Re: Geotechnical Engineering Report
Yucca Valley Walmart Fuel Station
58501 Twenty Nine Palms Hwy.
Yucca Valley, San Bernardino County, CA
Terracon Project No. LA245053

Dear Mr. Alvarez:

We have completed the scope of Geotechnical Engineering services for the above referenced project in general accordance with Terracon Proposal No. PLA245053 dated March 14, 2023 between Terracon and Kimley-Horn. This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning earthwork, construction of floor slabs, underground storage tanks, pavements and the design and construction of foundations for the proposed fuel center.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,

Terracon

Janna Valdez, E.I.T.
Staff Engineer

Joshua R. Morgan, P.E.
Regional Geotechnical Manager

Introduction

This report presents the results of our subsurface exploration and Geotechnical Engineering services performed for the proposed fuel station to be located at within the existing parking lot of a Walmart Supercenter at 58501 Twentynine Palms Hwy., Yucca Valley, San Bernardino County, CA. The purpose of these services was to provide information and geotechnical engineering recommendations relative to:

- Subsurface soil conditions
- Groundwater conditions
- Seismic site classification per California Building Code (CBC)
- Lateral Earth Pressures
- Site preparation and earthwork
- Foundation design and construction
- Pavement design and construction

The geotechnical engineering Scope of Services for this project included the advancement of test borings, laboratory testing, engineering analysis, and preparation of this report. The geotechnical engineering Scope of Services for our current scope of work included the following:

- Two (2) soil test borings to depths of 21.5, two (2) to approximately 16.5 feet, and two (2) to 6.5 feet below ground surface (bgs) in the proposed fuel station areas
- Corrosion testing on soil samples obtained from one (1) location

Drawings showing the site and boring locations are shown on the **Site Location** and **Exploration Plan**, respectively. The results of the laboratory testing performed on soil samples obtained from the site during our field exploration are included on the boring logs and/or as separate graphs in the **Exploration Results** section.

Project Description

Our initial understanding of the project was provided in our proposal and was discussed during project planning. A period of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

Item	Description
Information Provided	An email request for proposal was provided by Ryan Alvarez on March 7, 2024. The request included a conceptual site plan.
Project Description	The project includes a fuel station area with a footprint up to 1.2 acres in the northeast portion of an existing Walmart Supercenter parking lot.
Proposed Structure	The project includes a single-story fuel station serviced building with a footprint up to 1500 square feet (30x50 feet). The building will be slab-on-grade (non-basement). The project will also include the construction of a fuel station canopy (160 feet by 30 ft). The improvements will also include reconfiguration of drive lanes and landscape areas. A below grade fuel tank is also proposed.
Maximum Structural Loads	**Fuel Station Service Building Structural Load Data:** We understand that the fuel service building will have dimensions of 1,500 square feet. The typical gravity load to an interior column is 12 kips. The estimated maximum gravity load that may occasionally occur due to severe live loading is 25 kips. Maximum column uplift force from wind is estimated at 15 kips. The light gauge steel stud wall gravity loads range from 0.5 to 1.0 kips per lineal foot. Estimated maximum uniform floor slab live load is 100 psf. Estimated maximum floor slab concentrated load is 1.0 kip. **Fuel Station Canopy (typical for multi-column layouts) Structural Load Data:** For the canopy, the isolated column loads consist of axial gravity and uplift loads in conjunction with shear and overturning moments. The typical gravity axial load to a canopy column is 20 kips. The estimated maximum gravity load that may occasionally occur due to severe live loading is 40 kips. Maximum column uplift force from wind is estimated at 25 kips. The estimated maximum shear load from wind is estimated at 8 kips. The estimated maximum overturning moment from wind is estimated at 120 kip-feet.
Grading/Slopes	We anticipate that the field grade will follow the existing site grades with minimum grading required to bring the site to finish grade. The fuel tank is anticipated to be on the order of 15 feet below existing site grades.

Item	Description
Pavements	Standard Duty Pavement: Design life of 20 years based on a minimum ESAL (18 kip) load of 2,200, terminal serviceability = 2.0, reliability = 85%, initial serviceability = 4.2, standard deviation = 0.45 for flexible pavements and 0.35 for rigid pavements. Heavy Duty Pavement: A design life of 20 years, based on a minimum ESAL (18 kip) load of 335,800, terminal serviceability = 2.0, reliability = 85%, initial serviceability = 4.2, standard deviation = 0.45 for flexible pavements and 0.35 for rigid pavements.
Infiltration Systems	The realignment of the storm drain line is included in the site plan and outfalls into an existing stormwater infiltration basin, therefore we did not include percolation testing for infiltration rates is not part of this project.
Building Code	2022 California Building Code (CBC)

Terracon should be notified if any of the above information is inconsistent with the planned construction, especially the grading limits, as modifications to our recommendations may be necessary.

Site Conditions

The following description of site conditions is derived from our site visit in association with the field exploration and our review of publicly available geologic and topographic maps.

Item	Description
Parcel Information	The project is located at 58501 Twentynine Palms Hwy., Yucca Valley, San Bernardino County, CA. The proposed canopy portion of the site encompasses an approximate footprint of 1.2 acres. The coordinates of the approximate center of the site are 34.1340°N, 116.3833°W. See **Site Location**
Existing Improvements	The site is currently a parking lot for an existing Walmart shopping center. Existing improvements consist of paved parking and drive areas, hardscaping, and landscaping.
Current Ground Cover	Primarily asphalt pavements for parking and drive areas.

Item	Description
Existing Topography	The site is relatively flat with an approximate elevation ranging from 3206 to 3210 feet (from Google Earth Pro™).

Geotechnical Characterization

Subsurface Conditions

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of the site. Conditions observed at each exploration point are indicated on the individual logs. The individual logs can be found in the **Exploration Results** and the GeoModel can be found in the **Figures** attachment of this report.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at each boring location, refer to the GeoModel.

Model Layer	Layer Name	Density/Consistency
01	**Fill – Silty Sand**	Medium dense to dense
02	**Silty Sand or Poorly Graded Sand with Silt**	Loose to dense

The geotechnical characterization forms the basis of our geotechnical calculations and evaluation of site preparation and foundation options. As noted in **General Comments**, the characterization is based upon widely spaced exploration points across the site, and variations are likely.

Lab Results

Laboratory tests were conducted on selected soil samples and the test results are presented in the **Exploration Results** section and on the boring logs. Atterberg limit test results indicate that the on-site soils generally non-plastic. A consolidation test indicated that the sandy soils encountered at an approximate depth of 2.5 feet and 5 feet bgs have a negligible collapse potential when saturated under normal footing loads of 2,000 psf. Direct shear testing on clayey soils encountered at 7.5 feet indicate soils

have an effective friction angle of approximately 35 degrees with apparent cohesion value of 170 psf. Maximum density/optimum moisture content testing conducted in accordance with ASTM D1557 (Modified Proctor) indicate that near surface soils tested have maximum dry density of 125.5 pounds per cubic feet (pcf) and optimum water content of 9 percent. R-value tests on soils tested in the surface indicate that the soils have an approximate R-value of 65.

Groundwater

The borings were advanced using a hollow-stem-auger technique that allow short term groundwater observations to be made while drilling. Groundwater seepage was not encountered within the maximum allowed drilling depth at the time of our field exploration. Groundwater conditions may be different at the time of construction.

According to data collected from the Water Data Library for the State of California from a nearby well, located approximately 0.7 miles southwest of the site in the State Well Number 01N06E31G001S, historic groundwater levels between July 3, 2008, and December 20, 2009 were recorded at greater than 100 feet bgs.[1]

Groundwater conditions may change because of seasonal variations in rainfall, runoff, and other conditions not apparent at the time of drilling. Therefore, groundwater levels during construction or at other times in the life of the structure may be higher or lower than the levels indicated on the boring logs. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project.

Seismic Site Class

The 2022 California Building Code (CBC) Seismic Design Parameters have been generated using the SEAOC/OSHPD Seismic Design Maps Tool. This web-based software application calculates seismic design parameters in accordance with ASCE 7-16, and 2022 CBC. The 2022 CBC requires that a site-specific ground motion study be performed

[1] Groundwater elevation was obtained from the Water Data Library for the State of California Well Name 01N06E31G001S

in accordance with Section 11.4.8 of ASCE 7-16 for Site Class D sites with a mapped S_1 value greater than or equal 0.2.

However, Section 11.4.8 of ASCE 7-16 includes an exception from such analysis for specific structures on Site Class D sites. The commentary for Section 11 of ASCE 7-16 (Page 534 of Section C11 of ASCE 7-16) states that "In general, this exception effectively limits the requirements for site-specific hazard analysis to very tall and or flexible structures at Site Class D sites." Based on our understanding of the proposed structures, it is our assumption that the exception in Section 11.4.8 applies to the proposed structure. However, the structural engineer should verify the applicability of this exception.

Based on this exception, the spectral response accelerations presented below were determined using the site coefficients (Fa and Fv) from Tables 1613.2.3(1) and 1613.2.3(2) presented in Section 16.4.4 of the 2022 CBC.

Description	Value
2022 California Building Code Site Classification (CBC)[1]	D[2]
Site Latitude (°N)	34.1340
Site Longitude (°W)	116.3833
S_s Spectral Acceleration for a 0.2-Second Period	2.279
S_1 Spectral Acceleration for a 1-Second Period	0.813
F_a Site Coefficient for a 0.2-Second Period	1.0
F_v Site Coefficient for a 1-Second Period	1.7

1. Seismic site classification in general accordance with the *2022 California Building Code*.
2. The 2022 California Building Code (CBC) requires a site soil profile determination extending to a depth of 100 feet for seismic site classification. The current scope does not include the 100-foot soil profile determination. Borings were extended to a maximum depth of 21.5 feet, and this seismic site class definition considers that similar or denser soils continue below the maximum depth of the subsurface exploration. Additional exploration to deeper depths would be required to confirm the conditions below the current depth of exploration.

Faulting and Estimated Ground Motions

The site is located in the southern California, which is a seismically active area. The type and magnitude of seismic hazards affecting the site are dependent on the distance to causative faults, the intensity, and the magnitude of the seismic event. As calculated using the USGS Unified Hazard Tool, the Eureka Peak fault, which is considered to have the most significant effect at the site from a design standpoint, has a maximum credible earthquake magnitude of 6.47 and is located approximately 2.21 kilometers from the site.

Based on the USGS Design Maps Summary Report, using the American Society of Civil Engineers (ASCE 7-16) standard, the peak ground acceleration (PGA_M) at the project site is expected to be 1.152g. Based on the USGS Unified Hazard Tool, the project site has a mean magnitude of 6.72. Furthermore, the site's parcel partially overlaps an Alquist Priolo (AP) Earthquake Fault Zone based on our review of the State Fault Hazard Maps.[2] However, the specific project site is not located within the AP Fault Zone.

Liquefaction

Liquefaction is a mode of ground failure that results from the generation of high pore water pressures during earthquake ground shaking, causing loss of shear strength. Liquefaction is typically a hazard where the condition of loose sandy soils exists below groundwater. The California Geological Survey (CGS) has designated certain areas as potential liquefaction hazard zones.[3] These are areas considered at a risk of liquefaction-related ground failure during a seismic event, based upon mapped surficial deposits and the presence of a relatively shallow water table.

Based on our review of the CGS map, the project site has not been mapped for liquefaction hazard. However, according to the San Bernadino County Geologic Maps, the site's potential for liquefaction hazard is low. Furthermore, based on the anticipated depth to groundwater, liquefaction hazard potential at the site is considered low.[4]

Corrosivity

The table below lists the results of laboratory soluble sulfate, soluble chloride, electrical resistivity, and pH testing. The values may be used to estimate potential corrosive characteristics of the on-site soils with respect to contact with the various underground materials which will be used for project construction.

[2] California Geological Survey. https://maps.conservation.ca.gov/cgs/informationwarehouse.

[3] California Geologic Survey, "Earthquake Zones of Required Investigation, https://maps.conservation.ca.gov/cgs/EQZApp/app/

[4] San Bernardino County Zoning and Overlay Maps, Geologic Hazard Maps, https://lus.sbcounty.gov/planning-home/zoning-and-overlay-maps/geologic-hazard-maps/

Corrosivity Test Results Summary

Boring	Sample Depth (feet)	Soluble Sulfate (%)	Sulfides (ppm)	Soluble Chloride (mg/kg)	Red-Ox Potential (mV)	Total Salts (ppm)	Electrical Resistivity (Ω-cm)	pH
B-1	0-5	0.01	Nil	55	+733	286	4,020	8.22
B-3	0-5	0.01	0.01	95	+732	339	6,499	8.46

Results of soluble sulfate testing indicate samples of the on-site soils tested possess negligible sulfate concentrations when classified in accordance with Table 19.3.1.1 of the ACI Design Manual. Concrete should be designed in accordance with the exposure class S0 provisions of the ACI Design Manual, Section 318, Chapter 19.

Geotechnical Overview

The site appears suitable for the proposed construction based upon geotechnical conditions encountered in the test borings, provided that the recommendations provided in this report are implemented in the design and construction phases of this project.

The subsurface materials generally consisted of loose to dense sand with varying amounts silts extending to the maximum depth of the borings. Groundwater was not encountered within the maximum depths of exploration during or at the completion of drilling and is not expected to affect foundation construction on this site.

Our explorations indicate the site has approximately 5 feet of fill material across the site. The fill soils consisted of silty sand. The estimated depth of fill should not be considered exact due to the similarity of lithology, color, and densities of the graded materials and native soils. Typically, fill soils should be removed and replaced prior to new construction. However, this fill was likely placed during the grading and relatively recent construction of the Wal-Mart shopping center and based on past history with Wal-Mart projects grading and inspection documentation likely exists. Furthermore, In-situ density tests measured from samples taken from our borings indicate that these soils are compacted to greater than 95% of the modified proctor value and are generally homogenous. It is our opinion that these soils received adequate compaction testing during placement. However, Terracon recommends that records of the testing and inspection of grading in this area be reviewed prior to start of construction of this outlying Fuel Facility.

The proposed structures may be supported on shallow spread footing foundations bearing on engineered fill, or on drilled shafts.. Engineered fill should extend to a minimum depth of 1 feet below the bottom of foundations, or the depth of undocumented fill, or 3 feet below existing grades, whichever is greater. The excavation

should be widened laterally at least 8 inches for each 12 inches of fill placed below footing base elevations. Grading for the proposed station should incorporate the limits of the overexcavation plus a lateral distance of 1 feet beyond the outside edge of perimeter footings, where possible. Overexcavation and replacement is not required for support of drilled shaft foundations.

Geotechnical engineering recommendations for foundation systems and other earth connected phases of the project are outlined below. The recommendations contained in this report are based upon the results of field and laboratory testing (presented in the **Exploration Results**), engineering analyses, and our current understanding of the proposed project.

The **General Comments** section provides an understanding of the report limitations.

Earthwork

The following presents recommendations for site preparation, excavation, subgrade preparation, and placement of engineered fills on the project. The recommendations presented for the design and construction of foundations are contingent upon following the recommendations outlined in this section.

Earthwork on the project should be observed and evaluated by Terracon. The evaluation of earthwork should include observation and testing of engineered fill, subgrade preparation, foundation of bearing soils, and other geotechnical conditions exposed during construction of the project.

Site Preparation

Prior to placing fill, existing debris, pavements, and other deleterious materials should be removed from proposed foundation and pavement areas. Exposed surfaces within these areas should be free of mounds and depressions which could prevent uniform compaction. The site should be initially graded to create a relatively level surface to receive fill and provide for a relatively uniform thickness of fill beneath proposed structures.

Our explorations indicate the site has approximately 5 feet of fill materials across the site. The fill soils consisted of silty sand. The estimated depth of fill should not be considered exact due to the similarity of lithology, color, and densities of the graded materials and native soils. Based on our review of Google Earth imagery, it is apparent that the fill materials are associated with the grading and development of the existing shopping center onsite between March 2013 and January 2015.

Terracon does not have any documentation to show if the grading operations were monitored or the fill materials have been compacted and tested. Typically fill soils should be removed and replaced prior to new construction. However, this fill was likely placed

during the grading and relatively recent construction of the Wal-Mart shopping center and based on past history with Wal-Mart projects grading and inspection documentation likely exists. Furthermore, In-situ density tests measured from samples taken from our borings indicate that these soils are compacted to greater than 95% of the modified proctor value and are generally homogenous. It is our opinion that these soils received adequate compaction testing during placement.. If such documentation exists, Terracon should be notified and the recommendations in this report may be appropriately modified or confirmed.

Evidence of utilities such as manhole covers and utility markings was observed onsite. Although no evidence underground facilities such as septic tanks, cesspools, or basements were observed during the site reconnaissance, such features could be encountered during construction. If unexpected fills or underground facilities are encountered, such features should be removed, and the excavation thoroughly cleaned prior to backfill placement and/or construction.

Subgrade Preparation

The proposed service building and canopies may be supported by a shallow concrete foundation system bearing on engineered fill or drilled shafts.

The proposed structures may be supported by a shallow foundation supported on engineered fill extending to a minimum depth of 1 feet below the bottom of foundations, or 3 feet below existing grade, whichever is greater. Grading for the proposed station should incorporate the limits of the overexcavation plus a lateral distance of 1 feet beyond the outside edge of perimeter footings. Overexcavation and replacement is not required for support of drilled shaft foundations.

Subgrade soils beneath proposed exterior slabs should be scarified to a minimum depth of 12 inches, moisture conditioned, and compacted. The moisture content and compaction of subgrade soils should be maintained until slab or pavement construction.

All exposed areas which will receive fill, once properly cleared and benched where necessary, should be scarified to a minimum depth of 10 inches, moisture conditioned as necessary, and compacted per the compaction requirements in this report. Compacted structural fill soils should then be placed to the proposed design grade and the moisture content and compaction of subgrade soils should be maintained until foundation construction.

Based upon the subsurface conditions determined from the geotechnical exploration, subgrade soils exposed during construction are anticipated to be relatively workable; however, the workability of the subgrade may be affected by precipitation, repetitive construction traffic or other factors. If unworkable conditions develop, workability may be improved by scarifying and drying.

Excavation

We anticipate that excavations for the proposed construction can be accomplished with conventional earthmoving equipment.

The bottom of excavations should be thoroughly cleaned of loose soils and disturbed materials prior to backfill placement and/or construction.

Onsite soils consist of cohesionless sandy soils. Such soils have the tendency to cave and slough during excavations. Therefore, formwork may be needed for foundation excavations.

The walls of the proposed excavation should be shored or sloped in conformance with OSHA excavation and trench safety standards. If any excavation is extended to a depth of more than 20 feet, it will be necessary to have the side slopes designed by a professional engineer.

We recommend that the underground storage tanks be over-excavated by about 2 feet in plan area to provide adequate access around the excavation for underground storage tanks construction. The walls of the proposed excavation should be shored or sloped in conformance with OSHA excavation and trench safety standards. If any excavation is extended to a depth of more than 20 feet, it will be necessary to have the side slopes designed by a professional engineer.

Soils from the excavation should not be stockpiled higher than six 6 feet or within ten 10 feet of the edge of an open trench. Construction of open cuts adjacent to existing structures, including underground pipes, is not recommended within a 1½ H:1V plane extending beyond and down from the perimeter of the structure. Cuts that are proposed within five 5 feet of light standards, other utilities, underground structures, and pavement should be provided with temporary shoring.

Onsite soils consist of cohesionless sandy soils. Therefore, OSHA Soil Type C should be utilized for sloping considerations and on-site soils shall be sloped at a minimum of 1.5H:1V. Furthermore, benching is not permitted.

It may be necessary for the contractor to retain a geotechnical engineer to monitor the soils exposed in all excavations and provide engineering services for slopes. This will provide an opportunity to monitor the soils encountered and to modify the excavation slopes as necessary. It also offers an opportunity to verify the stability of the excavation slopes during construction

Individual contractors are responsible for designing and constructing stable, temporary excavations. Excavations should be sloped or shored in the interest of safety following local, and federal regulations, including current OSHA excavation and trench safety standards.

Fill Material and Placement

All fill materials should be inorganic soils free of vegetation, debris, and fragments larger than six inches in size. Pea gravel or other open-graded materials should not be used as fill or backfill without the prior approval of the geotechnical engineer.

Clean on-site soils or approved imported materials may be used as fill material for the following:

- general site grading
- foundation areas
- foundation backfill
- pavement areas

Imported soils for use as fill material within proposed structure areas should conform to low volume change materials as indicated in the following specifications:

Gradation	**Percent Finer by Weight** (ASTM C 136)
3”	100
No. 4 Sieve	50-100
No. 200 Sieve	40(max)

- Liquid Limit..... 30 (max)
- Plasticity Index..... 15 (max)
- Maximum Expansion Index* ..... 20 (max)

*ASTM D4829

The contractor shall notify the Geotechnical Engineer of import sources sufficiently ahead of their use so that the sources can be observed and approved as to the physical characteristic of the import material. For all import material, the contractor shall also submit current verified reports from a recognized analytical laboratory indicating that the import has a "not applicable" (Class S0) potential for sulfate attack based upon current ACI criteria and is "mildly corrosive" to ferrous metal and copper. The reports shall be accompanied by a written statement from the contractor that the laboratory test results are representative of all import material that will be brought to the job.

Engineered fill should be placed and compacted in horizontal lifts, using equipment and procedures that will produce recommended moisture contents and densities throughout the lift. Fill lifts should not exceed 10 inches loose thickness.

Compaction Requirements

Recommended compaction and moisture content criteria for engineered fill materials are as follows:

Material Type and Location	Per the Modified Proctor Test (ASTM D 1557)		
	Minimum Compaction Requirement	Range of Moisture Contents for Compaction Above Optimum	
		Minimum	Maximum
On-site soils and low volume change imported fill:			
Beneath foundations:	90%	-1%	+3%
Beneath interior slabs:	90%	-1%	+3%
Fill greater than 5 feet in depth:	95%	-1%	+3%
Beneath pavements:	95%	-1%	+3%
Aggregate base (beneath pavements):	95%	-1%	+3%
Utility trenches*:	90%	-1%	+3%
Exterior Slabs:	90%	-1%	+3%
Bottom of excavation receiving fill:	90%	-1%	+3%
Miscellaneous backfill:	90%	-1%	+3%

*upper 12 inches should be compacted to 95% within structural areas. Low-volume change imported soils should be used in structural areas

Utility Trench Backfill

We anticipate that the on-site soils will provide suitable support for underground utilities and piping that may be installed. Any soft and/or unsuitable material encountered at the bottom of excavations should be removed and be replaced with an adequate bedding material.

A non-expansive granular material with a sand equivalent greater than 30 should be used for bedding and shading of utilities, unless allowed or specified otherwise by the utility manufacturer.

On-site materials are considered suitable for backfill of utility and pipe trenches from 1 foot above the top of the pipe to the final ground surface, provided the material is free of organic matter and deleterious substances.

Trench backfill should be mechanically placed and compacted as discussed earlier in this report. Compaction of initial lifts should be accomplished with hand-operated tampers or other lightweight compactors. Where trenches are placed beneath footings, the backfill should satisfy the gradation and expansion index requirements of engineered fill

discussed in this report. Flooding or jetting for placement and compaction of backfill is not recommended.

Grading and Drainage

All grades must provide effective drainage away from the proposed structure during and after construction and should be maintained throughout the life of the structure. Water retained next to the structure can result in soil movements greater than those discussed in this report. Greater movements can result in unacceptable differential foundation movements, cracked slabs and walls, and roof leaks.

Planters and other surface features which could retain water in areas adjacent to the building or pavements should be sealed or eliminated. In areas where sidewalks or paving do not immediately adjoin the structure, we recommend that protective slopes be provided with a minimum grade of approximately 5 percent for at least 10 feet from perimeter walls. Backfill against footings, exterior walls, and in utility and sprinkler line trenches should be well compacted and free of all construction debris to reduce the possibility of moisture infiltration. We recommend a minimum horizontal setback distance of 10 feet from the perimeter of any structure and the high-water elevation of the nearest storm-water retention basin.

Roof and canopy drainage should discharge into splash blocks or extensions when the ground surface beneath such features is not protected by exterior slabs or paving. Sprinkler systems and landscaped irrigation should not be installed within 5 feet of foundation walls.

Exterior Slab Design and Construction

Exterior slabs-on-grade, exterior architectural features, and utilities founded on, or in backfill may experience some movement due to the volume change of the backfill. To reduce the potential for damage caused by movement, we recommend:

- minimizing moisture increases in the backfill;
- controlling moisture-density during placement of backfill;
- using designs which allow vertical movement between the exterior features and adjoining structural elements;
- placing effective control joints on relatively close centers

Earthwork Construction Considerations

Upon completion of filling and grading, care should be taken to maintain the subgrade water content prior to construction of pavements. Construction traffic over the completed subgrades should be avoided to the extent practical. The site should also be

graded to prevent ponding of surface water on the prepared subgrades or in excavations. Water collecting over or adjacent to construction areas should be removed. If the subgrade desiccates, saturates, or is disturbed, the affected material should be removed, or the materials should be scarified, moisture conditioned, and recompacted prior to pavement construction.

Should unstable subgrade conditions develop stabilization measures will need to be employed. Stabilization measures may include placement of aggregate base and multi-axial geogrid. Use of lime, fly ash, kiln dust or cement could also be considered as a stabilization technique. Laboratory evaluation is recommended to determine the effect of chemical stabilization on subgrade soils prior to construction.

We recommend that the earthwork portion of this project be completed during extended periods of dry weather if possible. If earthwork is completed during the wet season (typically November through April) it may be necessary to take extra precautionary measures to protect subgrade soils. Wet season earthwork operations may require additional mitigative measures beyond that which would be expected during the drier summer and fall months. This could include diversion of surface runoff around exposed soils and draining of ponded water on the site. Once subgrades are established, it may be necessary to protect the exposed subgrade soils from construction traffic.

Based on our understanding of the project, we anticipate that excavations up to 15 feet below existing grade for the installation of the underground storage tanks are planned for this project. The sides of below grade structure excavations may either be sloped or formed with vertical cuts. For vertical sided excavations greater than 5 feet in depth, the excavations will require the use of shoring, bracing or some form of retention to prevent sloughing and caving of the soil into the excavation.

As a safety measure, no equipment should be operated within 5 feet of the edge of the excavation and no materials should be stockpiled within 10 feet of the excavation. Excavations should not approach closer than a distance equal to the depth of excavation from existing structures/facilities without some form of protection for the facilities. Proper berming or ditching should be performed to divert any surface runoff away from the excavation.

The individual contractor(s) is responsible for designing and constructing stable, temporary excavations as required to maintain stability of both the excavation sides and bottom. Excavations should be sloped or shored in the interest of safety following local, and federal regulations, including current Occupational Safety and Health Administration (OSHA) excavation and trench safety standards.

As a minimum, excavations should be performed in accordance with OSHA 29 CFR, Part 1926, Subpart P, "Excavations" and its appendices, and in accordance with any applicable local, and/or state regulations.

Construction site safety is the sole responsibility of the contractor who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for construction site safety, or the contractor's activities; such responsibility shall neither be implied nor inferred.

Construction Observation and Testing

The geotechnical engineer should be retained during the construction phase of the project to observe earthwork and to perform necessary tests and observations during subgrade preparation, proof-rolling, placement and compaction of controlled compacted fills, backfilling of excavations to the completed subgrade.

The exposed subgrade and each lift of compacted fill should be tested, evaluated, and reworked, as necessary, as recommended by the Geotechnical Engineer prior to placement of additional lifts. Each lift of fill should be tested for density and water content at a frequency of at least one test for every 2,500 square feet of compacted fill in the building areas and 5,000 square feet in pavement areas. Where not specified by local ordinance, one density and water content test should be performed for every 50 linear feet of compacted utility trench backfill. This testing frequency criteria may be adjusted during construction as specified by the geotechnical engineer of record.

In areas of foundation excavations, the bearing subgrade should be evaluated by the Geotechnical Engineer. If unanticipated conditions are observed, the Geotechnical Engineer should prescribe mitigation options.

In addition to the documentation of the essential parameters necessary for construction, the continuation of the Geotechnical Engineer into the construction phase of the project provides the continuity to maintain the Geotechnical Engineer’s evaluation of subsurface conditions, including assessing variations and associated design changes.

Shallow Foundations

We anticipate that the proposed service building and canopies may be supported on spread footings.

If the site has been prepared in accordance with the requirements noted in **Earthwork**, the following design parameters are applicable for shallow foundations.

Shallow Foundation Design Recommendations

Item	Description
Foundation System	Spread footings
Maximum Net Allowable Bearing Pressure[1]	3,000 psf up to 4 feet wide 2,500 psf up to 6 feet wide 2,000 psf up to 10 feet wide
Required Bearing Stratum[2]	Engineered fill extending to a minimum of 1 feet below the bottom of foundations, or the depth of undocumented fill, or 3 feet below existing grade, whichever is greater.
Ultimate Passive Resistance[3]	375 pcf
Ultimate Coefficient of Sliding Friction[4]	0.34
Minimum Embedment Below Finished Grade[5]	18 inches
Minimum Dimensions	Columns: 24 inches Walls: 18 inches
Estimated Total Settlement from Structural Loads	About 1 inch
Estimated Differential Settlement[2,6]	About 1/2 of total settlement over a horizontal distance of 40 feet

1. The maximum net allowable bearing pressure is the pressure in excess of the minimum surrounding overburden pressure at the footing base elevation. An appropriate factor of safety has been applied. These bearing pressures can be increased by 1/3 for transient loads unless those loads have been factored to account for transient conditions.
2. Unsuitable or soft soils should be overexcavated and replaced per the recommendations presented in **Earthwork**.
3. Use of passive earth pressures require the sides of the excavation for the spread footing foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the footing forms be removed, and compacted structural fill be placed against the vertical footing face. Assumes no hydrostatic pressure.
4. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Should be neglected for foundations subject to net uplift conditions. A factor of safety of 1.5 is recommended.
5. For sloping ground, maintain depth below the lowest adjacent exterior grade within 5 horizontal feet of the structure
6. Differential settlements are noted for equivalent-loaded foundations and bearing elevation as measured over a span of 50 feet.

Settlement calculations were performed utilizing Westergaard and Hough's methods[5] to estimate the static settlement for various foundations widths with an allowable settlement of 1-inch.

Finished grade is defined as the lowest adjacent grade within five feet of the foundation for perimeter (or exterior) footings.

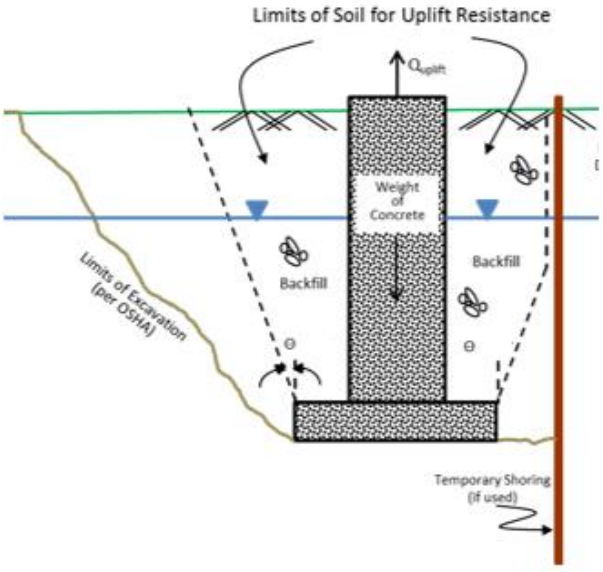
The allowable foundation bearing pressure applies to dead loads plus design live load conditions. The design bearing pressure may be increased by one-third when considering total loads that include wind or seismic conditions. The weight of foundation concrete below grade may be neglected in dead load computations.

Foundation should be reinforced as necessary to reduce the potential for distress caused by differential foundation movement. Foundation excavations should be observed by the geotechnical engineer. If the soil conditions encountered differ significantly from those presented in this report, supplemental recommendation will be required.

Design Parameters – Overturning and Uplift Loads

Uplift resistance of spread footings can be developed from the effective weight of the footing and the overlying soils. As illustrated on the subsequent figure, the effective weight of the soil prism defined by diagonal planes extending up from the top of the perimeter of the foundation to the ground surface at an angle, θ, of 20 degrees from the vertical can be included in uplift resistance. The maximum allowable uplift capacity should be taken as a sum of the effective weight of soil plus the dead weight of the foundation, divided by an appropriate factor of safety. A maximum total unit weight of 120 pcf should be used for the backfill.

[5] FHWA Geotechnical Engineering Circular No. 6 – Shallow Foundations, FHWA – SA-02-054



Foundations subject to overturning loads should be sized to maintain the entire foundation area in contact with the bearing surface during the load event. This condition requires that the load eccentricity be maintained in the central third of the foundation (e.g., e < b/6), and may require foundation widening or additional foundation weight beyond that provided by proportioning for uplift alone.

Foundation Construction Considerations

Finished grade is defined as the lowest adjacent grade within five feet of the foundation for perimeter (or exterior) footings.

The allowable foundation bearing pressure applies to dead loads plus design live load conditions. The design bearing pressure may be increased by one-third when considering total loads that include wind or seismic conditions. The weight of the foundation concrete below grade may be neglected in dead load computations.

Foundations should be reinforced as necessary to reduce the potential for distress caused by differential foundation movement. Foundation excavations should be observed by the geotechnical engineer. If the soil conditions encountered differ significantly from those presented in this report, supplemental recommendations will be required.

Deep Foundations

Drilled Shaft Design Recommendations

Proposed canopies may be supported on drilled shafts. Total required embedment of the drilled shaft should be determined by the structural engineer based on structural loading and parameters provided in this report.

Drilled Shaft Axial Loading

Allowable skin friction and total capacity charts are attached to our **Supporting Information** section at the end of this report. The values presented for allowable side friction and end bearing include a factor of safety of 2.5.

Drilled piers should have a minimum (center-to-center) spacing of three diameters. Closer spacing may require a reduction in axial load capacity. Axial capacity reduction can be determined by comparing the allowable axial capacity determined from the sum of individual piers in a group versus the capacity calculated using the perimeter and base of the pier group acting as a unit. The lesser of the two capacities should be used in design.

The allowable uplift capacities should only be based on the side friction of the shaft; however, the weight of the foundation should be added to these values to obtain the actual allowable uplift capacities for drilled shafts. Tensile reinforcement should extend to the bottom of shafts subjected to uplift loading.

Drilled Shaft Lateral Loading

Based on our review of the subsurface conditions in the area of the proposed hydrogen station, our laboratory testing, and the Standard Penetration Test (SPT) results, engineering properties have been estimated for the soils conditions as shown in the following table. Due to potential for disturbance within the upper soils around the shaft, lateral and axial capacity of soils within the upper 2 feet should be neglected.

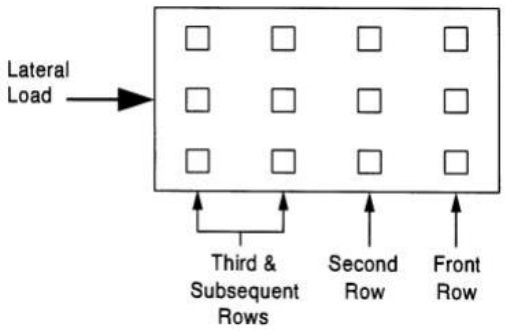
Recommended geotechnical parameters for lateral load analyses by others of drilled shaft foundations have been developed for use in the LPILE computer program. The following table summarizes input values for use in LPILE analyses. LPILE estimated values of k_h may be used. Since deflection or a service limit criterion will most likely control lateral capacity design, no safety/resistance factor is included with the parameters.

Stratigraphy[1]		L-Pile Soil Model	ϕ[2]	γ' (pcf)[2]
Layer	Depth Below Finished Grade (feet)			
1	2	Sand	34	120
	5			
2	5	Sand	30	110
	20			

1. See Subsurface Profile in **Geotechnical Characterization** for more details on Stratigraphy.
2. Definition of Terms:
3. ϕ: Internal friction angle
4. γ'': Effective unit weight
5. Default K and E50 values may be utilized.

The load capacities provided herein are based on the stresses induced in the supporting soil strata. The structural capacity of the shafts/piles should be checked to assure they can safely accommodate the combined stresses induced by axial and lateral forces. Lateral deflections of shafts/piles should be evaluated using an appropriate analysis method, and will depend upon the pile's diameter, length, configuration, stiffness and "fixed head" or "free head" condition. We can provide additional analyses and estimates of lateral deflections for specific loading conditions upon request. The load-carrying capacity of shafts/piles may be increased by increasing the diameter and/or length.

When piers are used in groups, the lateral capacities of the piers in the second, third, and subsequent rows of the group should be reduced as compared to the capacity of a single, independent pier. Guidance for applying p-multiplier factors to the p values in the p-y curves for each row of pier foundations within a pier group are as follows:



1. Front row: Pm = 0.8

2. Second row: Pm = 0.4
3. Third and subsequent row: Pm= 0.3

For the case of a single row of piers supporting a laterally loaded grade beam, group action for lateral resistance of piers would need to be considered when spacing is less than five pier diameters (measured center-to-center). However, spacing closer than 3D (where D is the diameter of the pier) is not recommended due to the potential for the installation of a new pier disturbing an adjacent installed pier, likely resulting in axial capacity reduction.

Drilled Shaft Construction Considerations

Drilling to design depths should be possible with conventional single flight power augers. Due to presence of granular soils, caving of soils within the drilled shaft excavations should be anticipated. Temporary steel casing will likely be required to properly drill and clean shafts prior to concrete placement.

We do not anticipate drilled shafts to extend below the depth of groundwater. However, if foundation concrete cannot be placed in dry conditions, a tremie should be used for concrete placement. If shafts extend below the depth of groundwater, a tremie should be used for concrete placement.

Drilled shaft foundation concrete should be placed immediately after completion of drilling and cleaning. If foundation concrete cannot be placed in dry conditions, a tremie should be used for concrete placement. Due to potential sloughing and raveling, foundation concrete quantities may exceed calculated geometric volumes.

In the event drilled hole walls slough during drilling, temporary steel casing may be required to properly drilled shafts prior to concrete placement. We recommend the use of slurry drilling methods with polymers method to keep the solids in suspension during the drilling. Drilled shaft foundation concrete should be placed within 6 inches of the shaft base of the slurry-filled excavation immediately after completion of drilling and cleaning. The tremie should remain inserted several feet into the fresh concrete as it displaces the slurry upward and until placement is complete. The slurry should have a sand content no greater than 1% at the time concrete placement commences. The maximum unit weight of the slurry should be established in consultation with Terracon.

As an alternative to temporary casing, the shaft excavation may be backfilled with a slurry mix in order to help stabilize sloughing sidewalls of the excavation, allowed to dry, and re-drilled through the backfill. The slurry mix design should be submitted to the Geotechnical Engineer for review and approval

If casing is used for drilled shaft construction, it should be withdrawn in a slow continuous manner maintaining a sufficient head of concrete to prevent infiltration of

water or the creation of voids in shaft concrete. Shaft concrete should have a relatively high fluidity when placed in cased shaft holes or through a tremie. Shaft concrete with slump in the range of 6 to 8 inches is recommended.

Closely spaced shafts should be drilled and filled alternatively, allowing the concrete to set at least eight hours before drilling the adjacent shaft. All excavations should be filled with concrete as soon after drilling as possible. In no event should shaft holes be left open overnight.

Formation of mushrooms or enlargements at the tops of shafts should be avoided during shaft drilling. If mushrooms develop at the tops of the shafts during drilling, sono-tubes should be placed at the shaft tops to help isolate the shafts.

Free-fall concrete placement in drilled piers will only be acceptable if provisions are taken to avoid striking the concrete on the sides of the hole or reinforcing steel. The use of a bottom-dump hopper, or an "elephant's trunk" discharging near the bottom of the hole where concrete segregation will be minimized, is recommended.

We recommend that all drilled shaft installations be observed on a full-time basis by an experienced geotechnical engineer in order to evaluate that the soils encountered are consistent with the recommended design parameters. If the subsurface soil conditions encountered differ significantly from those presented in this report, supplemental recommendations will be required. The Geotechnical Engineer should observe the installation of drilled piers to verify the soil conditions and the diameter and depth of piers. Drilled piers should be constructed true and plumb.

Drilled pier end bearing surfaces must be thoroughly cleaned prior to concrete placement. A representative of the Geotechnical Engineer should inspect the bearing surface and foundation pier configuration. If the subsurface soil conditions encountered differ significantly from those presented in this report, supplemental recommendations will be required.

The contractor should check for gas and/or oxygen deficiency before any workers enter the excavation for observation and manual cleanup. All necessary monitoring and safety precautions as required by OSHA, State or local codes should be strictly enforced.

Floor Slabs

Description	Recommendation
Interior floor system	Slab-on-grade concrete

Description	Recommendation
Floor slab support	Engineered fill extending to a minimum depth of 1 foot below the bottom of foundations, or to the depth of undocumented fill, or 3 feet below existing grade whichever is greater.
Subbase	Minimum 4-inches of Aggregate Base
Modulus of subgrade reaction	200 pounds per square inch per inch (psi/in) (The modulus was obtained based on estimates obtained from NAVFAC 7.1 design charts). This value is for a small loaded area (1 Sq. ft or less) such as for forklift wheel loads or point loads and should be adjusted for larger loaded areas.

The use of a vapor retarder should be considered beneath concrete slabs on grade covered with wood, tile, carpet, or other moisture sensitive or impervious coverings, or when the slab will support equipment sensitive to moisture. When conditions warrant the use of a vapor retarder, the slab designer should refer to ACI 302 and/or ACI 360 for procedures and cautions regarding the use and placement of a vapor retarder.

Saw-cut control joints should be placed in the slab to help control the location and extent of cracking. For additional recommendations refer to the ACI Design Manual. Joints or cracks should be sealed with a water-proof, non-extruding compressible compound specifically recommended for heavy duty concrete pavement and wet environments.

Where floor slabs are tied to perimeter walls or turn-down slabs to meet structural or other construction objectives, our experience indicates differential movement between the walls and slabs will likely be observed in adjacent slab expansion joints or floor slab cracks beyond the length of the structural dowels. The Structural Engineer should account for potential differential settlement through use of sufficient control joints, appropriate reinforcing or other means.

Design parameters for floor slabs assume the requirements for **Earthwork** have been followed. Specific attention should be given to positive drainage away from the structure and positive drainage of the aggregate base beneath the floor slab.

Lateral Earth Pressures

Design Parameters

Recommended equivalent fluid pressures for cantilever shoring based on onsite native soils are as follows:

Item	Recommended Value [1,2]
Active Case	38 psf/ft
Passive Case[3]	375 psf/ft
At-Rest Case	58 psf/ft

1. The values are based on engineered fill materials used as backfill.
2. Uniform, horizontal backfill, compacted to at least 90% of the ASTM D1557 maximum dry density, rendering a maximum unit weight of 120 pcf.
3. Use of passive earth pressures require the sides of the excavation for the foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the foundation forms be removed and compacted engineered fill be placed against the vertical foundation face

The lateral earth pressures herein do not include any factor of safety and are not applicable for submerged soils/hydrostatic loading. Additional recommendations may be necessary if such conditions are to be included in the design.

The design of retaining structures and shoring systems should consider surcharge loads imposed on the foundations. In addition, the design should take into consideration new and existing footing loads and anticipated vehicular loads in the vicinity of the proposed basement walls. In general, surcharge loads should be considered where they are located within a horizontal distance behind the wall equal to the height of the wall.

Surcharge loads acting at the top of the wall should be applied to the wall over the backfill as a uniform pressure over the entire wall height and should be added to the static earth pressures. Surcharge stresses due to point loads, line loads, and those of limited extent, such as compaction equipment, should be evaluated using elastic theory.

For the design of braced shoring, we recommend such shoring be designed using a rectangular-shaped distribution of lateral earth pressure of 23H psf, where H (in units of feet) is the height of the braced shoring. Surcharge loads from the drive lanes should be also considered in the design of the shoring.

Fill against foundation and retaining walls should be compacted to densities specified in the Earthwork section of this report. Compaction of each lift adjacent to walls should be

accomplished with hand-operated tampers or other lightweight compactors. Over-compaction may cause excessive lateral earth pressures on the wall.

The design of the shored excavation should be performed by an engineer knowledgeable and experienced with the on-site soil conditions. The contractor should be aware that slope height, slope inclination or excavation depths should in no case exceed those specified in local, state or federal safety regulations, e.g., OSHA Health and Safety Standards for Excavation, 29 CFR Part 1926, or successor regulations. Such regulations are strictly enforced and, if not followed, the owner or the contractor could be liable for substantial penalties.

Pavements

General Pavement Comments

Pavement designs are provided for the traffic conditions and pavement life conditions as noted in **Project Description** and in the following sections of this report. A critical aspect of pavement performance is site preparation. Pavement designs noted in this section must be applied to the site which has been prepared as recommended in the **Earthwork** section.

Pavement Design Parameters

Asphalt concrete the Portland cement concrete pavement sections thickness was based on lab testing results. The results of R-value testing exceeded the maximum value of 50 recommended in the Caltrans method for design of flexible pavements, therefore an R-value of 50 was used in the following design. R-value testing may be required prior to pavement construction to verify the design R-value.

The structural sections are predicated upon proper compaction of the utility trench backfills and the subgrade soils as prescribed by in **Earthwork**, with the upper 12 inches of subgrade soils and all aggregate base material brought to a minimum relative compaction of 95 percent in accordance with ASTM D 1557 prior to paving. The aggregate base should meet Caltrans requirements for Class 2 base.

Assuming the pavement subgrades will be prepared as recommended within this report, the following pavement sections should be considered minimums for this project for the traffic loading listed in the table below.

Pavement calculations are based on geotechnical specifications provided by Wal-Mart using the AASHTO 1993 method. Design criteria for both standard and heavy-duty pavements are based on 18-kip Equivalent Single Axle Load (ESAL) values as shown in

the tables below, using a terminal serviceability of 2.0, reliability of 85%, initial serviceability of 4.2, and a standard deviation of 0.45 for flexible pavements and 0.35 for rigid pavements. If more specific traffic information becomes available for the site, we should be contacted to reevaluate the pavement calculations.

Pavement Section Thicknesses

The following table provides our opinion of minimum thickness for AC sections:

Asphaltic Concrete Design

Layer	Thickness (inches)	
	Standard Duty [2]	Heavy Duty [3]
AC [1, 3]	3	3
Aggregate Base[1]	4	6

1. All materials should meet the Caltrans Standard Specifications for Highway Construction.
2. 2,200 ESAL
3. 335,800 ESAL
4. Flexible pavement structural sections were calculated utilizing the AASHTO 1993 method.

The following table provides our estimated minimum thickness of PCC pavements.

Portland Cement Concrete Design

Layer	Thickness (inches)	
	Standard Duty [2]	Heavy Duty [3]
PCC [1]	5	6
Aggregate Base[1]	4	4

1. All materials should meet the Caltrans Standard Specifications for Highway Construction.
2. 2,200 ESAL
3. 335,800 ESAL
4. Flexible pavement structural sections were calculated utilizing the AASHTO 1993 method.

Pavement Drainage

Pavements should be sloped to provide rapid drainage of surface water. Water allowed to pond on or adjacent to the pavements could saturate the subgrade and contribute to premature pavement deterioration. In addition, the pavement subgrade should be graded to provide positive drainage within the granular base section. Appropriate sub-

drainage or connection to a suitable daylight outlet should be provided to remove water from the granular subbase.

Pavement Maintenance

The pavement sections represent minimum recommended thicknesses and, as such, periodic upkeep should be anticipated. Preventive maintenance should be planned and provided for through an on-going pavement management program. Maintenance activities are intended to slow the rate of pavement deterioration and to preserve the pavement investment. Pavement care consists of both localized (e.g., crack and joint sealing and patching) and global maintenance (e.g., surface sealing). Additional engineering consultation is recommended to determine the type and extent of a cost-effective program. Even with periodic maintenance, some movements and related cracking may still occur, and repairs may be required.

Pavement performance is affected by its surroundings. In addition to providing preventive maintenance, the civil engineer should consider the following recommendations in the design and layout of pavements:

- Final grade adjacent to paved areas should slope down from the edges at a minimum 2%.
- Subgrade and pavement surfaces should have a minimum 2% slope to promote proper surface drainage.
- Install pavement drainage systems surrounding areas anticipated for frequent wetting.
- Install joint sealant and seal cracks immediately.
- Seal all landscaped areas in or adjacent to pavements to reduce moisture migration to subgrade soils.
- Place compacted, low permeability backfill against the exterior side of curb and gutter.
- Place curb, gutter and/or sidewalk directly on clay subgrade soils rather than on unbound granular base course materials.

General Comments

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide

further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly effect excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety and cost estimating including excavation support and dewatering requirements/design are the responsibility of others. Construction and site development have the potential to affect adjacent properties. Such impacts can include damages due to vibration, modification of groundwater/surface water flow during construction, foundation movement due to undermining or subsidence from excavation, as well as noise or air quality concerns. Evaluation of these items on nearby properties are commonly associated with contractor means and methods and are not addressed in this report. The owner and contractor should consider a preconstruction/precondition survey of surrounding development. If changes in the nature, design, or location of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

Exploration and Testing Procedures

Field Exploration

Number of Borings	Approximate Boring Depth (feet)	Location
1	20 feet	Proposed Underground Storage Tanks
1	20 feet	Proposed Service Building
2	15 feet	Proposed Fuel Station – Canopy Area
1	5 feet	Proposed pavement area

Boring Layout and Elevations: Terracon personnel provided the boring layout using handheld GPS equipment (estimated horizontal accuracy of about ±10 feet) and referencing existing site features. Approximate ground surface elevations were estimated using Google Earth. If elevations and a more precise boring layout are desired, we recommend borings be surveyed.

Subsurface Exploration Procedures: We advanced the borings in the proposed fuel station with a truck-mounted drill rig using continuous hollow stem flight. Four samples were obtained in the upper 10 feet of each boring and at intervals of 5 feet thereafter. Test samples were collected during drilling in general accordance with the appropriate ASTM methods using Standard Penetration Testing (SPT) and sampling using either standard split-spoon or Modified California samplers. A sampling spoon was driven into the ground by a 140 pound automatic hammer falling a distance of 30 inches. The number of blows required to advance the sampling spoon the last 12 inches of a normal 18 inch penetration was recorded as the Standard Penetration Test (SPT) resistance value, also referred to as N-values. The N-values are indicated on the boring logs at the test depths. The samples were placed in appropriate containers, taken to our soil laboratory for testing, and classified by a geotechnical engineer.

For safety purposes, all borings were backfilled with auger cuttings after their completion.

We also observed the boreholes while drilling and at the completion of drilling for the presence of groundwater. Groundwater was not encountered during exploration.

The sampling depths, penetration distances, and other sampling information was recorded on the field boring logs. The samples were placed in appropriate containers and taken to our soil laboratory for testing and classification by a Geotechnical Engineer. Our exploration team prepared field boring logs as part of the drilling operations. These field

logs included visual classifications of the materials observed during drilling and our interpretation of the subsurface conditions between samples. Final boring logs were prepared from the field logs. The final boring logs represent the Geotechnical Engineer's interpretation of the field logs and include modifications based on observations and tests of the samples in our laboratory.

Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests. The laboratory testing program included the following types of tests:

- Moisture Content
- Dry Unit Weight
- Atterberg Limits
- Compaction
- Swell Consolidation Test
- Direct Shear
- Corrosivity
- R-value

The laboratory testing program often included examination of soil samples by an engineer. Based on the results of our field and laboratory programs, we described and classified the soil samples in accordance with the Unified Soil Classification System.

Boring Started
04-02-2024

Boring Completed
04-02-2024

Notes

The estimated depth of fill should not be considered exact due to the similarity of lithology, color, and densities of the graded materials and native soils.

Advancement Method
8" Hollow Stem Auger

Abandonment Method
Boring backfilled with Auger Cuttings
Surface capped with asphalt

Terracon
145 W Walnut St
Gardena, CA

General Notes

Sampling	Water Level	Field Tests
 Auger Cuttings; Modified Dames & Moore Ring Sampler; Grab Sample; Standard Penetration Test	Water Initially Encountered; Water Level After a Specified Period of Time; Water Level After a Specified Period of Time; Cave In Encountered Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.	N Standard Penetration Test Resistance (Blows/Ft.) (HP) Hand Penetrometer (T) Torvane (DCP) Dynamic Cone Penetrometer UC Unconfined Compressive Strength (PID) Photo-Ionization Detector (OVA) Organic Vapor Analyzer

Descriptive Soil Classification

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

Location And Elevation Notes

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

Strength Terms

Relative Density of Coarse-Grained Soils
(More than 50% retained on No. 200 sieve.)
Density determined by Standard Penetration Resistance

Relative Density	Standard Penetration or N-Value (Blows/Ft.)	Ring Sampler (Blows/Ft.)
Very Loose	0 - 3	0 - 6
Loose	4 - 9	7 - 18
Medium Dense	10 - 29	19 - 58
Dense	30 - 50	59 - 98
Very Dense	> 50	> 99

Consistency of Fine-Grained Soils
(50% or more passing the No. 200 sieve.)
Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

Consistency	Unconfined Compressive Strength Qu (tsf)	Standard Penetration or N-Value (Blows/Ft.)	Ring Sampler (Blows/Ft.)
Very Soft	less than 0.25	0 - 1	< 3
Soft	0.25 to 0.50	2 - 4	3 - 4
Medium Stiff	0.50 to 1.00	4 - 8	5 - 9
Stiff	1.00 to 2.00	8 - 15	10 - 18
Very Stiff	2.00 to 4.00	15 - 30	19 - 42
Hard	> 4.00	> 30	> 42

Relevance of Exploration and Laboratory Test Results

Exploration/field results and/or laboratory test data contained within this document are intended for application to the project as described in this document. Use of such exploration/field results and/or laboratory test data should not be used independently of this document.

Unified Soil Classification System

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A]				Soil Classification	
				Group Symbol	Group Name [B]
Coarse-Grained Soils: More than 50% retained on No. 200 sieve	**Gravels:** More than 50% of coarse fraction retained on No. 4 sieve	**Clean Gravels:** Less than 5% fines [C]	Cu≥4 and 1≤Cc≤3 [E]	GW	Well-graded gravel [F]
			Cu<4 and/or [Cc<1 or Cc>3.0] [E]	GP	Poorly graded gravel [F]
		Gravels with Fines: More than 12% fines [C]	Fines classify as ML or MH	GM	Silty gravel [F, G, H]
			Fines classify as CL or CH	GC	Clayey gravel [F, G, H]
	Sands: 50% or more of coarse fraction passes No. 4 sieve	**Clean Sands:** Less than 5% fines [D]	Cu≥6 and 1≤Cc≤3 [E]	SW	Well-graded sand [I]
			Cu<6 and/or [Cc<1 or Cc>3.0] [E]	SP	Poorly graded sand [I]
		Sands with Fines: More than 12% fines [D]	Fines classify as ML or MH	SM	Silty sand [G, H, I]
			Fines classify as CL or CH	SC	Clayey sand [G, H, I]
Fine-Grained Soils: 50% or more passes the No. 200 sieve	**Silts and Clays:** Liquid limit less than 50	**Inorganic:**	PI > 7 and plots above "A" line [J]	CL	Lean clay [K, L, M]
			PI < 4 or plots below "A" line [J]	ML	Silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OL	Organic clay [K, L, M, N]
					Organic silt [K, L, M, O]
	Silts and Clays: Liquid limit 50 or more	**Inorganic:**	PI plots on or above "A" line	CH	Fat clay [K, L, M]
			PI plots below "A" line	MH	Elastic silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OH	Organic clay [K, L, M, P]
					Organic silt [K, L, M, Q]
Highly organic soils:	Primarily organic matter, dark in color, and organic odor			PT	Peat

[A] Based on the material passing the 3-inch (75-mm) sieve.
[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.
[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.
[E] $Cu = D_{60}/D_{10}$ $\quad Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$
[F] If soil contains ≥ 15% sand, add "with sand" to group name.
[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.
[H] If fines are organic, add "with organic fines" to group name.
[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.
[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.
[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.
[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.
[N] PI ≥ 4 and plots on or above "A" line.
[O] PI < 4 or plots below "A" line.
[P] PI plots on or above "A" line.
[Q] PI plots below "A" line.

Project Owner's Certification

This Mojave River Watershed Water Quality Management Plan (WQMP) has been prepared for Wal-Mart Stores, Inc., by Kimley-Horn. The WQMP is intended to comply with the requirements of the Town of Yucca Valley and the Phase II Small MS4 General Permit for the Mojave River Watershed. The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the Phase II Small MS4 Permit and the intent of San Bernardino County (unincorporated areas of Phelan, Oak Hills, Spring Valley Lake and Victorville) and the incorporated cities of Hesperia and Victorville and the Town of Apple Valley. Once the undersigned transfers its interest in the property, its successors in interest and the city/county/town shall be notified of the transfer. The new owner will be informed of its responsibility under this WQMP. A copy of the approved WQMP shall be available on the subject site in perpetuity.

"I certify under a penalty of law that the provisions (implementation, operation, maintenance, and funding) of the WQMP have been accepted and that the plan will be transferred to future successors."

Section I – Introduction

This WQMP template has been prepared specifically for the Phase II Small MS4 General Permit in the Mojave River Watershed. This location is within the jurisdiction of the Lahontan Regional Water Quality Control Board (LRWQCB). This document should not be confused with the WQMP template for the Santa Ana Phase I area of San Bernardino County.

WQMP preparers must refer to the MS4 Permit for the Mojave Watershed WQMP template and Technical Guidance (TGD) document found at: http://cms.sbcounty.gov/dpw/Land/NPDES.aspx to find pertinent arid region and Mojave River Watershed specific references and requirements.

Section 1 Discretionary Permit(s)

Form 1-1 Project Information					
Project Name	Wal-Mart 1915 Fuel - Yucca Valley				
Project Owner Contact Name:					
Mailing Address:	Mail Stop 0505 702 SW 8th St., Bentonville, AR 72716	E-mail Address:		Telephone:	479-871-7573
Permit/Application Number(s):	CUP 01-25 | EA 02-25		Tract/Parcel Map Number(s):	APN: 0601201540000	
Additional Information/ Comments:					
Description of Project:	The project site is located on the northeast area of the existing Wal-Mart Supercenter parking lot, located in the Town of Yucca Valley. The project proposes a fuel station with 6 dispensers, overhead canopy, underground storage tanks, and associated convenience store. Proposed work includes hardscape pavement, landscaping and wet and dry utility trenching. The hydrologic soil type was not determined in the Geotech report and USDA Web Soil Survey does not have further information; therefore, soil type D will be assumed. Stormwater runoff will be collected by nearby catch basins and area drains and be conveyed to the existing detention basin on the north side of the parcel. For fueling areas, prior to entering the detention basin, the runoff collected from there will enter an Aqua-Swirl Trash Capture AS-2 Hydrodynamic separator for pre-treatment. The proposed project will provide more pervious surfaces than the existing conditions. The forms in this WQMP will reflect the proposed project area's impact to the site but will be compared to previous conditions to ultimately show that the proposed conditions does not increase the stormwater volumes to the existing detention basin on the north side of the Wal-Mart Parcel.				

Provide summary of Conceptual WQMP conditions (if previously submitted and approved). Attach complete copy.	

Section 2 Project Description

2.1 Project Information

The WQMP shall provide the information listed below. The information provided for Conceptual/ Preliminary WQMP should give sufficient detail to identify the major proposed site design and LID BMPs and other anticipated water quality features that impact site planning. Final Project WQMP must specifically identify all BMP incorporated into the final site design and provide other detailed information as described herein.

The purpose of this information is to help determine the applicable development category, pollutants of concern, watershed description, and long term maintenance responsibilities for the project, and any applicable water quality credits. This information will be used in conjunction with the information in Section 3, Site Description, to establish the performance criteria and to select the LID BMP or other BMP for the project or other alternative programs that the project will participate in, which are described in Section 4.

2.1.1 Project Sizing Categorization

If the Project is greater than 5,000 square feet, and not on the excluded list as found on Section 1.4 of the TGD, the Project is a Regulated Development Project.

If the Project is creating and/or replacing greater than 2,500 square feet but less than 5,000 square feet of impervious surface area, then it is considered a Site Design Only project. This criterion is applicable to all development types including detached single-family homes that create and/or replace greater than 2,500 square feet of impervious area and are not part of a larger plan of development.

Form 2.1-1 Description of Proposed Project

1 Regulated Development Project Category (Select all that apply):					
☐ #1 New development involving the creation of 5,000 ft² or more of impervious surface collectively over entire site	☒ #2 Significant re-development involving the addition or replacement of 5,000 ft² or more of impervious surface on an already developed site	☐ #3 Road Project – any road, sidewalk, or bicycle lane project that creates greater than 5,000 square feet of contiguous impervious surface	☐ #4 LUPs – linear underground/overhead projects that has a discrete location with 5,000 sq. ft. or more new constructed impervious surface		
☐ Site Design Only (Project Total Square Feet > 2,500 but < 5,000 sq.ft.) *Will require source control Site Design Measures. Use the "PCMP" Template. Do not use this WQMP Template.*					
2 Project Area (ft2):	61,805	**3** Number of Dwelling Units:	N/A	**4** SIC Code:	5541
5 Is Project going to be phased? Yes ☐ No ☒ *If yes, ensure that the WQMP evaluates each phase as a distinct DA, requiring LID BMPs to address runoff at time of completion.*					

2.2 Property Ownership/Management

Describe the ownership/management of all portions of the project and site. State whether any infrastructure will transfer to public agencies (City, County, Caltrans, etc.) after project completion. State if a homeowners or property owners association will be formed and be responsible for the long-term maintenance of project stormwater facilities. Describe any lot-level stormwater features that will be the responsibility of individual property owners.

Form 2.2-1 Property Ownership/Management

Describe property ownership/management responsible for long-term maintenance of WQMP stormwater facilities:

All proposed BMP's for the project site will be maintained by Wal-Mart Stores, Inc.

Maintenance of the WQMP facilities will be the responsibility of the property owner:

Wal-Mart Stores, Inc.
Mail Stop 0505 702 SW 8th Street, Bentonville, AR 72716
Phone: (479)-871-7573

The owner may choose to contract the appropriate employers for the maintenance of stormwater to whom will provide the proper equipment if the current general manager of the existing Wal-Mart Supercenter does not have the proper equipment and/or knowledge to do so. Any future property owner(s) will succeed Wal-Mart Stores, Inc., as the entity responsible for long term maintenance.

2.3 Potential Stormwater Pollutants

Best Management Practices (BMP) measures for pollutant generating activities and sources shall be designed consistent with recommendations from the CASQA Stormwater BMP Handbook for New Development and Redevelopment (or an equivalent manual). Pollutant generating activities must be considered when determining the overall pollutants of concern for the Project as presented in Form 2.3-1.

Determine and describe expected stormwater pollutants of concern based on land uses and site activities (refer to Table 3-2 in the TGD for WQMP).

Form 2.3-1 Pollutants of Concern

Pollutant	Please check: E=Expected, N=Not Expected		Additional Information and Comments
Pathogens (Bacterial / Virus)	E ☒	N ☐	Wild bird and pet waste, garbage
Nutrients - Phosphorous	E ☒	N ☐	Fertilizers, food waste, & garbage
Nutrients - Nitrogen	E ☒	N ☐	Fertilizer & waste
Noxious Aquatic Plants	E ☐	N ☒	The proposed development does not include any areas where water will be standing long enough to allow the growth of aquatic plants.
Sediment	E ☒	N ☐	Driveways, rooftops, sidewalks, paved areas, & landscape
Metals	E ☒	N ☐	Cars, trucks, & parking areas
Oil and Grease	E ☒	N ☐	Leaking vehicles, & other related fueling activities
Trash/Debris	E ☒	N ☐	Poorly managed trash containers & parking areas
Pesticides / Herbicides	E ☒	N ☐	Landscape areas
Organic Compounds	E ☒	N ☐	Cars & trucks
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	

Section 3 Site and Watershed Description

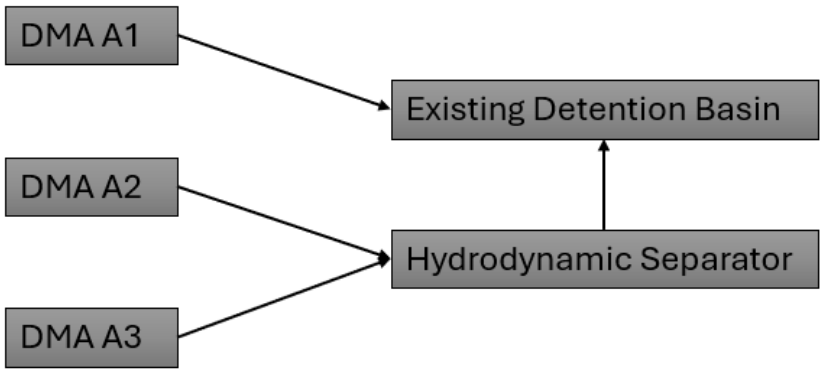
Describe the project site conditions that will facilitate the selection of BMPs through an analysis of the physical conditions and limitations of the site and its receiving waters. Identify distinct drainage areas (DA) that collect flow from a portion of the site and describe how runoff from each DA (and sub-watershed Drainage Management Areas (DMAs)) is conveyed to the site outlet(s). Refer to Section 3.2 in the TGD for WQMP. The form below is provided as an example. Then complete Forms 3.2 and 3.3 for each DA on the project site. ***If the project has more than one drainage area for stormwater management, then complete additional versions of these forms for each DA / outlet. A map presenting the DMAs must be included as an appendix to the WQMP document.***

Form 3-1 Site Location and Hydrologic Features

Site coordinates *take GPS measurement at approximate center of site*	Latitude 34.13398	Longitude -116.38341	Thomas Bros Map page

1 San Bernardino County climatic region: ☒ Desert

2 Does the site have more than one drainage area (DA): Yes☒ No☐ *If no, proceed to Form 3-2. If yes, then use this form to show a conceptual schematic describing DMAs and hydrologic feature connecting DMAs to the site outlet(s). An example is provided below that can be modified for proposed project or a drawing clearly showing DMA and flow routing may be attached*



Conveyance	Briefly describe on-site drainage features to convey runoff that is not retained within a DMA
DMA A1 to Existing Detention Basin	Proposed circulation and convenience store areas will have stormwater runoff sheet flow into nearby catch basins and is routed directly to the existing detention basin north of the project area.
DMA A2 to Existing Detention Basin	Proposed canopy area will have stormwater runoff sheet flow via valley gutters to an area drain and is routed through a hydrodynamic separator for pre-treatment prior to reaching the existing detention basin
DMA A3 to Existing Detention Basin	Proposed underground fuel storage will have stormwater runoff sheet flow via valley gutters to an area drain and is routed through a hydrodynamic separator for pre-treatment prior to reaching the existing detention basin

Form 3-2 Existing Hydrologic Characteristics for Drainage Area 1

For Drainage Area 1's sub-watershed DMA, provide the following characteristics	DMA A	DMA B	DMA C	DMA D
1 DMA drainage area (ft^2)	61,805			
2 Existing site impervious area (ft^2)	55,390			
3 Antecedent moisture condition *For desert areas, use* *http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*	II			
4 Hydrologic soil group *Refer to County Hydrology Manual Addendum for Arid Regions – http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_addendum.pdf*	D			
5 Longest flowpath length (ft)	267			
6 Longest flowpath slope (ft/ft)	0.025			
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*	Commercial Landscaping, Commercial Paved Lot			
8 Pre-developed pervious area condition: *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50%* ***Attach photos of site to support rating***	Good			

Form 3-3 Watershed Description for Drainage Area

Receiving waters Refer to SWRCB site: http://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml	Yucca Creek
Applicable TMDLs *http://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml*	N/A
303(d) listed impairments *http://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml*	N/A
Environmentally Sensitive Areas (ESA) *Refer to Watershed Mapping Tool –* *http://sbcounty.permitrack.com/WAP*	N/A
Hydromodification Assessment	☒ Yes *Complete Hydromodification Assessment. Include Forms 4.2-2 through Form 4.2-5 and Hydromodification BMP Form 4.3-9 in submittal* The project is in a hydromodification zone, but there is no additional volume to account for. Therefore, forms 4.2-2 through form 4.2-5. ☐ No, project is within an HCOC exempt area

Section 4 Best Management Practices (BMP)

4.1 Source Control BMPs and Site Design BMP Measures

The information and data in this section are required for both Regulated Development and Site Design Only Projects. Source Control BMPs and Site Design BMP Measures are the basis of site-specific pollution management.

4.1.1 Source Control BMPs

Non-structural and structural source control BMP are required to be incorporated into all new development and significant redevelopment projects. Form 4.1-1 and 4.1-2 are used to describe specific source control BMPs used in the WQMP or to explain why a certain BMP is not applicable. Table 7-3 of the TGD for WQMP provides a list of applicable source control BMP for projects with specific types of potential pollutant sources or activities. The source control BMP in this table must be implemented for projects with these specific types of potential pollutant sources or activities.

The preparers of this WQMP have reviewed the source control BMP requirements for new development and significant redevelopment projects. The preparers have also reviewed the specific BMP required for project as specified in Forms 4.1-1 and 4.1-2. All applicable non-structural and structural source control BMP shall be implemented in the project.

The identified list of source control BMPs correspond to the CASQA Stormwater BMP Handbook for New Development and Redevelopment.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N1	Education of Property Owners, Tenants and Occupants on Stormwater BMPs	☒	☐	The current owner/developer and future owners and their POA shall be familiar with the contents of this WQMP and County & City ordinances and brochures and furnish copies of these documents to all future property owners.
N2	Activity Restrictions	☒	☐	Property owners and their tenants or occupants shall not be allowed to discharge chemicals, chemical residues, wastewater or other prohibited discharges listed in the City Stormwater Ordinance, to the outside, paved areas of the site, or store chemicals or other pollutant sources in non-spill containers or covered facilities as stipulated in the CC&Rs.
N3	Landscape Management BMPs	☒	☐	The POA and their landscape maintenance contractor shall inspect the irrigation system, plant health, and erosion problems after each landscape procedure and shall report all repairs and problems to the POA.
N4	BMP Maintenance	☒	☐	The POA shall inspect for standing water in underground chamber systems, 48 hours after significant storm events. BMP maintenance shall be performed per the schedule in Form 5-1, as needed to restore free drainage and maintain all other Source Control BMPs.
N5	Title 22 CCR Compliance (How development will comply)	☒	☐	The POA will file appropriate hazardous material disclosures, if any storage is conducted, and must comply with all Title 22 CCR, Chapter 29 regulations.
N6	Local Water Quality Ordinances	☒	☐	The POA shall ensure that all maintenance activities at the site comply with the City Stormwater Ordinance, through the implementation of BMPs.
N7	Spill Contingency Plan	☒	☐	Building operators shall prepare specific plans based on materials on site for the cleanup of spills. Plans shall mandate stock piling of cleanup materials, notification of agencies, disposal, documentation, etc.
N8	Underground Storage Tank Compliance	☒	☒	Compliance to be maintained by property owners or future property owners, and/or their tenants
N9	Hazardous Materials Disclosure Compliance	☐	☒	The current owner and the future POA shall prohibit the storage of hazardous materials.

Form 4.1-1 Non-Structural Source Control BMPs

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N10	Uniform Fire Code Implementation	☒	☐	The current owners or future POA shall require all fire code requirements to be implemented at this project site.
N11	Litter/Debris Control Program	☒	☐	The property owners, POA and their contractor shall pick up litter and sweep and clean the existing trash enclosure weekly. The trash enclosures is designed to divert all flows around the dumpsters and shall be roofed. The HOA shall contract with a refuse company to have the dumpsters emptied on a weekly basis, at a minimum.
N12	Employee Training	☒	☐	The POA shall require all maintenance contractors to train their employees in stormwater BMP implementation.
N13	Housekeeping of Loading Docks	☒	☒	There are no dock areas
N14	Catch Basin Inspection Program	☒	☐	The on-site catch basins shall be inspected monthly during the rainy season (October-May) and before and after each storm to ensure proper operation. The HOA shall contract with a qualified landscape contractor to inspect and clean out accumulation of trash, litter, and sediment and check for evidence of illegal dumping of waste materials into on-site storm drains.
N15	Vacuum Sweeping of Private Streets and Parking Lots	☒	☐	The paved areas and common open areas of the project site shall be swept and cleaned weekly by the POA's contractor.
N16	Other Non-structural Measures for Public Agency Projects	☐	☒	This development is not a part of a Public Agency Project.
N17	Comply with all other applicable NPDES permits	☒	☐	The developer of this site shall comply with all BMP implementation requirements of the City for stormwater discharge during construction of this project and shall file for a permit coverage under the Statewide General Construction Stormwater Permit, prior to beginning construction/grading activities at this site. Following occupancy, owners, tenants, and POA shall comply with SB County MS4 Permit requirements, enforced by the City.

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S1	Provide storm drain system stencilling and signage (CASQA New Development BMP Handbook SD-13)	☒	☐	A painted message "No Dumping-Drains to River" shall be placed on each catch basin by the developer. The message shall be inspected annually & repainted as necessary by the POA.
S2	Design and construct outdoor material storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-34)	☐	☒	This development does not include the storage of materials outdoors.
S3	Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	☒	☐	Stormwater flows are diverted away from the trash enclosure. All dumpsters shall have working lids which shall be kept closed at all times. Trash enclosures shall comply with CASQA SD-32 and shall have doors and a solid roof.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (Statewide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	☒	☐	The irrigation system will include devices to prevent low head drainage, overspray, and run off through the use of pressure regulating devices, check valves, rain shutoff valves, flow sensors, pressure drop sensors, proper spacing, low precipitation emissions devices and ET or weather-based controllers. Landscape and irrigation shall be consistent with the State Model Water Efficient Landscape Ordinance and the City landscape development standards. Plants installed will be arranged according to similar hydrozones and meet the required water budget for the site. Shade trees shall be used to intercept rainwater and reduce heat gain on paving.
S5	Finish grade of landscaped areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement	☒	☐	All landscaped areas shall comply with depressed grading requirements by finish grading to a minimum of 1" below pavement grades or top of curb.
S6	Protect slopes and channels and provide energy dissipation (CASQA New Development BMP Handbook SD-10)	☒	☐	All slopes shall be hard lined, rip-rapped or vegetated to provide erosion protection and prevent sediment transport.
S7	Covered dock areas (CASQA New Development BMP Handbook SD-31)	☐	☒	There are no loading docks
S8	Covered maintenance bays with spill containment plans (CASQA New Development BMP Handbook SD-31)	☐	☒	Maintenance bays are not proposed as a part of this development, and no maintenance activities will be allowed on site.
S9	Vehicle wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	Vehicle wash areas are not provided as part of this development and outdoor vehicle/equipment washing shall be prohibited by the owners and their POA..

S10	Covered outdoor processing areas (CASQA New Development BMP Handbook SD-36)	☐	☒	Outdoor processing is not associated with the proposed development.

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S11	Equipment wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	Outdoor equipment is not associated with the proposed development.
S12	Fueling areas (CASQA New Development BMP Handbook SD-30)	☐	☒	Fueling areas are not included as part of the proposed development.
S13	Hillside landscaping (CASQA New Development BMP Handbook SD-10)	☐	☒	No hillsides will require re-vegetation as part of the proposed development.
S14	Wash water control for food preparation areas	☐	☒	The proposed development does not include food preparation areas.
S15	Community car wash racks (CASQA New Development BMP Handbook SD-33)	☐	☒	The proposed development does not include community car wash areas.

4.1.2 Site Design BMPs

As part of the planning phase of a project, the site design practices associated with new LID requirements in the Phase II Small MS4 Permit must be considered. Site design BMP measures can result in smaller Design Capture Volume (DCV) to be managed by both LID and hydromodification control BMPs by reducing runoff generation.

As is stated in the Permit, it is necessary to evaluate site conditions such as soil type(s), existing vegetation and flow paths will influence the overall site design.

Describe site design and drainage plan including:

- A narrative of site design practices utilized or rationale for not using practices
- A narrative of how site plan incorporates preventive site design practices
- Include an attached Site Plan layout which shows how preventative site design practices are included in WQMP

Refer to Section 5.2 of the TGD for WQMP for more details.

Form 4.1-3 Site Design Practices Checklist

Site Design Practices *If yes, explain how preventative site design practice is addressed in project site plan. If no, other LID BMPs must be selected to meet targets*
Minimize impervious areas: Yes ☒ No ☐ Explanation: The proposed conditions will provide more pervious than the existing conditions, with additional landscaping
Maximize natural infiltration capacity; Including improvement and maintenance of soil: Yes ☒ No ☐ Explanation: Additional pervious is proposed and storm water from impervious surfaces will enter the existing detention basin
Preserve existing drainage patterns and time of concentration: Yes ☒ No ☐ Explanation: The flow of the existing conditions were maintained to be flowing from south to north
Disconnect impervious areas. Including rerouting of rooftop drainage pipes to drain stormwater to storage or infiltration BMPs instead of to storm drain : Yes ☒ No ☐ Explanation: Rooftop drains for the canopy and fuel store are routed to the existing detention basin
Use of Porous Pavement.: Yes ☐ No ☒ Explanation: This project does not proposed pervious pavement
Protect existing vegetation and sensitive areas: Yes ☒ No ☐ Explanation: Existing vegetation will be preserved or replaced if found to be inadequate
Re-vegetate disturbed areas. Including planting and preservation of drought tolerant vegetation. : Yes ☐ No ☐ Explanation: If applicable, appropiate plant types will be used to re-vegetate
Minimize unnecessary compaction in stormwater retention/infiltration basin/trench areas: Yes ☒ No ☐ Explanation: Exisitng detention basin is fenced off

Utilize naturalized/rock-lined drainage swales in place of underground piping or imperviously lined swales: Yes ☐ No ☒ Explanation: Vegetated drainage swales are not feasible for the proposed development due to the development being primiary a paved parking lot
Stake off areas that will be used for landscaping to minimize compaction during construction : Yes ☒ No ☐ Explanation: Landscaping areas will be staked off after rough grading has been completed to prevent excessive compaction
Use of Rain Barrels and Cisterns, Including the use of on-site water collection systems.: Yes ☐ No ☒ Explanation: N/A
Stream Setbacks. Includes a specified distance from an adjacent steam: : Yes ☐ No ☒ Explanation: N/A

It is noted that, in the Phase II Small MS4 Permit, site design elements for green roofs and vegetative swales are required. Due to the local climatology in the Mojave River Watershed, proactive measures are taken to maximize the amount of drought tolerant vegetation. It is not practical in this region to have green roofs or vegetative swales. As part of site design the project proponent should utilize locally recommended vegetation types for landscaping. Typical landscaping recommendations are found in following local references:

4.2 Treatment BMPs

After implementation and design of both Source Control BMPs and Site Design BMP measures, any remaining runoff from impervious DMAs must be directed to one or more on-site, treatment BMPs (LID or biotreatment) designed to infiltrate, evaportranspire, and/or bioretain the amount of runoff specified in Permit Section E.12.e (ii)(c) Numeric Sizing Criteria for Storm Water Retention and Treatment.

4.2.1 Project Specific Hydrology Characterization

The purpose of this section of the Project WQMP is to establish targets for post-development hydrology based on performance criteria specified in Section E.12.e.ii.c and Section E.12.f of the Phase II Small MS4 Permit. These targets include runoff volume for water quality control (referred to as LID design capture volume), and runoff volume, time of concentration, and peak runoff for protection from hydromodification.

If the project has more than one outlet for stormwater runoff, then complete additional versions of these forms for each DA / outlet.

It is noted that in the Phase II Small MS4 Permit jurisdictions, the LID BMP Design Capture Volume criteria is based on the 2-year rain event. The hydromodification performance criterion is based on the 10-year rain event.

Methods applied in the following forms include:

- For LID BMP Design Capture Volume (DCV), San Bernardino County requires use of the P_6 method (Form 4.2-1) For pre- and post-development hydrologic calculation, San Bernardino County requires the use of the Rational Method (San Bernardino County Hydrology Manual Section D). Forms 4.2-2 through Form 4.2-5 calculate hydrologic variables including runoff volume, time of concentration, and peak runoff from the project site pre- and post-development using the Hydrology Manual Rational Method approach. For projects greater than 640 acres (1.0 mi^2), the Rational Method and these forms should not be used. For such projects, the Unit Hydrograph Method (San Bernardino County Hydrology Manual Section E) shall be applied for hydrologic calculations for hydromodification performance criteria.

Refer to Section 4 in the TGD for WQMP for detailed guidance and instructions.

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DA 1)		
[1] Project area DA 1 (ft^2): 61,805	[2] Imperviousness after applying preventative site design practices (Imp%): 79%	[3] Runoff Coefficient (Rc): _0.587 *$R_c = 0.858(Imp\%)^{\wedge 3} - 0.78(Imp\%)^{\wedge 2} + 0.774(Imp\%) + 0.04$*
[4] Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): 0.428 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html		
[5] Compute P_6, Mean 6-hr Precipitation (inches): 0.529 *P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Desert = 1.2371)*		
[6] Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24 hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
[7] Compute design capture volume, DCV (ft^3): 3,140 ** *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*		

**The proposed area's impact to the northern basin decreases the design capture volume from existing. 3,140 cubic feet can be compared to the existing areas impact of 3,879 cubic feet, meaning there was a decrease to the overall site's DCV of 739 cubic feet. See appendix for full DCV calculations for the existing area being disturbed.

Form 4.2-2 Summary of Hydromodification Assessment (DA 1)

Is the change in post- and pre- condition flows captured on-site? : Yes ☐ No ☒

If "Yes", then complete Hydromodification assessment of site hydrology for 10yr storm event using Forms 4.2-3 through 4.2-5 and insert results below *(Forms 4.2-3 through 4.2-5 may be replaced by computer software analysis based on the San Bernardino County Hydrology Manual- Addendum 1)*

If "No," then proceed to Section 4.3 BMP Selection and Sizing

Condition	Runoff Volume (ft^3)	Time of Concentration (min)	Peak Runoff (cfs)
Pre-developed	**1** *Form 4.2-3 Item 12*	**2** *Form 4.2-4 Item 13*	**3** *Form 4.2-5 Item 10*
Post-developed	**4** *Form 4.2-3 Item 13*	**5** *Form 4.2-4 Item 14*	**6** *Form 4.2-5 Item 14*
Difference	**7** *Item 4 – Item 1*	**8** *Item 2 – Item 5*	**9** *Item 6 – Item 3*

Difference (as % of pre-developed)	**10** % *Item 7 / Item 1*	**11** % *Item 8 / Item 2*	**12** % *Item 9 / Item 3*

Form 4.2-3 Hydromodification Assessment for Runoff Volume (DA 1)

Weighted Curve Number Determination for: Pre-developed DA	DMA A	DMA B	DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1a Land Cover type								
2a Hydrologic Soil Group (HSG)								
3a DMA Area, ft² *sum of areas of DMA should equal area of DA*								
4a Curve Number (CN) *use Items 1 and 2 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*								
Weighted Curve Number Determination for: Post-developed DA	DMA A	DMA B	DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1b Land Cover type								
2b Hydrologic Soil Group (HSG)								
3b DMA Area, ft² *sum of areas of DMA should equal area of DA*								
4b Curve Number (CN) *use Items 5 and 6 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*								

5 Pre-Developed area-weighted CN:	**7** Pre-developed soil storage capacity, S (in): *S = (1000 / Item 5) - 10*	**9** Initial abstraction, I_a (in): *I_a = 0.2 * Item 7*
6 Post-Developed area-weighted CN:	**8** Post-developed soil storage capacity, S (in): *S = (1000 / Item 6) - 10*	**10** Initial abstraction, I_a (in): *I_a = 0.2 * Item 8*

11 Precipitation for 10 yr, 24 hr storm (in):
Go to: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

12 Pre-developed Volume (ft³):
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 9)^2 / ((Item 11 – Item 9 + Item 7)*

13 Post-developed Volume (ft³):
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 10)^2 / ((Item 11 – Item 10 + Item 8)*

14 Volume Reduction needed to meet hydromodification requirement, (ft³):
*Vhydro = (Item 13 * 0.95) – Item 12*

Form 4.2-4 Hydromodification Assessment for Time of Concentration (DA 1)

Compute time of concentration for pre and post developed conditions for each DA *(For projects using the Hydrology Manual complete the form below)*

Variables	Pre-developed DA1 *Use additional forms if there are more than 4 DMA*				Post-developed DA1 *Use additional forms if there are more than 4 DMA*			
	DMA A	DMA B	DMA C	DMA D	DMA A	DMA B	DMA C	DMA D
1 Length of flowpath (ft) *Use Form 3-2 Item 5 for pre-developed condition*								
2 Change in elevation (ft)								
3 Slope (ft/ft), S_o = *Item 2 / Item 1*								
4 Land cover								
5 Initial DMA Time of Concentration (min) *Appendix C-1 of the TGD for WQMP*								
6 Length of conveyance from DMA outlet to project site outlet (ft) *May be zero if DMA outlet is at project site outlet*								
7 Cross-sectional area of channel (ft^2)								
8 Wetted perimeter of channel (ft)								
9 Manning's roughness of channel (n)								
10 Channel flow velocity (ft/sec) V_{fps} = *(1.49 / Item 9) * (Item 7/Item 8)^0.67 * (Item 3)^0.5*								
11 Travel time to outlet (min) T_t = *Item 6 / (Item 10 * 60)*								
12 Total time of concentration (min) T_c = *Item 5 + Item 11*								
13 Pre-developed time of concentration (min): *Minimum of Item 12 pre-developed DMA*								
14 Post-developed time of concentration (min): *Minimum of Item 12 post-developed DMA*								
15 Additional time of concentration needed to meet hydromodification requirement (min): $T_{C\text{-}Hydro}$ = *(Item 13 * 0.95) – Item 14*								

Form 4.2-5 Hydromodification Assessment for Peak Runoff (DA 1)

Compute peak runoff for pre- and post-developed conditions

Variables		Pre-developed DA to Project Outlet (*Use additional forms if more than 3 DMA)*			Post-developed DA to Project Outlet (*Use additional forms if more than 3 DMA)*		
		DMA A	DMA B	DMA C	DMA A	DMA B	DMA C
1 Rainfall Intensity for storm duration equal to time of concentration *I_{peak} = 10^(LOG Form 4.2-1 Item 4 - 0.7 LOG Form 4.2-4 Item 5 /60)*							
2 Drainage Area of each DMA (Acres) *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
3 Ratio of pervious area to total area *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
4 Pervious area infiltration rate (in/hr) *Use pervious area CN and antecedent moisture condition with Appendix C-3 of the TGD for WQMP*							
5 Maximum loss rate (in/hr) *F_m = Item 3 * Item 4* *Use area-weighted F_m from DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*							
6 Peak Flow from DMA (cfs) *Q_p =Item 2 * 0.9 * (Item 1 - Item 5)*							
7 Time of concentration adjustment factor for other DMA to site discharge point *Form 4.2-4 Item 12 DMA / Other DMA upstream of site discharge point (If ratio is greater than 1.0, then use maximum value of 1.0)*	DMA A	*n/a*			*n/a*		
	DMA B		*n/a*			*n/a*	
	DMA C			*n/a*			*n/a*

8 Pre-developed Q_p at T_c for DMA A: *Q_p = Item 6_{DMAA} + [Item 6_{DMAB} * (Item 1_{DMAA} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAA/2}$] + [Item 6_{DMAC} * (Item 1_{DMAA} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAA/3}$]*	**9** Pre-developed Q_p at T_c for DMA B: *Q_p = Item 6_{DMAB} + [Item 6_{DMAA} * (Item 1_{DMAB} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAB/1}$] + [Item 6_{DMAC} * (Item 1_{DMAB} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAB/3}$]*	**10** Pre-developed Q_p at T_c for DMA C: *Q_p = Item 6_{DMAC} + [Item 6_{DMAA} * (Item 1_{DMAC} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAC/1}$] + [Item 6_{DMAB} * (Item 1_{DMAC} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAC/2}$]*

14 Peak runoff from post-developed condition confluence analysis (cfs):	*Maximum of Item 11, 12, and 13 (including additional forms as needed)*	
15 Peak runoff reduction needed to meet Hydromodification Requirement (cfs):	*$Q_{p\text{-}hydro}$ = (Item 14 * 0.95) – Item 10*	

4.3 BMP Selection and Sizing

Complete the following forms for each project site DA to document that the proposed treatment (LID/Bioretention) BMPs conform to the project DCV developed to meet performance criteria specified in the Phase II Small MS4 Permit (WQMP Template Section 4.2). For the LID DCV, the forms are ordered according to hierarchy of BMP selection as required by the Phase II Small MS4 Permit (see Section 5.3 in the TGD for WQMP). The forms compute the following for on-site LID BMP:

- Site Design Measures (Form 4.3-2)
- Retention and Infiltration BMPs (Form 4.3-3) or
- Biotreatment BMPs (Form 4.3-4).

At the end of each form, additional fields facilitate the determination of the extent of mitigation provided by the specific BMP category, allowing for use of the next category of BMP in the hierarchy, if necessary.

The first step in the analysis, using Section 5.3.2 of the TGD for WQMP, is to complete Forms 4.3-1 and 4.3-3) to determine if retention and infiltration BMPs are infeasible for the project. For each feasibility criterion in Form 4.3-1, if the answer is "Yes," provide all study findings that includes relevant calculations, maps, data sources, etc. used to make the determination of infeasibility.

Next, complete Form 4.3-2 to determine the feasibility of applicable Site Design BMPs, and, if their implementation is feasible, the extent of mitigation of the DCV.

If no site constraints exist that would limit the type of BMP to be implemented in a DA, evaluate the use of combinations of LID BMPs, including all applicable Site Design BMPs to maximize on-site retention of the DCV. If no combination of BMP can mitigate the entire DCV, implement the single BMP type, or combination of BMP types, that maximizes on-site retention of the DCV within the minimum effective area.

If the combination of site design, retention and/or infiltration BMPs is unable to mitigate the entire DCV, then the remainder of the volume-based performance criteria that cannot be achieved with site design, retention and/or infiltration BMPs must be managed through biotreatment BMPs. If biotreatment BMPs are used, then they must be sized to provide equivalent effectiveness based on Template Section 4.3.4.

4.3.1 Exceptions to Requirements for Bioretention Facilities

Contingent on a demonstration that use of bioretention or a facility of equivalent effectiveness is infeasible, other types of biotreatment or media filters (such as tree-box-type biofilters or in-vault media filters) may be used for the following categories of Regulated Projects:

1) Projects creating or replacing an acre or less of impervious area, and located in a designated pedestrian-oriented commercial district (i.e., smart growth projects), and having at least 85% of the entire project site covered by permanent structures;

2) Facilities receiving runoff solely from existing (pre-project) impervious areas; and

3) Historic sites, structures or landscapes that cannot alter their original configuration in order to maintain their historic integrity.

Form 4.3-1 Infiltration BMP Feasibility (DA 1)
Feasibility Criterion – Complete evaluation for each DA on the Project Site
[1] Would infiltration BMP pose significant risk for groundwater related concerns? Yes ☐ No ☒ *Refer to Section 5.3.2.1 of the TGD for WQMP*
If Yes, Provide basis: (attach)
[2] Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes ☐ No ☒ (Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert): • The location is less than 50 feet away from slopes steeper than 15 percent • The location is less than ten feet from building foundations or an alternative setback. • A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.
If Yes, Provide basis: (attach)
[3] Would infiltration of runoff on a Project site violate downstream water rights? Yes ☐ No ☒
If Yes, Provide basis: (attach)
[4] Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils? Yes ☐ No ☒
If Yes, Provide basis: (attach)
[5] Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)? Yes ☐ No ☒
If Yes, Provide basis: (attach)
[6] Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses? Yes ☐ No ☒ *See Section 3.5 of the TGD for WQMP and WAP*
If Yes, Provide basis: (attach)
[7] Any answer from Item 1 through Item 3 is "Yes": Yes ☐ No ☒ *If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Selection and Evaluation of Biotreatment BMP.* *If no, then proceed to Item 8 below.* [8] Any answer from Item 4 through Item 6 is "Yes": Yes ☐ No ☒ *If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Site Design BMP.* *If no, then proceed to Item 9, below.* [9] All answers to Item 1 through Item 6 are "No": *Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP.* *Proceed to Form 4.3-2, Site Design BMPs.*

4.3.2 Site Design BMP

Section E.12.e. of the Small Phase II MS4 Permit emphasizes the use of LID preventative measures; and the use of Site Design Measures reduces the portion of the DCV that must be addressed in downstream BMPs. Therefore, all applicable Site Design Measures shall be provided except where they are mutually exclusive with each other, or with other BMPs. Mutual exclusivity may result from overlapping BMP footprints such that

either would be potentially feasible by itself, but both could not be implemented. Please note that while there are no numeric standards regarding the use of Site Design BMPs. If a project cannot feasibly meet BMP sizing requirements or cannot fully address hydromodification, feasibility of all applicable Site Design BMPs must be part of demonstrating that the BMP system has been designed to retain the maximum feasible portion of the DCV. Complete Form 4.3-2 to identify and calculate estimated retention volume from implementing site design BMP. Refer to Section 5.4 in the TGD for more detailed guidance.

Form 4.3-2 Site Design BMPs (DA 1)

1 Implementation of Impervious Area Dispersion BMP (i.e. routing runoff from impervious to pervious areas), excluding impervious areas planned for routing to on-lot infiltration BMP: Yes ☐ No ☒ *If yes, complete Items 2-5; If no, proceed to Item 6*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Total impervious area draining to pervious area (ft^2)			
3 Ratio of pervious area receiving runoff to impervious area			
4 Retention volume achieved from impervious area dispersion (ft^3) *V = Item2 * Item 3 * (0.5/12), assuming retention of 0.5 inches of runoff*			
5 Sum of retention volume achieved from impervious area dispersion (ft^3):	$V_{retention}$ *=Sum of Item 4 for all BMPs*		
6 Implementation of Localized On-lot Infiltration BMPs (e.g. on-lot rain gardens): Yes ☐ No ☒ *If yes, complete Items 7-13 for aggregate of all on-lot infiltration BMP in each DA; If no, proceed to Item 14*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
7 Ponding surface area (ft^2)			
8 Ponding depth (ft) (min. 0.5 ft.)			
9 Surface area of amended soil/gravel (ft^2)			
10 Average depth of amended soil/gravel (ft) (min. 1 ft.)			
11 Average porosity of amended soil/gravel			
12 Retention volume achieved from on-lot infiltration (ft^3) $V_{retention}$ *= (Item 7 *Item 8) + (Item 9 * Item 10 * Item 11)*			
13 Runoff volume retention from on-lot infiltration (ft^3):	$V_{retention}$ *=Sum of Item 12 for all BMPs*		

Form 4.3-2 Site Design BMPs (DA 1)

Form 4.3-2 cont. Site Design BMPs (DA 1)

14 Implementation of Street Trees: Yes ☐ No ☒ *If yes, complete Items 14-18. If no, proceed to Item 19*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
15 Number of Street Trees			
16 Average canopy cover over impervious area (ft^2)			
17 Runoff volume retention from street trees (ft^3) $V_{retention}$ *= Item 15 * Item 16 * (0.05/12) assume runoff retention of 0.05 inches*			
18 Runoff volume retention from street tree BMPs (ft^3):	$V_{retention}$ *= Sum of Item 17 for all BMPs*		
19 Total Retention Volume from Site Design BMPs:	*Sum of Items 5, 13 and 18*		

4.3.3 Infiltration BMPs

Use Form 4.3-3 to compute on-site retention of runoff from proposed retention and infiltration BMPs. Volume retention estimates are sensitive to the percolation rate used, which determines the amount of runoff that can be infiltrated within the specified drawdown time. The infiltration safety factor reduces field measured percolation to account for potential inaccuracy associated with field measurements, declining BMP performance over time, and compaction during construction. Appendix C of the TGD for WQMP provides guidance on estimating an appropriate safety factor to use in Form 4.3-3.

If site constraints limit the use of BMPs to a single type and implementation of retention and infiltration BMPs mitigate no more than 40% of the DCV, then they are considered infeasible and the Project Proponent may evaluate the effectiveness of BMPs lower in the LID hierarchy of use (Section 5.5 of the TGD for WQMP)

If implementation of infiltrations BMPs is feasible as determined using Form 4.3-1, then LID infiltration BMPs shall be implemented to the MEP (section 4.1 of the TGD for WQMP).

4.3.3.1 Allowed Variations for Special Site Conditions

The bioretention system design parameters of this Section may be adjusted for the following special site conditions:

1) Facilities located within 10 feet of structures or other potential geotechnical hazards established by the geotechnical expert for the project may incorporate an impervious cutoff wall between the bioretention facility and the structure or other geotechnical hazard.

2) Facilities with documented high concentrations of pollutants in underlying soil or groundwater, facilities located where infiltration could contribute to a geotechnical hazard, and facilities located on elevated plazas or other structures may incorporate an impervious liner and may locate the underdrain discharge at the bottom of the subsurface drainage/storage layer (this configuration is commonly known as a “flow-through planter”).

3) Facilities located in areas of high groundwater, highly infiltrative soils or where connection of underdrain to a surface drain or to a subsurface storm drain are infeasible, may omit the underdrain.

4) Facilities serving high-risk areas such as fueling stations, truck stops, auto repairs, and heavy industrial sites may be required to provide adequate pretreatment to address pollutants of concern unless these high-risk areas are isolated from storm water runoff or bioretention areas with no chance of spill migration.

.

Form 4.3-3 Infiltration LID BMP - including underground BMPs (DA 1)

1 Remaining LID DCV not met by site design BMP (ft^3): *V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item19*			
BMP Type *Use columns to the right to compute runoff volume retention from proposed infiltration BMP (select BMP from Table 5-4 in TGD for WQMP) - Use additional forms for more BMPs*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Infiltration rate of underlying soils (in/hr) *See Section 5.4.2 and Appendix C of the TGD for WQMP for minimum requirements for assessment methods*			
3 Infiltration safety factor *See TGD Section 5.4.2 and Appendix D*			
4 Design percolation rate (in/hr) *P_{design} = Item 2 / Item 3*			
5 Ponded water drawdown time (hr) *Copy Item 6 in Form 4.2-1*			
6 Maximum ponding depth (ft) *BMP specific, see Table 5-4 of the TGD for WQMP for BMP design details*			
7 Ponding Depth (ft) *d_{BMP} = Minimum of (1/12*Item 4*Item 5) or Item 6*			
8 Infiltrating surface area, SA_{BMP} (ft^2) *the lesser of the area needed for infiltration of full DCV or minimum space requirements from Table 5.7 of the TGD for WQMP*			
9 Amended soil depth, d_{media} (ft) *Only included in certain BMP types, see Table 5-4 in the TGD for WQMP for reference to BMP design details*			
10 Amended soil porosity			
11 Gravel depth, d_{media} (ft) *Only included in certain BMP types, see Table 5-4 of the TGD for WQMP for BMP design details*			
12 Gravel porosity			
13 Duration of storm as basin is filling (hrs) *Typical ~ 3hrs*			
14 Above Ground Retention Volume (ft^3) *$V_{retention}$ = Item 8 * [Item7 + (Item 9 * Item 10) + (Item 11 * Item 12) + (Item 13 * (Item 4 / 12))]*			
15 Underground Retention Volume (ft^3) *Volume determined using manufacturer's specifications and calculations*			
16 Total Retention Volume from LID Infiltration BMPs: *(Sum of Items 14 and 15 for all infiltration BMP included in plan)*			
17 Fraction of DCV achieved with infiltration BMP: % *Retention% = Item 16 / Form 4.2-1 Item 7*			
18 Is full LID DCV retained onsite with combination of hydrologic source control and LID retention/infiltration BMPs? Yes ☐ No ☐ *If yes, demonstrate conformance using Form 4.3-10; If no, then reduce Item 3, Factor of Safety to 2.0 and increase Item 8, Infiltrating Surface Area, such that the portion of the site area used for retention and infiltration BMPs equals or exceeds the minimum effective area thresholds (Table 5-7 of the TGD for WQMP) for the applicable category of development and repeat all above calculations.*			

4.3.4 Biotreatment BMP

Biotreatment BMPs may be considered if the full LID DCV cannot be met by maximizing retention and infiltration. A key consideration when using biotreatment BMP is the effectiveness of the proposed BMP in addressing the pollutants of concern for the project (see Table 5-5 of the TGD for WQMP).

Use Form 4.3-4 to summarize the potential for volume based and/or flow based biotreatment options to biotreat the remaining unmet LID DCV. Biotreatment computations are included as follows:

- Use Form 4.3-5 to compute biotreatment in small volume based biotreatment BMP (e.g. bioretention w/underdrains);
- Use Form 4.3-6 to compute biotreatment in large volume based biotreatment BMP (e.g. constructed wetlands);
- Use Form 4.3-7 to compute sizing criteria for flow-based biotreatment BMP (e.g. bioswales)

Form 4.3-4 Selection and Evaluation of Biotreatment BMP (DA 1)

1 Remaining LID DCV not met by site design , or infiltration, BMP for potential biotreatment (ft^3): *Form 4.2-1 Item 7 - Form 4.3-2 Item 19 – Form 4.3-3 Item 16*	List pollutants of concern *Copy from Form 2.3-1.*	
2 Biotreatment BMP Selected *(Select biotreatment BMP(s) necessary to ensure all pollutants of concern are addressed through Unit Operations and Processes, described in Table 5-5 of the TGD for WQMP)*	Volume-based biotreatment *Use Forms 4.3-5 and 4.3-6 to compute treated volume*	Flow-based biotreatment *Use Form 4.3-7 to compute treated flow*
	☐ Bioretention with underdrain ☐ Planter box with underdrain ☐ Constructed wetlands ☐ Wet extended detention ☐ Dry extended detention	☐ Vegetated swale ☐ Vegetated filter strip ☐ Proprietary biotreatment
3 Volume biotreated in volume based biotreatment BMP (ft^3): *Form 4.3-5 Item 15 + Form 4.3-6 Item 13*	**4** Compute remaining LID DCV with implementation of volume based biotreatment BMP (ft^3): *Item 1 – Item 3*	**5** Remaining fraction of LID DCV for sizing flow based biotreatment BMP: % *Item 4 / Item 1*
6 Flow-based biotreatment BMP capacity provided (cfs): *Use Figure 5-2 of the TGD for WQMP to determine flow capacity required to provide biotreatment of remaining percentage of unmet LID DCV (Item 5), for the project's precipitation zone (Form 3-1 Item 1)*		
7 Metrics for MEP determination: • Provided a WQMP with the portion of site area used for suite of LID BMP equal to minimum thresholds in Table 5-7 of the TGD for WQMP for the proposed category of development: ☐ *If maximized on-site retention BMPs is feasible for partial capture, then LID BMP implementation must be optimized to retain and infiltrate the maximum portion of the DCV possible within the prescribed minimum effective area. The remaining portion of the DCV shall then be mitigated using biotreatment BMP.*		

Form 4.3-5 Volume Based Biotreatment (DA 1) – Bioretention and Planter Boxes with Underdrains

Biotreatment BMP Type *(Bioretention w/underdrain, planter box w/underdrain, other comparable BMP)*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
1 Pollutants addressed with BMP *List all pollutant of concern that will be effectively reduced through specific Unit Operations and Processes described in Table 5-5 of the TGD for WQMP*			
2 Amended soil infiltration rate *Typical ~ 5.0*			
3 Amended soil infiltration safety factor *Typical ~ 2.0*			
4 Amended soil design percolation rate (in/hr) P_{design} *= Item 2 / Item 3*

4.3.5 Conformance Summary

Complete Form 4.3-8 to demonstrate how on-site LID DCV is met with proposed site design, infiltration, and/or biotreatment BMP. The bottom line of the form is used to describe the basis for infeasibility determination for on-site LID BMP to achieve full LID DCV, and provides methods for computing remaining volume to be addressed in an alternative compliance plan. If the project has more than one outlet, then complete additional versions of this form for each outlet.

Form 4.3-8 Conformance Summary and Alternative Compliance Volume Estimate (DA 1)

1 Total LID DCV for the Project DA-1 (ft^3): Δ = -731 cu. Ft. *Copy Item 7 in Form 4.2-1*

2 On-site retention with site design BMP (ft^3): *Copy Item18 in Form 4.3-2*

3 On-site retention with LID infiltration BMP (ft^3): *Copy Item 16 in Form 4.3-3*

4 On-site biotreatment with volume based biotreatment BMP (ft^3): *Copy Item 3 in Form 4.3-4*

5 Flow capacity provided by flow based biotreatment BMP (cfs): *Copy Item 6 in Form 4.3-4*

6 LID BMP performance criteria are achieved if answer to any of the following is "Yes":**

- Full retention of LID DCV with site design or infiltration BMP: Yes ☒ No ☐
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV: Yes ☐ No ☐
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- On-site retention and infiltration is determined to be infeasible; therefore biotreatment BMP provides biotreatment for all pollutants of concern for full LID DCV: Yes ☐ No ☐
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

7 If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

- Combination of Site Design, retention and infiltration, , and biotreatment BMPs provide less than full LID DCV capture: ☐
  Checked yes if Form 4.3-4 Item 7is checked yes, Form 4.3-4 Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*

- Facilities, or a combination of facilities, of a different design than in Section E.12.e.(ii)(f) may be permitted if all of the following Phase II Small MS4 General Permit 2013-0001-DWQ 55 February 5, 2013 measures of equivalent effectiveness are demonstrated:
  1) Equal or greater amount of runoff infiltrated or evapotranspired; ☐
  2) Equal or lower pollutant concentrations in runoff that is discharged after biotreatment; ☐
  3) Equal or greater protection against shock loadings and spills; ☐
  4) Equal or greater accessibility and ease of inspection and maintenance. ☐

4.3.6 Hydromodification Control BMP

Use Form 4.3-9 to compute the remaining runoff volume retention, after Site Design BMPs are implemented, needed to address hydromodification, and the increase in time of concentration and decrease in peak runoff necessary to meet targets for protection of waterbodies with a potential hydromodification. Describe the proposed hydromodification treatment control BMP. Section 5.6 of the TGD for WQMP provides additional details on selection and evaluation of hydromodification control BMP.

Form 4.3-9 Hydromodification Control BMPs (DA 1)

1 Volume reduction needed for hydromodification performance criteria (ft^3): *(Form 4.2-2 Item 4 * 0.95) – Form 4.2-2 Item 1*	**2** On-site retention with site design and infiltration, BMP (ft^3): *Sum of Form 4.3-8 Items 2, 3, and 4. Evaluate option to increase implementation of on-site retention in Forms 4.3-2, 4.3-3, and 4.3-4 in excess of LID DCV toward achieving hydromodification volume reduction*
3 Remaining volume for hydromodification volume capture (ft^3): *Item 1 – Item 2*	**4** Volume capture provided by incorporating additional on-site BMPs (ft^3):

5 Is Form 4.2-2 Item 11 less than or equal to 5%: Yes ☐ No ☐

If yes, hydromodification performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate increase in time of concentration achieved by proposed LID site design, LID BMP, and additional on-site BMP ☐
- Increase time of concentration by preserving pre-developed flow path and/or increase travel time by reducing slope and increasing cross-sectional area and roughness for proposed on-site conveyance facilities ☐

6 Form 4.2-2 Item 12 less than or equal to 5%: Yes ☐ No ☐

If yes, hydromodification performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate reduction in peak runoff achieved by proposed LID site design, LID BMPs, and additional on-site retention BMPs ☐

4.4 Alternative Compliance Plan (if applicable)

Describe an alternative compliance plan (if applicable) for projects not fully able to infiltrate, or biotreat the DCV via on-site LID practices. A project proponent must develop an alternative compliance plan to address the remainder of the LID DCV. Depending on project type some projects may qualify for water quality credits that can be applied to reduce the DCV that must be treated prior to development of an alternative compliance plan (see Form 2.4-1, Water Quality Credits). Form 4.3-9 Item 8 includes instructions on how to apply water quality credits when computing the DCV that must be met through alternative compliance.

Alternative Designs — Facilities, or a combination of facilities, of a different design than in Permit Section E.12.e.(ii)(f) may be permitted if all of the following measures of equivalent effectiveness are demonstrated:

1) Equal or greater amount of runoff infiltrated or evapotranspired;

2) Equal or lower pollutant concentrations in runoff that is discharged after biotreatment;

3) Equal or greater protection against shock loadings and spills;

4) Equal or greater accessibility and ease of inspection and maintenance.

The Project Proponent will need to obtain written approval for an alternative design from the Lahontan Regional Water Board Executive Officer (see Section 6 of the TGD for WQMP).

Section 5 Inspection and Maintenance Responsibility for Post Construction BMP

All BMPs included as part of the project WQMP are required to be maintained through regular scheduled inspection and maintenance (refer to Section 8, Post Construction BMP Requirements, in the TGD for WQMP). Fully complete Form 5-1 summarizing all BMP included in the WQMP. Attach additional forms as needed. The WQMP shall also include a detailed Operation and Maintenance Plan for all BMP and a Maintenance Agreement. The Maintenance Agreement must also be attached to the WQMP.

Form 5-1 BMP Inspection and Maintenance **(use additional forms as necessary)**			
BMP	Reponsible Party(s)	Inspection/ Maintenance Activities Required	Minimum Frequency of Activities
Onsite storm drain catch basins	Property Owner	Onsite catch basins shall be inspected quarterly for debris buildup and evidence of illegal dumping and shall be cleaned whenever debris/sediment accumulates. Removal can be accomplished by vac-truck or other equally effective methods.	Quarterly
Underground Infiltration System	Property Owner	Regular inspections of system to oberserve sediment build up and infiltration capacity. Cleaning of accumulated trash, debris, and sediments as determined by inspections. Cleaning is recommended during dry weather. See manufacturer recommendations for additional maintenance activities.	Monthly and within 48 hours following a significant storm event to verify there is no standing water in the chambers
Hydrodynamic Separator	Property Owner	Visual inspection and debris removed quarterly per manufacturer recommendations.	Quarterly
Landscape Maintenance	Property Owner	Maintain landscape area vegetation, slope protection and grades, adjacent to hardscape and prevent discharge of landscape maintenance waste into storm drains.	Weekly
Litter Control	Property Owner	Maintain roofed waste collection areas and vacuum-sweep drive aisles and parking areas to remove potential stormwater contamination before anticipated storm events.	Weekly/Monthly
Anti-Dumping Stenciling & Signage	Property Owner	Visual inspection and replacement of damaged or illegible stenciling and signage over on-site catch basins	Annually

Section 6 WQMP Attachments

6.1. Site Plan and Drainage Plan

Include a site plan and drainage plan sheet set containing the following minimum information:

- Project location
- Site boundary
- Land uses and land covers, as applicable
- Suitability/feasibility constraints
- Structural Source Control BMP locations
- Site Design Hydrologic Source Control BMP locations
- LID BMP details
- Drainage delineations and flow information
- Drainage connections

6.2 Electronic Data Submittal

Minimum requirements include submittal of PDF exhibits in addition to hard copies. Format must not require specialized software to open. If the local jurisdiction requires specialized electronic document formats (as described in their Local Implementation Plan), this section will describe the contents (e.g., layering, nomenclature, geo-referencing, etc.) of these documents so that they may be interpreted efficiently and accurately.

6.3 Post Construction

Attach all O&M Plans and Maintenance Agreements for BMP to the WQMP.

6.4 Other Supporting Documentation

- 6.4.1 Calculations
- 6.4.2 NOAA Precipitation Data
- 6.4.3 Education Materials
- 6.4.4 Construction Plans

Variable	Factor/Formula	Proposed	Unit	
Ratio of impervious surface/total site surface	(imp%)	79%		
R_C= runoff coefficient	$0.858(imp\%)^3 - 0.78(imp\%)^2 + 0.774(imp\%) + 0.04$ =	0.587

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

AquaShield™

INNOVATING GOOD CLEAN WATER

AQUA-SWIRL® TRASH CAPTURE

HYDRODYNAMIC SEPARATOR FEATURES

1. The Aqua-Swirl® Trash Capture is constructed of durable, lightweight, high performance materials to withstand up to HS-25 loads.
2. Floatable trash, debris and coarse sediments enter tangentially into the unit.
3. Vortex separation removes coarse particles of TSS, floatable debris, and free oil.
4. Stainless steel screen removes trash larger than 5 mm.
5. Independent testing & validation for 100% trash removal larger than 5 mm before discharging into sensitive receiving waters.

Water Boards

Aqua-Swirl® TRASH CAPTURE System

AQUA-SWIRL® TRASH CAPTURE

- Provides customized solutions for project specific requirements.
- Systems designed for specific water quality treatment flow rates.
- Modular sizes from 2.5 – 13 ft diameters with attached riser(s) to finish grade.
- Online project and system design tool at http://pda.aquashieldinc.com.

Vortex Separation Technology

- Utilizes hydrodynamic and gravitational forces incorporating a stainless steel screen to remove trash/debris greater than 5mm, coarse sediment (TSS), and free oil.
- Extensive full-scale laboratory testing with independent 3rd parties.
- Certified Full Trash Capture device by CA State Water Resources Control Board.

Bypass Designs

- Systems are designed to treat water quality flow rates and bypass peak storm events.
- Internal and external bypass configurations are available and tailored to site-specific needs.

Pipe Connections

- Systems are designed with custom inlet/outlet diameters at various configuration angles.
- Inlet/outlet stub outs are provided for easy coupling to storm drain lines.
- Easily plumbed to RCP, CMP, PVC, and HDPE piping with dissimilar pipe diameters.

Installation Benefits

- Quick and simple installation, resulting in measurable project cost savings.
- Designed to withstand HS-25 loadings with capabilities of heavier loads available.
- Small footprint design reduces excavation costs.
- Lightweight and durable construction eliminating the need of a crane.
- Lifting lugs attached for easy maneuverability on site.

Storage Capacities

- Large storage capacities for sediment, debris and free oil to extend maintenance frequency.
- Screened trash capture storage capacities up to 122 ft3.
- Sediment storage capacities up to 310 ft3.

Inspection & Maintenance

- AquaShield™ offers an extensive network of local service providers across the country to ensure system performance efficiency.
- I&M manuals are available to download at www.aquashieldinc.com.

APPENDIX E, YUCCA VALLEY WALMART FUEL STATION – NOISE EIR ADDENDUM ANALYSIS MEMORANDUM

This page intentionally left blank.

Kimley»Horn

MEMORANDUM

To:	Town of Yucca Valley Planning Division
From:	Alex Pohlman, Kimley-Horn and Associates, Inc.
Date:	January 21, 2026
Subject:	Yucca Valley Walmart Fuel Station – Noise EIR Addendum Analysis

PURPOSE

This comparative analysis has been undertaken to analyze whether the proposed Yucca Valley Walmart Fuel Station Project (Project) would result in any new or substantially more severe significant environmental impacts as compared to the conclusions discussed in the certified Yucca Valley Retail Specific Plan (Original Project) Environmental Impact Report (Final EIR) that was certified on June 25, 2008. The purpose of this technical memorandum is to assess whether any new noise impacts would occur based on proposed updates to the Project (described below) pursuant to Public Resources Code, Section 21166 and State CEQA Guidelines Section 15162.

ORIGINAL PROJECT

The Final EIR for the Original Project analyzed the development of a commercial retail center on approximately 25.51 acres located on the southeast corner of Twentynine Palms Highway (SR-62) and Avalon Avenue. The EIR analysis for the Original Project included a 229,000-square foot Walmart Supercenter, a fuel station, a 4,000-square foot fast-food restaurant with drive-through, and a detention basin. However, the Specific Plan, approved on August 14, 2008, did not include the fuel station as a permitted use and the area designated in the EIR for the fuel station and a 4,000-square foot fast-food restaurant with drive-through was ultimately developed with two smaller fast-food restaurants instead.

PROPOSED PROJECT

The proposed Project involves the development of a fuel station similar to the one previously analyzed in the Final EIR, although in a different location. The fuel station would be located in the northeastern portion of the existing parking lot, south of the detention basin and SR-62, see **Exhibit 1: Local Vicinity Map** and **Exhibit 2: Conceptual Site Plan**.

NOISE ANALYSIS

Previous Significance Determination: The Final EIR determined that construction would generate noise and vibrations that would result in significant and unavoidable impacts on nearby sensitive receptors. However, the Final EIR found that operational noise including noise generated onsite from mechanical equipment, parking lot activities, loading and unloading operations, as well as offsite noise generated from traffic associated with Original Project would be less than significant.

Proposed Project Analysis:

Threshold (a) Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.

Temporary Construction Noise Impacts

Project construction is anticipated to occur over approximately 5 months and is scheduled to begin in November 2025 and completed in April 2026.[1] Construction of the Project would commence with demolition of an area of the existing surface parking lot, followed by grading and excavation. Building foundations would then be constructed, followed by building construction, paving/concrete installation, and architectural coatings. Construction delivery/haul trucks would generally travel between the Project Site and SR-62.

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods near the construction site. However, it is acknowledged that construction activities would occur throughout the Project site and would not be concentrated at a single point near sensitive receptors.

Construction activities would include demolition of the existing parking lot area, site preparation, grading, building construction, paving, and architectural coating. Such activities could require concrete saws, tractors, and dozers during demolition; graders, dozers and tractors during site preparation; graders, dozers, and tractors during grading; cranes, generators, tractors, forklifts, and welders during building construction; pavers, rollers, tractors, and a concrete mixer during paving; and air compressors during architectural coating. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings.

The construction noise analysis in the Final EIR did not identify a numeric threshold when determining construction noise impacts. However, it is assumed the noise threshold used in the

[1] A conservative worst-case construction timeline has been modeled for air quality and greenhouse gas analysis purposes. This construction schedule has been included in the noise analysis for consistency.

construction noise analysis is the exterior noise standard of 75 dBA L_{MAX} during the day (7:00 a.m. to 10:00 p.m.) and 70 dBA L_{MAX} standard during the night (10:00 p.m. to 7:00 a.m.).[2] The Final EIR stated that the nearest residences to the Original Project boundary may be subject to short-term and intermittent, maximum noise levels reaching 81 dBA L_{MAX} and would potentially result in annoyance, resulting in a significant impact requiring mitigation.

The noise levels calculated in **Table 1: Project Construction Noise Levels** for the proposed Project, shows that the maximum noise level of construction equipment at the nearest sensitive receptor would be 73.7 dBA L_{MAX}, which is lower than the construction noise levels of the Original Project. Construction of the proposed Project would generate noise levels less than the Town's exterior noise standard of 75 dBA L_{MAX} during the day. Construction is prohibited during the nighttime and therefore the 70 dBA L_{MAX} standard during the night would not be exceeded. As a result, Project construction noise would result in a less than significant impact.

Table 1: Project Construction Noise Levels

Construction Phase	Land Use	Direction	Distance to Property Line (feet)[1]	Average Distance (feet)[1]	Worst Case Modeled Exterior Noise Level (dBA L_{MAX})[1]
Demolition	Residential	North	410	535	73.7
Site Preparation	Residential	North	410	535	69.4
Grading	Residential	North	410	535	70.7
Building Construction	Residential	North	410	535	68.9
Paving	Residential	North	410	535	68.4
Architectural Coating	Residential	North	410	535	59.4

1. To conservatively estimate construction noise, the loudest equipment is assumed to operate nearest to the property line of the closest sensitive receptors. All other equipment is distributed evenly between the property line and an average distance, with loudest equipment located nearest to sensitive receptors and quieter equipment further away

Source: Refer to **Appendix A** for noise modeling results.

Mitigation Program

The following applicable mitigation measure is identified in the Final EIR.

4.11.1A Construction activities are restricted within the Town to the hours of 7:00 a.m. to 10:00 p.m. Monday through Saturday. The following measures would reduce short-term construction-related noise impacts resulting from the project:

- During all project site excavation and grading onsite, the project contractor shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturer's standards.

[2] Final EIR Yucca Valley Retail Specific Plan, 2008. page 4.11-21.

- The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the project site.
- The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise-sensitive receptors nearest the project site during all project construction.

Conclusion

Project construction would generate less noise than identified in the Final EIR. Noise levels at the nearest sensitive receptor would reach 73.7 dBA L_{MAX} which is below the Yucca Valley's exterior noise standard. As a result, Project construction noise impacts would be less than significant. Although the proposed Project's construction noise levels do not exceed the exterior standard, mitigation measures identified in the Final EIR to reduce construction noise impacts would still be required to reduce cumulative noise levels. The Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to construction noise. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would change the impact finding. Although the Final EIR determined that the Original Project would result in a significant and unavoidable impact, the distance of the fuel station component of the Project to sensitive receptors has reduced construction noise levels to a less than significant level.

Operational Noise Impacts

Fuel Station and Parking Lot Activities

The Final EIR determined that operational noise from the Original Project, including the fuel station would be less than significant. However, the Final EIR analysis did not provide noise levels for the fuel station only, as a result, this noise analysis will use the noise levels identified as parking lot activities in the Final EIR. The noise levels from parking lot activities would be comparable to fuel station noise levels because they include similar activities (i.e., car door slamming, car radios, engine start-up, and car pass-by). The Final EIR noted that these activities would generate approximately 60 dBA L_{MAX} at 50 feet.[3] The nearest sensitive receptor would be approximately 466 feet from the proposed fuel station refueling area. At this distance, the fuel station noise would attenuate to 40.6 dBA L_{MAX} which is lower than the Town's exterior noise standards of 75 dBA L_{MAX} during the day and 70 dBA L_{MAX} standard during the night. As a result, fuel station noise levels and would result in a less than significant impact.

Truck Movements

[3] Final EIR Yucca Valley Retail Specific Plan, 2008. page 4.11-21.

The Final EIR determined that slow moving trucks would generate noise levels of up to 75 dBA L_{MAX} when traveling and breaking at a distance of 50 feet.[4] The nearest sensitive receptor would be approximately 466 feet from the proposed fuel station refueling area. At this distance, the noise generated by tanker trucks delivering fuel would attenuate to 55.6 dBA L_{MAX} and would result in a less than significant impact.

Other Noise-Generating Activities

The Final EIR stated that buildings withing the Original Project would have rooftop heating, ventilating, and air conditioning (HVAC) mechanical equipment. The Final EIR states that rooftop HVAC units generate noise levels of approximately 52 dBA at a distance of 50 feet. Based on the site plan, the convenience store associated with the fuel station would be approximately 626 feet from the nearest sensitive receptor. At this distance, the noise generated by the rooftop HVAC unit would attenuate to 30 dBA and would result in a less than significant impact.

Mitigation Program

None identified in the Original Project Final EIR.

Conclusion

The development of the proposed Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to operational noise. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would change the impact finding. This impact would remain less than significant.

Threshold (b) Result in a substantial permanent increase in traffic-related noise levels in the project vicinity above levels existing without the project.

As noted in the Final EIR, it takes a doubling of traffic volume to cause a three-decibel increase in traffic noise.[5] Therefore, consistent with the Final EIR, vehicular traffic trips associated with the proposed Project would not result in significant traffic noise impacts on off-site sensitive uses.

The Proposed Project is anticipated to generate 826 daily trips. Vehicles accessing the site would either come from SR-62 or from Avalon Avenue. Based on the most recent data from the Caltrans Traffic Census Program (2022), the segment of SR-62 between Pioneer Town Road and the SR-247 north junction has an average annual daily trip rate of 24,000 vehicles per day.[6] Conservatively assuming all vehicles associated with the fuel station were to enter and exit the site from SR-62, the additional 826 vehicles would not be enough to double the existing traffic volume and generate a noticeable increase in traffic noise. Additionally, Table 5.14-3 of the

[4] Final EIR Yucca Valley Retail Specific Plan, 2008, page 4.11-21.
[5] Final EIR Yucca Valley Retail Specific Plan, 2008, page 4.11-9.
[6] Caltrans, Traffic Census Program, 2022. dot.ca.gov/programs/traffic-operations/census

Yucca Valley General Plan EIR states that the traffic volume of Avalon Avenue, north of Sunnyslope Drive, has 2,707 daily trips.[7] Conservatively assuming all vehicles associated with the fuel station were to enter and exit the site from Avalon Avenue, the additional 826 vehicles would not be enough to double the existing traffic volume and generate a noticeable increase in traffic noise. Therefore, operational traffic associated with the proposed Project would result in a less than significant impact.

Mitigation Program

None identified in the Original Project Final EIR.

Conclusion

The development of the proposed Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to traffic-related noise. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would change the impact finding. This impact remains less than significant.

Threshold (c) Result in the exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

The Final EIR determined that noise levels from loading and unloading operations for the Original Project may exceed the noise standards during nighttime hours at the closest residences. However, the operational noise levels discussed under Threshold (a) Operations associated with the operation of the proposed Project would combine to 56 dBA L_{MAX}. Assuming all these activities occurred at the same time during nighttime hours, the noise level would still be below the Town's exterior nighttime noise standard of 70 dBA L_{MAX}. However, although the proposed Project's operational noise levels do not exceed the nighttime standard, mitigation measures identified in the Final EIR to reduce noise impacts would still be required as part of the EIR to reduce cumulative noise levels.

Mitigation Program

The following applicable mitigation measures are identified in the Final EIR.

4.11.3A Nighttime operation of delivery trucks shall be limited to less than 30 minutes each.

4.11.3B Nighttime operation of delivery truck beepers shall be prohibited for on-site vehicles.

[7] Yucca Valley, General Plan EIR. 2014. https://www.yucca-valley.org/home/showpublisheddocument/5603/637399893763570000

Conclusion

The development of the proposed Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to established noise standards. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would change the impact finding.

Threshold (d) Result in the exposure of persons to or generation of excessive groundborne vibration or groundbourne noise levels.

The Final EIR determined that residences nearest the Original Project would experience vibration levels that could cause annoyance. The Final EIR states that bulldozers and other heavy equipment would generate approximately 92 vibration velocity in decibels (VdB) of groundbourne vibration at 50 feet and that at each doubling of the distance, the vibration level would be approximately 6 VdB lower [8] based on the Federal Transit Administration's (FTA) 1995 report, *Transit Noise and Vibration Impact Assessment Manual*. The Final EIR also states that annoyance often occurs when vibrations exceed the threshold of perception (65 VdB) by 10 decibels or more.

The Final EIR determined that existing residence located 150 feet to the west of the Original Project site (this includes the entire Original Project site, not just the fuel station) would be exposed to vibration levels between 80 and 86 VdB during construction which would result in annoyance, while vibrations from operations (trucks and other on-road vehicles) would not. The Final EIR concluded that although groundbourne vibration during construction would be temporary, impacts from groundbourne vibration during construction would be significant and unavoidable, as no mitigation measures would reduce this impact to less than significant.

However, the proposed Project construction site is approximately 410 feet from the property line of the nearest sensitive receptor. Following the Final EIR's methodology of reducing groundbourne vibrations by 6 VdB each time the distance is doubled, at 400 feet the vibrations from construction would be reduced to 74 VdB which is below the annoyance threshold of 75 VdB defined in the Final EIR. In addition, the current version of the FTA's *Transit Noise and Vibration Impact Assessment Manual,* dated 2018, includes lower vibration source levels for construction equipment. Based on the 2018 version of the manual, bulldozers will generate 87 VdB of groundbourne vibration at 25 feet, at a distance of 410 feet, the nearest sensitive receptor would experience vibration levels of 51 VdB, which is below the annoyance threshold of 75 VdB. Therefore, construction vibrations would not cause annoyance and impacts from groundbourne vibrations would be less than significant.

[8] Final EIR Yucca Valley Retail Specific Plan, 2008. pg 4.11-26.

Mitigation Program

None identified in the Original Project Final EIR.

Conclusion

The development of the proposed Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to groundbourne vibrations. Although the Final EIR determined that the Original Project would result in a significant and unavoidable impact, the distance of the fuel station component of the Project to sensitive receptors and improvements to equipment have reduced construction equipment vibrations to a less than significant level.

Threshold (e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

The Yucca Valley Airport is located approximately one mile west of the proposed project site. It is a privately owned airstrip which has been leased on a long term to the Yucca Valley Airport District. According to the Airport Comprehensive Land Use Plan for the Yucca Valley Airport, the proposed project site is located outside of the 60 CNEL contour line for Yucca Valley Airport. Although there may be occasional aircraft flyover noise that is higher than the ambient noise level, because the proposed project is located outside of the 60 CNEL contour line for the Yucca Valley Airport, airport noise levels at the proposed project site are within normally acceptable levels, resulting in a less than significant impact

Mitigation Program

None identified in the Original Project Final EIR.

Conclusion

There are no new potentially significant impacts associated with the development of proposed Project. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would change the impact finding. This impact remains less than significant.

TRANSPORTATION IMPACT ANALYSIS
FOR THE PROPOSED
WALMART FUEL STATION PROJECT
IN THE TOWN OF YUCCA VALLEY

INTRODUCTION

Purpose and Study Objectives

This Transportation Impact Analysis has been prepared to address the traffic-related effects of the proposed Walmart Fuel Station project in the Town of Yucca Valley in San Bernardino County. This analysis has been conducted in accordance with the San Bernardino County *Transportation Impact Study Guidelines* (July 2019).

This report includes a description of existing traffic conditions in the surrounding area, estimated project trip generation and distribution, future traffic growth, and an assessment of project-related effects on the transportation system.

Project Overview

The project site is currently an existing Walmart parking lot and is bounded by drive aisles to the north and east and parking lot to the south and west. The project consists of the construction of a new fuel station with twelve fueling positions and a 1,556 square-foot convenience store within the northeast corner of the existing Walmart parking lot located at 58501 Twentynine Palms Highway. The project location is shown in its regional setting on Figure 1. The proposed project site plan is shown on Figure 2.

Proposed project ingress and egress will be facilitated via two existing drive aisles. One driveway and one intersection along Twentynine Palms Highway allow direct access to the proposed project; the westernmost driveway is right-in, right-out only (RIRO), and the easternmost intersection is full-access.

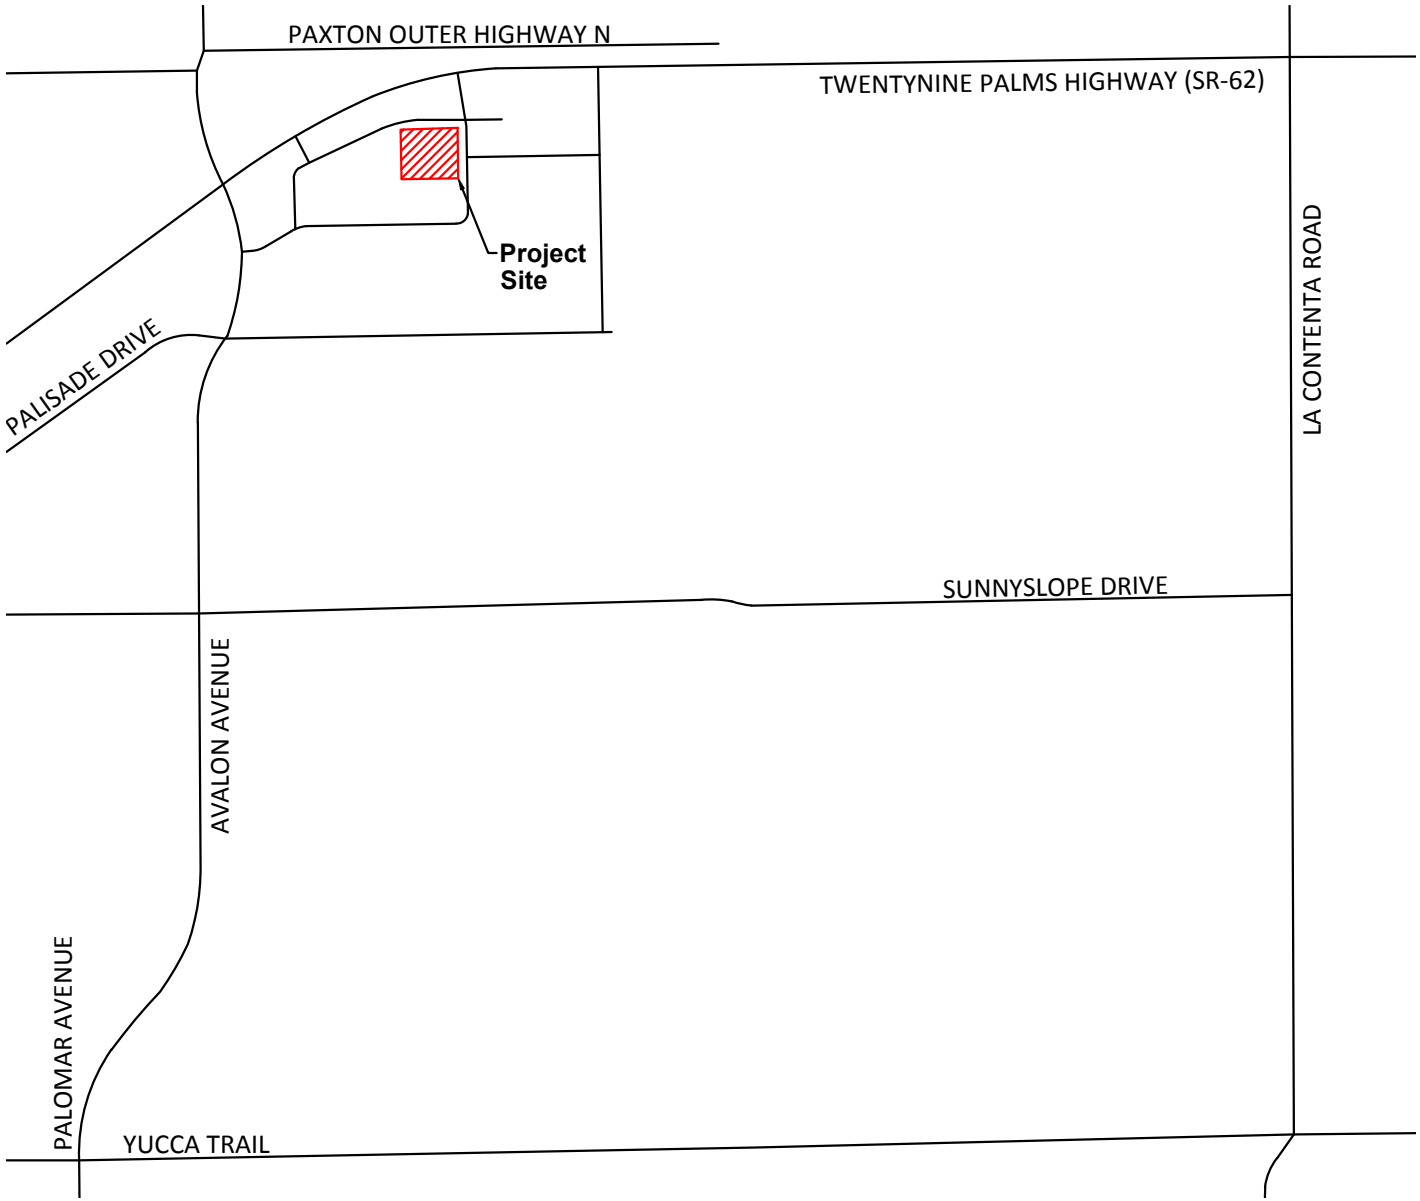

FIGURE 1
VICINITY MAP

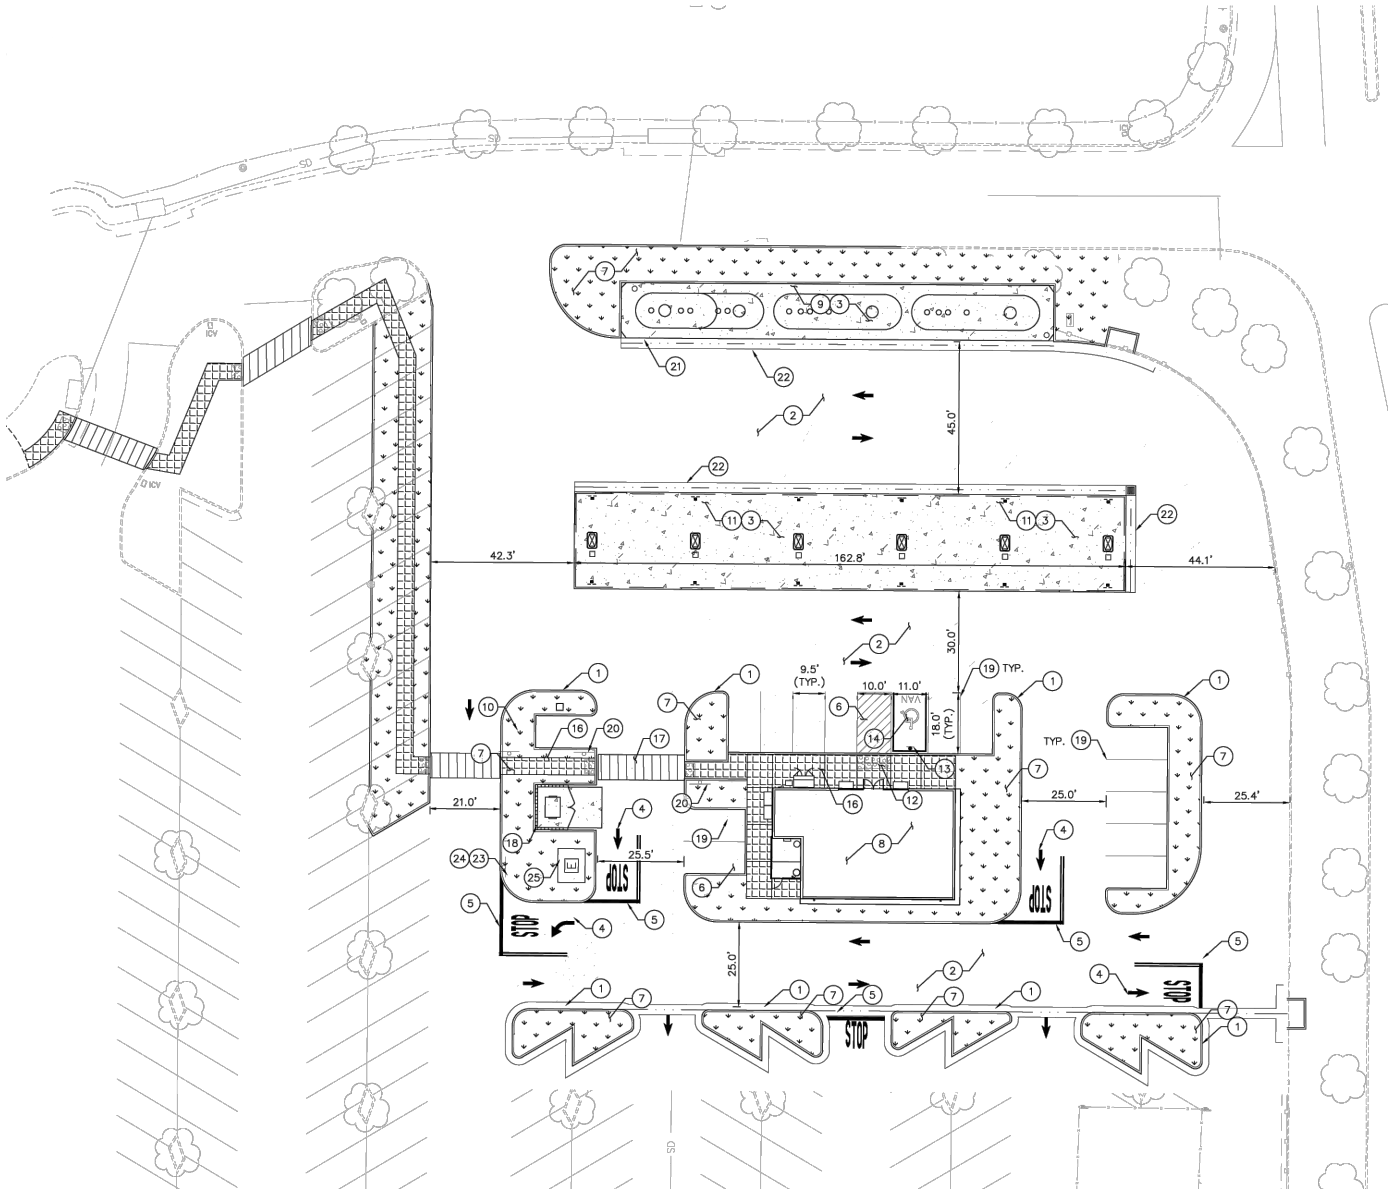

FIGURE 2
PROJECT SITE PLAN

ANALYSIS SCENARIOS AND METHODOLOGY

The analysis scenarios and methodology were established with Town of Yucca Valley staff through the Scoping Agreement process. As part of this process, a Traffic Consistency Analysis Memorandum was created to analyze the proposed project's consistency with the development assumed in the Environmental Impact Report (EIR) for the Yucca Valley Retail Specific Plan (March 2008). A copy of the approved Traffic Consistency Analysis Memorandum with the revised scope is provided in *Appendix A*.

Analysis Scenarios

Based on the San Bernardino County *Transportation Impact Study Guidelines* (July 2019), the study intersections will be evaluated in the morning and evening peak hours on a typical weekday for the following conditions:

- Existing Conditions
- Opening Year 2026
- Opening Year 2026 Plus Project

It should be noted that the revised scope in *Appendix A* reflects an Opening Year of 2025; however, per City correspondence in September 2025, the Opening Year was revised to 2026.

Intersection Analysis – HCM Methodology

Peak hour intersection operations at the study intersections and driveways were evaluated using the methods prescribed in the Highway Capacity Manual 7th Edition (HCM), consistent with San Bernardino County guidelines. The intersection analysis was conducted using Synchro 12 software.

For signalized intersections, the HCM methodology estimates the average delay (in average seconds per vehicle) for each of the movements through the intersection, considering a number of factors, including the number of lanes, volume of traffic, and the signal timing phasing.

For unsignalized intersections, the HCM methodology analysis determines the worst-case delay per lane for each vehicle making any movement from the stop-controlled minor street, as well as left turns from the major street. Delay values are calculated based on the relationship between traffic on the major street and the availability of acceptable gaps in the traffic stream through which conflicting traffic movements can be made.

In order to generate HCM results for Intersection #D2 (Twentynine Palms Highway (SR-62) & Commercial Driveway 2), the northbound approach was considered to be free moving to be most representative of the worst-case scenario.

The HCM delay forecast translates to a Level of Service designation, ranging from LOS A to LOS F. A

summary of each Level of Service and the corresponding delay is provided in the following chart.

LEVEL OF SERVICE DEFINITIONS	
Level of Service	Description
A	No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted but not objectionably so.
D	This level encompasses a zone of increasing restriction, approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially, and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED AND UNSIGNALIZED INTERSECTIONS		
Level of Service	Signalized Intersection (Average delay per vehicle, in seconds) [1]	Unsignalized Intersections (Average delay per vehicle, in seconds) [2]
A	≤ 10	0 – 10
B	> 10 – 20	> 10 – 15
C	> 20 – 35	> 15 – 25
D	> 35 – 55	> 25 – 35
E	> 55 – 80	> 35 – 50
F	> 80	> 50

[1] Source: Highway Capacity Manual (HCM 7th Edition), Exhibit 19-8.

[2] Source: Highway Capacity Manual (HCM 7th Edition), Exhibit 20-2.

Level of Service Standards

The County of San Bernardino General Plan standard in the Desert Region for level of service for signalized and unsignalized intersections is LOS C.

Thresholds of Significance

The Town of Yucca Valley is located in the East Desert Region of San Bernardino County. The County requires that improvements shall be identified when any of the following occurs between the "without project" and the "plus project" conditions:

- Any signalized study intersection in the Desert region that is operating at an LOS C or better without project traffic in which the addition of project traffic causes the intersection to degrade to an LOS D, E, or F shall identify improvements to improve operations to LOS C.

- Any signalized study intersection in the Desert region that is operating at LOS D, E, or F without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

For unsignalized intersections, an operational improvement achieving LOS C or better or to pre-project LOS would be required if the analysis determines that either section a) or both sections b) and c) occur:

a) The addition of project-related traffic causes the intersection to degrade from an LOS D or better to a LOS E or worse in the Valley and Mountain regions or from an LOS C or better to an LOS D or worse in the Desert region.

OR

b) The project adds 5.0 seconds or more of delay to an intersection that is already projected to operate without project traffic at an LOS E or F in the Valley and Mountain regions or at an LOS D, E, or F in the Desert region (per Section 10.5.2 b).

AND

c) One or both of the following conditions are met:
   1) The project adds ten (10) or more trips to any minor street approach
   2) The intersection meets the peak hour traffic signal warrant after the addition of project traffic (per Section 10.5.2 c).

STUDY AREA

This Transportation Impact Analysis includes documentation of existing conditions, future conditions, and identification of project-related deficiencies at the following study locations:

Existing Intersections

1. Avalon Avenue & Twentynine Palms Highway (SR-62)
2. Avalon Avenue & Palisade Drive
3. Twentynine Palms Highway (SR-62) & West Commercial Access Road
4. Twentynine Palms Highway (SR-62) & East Commercial Access Road
5. Twentynine Palms Highway (SR-62) & La Contenta Road
6. Palomar Avenue & Yucca Trail
7. Yucca Trail & La Contenta Road

Future Project Driveways

D1. Twentynine Palms Highway (SR-62) & Commercial Driveway 1
D2. Twentynine Palms Highway (SR-62) & Commercial Driveway 2

The study locations were established in consultation with Town of Yucca Valley staff through the Scoping Agreement process.

AREA CONDITIONS

Existing Street System

Regional access to the site is provided primarily by the Twentynine Palms Freeway (SR-62).

Existing lane configurations and intersection controls at the study intersections are shown on Figure 3. A copy of the Town of Yucca Valley *Roadway Classifications at General Plan Buildout* is provided on Figure 4. The following provides a description of the roadways surrounding the project site.

Twentynine Palms Highway (SR-62) is an east-west roadway with two travel lanes in each direction. The posted speed limit is 50 miles per hour (mph). On-street parking is prohibited on both sides of the street and there are no bike lanes in either direction. Twentynine Palms Highway is classified as a Highway in the Town of Yucca Valley *Roadway Classifications at General Plan Buildout*.

Avalon Avenue is a north-west roadway with one travel lane in each direction. The posted speed limit is 45 mph. On-street parking is prohibited on both sides of the street and there are no bike lanes in either direction. Avalon Avenue is classified as an Arterial in the Town of Yucca Valley *Roadway Classifications at General Plan Buildout*.

Palisade Drive is an east-west roadway with one lane in each direction. There is on-street parking on both sides of the street and there are no bike lanes in either direction.

Yucca Trail is an east-west roadway with one lane in each direction. There is no on-street parking on both sides of the street and there are no bike lanes in either direction. The posted speed limit is 50 mph. Yucca Trail is classified as an Arterial in the Town of Yucca Valley *Roadway Classifications at General Plan Buildout*.

Palomar Avenue is a north-south roadway with one travel lane in each direction. The posted speed limit is 45 mph. On-street parking is prohibited on both sides of the street and there are no bike lanes in either direction. Palomar Avenue is classified as an Arterial in the Town of Yucca Valley *Roadway Classifications at General Plan Buildout.*

La Contenta Road is a north-south roadway with one travel lane in each direction. The posted speed limit is 55 mph. On-street parking is prohibited on both sides of the street and there are no bike lanes in either direction. La Contenta Road is classified as an Arterial in the Town of Yucca Valley *Roadway Classifications at General Plan Buildout.*

Yucca Mesa Road is an east-west roadway with one travel lane in each direction. The posted speed limit is 55 mph. On-street parking is prohibited on both sides of the street and there are no bike lanes in either direction. Yucca Mesa Road is classified as an Arterial in the Town of Yucca Valley *Roadway Classifications at General Plan Buildout.*

Existing Traffic Volumes

Existing morning peak hour and evening peak hour counts were conducted at the study intersections on a typical weekday. The counts were completed in December 2024, while schools were in session. Peak hour intersection traffic count worksheets are provided in *Appendix B*. Existing morning and evening peak hour volumes are presented on Figure 5.

Intersection Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours using the analysis procedures and assumptions described previously in this report. The results of the intersection analysis for Existing Conditions are shown on Table 1. Copies of Existing Conditions intersection analysis worksheets are provided in *Appendix C*. Review of this table shows that all study intersections currently operate at an acceptable Level of Service during the morning and evening peak hours.

- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

OPENING YEAR 2026 CONDITIONS

The Project Opening Year (the year the project would be constructed and occupied) is anticipated to be Year 2026. Based on consultation with City staff, an ambient growth rate of 2.0% per year to Opening Year 2026 was applied to existing traffic volumes. The resulting peak hour turning movement volumes at the study locations are shown in Figure 6.

Intersection Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours for the Opening Year 2026 conditions. The results are shown on Table 2. Intersection analysis worksheets are provided in *Appendix C*. Review of this table indicates that, with the addition of ambient growth, all intersections would continue to operate at an acceptable Level of Service under Opening Year 2026 conditions.

PROJECT TRAFFIC

Project Trip Generation

Peak hour trips for the proposed project were calculated using the trip generation rates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition (2021). Trip rates are based on the following ITE Land Use Category:

- LU 944 – Gasoline/Service Station

It is recognized that not all inbound and outbound trips to the proposed project will be "new" trips on the roadway system in the vicinity of the project site. Some trips to the project site will consist of "pass-by" trips -- motorists who are already traveling on the surrounding roadways from one place to another. Common pass-by trips for a gas station would be individuals who stop at the project site on the way to work, home, shopping, or school.

Based on the latest version of the ITE Trip Generation Handbook, 3rd Edition (2017), a pass-by rate of 63% in the morning peak hour and 57% in the evening peak hour were applied to the trips for the proposed land use. As the ITE Trip Generation Handbook does not provide pass-by rates for daily trips, the daily pass-by trip percentage was assumed to be the average of the morning and evening peak periods (60%).

The project is estimated to generate approximately 826 trips daily, with 46 trips in the morning peak hour (23 inbound, 23 outbound) and 72 trips in the evening peak hour (36 inbound, 36 outbound). The resulting trip rates and the project trip generation estimates are shown on Table 3.

Trip Distribution and Assignment

Project trip distribution assumptions for the project site were developed taking into account the proposed site uses, existing travel patterns, and routes to and from the freeway system. Trip distribution assumptions are shown on Figure 7.

Based on the proposed project trip distribution, project trips were assigned through the study intersections. Figure **8** shows new project trips that would be added to the study intersections. However, these trips do not include pass-by trips, which would typically be added to project driveways but not to non-adjacent study intersections; pass-by trips are assumed to be part of the existing flow of traffic until reaching the project site. Pass-by trips are shown on Figure 9 and should be added to the volumes shown on Figure 8 to determine the total project trips at each study intersection. The total project trips are shown on Figure 10.

TABLE 3
SUMMARY OF PROJECT TRIP GENERATION
YUCCA VALLEY WALMART FUEL STATION

FIGURE 11
OPENING YEAR 2026 PLUS PROJECT TRAFFIC VOLUMES

RECOMMENDED IMPROVEMENTS

Based on the Level of Service standards and significant impact criteria discussed previously, the project-related effect would not be considered significant; therefore, no improvements are identified.

SITE ACCESS ANALYSIS

Vehicular access for the project site will be facilitated via two existing drive aisles. One driveway and one intersection along Twentynine Palms Highway allow direct access to the proposed project; the westernmost driveway is right-in, right-out only (RIRO), and the easternmost intersection is full-access.

ON-SITE QUEUING ANALYSIS

The 95th percentile queuing capacity was analyzed at the project driveways. 95th percentile queue is defined as the queue length that has only a 5% probability of being exceeded during the analysis period; in other words, the typical worst-case queue. The goal of the analysis was to demonstrate the 95th percentile queue can be contained within the provided storage without disrupting the flow of traffic at surrounding drive aisles in the Walmart parking lot. The distance per vehicle was assumed to be 20 feet, to account for the length of the passenger vehicle and spacing from the next queued vehicle. For the 95th percentile queue, the following stop-controlled egress movements were evaluated in the Opening Year Plus Project scenario:

- Northbound movements at Project Driveway 1 (Commercial Dwy 1 & Twentynine Palms Hwy (SR-62))
- Eastbound movements at Project Driveway 2 (Commercial Dwy 2 & Twentynine Palms Hwy (SR-62))

The results of the analysis are summarized below. Overall, 95th percentile queues at the project driveways will not back up into surrounding drive aisles. No impacts to circulation or to ingress / egress to surrounding properties are anticipated due to proposed conditions. See *Appendix D* for queueing analysis worksheets.

Project Driveway 1 (Commercial Dwy 1 & Twentynine Palms Hwy (SR-62)):

- Queue Storage – 65 feet (just over 3 passenger vehicles)
- Morning Peak Hour 95th Percentile Queue – 19 feet (just under 1 passenger vehicle)
- Evening Peak Hour 95th Percentile Queue – 38 feet (just under 2 passenger vehicles)

Project Driveway 2 (Commercial Dwy 2 & Twentynine Palms Hwy (SR-62)):

- Queue Storage – 140 feet (7 passenger vehicles)
- Morning Peak Hour 95th Percentile Queue – 52 feet (just under 3 passenger vehicles)
- Evening Peak Hour 95th Percentile Queue – 82 feet (just over 4 passenger vehicles)

VEHICLE MILES TRAVELED ANALYSIS

With the passage of Senate Bill (SB) 743 by the California Legislature in September 2013, VMT has become an important indicator for determining if a new development will result in a "significant transportation impact" as required by the California Environmental Quality Act (CEQA). Under SB 743, the state Office of Planning and Research (OPR) was charged with developing new guidelines for evaluating transportation impacts under CEQA in order to replace methods measuring automobile delay and Level of Service. In response to this mandate, the Office of Planning and Research proposed, and the California Natural Resources Agency adopted CEQA Guidelines Section 15064.3, which indicates that VMT exceeding an applicable threshold of significance is the most appropriate measure for evaluating a project's transportation impacts. Section 15064.3 goes on to clarify that except for projects regarding roadway capacity, "…a project's effect on automobile delay does not constitute a significant environmental impact." The OPR further elaborates on VMT metrics within the *Technical Advisory on Evaluating Transportation Impacts in CEQA* document, published in December 2018. Subsequently, the San Bernardino County, via the *San Bernardino County Transportation Impact Study Guidelines (July 2019)* has established VMT screening thresholds of significance for projects within the City.

The County's VMT guidelines provide details on appropriate screening thresholds that can be used to identify when a proposed land use project is anticipated to result in a less-than-significant impact without conducting a more detailed analysis. The County's screening criteria are as follows:

1. Projects which serve the local community and have the potential to reduce VMT
2. Projects generating less than 110 daily vehicle trips
3. Projects located within a Transit Priority Area (TPA)
4. Projects located within a low VMT generating area

Projects which serve the local community and have the potential to reduce VMT would be considered to have a less-than-significant impact. Since the project is a fuel station under 50,000 square feet, the project would screen out of VMT under qualifying local-serving criteria.

In accordance with the Technical Advisory and with San Bernardino County, it is appropriate that the proposed project be presumed to result in a less-than-significant VMT impact and support the goals of SB 743. Therefore, the Project screens out and no further VMT analysis is required.

The Town of Yucca Valley VMT Screening Justification is included as part of the Approved Traffic Consistency Analysis Memorandum in *Appendix A*.

SUMMARY OF FINDINGS AND CONCLUSIONS

- The project site is currently an existing Walmart parking lot and is bounded by drive aisles to the north and east and parking lot to the south and west.

- The project consists of the construction of a new fuel station with twelve fueling positions and a 1,556 square-foot convenience store within the northeast corner of the existing Walmart parking lot located at 58501 Twentynine Palms Highway.

- Vehicular access for the project site will be facilitated via two existing drive aisles. One driveway and one intersection along Twentynine Palms Highway allow direct access to the proposed project; the westernmost driveway is right-in, right-out only (RIRO), and the easternmost intersection is full-access.

- Morning and evening peak hour operating conditions were evaluated at the study intersections for the following study scenarios:
  - Existing Conditions
  - Opening Year 2026
  - Opening Year 2026 Plus Project

- Existing peak hour traffic counts were collected in December 2024.

- Under Existing Conditions, all study intersections currently operate at an acceptable LOS.

- Under Opening Year 2026 Conditions, all study intersections would continue to operate at an acceptable LOS.

- The project is estimated to generate approximately 826 trips daily, with 46 trips in the morning peak hour (23 inbound, 23 outbound) and 72 trips in the evening peak hour (36 inbound, 36 outbound).

- Under Opening Year 2026 Plus Project Conditions, all study intersections would continue to operate at an acceptable LOS.

- 95th percentile queues for the project driveways will not back up into surrounding drive aisles. No impacts to circulation or to ingress / egress to surrounding properties are anticipated due to proposed conditions.

- Based on the Level of Service standards and significant impact criteria, the project-related effect would not be considered significant; therefore, no improvements were identified.

- Per the County of San Bernardino's VMT guidelines, the proposed project meets the local-serving land use VMT screening criteria. Therefore, the Project screens out and no further VMT analysis is required.

APPENDIX A

APPROVED TRAFFIC CONSISTENCY
ANALYSIS MEMORANDUM

Kimley»Horn

MEMORANDUM

To: Alex Qishta, P.E.
Public Works Director, Town of Yucca Valley

From: Ryan Alvarez, P.E. (C95193)
Kimley-Horn and Associates, Inc.

Date: November 21, 2024

Subject: *Traffic Consistency Analysis Memorandum for the Proposed Walmart Fuel Station in the Town of Yucca Valley*

Kimley-Horn and Associates, Inc. is submitting this Traffic Consistency Analysis Memorandum to the Town of Yucca Valley regarding the revised traffic study scope and assumptions for the proposed Walmart Fuel Station project located in the Town of Yucca Valley. The proposed traffic scope and assumptions for the project are presented below. This memorandum also analyzes the proposed project's consistency with the development assumed in the Environmental Impact Report (EIR) for the Yucca Valley Retail Specific Plan (March 2008).

PROJECT DESCRIPTION

The applicant proposes to construct a new fuel station with twelve fueling positions and a 1,556 square-foot convenience store within the northeast corner of the existing Walmart parking lot located at 58501 Twentynine Palms Highway. The project, in its local setting, is shown on Figure 1. The project site plan is shown on Figure 2. The project is anticipated to open in 2025.

Proposed project ingress and egress will be facilitated via two existing drive aisles. One driveway and one intersection along Twentynine Palms Highway allow direct access to the proposed project; the westernmost driveway is right-in, right-out only (RIRO), and the easternmost intersection is full-access.

SCOPE OF STUDY

Project Trip Generation

Trip estimates for the proposed uses were calculated using the trip generation rates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, (11th Edition) for Gasoline/Service Station (ITE Land Use 944). Pass-by reduction factors were applied to applicable uses based on the ITE Trip Generation Handbook, (3rd Edition).

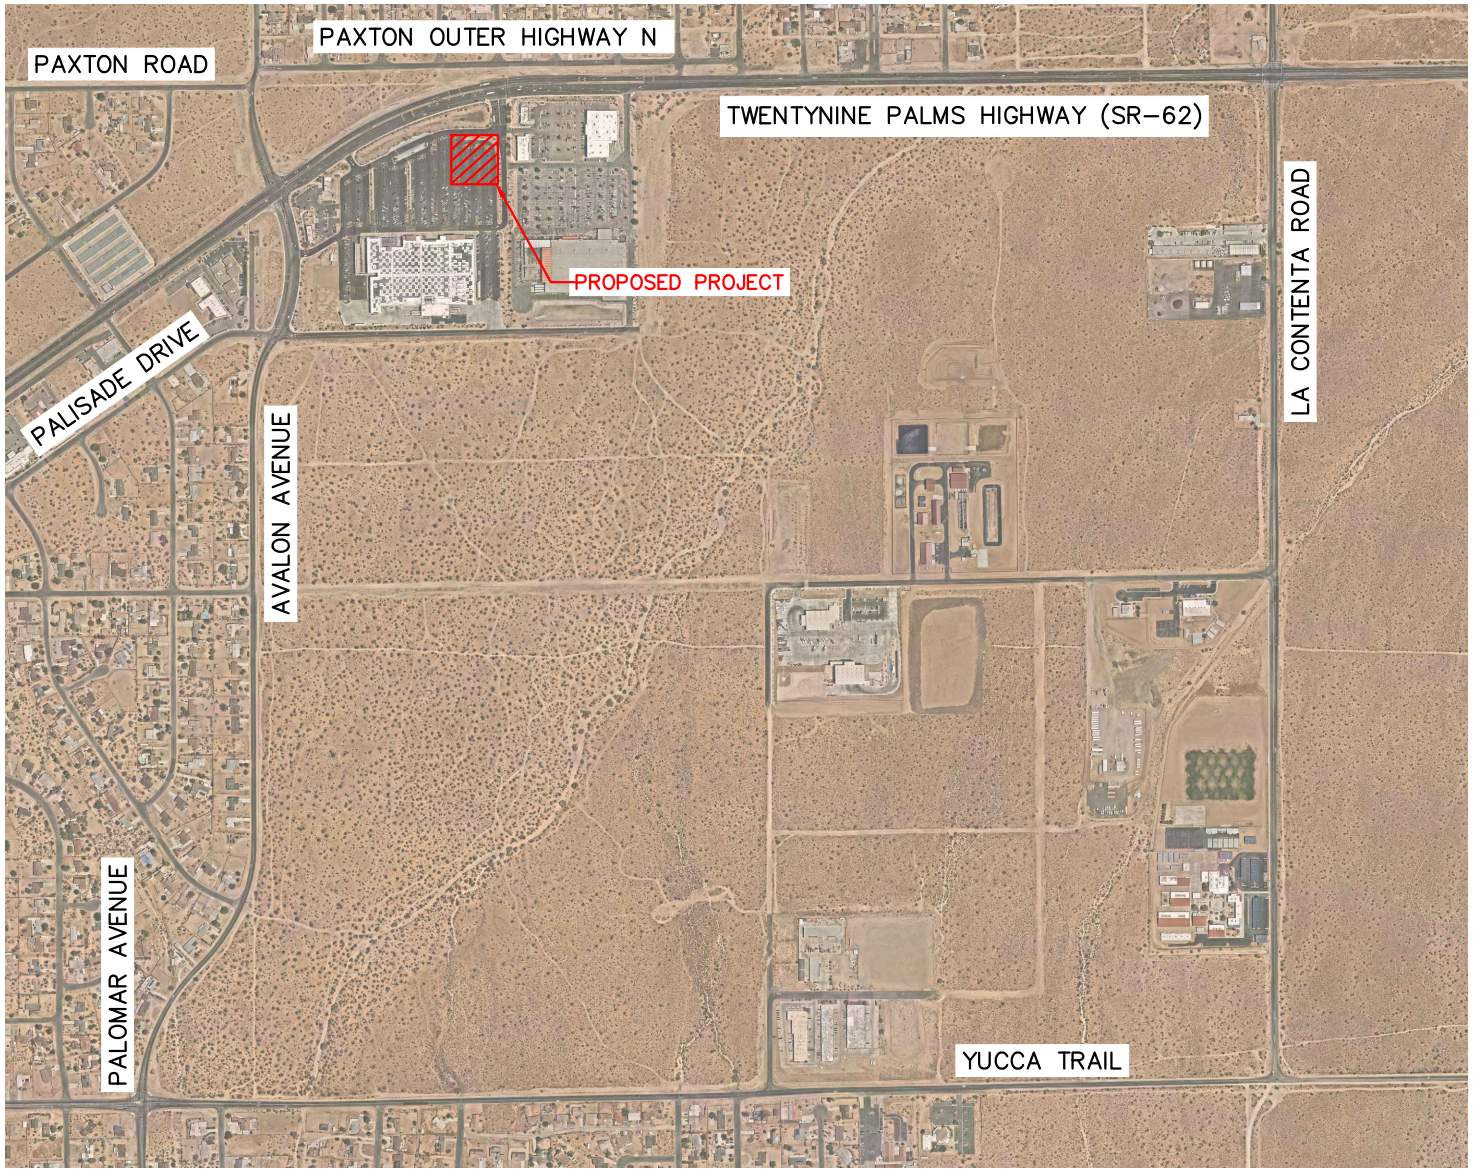

FIGURE 1
VICINITY MAP

FIGURE 2
SITE PLAN

Kimley»Horn

Trip generation rates and the resulting trip generation estimates for the existing and proposed uses are summarized on Table 1. The project is estimated to generate approximately 826 trips daily, with 46 trips in the morning peak hour (23 inbound, 23 outbound) and 72 trips in the evening peak hour (36 inbound, 36 outbound).

Project Trip Distribution

Project distribution assumptions were developed based on existing travel patterns, and the likely origins and destinations of the proposed project. Trip distribution assumptions are shown on Figure 3.

Study Area

The following study intersections are proposed, and are shown on Figure 3:

1. Avalon Avenue & Twentynine Palms Highway (SR-62)
2. Avalon Avenue & Palisade Drive
3. Twentynine Palms Highway (SR-62) & West Commercial Access Road
4. Twentynine Palms Highway (SR-62) & East Commercial Access Road
5. Twentynine Palms Highway (SR-62) & La Contenta Road
6. Palomar Avenue & Yucca Trail
7. Yucca Trail & La Contenta Road

D1. Twentynine Palms Highway (SR-62) & Commercial Driveway 1
D2. Twentynine Palms Highway (SR-62) & Commercial Driveway 2

Study Scenarios

- Existing Conditions
- Opening Year 2025
- Opening Year 2025 with Project

Opening Year 2025 base traffic, without the addition of the proposed project traffic, will be determined by growing existing volumes by 2% per year, and by adding traffic from cumulative projects in the town to the study intersections. A list of cumulative projects, and their associated traffic, will be provided by the Town.

TABLE 1
SUMMARY OF PROJECT TRIP GENERATION
YUCCA VALLEY WALMART FUEL STATION

Land Use	ITE Code	Unit	Trip Generation Rates [1]						
			Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Gasoline/Service Station	944	Fueling Position	172.01	5.14	5.14	10.28	6.955	6.955	13.91

Land Use	Quantity	Unit	Trip Generation Estimates						
			Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Gasoline/Service Station	12	Fueling Position	2,064	62	62	124	83	83	166
Pass-by Trips (60% Daily, 63% AM, 57% PM) [1,2]			*-1,238*	*-39*	*-39*	*-78*	*-47*	*-47*	*-94*
Net Trips			*826*	*23*	*23*	*46*	*36*	*36*	*72*
Total Project Trips			826	23	23	46	36	36	72

[2] Note: The Trip Generation Manual does not provide pass-by rates for daily trip generation. The daily pass-by trip percentage shown is the average of the AM and the PM pass-by trip percentages.

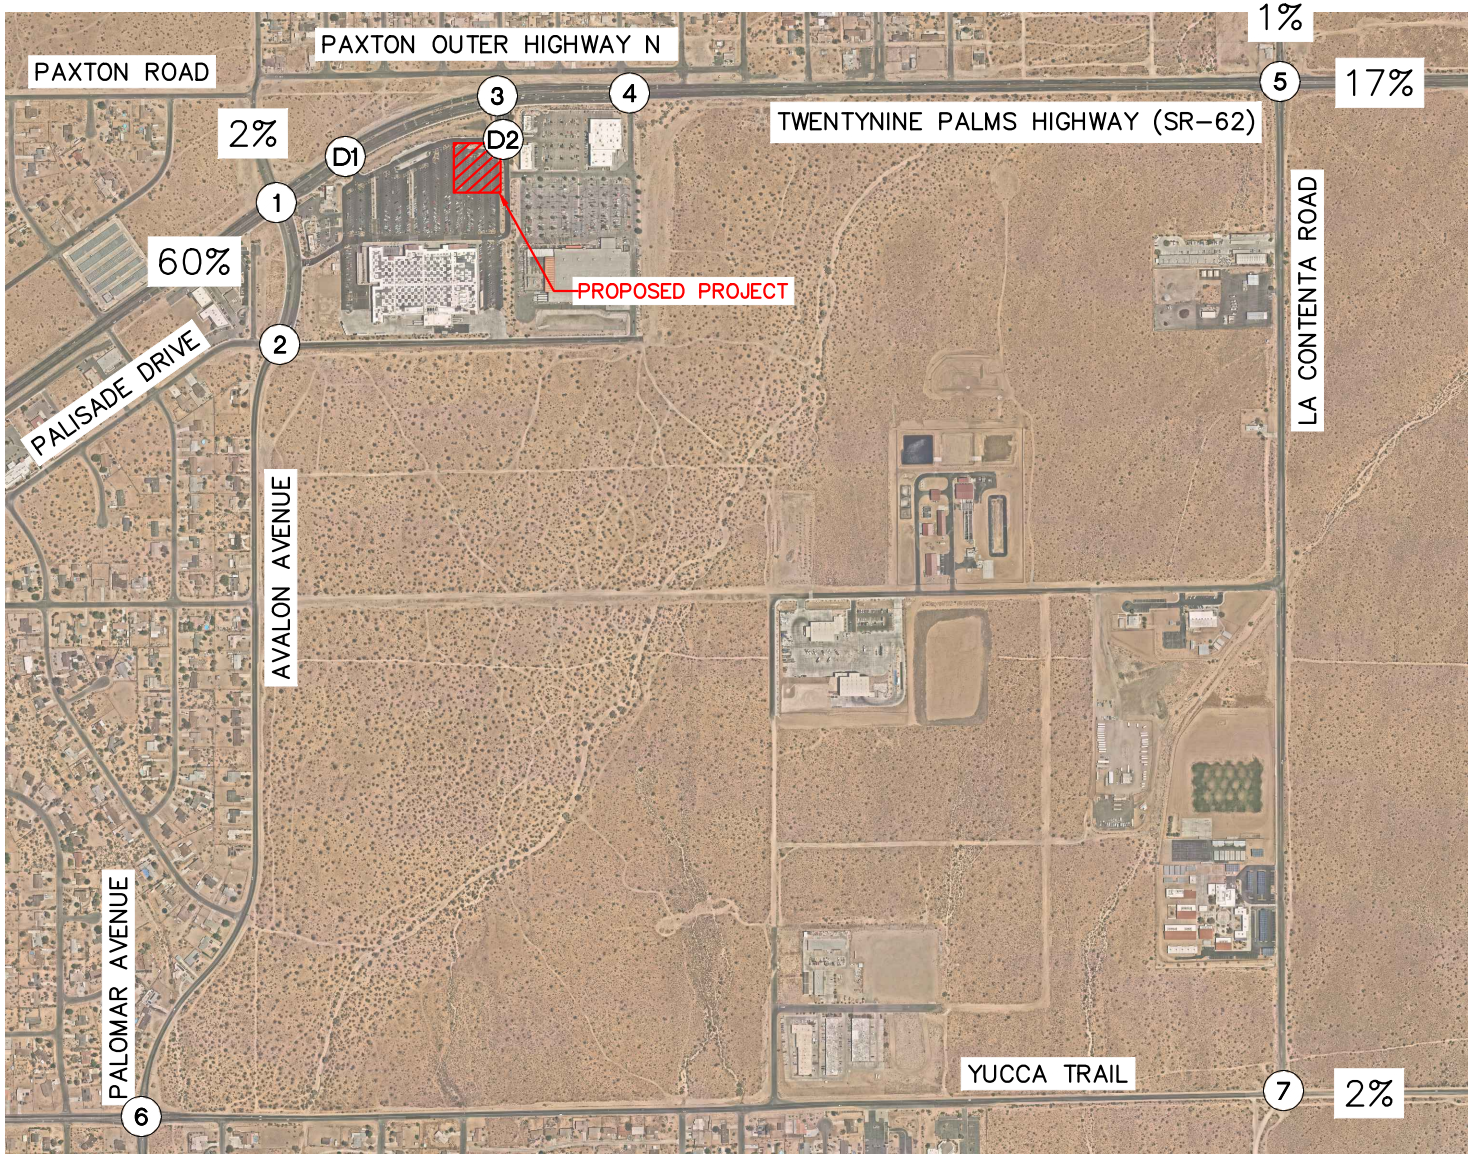

FIGURE 3
TRIP DISTRIBUTION ASSUMPTIONS

VEHICLE MILES TRAVELED (VMT) SCREENING

With the passage of Senate Bill (SB) 743 by the California Legislature in September 2013, VMT has become an important indicator for determining if a new development will result in a "significant transportation impact" as required by the California Environmental Quality Act (CEQA). Under SB 743, the state Office of Planning and Research (OPR) was charged with developing new guidelines for evaluating transportation impacts under CEQA in order to replace methods measuring automobile delay and Level of Service. In response to this mandate, the Office of Planning and Research proposed, and the California Natural Resources Agency adopted CEQA Guidelines Section 15064.3, which indicates that VMT exceeding an applicable threshold of significance is the most appropriate measure for evaluating a project's transportation impacts. Section 15064.3 goes on to clarify that except for projects regarding roadway capacity, "…a project's effect on automobile delay does not constitute a significant environmental impact." The OPR further elaborates on VMT metrics within the *Technical Advisory on Evaluating Transportation Impacts in CEQA* document, published in December 2018. Subsequently, the San Bernardino County, via the *San Bernardino County Transportation Impact Study Guidelines (July 2019)* has established VMT screening thresholds of significance for projects within the City.

The County's VMT guidelines provide details on appropriate screening thresholds that can be used to identify when a proposed land use project is anticipated to result in a less-than-significant impact without conducting a more detailed analysis. The County's screening criteria are as follows:

1. Projects which serve the local community and have the potential to reduce VMT
2. Projects generating less than 110 daily vehicle trips
3. Projects located within a Transit Priority Area (TPA)
4. Projects located within a low VMT generating area

Projects which serve the local community and have the potential to reduce VMT would be considered to have a less-than-significant impact. Since the project is a fuel station under 50,000 square feet, the project would screen out of VMT under qualifying local-serving criteria.

In accordance with the Technical Advisory and with San Bernardino County, it is appropriate that the proposed project be presumed to result in a less-than-significant VMT impact and support the goals of SB 743. No further VMT assessment is anticipated.

TRAFFIC CONSISTENCY WITH THE YUCCA VALLEY RETAIL SPECIFIC PLAN EIR

The project site is located within Yucca Valley Retail Specific Plan area in the Town of Yucca Valley. The Environmental Impact Report (EIR) for the Yucca Valley Retail Specific Plan was approved in March 2008. The approved EIR serves as an environmental review for commercial retail center development of approximately 25.51 acres in the Town of Yucca Valley. The retail center development consists of approximately 229,000 square feet of retail space composed of a major retail store, one fast-food restaurant with a drive-through, and a gas station with 12 fueling positions. The study area evaluates the following study intersections:

1. Inca Trail & Twentynine Palms Highway (SR-62)
2. Pioneertown Toad & Deer Trail & SR-62
3. Sage Avenue & SR-62 & Yucca Trail
4. Old Woman Springs Road (SR-247) & Aberdeen Drive
5. SR-247 & Buena Vista Drive
6. SR-247 & SR-62
7. Joshua Lane & Yucca Trail
8. Joshua Lane & Onaga Trail
9. Balsa Avenue & Hanford Avenue & SR-62
10. Avalon Avenue & SR-62
11. Avalon Avenue & Palisades Drive
12. Avalon Avenue & Palomar Avenue & Yucca Trail
13. Palomar Avenue & Joshua Lane
14. Yucca Mesa Road & La Contenta Road & SR-62
15. La Contenta Road & Yucca Trail
16. Sunny Vista Road & Yucca Trail
17. Sunny Vista Road & Alta Loma Drive
18. Park Boulevard & SR-62
19. Alta Loma Drive & Park Boulevard & Quail Springs Road

D1. Avalon Avenue & Driveway 1
D2. Driveway 2 & SR-62
D3. Driveway 3 & SR-62

The EIR analyzes an additional 14 intersections in comparison to the scoped study area for the proposed Walmart Fuel Station TIA. However, Intersection 4 (Twentynine Palms Highway (SR-62) & East Commercial Access Road) to be analyzed in the proposed Walmart Fuel Station TIA was not analyzed in the previous EIR.

The trip generation in the EIR is based on rates contained in the ITE *Trip Generation*, 7th Edition (2003) and pass-by percentages from the ITE *Trip Generation Handbook* (1998). An internal capture rate of 10% is applied to all land uses. Pass-by reduction factors of 56%, 17.2%, and 50% are applied to the fueling station, retail store, and fast-food restaurant w/drive-thru land uses in the EIR, respectively.

The revised scope for the proposed Walmart Fuel Station TIA lists pass-by percentages of 60% daily, 63% in the AM Peak, and 57% in the PM Peak. The EIR estimated the fueling station would generate approximately 776 trips daily, with 48 trips in the morning peak hour (24 inbound, 24 outbound), and 64 trips in the evening peak hour (32 inbound, 32 outbound). The net difference between the EIR trips versus the proposed trip generation is a net increase of 50 trips daily, 2 trips in the morning peak hour, and a net decrease of 8 trips in the evening peak hour.

In addition, the EIR calculated trip generation for the retail store with 229,000 square feet, while the existing Walmart Supercenter is 206,965 square feet. The EIR estimates 9,560 trips daily, with 143 trips in the morning peak hour (77 inbound, 66 outbound), and 863 trips in the evening peak hour (453 inbound, 411 outbound). The net difference between the EIR trips versus the existing trip generation is a net decrease of 2,373 trips daily, 263 trips in the evening peak hour, and a net increase of 193 trips in the evening peak hour.

The EIR also calculated trip generation for a 4,000 square-feet fast-food restaurant w/drive-thru. The existing two fast-food restaurants with drive-thru have a roughly combined area of 5,200 square feet. The EIE estimates 893 trips daily, with 96 trips in the morning peak hour (50 inbound, 46 outbound), and 62 trips in the evening peak hour (34 inbound, 29 outbound). The net difference between the EIR trips versus the existing trip generation is a net increase of 280 trips daily, 20 trips in the morning peak hour, and 15 trips in the evening peak hour.

The net difference in the trip generation between the EIR and the existing land uses plus the proposed gas station is a net increase of 1,229 trips daily, 260 trips in the morning peak hour, and a net decrease of 56 trips in the evening peak hour. The resulting trip generation estimates and comparisons are shown on Table 2.

The trip generation of the proposed project and existing uses plus the proposed project is not within the analyzed scope of the EIR, therefore, a LOS analysis is required for the Walmart Fuel Station.

TABLE 2
SUMMARY OF PROJECT TRIP GENERATION COMPARISON

[2] Source: Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition

[3] Note: The Trip Generation Manual does not provide pass-by rates for daily trip generation. The daily pass-by trip percentage shown is the average of the AM and the PM pass-by trip percentages.

FINDINGS AND CONCLUSIONS

Based on the project trip generation for the existing and proposed land uses in comparison with the Yucca Valley Retail Specific Plan EIR, a Level of Service (LOS) analysis is required for the proposed project. The proposed project would screen out of VMT based on the project qualifying as local serving to the community. As such, the proposed project would be presumed to have a less-than-significant impact. Therefore, no further VMT analysis is required for the proposed project.

MITIGATION MONITORING AND REPORTING PROGRAM

This Mitigation Monitoring and Reporting Program (MMRP) has been prepared for the Walmart Fuel Station Project (proposed project) pursuant to the requirements of California Environmental Quality Act Guidelines Section 15097, Mitigation Monitoring or Reporting. The purpose of this MMRP is to ensure the implementation of mitigation measures identified as part of the environmental review for the proposed project. The public agency may choose whether its program will monitor mitigation, report on mitigation, or both. This MMRP includes the following information:

- The full text of the mitigation measures.
- The party responsible for implementing the mitigation measures.
- The timing for implementation of the mitigation measures.
- The agency responsible for monitoring the implementation.

	Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
AESTHETICS				
4.1.1B	All exterior wall-mounted area lights on project buildings, the fast-food drive-through lane lights, and the fast-food restaurant parking lot lights shall be equipped with "cut-off' optics to mitigate spillover light and direct glare within the project boundary. Specifically, the Illumination Engineering Society (JES) definition for the cut-off fixture classification is as follows: Intensity at 80 degrees from nadir (0-degree-angle pointing directly downward from the lighting fixture) does not exceed 100 candela (cd) per 1,000 lamp lumens, nor at 90 degrees from nadir does the intensity exceed 25 cd per 1,000 lamp lumens.	Project Applicant in coordination with Construction Contractor	Prior to issuance of occupancy permits	Town of Yucca Valley; Town Planner, Building Official, or designee
4.1.1C	Prior to the issuance of grading permits, the applicant shall submit to the Town a photometric study (to include parking areas and access way lights, external security lights, and lighted signage), proving that the project light sources do not spill over to adjacent off-site properties.	Project Applicant	Prior to the issuance of grading permits	Town of Yucca Valley; Town Planner, Building Official, or designee
AIR QUALITY				
4.3.1A	Prior to issuance of grading permits, the construction contractor shall provide evidence showing that the following measures shall be implemented to reduce NOx and PM10 emissions from ground disturbance and VOC emissions from application of architectural coatings: ▪ The construction contractor shall select the construction equipment used on site based on low emission factors and high energy efficiency. The construction contractor shall ensure that construction grading plans include a statement that all construction equipment will be tuned and maintained in accordance with the manufacturer's specifications.	Project Applicant in coordination with Construction Contractor	Prior to issuance of grading permits; and during construction	Town of Yucca Valley; Building Official or designee

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
▪ The construction contractor shall demonstrate to the Town that construction activities shall make use of alternatively fueled equipment or catalyst-equipped diesel powered equipment to the extent such alternative fuels are available. ▪ The construction contractor shall ensure that construction grading plans include a statement that work crews will shut off equipment when not in use. ▪ The construction contractor shall time the construction activities so as not to interfere with peak hour traffic and to minimize obstruction of through traffic lanes adjacent to the site; if necessary, a flag person shall be retained to maintain safety adjacent to existing roadways. ▪ The construction contractor shall support and encourage ridesharing and transit incentives for the construction crew. ▪ The construction contractor shall demonstrate compliance with the fugitive dust suppression measures 403 a) through 403 e) contained in MDAQMD Rule 403. ▪ The construction contractor shall demonstrate compliance with the VOC suppression measures contained in MDAQMD 1113. ▪ The construction contractor shall apply non-toxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more). ▪ The construction contractor shall water active sites at least twice daily (Locations where grading is to occur shall be thoroughly watered prior to earthmoving).			

	Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
	▪ The construction contractor shall provide evidence to the Town that all trucks hauling dirt, sand, soil, or maintain at least two feet of freeboard (vertical space between the top of the load and top of the trailer) in accordance with the requirements of California Vehicle Code (CVC) section 23114. ▪ The construction contractor shall pave construction access roads at least 100 feet onto the site from the main road. ▪ The construction contractor shall promote the reduction of traffic speeds on all unpaved roads to 15 miles per hour (mph) or less.			
BIOLOGICAL RESOURCES				
4.4.1C	In accordance with the MBTA, the removal of vegetation or other potential nesting habitat shall be conducted outside of the avian nesting season (February through August). If construction occurs during the avian nesting season, a pre-construction nesting bird survey shall be conducted seven days prior to any ground disturbing activities. If birds are found to be nesting inside, or within 250 feet (500 feet for raptors) of the impact area, construction will need to be postponed until it is determined by a qualified biologist that the nest is no longer active.	Project Applicant in coordination with Project Biologist and Construction Contractor	Prior to and during construction	Town of Yucca Valley; Town Planner or designee
4.4.2A	Exclude the Mexican Palo Verde tree (*Parkinsonia aculeate*) from the plant palette proposed in the landscaping plan.	Project Applicant	Prior to approval of landscaping plans	Town of Yucca Valley; Town Planner, Building Official, or designee
CULTURAL RESOURCES				
4.5.1A	In the event a historical resource is uncovered, discovered, or otherwise detected or observed during the course of grading or construction of the project, ground-disturbing activities	Project Applicant in coordination with	During grading and construction	Town of Yucca Valley; Community Development Director,

	Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
	within 50 feet of the find shall cease until the nature and extent of the find can be evaluated by a qualified historian (meeting Secretary of Interior Standards). ff any such resource is uncovered during the course of project-related grading or construction, appropriate mitigation measures, recordation, and removal procedures shall be required prior to any resumption of work in the affected area of the project.	Construction Contractor		Building Official or designee
4.5.2A	Prior to grading activities, an archeological resource monitoring plan shall be submitted for review and approved by the Town. The archeological resource monitoring plan shall require monitoring of the upper ten (10) feet of topsoil. If after 100 percent of soils to five (5) feet below original grade has been monitored and no archaeological resources have been identified, the Project Archaeologist may discontinue monitoring. In the event an archaeological resource is uncovered, discovered, or otherwise detected or observed during the course of grading or construction of the project, ground-disturbing activities within 50 feet of the find shall cease until the nature and extent of the find can be evaluated by a qualified archaeologist (meeting Secretary of Interior Standards). If any such resource uncovered during the course of project related grading or construction, appropriate mitigation measures, recordation, and removal procedures shall be required prior to any resumption of work in the affected area of the project.	Project Applicant in coordination with Project Archeologist and Construction Contractor	Prior to grading; and during construction	Town of Yucca Valley; Community Development Director, Building Official or designee
4.5.2B	Prior to the start of construction, one tribal monitor from the Consulting Tribe (either Yuhaaviatam of San Manuel Nation, Morongo Band of Mission Indians, Agua Caliente Band of Cahuilla Indians, or Twenty-nine Nine Palms Band of Mission Indians) shall be hired by the project applicant to provide	Project Applicant in coordination with Tribal Monitors	Prior to and during ground-disturbing activities	Town of Yucca Valley; Community Development Director,

	Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
	monitoring during ground disturbing construction activities, and if needed, consult on the discovery and its disposition.			Building Official or designee
GEOLOGY AND SOILS				
4.5.3A	Prior to grading activities, a paleontological resource monitoring plan shall be submitted for review and approved by the Town. The paleontological resource monitoring plan shall require monitoring of the upper ten (10) feet of topsoil. If after 100 percent of soils to five (5) feet below original grade has been monitored and no paleontological resources have been identified, the Project Paleontologist may discontinue monitoring. In the event that a paleontological resource is uncovered, discovered, or otherwise detected or observed during the course of grading or construction of the project, ground-disturbing activities within 50 feet of the find shall cease until the nature and extent of the find can be evaluated by a qualified paleontologist (meeting Secretary of Interior Standards). If any such resource uncovered during the course of project-related grading or construction, appropriate mitigation measures, recordation, and removal procedures shall be required prior to any resumption of work in the affected area of the project.	Project Applicant in coordination with a Qualified Paleontologist and Construction Contractor	Prior to grading activities; and during ground-disturbing activities	Town of Yucca Valley; Community Development Director, Building Official or designee
4.6.1A	The design and construction of the proposed on-site uses shall adhere to the recommendations identified in the geotechnical investigation prepared for the proposed project; and/or other design requirements established by the Town. The geotechnical investigation prepared for this project identifies the potential for some degree of structural damage during seismic shaking, but the risk can be reduced through recommendations contained in the geotechnical investigation. These design and construction measures, from	Project Applicant in coordination with the Construction Contractor	Prior to Town approval of grading and building plans; and during construction	Town of Yucca Valley; Town Engineer or designee

Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
the geotechnical investigation, shall include but are not limited to the following~~}~~): ▪ The proposed structures may be supported on shallow spread footing foundations bearing on engineered fill, or on drilled shafts. Engineered fill should extend to a minimum depth of 1 feet below the bottom of foundations, or the depth of undocumented fill, or 3 feet below existing grades, whichever is greater. ▪ The excavation should be widened laterally at least 8 inches for each 12 inches of fill placed below footing base elevations. ▪ Grading for the proposed station should incorporate the limits of the overexcavation plus a lateral distance of 1 feet beyond the outside edge of perimeter footings, where possible. Overexcavation and replacement is not required for support of drilled shaft foundations. ▪ It is recommend that the underground storage tanks be over-excavated by about 2 feet in plan area to provide adequate access around the excavation for underground storage tanks construction. The walls of the proposed excavation should be shored or sloped in conformance with OSHA excavation and trench safety standards. If any excavation is extended to a depth of more than 20 feet, it will be necessary to have the side slopes designed by a professional engineer. ▪ Onsite soils consist of cohesionless sandy soils. Therefore, OSHA Soil Type C should be utilized for sloping considerations and on-site soils shall be sloped at a minimum of 1.5H:1V.			

	Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
	▪ In areas where sidewalks or paving do not immediately adjoin the structure, it is recommend that protective slopes be provided with a minimum grade of approximately 5 percent for at least 10 feet from perimeter walls. ▪ To reduce the potential for damage caused by movement, we recommend: o minimizing moisture increases in the backfill o controlling moisture-density during placement of backfill; o using designs which allow vertical movement between the exterior features and adjoining structural elements; o placing effective control joints on relatively close centers.			
NOISE				
4.11.1A	Construction activities are restricted within the Town to the hours of 7:00 a.m. to 10:00 p.m. Monday through Saturday. The following measures would reduce short-term construction-related noise impacts resulting from the proposed project: ▪ During all project site excavation and grading on-site, the project contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards. ▪ The project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the project site.	Project Applicant in coordination with the Construction Contractor	During construction activities	Town of Yucca Valley; Building Official or designee

	Mitigation Measures	Party Responsible for Implementation	Implementation Timing	Agency Responsible for Monitoring
	▪ The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction related noise sources and noise-sensitive receptors nearest the project site during all project construction.			
PUBLIC SERVICES				
4.13.1A	Prior to the issuance of occupancy permits, the project applicant shall make payment of fair share contribution fees (as Occupancy Permits determined by the Fire Chief) to a Town-wide public services assessment process district.	Project Applicant	Prior to the issuance of occupancy permits	Fire Chief or designee
4.13.1B	Prior to the issuance of grading permits, the project applicant shall submit for review and approval by the Fire Chief, a site plan design which includes looped water service which provides adequate fire flow (as determined by the Fire Chief).	Project Applicant	Prior to the issuance of grading permits	Fire Chief or designee
4.13.2A	Prior to the issuance of occupancy permits, the project applicant shall make payment of fair share contribution fees to a City-wide public services assessment district.	Town of Yucca Valley; Building Official or designee	Prior to the issuance of occupancy permits	Town of Yucca Valley; Building Official or designee
TRANSPORTATION AND TRAFFIC				
4.13.3A	Prior to issuance of grading permits, the project applicant shall submit and receive Town approval of detailed grading and landscaping plans to ensure that grading elevation, height of landscaping, vegetation, fencing, monumentation, signage, and other visual obstructions along the project site frontage do not obstruct the minimum sight distance requirement of 942 feet westerly from the proposed signalized driveway on SR-62. This area falls primarily within the proposed detention basin between the proposed signalized driveway and the proposed right in/out only driveway on SR-62.	Project Applicant in coordination with the Construction Contractor	Prior to issuance of grading permits	Town of Yucca Valley; Town Planner, Building Official, or designee

SUBJECT: Filing of Notice of Determination in compliance with Section 21108 or 21152 of the Public Resources Code.

State Clearinghouse Number (if submitted to State Clearinghouse): 2004071127

Project Title: Walmart Fuel Station Project EIR Addendum

Project Applicant: Town of Yucca Valley

Project Location (include county): 58501 Twentynine Palms Highway (SR62), San Bernardino County

Project Description:

The proposed project is a new fuel station in the existing Walmart Supercenter parking lot that would include six fuel dispensers beneath a canopy, a 1,556-square-foot convenience store (which would include alcohol sales and an air station for vehicle tire inflation), three underground storage tanks, a new drive aisles for internal circulation, new landscaped areas within the parking lot and a new pedestrian walkway that would connect the project site to the existing bus stop.

This is to advise that the Town of Yucca Valley (☒ Lead Agency or ☐ Responsible Agency) has approved the above described project on April 14, 2026 (date) and has made the following determinations regarding the above described project.

1. The project [☐ will ☒ will not] have a significant effect on the environment.
2. ☒ An Environmental Impact Report was prepared for this project pursuant to the provisions of CEQA.
   ☐ A Negative Declaration was prepared for this project pursuant to the provisions of CEQA.
3. Mitigation measures [☒ were ☐ were not] made a condition of the approval of the project.
4. A mitigation reporting or monitoring plan [☒ was ☐ was not] adopted for this project.
5. A statement of Overriding Considerations [☐ was ☒ was not] adopted for this project.
6. Findings [☐ were ☒ were not] made pursuant to the provisions of CEQA.

This is to certify that the final EIR with comments and responses and record of project approval, or the negative Declaration, is available to the General Public at:
Community Development Department, 58928 Business Center Drive, Yucca Valley, CA 92284

Signature (Public Agency): _____ Title: Deputy Town Manager

Project Title: Yucca Valley Retail Specific Plan

Project Location (include county): Yucca Valley, San Bernardino County

Project Description: The proposed project is a Specific Plan to authorize development of a commercial retail center that includes an approximately 184,146 square foot Wal-Mart Supercenter, a 3,500 square foot retail building, and a 4,000 square foot fast-food restaurant with drive-through on a 28 acre site.

This is to advise that the Town of Yucca Valley (☒ Lead Agency or ☐ Responsible Agency) has approved the above described project on June 25, 2008 (Date) and has made the following determinations regarding the above described project:

1. The project [☒ will ☐ will not] have a significant effect on the environment.
2. ☒ An Environmental Impact Report was prepared for this project pursuant to the provisions of CEQA.
   ☐ A Negative Declaration was prepared for this project pursuant to the provisions of CEQA.
3. Mitigation measures [☒ were ☐ were not] made a condition of the approval of the project.
4. A mitigation reporting or monitoring plan [☒ was ☐ was not] adopted for this project.
5. A statement of Overriding Considerations [☒ was ☐ was not] adopted for this project.
6. Findings [☒ were ☐ were not] made pursuant to the provisions of CEQA.

DATE FILED & POSTED

This is to certify that the final EIR with comments and responses and record of project approval, or the Negative Declaration, is available to the General Public at: The Town of Yucca Valley Community Development Department, Town Hall, San Bernardino County Library Yucca Valley Branch, and the Town of Yucca Valley website.

RESOLUTION NO. 26-XX

A RESOLUTION OF THE TOWN COUNCIL OF THE TOWN OF YUCCA VALLEY, CALIFORNIA, APPROVING THE ADDENDUM TO THE PREVIOUSLY ADOPTED YUCCA VALLEY RETAIL SPECIFIC PLAN ENVIRONMENTAL IMPACT REPORT AND APPROVING SPECIFIC PLAN AMENDMENT #2 FOR THE YUCCA VALLEY RETAIL SPECIFIC PLAN

WHEREAS, the Environmental Impact Report ("EIR") for the Project was circulated for public review on July 28, 2010, through August 16, 2010; and

WHEREAS, on June 25, 2008, the Town of Yucca Valley ("Town") Town Council ("Council") adopted the Yucca Valley Retail Specific Plan EIR, and approved the Project; and

WHEREAS, the Notice of Determination for the Project was filed with the San Bernardino County Clerk on June 30, 2008; and

WHEREAS, the project includes Amendment #2 to the Specific Plan, allowing a fueling station as a permitted land use and amending the Sign Program to allow for signage on the fuel station and convenience store, and also the construction and operation of a new fuel station with six fueling pumps (12 dispensers), an overhead canopy, underground fuel storage, a trash enclosure, and a 1,556 square-foot convenience store; and

WHEREAS, Placeworks, prepared an addendum to the EIR ("Addendum"), attached hereto as Exhibit A and incorporated herein, to analyze the changes to that Project and the potential environmental impacts thereof; and

WHEREAS, the Town Council conducted a duly noticed meeting on _____ 2026, to consider the Addendum and information and testimony from Town staff and the public on the Addendum.

NOW, THEREFORE, BE IT RESOLVED AND HEREBY ORDERED BY THE TOWN COUNCIL OF THE TOWN OF YUCCA VALLEY, CALIFORNIA AS FOLLOWS:

SECTION 1. That the above recitals are true and correct and are incorporated herein.

SECTION 2. That the Addendum, together with the original EIR, contains a complete and accurate reporting of the environmental impacts associated with the Project and that the Addendum has been completed in full compliance with CEOA and the State CEQA Guidelines.

SECTION 3. That based on the substantial evidence set forth in the record, including but not limited to the Addendum, the Town Council finds that an addendum to the EIR is the appropriate document for disclosing the minor changes and additions to the Project associated with adding the Project and assessing the potential environmental impacts thereof and that none of the conditions under State CEQA Guidelines section 15162 requiring the need for further supplemental or subsequent environmental review have occurred based upon the following:

(1) Substantial changes are not proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

Facts: As is fully detailed in the Addendum, changes to the Yucca Valley Retail Specific Plan and regulatory conditions, would fulfill none of the conditions outlined in CEQA Guidelines Sections 15162(a)(l) as these changes would not involve or result in new significant environmental effects or a substantial increase in the severity of previously identified significant effects requiring major revisions to the Adopted EIR.

(2) Substantial changes will not occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects.

Facts: There are no substantial changes to the environmental setting for the Project or other circumstances surrounding the Project since the Project EIR for the project was adopted and no new or more severe impacts were identified to result from the Yucca Valley Retail Specific Plan Project.

(3) No new information of substantial importance has come to light, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, showing any of the following:

(A) The project will have one or more significant effects not discussed in the previous EIR;

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Facts: No new information regarding the Project has been brought to the Town's attention.

SECTION 4. The Addendum to the Yucca Valley Retail Specific Plan EIR reflects the Town Council's independent judgment and analysis regarding the potential environmental effects of the Project and is hereby approved and adopted. The Council directs staff to prepare, execute, and file a CEQA Notice of Determination with the San Bernardino County Clerk's Office.

APPROVED AND ADOPTED by the Town Council and signed by the Mayor and attested by the Town Clerk this _____ day of Month, 2026.

ORDINANCE NO. XX-XX

AN ORDINANCE OF THE TOWN COUNCIL OF THE TOWN OF YUCCA VALLEY, CALIFORNIA, ADOPTING SPECIFIC PLAN 01-04, AMENDMENT #2, TO THE YUCCA VALLEY RETAIL CENTER SPECIFIC PLAN

WHEREAS, on June 25, 2008, the Town of Yucca Valley ("Town") Town Council ("Council") adopted the Yucca Valley Retail Specific Plan EIR, and approved the Project; and

WHEREAS, the project includes Amendment #2 to the Specific Plan, allowing a fueling station as a permitted land use and amending the Sign Program to allow for signage on the fuel station and convenience store, and also the construction and operation of a new fuel station with six fueling pumps (12 dispensers), an overhead canopy, underground fuel storage, a trash enclosure, and a 1,556 square-foot convenience store.

The Town Council of the Town of Yucca Valley, California, does ordain as follows:

SECTION 1: The Town of Yucca Valley adopts Specific Plan Amendment #2, on the subject property, identified as assessor's parcel numbers 0601-201-54.

SECTION 2: PUBLIC HEARINGS. Required public hearings were held before the Town of Yucca Valley Planning Commission and Town Council of the Town of Yucca Valley, California pursuant to the Planning and Zoning Law of the State of California and the Yucca Valley Development Code.

SECTION 3: NOTICE OF ADOPTION. Within fifteen (15) days after the adoption hereof, the Town Clerk shall certify to the adoption of this Ordinance and cause it to be published once in a newspaper of general circulation printed and published in the County and circulated in the Town pursuant to Section 36933 of the Government Code.

SECTION 4: EFFECTIVE DATE. This Ordinance shall become effective thirty (30) days from and after the date of its adoption.

APPROVED AND ADOPTED by the Town Council and signed by the Mayor and attested by the Town Clerk this _____ day of May, 2026.

SECTION 5: PUBLICATION

The Town Clerk is authorized and directed to cause this Ordinance to be published within fifteen (15) days after its passage in a newspaper of general circulation and circulated within the Town in accordance with Government Code Section 36933(a) or, to cause this Ordinance to be published in the manner required by law using the alternative summary and posting procedure authorized under Government Code Section 39633(c).

SECTION 6. CERTIFICATION

The foregoing Ordinance was approved and adopted at a meeting of the Town Council held on the _____ day of May, 2026, by the following vote:

Town of Yucca Valley
Planning Commission Staff Report

To: Planning Commission

From: Evan Willoughby, Assistant Planner

Date: April 6, 2026

Meeting Date: April 14, 2026

Subject: Development Code Interpretation (DCI 02-26) — A request to waive Official Zoning Map requirement for Specific Plan at an 37.58 acre property located at the SW Corner of Joshua Lane and Warren Vista, also identified as APN: 0585-062-33

Recommendation:
That the Planning Commission finds that the request is consistent with the objectives and policies of the Town of Yucca Valley General Plan and Development Code, and interprets that the Specific Plan requirement for APN: 0585-062-33 does not apply until such time that a project requiring discretionary entitlement is filed for the property, allowing by-right development to proceed as allowed by the underlying zoning district.

Prior Review:
There has been no prior review of this matter.

Discussion:
On February 20, 2026, staff received the attached request for a waiver of specific plan requirements for APN: 0585-062-33, a 37.58 acre property located at the southwest corner of Joshua Lane and Warren Vista. This request was preceded by communication with staff at the front counter regarding the siting of future sewer infrastructure and future development of a single-family home and ADU. To address the Specific Plan Overlay requirements on the Town's Official Zoning Map, staff requested the owner send a written request for a waiver of that requirement that staff can bring to the Planning Commission for review.

The General Plan provides overall guidance and a comprehensive vision for the physical development of the entire Town. Specific Plans are typically used for large-scale projects that require a comprehensive approach to planning and infrastructure issues or areas that warrant customized regulatory guidance that is not present in the Town's Development Code.

Specific plans address site-specific concerns and provide guidance for the design, use, and development of that site. Specific plans are typically implemented as customized zoning for a focused geographic area of the Town and can be initiated by the Town or a project applicant.

The Town has three (3) adopted Specific Plans, the Old Town Specific Plan, the Home Depot Retail Specific Plan, and the Yucca Valley Retail (Walmart) Specific Plan. Other areas that have been designated with Specific Plan (SP) requirements on the Town's Official Zoning Map were designated as such by the Town Council to ensure larger, complex proposals in those areas were planned comprehensively.

Single-family, by-right, infill construction on an existing lot of record, including accessory structures as allowed by Code, does not warrant preparation of a Specific Plan in of itself. While the preparation of a Specific Plan may not be necessary in this case, it is still the case that larger, complex projects should be planned comprehensively through a Specific Plan as identified by the Town's Official Zoning Map, and therefore, staff recommends that the Planning Commission interprets that the Specific Plan requirement for APN: 0585-062-33 does not apply until such time that a project requiring discretionary entitlement is filed for the property, allowing by-right development to proceed as allowed by the underlying zoning district.

City of Yucca Valley Building Planning Commission
58928 Business Center Drive Yucca Valley, CA 92284

*Subject: Request for **Waiver of Specific Plan Requirement** – Underwood Residence – APN 585062330000*

Dear Esteemed Members of the Building Planning Commission,

This letter is a formal request for a **waiver of the specific plan requirement** as outlined in the City of Yucca Valley's planning regulations GIS Map designation "SP" for our proposed project, Underwood Residence, located at the corner of Joshua Lane and Warren Vista Avenue APN 585062330000.

We believe that requiring a specific plan for this project is unnecessary and disproportionate to its nature and scope. Our proposed project involves the construction of a single-family dwelling and possibly an ADU to accommodate our aging parents.

The primary reasons we respectfully request this waiver are as follows:

1. **Limited Scope and Impact:** The project's footprint is minimal and confined to a small portion of this large parcel. It will align harmoniously with the existing neighborhood character and zoning, it will not generate significant traffic, noise, or demand on public services. We will diligently design this project with the intent of avoiding any Joshua Trees on the property.

2. **Existing Zoning and General Plan Consistency:** The proposed use is fully consistent with the underlying zoning designation of **R-M-4-SP** and the City's General Plan land use designation for this area; it will meet all objective design standards and development criteria already established for this zone. A specific plan would be redundant and unnecessary.

3. **Unnecessary Burden and Cost:** Developing a comprehensive specific plan for a project of this scale would impose a significant and unnecessary financial and time burden. This costly and lengthy process would add undue expense to an otherwise straightforward build. The additional studies and documentation required for a specific plan are not warranted given the project's simplicity. We believe these resources could be better allocated to the project's direct development costs.

4. **No Unique Planning Challenges:** The project does not introduce innovative land uses, complex design elements, or propose significant infrastructure changes that would necessitate a specialized planning document.

We are committed to developing a project that adheres to all applicable City ordinances and enhances the Yucca Valley community. We firmly believe that the goals and objectives typically addressed by a specific plan can be adequately achieved and reviewed through the standard planning application and review processes, including site plan review and environmental assessment.

We are prepared to provide any additional information or attend any meetings the Commission deems necessary to discuss this request further. Thank you for your time and consideration of this waiver. We look forward to your favorable response.

Sincerely,

Martin Underwood

remain RM 8; the 140 acres of RS2 be changed to 2.5 SP and the northern portion remain RL10. Requested the entire Amendment #2 be Specific Planned.

Chair Szymanski would go RM8 and RL2.5 to be Specific Plan. Commissioner Thompson amended motion (RM3 and RL2.5 only be Specific Planned). Chair Szymanski seconded. Motion carried on a 5-0 voice vote.

AMENDMENT #3 (The North 1/2 of the SE 1/4 of Section 12 T1S R5E)

Chair Szymanski was feeling more comfortable with the commercial designation than the RS4. Had taken out general commercial on Skyline Ranch Road the southwest corner (OWSR). Was thinking that intersection of Old Woman Springs Road and Highway 62 have a commercial designation. Was open to put in commercial and see what reaction would be for the Town Council. Was concerned with RS4.

Commissioner Sachs was not clear on what was decided. Talked about 37 acres being RM4. Commissioner Huntington commented the request was amended with the 1/2 of Section 3 went back to RL2.5 for the southern part. 37 acres was correct, the request was for RM4 with the CS on the 2 acres to the east.

Joe Yott asked to identify sections. Chair Szymanski commented the section the Commission is talking about now is Section 12, in the southeast portion. Stueckle interjected the north half of the southeast corner of Section 12.

Commissioner Thompson had heard vocal persons outside of meetings that do not want commercial in that area. Believed that area will eventually enjoy a small commercial area, not a 7-11 store especially. In a planning perspective she is for that, not sure the Council is for it. Commissioner Huntington had on 37 acres RM4 SP, that is 148 units. Chair Szymanski would be willing to try a commercial.

Commissioner Malin commented commercial makes since because there is institutional projects there already with the church and Moyles. If have multi residential there, the commercial will fit in with the multi use type of zoning. As a planning tool it works in this area. Commissioner Sachs would be in favor of leaving commercial in.

Commissioner Sachs was for RM4 SP and commercial. Commissioner Thompson clarified RM4 for 37 acres.

Commissioner Huntington moved to recommend the northern portion of the southeast corner of Section 12 be designated RM4 SP with the 2 acres on the east be designated CS that also with SP designation. Commissioner Malin seconded. Motion carried on a 4-1 voice vote. Chair Szymanski opposed.

have the ability to adopt the General Plan as written. The Commission has the ability to restate their requests.

Commissioner Thompson had a question on Mr. Thacher's comments. Asked Mr Thacher he was talking about something was inaccurate on the chart. Thacher was addressing Section 33. On the April 27 GPAC, they walked away with 1 to the acre for the north 1/2 of the section (i.e. from the center section line up to the top of the ridge) then it was 2 to the acre coming down the rest of the way to basically Camino Del Cielo, then the higher density adjacent to the golf course. The map still shows the high density next to the golf course, but there is a strip in there that is not high density, a buffer between the golf course and this high density. That high density should come down to the golf course. That is part of the object of having a condominium situation contiguous to a golf course. There is an area the map shows as a white triangle in opposition to the colors of the high density and the golf course. At one time it is was 1 to 5 acres for the north half. Never has the south half been less than two to the acre. Never has the high density down by the golf course change.

Commission Thompson clarified so the one third plus/minus that should be at least RS2. Thacher responded yes, RS2 two to the acre not one to every two acres. Where the high density misses the golf course would like to see corrected. It does not make sense to have a golf course a low density buffer and then high density where logically someday condominiums will go, that should extend down to the golf course.

Vice Chair Sachs asked to clarify Section 12. Thacher asked the Commission to state their position as agreeing with his recommendation that the 40 acre corner of Warren Vista and Joshua Lane, the southwest corner, be given a designation of multiple units 4 to the acre. The object there is to put in a retirement village. Thought the Town Council wanted the Planning Commission's input and thoughts.

Town Council indicated they would like to adopt the General Plan with the preferred alternative land use map that is included as part of that General Plan, which is around the 48,000 figure. Then to include the alternative language for Section 13, Section 15, Section 5 and Section 33. Have been able to accommodate Section 5 of the Miller's property so that is a non issue. Then, Section 12 was requested to again include the land uses stated in the preferred alternative and not employ the alternative language.

Commissioner Huntington thought because it was a split vote on the Commission's decision on this they cannot reaffirm their decisions of last Planning Commission meeting at this meeting without further study and being a 5 member panel with only 4 members present. They are an appointed advisory committee and they are responsible to Council. It is also their responsibility if they feel strongly enough about an issue to voice that issue. Would recommend to move on to the letters and settle that issue.

Town of Yucca Valley
