting of October 14, 2008.

The Planning Commission recommended approval of Specific Plan 01-04, Amendment #1, at

their meeting of October 12, 2021, for the purpose of altering the approved Sign Program. The Town Council adopted Specific Plan 01-04, Amendment #1, at their meeting of November 16, 2021.

West: General Commercial (C-G)

Surrounding Land Use:

North: Vacant

South: Vacant

East: Commercial Retail and Restaurants

West: Vacant

PROJECT ANALYSIS:

PROJECT DESCRIPTION: The proposed project includes the construction of a new fuel station with six fueling pumps (12 dispensers), an overhead canopy, underground fuel storage, a trash enclosure, and a 1,556 square-foot convenience store. This project is over an approximate area of 1.32 acres. The overhead canopy stands at 17.67 feet, and the convenience store stands at 16 feet. The proposed work includes heavy duty asphalt pavement, heavy duty concrete pavement, concrete walkways to the existing accessible path and bus stop, landscaping, additional storm infrastructure and additional dry utility for the convenience store. The proposed underground sewer will connect to the existing sewer infrastructure of the main store. The convenience store will mimic the hours of the existing Walmart Supercenter, 6AM-11PM, but the gas station will remain operational 24 hours, 7 days a week. The convenience store is expected to have two employees at a time. Alcohol sales are planned to be a part of the convenience store.

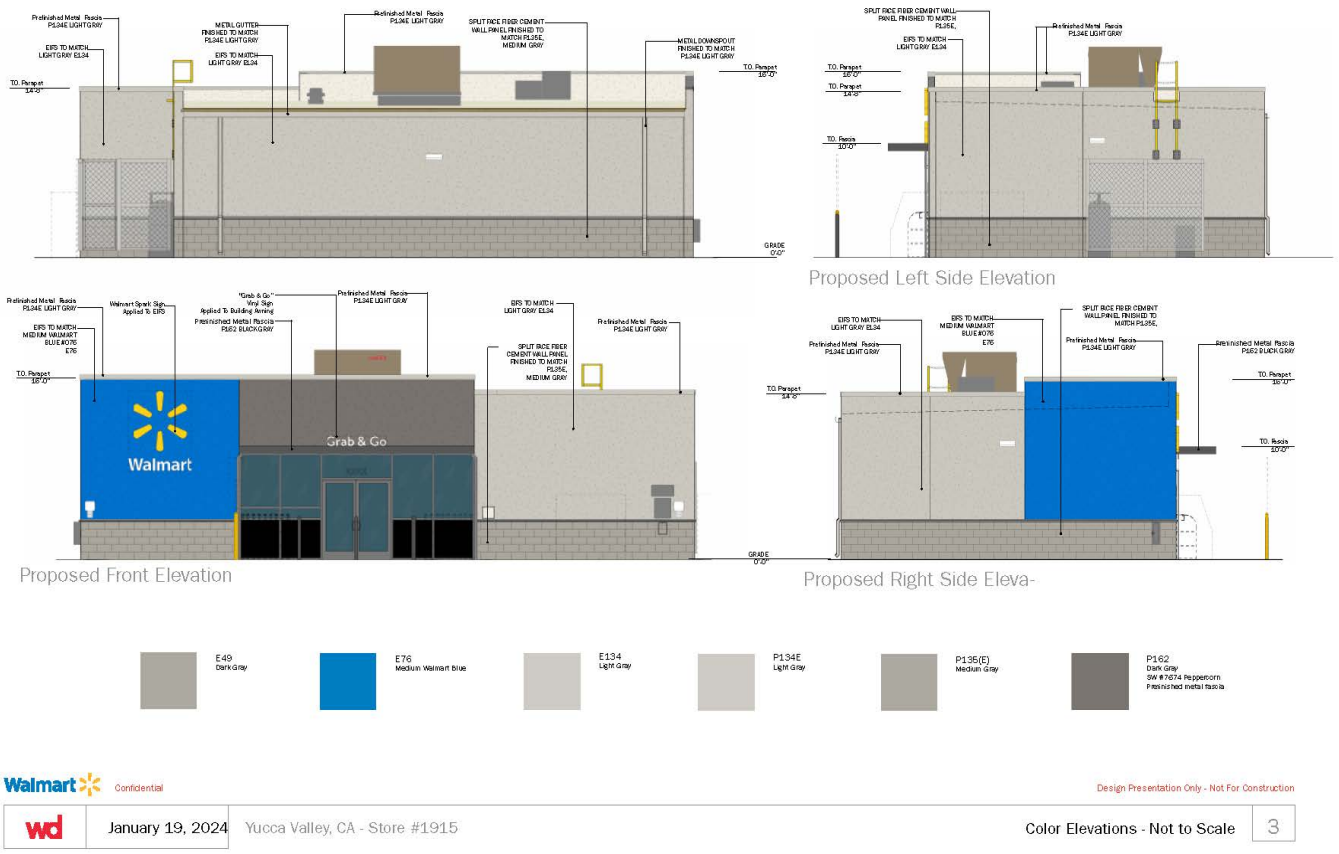
© 2024 KIMLEY-HORN AND ASSOCIATES, INC.
1100 W TOWN AND COUNTRY RD, SUITE 700, ORANGE, CA 92868
PHONE: 714-939-1030 FAX: 714-938-9488
REVISED: 12.22.2025



PROJECT AREA: 1.32 acres within NE portion of 23.85 acre site.

BUILDING AREA: 1,556 square-foot convenience store and 4,950 square-foot fuel station canopy.

SETBACKS:

Front: 15' minimum required by Code. ~200' proposed.

Rear: 10' minimum required by Code (if adjacent property is not designated Commercial or Industrial) ~810' proposed.

Interior Side(s): 10' minimum required by Code. (Only one side yard is required to provide emergency access. If the adjacent property is not designated commercial or industrial, a side yard shall be required along that side of the property) (~115' proposed east) (~520' proposed west)

MAX BUILDING HEIGHT: Maximum 40' allowed by Code. The fueling station canopy is proposed at 17.67' height, with a 14' maximum vehicle clearance, and the convenience store is proposed at 16' height.

BUILDING ELEVATIONS: The proposed building is of varying heights, materials, and colors, including dark gray cement, light gray fiber cement wall, and blue fiber cement wall. The proposed canopy consists of a blue, light gray, and white color palette on factory pre-finished materials.

SIGNAGE: Permits for signage are to be processed consistent with standards adopted by this Specific Plan. The Specific Plan includes a comprehensive Master Sign Program for the property, addressing wall sign and freestanding sign standards for the anchor tenant and outparcel tenants. The proposed Specific Plan

amendment includes new provisions to address signage allowances for the fueling station canopy, convenience and fueling station signage, and modifications to existing pylon signage. The existing pylon sign at the NE corner of the overall site is proposed to be modified to include an electronic display of fuel station prices. A new monument sign is proposed at the NE corner of the project site for the fuel station to include an electronic display fuel station prices.

FAR: 1.20 Maximum allowed by Code. 0.185 FAR includes existing and proposed construction.

PHASED CONSTRUCTION: Phased construction is not proposed.

FLOOD ZONE: Not applicable to project area.

ALQUIST PRIOLO/EARTHQUAKE FAULT HAZARD ZONE: Not applicable to project area.

ACCESS/PARKING: The current Specific Plan requires, for the major tenant, a ratio of 1 space per 200 square feet of building area, totaling 920 spaces. The proposed Specific Plan Amendment reduces that standard, for the major tenant, to 1 space per 250 square feet of building area, totaling 737 spaces. All other land uses shall comply with Development Code parking requirements. The proposed convenience store is 1,556 square feet and requires a total of 6 spaces based on retail sales parking ratio in the Development Code of 1 space per 250 square feet of building area. A total of 743 spaces are required and a total of 785 spaces are proposed across the overall site, excluding stalls occupied by parking corrals. The traffic circulation of existing drive-aisles along the NE portion of the existing parking lot would be modified to accommodate the proposed fuel station improvements, eliminating the drive-aisle entrance at the NE corner of the overall parcel. A truck turning plan, attached to this staff report, identifies how fuel trucks would enter and exit the site.

ADA: The existing ADA parking spaces on the site total 32 spaces. The proposed ADA parking would total 33 spaces, adding 1 space. ADA path of travel is required.

AIRPORT COMPREHENSIVE LAND USE PLAN: The project is located within the Part 77 Imaginary Surface - Horizontal Surface and Safety Review Area 3 of the Airport Comprehensive Land Use Plan.

LANDSCAPING:

The preliminary landscaping for the proposed project includes the following plants, identified by scientific name, common name, size, and quantity proposed, and other decorative ground cover:

Chilopsis Linearis/Desert Willow (24" BOX) - (QUANTITY 9)
Pistacia Chinensis/Chinese Pistache (24" BOX) - (QUANTITY 14)
Hesperaloe Parviflora/Red Yucca (5 GAL) - (QUANTITY 21)
Leucophyllum Frutescens 'Compacta'/Compact Desert Ranger (5 GAL) - (QUANTITY 77)
Rosemarinus Officinalis 'Prostrate'/Prostrate Rosemary (5 GAL) - (QUANTITY 52)
Ground Cover - Lantana X 'New Gold'/New Gold Lantana (1 GAL) - (QUANTITY 48)
Ground Cover - 3" DEPTH MIN. OF 1/4"-3/4" CRUSHED ROCK / TO MATCH EXISTING (6,649 SF)
Ground Cover - 2" DEPTH DECOMPOSED GRANITE / COLOR AND SIZE TO MATCH EXISTING (6,124 SF)
Ground Cover - EXISTING LANDSCAPE TO REMAIN (8,513 SF)
Existing Tree To Be Removed - (QUANTITY 22)

TRASH ENCLOSURE:

Project includes a trash enclosure located to the southwest of the drive-through entrance, which shall accommodate three (3) bins for landfill, recycling, and organic waste in compliance with SB 1383.

RIGHT OF WAY DEDICATION REQUIRED:

No additional right-of-way dedication is required.

OFF SITE IMPROVEMENTS REQ:

No additional off-site improvements required.

ASSESSMENT DISTRICTS REQ: No additional action required.
STREET LIGHTS: N/A

CAL TRANS PERMIT REQUIRED: Caltrans permit is required if any work is proposed within Caltrans ROW.

UTILITY UNDERGROUNDING: Yes, in accordance with Ordinance 233.

ON-SITE LIGHTING: All lighting shall be shielded to comply with Development Code Chapter 8.70, Outdoor Lighting. Condition of Approval P5 is recommended, requiring 0.3-foot candles or less of lighting output at each property line, to be reviewed by Planning Division staff.

AIRPORT INFLUENCE AREA: Yes. A deed notice shall be recorded based on the proximity of Yucca Valley Airport.

TRAILS AND BIKE LANE MASTER PLAN: N/A

PUBLIC FACILITY MASTER PLAN: N/A

PARKS AND REC MASTER PLAN: N/A

MASTER PLAN OF DRAINAGE: N/A

SPECIFIC PLAN/PLANNED DEVELOPMENT: Yes, the proposed project includes amendment of the Yucca Valley Retail Specific Plan (S-01-04).

GATEWAY REIMBURSEMENT DISTRICT: N/A

AVALON SIGNAL REIMBURSEMENT DISTRICT: N/A

HDWD SEWER CONNECTION: Required upon notification of availability by HDWD.

FUTURE PLANNING COMMISSION ACTION REQ: No, unless requested by the Planning Commission or Director.

TOWN COUNCIL ACTION REQUIRED: Yes, Environmental Assessment, EA 02-25; Ordinance No. XX, Specific Plan 01-04 Amendment #2, Conditional Use Permit, CUP 01-25 is subject to Town Council approval at future scheduled public hearings.

GENERAL PLAN CONSIDERATION:

The General Plan provides overall guidance and a comprehensive vision for the physical development of the entire Town. Specific Plans are typically used for large-scale projects that require a comprehensive approach to planning and infrastructure issues or areas that warrant customized regulatory guidance that is not present in the Town's Development Code. Specific plans address site-specific concerns and provide guidance for the design, use, and development of that site. The Yucca Valley Retail Specific Plan was adopted by Town Council at their meeting of October 14, 2008. The Town Council adopted Specific Plan 01-04, Amendment #1, at their meeting of November 16, 2021, to address minor changes to the master sign program of the anchor tenant building. The proposed project, including policy amendments to the specific plan and site improvements to add a fueling station and convenience store are internally consistent with the provisions of the General Plan.

DEVELOPMENT CODE CONSIDERATION:

The Specific Plan is the Zoning Designation for the property. Where the Specific Plan is silent, Development Code provisions apply. The proposed project, including policy amendments to the specific plan and site improvements to add a fueling station and convenience store are substantially consistent with the provisions of the Development Code, deviating from Development Code standards as outlined in the Specific Plan to address site-specific guidance for the design, use, and development of the site.

ENVIRONMENTAL CONSIDERATIONS:

An EIR was previously prepared for the project and adopted by Town Council on October 14, 2008. The proposed project includes adoption of the resolution for Addendum #1 to the previously adopted Environmental Impact Report consistent

with CEQA Section 15164.

CONCLUSION:
Based upon the facts on record, the project is consistent with the Town's General Plan, Development Code, and Specific Plan as recommended and conditioned.

CONDITIONAL USE PERMIT FINDINGS
A. That the location, size, design, density and intensity of the proposed development is consistent with the General Plan, the purpose of the land use district in which the site is located, and the development policies and standards of the Town;

The proposed project site is located in the Commercial (C) General Plan Designation. The proposed size, design, and land use are consistent with the General Plan, Development Code, and proposed Specific Plan requirements.

B. That the location, size, design and architectural design features of the proposed structures and improvements are compatible with the site's natural landform, surrounding sites, structures and streetscapes;

The proposed development features varying heights, materials, and colors, including dark gray cement, light gray fiber cement wall, and blue fiber cement wall. The proposed canopy consists of a blue, light gray, and white color palette on factory prefinished materials.

C. That the proposed development produces compatible transitions in the scale, bulk, coverage, density and character of the development between adjacent land uses;

The proposed structure is not anticipated to result in any architectural incompatibilities in terms of scale, bulk coverage, density, or character of surrounding land uses. The proposed canopy and convenience store structure is set back from the highway and adjacent structures and does not result in any architectural incompatibilities with its surroundings.

D. That the building site and architectural design is accomplished in an energy efficient manner;

The proposed project is required to meet all applicable California Building Code requirements for the type of commercial structure including the CALGreen requirements. As such, the building is anticipated to accomplish energy efficiency.

E. That the materials, textures and details of the proposed construction, to the extent feasible, are compatible with the adjacent and neighboring structures.

The proposed development features varying heights, materials, and colors, including dark gray cement, light gray fiber cement wall, and blue fiber cement wall. The proposed canopy consists of a blue, light gray, and white color palette on factory prefinished materials. The proposed canopy and convenience store structure is set back from the highway and adjacent structures and does not result in any architectural incompatibilities with its surroundings.

F. That the development proposal does not unnecessarily block views from other buildings or from public ways, or visually dominate its surroundings with respect to mass and scale to an extent unnecessary and inappropriate to the use.

The fueling station canopy is proposed at 17.67' height, with a 14' maximum vehicle clearance, and the convenience store is proposed at 16' height. Due to its height and setback from the adjoining right-of-way, the proposed project is not anticipated to visually dominate its surroundings or block views from other buildings or the public right of way. Incidental improvements to the existing pylon sign conform to the existing sign dimension and the proposed new monument sign is setback internally on-site from the SR-62 right-of-way.

G. That the amount, location, and design of open space and landscaping conforms to the requirements of the Development Code, enhances the visual appeal and is compatible with the design and functions of the structure(s), site and surrounding area;

The preliminary landscaping for the proposed project includes the following plants, identified by scientific name, common name, size, and quantity proposed, and other decorative ground cover: Chilopsis Linearis/Desert Willow (24" BOX)
- (QUANTITY 9), Pistacia Chinensis/Chinese Pistache (24" BOX) - (QUANTITY 14), Hesperaloe Parviflora/Red Yucca (5 GAL) - (QUANTITY 21), Leucophyllum Frutescens 'Compacta'/Compact Desert Ranger (5 GAL) - (QUANTITY 77),
Rosemarinus Officinalis 'Prostrate'/Prostrate Rosemary (5 GAL) - (QUANTITY 52), Ground Cover - Lantana X 'New Gold'/New Gold Lantana (1 GAL) - (QUANTITY 48), Ground Cover - 3" DEPTH MIN.
OF 1/4"-3/4" CRUSHED ROCK / TO MATCH EXISTING (6,649 SF), Ground Cover - 2" DEPTH DECOMPOSED GRANITE / COLOR AND SIZE TO MATCH EXISTING (6,124 SF), Ground Cover - EXISTING LANDSCAPE TO REMAIN (8,513 SF), and
Existing Tree To Be Removed - (QUANTITY 22).

The proposed project landscaping is required to comply with the California Model Water Efficiency Landscape Ordinance (MWELO). The proposed project therefore conforms to the requirements in the Town's Development Code as conditioned.

H. That quality in architectural design is maintained in order to enhance the visual environment of the Town and to protect the economic value of existing structures;

The structures are consistent with the Development Code and proposed Specific Plan and provide quality in architectural design consistent with the Commercial Design Guidelines.

I. That there are existing public facilities, services, and utilities available at the appropriate levels and/or that new or expanded facilities, services and utilities shall be required to be installed at the appropriate time to serve the project as they are needed;

The project is located in an area of developed commercial properties. Each utility provider charges connection and service fees which are designed to include the need for additional facilities as growth occurs. The project applicant will be required to pay these fees as applicable.

Electrical services are provided by Southern California Edison. Water services are provided by the Hi Desert Water District (HDWD). Solid Waste Services are provided by Burrtec, Inc. The Town of Yucca Valley requires mandatory solid waste services, and the project will be served by Burrtec.

J. That access to the site and circulation on and off-site is required to be safe and convenient for pedestrians, bicyclists, equestrians and motorists;

Onsite traffic circulation will be modified to accommodate the proposed fuel station improvements, eliminating the drive-aisle entrance at the NE corner of the overall parcel. ADA access is required to be provided to the public right-of-way and from the vehicle parking lot to the structures. To accommodate the proposed fuel station improvements, eliminating the drive-aisle entrance at the NE corner of the overall parcel. Points of off-site ingress and egress to SR-62 and adjoining streets are not proposed to be modified.

K. That traffic generated from the proposed project has been sufficiently addressed and mitigated and will not adversely impact the capacity and physical character of surrounding streets;

The traffic analysis for the proposed project identified up to 826 daily vehicle trips. Implementation of the TDM requirements under Mitigation Measure 4.3.2A would contribute to reducing vehicle miles traveled (VMT) under the proposed project. As a result, impacts associated with the construction of the proposed project would be less than significant and would not require any additional mitigation.

L. That traffic improvements and/or mitigation measures have been applied or required in a manner adequate to maintain a Level of Service C or better on arterial roads, where applicable, and are consistent with the Circulation Element of the Town General Plan;

The Certified EIR evaluated traffic operations using Level of Service (LOS) under the San Bernardino County CMP Traffic Impact Analysis Guidelines for both Opening Day (2007) and Year 2030 scenarios. Under Opening Day + Project conditions, five intersections would operate below the Town's LOS standard, constituting a significant impact. Significant and unavoidable impacts were identified for the original EIR and required mitigation was implemented. Mitigation measures related to level-of-service (LOS) are not applicable to the current project under CEQA.

M. That there will not be significant harmful effects upon environmental quality and natural resources including endangered, threatened, rare species, their habitat, including but not limited to plants, fish, insects, animals, birds or reptiles;

Significant and unavoidable impacts were identified for the original EIR and required mitigation was implemented. The proposed project is addressed by the proposed Addendum #1 consistent with CEQA Section 15164.

N. That there are no other relevant or anticipated negative impacts of the proposed use that cannot be mitigated and reduced to a level of non-significance in conformance with CEQA, the California Environmental Quality Act;

Significant and unavoidable impacts were identified for the original EIR and required mitigation was

implemented. The proposed project is addressed by the proposed Addendum #1 consistent with CEQA Section 15164.

O. That the impacts which could result from the proposed development, and the proposed location, size, design and operating characteristics of the proposed development, and the conditions under which it would be operated or maintained will not be detrimental to the public health, safety and welfare of the community or be materially injurious to properties or improvements in the vicinity or be contrary to the adopted General Plan;

Significant and unavoidable impacts were identified for the original EIR and required mitigation was implemented. The proposed project is addressed by the proposed Addendum #1 consistent with CEQA Section 15164.

P. That the proposed development will comply with each of the applicable provisions of this code, and applicable Town policies; except approved variances.

The project, as conditioned, complies with the standards and requirements of the Development Code, Specific Plan, and the policies and procedures of the Yucca Valley General Plan.

SPECIFIC PLAN REQUIRED FINDINGS

A. The proposed specific plan meets all of the following content criteria:

1. Specifies through text and/or diagrams, the distribution, location, and extent of the uses of land, including open space, within the area covered by the plan;
2. Specifies through text and/or diagrams, the proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;
3. Specifies through text and/or diagrams, the standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable;
4. Specifies a program of implementation measures including regulation, programs, public works projects, and financing measures necessary to carry out subsections A1, A2 and A3 of this section;
5. Includes a statement of the relationship of the specific plan to the general plan, development code, and any other applicable plan or ordinance;
6. Addresses any other subjects which are necessary for implementation of the general plan.

The proposed Specific Plan Amendment is consistent with the criteria identified above.

B. The location and design of the proposed development will be consistent with the goals and policies of the general plan and with any other applicable plan or policies adopted by the town and with any other applicable provisions of this development code.

The location and design of the proposed project is consistent with the goals and policies of the General Plan,

insofar as the Specific Plan promotes the diversification of commercial land uses in Town, and is located on Twentynine Palms Highway.

C. The proposed location will allow the development to be well integrated with or adequately buffered from its surroundings, whichever may be appropriate.

The proposed location will allow the development to be well integrated with its surroundings, insofar as the project will share access with the Home Depot and existing Walmart facilities, and its location on Twentynine Palms Highway facilitates access and circulation.

D. All vehicular traffic generated by the development, either in phased increments or at full build out, will be accommodated safely and without causing significantly increased congestion upon adjoining streets.

All vehicular traffic generated by the development will be accommodated safely and without causing significantly increased congestion upon adjoining streets, because the conditions of approval and the mitigation measures assure that adequate levels of service will be maintained at build out of the project.

E. The final specific plan will identify a methodology to allow land uses to be adequately serviced by existing or proposed public facilities and services. In appropriate circumstances, and as provided elsewhere by this development code, the town may require that suitable areas be reserved for uses such as schools, parks and pedestrianways; public open spaces may be dedicated or reserved by private covenant for the common use of residents, establishments or operations in the development.

The final specific plan will identify a methodology to allow land uses to be adequately serviced by existing or proposed public facilities and services, insofar as all services are available in the area, and the Specific Plan requires the extension of adequate infrastructure to provide all services to the site.

F. In accordance with the requirements of the California environmental quality act (CEQA), environmental impacts have been reduced to a level of nonsignificance; or in the case where such impacts remain, a statement of overriding considerations must be adopted to justify the merits of project implementation after certification of the environmental impact report.

In accordance with the requirements of the California Environmental Quality Act (CEQA), environmental impacts have been reduced to a level of insignificance wherever possible, and a statement of overriding considerations has been adopted to justify the merits of the implementation of the project after certification of the original EIR. The proposed project is addressed by the proposed Addendum #1 consistent with CEQA Section 15164.

G. The proposed specific plan shall contribute to a balance of land uses so that local residents may work and shop in the community in which they live.

The specific plan amendment will contribute to a balance of land uses so that local residents may work and shop in Town, because the project will add to the shopping opportunities, and provide new jobs for Town residents.

H. The proposed specific plan will not be detrimental to the public health, safety, or welfare of the town.

The specific plan amendment will not be detrimental to the public health, safety or welfare of the Town, insofar as its impacts and infrastructure requirements are to be mitigated by the applicant, and maintenance districts and other methods are included which assure long-term maintenance is not the responsibility of the Town.

Project Information

Project Address 58501 Twenty Nine Palms Hwy Assessor Parcel Number(s) 0601201540000
Project Location Proposed project located at the North East side of Walmart parking lot.

Project Description: Walmart is proposing a new 1.21 Acres project. The proposed project includes the construction of a fuel station with 6 fueling dispensers with a canopy, a 1,556 square-foot convenience store which includes alcohol sales, and parking stalls within the existing parking lot of Wal-mart super center. Any proposed utilities will be underground, including the fuel tanks.

Please attach any additional information that is pertinent to the application.

Town of Yucca Valley
Community Development Department
58928 Business Center Drive

Environmental Assessment

1. Property boundaries, dimensions and area (also attach an 8 ½ x 11" site plan):
   property is 22.74 Acres. Bounded by 29 Palms Hwy on the north side, Avalon Ave and other commercials on the Wast, Palisade Dr on the South, and Home Depot and other commercials on the East.
2. Existing site zoning: C-G: General Commercial
3. Existing General Plan designation: C: Commercial
4. Precisely describe the existing use and condition of the site:
   The existing site is a Walmart supercenter
5. Existing Zoning of adjacent parcels:
   North R-M-8 South I East C-G West C-G
6. Existing General Plan designation of adjacent parcels:
   North C South I East C West C
7. Precisely describe existing uses adjacent to the site:
   North Single-family houses across 29 Palms Hwy
   South Vacant land
   East Home Depot and other general commercials
   West Restaurants and other general commercials
8. Describe the plant cover found on the site, including the number and type of all protected plants: The plant cover on the site is desert landscaping that utilizes the region and native species prior to development.
   No protected plants found on site.

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

Note: Explain any "Yes" or '"Maybe" responses to questions below. If the information and responses are insufficient or not complete, the application may be determined incomplete and returned to the applicant.

Yes	Maybe	No	
☐	☐	☑	9. Is the Site on filled or slopes of 15% or more or in a canyon? (A geological and/or soils Investigation report is required with this application.)
☐	☐	☑	10. Has the site been surveyed for historical, paleontological or archaeological resources? (If yes, a copy of the survey report is to accompany this application.)
☐	☐	☑	11. Is the site within a resource area as identified in the archaeological and historical resource element?
☐	☐	☑	12. Does the site contain any unique natural, ecological, or scenic resources?
☐	☐	☑	13. Do any drainage swales or channels border or cross the site?
☑	☐	☐	14. Has a traffic study been prepared? (If yes, a copy of the study is to accompany this application.)
☐	☐	☑	15. Is the site in a flood plain? (See appropriate FIRM)

Project Description Proposed fuel station with 6 dispensers, and associated 1,556 SF Convenience Store

Complete the items below as they pertain to your project. Attach any other supplemental information that will assist in the review of the proposed project pursuant to CEQA.

1. **Commercial, Industrial, or Institutional Projects:**

   A. Specific type of use proposed: Gasoline dispensing station

   B. Gross square footage by each type of use: approximately 52,707 sq. ft.

   C. Gross square footage and number of floors of each building: 1,556 sq. ft. one story convenience store.

   D. Estimate of employment by shift: 6AM-2PM, 2PM-10PM

   E. Planned outdoor activities: N/A

2. **Percentage of project site covered by:**

   Paving 85.6 % Building 2.8 % Landscaping 11.6 % Parking 4.8 %

3. **Maximum height of structures** 17.67 foot canopy

4. **Amount and type of off street parking proposed**: 14 standard stalls and 1 ADA stall

5. **How will drainage be accommodated?** The site will following existing drainage matters where water surface flows to existing drains except for the fueling pad and surface of storage tanks. These ares will drain to 2 proposed inlets where it will flow through an oil water separator.

6. **Off-site construction (public or private) required to support this project:** N/A

7. **Preliminary grading plan estimate of cut and fill** Cut: 150 Cu. Yards, Fill: 225 Cubic Yards

8. **Description of project phasing if applicable:** N/A

9. **Is this project part of a larger project previously reviewed by the Town? If yes, identify the review process and associated project title(s)** Yes, an existing Wal-Mart Supercenter
   Project Title: Wal-Mart #1915-04

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

11. During construction, will the project: (Explain any "yes" or "maybe" responses to questions below – attach extra pages if necessary.)

Yes	Maybe	No	
☐	☑	☐	A. Emit dust, ash, smoke, fumes or odors?
☐	☐	☑	B. Alter existing drainage patterns?
☐	☑	☐	C. Create a substantial demand for energy or water?
☐	☐	☑	D. Discharge water of poor quality?
☐	☐	☑	E. Increase noise levels on site or for adjoining areas?
☐	☐	☑	F. Generate abnormally large amounts of solid waste or litter?
☑	☐	☐	G. Use, produce, store, or dispose of potentially hazardous materials such as toxic or radioactive substances, flammable or explosives?
☐	☐	☑	H. Require unusually high demands for such services as police, fire, sewer, schools, water, public recreation, etc.
☐	☐	☑	I. Displace any residential occupants?

Owner/Applicant Authorization

Applicant/Representative: I/We have reviewed this completed application and the attached material. The information included with this application is true and correct to the best of my/our knowledge. I/We further understand that the Town may not approve the application as submitted, and may set conditions of approval. Further, I/We understand that all documents, maps, reports, etc., submitted with this application are deemed to be public records. This application does not guarantee approval or constitute a building permit application. Additional fees may be required depending on additional administrative costs.

Signature: _____

Name: Ryan Alvarez, P.E.

Date: 06/03/2025

Property Owner: I/We certify that I/We are presently the legal owner(s) of the above described property (If the undersigned is different from the legal property owner, a letter of authorization must accompany the form). Further, I/We acknowledge the filing of this application and certify that all of the above information is true and accurate. I/We understand that I/We are responsible for ensuring compliance with conditions of approval. I/We hereby authorize the Town of Yucca Valley and or/its designated agent(s) to enter onto the subject property to confirm the location of existing conditions and proposed improvements including compliance with applicable Town Code Requirements. Further, I/We understand that all documents, maps, reports, etc., submitted with this application are deemed to be public records. This application does not guarantee approval or constitute a building permit application. Additional fees may be required depending on additional administrative costs. I am hereby authorizing Ryan Alvarez to act as my agent and is further authorized to sign any and all documents on my behalf.

Signature: DocuSigned by: _____ 748AEE87E09C430...

Agreement to Pay All Development Application Fees

In accordance with Town Council Resolution 24-07 the Town collects certain fees based on the actual cost of providing service. The application deposit for this project (as indicated below) may not cover the total cost of processing this application. I/We are aware that if the account has 25% or less remaining prior to completion of the project, staff will notify the undersigned in writing, of the amount of additional deposit required to complete the processing of the application, based on Staff's reasonable estimate of the hours remaining to complete this application process.

Further, I understand that if I do not submit the required additional deposit to the Town within 15 business days from the date of notification by the Town, the Town will cease processing of the application and/ or not schedule the project for action by the Planning Commission or Town Council until the fees have been paid.

Any remaining deposit will be refunded to me at time of closeout after I have submitted any required approved project plans and forms, including signed conditions of approval, or upon my written request to withdraw the application.

As the applicant, I understand that I am responsible for the cost of processing this application and I agree that the actual costs incurred processing this application will be paid to the Town of Yucca Valley.

Deposit Paid: 8,391

Conditional Use Permit Application Submittal Requirements

Initial Submittal Requirements	# Required
Completed and Signed Applications and Filing Fee	1
Project Description and Existing Conditions Letter	1
Signed completed Environmental Information form	1
Signed Agreement for Cost Recovery	1
Signed Hazardous Waste Site Statement	1
Preliminary Title Report within 60 days of application date	1
Grant Deeds for all involved properties	1
Site Plan (See Section A)	5
Floor Plans	5
Building elevations, including a minimum of one (1) color set	5
Preliminary Grading and Drainage Plan (Section B)	5
Detailed slope analysis if project contains any slopes of 15 percent or greater	5
Preliminary Landscape Plans	5
Native Plant Plan	5
Photometric Plan	5
Exterior Lighting Cutsheets	1
Utility Plan including location and capacity	5
Materials Board	1
8 1/2 x 11 reductions of all plans	1
Applicable utility service availability letters	1
Water purveyor service letter or ground water report prepared and signed by a registered civil engineer	1
Signed statement indicating method of sewage disposal and if Regional Water Quality Control Board approval is required	1
Signed surrounding property owners list certification	1
Surrounding property owners mailing list and labels	2
Surrounding properties radius map showing project site	1
Underlying Conditions of Approval (if applicable)	1
Copy of underlying Recorded Map and Environmental Constraints Sheet (if applicable)	1
Planned Development Document (if applicable)	2
Specific Plan (if applicable)	2
All maps, plans, special studies, reports, etc. submitted in hard copy as part of this application are also to be delivered electronically, by CD, flash drive or email at time of submittal.	1
Upon review of the initial submittal, the Town will determine which of the following studies will be required for the project:	
Air Quality and Greenhouse Gas Inventory/Analysis	2
Archaeological Survey	2
Biological Report to include Native Plant Inventory and Focused Desert Tortoise	2
Geological Report, if property is located within an Alquist Priolo zone	2
Geotechnical/Soils Report	2
Hydrology Report prepared by a registered Civil Engineer	2
Noise Study	2
Traffic Study/Analysis prepared by a registered Civil Engineer	2
Please note that each project and each property are unique. Some projects may not require the submittal of each item listed above at time of submittal. Some circumstances may require items not included on the above list. Please contact Planning Staff if you have any questions.	

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

Plan Preparation and Guidelines

All plans shall be drawn on uniform sheets no less than 24" X 36" (or as approved by the Community Development Department). All plans must be collated, stapled and folded as close as possible to 8 ½" x 11" notebook size. All plans shall be clear, legible and accurately scaled. The site plan, preliminary landscape plan, photometric plan, building elevations and native plant plan should all be at the **same** scale and shall be consistent with each other.

Section A. Site Plan Content

Scale: Engineering scale not to exceed 1"=100'.

The following information shall be included on the plan:

- Data table formatted in the following order:
  - Assessor's Parcel Number(s) (book, page and parcel number)
  - Legal description
  - Existing and proposed zoning designation
  - Existing and proposed General Plan designation
  - Specific Plan identification and land use designation (if applicable)
  - Existing and proposed land use
  - Total Gross Area: square feet and acres
  - Total Net Area: square feet and acres
  - Name of utility purveyors and type of sewage disposal

- Name, address, phone number, and email of applicant, owner and registered civil engineer or licensed surveyor.
- Graphic scale (with bar scale) and north arrow
- North arrow (make top of map north)
- Vicinity map with labeled streets
- Date plan prepared
- Revision block indicating date when plan is revised through the development review process
- Surrounding information for adjoining properties including zoning and land use
- Existing buildings and traveled ways within the proposed project and within 100 feet of the exterior boundaries.
- Property lines, dimensions (metes & bounds) and location of adjoining lot lines.
- The locations, names and existing widths of all highways, streets, or easements within 100 feet of the project boundaries that provide legal access to the property.
- The location of existing wells, cesspools, sewers, culverts, drain pipes, underground structures, or excavated areas within 100 feet of any portion of the project noting thereon whether or not they are to be abandoned, removed, or remain in operation.
- The location of all existing and proposed fire hydrants.
- Location of on-site utilities and locations of existing public utilities including sanitary sewers, water mains and storm drains.

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

- The approximate location of all areas subject to storm water overflow, inundation or flood hazard (indicate limits of FEMA floodplain and floodway), and the location and direction of flow of each watercourse.
- Delineation of special hazard zones (i.e., earthquake faults, liquefaction zones, etc.).
- If the site is proposed to be developed in phases, the proposed sequence of phasing shall be provided.

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

Section B. Preliminary Grading Plan Content

Scale: Engineering scale not to exceed 1"=40'.

The following grading information shall be included on the plan:

- Title Block
  - Name, address, phone, and email address of applicant, owner, and engineer
- Legend, north arrow, bar and graphic scale
- Data Table
  - Assessor's Parcel Number(s)
  - Project Name
  - Legal Description (i.e. Tract/Parcel Map and lot(s)/parcel(s))
  - Approximate earthwork quantities (CY), include cut and fill
  - Date and Source of Topography (should be current)

- Preliminary pad elevations
- Minimum 1-foot contour interval
- Drainage facilities
- Existing and proposed easements, property lines, rights-of-way
- Overall cut and fill cubic yards (quantity to be called out on the plan)
- Vicinity map, bar and graphic scale
- Existing and proposed improvements within and 50' beyond the site boundaries (label those proposed to remain or to be removed)
- Shade pavement areas and fill slopes 3:1 or steeper
- Streets; typical cross-sections to show existing and proposed improvements, utilities, right-of-way, etc.
- Limits of FEMA floodplain and floodway
- Delineate open space areas
- Delineation of special hazard zones (i.e., earthquake faults, liquefaction zones, etc.)
- Existing topography at least fifty (50) feet beyond project boundary including natural features to be preserved.
- Proposed street grades with arrows indicating the direction of flow.

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

Property Owners Mailing List

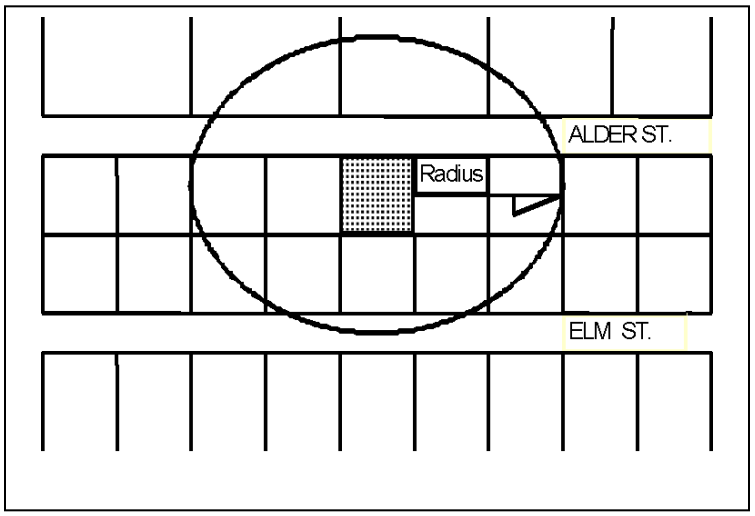
All applications that are subject to a Public Hearing require the applicant to submit a list of property owners who own property contiguous to and within 300 feet of the project site. This process is required by Section 83.010330 of the Development Code to notify residents and property owners in the immediate vicinity. Staff will send public notices to these individuals informing them of the proposed project and scheduled public hearings.

The surrounding property owner information must be obtained from the most current San Bernardino County Assessor's roll or shall be prepared and verified by a title company doing business in San Bernardino County. A County Assessor's office is located at 63665 29 Palms Hwy in Joshua Tree. The general telephone number for the Assessor's office is 760-366-1420.

MATERIALS REQUIRED:

- Two (2) sets of adhesive labels containing the mailing address of the owner(s), applicant(s) and of all surrounding property owners, including vacant properties. Mailing labels must contain: Assessor's Parcel Number, property owners name, address and zip code.
- One (1) copy of the labels sheets.
- One (1) radius map showing the subject property and all surrounding properties. The appropriate radius shall be drawn from the exterior boundaries of the subject property as shown in the sample below. The scale of the radius map shall be large enough to clearly show all surrounding properties.
- One (1) electronic copy of all submitted materials.

Sample Vicinity/Radius Map



Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

SURROUNDING PROPERTY OWNERS LIST CERTIFICATION

(To be submitted with application)

I, Ryan Alvarez , certify that on 8/05/2024 the attached property owners list was prepared by Kimley-Horn & Associates Inc. pursuant to the requirements of the Town of Yucca Valley. Said list is a complete compilation of the owner(s), applicant(s) and representative of the subject property and all owners of surrounding properties within a radius of 300 feet from all exterior boundaries of the subject property and is based on the latest equalized assessment rolls of the San Bernardino County Assessor's Office dated 06/28/2024 . I further certify that the information filed is true and correct to the best of my knowledge; I understand that incorrect and erroneous information may be grounds for rejection or denial of the development application.

Hazardous Waste and Substance Sites

Government Code Section 65962.5 requires each applicant for any development project to consult the State List of Hazardous Waste and Substance Sites. Based upon the list, the applicant/representative is required to submit a signed statement to the Town of Yucca Valley indicating whether the project is located on a site which is included on the list before the Town accepts the application as complete. If the project is listed by the State as a hazardous waste or substance site, the applicant must fully describe on the "Environmental Information Form" the nature of the hazard and the potential environmental impact. Attached is a standard statement for the applicant to sign.

The State list of Hazardous Waste and Substance Sites (which is annually updated) may be reviewed at the following web site address:

http://www.dtsc.ca.gov/SiteCleanup/Cortese_List.cfm

Attachment: Hazardous Waste Site Statement

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

HAZARDOUS WASTE SITE STATEMENT

I have been informed by the Town of Yucca Valley of my responsibilities, pursuant to California Government Code Section 65962.5, to notify the Town as to whether the site for which a development application has been submitted is located within an area which has been designated as the location of a hazardous waste site by the Office of Planning and Research, State of California (OPR).

I am informed and believe that the proposed site, for which a development application has been submitted, is not within any area specified in said Section 65962.5 as a hazardous waste site.

I declare under penalty of perjury of the laws of the State of California that the foregoing is true and correct.

Dated: 8/05/2024

Special Studies

In order to ensure a project will comply with applicable local, State and Federal requirements, special studies or reports may be required for a project. These special studies can include biological, hydrologic, soils, geotechnical, noise, photometric, traffic, etc. Some of these studies are valid for a limited period of time. The following information is intended to provide some basic information on the types of studies that may be necessary based upon the project

Biological:

A General Biological Assessment is typically required for projects that have seen little or no disturbance. The report generally includes a focused tortoise survey and burrowing owl habitat assessment. The desert tortoise is protected under both state and federal law. The burrowing owl is listed as a species of special concern by the state Fish and Game Department. Together this study helps to evaluate the site and recommend mitigation measures to help avoid impacts to biological resources if required.

Additional information on the Desert Tortoise can be obtained from the following website:http://www.deserttortoise.org/documents/2010DTPre-projectSurveyProtocol.pdf

Additional information on the Burrowing Owl can be obtained from the following website: http://www.dfg.ca.gov/wildlife/nongame/docs/boconsortium.pdf

The studies are valid for a period of one year. If a project is in the planning process and the report expires prior to the start of construction it is possible that an update will be required.

Native Plant Plans: Should your site be enriched with native plants, including but not limited to joshua trees, mojave yuccas, or junipers a native plant plan is required to be submitted with your project. The plan shall include an inventory of the size, health, and condition of the plant. Recommendations for the plant can include relocate, protect in place or destroy. It is encouraged to incorporate as many plants as possible back into the project landscaping.

Traffic: When it is anticipated that a project will have an impact on traffic circulation or a project is expected to generate in excess of 50 average daily trips (ADTs) then a traffic study is likely required. These reports can range from a simple one page letter prepared by a traffic engineer to complex traffic studies depending on the scope of the project.

Hydrology: The project shall provide retention for the incremental storm flows generated during the worst case 100 year storm event plus an additional 10% minimum, and 20% incremental retention is desired. A hydrology study shall be provided detailing the retention amounts required.

Geotechnical/Soils Report: This study evaluates what type of soils occur onsite and makes recommendations for construction on the site. These are required to be submitted with the final grading plans.

Photometric Analysis: A photometric analysis evaluates lighting to be installed on the site and predicts the intensity of the light and locations on the site. Additionally, lighting cut sheets of all proposed exterior lights shall be submitted.

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

Geotechnical/Fault Hazard Investigation: If any portion of your site is in an Alquist-Priolo Special Study, area fault trenching approved and coordinated with the Town and San Bernardino County Geologist, is required. The trenching is to determine the location of any faults on the site. The consultants, in conjunction with the County Geologist will determine if there are any restrictions that must be imposed for construction on the site.

Noise: A noise study or acoustical analysis may be required for different reasons. One example is if the project is expected to generate large amounts of noise that could impact surrounding neighbors, businesses, etc. Another example is if a nearby roadway may be generating noise in excess of acceptable standards and mitigation to protect the future occupants is required.

Air Quality Assessment: Larger projects and/or those that involve the movement of significant amounts of earth, or will have an impact on air quality are required to provide an air quality assessment. This assessment will recommend mitigation measures to reduce the impacts to less than significant levels.

Greenhouse Gas Inventory: In order to comply with state requirements, many projects are required to prepare and submit a greenhouse gas emissions inventory. The study will look at both short and long term impacts the project will have on Greenhouse gas and make recommendations to reduce any impacts to levels which are less than significant.

Project Information

Project Address 58501 Twenty-Nine Palms Hwy Assessor Parcel Number(s) 0601201540000

Project Location Proposed project located on the North East side of Wal-mart parking lot

Project Description: Wal-Mart is proposing a new 1.21 acre project. The proposed project includes the construction of a fuel station with 6 fueling dispensers, with a canopy a 1,556 square foot convenience store which includes alcohol and parking. Associated utility work and underground fuel storage is proposed.

Please attach any additional information that is pertinent to the application.

Environmental Assessment

1. Property boundaries, dimensions, and area (also attach an 8 ½ x 11" site plan):

   Property is 22.74 acres bound by 29 Palms Highway on the north, Avalon Ave on the west, Palisade Dr. to the south, and Home Depot on the east.

2. Existing site zoning: C-G: Commercial

3. Existing General Plan designation: C: Commercial

4. Precisely describe the existing use and condition of the site: The existing site is a walmart supercenter

5. Existing Zoning of adjacent parcels:

   North R-M-8 South I East C-G West C-G

6. Existing General Plan designation of adjacent parcels:

   North C South I East C West C

7. Precisely describe existing uses adjacent to the site: Single family housing, vacant land
   Home Depot, General Commercial, Restaurants

8. Describe the plant cover found on the site, including the number and type of all protected plants: The plant cover on site is desert landscaping that utilizes the region and native species prior to development. No protected plants found on site.

Note: Explain any "Yes" or '"Maybe" responses to questions below. If the information and responses are insufficient or not complete, the application may be determined incomplete and returned to the applicant.

Yes	Maybe	No	
☐	☐	☒	9. Is the Site on filled or slopes of 15% or more or in a canyon? (A geological and/or soils Investigation report is required with this application.)
☐	☐	☒	10. Has the site been surveyed for historical, paleontological, or archaeological resources? (If yes, a copy of the survey report is to accompany this application.)
☐	☐	☒	11. Is the site within a resource area as identified in the archaeological and historical resource element?
☐	☐	☒	12. Does the site contain any unique natural, ecological, or scenic resources?
☐	☐	☒	13. Do any drainage swales or channels border or cross the site?
☒	☐	☐	14. Has a traffic study been prepared? (If yes, a copy of the study is to accompany this application.)
☐	☐	☒	15. Is the site in a flood plain? (See appropriate FIRM)

Project Description

Complete the items below as they pertain to your project. Attach a copy of any plans submitted as part of the project application and any other supplemental information that will assist in the review of the proposed project pursuant to CEQA.

1. **Commercial, Industrial, or Institutional Projects:**

   A. Specific type of use proposed: Gasoline Dispensing Station, convenience store

   B. Gross square footage by each type of use: approximately 52707 Sq ft, 1,556 sq ft

   C. Gross square footage and number of floors of each building: 1,556 sq ft, one story

   D. Estimate of employment by shift: 6AM-2PM, 2PM-10PM

   E. Planned outdoor activities: N/A

2. **Percentage of project site covered by:**

   80.8 % Paving, 2.8 % Building, 11.6 % Landscaping, 4.8 % Parking

3. **Maximum height of structures** 17 ft. 8 in.

4. **Amount and type of off street parking proposed**: 14 Standard, 1 ADA

5. **How will drainage be accommodated?** The site will follow existing drainage patterns where the water surface flows to existing drains except for the fueling pad/tanks. The areas will drain to two pro[posed inlets where it will flow through an oil/water separator.

6. **Off-site construction (public or private) required to support this project:** N/A

7. **Preliminary grading plans estimate** 150 **cubic yards of cut and** 225 **cubic yards of fill**

8. **Description of project phasing if applicable:** N/A

9. **Permits or public agency approvals required for this project**:

10. **Is this project part of a larger project previously reviewed by the Town? If yes, identify the**

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

review process and associated project title(s)

Yes, an existing Wal-Mart Supercenter. Project Title: Walmart #1915-04

11. During construction, will the project: (Explain any "yes" or "maybe" responses to questions below – attach extra pages if necessary.)

Yes	Maybe	No		
☐	☒	☐	A.	Emit dust, ash, smoke, fumes, or odors?
☐	☐	☒	B.	Alter existing drainage patterns?
☐	☒	☐	C.	Create a substantial demand for energy or water?
☐	☐	☒	D.	Discharge water of poor quality?
☐	☐	☒	E.	Increase noise levels on site or for adjoining areas?
☐	☐	☒	F.	Generate abnormally large amounts of solid waste or litter?
☒	☐	☐	G.	Use, produce, store, or dispose of potentially hazardous materials such as toxic or radioactive substances, flammable or explosives?
☐	☐	☒	H.	Require unusually high demands for such services as police, fire, sewer, schools, water, public recreation, etc.
☐	☐	☒	I.	Displace any residential occupants?

Certification

I hereby certify that the information furnished above, and in the attached exhibits, is true and correct to the best of my knowledge and belief.

Agreement to Pay All Development Application Fees

In accordance with Town Council Resolution 24-07 the Town collects certain fees based on the actual cost of providing service. The application deposit for this project (as indicated below) may not cover the total cost of processing this application. I/We are aware that if the account has 25% or less remaining prior to completion of the project, staff will notify the undersigned in writing, of the amount of additional deposit required to complete the processing of the application, based on Staff's reasonable estimate of the hours remaining to complete this application process.

Further, I understand that if I do not submit the required additional deposit to the Town within 15 business days from the date of notification by the Town, the Town will cease processing of the application and/ or not schedule the project for action by the Planning Commission or Town Council until the fees have been paid.

Any remaining deposit will be refunded to me at time of closeout after I have submitted any required approved project plans and forms, including signed conditions of approval, or upon my written request to withdraw the application.

As the applicant, I understand that I am responsible for the cost of processing this application and I agree that the actual costs incurred processing this application will be paid to the Town of Yucca Valley.

Deposit Paid: $ _____

Property Owners Mailing List

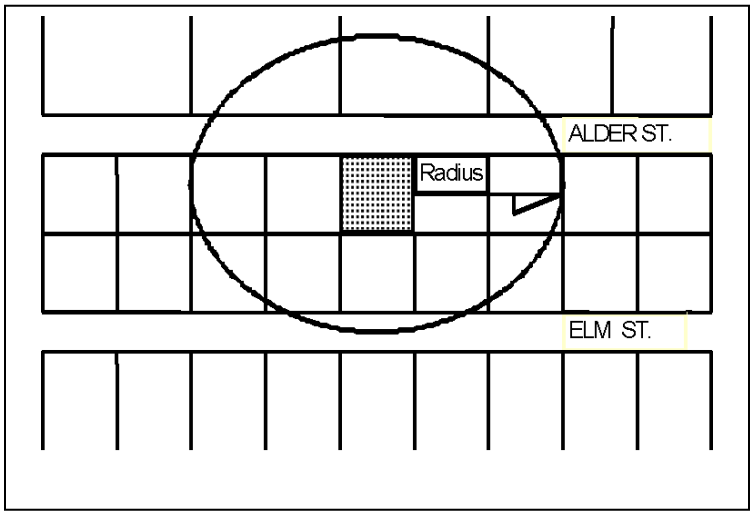
All applications that are subject to a Public Hearing require the applicant to submit a list of property owners who own property contiguous to and within 300 feet of the project site. This process is required by Section 83.010330 of the Development Code to notify residents and property owners in the immediate vicinity. Staff will send public notices to these individuals informing them of the proposed project and scheduled public hearings.

The surrounding property owner information must be obtained from the most current San Bernardino County Assessor's roll or shall be prepared and verified by a title company doing business in San Bernardino County. A County Assessor's office is located at 63665 Twentynine Palms Highway in Joshua Tree. The general telephone number for the Assessor's office is 760-366-1420.

MATERIALS REQUIRED:

- Two (2) sets of adhesive labels containing the mailing address of the owner(s), applicant(s) and of all surrounding property owners, including vacant properties. Mailing labels must contain: Assessor's Parcel Number, property owner's name, address, and zip code.
- One (1) copy of the label sheets.
- One (1) radius map showing the subject property and all surrounding properties. The appropriate radius shall be drawn from the exterior boundaries of the subject property as shown in the sample below. The scale of the radius map shall be large enough to clearly show all surrounding properties.
- One (1) electronic copy of all submitted materials.

Sample Vicinity/Radius Map



Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

SURROUNDING PROPERTY OWNERS LIST CERTIFICATION
(To be submitted with application)

I, Ryan Alvarez , certify that on 06/02/2025 the attached property owners list was prepared by Kimley-Horn & Associates pursuant to the requirements of the Town of Yucca Valley. Said list is a complete compilation of the owner(s), applicant(s) and representative of the subject property and all owners of surrounding properties within a radius of 300 feet from all exterior boundaries of the subject property and is based on the latest equalized assessment rolls of the San Bernardino County Assessor's Office dated 06/28/2024 . I further certify that the information filed is true and correct to the best of my knowledge; I understand that incorrect and erroneous information may be grounds for rejection or denial of the development application.

Hazardous Waste and Substance Sites

Government Code Section 65962.5 requires each applicant for any development project to consult the State List of Hazardous Waste and Substance Sites. Based upon the list, the applicant/representative is required to submit a signed statement to the Town of Yucca Valley indicating whether the project is located on a site which is included on the list before the Town accepts the application as complete. If the project is listed by the State as a hazardous waste or substance site, the applicant must fully describe on the "Environmental Information Form" the nature of the hazard and the potential environmental impact. Attached is a standard statement for the applicant to sign.

The State list of Hazardous Waste and Substance Sites (which is annually updated) may be reviewed at the following web site address:

http://www.dtsc.ca.gov/SiteCleanup/Cortese_List.cfm

Attachment: Hazardous Waste Site Statement

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

HAZARDOUS WASTE SITE STATEMENT

I have been informed by the Town of Yucca Valley of my responsibilities, pursuant to California Government Code Section 65962.5, to notify the Town as to whether the site for which a development application has been submitted is located within an area which has been designated as the location of a hazardous waste site by the Office of Planning and Research, State of California (OPR).

I am informed and believe that the proposed site, for which a development application has been submitted, is not within any area specified in said Section 65962.5 as a hazardous waste site.

I declare under penalty of perjury of the laws of the State of California that the foregoing is true and correct.

In order to ensure a project will comply with applicable local, State and Federal requirements, special studies or reports may be required for a project. These special studies can include biological, hydrologic, soils, geotechnical, noise, photometric, traffic, etc. Some of these studies are valid for a limited period of time. The following information is intended to provide some basic information on the types of studies that may be necessary based upon the project

Biological:

A General Biological Assessment is typically required for projects that have seen little or no disturbance. The report generally includes a focused tortoise survey and burrowing owl habitat assessment. The desert tortoise is protected under both state and federal law. The burrowing owl is listed as a species of special concern by the state Fish and Game Department. Together this study helps to evaluate the site and recommend mitigation measures to help avoid impacts to biological resources if required.

Additional information on the Desert Tortoise can be obtained from the following website:http://www.deserttortoise.org/documents/2010DTPre-projectSurveyProtocol.pdf

Additional information on the Burrowing Owl can be obtained from the following website: http://www.dfg.ca.gov/wildlife/nongame/docs/boconsortium.pdf

The studies are valid for a period of one year. If a project is in the planning process and the report expires prior to the start of construction it is possible that an update will be required.

Native Plant Plans: Should your site be enriched with native plants, including but not limited to Joshua trees, Mojave yuccas, or junipers a native plant plan is required to be submitted with your project. The plan shall include an inventory of the size, health, and condition of the plant. Recommendations for the plant can include relocate, protect in place or destroy. It is encouraged to incorporate as many plants as possible back into the project landscaping.

Traffic: When it is anticipated that a project will have an impact on traffic circulation or a project is expected to generate in excess of 50 average daily trips (ADTs) then a traffic study is likely required. These reports can range from a simple one page letter prepared by a traffic engineer to complex traffic studies depending on the scope of the project.

Hydrology: The project shall provide retention for the incremental storm flows generated during the worst case 100 year storm event plus an additional 10% minimum, and 20% incremental retention is desired. A hydrology study shall be provided detailing the retention amounts required.

Geotechnical/Soils Report: This study evaluates what type of soils occur onsite and makes recommendations for construction on the site. These are required to be submitted with the final grading plans.

Photometric Analysis: A photometric analysis evaluates lighting to be installed on the site and predicts the intensity of the light and locations on the site. Additionally, lighting cut sheets of all proposed exterior lights shall be submitted.

Docusign Envelope ID: CF24FD7B-25BD-4AB1-94E2-DA5535358A55

Geotechnical/Fault Hazard Investigation: If any portion of your site is in an Alquist-Priolo Special Study, area fault trenching approved and coordinated with the Town and San Bernardino County Geologist, is required. The trenching is to determine the location of any faults on the site. The consultants, in conjunction with the County Geologist will determine if there are any restrictions that must be imposed for construction on the site.

Noise: A noise study or acoustical analysis may be required for different reasons. One example is if the project is expected to generate large amounts of noise that could impact surrounding neighbors, businesses, etc. Another example is if a nearby roadway may be generating noise in excess of acceptable standards and mitigation to protect the future occupants is required.

Air Quality Assessment: Larger projects and/or those that involve the movement of significant amounts of earth or will have an impact on air quality are required to provide an air quality assessment. This assessment will recommend mitigation measures to reduce the impacts to less than significant levels.

Greenhouse Gas Inventory: In order to comply with state requirements, many projects are required to prepare and submit a greenhouse gas emissions inventory. The study will look at both short and long term impacts the project will have on Greenhouse gas and make recommendations to reduce any impacts to levels which are less than significant.

Memorandum

To: Town of Yucca Valley, Community Development

From: Ryan Alvarez – Project Manager– Kimley-Horn

Date: June 24, 2025

Subject: Wal-Mart Fuel Station – Town of Yucca, CA - #1915
58501 Twentynine Palms Hwy., Yucca Valley, CA 92284

The proposed project is located at the existing Wal-Mart development at 58501 Twentynine Palms Hwy., Yucca Valley. The project area sits at the Northeast corner of the Wal-Mart parcel. The existing conditions of the project site are a developed asphalt paved parking lot, curbed landscaping, concrete walkways, storm infrastructure leading to a retention basin and underground utilities nearby. The existing zoning for this parcel is CG- General Commercial and will remain the same. General Plan Designation is (C) Commercial and will remain the same. The existing land use is General Retail Merchandiser and will be changed to include Gas Station with Convenience Store.

The proposed project includes the construction of a new fuel station with six fueling pumps (12 dispensers), an overhead canopy, underground fuel storage, a trash enclosure, and a 1,556 square-foot convenience store. This project is over an approximate area of 1.32 acres. The overhead canopy stands at 17.67 feet, and the convenience store stands at 16 feet. The proposed work includes heavy duty asphalt pavement, heavy duty concrete pavement, concrete walkways to the existing accessible path and bus stop, landscaping, additional storm infrastructure and additional dry utility for the convenience store. The proposed underground sewer will connect to the existing sewer infrastructure of the main store. The convenience store will mimic the hours of the existing Wal-Mart supercenter, 6AM-11PM, but the gas station will remain operational 24 hours, 7 days a week. The convenience store is expected to have two employees at a time. Alcohol sales are planned to be a part of the convenience store.

Should you have any further questions please contact me via email at ryan.alvarez@kimley-horn.com or via phone at 714-786-6322. An alternative contact will be a team member at matt.jaureguy@kimley-horn.com or 657-331-4291.

Sincerely,

Ryan Alvarez, P.E.

PRELIMINARY LANDSCAPE PLAN

NORTH

GRAPHIC SCALE IN FEET
0 10 20 40

SCALE: 1" = 20'
WHEN PRINTED AT FULL
SIZE 24"X36"

LANDSCAPE NOTES:

THE SELECTION OF PLANT MATERIAL IS BASED ON CLIMATIC, AESTHETIC, AND MAINTENANCE CONSIDERATIONS. ALL PLANTING AREAS SHALL BE PREPARED WITH APPROPRIATE SOIL AMENDMENTS, FERTILIZERS AND APPROPRIATE SUPPLEMENTS BASED UPON A SOILS REPORT FROM AN AGRICULTURAL SUITABILITY SOIL SAMPLE TAKEN FROM THE SITE. DECOMPOSED GRANITE SHALL FILL IN BETWEEN SHRUBS TO SHIELD THE SOIL FROM THE SUN, EVAPOTRANSPIRATION, AND RUN-OFF. ALL SHRUB BEDS SHALL CONTAIN CRUSHED ROCK A 3" DEPTH TO HELP CONSERVE WATER, LOWER SOIL TEMPERATURE, AND REDUCE WEED GROWTH. THE SHRUBS SHALL BE ALLOWED TO GROW IN THEIR NATURAL FORMS. ALL LANDSCAPE IMPROVEMENTS SHALL FOLLOW THE GUIDELINES SET FORTH BY THE TOWN OF YUCCA VALLEY MUNICIPAL CODE.

IRRIGATION NOTES:

AN AUTOMATIC IRRIGATION SYSTEM SHALL BE INSTALLED TO PROVIDE 100% COVERAGE FOR ALL PLANTING AREAS SHOWN ON THE PLAN. THE WATER SUPPLY FOR THIS SITE IS A POTABLE WATER CONNECTION AND A DEDICATED IRRIGATION METER WILL BE PROVIDED. LOW VOLUME EQUIPMENT SHALL PROVIDE SUFFICIENT WATER FOR PLANT GROWTH WITH NO WATER LOSS DUE TO WATER CONTROLLERS, AND OTHER NECESSARY IRRIGATION EQUIPMENT. ALL POINT SOURCE SYSTEM SHALL BE ADEQUATELY FILTERED AND REGULATED PER THE MANUFACTURER'S RECOMMENDED DESIGN PARAMETERS. ALL IRRIGATION IMPROVEMENTS SHALL FOLLOW THE GUIDELINES SET FORTH BY THE TOWN OF YUCCA VALLEY MUNICIPAL CODE.

LED STATISTICS SHOWN ARE AT 50000 HOURS L85 & L93 RATING (~12 YEARS @ 12 HRS/DAY)

L85 = OPERATING HOURS AT WHICH AN AVERAGE OF 15% OF INITIAL LUMENS HAVE BEEN LOST IN A TESTED POPULATION OF LED PLATFORMS. THE POPULATION STILL EMITS 85% OF INITIAL LUMENS. THE LUMINAIRE HAS NOT FAILED. IT IS STILL OPERATING WITH A REDUCED LIGHT OUTPUT.

L93 = OPERATING HOURS AT WHICH AN AVERAGE OF 7% OF INITIAL LUMENS HAVE BEEN LOST IN A TESTED POPULATION OF LED PLATFORMS. THE POPULATION STILL EMITS 93% OF INITIAL LUMENS. THE LUMINAIRE HAS NOT FAILED. IT IS STILL OPERATING WITH A REDUCED LIGHT OUTPUT.

IN COMPARISON, NON-LED LUMINAIRES ARE RATED WITH MEAN LUMENS MEASURED AT 40-50% OF RATED LIFE, DEPENDING ON TECHNOLOGY, AND RATED LIFE OF B50, WHERE B50 = OPERATING HOURS AT WHICH 50% OF A TESTED POPULATION OF LAMPS HAVE FAILED.

PROPERTY LINES BASED OFF PROVIDED LIGHTING RETROFIT SURVEY AND GOOGLE EARTH PRO. CALCULATION AREAS TREATED AS OPEN AND EMPTY. NO TREES ARE CONSIDERED IN THE DESIGN, ACTUAL VALUES MAY VARY FROM CALCULATED VALUES SHOWN.

Current

The magnitude of the differences between detailed analysis methods and field measurements varies. In general, differences of less than 20% can be expected, but in extreme cases, where a calculation method cannot handle the complexity of the lighting system, they may be greater. A more complete discussion of the uncertainties is available.

PROPOSED STATE MANDATED SIGN

Disclosures

1915 Yucca Valley CA
58501 29 Palms Hwy, Yucca Valley, CA 92284

Disclosures:
Jurisdiction: Town of Yucca Valley CA https://www.yucca-valley.org/

- May have additional seismic requirements.
- ECR/Conditions of Approval information are only available through a public records request.

Zoning
Site is zoned CG – General Commercial https://codelibrary.amlegal.com/codes/yuccavalleyca/latest/overview

Disclosures:

Design standards to be verified by City of Yucca Valley Planning Department.

Site
The minimum structure setback from street property lines shall be forty feet (40'), unless otherwise approved by the commission for a reverse designed fueling service station (where rear of structure is placed adjacent to the street property line(s)).
- The minimum structure setback from other property lines shall be ten feet (10').
- The minimum standard width of driveways at the sidewalk shall be thirty feet (30').
- The centerline of driveways shall be perpendicular to the curb line.
- The minimum distance from any driveway to any interior property line shall be five feet (5'), and the minimum radius of the curb return for the driveway shall be twenty feet (20') from full height curb on the street.
- The minimum distance between curb cuts shall be thirty feet (30').

Parking
Parking shall comply with the design, parking ratio, and size requirements specified in chapter 9.33, "Parking And Loading Regulations", of this title, but accessory uses associated with the fueling service station shall be parked as follows:
- Accessory uses (e.g., car wash and/or minimarket, fast food restaurant) may be allowed subject to meeting off street parking standards for each accessory use.
- The total number of off street parking spaces shall be the sum total required for the various uses computed separately.

Fuel Pumps
All pump or fuel dispensing islands shall be set back a minimum of fifteen feet (15') from the closest property line. The maximum number of pumps or individual fuel dispensing appliances shall be as follows:
- Site size of twelve thousand (12,000) square feet or less shall be limited to eight (8) pumps or individual fuel dispensing appliances.
- Two (2) pumps or individual fuel dispensing appliances may be added for each additional two thousand (2,000) square feet of site area.

Walls
A solid decorative masonry wall of minimum six feet (6') high, and five foot (5') wide landscape buffer, should be erected along all property lines separating the site from any parcel zoned for residential purposes, and along all alley property lines if the property opposite is zoned for residential purposes. The design of the wall and the proposed construction materials shall be subject to review and approval through the site plan review process.

Landscaping
General Requirements:
- Setbacks: Setback and open space areas required by this development code shall be landscaped based on the requirements of this chapter, except the portion where a sidewalk or driveway occurs in the required setback. Required setbacks that are screened from public view in commercial and industrial zones, and are not adjacent to residentially zoned property, are exempt from the provisions of this chapter.
- Unused Areas: Areas of a project site not intended for a specific use shall be landscaped based on the requirements of this chapter, unless exempt in compliance with section 9.32.030, "Exemptions From The Landscaping Requirements", of this chapter.
- Parking Areas: Parking areas shall be landscaped in compliance with subsection 9.33.110K, "Landscaping Requirements For Parking Areas", of this article 3 and the water efficient landscaping requirements of this chapter.
- Landscaping In Lieu Of Parking Spaces: Landscaping may be provided in lieu of ten percent (10%) of the total number of parking spaces required, provided the landscaping is arranged so that parking may be installed at a later date if a demand arises, and further provided, that the owner agrees to provide parking at the request of the reviewing agency.

SECTION 1: PLAN OVERVIEW

SECTION 1: PLAN OVERVIEW

1.1 - INTRODUCTION (PURPOSE & AUTHORITY)

The Yucca Valley Retail Center Specific Plan has been prepared pursuant to the provisions of the California Government Code, Title 7, Division 1, Chapter 3, Article 8, and Sections 65450 through 65457. The California Government Code authorizes jurisdictions to adopt Specific Plans by resolution as policy documents or by ordinance as regulatory documents. The law allows preparation of Specific Plans, as may be required for the implementation of the General Plan, and further allows for their review and adoption. Article 13 of Title 8, Division 3, Chapter 3 of the Development Code of the Town of Yucca Valley, provides the requirements and procedures for preparation and processing of Specific Plans in the Town. Specific Plans act as a bridge between the General Plan and individual development proposals. Specific Plans combine development standards and guidelines, capital improvement programs and financing methods into a single document that is tailored to meet the needs of a specific area.

The Yucca Valley Retail Specific Plan, when adopted, will serve to implement the General Plan land use designation of "General Commercial" and zoning designation of "General Commercial District" for the project area. This Specific Plan establishes the development requirements and design guidelines to be applied to all development within the project area.

1.2 - PROJECT LOCATION

The project site encompasses approximately 25 acres located at the southeast corner of the intersection of Twentynine Palms Highway (State Highway 62) and Avalon Avenue. The legal description for the proposed project site is contained in Appendix A. The location of the project site is illustrated in Figure 1-1, "Regional Location" and Figure 1-2, "Project Vicinity."

1.3 - PROJECT SETTING AND SITE FEATURES

The project site is designated by the General Plan of the Town of Yucca Valley as General Commercial, and the zoning is General Commercial District (C-G), and includes a Specific Plan (SP) overlay.

Existing Site Features

The average elevation of the project site is approximately 3,200 feet above mean sea level. The site slopes from the south to north with approximately 35 feet difference in elevation from the extension of Palisade Drive to State Highway 62.

The site is currently vacant land covered with native brush. Joshua trees and creosote bush are the dominant vegetative species. There are approximately 129 Joshua trees and two (2) Mojave Yucca within the project impact area where grading will occur. The Native Plant Survey (Appendix C) indicates that approximately 92 trees were determined to be salvageable. Both Yuccas are expected to be translocated successfully. The integration of these plants within the project landscape plan is described in Section 4.3, Landscape Concept.

Surrounding Land Use Designations

The project site is currently designated C-G, General Commercial. Property to the east is also designated C-G, and a Home Depot store has recently been constructed on this property. Property to the south is zoned I, Industrial and is currently vacant.

As previously mentioned, the adjacent property to the east has been recently developed for retail uses, including a Home Depot. This project will share a common entrance and exit on State Highway 62 with the Yucca Valley Retail Center.

The development of the project will require the construction of improvements, as shown on Figure 1-3. As part of the development of the adjacent Home Depot project, a number of off-site improvements were previously constructed that will serve both the proposed project and the Home Depot project. The proposed project is required to participate in a reimbursement arrangement for these improvements. Following is a list of the off-site improvements previously constructed to serve both projects:

1. Install Traffic Signal at State Highway 62 and the proposed primary project entrance (shared with the Home Depot Retail Center to the east of the project site).

2. Construct a shared driveway south of the new signalized intersection on State Highway 62.

3. Construct street improvements on the south side of State Highway 62 including medians along the street frontages of the Yucca Valley Retail Center and The Home Depot Retail Center.

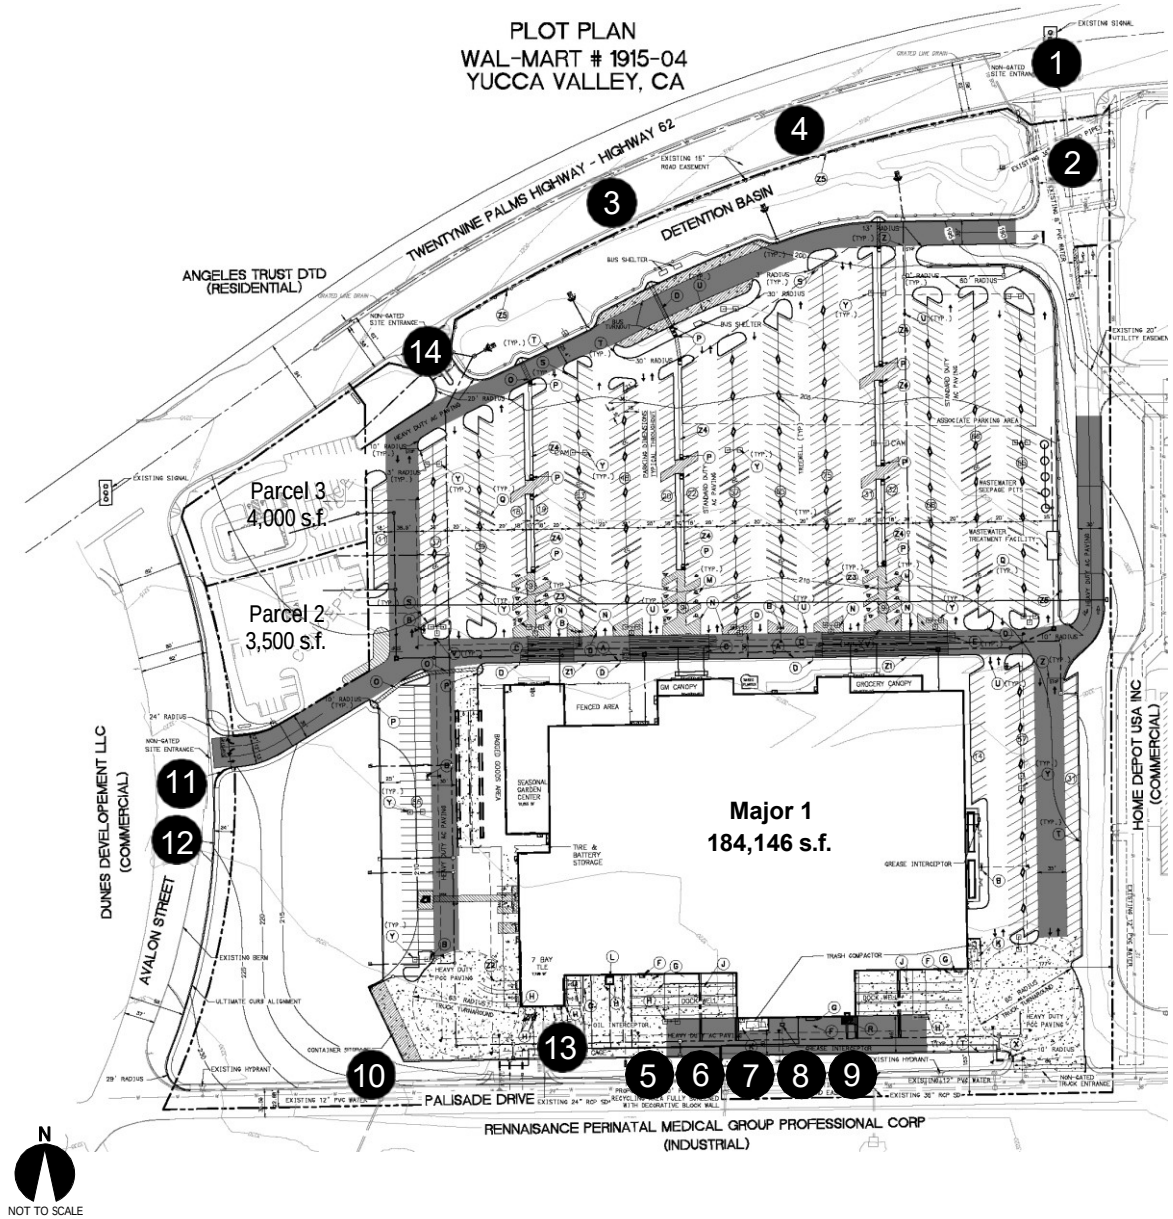
4. Construct catch basins and install drain pipes on State Highway 62 along the street frontages.

5. Construct permanent storm drain inlet structures and storm drain pipes in Palisade Drive.

6. Grade Palisade Drive southerly of the project site for improvements described in item 7 below.

7. Install a 12" Water Line in Palisade Drive southerly of the project site.

8. Construct 35-foot wide Palisade Drive southerly of the project site including: curb, gutter, sidewalk, and travel lanes on the north side of the street centerline and one lane on the south side of the street centerline.



Source: Nasland Engineering, Applied Planning, Inc.

Off-Site Improvements - Previously Constructed

1. Traffic Signal
2. Shared Driveway
3. Street Improvements
4. Catch Basins/Drain Pipes
5. Storm Drain Inlet/Storm Drain Pipes
6. Grade Palisade Drive
7. Install 12" Water Line
8. Construct 35'- Wide Palisade Drive
9. Install T-valves
10. Fire Hydrants

Off-Site Improvements - To Be Constructed

11. Widen Avalon Avenue
12. Construct curbs, gutters, sidewalk and travel lanes
13. Secondary Driveway from Palisade Drive
14. Secondary Driveway from State Highway 62

appliedplanning inc

Figure 1-3
Off-Site Improvements

9. Provide connection or T-valves at 300-foot intervals along Palisade Drive east of Avalon Avenue, southerly of the project site.

10. Provide fire hydrants at 300-foot intervals along the Yucca Valley Retail Center street frontage at Palisade Drive.

The following is a list of additional off-site improvements which will be constructed and funded as part of the Yucca Valley Retail Center:

11. Widen Avalon Avenue to allow full turn movements at the Yucca Valley Retail Center Driveway.

12. On Avalon Avenue, construct curbs, gutters, sidewalk and travel lanes on the east side of the centerline of Avalon Avenue. Median and traffic lane striping will be provided at Avalon Avenue.

13. Construction of a secondary driveway from Palisade Drive.

14. Construction of a secondary (right-in/right/out) driveway from improved State Highway 62 near the westerly property line.

1.4 - RELATIONSHIP TO THE GENERAL PLAN AND ZONING ORDINANCE

The Yucca Valley Retail Center Specific Plan implements the goals and policies of the Town of Yucca Valley General Plan within the Specific Plan area. The goals and objectives found in the Land Use Element support the Town's desire to continue to create a future in which the traditional character of the Town is preserved and enhanced by new development. Appendix B, the General Plan Consistency Analysis, demonstrates how the Yucca Valley Retail Center implements applicable goals and objectives of the General Plan. Various land use goals that support a viable economic future direction for the Town while preserving its traditional character are described.

Because an adopted specific plan must be consistent with the Town General Plan, all projects that are found to be consistent with this Specific Plan are deemed consistent with the General Plan.

The Yucca Valley Retail Center Specific Plan works in concert with the Town of Yucca Valley Development Code, but provides additional development standards and guidelines that are customized to achieve the specific vision for the project area. The Town's zoning standards are utilized for certain aspects, such as parking, while the Specific Plan provides other standards that are tailored to the Yucca Valley Retail Center. Development projects and new uses shall be subject to the review procedures, findings and provisions of the Town of Yucca Valley Development Code and the provisions of this Specific Plan. Related and/or subsequent approvals, such as Conditional Use Permits, Site Plan Reviews, and Parcel Maps, must be consistent with both the guidelines of the Yucca Valley Retail Center Specific Plan and the Town's Development Code.

Where development regulations in this Specific Plan differ from those established in the Town Code, the provisions of the Yucca Valley Retail Specific Plan shall prevail. Where this Specific Plan is silent on a development regulation, the Town Code shall prevail.

1.5 - PROJECT OBJECTIVES

The purpose of the Yucca Valley Retail Specific Plan is to define the range of permitted uses, development regulations, requirements, and design guidelines for the development of the project area. Implementation of this Specific Plan will accomplish the following objectives:

- Provide for the orderly and master planned development of land uses within the project area, to ensure that an economically viable project or projects can be developed.

- Allow the potential for development of high quality commercial uses within an undeveloped portion of the Town.

1.6 - COMPLIANCE WITH CALIFORNIA ENVIRONMENTAL QUALITY ACT

Adoption or amendment of a Specific Plan constitutes a project under the California Environmental Quality Act (CEQA). An Environmental Impact Report (EIR) SCH# 2005051047 has been prepared in accordance with the CEQA Guidelines (CCR, Title 14, Division 6, Chapter 3 Section 15000-15387), and Guidelines Section 15161 ('Project EIR') in particular, to analyze the environmental impacts of the Yucca Valley Retail Center Specific Plan. The EIR establishes the existing, on-site environmental conditions and evaluates the potential impacts of this Specific Plan. The EIR references project design features and includes various mitigation measures that will be implemented through either the Mitigation Monitoring Plan or Conditions of Approval.

The graphic illustrations, rendering, and photos included in this Specific Plan, are illustrative, including with respect to number of buildings, building and sign locations and orientation, and alignment of streets or drive aisles. Unless otherwise specified, all graphic illustrations and photos shall be interpreted as conceptual design and subject to final site plan approval in substantial conformance with the Specific Plan.

SECTION 2: LAND USE

SECTION 2: LAND USE

2.1 - LAND USE PLAN

The project area is approximately 25 acres in size and is generally bounded by State Highway 62 to the north, developed lands to the east, Palisade Drive to the south, and Avalon Avenue to the west. Please also refer to Figure 2-1, "Specific Plan Land Use Concept." A general description of uses proposed within the Specific Plan is provided below.

2.2 - LAND USE SUMMARY

Parcel 1 (23.85 acres [ac]) will be developed with approximately 184,146 square feet (s.f.) single retail use, associated parking, a fuel station including a convenience store and fueling canopy with up to 12 fueling positions, and a stormwater retention basin. Parcel 2 (0.75 acres) will be developed with a 3,500 s.f. retail use. Parcel 3 (0.84 acres) will be developed with a 4,000 s.f. fast-food restaurant use. Open space areas throughout the site will be landscaped in accordance with the approved plant palette and will serve a variety of functions, including separation and buffering from adjacent uses, providing visual amenity, and stormwater detention. A summary of proposed land uses is presented in Table 2-1. Additional specificity regarding these uses is presented in Section 3.0, "Commercial Use Regulations" of this document.

Table 2-1

Yucca Valley Specific Plan Land Use Summary

Land Use	Parcel Area	Building Area	Comments
Parcel 1	23.85 ac	184,146 s.f. retail 1,556 s.f. convenience store	General merchandiser with grocery sales and garden center, a fuel station with canopy, dispensers, and a convenience store, and a stormwater retention basin
Parcel 2	0.75 ac	3,500 s.f.	Retail
Parcel 3	0.84 ac	4,000 s.f.	Fast-Food Restaurant
Total	25.44 ac	193,202 s.f.	

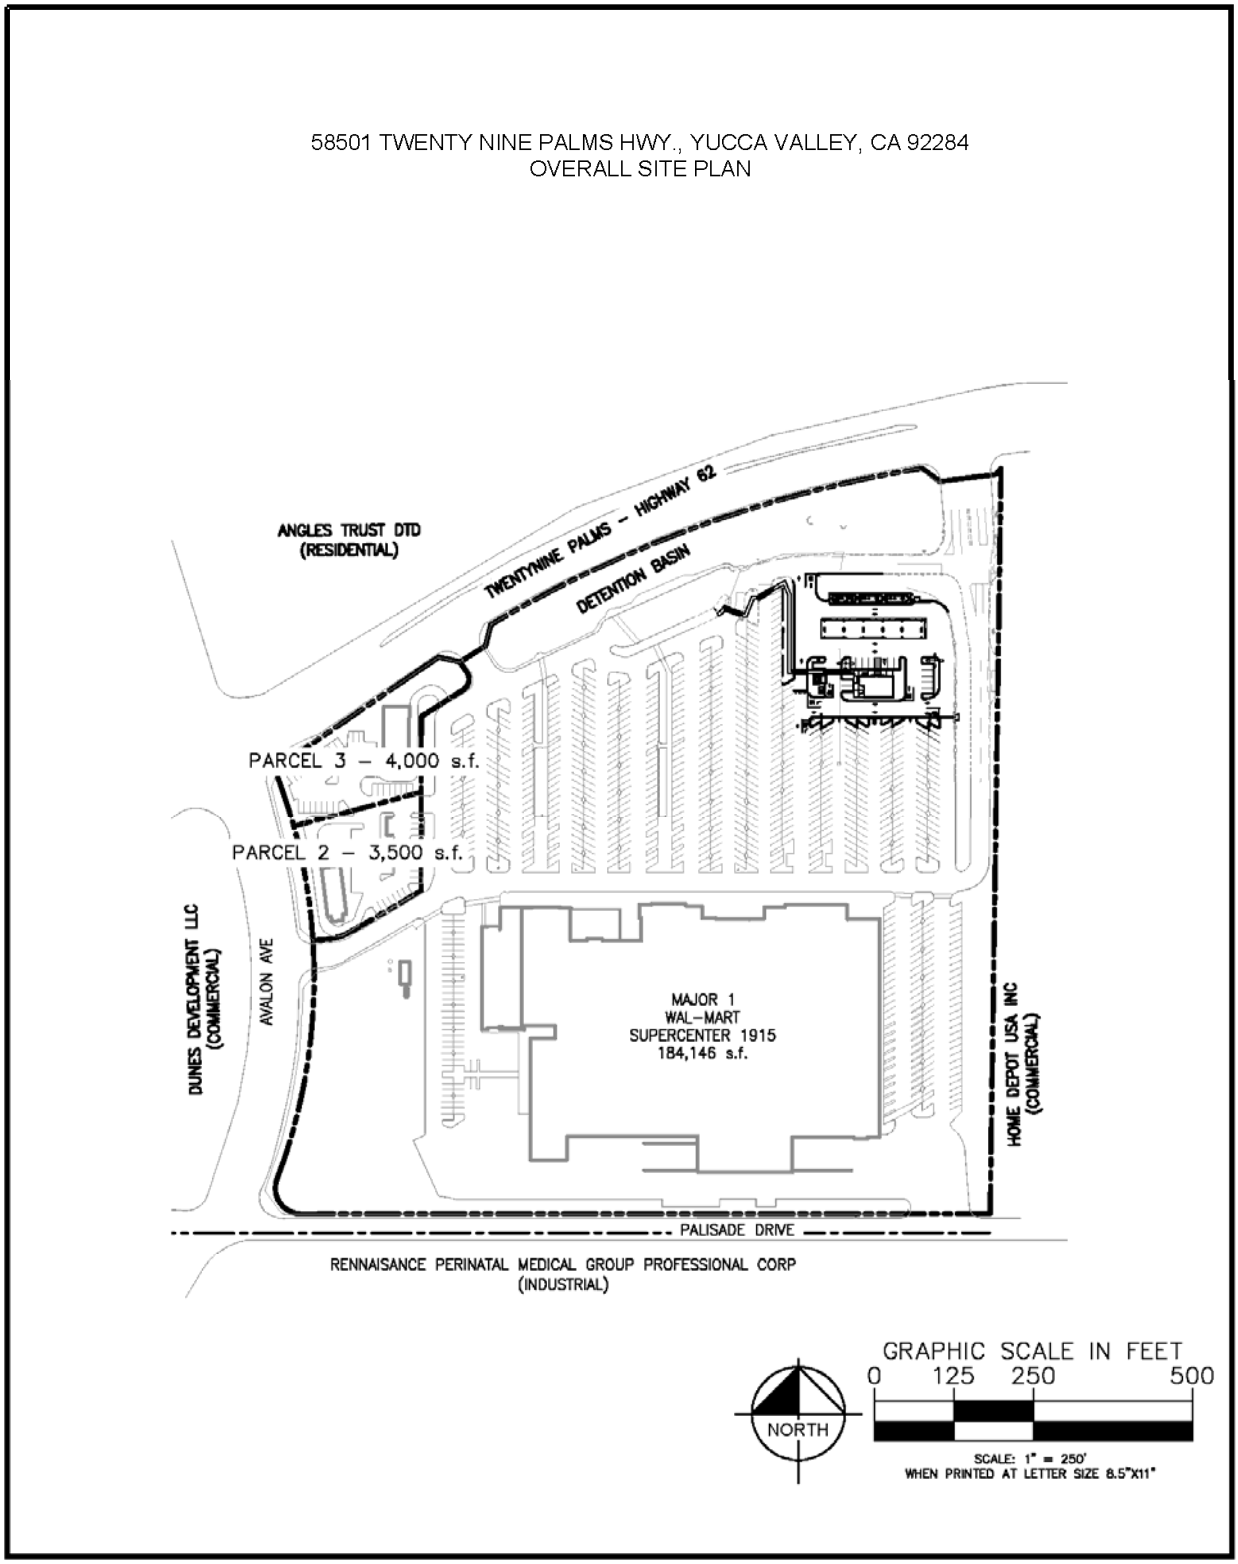


Figure 2-1
Specific Plan Land Use Concept

SECTION 3: COMMERCIAL USE REGULATIONS

SECTION 3: COMMERCIAL USE REGULATIONS

3.1 - GENERAL PROVISIONS

The regulations provide for implementation of a General Commercial (C-G) District classification as a community-level commercial shopping center, anchored by a retail store consisting of a total of 184,146 square feet, with all appurtenant structures and facilities for the sale of general merchandise, groceries, liquor and other alcoholic beverages, including without limitation, a garden center, truck docks and loading facilities, tire and lube facilities, outdoor sale facilities, a bagged goods pick-up area, rooftop proprietary satellite communication facilities and parking facilities. The store may contain, without limitation, a drive thru pharmacy, a vision care center, a food service center, a photo studio, a photo finishing center, a banking center and an arcade. The store may, among other things, carry pool chemicals, petroleum products, pesticides, paint products, firearms and ammunition. The store may be developed in more than one phase and will operate on a 24-hour basis.

The standards set forth in this section will ensure that future development proceeds in a manner consistent with Town requirements and design guidelines. Upon adoption of the Yucca Valley Retail Center Specific Plan by the Town of Yucca Valley, this Specific Plan shall be the zoning document for the subject property, superseding other zoning designations and development standards of the Town of Yucca Valley as described herein. If not specifically addressed in this Specific Plan, the applicable provisions of the Town of Yucca Valley Development Code shall apply.

3.2 - PERMITTED USES

Those uses specified below and in Section 84.0350 of the Town of Yucca Valley Development Code (CG-General Commercial District) shall apply.

3.2.1 Principal Uses: The following uses shall be permitted, subject to approval of a Site Plan Review, as specified in Section 6.2 herein:

a. General Retail Merchandiser, including:

- The sale of general merchandise, including groceries, liquor and other alcoholic beverages. The store may, among other things, carry pool chemicals, petroleum products, pesticides, paint products, firearms and ammunition.
- A garden center.
- Tire and lube facilities.
- A drive thru pharmacy.
- A vision care center.
- A food service center.
- A photo studio.
- A medical clinic.
- A photo finishing center.
- A banking center.
- An arcade.
- A bagged goods pick-up area.
- Truck docks and loading facilities.
- Outdoor sale facilities.
- Rooftop proprietary satellite communication facilities, which will be screened by the parapet wall.
- Parking facilities.

b. Restaurant, including:

- Full-service restaurant.
- Fast food with drive-thru, take out, delivery.

c. Automobile gas station

d. Other Commercial Uses designated 'SPR' Site Plan Review in Section Table 2-15 of the Development Code.

3.2.2 Operations: The following describes the operations of the major tenant of the Yucca Valley Retail Center, which are part of the primary retail sales as listed in Section 3.2.1, a.

a. Outdoor Seasonal Garden Area - Approximately 10,000 square feet. A minimum of eight special events per year lasting no more than two weeks, exclusive of the holiday season, including the period from Thanksgiving through New Year's Day.

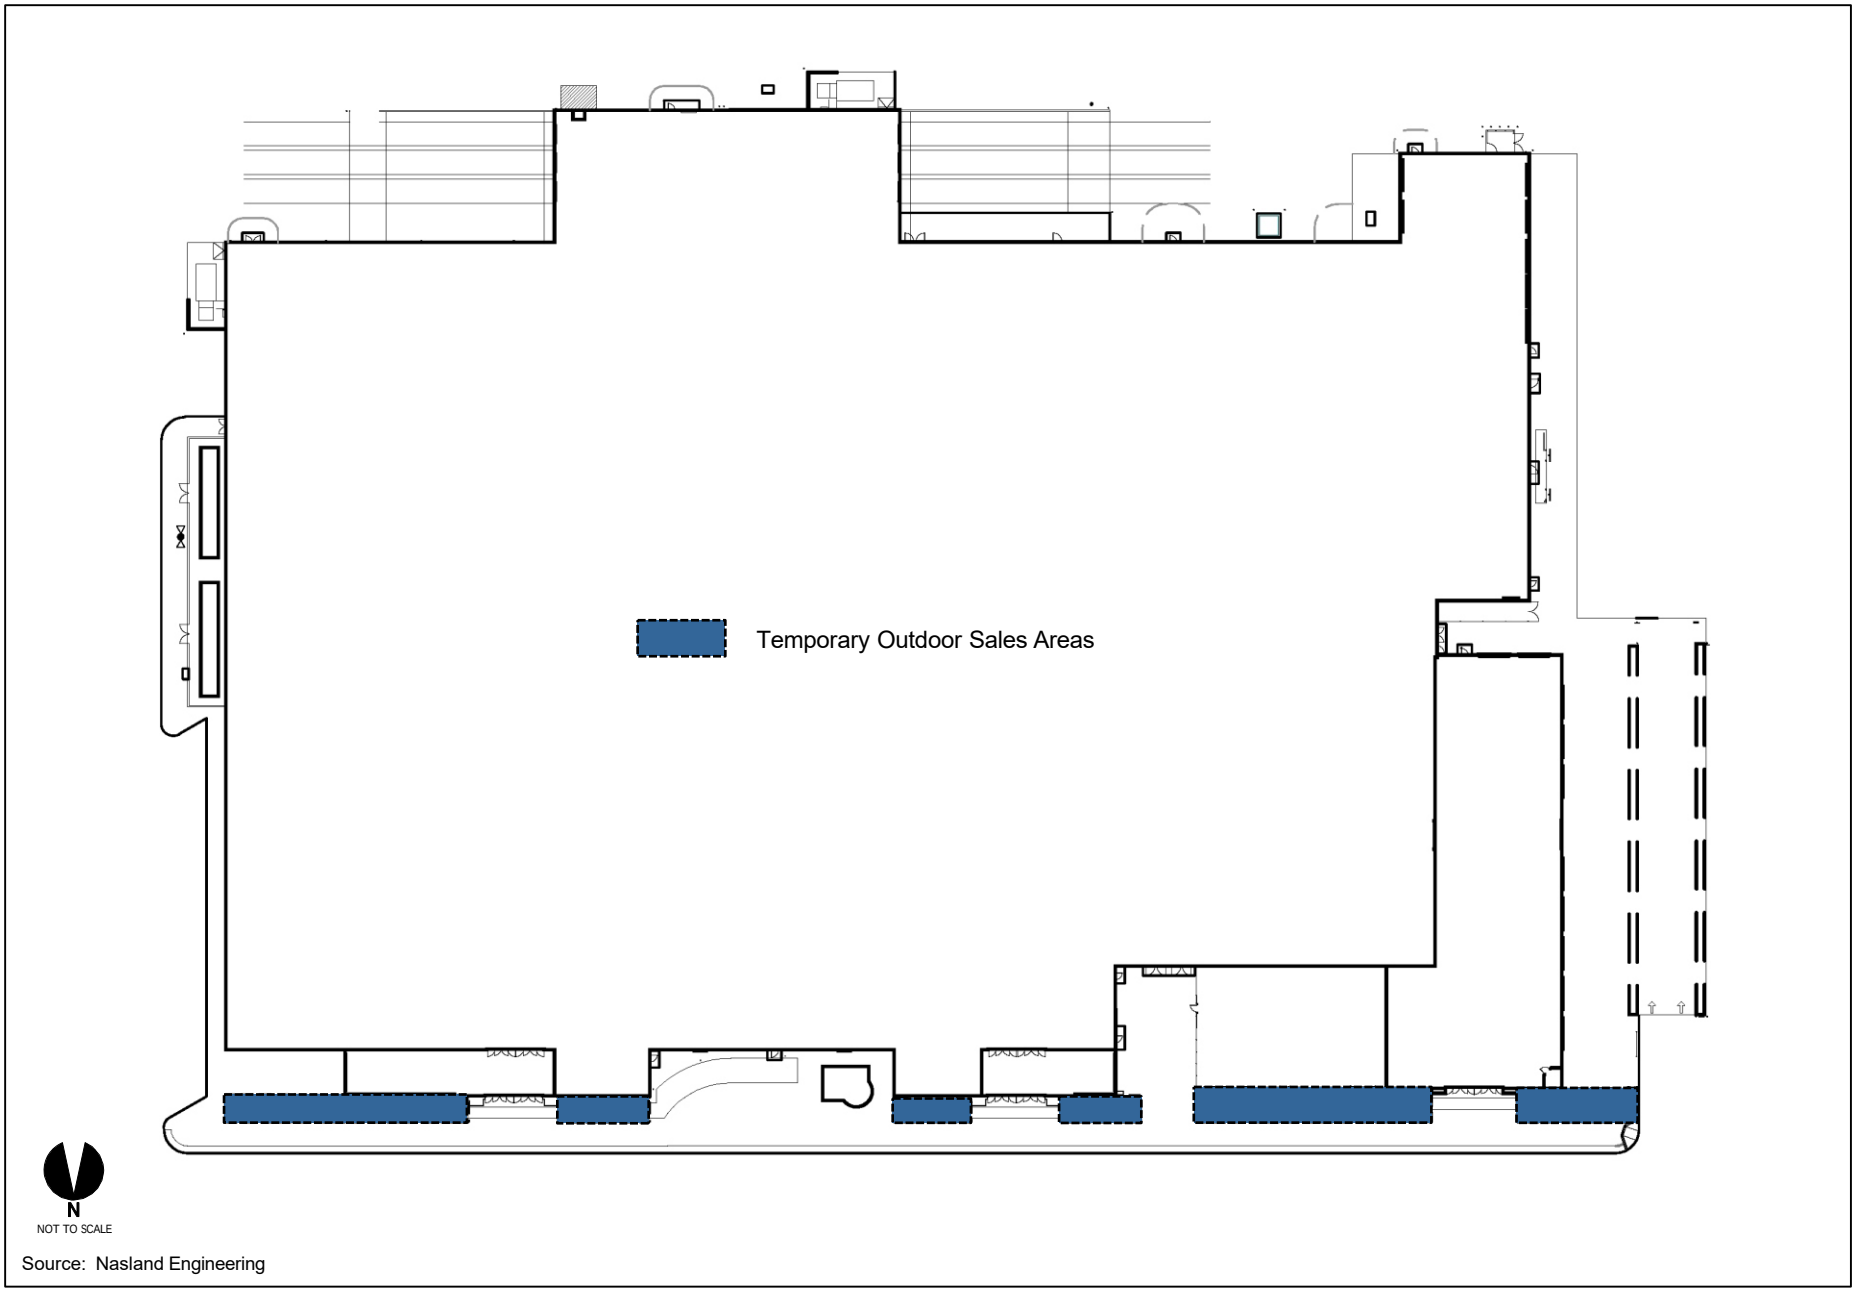
b. The project will be permitted, by right, to leave the outdoor display items along the front of the store overnight, in specified areas shown in Figure 3-1. Additionally, tents and awnings will be used in conjunction with seasonal sales and enclosed by a chain link fence for security.

c. The project will be permitted, by right, to display merchandise in front of the store in designated areas on a daily basis. These areas are shown in Figure 3-1.

d. The project will be permitted, by right, to place vending machines in vestibules inside the store.

e. The project will be permitted, by right, to install pay phones in vestibules inside the store.

f. The major anchor will be permitted, by right, to operate the store 24 hours.



Source: Nasland Engineering

Figure 3-1
Outdoor Sales Areas

3.2.3 Uses Permitted Subject to a Conditional Use Permit: The following uses may be permitted on the project site, subject to approval of a Conditional Use Permit:

a. Arcade (Freestanding)
b. Automobile rental
c. Convenience store
d. Entertainment, live (excluding adult entertainment)
e. Fitness centers
f. Maintenance & repair services: major

3.3 - DEVELOPMENT STANDARDS

The following Property Development Standards shall apply.

Maximum Structure Height	40 feet
Minimum Lot Size	0.70 acre
Maximum Building Lot Coverage	60 percent
Maximum Lot Dimension (width to depth ratio)	1:3
Minimum lot dimensions (width to depth ratio)	120 feet x 120 feet
Front Yard Setback	15 feet
Side Yard Setbacks	10 feet (only one side yard is required to provide emergency access. If the adjacent property is not designated commercial or industrial, a side yard shall be required along that side of the property.)
Rear Yard Setback	10 feet (A rear yard is required only when the adjacent property is not designated commercial or industrial.)
Street Side Setbacks	10 feet
Maximum Floor Area Ratio (FAR - FI. Area/Lot Area)	1.20
Minimum District Size	5 acres

Fuel Station Development Standards

The minimum structure setback from street property lines shall be forty feet (40′), unless otherwise approved by the Planning Commission for a reverse designed fueling service station (where rear of structure is placed adjacent to the street property line(s)).

- The minimum structure setback from other property lines shall be ten feet (10′).
- The minimum standard width of driveways at the sidewalk shall be thirty feet (30′).
- The centerline of driveways shall be perpendicular to the curb line.
- The minimum distance from any driveway to any interior property line shall be five feet (5′), and the minimum radius of the curb return for the driveway shall be twenty feet (20′) from full height curb on the street.
- The minimum distance between curb cuts shall be thirty feet (30′).

Fuel Pumps

All pump of fuel dispensing islands shall be set back a minimum of fifteen feet (15′) from the closest property line. The maximum number of pumps or individual fuel dispensing appliances shall be as follows:

- Site size of twelve thousand (12,000) square feet or less shall be limited to eight (8) pumps or individual fuel dispensing appliances.
- Two (2) pumps or individual fuel dispensing appliances may be added for each additional two thousand (2,000) square feet of site area.

3.4 - PARKING REQUIREMENTS

Parking for the major tenant of the Yucca Valley Retail Center shall be provided at a ratio of 1 space per 250 square feet of building area. All other land uses shall provide parking in compliance with the Yucca Valley Development Code.

Accessory uses associated with the fueling service station shall be parked as follows:

- Accessory uses (e.g., car wash and/or minimarket, fast food restaurant) may be allowed subject to meeting off street parking standards for each accessory use.

- The total number of off street parking spaces shall be the sum total required for the various uses separately.

3.5 - SIGNAGE AND LIGHTING

3.5.1 **Master Sign Program Intent**

The intent of the Master Sign Program is to achieve a visually coordinated, balanced and appealing signage system throughout the Yucca Valley Retail Center, particularly one that promotes compatibility with the architectural styles and landscape concepts identified within this Specific Plan.

The regulating signage document for the Specific Plan will be a Master Sign Program (MSP). Project-level signage will require a site-specific Sign Plan in conformance with the MSP and in accordance with Section 3.5 of the Specific Plan. In the event of conflict between the Yucca Valley Municipal Code and the Specific Plan, the Specific Plan shall prevail.

3.5.2 **Master Sign Program**

The MSP is a separate stand-alone document that establishes the standards and guidelines for all signs within the Specific Plan. The MSP will also provide guidance for the general location and design of project-level signage. Processing of the MSP is outlined in Appendix D of the Specific Plan.

The design and configuration of all proposed signs is conceptually presented within the Master Sign Program, which is provided as Appendix D. Sign locations are also presented in Figure 3-2, "Monument and Sign Locations."

3.5.1 **Freestanding Sign Area**

Anchor Tenant: The cumulative total sign area allowed for freestanding signs shall be one (1) square-feet per five (5) linear feet of street frontage on which the sign is located. No single sign area of freestanding signs (i.e., Pylon sign) shall exceed hundred (100) square feet per side.

- The anchor tenant pylon sign will not exceed twenty-five (25) feet in height and twenty-two (22) feet in length.
- The anchor Tenant pylon sign shall have sign are of twenty (20) feet in length and five (5) feet in height.

Outparcel Tenant: Outparcel building pads located adjacent to a highway or street may be permitted a monument sign not to exceed 25-square feet of sign area per side.

- There are three (3) proposed freestanding monument signs, including one state-mandated monument sign with electronic fuel price readers.
- Outparcel tenant monument signs are not to exceed 8 feet in height and 19 feet in length.
- Outparcel tenant monument sign shall have sign are of ten (10) feet in length and two (2) feet in height.
- The gasoline service station shall be limited to one (1) double-face design of an area not to exceed 36 square feet on each side face.

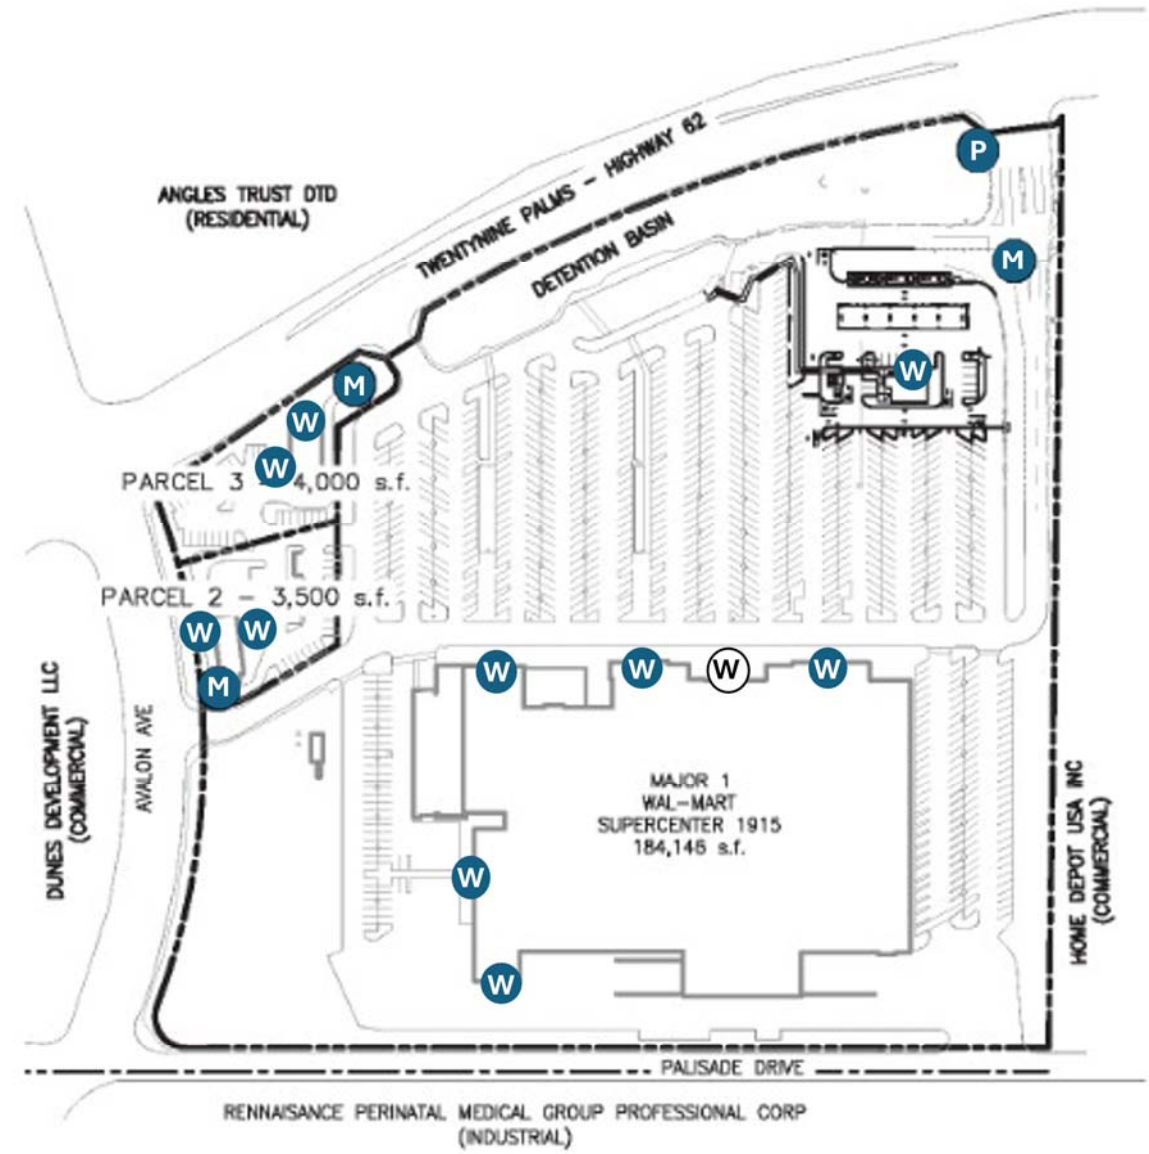
3.5.2 **Wall Sign Area**

Wall signs are proposed on the facades of the anchor and outparcel tenants, including the fuel station canopy.

Anchor and Outparcel Tenant: For each use or occupancy, one building sign per building frontage oriented towards a street, driveway, or parking area based on a maximum of one (1) square-foot of sign area per one linear foot of use or occupancy.

- Anchor Tenant: Maximum of 560.57 square feet of building signage area per building side.
    - Maximum of 555.80 square feet of total sign area.
    - The Master Sign Program shall define sign area for all signs demonstrating compliance within eh maximum total sign area.
- Outparcel Tenant: Maximum of one (1) square foot per lineal foot of building frontage.
- Fuel Station:
    - The fuel station canopy and convenience store are permitted fifty (50) square feet of allowable signage area.
    - A single ten (10) square foot sign, fixed flat on the surface of the building shall be allowed.
    - The height of this sign shall not exceed twenty (20) feet.

© 2008 Applied Planning, Inc.



Legend

- P — Pylon Sign
- M — Monument sign
- W — Wall Sign, Illuminated
- W — Wall Sign, Non -Illuminated

Figure 3-2
Monument and Sign Locations

3.5.3 **Illuminated Signs**

Anchor Tenant Identification Sign:

- The sign shall be located approximately in the center of the building and will consist of channel letters with vacuum formed face (pan formed) anchored to the building surface.
- The identification sign, comprised of two lines of illuminated text, will be internally illuminated with fluorescent tube or LED.
- The illuminated text in the sign will not exceed seven (7) feet in height and thirty-eight (38) feet in length. The total sign area will not exceed 229 square feet.

Outparcel Tenant Sign:

- The buildings proposed on Parcel's 2 and 3 will be permitted wall signage not to exceed the limits of YVMC, Section 87.07122 § b.1.A of Ordinance No. 156, which allows a maximum of one (1) square-foot of sign area per one (1) square-foot of linear building frontage.
- These will consist of channel letters with vacuum formed face (pan formed) anchored to the building surface. The signs will be internally illuminated with fluorescent tube or LED.

3.5.4 **Non-illuminated Signs**

Anchor Tenant Wall Signs:

- On the anchor tenant building, excluding the non-illuminated text within the anchor identification sign, the total amount of non-illuminated wall signage will not exceed 370.57 square feet.
- A total of ten (10) non-illuminated identification and directional signs will be placed on the anchor tenant building. These signs will consist of Plexiglas formed letters that are stud mounted to the wall. A complete inventory of these signs shall be presented within the approved Master Sign Program.
- Non-illuminated wall signs consist of between one and three lines of text. No single line of text will exceed 2-feet and 6-inches in height and 23-feet 11 ½- inches in length.

SECTION 4: DESIGN GUIDELINES

SECTION 4: DESIGN GUIDELINES

4.1 - GRADING CONCEPT

The existing topography of the site could generally be described as a sloped desert landscape. The site naturally drains from a northwest to southwest direction.

The proposed grading concept, presented in Figure 4-1, illustrates the extent of grading required to achieve the design concept for the Project. This grading plan will provide level building pads for the proposed structures, assure safe and adequate drainage patterns across the project site, and manage the conveyance of storm water run-off to appropriate discharge and/or detention facilities. The finish grade would generally drain in a south to north direction.

In addition, grading will occur as part of the construction of the shared off-site improvements as part of the Phase 1 improvements listed in Section 6.1. The easements for these improvements will be a condition on the subdivision maps for the project. The Grading Plan is designed to follow the requirements of the Town of Yucca Valley development ordinances and is to be submitted to the Town for review, approval, and permit issuance prior to the initiation of grading.

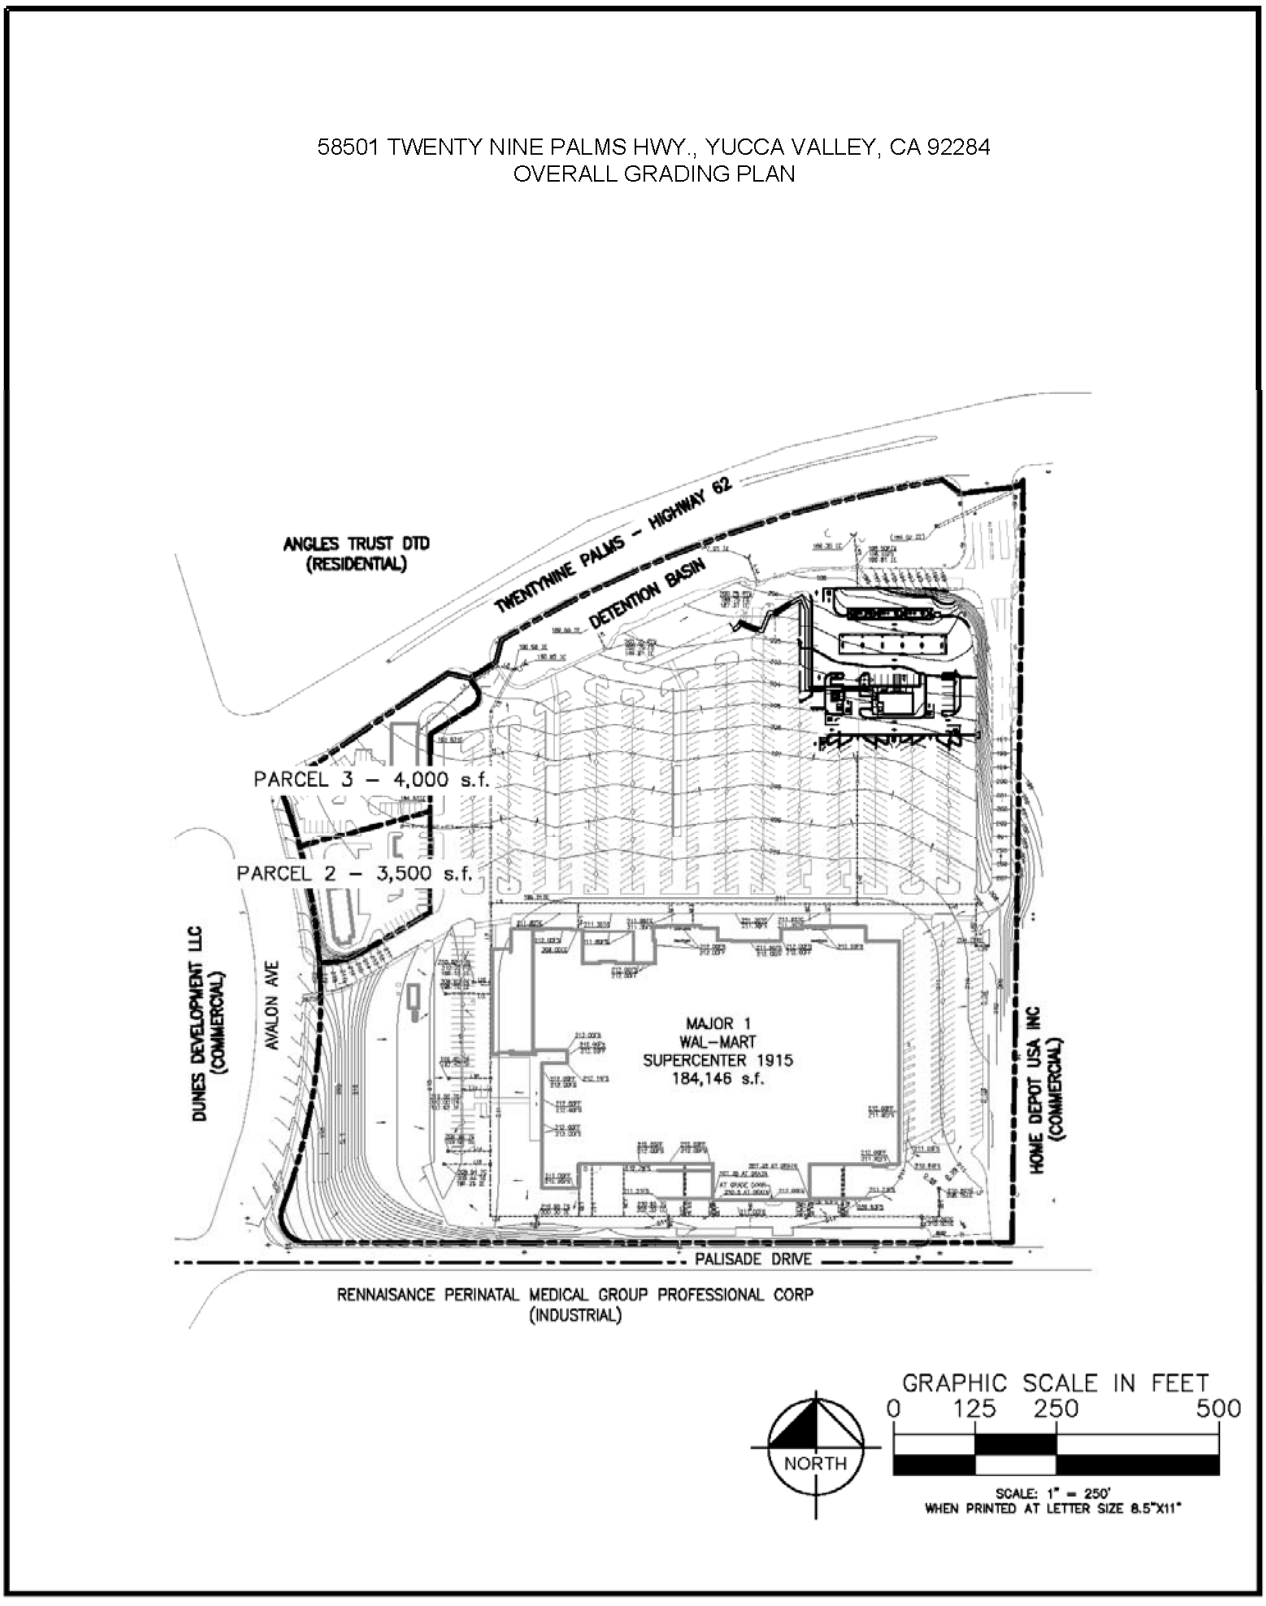


Figure 4-1
Grading Concept

© 2008 Applied Planning, Inc.

4.2 - ARCHITECTURAL CONCEPT

The architectural style of the Yucca Valley Retail Center will conform to exterior materials, treatments, and colors reflected in the building elevations depicted in Figures 4-2A through 4-2C.

Development within the project area shall comply with the design guidelines contained within the adopted Town Code. Except as provided herein, the design guidelines in the Town Code shall apply to all improvements within the project area, including new construction, remodels, additions, landscaping, paving, signage, amenities, and related facilities. They are provided to guide developers, builders, architects, engineers, landscape architects, and others involved in the preparation of future development proposals to ensure a consistent level of quality throughout the project area. The design guidelines will assist the Town of Yucca Valley staff and decision-making authorities with criteria to evaluate future development proposals.

Architectural Design Objectives

- To establish a comprehensively designed project that incorporates unity through the use of complementary colors, materials, and landscape themes.

- To design within the context of the local environs.

- To create a project that provides for efficient circulation for both vehicles and pedestrians.

Architectural Design Guidelines

These Architectural Design Guidelines are intended to provide an overall direction in the design of structures within the Specific Plan. No particular style is intended to dominate; however, architectural concepts shall be compatible with existing, surrounding uses. These Guidelines are meant to be flexible over time and correspond with changing conditions in lifestyles, the marketplace, and economic conditions.

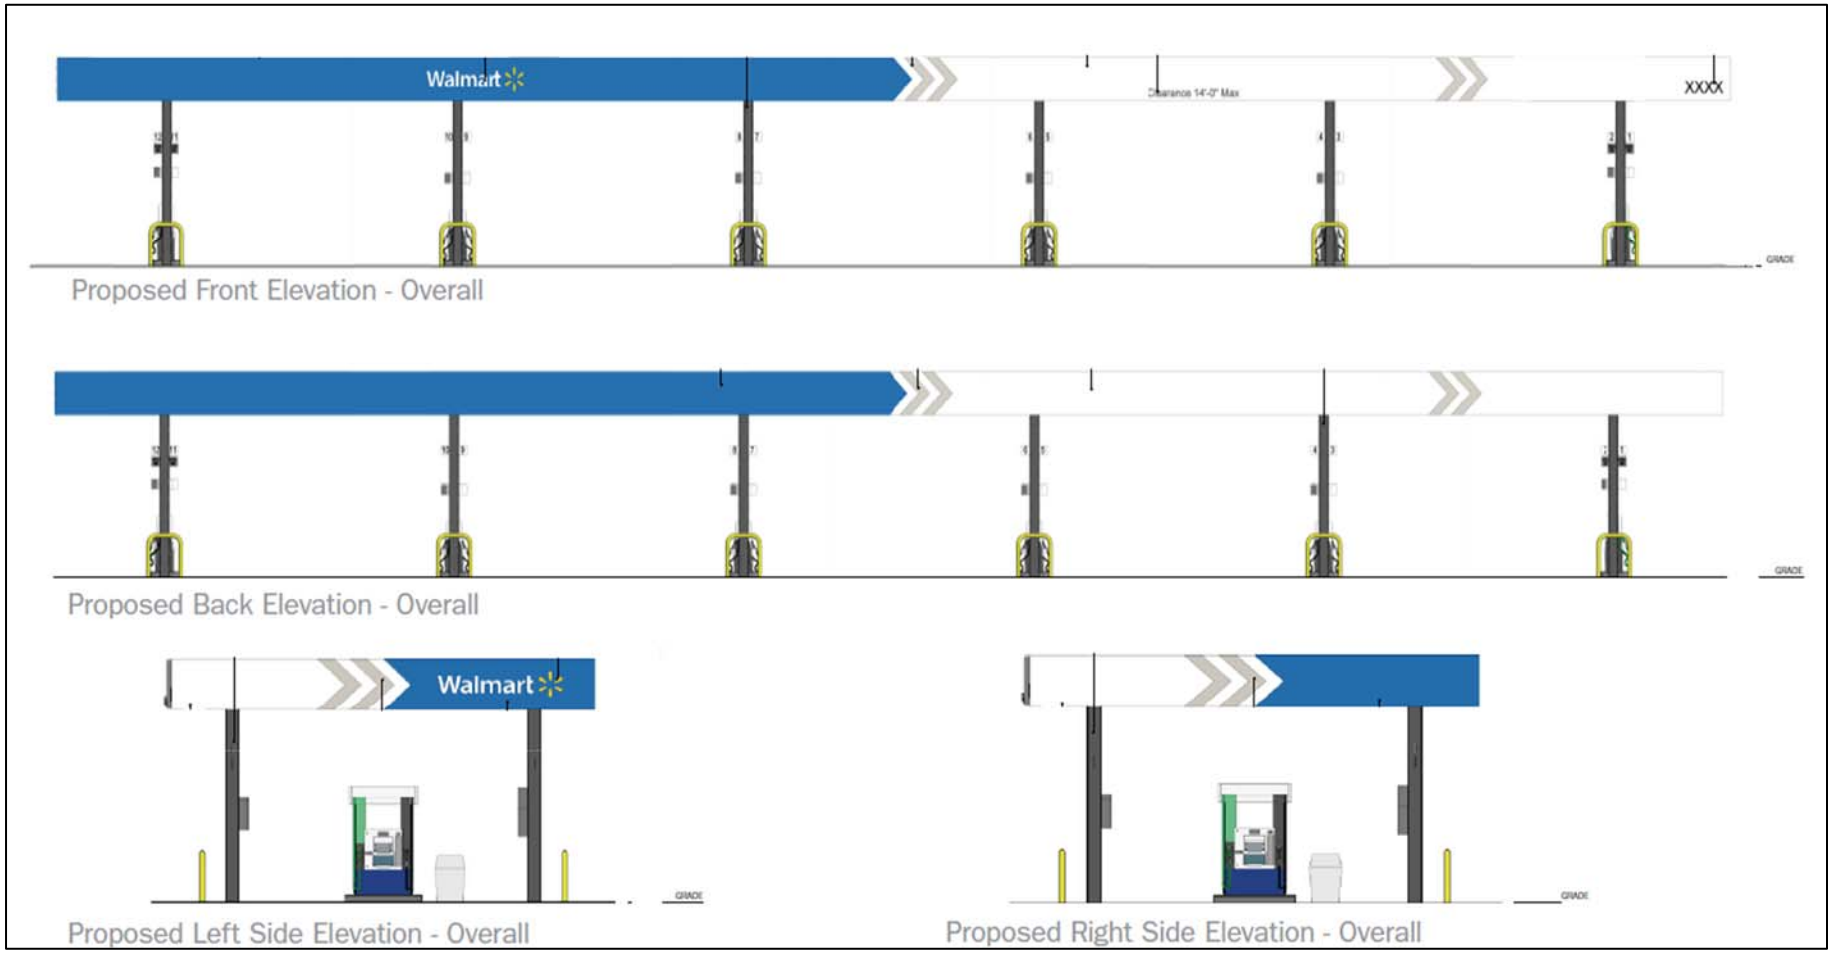

Figure 4-2B
Fuel Station Building Elevations

Figure 4-2C
Convenience Store Building Elevations

Building Mass, Form and Elements

Building massing, scale, and roof forms are the primary design components within the Yucca Valley Retail Specific Plan. Therefore, these require careful articulation. The rear and side elevations, as well as the front, should provide variation in massing, wall, and roof forms. Repetitive elements and modular materials are important elements and are encouraged.

Building Materials

Materials should be selected and detailed for compatibility throughout the site. Buildings should incorporate a mix of at least two of the prevalent materials, including block, block veneer, stucco, wood, or tile. These materials shall be used in traditional combinations that yield an impression of permanence as well as respect for the surrounding environment. Please refer also to Figure 4-3, "Color and Materials."

Color Palette

The use of complementary earth tones should be applied to building facades. The use of a neutral color palette and stone and/or tile accents that shall be repeated on multiple structures will act to unify the Specific Plan area. Company logos and colors shall be allowed on trims and accents. Acceptable materials and colors are presented within Table 4-1.

4.3 LANDSCAPE CONCEPT

The landscaping and streetscape of the Yucca Valley Retail Specific Plan is an important component of project development. Quality in landscape design will serve to enhance the overall appearance and character of the entire Specific Plan development. Please refer also to Figure 4-4, "Landscape Plan Concept." Landscape/streetscape criteria include the following:

- Commercial entry monumentation will be compatible with the building architecture and provide a statement of identification. A distinctive landscape theme will be developed at these entries and maintained throughout the site.
- Xeriscape landscaping shall be used and the design shall reflect the surrounding community's desert character.
- Shrubs and trees will be planted around the buildings to soften building architecture, as well as to enhance and define spaces. All slopes greater than 3:1 gradient that occur within the Specific Plan site will be planted with ground cover, shrubs and trees. All planted areas will be irrigated with an automatic system.
- Parking lot tree plantings will include a design and species that are compatible with the desert landscape.
- Long-term maintenance of on- and off-site improvements, including but not limited to, roadways, parking areas, landscape areas, detention basins, and drainage easements, will be guaranteed through the execution of a private maintenance agreement between the Yucca Valley Retail Center, the adjacent Home Depot Center, and other benefited property owners.

Figure 4-4
Landscape Plan Concept

© 2008 Applied Planning, Inc.

Plant Materials

The landscaping theme will enhance the overall Specific Plan's character. All landscape areas within the site will be planted with a combination of ground cover, shrubs and trees. Landscaped areas will also be top dressed with decomposed granite. Table 4-2 presents the proposed plant palette for Major 1.

Table 4-2 Proposed Plant Palette

Botanical Name	Common Name	Size	Approx. Quantity
TREES			
Relocated Yucca Brevifolia	Joshua Tree	N/A	65
Parkway Canopy Tree (40' height, 40' spread) Such as:		36" Box	25
Prosopis Chilensis	Chilean Mesquite		
Gleditsia Triacanthos	Honey Locust		
Parking Lot Shade Tree (20' height, 30' spread) Such as:		24" Box	200
Rhus Lancea	African Sumac		
Cercidum "Desert Museum"	Palo Verde		
Interior Driveway Tree (30' height, 20' spread) Such as:		24" Box	48
Eucalyptus Sideroxylon Rosea	Red Ironbark		
Koelreuteria Paniculata	Goldenrain Tree		
Parkway Flowering Tree (15' – 20' height, 20' spread) Such as:		24" Box	43
Lagerstroemia Indica	Crape Myrtle		
Chitalpa Tashkentensis	Pink Dawn		
Screening Tree (20' height, 20' spread) Such as:		24" Box	24
Pinus Halepensis	Aleppo Pine		
Vertical Accent Tree (60' – 100' height) Such as:		16' BTH	25
Washingtonia Robusta	Mexican Fan Palm		
SHRUBS/GROUNDCOVER			
Low to Medium Scale, Drought Resistant Shrubs and Groundcovers for Slopes – Drip Irrigation		1 Gallon	8,100
Acacia Redolens "Desert Carpet"	Prostrate Acacia		
Baccharis Pilularis "Centennial"	NCN		
Cotoneaster Species	Cotoneaster		
Dalea Pulchara	Bush Dalia		
Leucophyllum Frutescens "Compacta"	Texas Sage

Proposed Plant Palette

Salvia Greggii	Red Sage		
Rosmarinus Officinalis	Rosemary		
Low to Medium Scale, Drought Resistant Shrubs and Groundcovers – Drip Irrigation		1 Gallon	4,600
Buddleia Marrubifolia	Wooly Butterfly Bush		
Calliandra Eriophylla	Fairy Duster		
Dalea Greggii	Trailing Indigo Bush		
Leucophyllum Frutescens "Compacta"	Texas Sage		
Salvia Greggii	Red Sage		
Tecoma Alata	Orange Bells		
Senna Artemisioides	Feathery Senna		
Dasylirion Wheeleri	Desert Spoon		
Hesperaloe Pavifolia	Red Yucca		
Baccharis Pilularis "Centennial"	NCN		
Low Scale, Drought Resistant Interior Planter Shrubs and Groundcovers – Drip or Overhead Spray Irrigation		1 Gallon	2,900
Gazania Hybrids	Gazania		
Hemerocallis Hybrids	Daylily		
Mulhenbergia Capillaris	Pink Mulhy		
Mulhenbergia Rigens	Deer Grass		
Cotoneaster Horizontalis	Rock Cotoneaster		
Pennisetum Setaceum "Rubrum"	Purple Fountain Grass		
Lavandula Spp.	Lavender		
Leucophyllum Frutescens "Compacta"	Texas Sage		
Rosmarinus Officinalis	Rosemary		

N/A – Not Applicable

BTH – Brown Trunk Height

Native Plant Protection and Treatment Guidelines

The Yucca Valley Retail Center Specific Plan conforms with the Town of Yucca Valley Native Plant Protection and Management Ordinance (Ordinance No. 140). According to the Native Plant Survey (Appendix C) conducted for the project, Joshua trees and Mojave Yuccas are the only plant species listed in the Ordinance that occur within the Specific Plan area. A total of 129 Joshua trees and two (2) Mojave Yuccas occur on site. Some of these plants will be salvaged and replanted within the site. Remaining salvaged trees will be put up for adoption pursuant to the Ordinance and Town's

Joshua tree adoption program. Any plants indicated to be removed by this Specific Plan in conformance with the Native Plant Survey will be removed pursuant to Ordinance No. 140, concurrent with the grading permit for the project.

4.4 -WALLS AND FENCES

Walls and/or fences are permitted along the north, west, and south boundaries of the retail center. If installed, such walls or fences will be designed to provide security, while allowing for territorial views of the surrounding desert landscape and more distant hills. Walls/fences shall be constructed of block masonry, stone, or brick, as appropriate. Any wall adjacent to a public right of way, such as State Highway 62 or Palisade Drive, will be landscaped with a selection of trees, shrubs/hedges, and groundcover and is subject to review, approval, and permits issued by the Town of Yucca Valley and/or Caltrans.

A solid decorative masonry wall of minimum six (6) feet high and five (5) foot wide landscape buffer should be erected along all property lines separating the site from any parcel zoned for residential purposes, and along all alley property lines if the property opposite is zoned for residential purposes. The design of the wall and the proposed construction materials shall be subject to review and approval through the site plan review process.

4.5 - SIGNAGE AND LIGHTING

4.5.1 - Signage

All project Sign Plans submitted with a site development permit or individually, shall demonstrate compliance with the Master Sign Program required by Section 3.5, and incorporate the guidelines of this section. The following guidelines shall be applied:

- Materials to be used on Freestanding Signs (i.e., pylon and monument signs) shall be equal in characteristics with the materials used for the building front Façade.
- Tenant logos, corporate identities and/or images denoting the type of business and services shall be encouraged.

- Wall signs shall be affixed without visible means of attachment, unless attachments make an intentional design statement and are an integral part of the design.
- All conductors, conduits, tubing, crossovers, transformers, and other equipment for illumination of signs shall be concealed and/or incorporated into the building architecture.
- Signs should not cover up windows or important architectural features. K
- Directional Signage:
    - Direction signs may be located at any vehicular or pedestrian decision point.
    - Vehicular direction signs shall clearly direct to destination anchors, on-site parking areas and truck routes.
    - Typography on vehicular direction signs should be legible and have enough contrast to be read from an appropriate windshield viewing distance.
    - Vehicular direction signs shall incorporate reflective vinyl copy for night-time illumination.
- Lighting:
    - Signs with backlit, halo lit or internally illuminated individual channel letters are strongly encouraged.
    - To conserve energy, incorporate standard shutoff time for illuminated signs for businesses that do not operate at night.

4.5.2 - Lighting

The Yucca Valley Retail Center Specific Plan shall conform to the lighting standards of the Town of Yucca Valley. This includes measures to minimize light pollution, which has a detrimental effect on the environment and the enjoyment of the night sky, and measures such as shielding of parking area light fixtures to prevent nuisance spillover effects on surrounding properties.

A Lighting Plan (i.e., Photometric Plan) in conformance with the Town Outdoor Lighting and Night Sky Protection Ordinance (Ordinance No. 90) shall be prepared, to include parking areas and access way lights, external security lights, and lighted signage.

General Provisions for Lighting

- Parking areas and access ways - All lighting will be installed as required to conform with the Town's Outdoor Lighting Plan and Night Sky Protection Ordinance - Illuminated with free-standing light standards with metal halide fixtures. The Yucca Valley Retail Site has been designed with 42-foot pole heights (39 feet on a 3-foot base). The site will utilize Full Cut Off Light Fixtures and Shielded Fixtures around the perimeter of the site, to comply with the Town's Outdoor Lighting and Night Sky Protection Ordinance.

- Signage lighting - In conformance with signage specifications and standards.

- Security lighting - For the major anchor, wall-mounted light fixtures will be located along the rear and side elevation walls, including the rear loading dock. Security lighting will be set on a timer to run from dusk to dawn every day.

SECTION 5:
INFRASTRUCTURE, UTILITIES, AND PUBLIC SERVICES

SECTION 5:
INFRASTRUCTURE, UTILITIES, AND PUBLIC SERVICES

Infrastructure and services to support the Yucca Valley Retail Center shall be extended and improved in conjunction with its phased development. Primary infrastructure facilities are described below.

5.1 - CIRCULATION

The project site's primary access will be from a signalized driveway on Highway 62. This driveway will be a shared access with the Home Depot Retail Center located immediately east of the project. Additional project access will be located on the north- south oriented Avalon Avenue, with truck delivery access provided from Palisade Drive.

In support of the project, a traffic signal has been installed at the project's main entrance, at Twentynine Palms Highway. Avalon Avenue will be widened to its ultimate width. The north side of Palisade Drive has been improved to its ultimate width along the southern boundary of the project site. The roadway was constructed as part of The Home Depot Retail Center, but will be jointly funded by both retail center projects.

Parking requirements for the project are based on the Town of Yucca Valley's parking requirements. The Town requires retail shopping centers to provide four (4) parking spaces for each 1,000 square feet of building area. Major 1 provides for 184,146 square feet of retail space, and as such, the minimum parking requirement is 737 parking spaces. The project will provide 785 parking spaces for this use, thus exceeding the requirement. Additional parking required for the fast-food restaurant and retail pads would be provided in compliance with Town requirements. The project will provide a total of 54 parking spaces for these uses, thus exceeding the requirement of 29 spaces.

© 2008 Applied Planning, Inc.

5.2 - DRAINAGE

On-site drainage will be captured via a series of catch basins and transported via underground pipes to the retention basin proposed on the northern perimeter of the site.

The retention area straddles the northern boundary of the site and will retain onsite flows to pre-development discharges. The basin will be designed so that post- development water released will be equal to pre-development conditions. This will allow the surface water flows from the site to drain to the existing storm drain facilities within State Highway 62.

5.3 - WATER

Public water service is provided by High Desert Water District. Water service to the plan area will be provided with a connection to the 12" public water line in Avalon Avenue, and the extension of a public water line along the alignment of Palisade Drive and northerly onto the project site near the westerly property line to serve both the major retail and the outparcels. These extensions will be constructed by the project and dedicated to the Water District. There will be private water lines within the site to provide service to the major retail and outparcel buildings.

5.4 - WASTEWATER

Currently, the Town of Yucca Valley does not provide sewer treatment to any portion of the Town, therefore, requiring development projects to provide and maintain their own private system.

The anticipated combined average flow from the project site is approximately 9,620 GPD with 6,120 GPD from the Wal-Mart building, and an additional 3,500 GPD estimated for the outparcel buildings. The Town of Yucca Valley, Community

Development Department has, in conjunction with the State RWQCB, set a mandated maximum of 5,000 GPD per development for "Local Agency approval" for any proposed sewer treatment system. Flows exceeding that amount require both San Bernardino County Health Department and the State RWQCB approvals.

Project-generated effluent will be handled by an on-site secondary effluent treatment system that includes nitrogen removal. The package sewer treatment plant will be constructed under the easterly portion of the parking lot. The plant will have sufficient capacity to accommodate the projected wastewater flows anticipated to be generated by the project. After treatment, the wastewater effluent will be discharged into five (5) seepage pits located below the parking lot. The effluent will then naturally percolate back into the ground. Please refer also to Figure 5-1, "Sewer Plan."

5.5 - DRY UTILITIES

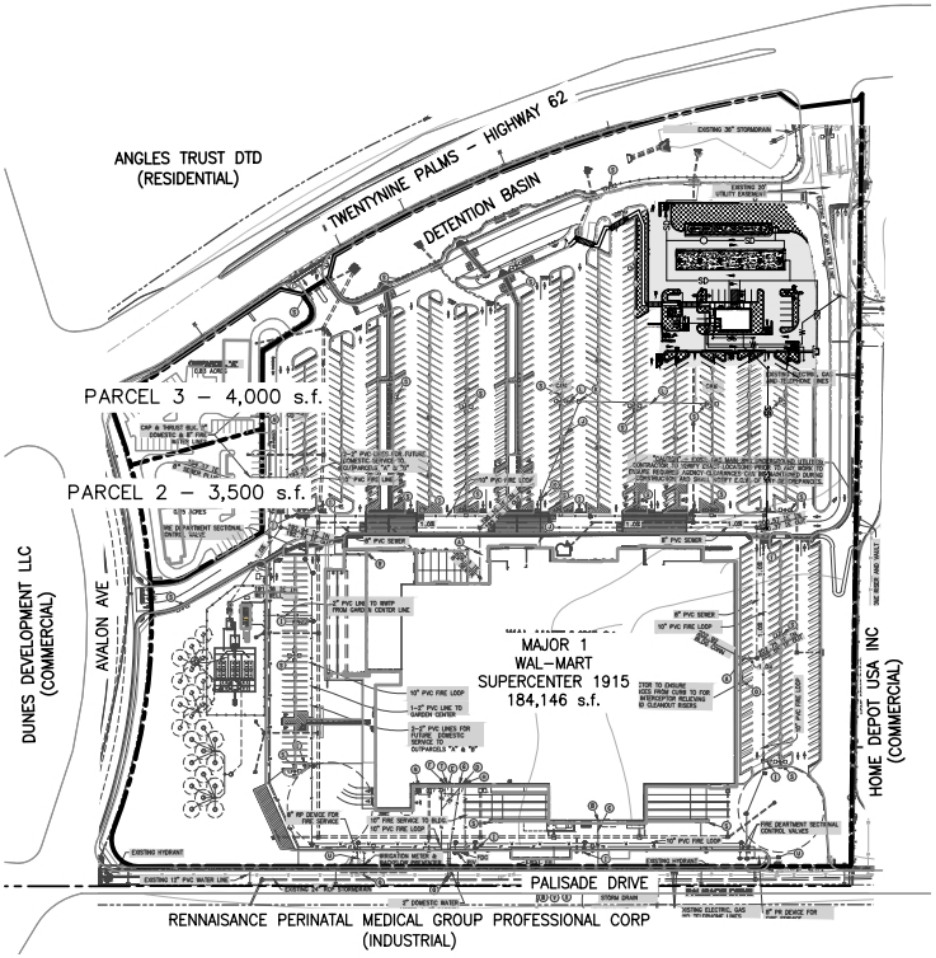
The Yucca Valley Retail Center lies within the service areas of Southern California Edison (electricity), Southern California Gas Company (natural gas), and Verizon (telephone). The utility network will be expanded to meet the future demands of the project. Electric, gas and telephone service lines will be extended from State Highway 62 within a joint trench along the western site boundary. The specific design and sizing requirements of necessary improvements and/or additions will be determined as part of the Town and utility provider's processing and permitting procedures.

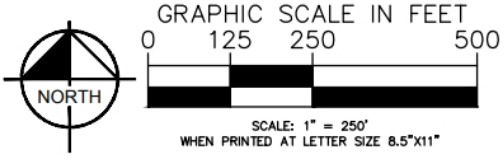
5.6 - GENERAL INFRASTRUCTURE AND SERVICE REQUIREMENTS

5.6.1 Any offsite installation of curbs, sidewalks, street and driveway paving, and street lighting as may be required by the Town shall be subject to the provisions of the Town's Standard Improvement Plans.

5.6.2 All onsite water supply, wastewater collection, storm drainage lines and facilities shall be provided by the developer.

58501 TWENTY NINE PALMS HWY., YUCCA VALLEY, CA 92284
OVERALL UTILITY PLAN





5.6.3 All utility lines serving the project area shall be placed underground by the developer as a condition of approval.

5.6.4 Adequate water for estimated domestic consumption and for fire flow requirements, as determined by San Bernardino County Fire Department, shall be provided by the developer.

5.6.5 Development of the project area shall comply with all requirements of the San Bernardino County Fire Department in providing adequate fire flow, number and location of hydrants, building clearances, and street and driveway/aisle turning radii for access.

5.6.6 The developer shall review with the Police Department the nature and design of the development, and types of security measures to be implemented.

SECTION 6:
IMPLEMENTATION AND ADMINISTRATION

SECTION 6:
IMPLEMENTATION AND ADMINISTRATION

6.1 - FINANCING AND PHASING OF DEVELOPMENT

The Yucca Valley Retail Center is a self-supporting commercial project with individual owners/developers responsible for on and offsite improvements necessary to support development of the project. Development of the plan area will occur in two phases, generally as follows:

Phase 1:

- Rough Grading of the entire 25-acre site and building pads
- Precise grading of Parcel 1 and driveways onto State Highway 62 and Palisade Drive
- Detention basin/drainage improvements (onsite and offsite)
- Installation of onsite sewage treatment system
- Provision of dry utilities (gas, electric, telephone)
- Access from State Highway 62 (Driveways)
- Construction of the major retail, and required parking area
- Construction of secondary drives onto State Highway 62 and Palisade Drive
- Landscape (Parcel 1, State Highway 62 frontage, State Highway 62 entry corners, drives along Avalon Avenue and Palisade Drive)
- Palisade Drive extension and improvements funded according to Section 1.3
- Off-Site Improvements (as detailed in Section 1.0, "Plan Overview")

Phase 2:

- Precise Grading and pad preparation for outparcel buildings (Parcel 2 and 3)
- Construction of outparcel buildings (Parcel 2 and 3)
- Wet and dry utility connection (Parcel 2 and 3)
- Landscape (remainder parking area and corners in Parcel 2 and 3)
- On-site septic system to serve outparcel buildings

Phase 3:

- Construction of fuel station and convenience store

© 2008 Applied Planning, Inc.

6.2 - APPLICATION PROCESSING

Following is a summary of the application requirements for the Yucca Valley Retail Center Specific Plan and individual projects within the Specific Plan. This section summarizes the processing procedures and is not intended to replace the Development Code or other ordinance requirements of the Town of Yucca Valley except where noted herein.

The Town of Yucca Valley has adopted and amended the County of San Bernardino's Development Code (Articles 1-6) General Procedures. The Development Code uses five procedures to review all types of development applications: Public Hearing, Design Review, Administrative Review, Staff Review with Notice, and Staff Review without Notice.

Overview of Applications and Meeting Requirements

Approval of a Specific Plan, Conditional Use Permits (CUPs) (if needed), Site Plan, and Subdivisions each require a discretionary action at public hearings before the Planning Commission and Yucca Valley Town Council. Applications are first reviewed by Staff. Then they are set for review by the Development Review Committee (DRC) and, in some cases, forwarded to the Traffic Advisory Committee (TAC). The recommendations of the DRC and TAC are forwarded to the Planning Commission, which provides a recommendation to the Town Council. Applications for Specific Plan, CUP and Site Plans can be considered concurrently; however, separate and distinct development applications must be made and the appropriate fees paid for each type of action requested. In addition, an Environmental Application must be made with each project.

Specific Plan

Ordinance 87 (February 19, 1998, Yucca Valley Town Council) established Article 13 for Specific Plans in the Town of Yucca Valley. The purposes of this ordinance are:

- To facilitate implementation of the General Plan by establishing procedures for adoption, maintenance and administration of Specific Plans per Sections 65450, et seq., of the California Government Code; and,

- To provide a framework for future development which encourages flexibility and creativity in design, efficient use of resources, infrastructure planning, conservation of open space, and development of various types of housing and living environments for the Town of Yucca Valley.

Where a Specific Plan is not consistent with the General Plan, appropriate General Plan amendments must be considered concurrently with the Specific Plan.

An adopted specific plan supersedes the town zoning, as shown on the Zoning District Map and in the Town Zoning Ordinance (Ordinance No. 79), for the site area included in the proposed land use plan of the Specific Plan.

All other provisions of the Town Development Code, which are applicable to the site, shall apply unless identified in the Specific Plan.

Division of Land Procedures (Subdivision Map Act)

Implementation of the Specific Plan would require the subdivision of land with a Parcel Map pursuant to California Government Code, Title 7, Division 2, Subdivision Map Act, and Chapter 4 of the Town of Yucca Valley Development Code. When the subdivision of land is associated with the Specific Plan, a public hearing is required for the approval of subdivisions.

Site Plan Review (Article 12): Individual projects may be considered under Town Site Plan Review procedures if they are in conformance with the appropriate criteria of the Specific Plan. Staff determines whether Site Plan Review is appropriate during the Pre-Application process. A Site Plan Review Application is submitted with a letter of explanation for the proposed uses. The application is accompanied by the site plan and appropriate fees. Site Plan Review applications must be reviewed and approved by the Planning Commission. The recommendations of the Development Review Committee and, if appropriate, the Traffic Advisory Committee will be forwarded to the Planning Commission for their consideration.

Conditional Use Permit (Article 1): A Conditional Use Permit (CUP) is required for specific uses listed in the land use districts of the Development Code. A CUP may be needed for new development and/or expansion, alteration and/or disturbance of land associated with an existing commercial, industrial, institutional or multiple residential site pursuant to the criteria of the Development Code. Additionally, the conversion of non-conforming land uses is subject to CUP requirements. A CUP is required for Specific Plan uses listed in Section 3.2.3 herein. The Town Staff would determine the need for a Conditional Use Permit during the Pre-Application process. All CUPs and amendments to CUPs shall be subject to approval by the Planning Commission.

Temporary Uses: The Development Code allows for temporary or seasonal uses subject to review and approval of the Planning Director. These types of uses require a Temporary Use Permit Application to be submitted to the Community Development Department along with a site plan and application fees.

Exterior Modifications: Alterations to the exterior of any structure approved under CUP 02-04 shall require an amendment to the CUP and approval by the Planning Commission.

Appeals: Appeals can be made to the Town Council within ten days of any action. An Appeal Application must be submitted to the Community Development Department with the applicable fees.

© 2008 Applied Planning, Inc.

6.3 - SPECIFIC PLAN AMENDMENTS

The Town of Yucca Valley Community Development Director shall be responsible for administering the provisions of this Specific Plan in accordance with the provisions of the State of California Government Code, Subdivision Map Act, and the Town of Yucca Valley General Plan and Development Code.

The Specific Plan may be amended per Section 9.70.120 of the Development Code (Specific Plan Amendment).

Minor Amendments

Minor amendments include simple modifications to text or graphics that do not change the meaning, intent, or are contrary to any provision of the Specific Plan. Minor modifications may be accomplished administratively by the Director of Community Development and are appealable to the Planning Commission and Town Council.

Major Amendments

Major modifications are amendments to exhibits or text that are intended to change the intent, development standards or other significant provisions of the Specific Plan. Major modifications require a Specific Plan Amendment and approval by the Planning Commission and Town Council in accordance with requirements of Chapter 9.83 of the Development Code (Permit Amendments).

Interpretations

Interpretations of the provisions of this Specific Plan are subject to Chapter 9.83 of the Development Code, except as follows:

- When there is a question or ambiguity regarding the interpretation of any provision of this Specific Plan, the Director of Community Development has the authority to interpret the intent of such provision.

- The Director of Community Development may, at his/her discretion, refer interpretations to the Planning Commission for its consideration and action. Such a referral shall be accompanied by a written analysis of issues related to the interpretation.

- All interpretations made by the Director of Community Development may be appealed to the Planning Commission in accordance with the appeal procedures set forth in the Development Code.

PURPOSE AND INTENT

To promote the quality of design desired for this Wal-Mart, this Sign Program establishes criteria for the design, implementation and regulation of Wal-Mart signage, as well as site or thematic graphics for the Wal-Mart located in Yucca Valley, California. Signage of high-quality design and materials using appropriate colors is considered an integral part of the image and success of this Wal-Mart.

Wal-Mart may utilize any or all the sign types described herein. All signage shall comply with applicable provisions of the Zoning Ordinance and land use plans of the Town of Yucca Valley. All building and site signage shall be consistent with this Sign Program to provide a consistent and comprehensive design character.

The intent of this Sign Program is to ensure that signage for Wal-Mart is designed and executed in a manner which will achieve the following objectives while providing desired project identification.

Exterior Signing
The objectives of exterior signage are:

- To provide concise identity and information for shoppers and prospective shoppers while avoiding visual competition with the building's aesthetic or the site landscaping.
- To produce creative signage in good taste that will enhance Wal-Mart's image while complementing the architectural and landscape design theme.
- To provide functional signage to effectively serve the needs of consumers while providing proper identification of Wal-Mart.
- To expedite the review and approval of Wal-Mart's signage by providing guidelines and criteria that explain acceptable standards for the signage.

RESTRICTIONS

The following are prohibited, along with restrictions described in Section 87.0780 PROHIBITED SIGNS of the Town of Yucca Valley's Sign Regulations:

- Abandoned signs and supporting structures
- Chalkboards or blackboards
- Permanent sale or come-on signs
- Portable signs (except A-frame)
- Roof signs
- Signs painted on fences or roofs
- Large balloons or other large inflatable devices
- Signs that are affixed to vehicles purposely parked and serve as advertisement device.
- Signs which simulate in color or design a traffic sign or signal, or which make use of words, symbols or characters in such a manner to interfere with, mislead, or confuse pedestrian or vehicular traffic
- Signs which incorporate in any manner any flashing, moving, or intermittent lighting
- Animated or moving signs or signs which contain any moving parts
- Banners and Flags (See Section 87.0130 Temporary Signs for exceptions)

GENERAL PROVISIONS AND SPECIFICATIONS

The Town of Yucca Valley Planning Department shall administer the project Sign Program. Sign permit applications and instructions concerning required exhibits are available from the Town of Yucca Valley. No sign shall be installed without the approval of the Town of Yucca Valley Planning Department.

- Tenant signs shall be of high graphic quality but also designed in a creative manner that is compatible with and complementary to the surrounding facades. Sign fabrication work shall be of excellent quality.

- Tenant logos, corporate identities and/or images denoting the type of business and services shall be encouraged. The sign copy, color, size and design shall be in accordance with this document and approved by the Town of Yucca Valley, except in the case of tenants whose design, colors, size and sign criteria are part of a nationally recognized image.

- Wall signs shall be affixed without visible means of attachment, unless attachments make an intentional design statement and are an integral part of the design.

- The tenant's sign contractor shall repair any damage to the building caused by their work. Damage to the structure that is not repaired by the sign contractor shall become the tenant's responsibility to correct. The tenant shall be fully responsible for the work of the tenant's sign contractor and shall indemnify, defend and hold the Owner harmless from damages or liabilities.

CONSTRUCTION SPECIFICATIONS & MISCELLANEOUS REQUIREMENTS

- All tenant identification signs shall consist of face-illuminated individual dimensional letter forms and/or symbols (or an assembly of dimensional letter forms if the tenant's logotype is script-style letters). All letter/symbol faces shall be translucent acrylic with integral color. Secondary identification signs shall consist of non-illuminated individual dimensional letter forms and/or symbols.

- The cabinet and/or channel letters shall be constructed of 0.060 - 0.090 aluminum, with 1/8" plastic face and fastened to the wall or fascia in an approved manner. All metal shall receive a minimum of two (2) coats of primer and two (2) coats of finish paint. Metal sheet seam joints shall be joined by pop rivets. Halo lighting and or neon need secondary ground fault consistent with UL2161. All letters shall have service access to lamps, ballasts and wiring.

- For each outparcel tenant, a total of four (4) building signs per building frontage oriented towards a street, driveway, or parking area, based on a maximum of one (1) square foot of sign area per one (1) lineal foot of use or occupancy.

- All fascia signs shall be centered left to right on the fascia or tenant frontage, and generally centered top and bottom between fascia reveals (the vertical position will vary depending on the configuration of the sign and the locations of the reveals on the sign fascia). Proposed sign locations for tenant logotypes and/or symbols with unusual configurations shall be submitted to the Town of Yucca Valley and Developer/Owner for review prior to filing an application with the municipality.

- Power will be provided from the house electrical panel to a junction box at all sign locations. Power connection is the tenant's responsibility. A time clock shall be provided by the tenant to turn off power to the signs. All electrical signs shall bear the UL Label (not visible to the public view) and their installation shall comply with all local building and electrical codes. The tenant shall pay for electrical service for the sign. All conductors, transformers and other equipment shall be concealed.

- All penetrations of the building structure required for sign installation shall be neatly sealed in a watertight condition. All bolts, fastenings, clips, etc., shall be painted to match the adjacent surface.

- All lettering shall be restrictive to the "net sign area." No projection above or below the "net sign area" will be permitted (except as otherwise noted and / or approved in writing).

- When a sign is removed, either for replacement or on termination of the lease, the tenant shall leave the building exterior in good condition, normal wear and tear excepted. Any holes caused by the removal of the tenant's sign(s) shall be repaired and painted to match the adjacent surface. It is the responsibility of the tenant to ensure that all signs are removed from a tenant space within ten (10) days of vacating the space.

- The tenant is required to maintain their signs in a first class condition and replace defective lights and/or components as necessary.

- Contractors installing signs shall be registered by the State of California, and must have a current Town of Yucca Valley business license. All work shall be done in accordance with the Town of Yucca Valley minimum standards. Each contractor must have valid and current Workman's Compensation Insurance.

ENVIRONMENTAL CHECKLIST/

PROJECT INFORMATION

Project Title: Walmart Fuel Station Project

Lead Agency Name and Address:
Town of Yucca Valley
Community Development Department
58928 Business Center Drive
Yucca Valley, California 92284

Contact Person and Phone Number:
Jared Jerome, Associate Planner
Tel: (760) 369-6579 ext. 317

Project Location: 58501 Twentynine Palms Highway (State Route 62) (Assessor's Parcel Number [APN] 0601-201-54) in the Town of Yucca Valley, San Bernardino County. The approximately 1.32-acre project site is in the northeastern portion of the existing Walmart Supercenter, south of State Route 62 and east of Avalon Avenue. The project site is paved and has ornamental landscaping.

Project Sponsor's Name and Address:
Walmart Stores Inc.
702 SW 8th Street
Bentonville, Arkansas 72716

General Plan Designation: Commercial (C)

Zoning: General Commercial under the Yucca Valley Retail Specific Plan

Description of Project:
The proposed project is a new fuel station in the existing Walmart Supercenter parking lot. The fuel station would include six fuel dispensers beneath a canopy and a 1,556-square-foot convenience store, which would include alcohol sales and an air station for vehicle tire inflation. Three underground storage tanks (UST) would be installed on the site: one 20,000-gallon

gasoline tank, one 20,000-gallon split gasoline tank,[1] and one 20,000-gallon diesel tank. Utilities, including the fuel tanks, would be underground in compliance with applicable regulations, which would require excavation up to 25 feet below grade. A total of 135 parking spaces would be removed, but 15 spaces would be installed at the convenience store. A total of 771 parking spaces (inclusive of the 15 spaces at the fuel station/convenience store) would be available for the Walmart Supercenter, which is 28 more spaces than required by the Town of Yucca Valley (Town). The proposed project would include new drive aisles for internal circulation and new landscaped areas within the parking lot (including a new landscaped median along the west side of the project site), and it would re-landscape an existing landscape median on the north side of the project site. A new pedestrian walkway would connect the project site to the existing bus stop.

Surrounding Land Uses and Setting:
The project site, within the Walmart Supercenter, is bordered by a drive aisle and a landscaped median to the north and east and by parking to the south and west. The Walmart Supercenter is surrounded by a mix of commercial and retail uses along State Route 62 (SR-62), including restaurants, shops and service-oriented businesses. Residential neighborhoods are further north of the project site and north of SR-62, and undeveloped land is beyond the commercial center to the east and south. The closest residential uses are 0.12 mile north of the project site. The project site is approximately 10 miles west of the City of Twentynine Palms, 15 miles northeast of the City of Desert Hot Springs, and 17 miles northeast of the City of Palm Springs. Joshua Tree National Park is to the south and southeast of the Town. The project site is within the Yucca Valley North USGS Quadrangle.

Discretionary Actions:
The Town of Yucca Valley is the lead agency under CEQA and has primary responsibility for reviewing and approving the proposed project. Discretionary approvals required from the Town include: (1) Approval of a Specific Plan Amendment to include the proposed project (i.e. a fuel station) in the Yucca Valley Retail Specific Plan and (2) Approval of a Conditional Use Permit (CUP) for the construction and operation of a fuel station and associated convenience store, pursuant to Dev. Code 9.06.030(A)(1)(b).

Other Public Agencies Whose Approval Is Required (e.g., Permits, Financing Approval, or Participating Agreement):

- **San Bernardino County Department of Environmental Health.** Issuance of permits related to USTs for fuel storage and compliance with applicable health and safety regulations.
- **Colorado River Basin Regional Water Quality Control Board (Region 7).** Compliance with water quality regulations, including coverage under the State Water Resources Control

[1] The 20,000-gallon split gasoline tank would hold 12,000 gallons of regular gasoline and 8,000 gallons of premium gasoline, respectively.

Board's Phase II Small Municipal Separate Storm Sewer System (MS4) General Permit and Construction General Permit.

- **Mojave Desert Air Quality Management District.** Issuance of a permit to operate the fuel dispensing facilities and associated equipment for stationary emission sources.

Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code Section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

The proposed project involves a Specific Plan Amendment; therefore, consultation pursuant to Senate Bill (SB) 18 is required. An addendum is not subject to Assembly Bill (AB) 52 consultation requirements. In accordance with Government Code Section 65352.3, the Town of Yucca Valley contacted the Native American Heritage Commission (NAHC) to identify tribes that may have traditional lands or cultural places within the project area and mailed consultation invitation letters to the tribes identified on July 25, 2025. Four tribes requested consultation: Yuhaaviatam of San Manuel Nation (formerly the San Manuel Band of Mission Indians), Morongo Band of Mission Indians, Twenty-Nine Palms Band of Mission Indians, and Agua Caliente Band of Cahuilla Indians.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

Chapter 3 of this document summarizes the environmental impact conclusions of the Yucca Valley Retail Specific Plan Environmental Impact Report (Certified EIR) and concludes that the proposed project meets the conditions described in CEQA Guidelines Section 15164 for preparation of an Addendum.

DETERMINATION

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Date

1. INTRODUCTION

1.1 BACKGROUND, PURPOSE, AND SCOPE

The proposed project involves the development of a new fuel station in the existing Walmart Supercenter parking lot in the Town of Yucca Valley. The proposed project is subject to environmental review pursuant to the California Environmental Quality Act (CEQA). Environmental analysis for the proposed project is embodied by this Addendum to the Yucca Valley Retail Specific Plan Environmental Impact Report (EIR) (State Clearinghouse No. 2004071127), which was certified on June 25, 2008 (Certified EIR).

The Certified EIR analyzed the development of a commercial retail center, including a 229,000-square-foot Walmart Supercenter, a six-pump (12 fueling positions) fuel station, a 4,000-square-foot fast-food restaurant with drive-through, and a detention basin. Though the Certified EIR analyzed a fuel station as part of the overall development program, the specific location and design of the proposed fuel facility differ from the original layout. Since the adoption of the Yucca Valley Retail Specific Plan (Specific Plan) (approved project), the Walmart Supercenter and other commercial uses have been constructed. The fuel station analyzed in the Certified EIR was not constructed, and the area originally designated for the fuel station and fast-food restaurant was developed with two smaller fast-food restaurants instead.

The proposed project would develop a six-pump (12 fueling positions) fuel station in the northeastern portion of the existing Walmart Supercenter parking lot, a different location than was originally analyzed. However, the use, intensity, and environmental footprint is similar to the fuel station analyzed in the Certified EIR. The proposed project would also add a single-story, 1,556-square-foot convenience store in connection with the fuel station. This Addendum evaluates whether the proposed project would result in new or more severe environmental impacts than those disclosed in the Certified EIR. The scope of this document is limited to analyzing project-specific impacts and changes in circumstances since certification of the EIR to determine whether the proposed project meets the criteria for preparation of an addendum pursuant to CEQA Guidelines Section 15164.

To implement the proposed project, the following discretionary approvals from the Town are required: (1) Approval of the Conditional Use Permit, and (2) Approval of the Specific Plan Amendment. As lead agency under CEQA, the Town is required to evaluate the environmental impacts associated with these discretionary approvals. The scope of the review for project-related impacts for this Addendum is limited to differences between impacts analyzed by the Certified EIR for the approved project and the proposed project. The baseline includes the

development assumptions and mitigation measures evaluated in the Certified EIR. As required by CEQA, this Addendum also addresses changes in circumstances and new information that could potentially involve new or more severe environmental impacts. The approved project as analyzed in the 2007 Certified EIR for the Specific Plan, serves as the "baseline" for the environmental impact analysis and the physical environment, and represents the physical and regulatory conditions at the time of that environmental review.

1.2 ENVIRONMENTAL PROCEDURES

Pursuant to CEQA and the CEQA Guidelines, this Addendum focuses on whether implementation of the proposed project would require major revisions to the Certified EIR due to the potential for new significant environmental effects or a substantial increase in the severity of previously identified significant effects, pursuant to CEQA Guidelines Section 15162.

Pursuant to Public Resources Code Section 21166 and Section 15162 of the CEQA Guidelines, when an EIR has been certified or a negative declaration adopted for a project, no subsequent or supplemental EIR or negative declaration shall be prepared for the project unless the lead agency determines that one or more of the following conditions are met:

(1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

(A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of

the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

A supplement to an EIR (supplemental EIR), which is narrower in scope than a subsequent EIR, may be prepared if any of the above criteria apply, but "only minor changes or additions would be necessary to make the previous EIR adequately apply to the project in the changed situation" (CEQA Guidelines Section 15163(a)). In the absence of the need to prepare either a subsequent or supplemental EIR, an addendum to a previously Certified EIR may be prepared. Section 15164 states:

(a) The lead agency or a responsible agency shall prepare an addendum to a previously Certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.

(b) An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

(c) An addendum need not be circulated for public review but can be included in or attached to the final EIR or adopted negative declaration.

(d) The decision making body shall consider the addendum with the final EIR or adopted negative declaration prior to making a decision on the project.

(e) A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's findings on the project, or elsewhere in the record. The explanation must be supported by substantial evidence. (CEQA Guidelines § 15164)

This Addendum to the Certified EIR has been prepared because the Lead Agency's evaluation of the proposed project has not indicated any of the circumstances requiring a subsequent or supplemental EIR. As demonstrated in Chapter 3, *Environmental Analysis*, the proposed project would not result in impacts that differ from the approved project, and it would not trigger the need for preparation of a subsequent or supplemental EIR under the criteria in CEQA Guidelines Sections 15162(a) and 15163(a). The proposed project would not change the assumptions made under the Certified EIR.

The proposed project is consistent with the Certified EIR and would not require changes to the approved project. This Addendum demonstrates that no substantial changes are proposed to the approved project or have occurred in the development area covered by the Certified EIR that would require major revisions to the Certified EIR or substantially increase the severity of previously identified significant effects (see CEQA Guidelines Section 15162[a][1]). Therefore, the impacts of the proposed project are within the significance findings and types of environmental impacts disclosed in the Certified EIR.

As substantiated in Section 3 of this Addendum, the proposed project would not result in new significant impacts or substantially increase the severity of the impacts of the approved project due to substantial changes in circumstances since the certification of the EIR (see CEQA Guidelines Section 15162[a][2]).

In addition, no information that was not known and could not have been known at the time the Certified EIR was certified has been revealed that shows new or substantially more severe significant impacts would result (see CEQA Guidelines Section 15162[a][3]). There are no new or considerably different mitigation measures that would substantially reduce one or more significant impacts of the approved project but that are not adopted.

Because this Addendum does not identify new or substantially more severe significant impacts, circulation for public review and comment is not necessary (CEQA Guidelines Section 15164[c]). The Town of Yucca Valley has considered this Addendum together with the previously Certified EIR prior to adoption of the proposed project, pursuant to CEQA Guidelines Section 15164(d).

1.3 PRIOR ENVIRONMENTAL DOCUMENTATION

The proposed project site is in the Specific Plan area, which was approved by the Town of Yucca Valley in August 2008. The Yucca Valley Retail Specific Plan EIR (State Clearinghouse No. 2004071127) was prepared and certified in accordance with CEQA to analyze the environmental impacts associated with development of the Specific Plan area.

The Certified EIR evaluated development of approximately 28 acres of commercial uses, including a 229,000-square-foot Walmart Supercenter, a six-pump fuel station, a 4,000-square-foot fast-food restaurant, and associated infrastructure and landscaping. Although the fuel station analyzed in the Certified EIR was not constructed, the Walmart Supercenter and other commercial uses were developed, consistent with the Specific Plan.
