TOWN OF YUCCA VALLEY
PLANNING COMMISSION MEETING

The Mission of the Town of Yucca Valley is to provide a government that is responsive to its citizens to ensure a safe and secure environment while maintaining the highest quality of life.

PLANNING COMMISSION: 6:00 PM
TUESDAY, APRIL 14, 2026
Yucca Valley Community Center - Yucca Room
57090 Twentynine Palms Highway
Yucca Valley, CA 92284
and
JW Marriott Washington, DC - Main Lobby Lounge Area
1331 Pennsylvania Avenue NW,
Washington, DC, USA 20004

https://zoom.us/j/92089627579?pwd=qaQkUOe5oWXK1qNtm0HTjoBbhBJEe2.1
Meeting ID: 920 8962 7579 Passcode: 479987

Use the above link to virtually access the meeting. You will automatically be muted upon entry. During the meeting, participants will be prompted to "raise hand" or inform the meeting moderator when wishing to make a public comment. Comment time is limited to 3 minutes or as instructed by the Mayor/Chair. If any technical difficulties occur resulting in lack of connectivity or virtual streaming, the in-person meeting will continue to proceed.

AGENDA
MEETING OF THE PLANNING COMMISSION
TUESDAY, APRIL 14, 2026, 6:00 PM

The Town of Yucca Valley complies with the Americans with Disabilities Act of 1990. If you require special assistance to attend or participate in this meeting, please call the Town Clerk's Office at (760) 369-7209 at least 48 hours prior to the meeting

The meeting agenda packet is available for public view in the Town Hall lobby and on the Town's website at www.yucca-valley.org prior to the meeting. For more information on an agenda item or the agenda process, please contact the Town Clerk's office at (760) 369-7209 ext. 226.

If you wish to comment on any agenda item or on any subject not on the agenda during public comments, please fill out a request to speak card and give to the Town Clerk/Commission Secretary. Comment time is limited to 3 minutes.

Where appropriate or deemed necessary, action may be taken on any item listed in the agenda.

OPENING CEREMONIES:

Call to Order

Roll Call

James Henderson, Gerard Noonan, J Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

Pledge of Allegiance

Approval of Agenda

1. Approve the meeting agenda for April 14, 2026, as prepared.

   Recommendation:
   Approve the meeting agenda for April 14, 2026, as prepared.

Consent Agenda

All items listed on the consent calendar are considered to be routine matters or are considered formal documents covering previous Planning Commission instruction. The items listed on the consent calendar may be enacted by one motion and a second. There will be no separate discussion of the consent calendar items unless a member of the Planning Commission or Town Staff requests discussion on specific consent calendar items at the beginning of the meeting. Public requests to comment on consent calendar items should be filed with the Commission Secretary before the consent calendar is called.

2. Approve the meeting minutes for March 24, 2026, as prepared.

   Recommendation:
   That the Planning Commission approves the minutes for March 24, 2026, as prepared.

Public Hearings

3. Environmental Assessment, EA 18-23; Site Plan Review, SPR 07-23, Resolution PC 26-

02, Sun Mesa Mini Storage. A request to construct and operate an 79,600 square foot self-storage facility with manager's unit, landscaping, and off-site street improvements. The project site is located at 4815 Newton Lane and is also identified as APN: 0597-111-67.

Recommendation:
Environmental Assessment 18-23:
That the Planning Commission adopts the Resolution, the Mitigated Negative Declaration and Mitigation Monitoring Report for Environmental Assessment 18-23.

Site Plan Review 07-23
That the Planning Commission approves SPR 07-23, a request to construct and operate an 79,600 square foot self-storage facility with manager's unit, landscaping, and off-site street improvements.

4. Environmental Assessment, EA 03-25; Conditional Use Permit, CUP 02-25, Resolution PC 26-03, Dutch Bros Coffee, the proposed construction of a 1,025 square-foot Dutch Bros Coffee with a drive through service window and a covered walk-up service window and incidental site improvements. The approximately 1.01-acre vacant Project Site is located at 58121 Twentynine Palms Highway (APN: 0601-416-05), approximately 275' southwest of the intersection of Twentynine Palms Highway and Balsa Avenue.

Recommendation:
Environmental Assessment 03-25:
That the Planning Commission adopts the Resolution, the Mitigated Negative Declaration and Mitigation Monitoring Report for Environmental Assessment 03-25.

Conditional Use Permit 02-25:
That the Planning Commission approves CUP 02-25, the proposed construction of a 1,025 square-foot Dutch Bros Coffee with a drive through service window and a covered walk-up service window and incidental site improvements.

5. Environmental Assessment, EA 02-25; Specific Plan 01-04 Amendment #2, Conditional Use Permit, CUP 01-25, Resolution No. 26-XX, Ordinance No. XX, Walmart Fuel Station. A request to amend the existing Specific Plan to allow for the construction and operation of a fuel station with six (6) fueling pumps, twelve (12) fuel dispensers, a 4,950 square foot fuel station canopy, and a 1,556 square foot convenience store. The project site is located at 58501 Twentynine Palms Highway and is also identified as APN: 0601-201-54.

Recommendation:
Environmental Assessment 02-25:
That the Planning Commission recommends approval of EA 02-25, and adoption of the resolution, to the Town Council, for Addendum #1 to the previously adopted Environmental Impact Report.

Conditional Use Permit 01-25:
That the Planning Commission recommends approval of CUP 01-25, a request to construct and operate a six (6) pump gasoline station, twelve (12) fuel dispensers, 4,950 square foot fuel station canopy, and a 1,556 square foot convenience store.

Ordinance No. XX, Specific Plan 01-04, Amendment #2:
That the Planning Commission recommends approval of Ordinance No. XX, Specific Plan 01-04 Amendment #2 to the Town Council, a request to amend the adopted Specific Plan by Ordinance, to allow a gasoline station as an approved land use and to allow for additional signage for the gasoline station and convenience store.

Department Reports

6. Development Code Interpretation (DCI 02-26) — A request to waive Official Zoning Map requirement for Specific Plan at an 37.58 acre property located at the SW Corner of Joshua Lane and Warren Vista, also identified as APN: 0585-062-33

   Recommendation:
   That the Planning Commission finds that the request is consistent with the objectives and policies of the Town of Yucca Valley General Plan and Development Code, and interprets that the Specific Plan requirement for APN: 0585-062-33 does not apply until such time that a project requiring discretionary entitlement is filed for the property, allowing by-right development to proceed as allowed by the underlying zoning district.

7. Land Development Update

   Recommendation:
   That the Planning Commission receives and files the report.

Future Agenda Items

Public Comments

The Planning Commission takes this time to consider your comments on items of concern which are not on the agenda. When you are called to speak, please state your name and community of residence. Please limit your comments to 3 minutes or less. Inappropriate behavior which disrupts, disturbs, or otherwise impedes the orderly conduct of the meeting will result in forfeiture of your public comment privileges. The Planning Commission is prohibited by State law from taking action or discussing items not on the printed agenda.

Announcements

Upcoming Meeting Schedule: The next regular meeting of the Yucca Valley Planning Commission will be held on Tuesday, April 28, 2026, at 6:00 PM in the Yucca Valley Community Center Yucca Room.

Adjournment

Town of Yucca Valley
Planning Commission Staff Report

To: Planning Commission

From: Janet Yochmowitz, Administrative Assistant III

Date: April 6, 2026

Meeting Date: April 14, 2026

Subject: Approve the meeting minutes for March 24, 2026, as prepared.

Recommendation:
That the Planning Commission approves the minutes for March 24, 2026, as prepared.

Prior Review:
There has been no prior review of this item.

Discussion:
None.

Alternatives
None.

Fiscal Impact:
None.

Town of Yucca Valley
Planning Commission Meeting Minutes
March 24, 2026

Call to Order

Chair Vasconcelos called the meeting to order at 6:00 pm.

Roll Call

Present: James Henderson, Gerard Noonan, Clint Stoker, Mathew Thomas, Alejandro Vasconcelos

Absent:

Pledge of Allegiance

led by Commissioner Henderson.

Approval of Agenda

Motion:
Approve the meeting agenda as prepared.

Result: Passed (Yes 5, No 0, Abstained 0)
Mover: Commissioner Mathew Thomas
Seconder: Commissioner Clint Stoker
Ayes: James Henderson, Gerard Noonan, Clint Stoker, Mathew Thomas, Alejandro Vasconcelos

1. **Approve the meeting agenda as prepared.**

   Motion:
   Approve the meeting agenda as prepared.

   Result: (Yes 5, No 0, Abstained 0)
   Mover: Commissioner Mathew Thomas
   Seconder: Commissioner Clint Stoker
   Ayes: James Henderson, Gerard Noonan, Clint Stoker, Mathew Thomas, Alejandro Vasconcelos

Commission Reorganization

Chair Vasconcelos stated moving on to item 2, selection of planning commission chairperson and vice chairperson, nominee, and elect chairperson and vice chairperson. Recommendation is the planning commission move to appoint the selected commissioner to serve as the chairperson and vice chairperson of the planning commission for the next 12 months.

Commissioner Stoker stated I'll, I'll go ahead and make a motion if there's no discussion on it.

Commission Secretary Yochmowitz stated if you wanted me just to give this one spill on it, that--

Sure.

Commission Secretary Yochmowitz stated at the February 13th, 2018 meeting, the Planning Commission was adopted a resolution establishing a rotation of the chairperson and vice chairperson to take place in March of each year. This is done, obviously, on an annual basis, and they serve for 12 months.

Commissioner Stoker stated sounds good. Um, I would make a motion, uh, that Vice Chair Thomas, uh, serve for the next 12 months as our chairperson.

Motion:
Elect Vice Chair Thomas for the next 12 months as the Planning Commission Chairperson.

Result:	Passed (Yes 5, No 0, Abstained 0)
Mover:	Commissioner Clint Stoker
Seconder:	Commissioner Gerard Noonan
Ayes:	James Henderson, Gerard Noonan, Clint Stoker, Mathew Thomas, Alejandro Vasconcelos

2. **Selection of Planning Commission Chairperson and Vice Chairperson — Nominate and Elect Chairperson and Vice Chairperson**

   Commissioner Stoker stated and then I'll m-make one more if that's okay, um, that, uh, Commissioner, uh, Henderson, would you care to be the, uh, vice chairperson for the next 12 months?

   Commissioner Henderson stated I'd be honored.

   Commissioner Stoker stated ll right. I'll make that motion for Commissioner Thomas- or Commissioner, uh, Henderson—as the vice chair for the next 12 months.

   Commissioner Vasconcelos stated yes. We will take a short recess while we change seats, and then we'll be right back.

   Motion:
   Elect Commissioner Henderson as Vice Chair for the next 12 months.

Result:	(Yes 5, No 0, Abstained 0)
Mover:	Commissioner Clint Stoker
Seconder:	Commissioner Gerard Noonan
Ayes:	Clint Stoker, Alejandro Vasconcelos, Mathew Thomas, James Henderson, Gerard Noonan

Consent Agenda

Chair Thomas stated Okay, we'll call the meeting back to order. Um, first of all, I wanted to, uh, thank, uh, Chairman Vasconcelos for a really excellent year. You did a great job running the meetings. Really appreciate it. You did a great job.

Commissioner Vasconcelos stated thank you.

Chair Thomas stated all items listed on the consent calendar are considered to be routine matters or are considered formal documents covering previous Planning Commission instruction. The items listed on the consent calendar may be enacted by one motion and a second. There will be no separate discussion of the consent calendar items unless a member of the Planning Commission or Town Staff requests discussion on specific consent calendar items at the beginning of the meeting. Public requests to comment on consent calendar items should be filed with the Commission Secretary before the consent calendar is called. All right. Does anybody have any comment? Anybody from the public wish to comment on the consent calendar? None? Anybody online? Any commissioners have anything to recuse or anything like that? All right, then we look for a motion to approve.

3. **Approve the meeting minutes for January 13, 2026, as prepared.**

   Motion:
   That the Planning Commission approves the minutes for January 13, 2026, as prepared.

Result:	Passed (Yes 5, No 0, Abstained 0)
Mover:	Commissioner James Henderson
Seconder:	Commissioner Alejandro Vasconcelos
Ayes:	James Henderson, Gerard Noonan, Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

4. **Approve the meeting minutes for February 24, 2026, as prepared.**

   Motion:
   That the Planning Commission approves the minutes for February 24, 2026, as prepared.

Result:	Passed (Yes 5, No 0, Abstained 0)
Mover:	Commissioner James Henderson
Seconder:	Commissioner Alejandro Vasconcelos
Ayes:	James Henderson, Gerard Noonan, Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

5. **Native Plant Permit (NPP) 011-26 @ 59815 Security Drive**

   Motion:

That the Planning Commission receives and files the attached Desert Native Plant Specialist Report and approves the application for NPP 011-26, to remove nine (9) Mojave Yuccas based upon Section 9.07.130(C)(2), that the regulated desert native plants being removed are located within the identified project area for residential construction of a recreational pickleball court; and finding that all necessary submittal materials have been submitted as indicated in the Application Table and as contained within the staff report.

Result: (Yes 5, No 0, Abstained 0)
Mover: Commissioner James Henderson
Seconder: Commissioner Alejandro Vasconcelos
Ayes: James Henderson, Gerard Noonan, Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

6. **Native Plant Permit (NPP) 017-26 @ 8946 Fortuna Avenue**

Motion:
That the Planning Commission receives and files the attached Desert Native Plant Specialist Report and approves the application for NPP 017-26, to remove nine (9) Mojave Yuccas based upon Section 9.07.130(C)(2), that the regulated desert native plants being removed are located within the identified project area for residential construction of an attached garage; and finding that all necessary submittal materials have been submitted as indicated in the Application Table and as contained within the staff report.

Result: Passed (Yes 5, No 0, Abstained 0)
Mover: Commissioner James Henderson
Seconder: Commissioner Alejandro Vasconcelos
Ayes: James Henderson, Gerard Noonan, Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

7. **General Plan Annual Report 2025**

Motion:
That the Planning Commission receives and files the General Plan Annual Housing Element Progress Report.

Result: Passed (Yes 5, No 0, Abstained 0)
Mover: Commissioner James Henderson
Seconder: Commissioner Alejandro Vasconcelos
Ayes: James Henderson, Gerard Noonan, Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

Public Hearings

8. **Environmental Assessment, EA 13-25; Variance, V 03-25, 8140 La Contenta Road. A requested variance from Town of Yucca Valley Development Code, Chapter 9.07.050, Table 2-4, to reduce the required side yard setback from 15' to 5' for an existing accessory structure located within the required 15' side yard setback at 8140 La Contenta Road (APN 0588-051-26), an approximately 1.82 acre parcel, located 225' south of the intersection of Joshua Drive and La Contenta Road.**

Chair Thomas stated yes. Okay. Then we're going to move to public hearings, item number 8. Environmental Assessment EA 13-25, variance V 03-25, 8140 La Contenta Road. A requested variance from town of Yucca Valley Development Code Chapter 9.07.050, Table 2-4, to reduce the required side yard setback from 15 feet to 5 feet for an existing accessory structure located within the fif--the required 15-foot set--side yard setback at 8140 La Contenta Road, APN 0588-051-26, and approximately 1.82 acre parcel located 225 feet south of the intersection of Joshua Drive and La Contenta Road. Okay. Staff.

Assistant Planner Willoughby stated, thank you, Chair and Commissioners. Uh, the recommendation is firstly, Environmental Assessment 13-25 that the Planning Commission finds the project is exempt from CEQA pursuant to Section 15303 E Class 3 new construction of small structures, as the proposed project is an accessory structure within a setback and Section 15305 A, minor alteration and land use limitations as the proposed project consists of a setback variance in an area with an average slope less than 20% that does not result in the creation of any new parcel. And secondly, for Variance 03-25, that the Planning Commission denies Variance 03-25 from the Town of Yaka Valley Development Code, chapter 9.07.0050 Table 2-4 to reduce the required side yard setback from 15 feet to 5 feet for an existing accessory structure located within the required 15-foot side yard setback at 8140 La Contenta Road, APN 058805126, based upon the information contained in the staff report and required findings.

Uh, for background on this property and what preceded this variance request, going back to 2016, a complaint was received in 2016 regarding non-permitted construction and operation of a non-permitted vacation rental, uh, with other noise issues reported under that same complaint. The current enforcement actions against the property continue from that 2016 case, including non-permitted construction and non-permitted operation of a vacation rental. The owner has taken down their vacation rental listing and reposted it multiple times over the years following code enforcement communication. The western display and gazebo were constructed on the property without benefit of permit in 2016 based on aerial s-satellite imagery. Uh, you can see in 2015 preceding, uh, the structure that we're talking about tonight. This is from March 2015. And then this is from July of 2016. You can see, uh, where I'm highlighting in red. This is the structure that encroaches into the, uh, north side, interior side yard setback. And then there is a smaller gazebo, um, down here. This-

uh, is the actual, um, structure, um, just seen from the outside, the exterior. It is a western display as I would best describe it. And for further background, um, we received the application on August 13, 2025, requesting the a-aforementioned variances. And on February 25th, a public hearing notice was published in the High Desert Star, which is attached to the staff report. And on February 27th, the hearing notice was mailed to the neighboring property owners within 300 feet of the subject property in accordance with our development code requirements.

For background on the code itself, uh, the property is in the RL zoning district, so subject to Section 9.07.0050 Table 2-4, that identified interior side yard setback is 15 feet. Uh, furthermore, Section 9.07.120, which regulates, uh, certain, uh, occurrences when a structure can encroach into a setback. It is not allowed to encroach, in this case, into the, um, interior side yard setback. There is no allowance for that under our code. The property is an approximately 1.82 acre parcel, um, located 225 feet south of the intersection of Joshua Drive and La Contenta Road. Uh, it is in a general plan designation of rural residential with a 2.5 acre minimum lot size and a corresponding zoning designation of rural living, RL 2.5. The surrounding properties from the north, south, and west, uh, are within the town boundaries and are under identical general plan and zoning classification of RR 2.5 and RL 2.5 respectively. The property to the west--or to the east, I apologize, is within the county. The county zoning for that eastern property is Rural Living, uh, one dwelling unit, uh, per 2.5 acre max.

The surrounding land uses for the property, um, to the north, there is a single-family dwelling. Uh, to the south is vacant. To the east is vacant, uh, county land-- uh, so-- apologize-- uh, land within the county's jurisdiction. And to the west is a single-family dwelling. Uh, for background on the size and shape of properties in the area, um, this property is highlighted, uh, here. This is from the assessor's tax parcel map, so I apologize. It's not the most legible kind of map that we could be looking at, but just for a reference to the, um, size and acreage of some of these parcels. Uh, the properties in the vicinity range from about 1.25 acres to five acres. Uh, the parcel size is identified on the assessor map as 1.82 acres, and the depths in the vicinity range from 331 feet to 662 feet. The widths in the vicinity range from 123 feet to 329 feet, and the property has a width of approximately 123 feet and a depth of 662. So it is nonconforming as to minimum lot size and maximum lot dimensions, uh, slightly, um, under that 2.5 and slightly over that, uh, width to depth ratio.

This is the site plan provided by the applicant as part of their, uh, building submittal package, identifying the structure, uh, with the, um, setbacks illustrated here with those dashed lines. Along with that, they also illustrate a, uh, path of drainage, which will be further addressed, um, throughout this presentation. And these are elevations provided by the applicant, um, seeing once again the structure that you saw some photos of, uh, earlier, which is in existence. Uh, variance findings before we get into those, uh, I just wanna note provisions for variances set forth in the Town's

development code are established to ensure that any property because of special circumstances such as size, shape, topography, location, or surrounding shall be accorded privileges commonly enjoyed by other properties in the same vicinity pursuant to California Government Code Section 65906. And the required variance findings are addressed by the applicant and staff in the following slides. Um, I will address the variance findings, um, and responses from staff and the applicant's responses are included in your packet presentation and the staff report.

So variance finding number one. Will the granting of this variance be detrimental to other properties or land uses in the area or substantially interfere with the present or future ability to use solar energy systems? Staff responses, no, the variance is not anticipated to be detrimental to other properties or land uses in the area or substantially to interfere with the present or future ability to use solar energy systems. Variance finding number two, staff response. Um, well, first, let me read it. Are there exceptional or extraordinary circumstances or conditions applicable to the property or to the intended use that do not apply to other properties in the same district or vicinity? Our staff response is, "There are no exceptional or extraordinary circumstances applicable to the property or to the intended use that do not apply to other properties in the same district or vicinity. Although the property is non-confor-- non-conforming as to size and lot dimensions, similar to others in the vicinity, there is adequate space to accommodate proposed accessory structures without encroaching into drainage courses or required setbacks on the subject property."

Variance finding number three. Will the strict application of land use district regulations deprive such property of privileges enjoyed by other properties in the same vicinity or in the same land use district? Staff response is, no, there is adequate space to accommodate proposed accessory structures without encroaching into the natural drainage course or runoff channel identified by the applicant's exhibit or required setbacks on the subject property. A minor portion of the rear of the property is traversed by a portion of the La Contenta Wash, which is identified on the attached, uh, master plan of drainage and also identified in the Town's General Plan Open Space and Conservation Element exhibit, which continues north and south of the property. Minor runoff is not an unusual property condition within the Rural Living zoning district, nor does it preclude development. And building plans and engineering can address required runoff retention in accordance with town standards. Variance finding number four. Is the variance request in conformance with the objectives, policies, and programs specified in the general plan and any applicable plan? Staff responds, yes, the land use is consistent with the general plan. A wood-sided accessory building is not anticipated to affect the objectives, policies, or programs specified in the general plan.

In the following slides, um, are some statements provided by the applicant and exhibits and photos also provided by the applicant. So I will briefly walk through

those, but they are attached to your staff report and included in the presentation that's printed before you. Uh, this is the applicant statement that they've provided to supplement, um, their application materials. These are exhibits and photos that the applicant has provided. Uh, I'll just specifically highlight Exhibit Number 2. Uh, what they're trying to show here is, once again, as stated, the path of runoff that they believe, uh, precludes them from moving the structure outside of the setback. These are other photos provided by the applicant, um, identifying the ground conditions and property, um, setbacks and taking a few measurements from the structure, uh, to the property line, I believe, in this photo. Staff has also provided some, uh, ph-photos to the staff report just for the commission, um, to view, uh, the surrounding properties and neighborhood context around the site. So these are just for context. Um, they were provided by Jared, um, so I wouldn't be able to give you specifics on exactly where these photos were taken, but they were taken throughout the neighborhood.

So as you can see, uh, these similar rural living properties are off of dirt roads, um, similar development, similar context. So, once again, uh, the recommendation is that the Planning Commission find the project exempt from CEQA and that the Planning Commission denies the variance, uh, from the Town of Yucca Valley Development Code to reduce the required yard-- side yard setback from 15 feet to 5 feet for an existing accessory structure located within that 15-foot side yard setback at 8140 La Contenta based upon the information contained in the staff report and required findings. And staff is available for questions following the public hearing.

Chair Thomas stated okay. Thank you, Evan, um, I'll open the hearing pu-public hearing comment on this item. Anybody in the audience wish to speak on this item? None? Oh, we have one?

Lori Portillo, applicant, stated good evening. My name is Lori Portillo. I've been coming to the Morongo Basin since before I can remember because my grandfather homesteaded in Morongo in the early '40s. I've lived on La Contenta Road for the past 45 years. I have bought rental houses in the area over the past four decades. It was my dream job to have rentals that I could go to easily to do repairs, and it was going to be in my dream retirement. The bad roads and water hauling made it difficult to attract and keep dependable renters. In 2010, I went to the Town of Yucca Valley and asked what I needed to do to get into short-term rentals. Someone looking for a two-day desert experience were happy to put up with the roads in exchange for the views. I was told there were no differences, no need to apply for anything. That started changing and has not stopped. I've tried to keep up with the changes the Town has made. When you told me I could no longer do short-term rentals, I switched my business to 31-plus day rentals. When I read about having my--having been doing business without a permit for vacation rentals--I wanted to clarify that I know nothing about websites or computers. I've had to depend on others to change

things when needed. And at one point, my web designer had changed everything but one last reference to vacation on my website. He told me he would figure it out and change it on the weekend. He did it for five weeks because our website is outdated, and it was hard for him to figure out. Everywhere on the website said long-term rentals and 31-plus minimum day stay, but that one-word vacation caused me to have more fines. I'm not a corporate entity with professional websites. I'm an old woman that has tried to do the best I can with what I've got. Between the county and the town, I've paid over $30,000 in fines to make up for my mistakes. My rentals are long-term again. There are more people in the area who love being out in the wild desert but close to town. They have not been swayed by a road that neither the town or the county has ever maintained. I've worked on the ro-road with a bobcat and more often with a shovel. The Old Town storefront was built as an art project by a friend and I to break up the scraped base ground at 8140 La Contenta. It was a lot of work and I take great pride in it. I did not realize there were 50-foot assessments--easements on a shared property line in the middle of a five-acre parcel. I thought 15-foot easements were required where a road might need to be run and Joshua Lane is 200 feet to the north. To move the building 10 feet to the south would have put it directly in the path of the water runoff soil. Directly. It would be running under the building from east to west, and it would block the view of the sunset, completely taking the building out of the frame it is in, which is part of the art piece. In conclusion, I'm asking the town to grant the variance which would allow this accessory building to stay where it is, where it was meant to be. Thank you.

Chair Thomas stated, thank you. Anybody else wishing to comment on this item? Anybody online? No? Close public hearing comment. Go to my commissioners. We'll start on the right. Commissioner Vasconcelos.

Commissioner Vasconcelos stated, thank you. So I appreciate that, you know, you've tried to be a part of this community and, and, and improve upon what's there and, and try to make a living for yourself in the--in this--in this area. The way I feel like of this is that there's-- these variances are put in place for extreme circumstances for us to grant. And, you know, looking at this building and looking at the unit the way it was, uh, installed at that time, I think if, you know, the proper questions would've been asked at that time for permitting or whatever and, and done some research would've shown that there, there are setbacks in this particular property that would've required you to maybe adjust the way that this, um, structure would've been built. Um, in regards to, like, the drainage, you know, according to the staff findings and whatnot, there-- the, the flow of the water is showing it in a certain way that, uh, you know, if, if--i-if that information is correct, like--uh, so--s--uh, Evan, so the d--the drainage report that they--uh, that you provided, it shows that there's no real viable flow that should be interfering with the, the structures in--on that property. Is that correct?

Assistant Planner Willoughby stated so in consultation with the town engineer who regularly reviews drainage issues and, um, single-family residential planning checks, this is just local, um, water flow. Um, there's nothing unusual about that.

Commissioner Vasconcelos stated yeah, there's no, like--it's not like a, a drainage flow or, or, or a 100-year flood stream that could pop up or anywhere just where--as regular drainage that every, every resident has in--within the community from runoff?

Assistant Planner Willoughby stated correct.

Commissioner Vasconcelos stated, yeah. So, um, for me personally, to be okay with a variance, it's like it, it would be setting a precedent for everybody to-- if we, uh, granted this to allow everyone else to--you know, if they went a-against w--the proper way of building things, and then all of a sudden, years later, 10 years down the road, they realize that they have an issue and now we need a grandfather in their construction that they didn't permit in, in the beginning. I just feel like that could open up a big can of worms for everybody if we were to, uh, uh, grant this, uh, variance.

Chair Thomas stated okay. Is that good?

Commissioner Vasconcelos stated that's kinda what I got so for.

Chair Thomas stated Commissioner Stoker.

Commissioner Stoker stated yeah. I-I, I, I feel like your story is not a s--is not a story that- uh, it's we hear all the time, to be honest. People do a lot of things without benefit of permit. And it's, it's frustrating. It's--I, I can understand your frustration. You've had something there for 10 years. You didn't think it was gonna be a big deal, um, but here we are. And it's a--it's a question that gets brought to, uh, me as a builder in, in my day job. Often people wanna build something and the first thing I ask them is, "Have you talked to the ooh--the town or the county or the City of Palm Springs or any-anybody to find out what you can and can't do?" And I think that's a im-important thing, um, for everyone. And sadly, it's something that I run into so often with people even buying homes because things have been done with-without benefit of permit for years and years and years. And it's, it's not something that was--uh, that I don't think is ever gonna go away. Even now, I have friends who I go to their house and they're building something in their backyard and I say, "Boy, I wish you, uh, would pause for a minute and go check and see if that's okay there, um, before you get too far along." And that's--and that's the sad thing about where you're at is you are so far along that it's--you know, moving it would be, uh, difficult.

Um, uh, uh, I mean, f-for me, your, your path would be to work with your neighbor, to be fair, and tell them, "I'd like to do a lot line adjustment and buy, buy some land from them and adjust the lot line. I-if, if it's important to you to keep it and it's something you love, then the path forward that's legal would be to work f--towards a lot line adjustment to--um, to buy a chunk of dirt from your neighbor to adjust that line. Um, and, and that's a process that you can work through with the town to get accomplished. Um, a--uh, the i--the--you know, and I don't f--well, I-I'm not gonna look at other planning things to be g-- related to that, but-- 'cause that's a whole other can of worms. Um, and, and that's the, the, the biggest lesson that I think all of the public, anyone that's ever been to a planning commission meeting, learns is it's always easier to ask questions upfront and figure out more information prior to building or digging or, or getting involved in any sort of construction, um, because the, the rules are nuanced. What, what might even apply to you might not even apply to your neighbor. And that's where people can get kind of in, in a tough, tough position. Um, I, I would agree with Commissioner Vasconcelos that, uh, the, the rules for a variance are very, very, very finite. Um, and w-- as a-- as a general rule, um, we look at some, some very stiff, um, rationale to be able to grant those.

Um, I, I went and drove by your house, actually. I don't know if you saw me in my white Tundra, um, but I went and walked kinda through the, the vacant desert on the-- um, the north of you and kind of looked at it from, from all sides that I could see. And, um, I, I, I just feel like, uh, i-if you would've known, you probably would've moved it in a little bit further and adjusted your swales and had that nuisance water continuing on towards the wash at the end of the property. 'Cause it looks like there is-- that's where kinda the real water runs is at the end of your property there. Um, so I, I don't know. I, I just don't-- I don't see variance as your path forward. I-- if, if it's something you love, I think a lot line adjustment will probably be, uh, more appropriate.

Chair Thomas stated yeah. Vice Chair Henderson.

Vice Chair Henderson stated, uh, thank you. Um, Ms. Portillo, I wanna thank you for coming out and speaking and, and sharing your thoughts on this. I know how important it is. One thing that stuck out to me was you have a really unique and almost, I would say, cool lot.
Chair Thomas stated, yeah.

Vice Chair Henderson stated, and I know this has been going on from the initial time of complaint until now, almost 10 years. And if this doesn't go your way tonight, I hope that you'll get in touch with staff and, and get things corrected the right way because it seems to me it would be a great short-term vacation rental. Very unique. So, I, I hope that happens. But as some of my fellow colleagues have said, variances, you know, th-- to get granted are usually very extraordinary, exceptional

circumstances, typically with a lot. And when staff shares with us, there's adequate space to accommodate proposed accessory structures without encroaching into drainage courses or the required setbacks on the subject property, that's certainly a concern. My question to staff is, so if this variance is denied, what happens to that structure on the property?

Assistant Planner Willoughby stated, the options available to the property owner are to move the structure, uh, through the proper building permit process, to demo the structure, um, or any other identified solution such as a potential lot line adjustment to address that setback issue. But the building permits would need to be secured in that case too.

Vice Chair Henderson stated, yeah, that was a great suggestion by Commissioner Stoker. Um, in regards to-- um, this has been going on like nine years. Has it just been-- h-h-has this specific issue been going on nine years or is that just recent about the building?

Assistant Planner Willoughby stated to my understanding and speaking with code enforcement staff on your same question, um, our host compliance software identifies when listings are posted for short-term vacation rental. So this one just flagged, um, that issue, which caused code staff to revisit, um, the code case that had not been closed on the property f-- since 2016.

Vice Chair Henderson stated okay. Thank you. Uh, nothing further from me.

Chair Thomas stated Commissioner Noonan.

Commissioner Noonan stated, thank you. Um, a quick question. So presently, the structure is being used as long-term housing. And is that-- is that what?

Chair Thomas stated she said the house is not the building.

Commissioner Noonan stated okay. So the building in question is not being used to house anybody or as any kind of housing. Okay. Um, um, I have nothing different than the rest of my, uh, fellow commissioners to say about that, so.

Commissioner Stoker asked, is the home itself at the address being used as a short-term rental currently?

Assistant Planner Willoughby stated it has been in the past. Um, I believe the most current information from code enforcement is the listing has been taken down again. Um, and the applicant indicated tonight, um, I believe they are intending to use it or are using it for long-term housing. I think that's what I heard.

Chair Thomas stated, yeah, I'm gonna-- I'm gonna chime in just quickly and agree with my fellow commissioners on this. And, uh, I was kind of going along the same lines as Commissioner Stoker. I do commercial real estate. I've seen this stuff around town a lot. I'm actually working on a couple of buildings right now that have encroached on the lot lines that have been there for 30 or 40 years. I mean, literally. So probably the best suggestion is exactly what Commissioner Stoker said was try to go-- uh, get with your neighbor and do a lot line adjustment. That would save you some time and-- not necessarily time, but a little bit of money and stuff if you had to move the structure or, or, uh, tear it down. So I'm in agreement on this. Um, so we'll look for a motion on this one. Anybody?

Commissioner Stoker stated I-I'll make a motion, um, to find the project exempt from CEQA item, um, Environmental Assessment 13-25 and deny variant 03-25.

Motion:

Environmental Assessment 13-25:

That the Planning Commission finds the project is exempt from CEQA pursuant to Section 15303(e), Class 3 (New Construction of Small Structures), as the proposed project is an accessory structure within a setback and Section 15305(a) Minor Alterations in Land Use Limitations as the proposed project consists of a setback variance in an area with an average slope less than 20% that does not result in the creation of any new parcel.

Variance 03-25:

That the Planning Commission denies Variance, V 02-25, from the Town of Yucca Valley Development Code, Chapter 9.07.050, Table 2-4, to reduce the required side yard setback from 15' to 5' for an existing accessory structure located within the required 15' side yard setback at 8140 La Contenta Road (APN 0588-051-26), based upon the information contained in the staff report and required findings.

9. **Environmental Assessment, EA 18-23; Site Plan Review, SPR 07-23, Sun Mesa Mini Storage. A request to construct and operate an 89,700 square foot self-storage facility with manager's unit, landscaping, and off-site street improvements. The project site is located at 4815 Newton Lane and is also identified as APN: 0597-111-67.**

Chair Thomas stated, okay. Uh, we're gonna move to item 9, but item 9 is going to be

tabled. We're gonna be moving that, uh, on, but I'd like to-- oh, I'm gonna open it to public comment first. And, uh, is there anybody on item 9 that wishes to speak?

Assistant Planner Willoughby stated [inaudible]. Uh, I will start with the recommendation for this item. For Environmental Assessment, EA 18-23 and Site Plan Review, SPR 07-23 for Sun Mesa Mini Storage, the recommended action tonight is to open the public hearing and continue the item to the Planning Commission's next meeting of April 14, 2026.

Deputy Town Manager Stueckle stated, and as part of that process, you can take any public comment or public hearing comments that are here or present this evening, either in the room or online, and then the public hearing can be continued.

Chair Thomas stated yeah. So on item number 9, is there anybody that wishes to comment? Yes, sir.

Brandon Fugate, public comment, stated, hi, uh, my name is Brandon Fugate. I live on Terry Lane in Yucca Valley, pretty close to the proposed site. And I'd like to speak in opposition to the storage facility. Uh, first and foremost, because it's a redundant business. We don't need it. We have multiple similar businesses in town that have ample vacancies. I know that's because I called them. A-and we also have similar businesses just outside of town and surrounding areas. Secondly, it's destructive. I've read the report. It will destroy nearly 100 mature western Joshua trees in addition to disturbing what is now undisturbed wildlife habitat. Third, we have very, very suitable locations in the heart of town, some that are already developed, some that are underutilized. Um, and I think that given its location kind of on the outskirts, a more undeveloped part of town, this to me feels very much like needless sprawl. Um, there are some eyesores in town, some vacant lots of considerable size that would make far more sense for this project. Thank you.

Chair Thomas stated, thank you.

Commissioner Stoker stated, excuse me, sir. Where did you say your home was?

Brandon Fugate, public speaker, stated I'm on Terry Lane. So just off--And----of Buena Vista.

Commissioner Stoker stated oh. And what was-- what was-- what was your name? I'm sorry.

Brandon Fugate, public speaker, stated I'm Brandon Fugate.

Commissioner Stoker stated Brandon Fugate. I'm just trying to find the spot on the

map so I can see where it's at relation.

Brandon Fugate, public speaker, stated little dirt road.

Commissioner Stoker stated, and is it-- is the home owned by-- owned by you right now or are you a renter?

Brandon Fugate, public speaker stated no, I'm a renter.

Commissioner Stoker stated owned by Matt Adams, maybe?

Brandon Fugate, public speaker, stated uh, Matt Adams is my next door neighbor.

Commissioner Stoker stated okay. All right. Sounds good. I-I'm just trying to find out where it's at in--

Brandon Fugate, public speaker, stated yeah. Yeah.

Commissioner Stoker stated--relation just for my--

[crosstalk]--

Commissioner Stoker stated,--own sake. Thank you.

Brandon Fugate, public speaker stated absolutely.

Chair Thomas stated okay. Uh, anybody else in the public wanna comment on this item? Anybody online? Okay, let's get a motion to continue then.

Commissioner Stoker stated, I'll make a motion to continue the public hearing for, uh, Environmental Assessment, EA 1823, and Site Plan Review, SPR07-23, to our next meeting of April 14, 2026.

Motion:
To continue the public hearing for Environmental Assessment, EA 18-23, and Site Plan Review, SPR 07-23, to our next meeting of April 14, 2026.
Environmental Assessment 18-23:
That the Planning Commission adopts the Resolution, the Mitigated Negative Declaration and Mitigation Monitoring Report for Environmental Assessment 18-23.

Site Plan Review 07-23
That the Planning Commission approves SPR 07-23, a request to construct and operate an 89,700 square foot self-storage facility with manager's unit, landscaping,

and off-site street improvements.

Department Reports

10. Design Review (EC) 02-26 @ 7021 Airway Avenue

Chair Thomas stated okay. Moving to department reports, item number 10 design review EC 02-26 at 7021 Airway Avenue.

Assistant Planner Willoughby stated, thank you, chair and commissioners. Uh, just real quick. This is on page 1,621 of your agenda packet. So Design Review EC 02-26 at 7021 Airway Avenue. The recommendation is that the Planning Commission approves the proposed fence material, split rail would propose fence, um, similar to illustration number 49 of the commercial design guidelines and proposed corral gate for Design Review EC 02-26 at 7021 Airway Avenue based upon the commercial design guidelines and the information contained within the staff report and recommended condition of approval. So for background, the town received a request from the property owner at 7021 Airway. Uh, it's a 1.41-- 1.42 acre property zoned General Commercial to install a corral gate and barbed wire fence, wire mesh, or split rail wood post fence along the property lines to deter vehicle access across the vacant, uh, northeast portion of the property, uh, which you can see, uh, highlighted here. The fence is, uh, proposed not to exceed four feet in height. These are some of the alternative photos provided by the applicant. Uh, and you can see their alternative number one, which I believe was their preferred alternative, uh, is barbed wire. Alternative number two is wire mesh and alternative number three is a split rail wood post fence. In either alternative, um, they propose that the gate be a corral gate.

This is a rendering provided by the applicant, uh, to illustrate exactly what that might look like. You can see the surrounding, um, streets, uh, the commercial developed, uh, tenant space around the property. And these are some more photos just from Google Street View, uh, showing the church, which is also, uh, part of that property on the developed south portion. Our commercial design guidelines do provide some guidance on, uh, walls and fences. So it notes, "Uh, they provide effective noise buffering and visual screening effects as well as enhanced security, which is the intent of this applicant to secure their property from vehicles." Uh, it also notes, "Design-wise, walls and fence materials shall consist of wood, stone, or masonry construction.

Uh, wall and fence colors shall consist of desert tones such as brown, tan, beige, sand, or other architectural schemes that may complement, uh, the nearest buildings and structures. And walls and fences should serve as unifying design elements along public streets and pedestrian corridors. Should be consistent material design and height in such locations." These are examples provided by the commercial design guidelines. And the example cited by the applicant is in our commercial design guidelines illustration number 49, which is a wood post, uh, fence.

Uh, further, just to deal with the particularities of the property, um, it is staff's recommendation to add a condition of approval, um, that the fencing may not project into the recorded San Bernardino County Flood Control District Easement, uh, with one modification from the staff report to note unless approved by San Bernadino County Flood Control District. Um, you've been provided a copy of the applicant's email following the publication of this staff report, uh, that they intend to address that by, uh, getting a proper encroachment permit from the Flood Control District if possible. So, once again, the recommendation is that the Planning Commission approves the proposed fence material for wood post fence, uh, similar to illustration number 49 of the commercial design guidelines and the proposed corral gate for EC 02-26 at 7021 Airway Avenue, based upon the commercial design guidelines and the information contained within the staff report and recommended condition of approval. And staff is available to answer questions following public comment.

Chair Thomas stated, thank you, Evan. Okay. It-- I-- doesn't look like there's anybody in the audience that wants to make a comment on item 10. Anybody online? No. Okay, we'll go to the left now. Commissioner N-Noonan.

Commissioner Noonan stated um, I'm-- I know this property and I can understand specifically why, um, the owner of that property wants to do this. So I think I'm all for allowing them to fence that area for vehicles and approve the material that they've submitted.

Chair Thomas stated, thank you. Commissioner--Vice Chair Henderson.

Vice Chair Henderson stated, yeah. I mean, I've lived here a long time. I didn't even realize that, that that was part of the church property. Um, I hope and I-- uh, like Commissioner Noonan said, I, I understand why they would put it up. I just hope that that material is good enough and strong enough to withstand what will likely be people trying to tear it down. That's the only thing. You've seen it over and over where they can just slide the wood post out and now they go right through it. So I hope the material is good.

Chair Thomas stated Commissioner Stoker.

Commissioner Stoker stated, yeah, I don't, uh, see a problem with it. I d-- I do question the ultimate use for the-- that part of that parcel. Um, I, I just don't-- I don't know how many parking spaces are on their concrete area for the assembly use that they have. Um, back when this was a heavily attended church when I was a kid, like, that dirt lot was full of cars every Sunday. Um, so I would imagine that was part of their parking plan for that building. Um, I would question whether-- if there's, uh, 20 feet left over, give or take out of the 39 and a half feet, not counting the 20-foot easement. If that driveway gate would be large enough to have parking in that area if it needed to be there, um, to accommodate that building. Um, I think routinely that entire dirt lot was full and then people were parking in adjacent parking lots that don't necessarily belong to that parcel, uh, behind the bank and other places. Um, so I, I just question what the ingress/egress would be of that parcel since there's only one, uh, gate going in and out. Um, and then that there's a block wall in between lots 64 and 65 in that overarching parcel. Um, my other question is, is-- a-and it looks like on the rendering that the proposed fence-- h-how close is that to the-- to the right-of-way? It-- I don't see any-- is it-- is it on the right-of-way? Does it-- is it a p-- does it go all the way to the lot line? I'm just curious what the-- 'cause it doesn't look like it goes to the building setback. It's something different.

Assistant Planner Willoughby stated uh, to address your question, um, it may be appropriate to add a condition to clarify for the applicant, uh, to verify the location of right-of-way and ensure the fence is not located within dedicated right-of-way areas. There has been-- and to clarify the use, uh, there has been no conversation with staff about intended use of the church or this, uh, adjoining vacant area that was previously used as parking, as you noted.

Commissioner Stoker stated, so I mean, I, I just wanna make sure that we're not approving something that's permanent, that, in essence, ends up becoming temporary once a use for the building, um, you know, gets made and, and what that use would be, whether it would necessitate any sort of change, change of use or at least clarification of what the parking requirements for the use as it was if there's enough spaces for that. Um, uh, uh, short of that, I, I also agree with, uh, Commissioner Henderson that I think no matter what type of fence is put in, um, whether it's, uh, wire mesh or split rail or barbed wire, it's going to get abused by people that have historically used it. I think, um, nobody likes change. And it's, it's a kind of an uphill battle, I think, when so many people have been driving through that lot for so long. I, I can understand the applicant, but I also foresee him making many repairs, um, regardless. I, I th-- I, I think I would probably have leaned against barbed wire, I think, for public safety considerations--yeah, probably. --with kids running around in that-- the whole neighborhood or--

Chair Thomas stated yeah.

Commissioner Stoker stated--riding bikes near there and you fall into barbed wire. That's, that's no fun.

Commissioner Vasconcelos stated yeah, bus stop.

Commissioner Stoker stated, Airway and aviation there. So, um, I-I'm o-- I'm okay with the split rail, uh, with the caveats that it'd be-- it'd be good to figure out what their-- what their intentions are and whether that lot has to be part of their intentions for parking.

Chair Thomas stated Commissioner Vasconcelos.

Commissioner Vasconcelos stated yeah. Uh, I, uh, too have lived here a long time and been through that area and could admit that I've probably driven through that dirt lot a few times on my way to Von's. But, uh, I do understand the concern and wouldn't-- uh, you know, wouldn't want, you know, liability of someone-- something happening on my property, constantly driving through that area.

Chair Thomas stated yeah.

Commissioner Vasconcelos stated and so I do see the need for the fence. Uh, I too have concerns about the material. I mean, just our own experiences, Commissioner Stoker and I with, like, the, the park where they, they-- uh, over there on-- uh, on Little League Drive where they put some rocks up to try to deter people from driving through that area. And we ended up having to put-- Alex ended up having to put a sea of rocks over there, not just a couple of rocks to stop them from driving through that area. So, uh, I d-- I w-- I hope that when-- with their plans that they're planning to install this fence, not right on-- within, within their property and not within the right of way. You know, that's the biggest concern. I think a lot of people just assume that they can pu-put their fence all the way up to, let's say, the pavement or whatever. And they really should kn-know that they need to be within their own property to b-- to be installing those fences. Other than that, I, I don't have a problem with it. I mean, Commissioner Stoker did bring up some good cons-- some considerations regarding the use of that lot for future use of, of the parking st-structures. And also with the ingress/egress, or just the access, one point of access from there, it would probably-- beneficial if they had more than one gate into that, that area. But with that, I, um--

Chair Thomas stated okay.

Commissioner Vasconcelos stated--feel good.

Chair Thomas stated yeah. Uh, yeah. I, I concur with the commissioners. Yeah, I was looking at this thing and thinking that, you know, this may be an insurance, uh, push, you know, from their insurance company saying, "Hey, you know, you got people driving across this lot all the time. You got-- exposing yourself to big liability." And I'm thinking that the split rail is probably the most cost-effective thing they could put up-- it's attractive. --and most attractive. Yeah. 'Cause I agree barbed wire would be awful and-- but most wood stuff doesn't-- uh, doesn't last up here, so they're probably gonna be doing a lot of repairs. But I have a feeling it's probably just to keep their insurance company happy. Uh, wi-- so with that, I'm, I'm good with it as well too. So who wa-- anybody wanna make a motion on this?

Commissioner Vasconcelos stated I'll make a motion to approve design review EC 02-26 at 7021 Airway Avenue.

[crosstalk] With additional-- with the additional stuff from staff [crosstalk].

Chair Thomas stated condition is to the right of way [crosstalk]--

Commissioner Vasconcelos stated yeah, with the-- we-- and with, uh, including the, the flood channel, making sure if they-- if they-- gosh, how am I gonna say this? I'm not sure--

Assistant Planner Willoughby stated uh, uh, I can address that. Um, so to address that, uh, fencing may not project into the recorded San Bernardino County Flood Control District easement without San Bernardino County Flood Control District permit and may not project into dedicated right-of-way.

Motion:
That the Planning Commission approves the proposed fence material, Split Rail Wood Post Fence - Illustration #49 of the Commercial Design Guidelines and proposed corral gate, for Design Review (EC) 02-26 at 7021 Airway Avenue, based upon the Commercial Design Guidelines and the information contained within the staff report and recommended conditions of approval.

11. Development Code Interpretation (DCI) 01-26 — Architectural Compatibility of Cargo/Shipping Containers in Residential Zoning Districts

Chair Thomas stated okay. We move to, uh, item number 11, Development Code

Interpretation DCI 01-26 architectural compatibility of cargo shipping containers in residential zoning districts. Staff.

Assistant Planner Willoughby stated, thank you, Chair and Commission. Um, this is Development Code Interpretation, DCI 01-26, architectural compatibility of cargo/shipping containers in residential zoning districts. The recommendation is that the Planning Commission reviews Chapter 9.07, Residential and Hillside Reserve Districts, Section 9.07.060C, and adopts resolution number PC 26-03 attached to the staff report. Uh, the Planning Commission previously reviewed, uh, this item at the latest meeting of, uh, February 27th, 2026, uh, requested some additional information from staff, including examples of other policies from other jurisdictions, regulating cargo or shipping containers-- and other shipping containers that have been permitted in town attached to this updated staff report. Uh, this is, uh, what we went over at our previous meeting. Um, very briefly, um, our development code allows cargo or si-- shipping containers to exist on residential properties, uh, without architectural treatment only on properties that are 2.5 acres or greater. UH, with properties that are lower than 2.5 acres, they are subject to being on a permanent foundation and be architecturally treated so as not to appear as a cargo or shipping container.

So, staff jurisdic-- staff research of other jurisdictions identified, uh, that where they are allowed as permanent residential accessory structures, architectural treatment and/or screening are typically required. Um, the codes I'll go through in the following slides do cite a variety of approaches to ensuring that compatibility with the primary residents or surroundings, uh, including some of the following examples, such as various sidings, whether that's wood, stucco, masonry, or decorative sighting. Um, full exterior skins, uh, or enclosures or stick-built enclosures. Uh, pitched roofs, matching paint or compatible color schemes. Matching trim details. This is all matching with the primary residence, of course. Uh, matching roof style, landscape screening, or opaque fencing as another screening element. Um, Town of Apple Valley is one jurisdiction that does allow it. Um, highlighted in yellow and in bold, their criteria for architectural treatment is covered or skinned with siding materials, wood, stucco, or masonry, similar to their primary residence, and the design is compatible with the primary residence. City of Twentynine Palms, um, identifies a few different criteria. So screened from view for many public rights-of-way or adjacent residential properties by residential structures, landforms, or physical features of the lot, landscaping, or opaque fencing of up to eight feet in height with any visible remaining exterior portion of the container painted in a manner compatible with the principal residence on site. Uh, on-site stick-built skin and eaves, which are architecturally consistent with the primary residence on site. And, uh, containers shall be maintained in reasonable aesthetic condition at all times as determined by, um, their director.

City of Escondido, uh, has similar, uh, to the previous two, screened from public view by fencing, landscaping, terrain, buildings, exterior architectural enhancements to the container, such as decorative siding, pitch roof, etc., and/or, uh, painted a non-reflective neutral color that is compatible with the primary structure or to blend in with the surrounding environment. City of Murrieta, which we also have some picture examples attached, uh, their criteria is to match the main residential structure in terms of exterior colors, trim, on-- and roofing style. Um, furthermore, over two acres or more on the parcel size, the modifications shall be limited to the paint color of the exterior in terms of matching the main residential structure and landscape screening method shall be provided on site for portions of the container visible from the public right-of-way to the satisfaction of the development services director or their, their designee. These are some examples that the city of Murrieta provides in their memo on this specific topic. So you, uh, can see the top example. They've added some, uh, architectural enhancements, some patio, um, some additional roof elements to the container, and, um, just a decorative feature next to it to further screen or obscure the fact that it is indeed a container.

The one to the bottom is a little bit more unique. It looks somewhat like a spa or sauna someone might, might, uh, order. Um, but that does seem to make it appear, um, that it's not a shipping container at first sight. Uh, this is one example that we were able to identify from prior years permitting. Um, this is on a residential property in town. Um, the architectural treatment that they are making-- and I don't think they've completely finished their building permit process. There may be additional elements that they're adding here. But you can see that they have added basically a, a faux roof line, um, to make this container appear, at least from, uh, this elevation that we took it, uh, to not look like a container at first sight.

Two containers.

Now, the, uh, resolution, which is a draft resolution attached, um, provides some potential clarity that the Planning Commission may, may give us. Um, the resolution in part states that the Planning Commission does hereby declare that a cargo or shipping container on a residential property containing less than 2.5 acres shall be on a permanent foundation and architecturally treated so as not to appear as a storage container by providing a minimum of three of the architectural treatments listed below, each of a different type, and that the Planning Commission may require additional architectural treatments as necessary to ensure consistency with town standards. So those examples provided by the proposed resolution are residential exterior cladding, such as stucco, wood siding, or masonry veneer, trim elements such as corner boards, fascia, soffits, um, fi-- pitch roof with complementary roofing materials, extended eaves or parapets, uh, simulated or faux non-operable residential style windows, decorative facade elements such as awnings and shutters, uh, complementary paint and color scheme, and landscape screening integrated with the

structure. So the recommendation is that the Planning Commission reviews, uh, Chapter 9.07, Section 9.07.0060C adopts the proposed draft resolution number PC 26-03 attached to the staff report. And staff is available for questions following public comment.

Chair Thomas stated, thank you. Uh, obviously, no one else in the public that wants to comment on this, but we'll look online. Nothing there. Okay, we'll start back on my right to Commissioner Vasconcelos.

Commissioner Vasconcelos stated, thank you, staff, for that detailed report. Like we asked you to bring you, you brought back some good information for us to discuss and to think about. Um, I do like the resolution that you've kind of drafted up here regarding the three different elements. Um, the siding and making sure, uh, it is, you know, similar type of materials that can conform with, you know, the existing exterior of the building. Uh, I liked the, the comment from one of the cities. They were saying that, you know, if it was more than two acres, it wasn't required to do a specific-- you know, as many kind of details because, you know, the, the pro-property is, is larger.

[inaudible], yeah.

Commissioner Vasconcelos asked is there-- is there anything in ours that says that if that-- uh, if it is larger? I saw that i-it said in here, you know, y-- it has to have-- you know, "Anything that's, uh, smaller than two and a half, it needs to be on, um, you know, concreted-- anything larger than two and a half acres shall be on a permanent foundation and architecturally treated," but.

Assistant Planner Willoughby stated to answer your question, yes, our code, um, does have a similar provision. So above that 2.5 acre threshold, a property owner can have a container on their property without a permanent foundation, without architectural treatments.

Commissioner Vasconcelos stated okay.

Assistant Planner Willoughby stated that is allowed under current code.

Commissioner Vasconcelos stated okay. G-good. Um, I think that-- I mean, I, I think all the, the-- uh, I think if we do meet three of the-- of the, the architectural treatment elements that are provided here, I think that'll be good enough to make it seem like, uh, uh, it's not just a shipping container on a property. Um, I don't know if there's particular materials that we wanna exclude or types of materials on the different types of buildings that may be causing-- you know, might cause an eyesore or something along the line. You mean-- I don't know. People can get creative with what they have--

Chair Thomas stated yeah.

Commissioner Vasconcelos stated--but I don't know if there's something that we need to discuss as a group to-- uh, to find [crosstalk]--

Assistant Palnner Willoughby stated so as, as one example, um, one thing that may be commonly prohibited, and I think at least one ordinance addresses it, uh, from the examples provided is reflective siding.

[crosstalk] Yeah.

Assistant Planner Willoughby stated um, so for the Planning Commission's consideration.

[crosstalk] That was--

Yeah.

Commissioner Vasconcelos stated--that was a concern. So I'm-- but thank you for the hard work and, you know, uh, I'm pass it on and we can continue the discussion.

Chair Thomas stated yeah. Commissioner, uh, Stoker.

Commissioner Stoker stated yeah, thank you again staff for all the digging through other people's ordinances and, and code. Um, there were some particular ones that I thought were interesting. Um, the City of Escondido, uh, ha-had a item that just said, "No signage shall be allowed on any permanent cargo container," which I, I appreciated not only for smaller than 2.5 acres, but larger than. It just kinda gets out of that realm where you see, like, a shipping company out in the middle of the desert where it's burgundy and says, you know, "Property of whoever they bought that container from--" um, but that kind of, "No signage shall be allowed," makes it to where you have to paint it. Um, the other one that I thought was really interesting, also in Escondido, said that, "Cargo containers shall be painted a non-reflective neutral color that is compatible with the primary structure or to blend with-- in with the surrounding environment. So for us, I think that would be like a n-- a desert-neutral tan or something that kinda makes it go away rather than look like a burgundy container out in the middle of the desert, um, which I think is kind of the intent of what our code is, is asking for. Um--

[crosstalk] As unobtrusive as possible.

Commissioner Stoker stated yeah, just, just to make it go away.

[crosstalk] Yeah.

Commissioner Stoker stated the other int-interesting things that I saw, and I didn't dig into ours again after reading all these, but I liked the other, language in item C on packet page 1,638, which is kind of where I saw most of the things I liked, um, where it said that, "Cargo containers may be used for storage only and not for human habitation, and that they may not be used to cons-- to store hazardous materials, um, in violation of any state, federal, blah, blah, blah." Additionally, in Murrieta, uh, they had an interesting-- uh, where was the one that I really dug on them? Oh, oh, th-their, their item G said that, "A cargo container should be modified to match the residential structure," which is similar to ours utilizing three of those styles. "And on larger parcels over two acres, the modification shall be limited to the paint color of the exterior." And s-so that, that was kind of a nice little bit of language that maybe addresses larger, larger parcels and makes it to where they're no-- they're not-- also not an eyesore, even though there-there's less regulation on those. Um, in all of them, I really appreciated the landscape screening methods, um, which I think is probably the most attractive of anything, is having some sort of plantings or hedge or trees to kind of stop the-- just looking like a container.

Um, and then I really dug on packet page 1,639, item K, which stated, "Existing cargo containers at an existing residential property can remain in place 18 months from the effective date of this ordinance." So at least it s-- kinda sun-- it kinda sunsets the existing non-conformity that may be out there and allows us-- allows us to bring some more of those existing non-conforming containers into conformance. That way it's not like we're in, in essence just picking on one. It gives us some--

[crosstalk] Right.

Commissioner Stoker stated--teeth to be able to get more people into, into conformity.

Chair Thomas stated Vice Chair Herensor-- Henderson.

Commissioner Henderson stated, yeah, some really good points by everyone and a great job by staff on putting this together. The one thing that stood out to me at the last meeting was Chair Thomas when he had said that he would like to see some language about-- Twentynine Palms does a good job of, of putting this in there on page 1,637 where they say, "Which are architecturally consistent with the primary residents." And I think that, you know, this draft-- the resolution we have is great. I would love to see that language put in there by providing a minimum of three architectural treatments so that the, the unit is architecturally consistent with the primary residence or somehow aligns with the primary residence.

[crosstalk] Right. Right.

Commissioner Henderson stated I think that would be good 'cause you don't want-- I, I don't know. It just sounds--

[crosstalk] Yeah.

Commissioner Henderson stated--right.

[crosstalk] Yeah. Yeah.

Vice Chair Henderson stated it gives them a, a playing field to go for. But that's all I have.

Chair Thomas stated, okay. Uh, Chairman Noonan-- or not Chairman Noonan. Thank you. Commissioner Noonan.

Commissioner Noonan stated, thank you. Um, so I'm, I'm, I'm happy with the-- um, hitting the three elements that are listed. I think that'll, that'll take care of it. And that would be also including that they have to be on a certifiable pad, correct?

Assistant Planner Willoughby stated yes, that's--

[crosstalk] Yeah. Yeah.

Assistant Planner Willoughby stated --current code.

Commissioner Noonan stated so the pad plus any three of these elements, uh, being in the wording, I think, uh, would, would be great. So I, I like-- I like the work you did. Uh, we've got lots to, to look at and choose from, I think, in drafting ours, so.

Chair Thomas stated, yeah. uh, thank you, Evan, and, uh, to the staff for, uh, putting together and getting the information that we asked you guys to do. You did a great job on that. Um, yeah, I'm in agreement with everybody regarding the, uh, consistency and, you know, three elements. Um, I, I like what, uh, Commissioner Vasconselos said that if the lot is over two and a half acres, maybe we don't, you know, be so sticky on some of this, uh, uh, you know, if the properties are really large. Or the other item, too, is-- uh, 'cause, uh, I, I know you guys have had some issues with that. But if you get a, a plumber that's in a house that's on a commercial setting and he's got a shipping container there to store his stuff in, maybe that shouldn't apply either because it's on a commercial zone property as opposed to being in residential. So, um, we've, we've seen some of that stuff going around a little bit, but,

uh, that's just something to bring up.

Deputy Town Manager Stueckle stated, I think staff has suf-sufficient direction that we can go back, make modifications to the resolution, return it back to the commission for final action.

Commissioner Stoker stated okay. Would it be a-applicable to, to continue this then? Continue the action. Actions to continue?

Deputy Town Manager Stueckle stated or just receive in file this evening. Yeah. Just bring-- just bring--[crosstalk]

Um, Gi-giving staff--

--a motion to receive in file [crosstalk]--

Deputy Town Manager Stueckle stated--direction, we'll return the matter back to you.

[crosstalk]Yeah.

Chair Thomas stated, okay. I'll, I'll make the motion to receive in file.

Motion:
That the Planning Commission reviews Chapter 9.07 Residential and Hillside Reserve Districts, Section 9.07.060(C) and adopts Resolution No. PC 26-03, attached to this staff report. Motion to receive and file.

Result:	(Yes 5, No 0, Abstained 0)
Mover:	Commissioner Mathew Thomas
Seconder:	Commissioner Gerard Noonan
Ayes:	James Henderson, Gerard Noonan, Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

12. Policy Discussion on Minimum Single-Family Residential Dwelling Unit Size

Chair Thomas stated okay. We go to, uh, item number 12, policy discussion on minimum single-family residential dwelling unit size.

Assistant Planner Willoughby stated, thank you, Chair and Commissioners. This is on packet page starting 1,687. The recommendation is that the Planning Commission retains the current minimum standard of 725 square feet for single-family residential dwelling units and discusses the policy information provided in the staff report. Alternatively, uh, the Planning Commission provides a recommendation to the town

council requesting policy direction to research development code amendments relating to dwelling unit size, including but not limited to single-family and multi-family standards and minimum dwelling size standards varying, uh, by the underlying residential zoning district. This, um, is graphically depicting some information provided in the staff report, uh, which is, um, listed on packet page 1,693 to address the single-family residential permits issued, um, by the town from 2023, 2024, and 2025. On the left-hand side is the size range. Um, so 725 to 799, you can see over a period of three years, there has only been an average of one, uh, single-family resident on that lower end of the spectrum, um, per year. Most single-family residences occur in this area above 1,000. You also do see some, um, in 2,000 and continuing to at least one outlier, um, around, I believe, 4, 325 at the time of writing the staff report.

Now, um, the Planning Commission, um, did request some research on other jurisdictions. So, uh, for background, our closest city of Twentynine Palms is still currently at their 400 square foot minimum across all their residential zoning districts. Uh, Town of Apple Valley is, uh, varying, uh, from 1,100 to 1,200. I believe in this case, uh, 1,100 applied to a specific tract, uh, within the town of Apple Valley. Uh, City of Victorville is at a uniform 1,400 square feet, and, um, these other cities may have a number of other, um, m-much more varying, uh, standards, all the way from 600, 750, 900, 1,000, 1,100, 1,350, 2,000, 2,500, and three-- 3,000. Uh, one thing that was interesting, um, to staff, uh, which was apparently not the case when this research was last done around 2019, is there are a good number of these cities in the list, uh, that currently have no minimum for single-family residential dwelling unit size and go solely by the Title 24, California Building Code. Um, it's my understanding in talking to our building official, that minimum number by the building code is somewhere around 164 square feet. So it accommodates, uh, just the bare minimum of that sleeping, um, sanitation, and, and some cooking area.

This continues on, uh, to the next list of cities. A lot of those that you can see do vary the number. Uh, typically by the zoning district, but I'll also show you an example in the next slide that varies it, not just by the zoning district, but also by the number of bedrooms. So this is the City of Cathedral City that you saw in one of the preceding slides with quite a good number of, uh, different minimums. These are two of their single-family residen-- residential zoning districts. Um, this one here for context, is typically one-acre minimum size lots. So, on those one-acre lots, a, a house with, um, two or less bedrooms is required to be a minimum of 2,000 square feet, three or more bedroom-- three bedrooms is 2,500 square feet, and four or more bedrooms is a minimum size of 3,000 square feet. Um, for contrast, as it gets down to the lower parcel sizes, I think this zoning district went down to at least seven-- 7,200 square feet for minimum lot size. The number, uh, which still varie-- varies based on the bedroom, is two or less bedrooms re-requires 1,000 square feet, and three or more bedrooms requires 1,200 square feet, which is still above, uh, where we are today by

our local standard.

Uh, for some additional context, there's some information attached to the packet that might be interesting for the commission to review. Um, there are links provided to all those cities, um, that are included here. Um, so if the commission chooses to, you can click through that information. And, um, it is starting on packet page 1,695. There's also some additional historical information if anyone's interested on PAC page 1,696 and a map, uh, that staff created to, to visualize that historical information on 1,697. Just briefly touching on that, um, there were some much older tract restrictions, um, that Art Miller Jr., um, informed the county at the time of by sending a letter. Uh, those tract restrictions had minimum unit size requirements anywhere from 600, uh, 900, 1,250 all the way up to 1,400. And, uh, you can see that visually on packet page, uh, 1,697. So once again, uh, the alternative is that the Planning Commission retains the current minimum standard of 725 square feet for single-family residential dwelling units and discusses policy information provided in the staff report, or, alternatively, that the Planning Commission provides a recommendation to the Town Council requesting policy direction to research development code amendments relating to dwelling unit size, including but not limited to single-family and multi-family standards and minimum dwelling size standards varying by the underlying residential zoning district. And staff is available to answer questions following public comment.

Chair Thomas stated okay, thank you. Thank you, Evan. Um, seeing nobody in the public, uh, anybody online wish to make a comment. Okay. Close public comment, and we'll go to Commissioner Noonan.

Commissioner Noonan stated, thank you. Um, does staff see any particular reason why i-if lowering the square footage would be advantageous, maybe hitting housing elements or something like that? Is there-- is there any purpose that we can see other than the quality of the actual structure?

Assistant Planner Willoughby stated uh, by itself, um, lowering single-family residential dwelling minimums alone, um, may not be too ad-advantageous in, in conversations and reaching out to these cities and planners who work there. Um, for context, even the ones that had lower minimum dwelling unit sizes than ours typically do not see, um, dwelling units submitted even below our minimum of 725 generally. Um, some can count just a handful in the past few years. Um, but as a whole, the alternative recommendation is structured such that a wider policy discussion could occur not just to address single-family residential standards, but also multi-family. Um, included in your staff report is some notes about our multi-family requirement. Um, a two-bedroom multifamily apartment, for example, is required to be a minimum of 750 square feet, I believe, by our code, which is more than the 725 for single-family residents. So there could be a broader conversation, um, to open it up

and address things that could more comprehensively address, uh, housing.

Commissioner Noonan asked, do you see multi-family residences coming, uh, to our table here soon? Or-- I mean, or is it-- is this really just we're just discussing single-family right now and, and whether or not we wanna lower that?

Assistant Planner Willoughby stated the policy discussion requested by the commission was single-family.

Commissioner Noonan stated okay.

Assistant Planner Willoughby stated um, staff did just want to note information about our multifamily standards in that context and provide that alternative recommendation, um, to address both of those things together.

Commissioner Noonan stated okay. On that, I, I see no reason to, to change it, uh, from my personal view unless someone else has a better reason. So that's all I got.

Chair Thomas stated all right. Thank you. Uh, Vice Chair Henderson.

Vice Chair Henderson stated so, Twentynine Palms is 400 feet. And I believe Commissioner Stoker, you, you had brought this up at that o-one meeting, correct?

Commissioner Stoker, stated yep.

Vice Chair Henderson stated and so I was just curious in conversation, whether Chair Thomas from a real estate aspect or, or Chair Stoke-- or, uh, Commissioner Stoker, have you seen a demand for--c-- for smaller single-family residences at all? Um, where I've seen this, uh, just on s-- on YouTube was, like, uh, tiny houses for Airbnbs in Joshua Tree. And looking at the square footage, they're probably down, you know, under 1,000 feet for sure. Um, but have you seen any demand for this?

Go ahead.

[crosstalk]--Oh yeah, I can--

Deputy Town Manager Stueckle stated just one, one bit on it. At the staff level, the answer is no.

[crosstalk] Okay.

Deputy Town Manager Stueckle stated there-- a-and if you can go back to the slide in the PowerPoint, which shows the size of single families that have been permitted

over the last three years, no one's walking in the door asking for a smaller home.

[crosstalk] Okay.

Deputy Town Manager Stueckle stated so a-at a technical level, that hasn't occurred.

[crosstalk] So would--

Deputy Town Manager Stueckle stated in terms of a tiny home, tiny homes are not stick-built homes. Tiny homes are recreational vehicles or travel trailers that are permitted by the State of California, and cities in California set up an actual zoning district separate from all of their other residential districts for tiny homes. So what you're really talking about here is, is does the town want to have a minimum dwelling unit size? So you have--and the reason staff pointed out, multi-family, is you've got multifamily, a two-bedroom multifamily is larger than your smallest single-family standard.

Chair Thomas stated right.

Deputy Town Manager Stueckle stated and that's a little bit awkward. I don't think that's necessarily typical. Um, so it really comes down to-- a-and I think you should always ask yourself this question when you're working on a public policy issue. And that's what this is, "What problem are we trying to solve?" Remember, government just gets in the way.

Chair Thomas stated right.

Deputy Town Manager Stueckle stated go-government creates more problems than it solves. So the question is, what problem are we trying to solve with considering minim-minimum modifications to the dwelling unit size? And that's for the commission's discussion. Is the goal to build more homes? No, I don't think your goal by adjusting a minimum square footage of a home when you're already at 725 is to facilitate more construction when you've had no applications and no one really screaming for that smaller unit size per se. So anyway, that's just a little bit of background in terms of the whole overall dialogue. Um, I don't know in-- when in discussions with Twe-- did we talk with Twentynine Palm staff if they see any units coming in at that size or no?

Assistant Planner Willoughby stated uh, yes. Uh, we did discuss with Twentynine Palm staff. They are not seeing units coming close to their 400 square foot minimum. Um, so it is fairly rare if it does exist in, in the past.

Commissioner Stoker asked, did you-- did you query the county? Is it how many they

had?

Deputy Town Manager Stueckle stated uh, no, we would not query the county. The, the, the town incorporated it for the purpose of, of municipal regulations and to move away from the county. The county is much larger in jurisdiction. Geographically, they have to address many, many, many other issues than cities do. So no, we would not compare ourselves to the county when it comes to looking at those types of issues.

Commissioner Stueckle asked or, or, or, or just for the statistics of how many were built?

Deputy Town Manager Stueckle asked pardon me?

Commissioner Stoker asked or just for the statistics of how many were built?

Deputy Town Manager Stueckle stated no, because we don't compare municipal growth, municipal development to county.

But we can-- okay.

[crosstalk]

Chair Thomas stated I mean, more and more of-- uh, y-you, you see more and more of the trend going towards these small houses that can be popped up really quickly. You know, uh, Tesla's working on some of them now. And you-you've seen these things at some of the trade shows now where you can come in for 70, 80 thousand bucks and you can buy a little 200, 300 square foot house and put it up and it's self-contained and all this other stuff. Are we kind of keeping our eyes open as to that trend or, or, you know, what's happening? And maybe, we-- like you said, maybe suggest a, a separate zone for that kind of thing. Is there anything like that that the town has discussed? Uh, uh--

Deputy Town Manager Stueckle stated so ultimately, as you all know probably better than staff, the market determines what gets built--

Chair Thomas stated right.

Deputy Town Manager Stueckle stated --at the end of the day. So has there been any development interest that has come forward and tried to implement a tiny home village or a tiny home neighborhood? No, that--

No, no, no. [crosstalk]--

Deputy Town Manager Stueckle stated, --that hasn't-- and I don't know if you guys have conversations--

Chair Thomas stated, no, I was thinking more on an individual residential basis, not a multi-family basis. Like, there-there's a lot of this st-stuff that's starting to hit the market right now because of the unaffordability of housing. So they're just looking at these things, and so--

Deputy Town Manager Stueckle asked do you wanna talk about inquiries you and Jared receive on a typical basis, on residential development?

Assistant Planner Willoughby stated on a typical basis, um, inquiries on single-family residential info lots, we typically try to address the main development standards first and foremost. So they're aware outright, 725 square foot is the minimum. You're-- Correct.

--required to have two-car covered parking. Um, generally, there's no push back on 725.

Chair Thomas stated yeah.

Most people say, "Oh—"

[crosstalk]—

"—I'm, I'm gonna go way—"

Bigger.

"—bigger than that."

Hmm.

Assistant Planner Willoughby stated "I'm going 1,500 square feet." Um, in terms of more unique inquiries on different housing types, uh, I can only really think of one. Um, and it's actually, uh, from the property owner who put forward the fence, uh, application earlier tonight on a separate property to the west in that industrial zoning district, um, to do something like a tiny home subdivision. So there's only been one who's really brought up that topic in the last few years that I've been with the town.

Chair Thomas stated okay. Well, I was just-- I was just curious from a-- from a standpoint of whether you guys have heard of any of this or we're watching the

market trends kinda move to these smaller, quicker homes where-- you know, because of the affordability crisis right now, I guess, and all of this stuff. So what is-- w-- I, I didn't see this here, but it-- I'm sure it's in our, our, our big packet here, but on our 750 square feet, what is the maximum number of bedrooms that can be put into that unit?

Assistant Planner Willoughby stated the maximum number of bedrooms would just be by the California Building Code. So that would dictate what the minimum size for a bedroom and how many you could accommodate in that living space while still complying with those building codes. So we don't--

Okay.

Assistant Planner Willloughby stated --set a, a maximum number of bedrooms by our development code. We just follow build-building codes for that.

Chair Thomas stated you just fo-- you just-- okay, that's great. Okay, that's all the questions I had. Commissioner Stoker.

Commissioner Stoker stated, yeah. So, um, I mean, uh, I think from a real estate standpoint, if a developer is gonna show up in any town or jurisdiction and they're not just running out buying the first thing that pops up, they're gonna do their due diligence. So if someone looking to build a house that's smaller, that looks at our development code or contact planning staff, is gonna know what the minimum sizes are. Anyone that's doing some-- any other construction outside of that norm, I don't think is-- they're not gonna beat down your door to ask because if they're a developer of-- with any salt, they're gonna look it up and know, uh, prior to making a purchase of any property. Um, i-in, in looking at con-conceptually and, and really taking our planning commissioner conference to heart and, and what was kind of brought up at many of the-- many of the talks we had there, um, they discussed our, our housing element ad nauseam and ADUs ad nauseam. And it, it got me thinking about these types of homes even last year at our last planning commissioner conference. Because to me, our job is to plan where we're--

Chair Thomas stated right.

Commissioner Stoker stated --we're planning for the future. And if part of our residential packet that says, "This is how you plan for a house. If you're building a house that's small, then the, the town requires you to site that house in the rear of the property and provide space in the front portion of the buildable portion of that property for a future phase to be a main house," and that would become an ADU or vice versa. I, I even think our larger homes, when we take a plan in, if we're gonna think about the want from the state and the-- and the need for more housing, when

we have someone that comes in and says, "Hey, I wanna build 2,000 feet," we tell them, "Okay, great. Here's your 2,000-foot footprint. Where you wanna put it? Make sure you have 600 square feet that's-- that you kinda have thought out and planned ahead for an additional dwelling unit in the back an ADU," that way we're, we're working with applicants to make sure that they've-- we're really planning for the future. And, and with the future that California with the ADU rules we have, gives us direction. And, and that's kinda where my brain was like, if, if you just build a house without thinking or site a house without thinking, um, going back to when I was drawing plans a lot, I used to make sure I cited a house thinking if I wanted to expand this house or, or add another bedroom on, I wanna make sure that that side of the house still has some room left on that side of the setback. I'd stuff the house onto one side to make sure there's some buildable space left over rather than setting it dead center to where it gives the owner zero flexibility.

And I think there were-- that's what this-- looking at these types of things where people-- or the cities are removing minimum size. It, it lends itself to flexibility. If someone-- if, if I was s-single or just newly married and I said, "Okay, I wanna buy a property, build a small house," and it's in the back corner knowing that down the road I wanna have a family, that might be your starter to get yourself in the door. Get all your utilities there, set yourself up, have this kinda planned place where a larger house can reside. Make sure you, you know, plan yourself out properly at the beginning. And I th-- uh, i-in, in my brain, that's where my brain goes to. Like, these houses, one, it-- i-it-- i-it makes it to where people that are coming up here for a weekend, they might not want a big place. So tha-that might take some of the houses that-- uh, our weekender houses out here, and they might say, "Oh, what I really want is 500 square feet or 400 square feet, just a-- just a weekend like the-- all the homesteaders that were doing it for, for years and years and years before I was born."

And, and that-that's the other little caveat is we have lots of little peppered homestead houses that are still out there that are kind of existing non-conforming, that really can't become a single-family resident still in, in town that with something similar to this could do some very minimal upgrades and become an SFR. Um, so th-that's where my head goes. Like, I see little survivors and they're kind of all up on the mesa, right up on the edges of our-- of, of town, but they're there. They're, like, still sitting out there. And we've had people that have came to our Planning Commission I think seven years ago, wanting us to give them a variance, I've-- if I remember right, on the ability to have their homestead house be an SFR, even though it had previously been given water and power by the county before our incorporation. So having things like that, I thi-- I think would help that situation. Um, and that's kinda why I brought it up as an item, is, is I-- you know, I, I, I know even in the county, there is-- there are smaller houses being built. The one you men-mentioned. Um, I met with that kid who was building those little tiny houses in Joshua Tree. Um, they're not--

they are stick-built. It's like a two-story stick-built house on a footprint that I wanna say is like 175 square feet or 200 square feet with a second floor. It's a weird little two-story thing and it's a one-bedroom, two-story thing that is l-literally like a little teeny tower with-- uh, with like a shed roof for a carport. And, uh, it's a cool little, little house. Um, he built another one. I wanna say it's like 625 square feet in kind of Quail Springs on a weird little lot. And, uh, i-it's like a perfect little weekender spot, um, but it, it helps us hit those numbers. Like, if there's people out there that are looking for something different, I think that helps us hit those numbers.

And n-- for me, even hearing Evan, when you mentioned multifamily, that our multi-family standard is actually a little higher than our single-family standard, if anything, having some more studio apartments-- if there's gonna be an apartment complex being built and having some studio-type things that are 400 to 500 square feet might help us really hit our numbers for multifamily, which we've never hit, or might entice a developer to come up here and wanna build some two-bedroom apartments, single-bedroom apartments, and studio apartments, and have a really good mix of multifamily, um, where it kind of hits different, different things for different people. 'Cause I think there's a lot of single people out there that maybe don't wanna have 1,000 roommates just 'cause most of our housing stock is two-bedroom and three-bedroom homes. They might r-really want to have an affordable studio or s-- or one-bedroom.

Chair Thomas asked, would you be in favor of lowering the square footage amount [crosstalk]--?

Commissioner Stoker stated I, I, I think I would be in favor of lowering the square footage amount, either getting closer to 29 at 400, which I think kinda hits most of th-those remaining-- if I was to guess-- I, I, I wanna say, like, a lot of the ones that I've measured in the past for people for homestead houses, end up being like 330 to 400 square feet. I, I think like 330 was somebody's sweet spot in the '50s when they were building those homestead shacks. Um, but a lot of them are still survivors. Like, up--

Yeah.

Commissioner Stoker stated --up, that wash, um, in La Contenta where our applicant earlier-- there's a lot of those little homestead houses that are kinda still there and still being lived in by people, um, even though they're kind of one-bedroom guys. Um, there's w-- uh, one that I know had water and power forever and ever that, um, a really good friend of mine that m-moved out here-- it was-- it was his weekend house in the '60s and '70s and '80s. And when he retired, he moved out here with his wife. They sold that little thing and bought a, a larger home and retired here un-until he passed. And it-it's still a little survivor that I drive by, and it's probably the smallest house right when you pop out of Juarez into, into La Contenta wash. Um, a-and it-- to

me, I, I think there's an opportunity for us to help hit our number in a little bit different way. And if we could modify our planning of people's single-family homes, if that's something we can add-- Shane, I don't know, you'd be able to speak to it. Is that something we could add to plan-- like, have them in part of their site plan site where the complimentary housing unit would be on a lot? Or is that not something we could ask for?

Chair Thomas stated it seems to me like that would be more of a recommendation than a--

Commissioner Stomer stated well, it would be something that----[crosstalk] say, "Hey, you could do this, but we're not gonna push you to do that [crosstalk]--"

Deputy Town Manager Stueckle stated so, Yucca Valley historically has taken what I would call a hands-off approach on single-family lot development design. You have no design criteria, no design guidelines for single-family homes. When you start going down that pathway, especially if you make-- if you incorporate those types of things into standards, that becomes a-- it's a really bad word today for us. It really is.

[crosstalk] Yeah.

Deputy Town Manager Stueckle stated it becomes a discretionary permit.

[crosstalk] Yeah.

Deptuy Town Manager Stueckle stated every discretionary action subjects you to what? Subjects you to CEQA. What does CEQA subject us to today? Incidental take permits for western Joshua tree. So, when we start going down that-- uh, understood and staff supports. You know, we've sat here now for 35 years of incorporation. You're the rare oddity of designing lots and thinking about those things in the future. If you ask Jared and Evan who worked with people on the phone, at the front counter, most people walk in blind. They haven't looked at the code. They haven't-- they haven't looked at the code. They don't know. They're just gonna plot that house on there and it is what it is. You think about those things because you-you've come up through that background. Um, so anyway, that starts us-- starts to take this community, this organization, in a direction that hasn't gone before. That's not a staff determination. That's ultimately a Planning Commission and Town Council conversation on where you wanna take that. But for every action, there's a reaction. The more complicated you make it, the more time it takes. It subjects it to more regulations. It has the potential for cost increases, all of those types of things.

Commissioner Stoker stated, but, uh, don't we require-- we require a whole litany of things on a site plan already that even as a [crosstalk]--

Deputy Town Manager Stueckle stated information. Information, yes. But in terms of regulating--

Commissioner Stoker stated well.

Deputy Town Manager Stueckle stated--outs-- out-- as long as they meet each one of those criteria, we're, we're mandated to issue a permit. So that's not a discretionary action. In other words, your code is criteria-based or standard-based. If you meet all these following things, staff has no discretion and we're obligated to issue a permit. When we start going down the path of, "Well, we want you to move it over here because of the following reasons," that's where the discretion--

Commissioner Stoker stated well, I-- but if-- but if--

Deputy Town Manager Stueckle stated--comes in.

--one of the standards is plan for-- plan for the ability—

Potential—

Commissioner Stoker stated--to put an ADU in, then it's still a—

Deputy Town Manager Stueckle stated agreed. Uh, but—

--it would still be [crosstalk]--

Deputy Town Manager Stueckle stated just y-- so, so the Commission's aware, we would have that conversation with the legal counsel's office because they're experts in discretion and non-discretion. Um, and then we go down that, that horrible path that so many property owners are facing.

Chair Thomas stated yeah, as an informational thing, I think, you know, planning for ADUs and stuff like that would be fine. I agree with that. But I, I think mandating it or trying to, you know, tell-

Yeah.

Chair Thomas stated--somebody, "Well, you got to put your dream house over here because you got to have room for--" and then maybe they don't ever wanna build one, uh, a-an ADU. So I, I, I don't wanna get into that kind of thing, but just as an informational thing, I think it would be good to hand to people and say, "Hey, here's something for you to think about." You know, that's fine. You know?

Commissioner Stoker stated yeah. No, I, I get you. And I-- and I understand all that. And, and I'm just trying to make it like-- i-it doesn't need to be us telling them where they need to put everything [crosstalk]--I-it's just like when we-- when we draw plans for a site now, we didn't used to have to decide where our s-- where our leach line was gonna go and have enough room planned ahead for 100%--

Mm-hmm.

[corsstalk]--of-- uh, of--

Leach bands.

--leach failure--

Yeah.

--we-- of expansion.

Okay.

Commissioner Stoker stated we didn't have to think about that before, but now we know that leach fields fail and now there's people out there with septic tanks that have no room to put a leach field because that wasn't thought about as something to pre-plan for. And, and that's kind of like-- that's something we put on there now. It's not discretionary. It's just one of the many things you look at when you're designing a home for any s-- any site and making people aware of what's out there for them like, "Hey, think about your guesthouse because it's an ADU now." People didn't used to think about that because granny flats couldn't have a stove. And then the second you were done getting your final, you pulled out that one cabinet that was 30 inches wide and threw it away and slid a stove in for grandma to move in because you weren't allowed to have two kitchens, you know? And we've moved on from that concept. Um, and now it's looking at finding creative ways to have more housing and hit numbers that we're never gonna hit if we don't kinda get a little bit more creative, I don't think.

Chair Thomas stated yeah.

Commissioner Nooan stated I have a couple of questions to-- now that we've been discussing this. [crosstalk]--

Chair Thomas stated yeah. C-- let me-- let me go to Commissioner, uh, Vasconselos, and then we'll come back to you.

Commissioner Noonan stated sure.

Chair Thomas stated yeah.

[crosstalk] Sorry.

No, it's fine.

Commissioner Vasconcelos stated sorry to take up more time, but--

No, it's good.

Commissioner Vasconcelos stated I'm looking at these n--these sizes, the square footages of, uh, minimum square footages. And with my experience of working within this community, Yucca Valley and Twentynine Palms, it seems to me like in Twentynine Palms, when they set these standards for that minimum size, it's probably to make sure that m--a good portion of the homes c--sc--come into conformance or stay in conformance when they're establishing that rule, I would think. Because going out in Twentynine Palms, there are a lot of these small homes that are existing that were there existing in those sites. Coming here into Yucca Valley, I didn't run into nearly as half as many homes that were in this, this size of a--of a 400-square-foot size home. In fact, the house I moved out of my mother's house into to move into was a 900-square-foot home. Looking at it now, when I was a kid, moving out, I'm thinking the house was a, a huge house. Now I look at that--I, I had a patio built that was 900 square feet. So, uh, I-I mean, it's all d--relative to what you need. But in my opinion, I think that lowering the number to 400 square feet is just not--it's not what's right for this community, in my opinion. Um, we wanna have a community that--you know, like, like what Town--uh, like staff has said is that, you know, the need--if the need is there, we would be hearing about it, I think.

Chair Thomas stated yeah.

Commissioner Vasconcelos stated you know? They're not hearing the need. But again, as to Commissioner Stoker's point, if there was something there, we might be seeing someone that may--might be drawing atte-attention to other people that--wanting to come up here and, and build that type of a home or even just, just, uh, the code--a-and as a whole, you know, like, saying that the multifamily, the minimum size is smaller- is larger than our minimum house size. Um, there was a lot that was said that I wanted to talk about, and, and Commissioner Stoker just kind of washed my mind out 'cause he kept going on and on.

Commissioner Stoker stated sorry. Sorry.

Commissioner Vasconcelos stated and, uh, you know, the--I get what your--the points were, were made about, like, th--not looking at what was going on within the county, even though we are surrounded by the county. But you're right. The rules have to addre-address a large area. It's not just our area that they have to conform. There's a lot of area within San Bernardino County that people build that are unincorporated. And those rules are set for that particular area as well. Um, typically, in, in the Town, you know, we have larger homes, like a 900-square-foot home seems reasonable enough. And as you start moving out, you start getting into the County, you start going into Joshua Tree, Morongo, wherever, the homes tend to get smaller.

Chair Thomas stated right.

Commissioner Vasconcelos stated and I think that's a reasonable expectation for them to have. [crosstalk]--

Commissioner Vasconcelos stated you know? Uh, the-- it's just a difficult--it's a di--it's difficult task, I think, for us to, to determine. I r--I really think that we, we should, you know, m-move this on to, you know, the Town Council and ask for direction on not just this policy, but I think the policy as a whole for multifamily and for single-family residential--

Chair Thomas stated yeah.

Commissioner Vasconcelos stated--of, of where we're gonna go if, if-- because it is-- it is important. These smaller homes, yeah, I get it. Like, uh, uh, elderly people, you know, people that can't afford, you know, th-- people that don't even have homes that when they're elderly-- you know, seniors, they don't-- they're renting still. And they-- you know, they're still having that dream to buy, buy a house, own a property. You know, with a smaller home for them. You know, just them or a sing-- they're by themselves or they're-- you know, m-maybe just two of them. You know, small little 600-square-foot house is perfect for them.

Commissioner Stoker stated well, it might o-open up more single-family lots that are adjacent to multi-family lots that could have two smaller houses as a planned, almost like duplex-y sorta thing. That's really a main house ADU that are both similarly sized.

Even if it's four or five hundred square feet, um, that's kind of already built that way.

I think, uh--

But it gives you options.

Chair Thomas stated um, Commissioner Noonan, you had some additional questions.

Commissioner Noonan stated, yeah. So couple of questions and comments based on the discussion. Um, I think i-i-it's not really a good comparison to talk about what's going on in Twentynine Palms simply because they have a Marine base, they have Marine-based housing, and the requirement for a person staying in one of those dwellings, um, is different because they have the support of the entire largest Marine base with all the amenities and all the things on base that they can use. So the actual, uh, square footage of the space they need really doesn't-- I don't think it matches up with what we're trying to do here. The other thing is, um, y-you know, uh, rec cabins versus single-family residences. I know a lot of these small buildings end up in Big Bear and stuff, they have what-- they're, they're called recreational cabins. They have limited amount of time you can stay in them and that's the designation. I think a lot of these s-settlers' cabins out here were, were probably designated as, as rec cabins. So I don't know if even that is really something that's considered a single-family resident--uh, residence. Um, I've talked to a couple people who've-- saying they've, they've had to get, you know, um, uh, uh, variances. They had to get the, the, the designation of s--of rec cabin taken away so they actually stay in their own house.

So, um, a-again, so the--I think that, that explains some of these smaller than 725-square-foot places that we're seeing. I'm not really sure they really are single-family residences. Staff said something interesting to me is stick-built versus the tiny homes are pre-assembled homes. And the, the need that I see mostly with people that I talk about in the community is, you know, they're still--they're still trying to do a, um, you know, uh, uh, um, v-vacation rental. They'll, they'll bring in a small, tiny home to put on the property so they can stay in while they rent their bigger house or vice versa. Uh, I see that being very useful. And I see that if there's a--

Mm-hmm.

Commissioner Noonan stated--if there's a-- if there's a plan for these smaller than 700-square foot--uh, 725-square-foot pre-built houses, if that's a designated thing or a plan like that you said, I think that solves the issues that we're talking about. But when it comes to just issuing a stick-built permit, I-I don't see anything wrong with that number. You know, I, I think that we're talking about two different things, whereas you could bring in a pre-built, uh, you know, Tesla home and stick it on your property, and that's a different issue. So I just wanna make those comments 'cause I, I wanna make sure we're apples to apples and--

--all of the comparisons. [crosstalk]--

Chair Thomas stated--I, I kind of agree with that too because that was my--th-th-that was my purpose for just bringing it up as a discussion. I wasn't necessarily pushing for

anything in regard to that. But I've just seen a lot of the market trends start going to these prefab, quick things. You can get them up and they're--and some of them I walked through it at some of these trade shows. They're really nice. I mean, they're better than some of these things that we s--we see out here. So I just wanna make sure we don't cut ourselves off from that if the market starts to really--you know, if, if we're flexible enough that we can do something in the code that will say, okay--maybe, like, what he was talking about, if it's stick-built, maybe we have certain parameters, but maybe some of these new, you know, high tech free [vent?].

Deputy Town Manager Stueckle stated, so when you-- when you talk with developers, when, when they walk in and they talk tiny homes, they're not talking stick-built. They're talking about prom--buying a pre-manufactured unit--

Chair Thomas stated there's a lot of that going on.

Deputy Town Manager Stueckle stated--that is not subject to the California building codes. So that's where staff was coming from with that differentiation.

Chair Thomas stated yeah. Yeah.

Deputy Town Manager Stueckle stated so you-you've got to-- you've got to do one-- uh, one-- uh, one of two things. You're either-- you're either gonna be building under the California building codes, which we adopt. Or you're going to have a manufactured home or mobile home park, or you're going to have a tiny home project, which meets the definitions you would establish in your code for tiny homes, which are not stick-built. So you-you-you're going to have a mix of those three things and a combination of those three things. Today, we don't have regulations in place that allow for tiny homes, tiny homes being a pre-manufactured unit that's issued by the State Department of Housing and Community Development. They have a stamp and the number on it. We don't-- we don't have that in our regulations today.

Chair Thomas stated it might be a good exercise for staff to see what type of those homes are out there and available, uh, right now. And then some of them [crosstalk]--

Deputy Town Manager Stueckle stated so there's, there's all kinds of options. What, what, what you'll--as the Commission--and, and if the Commission and the town council choose to go forward and study that is, where do you want to put them? What, what zone are you going to create? What part of town are you going to put them in?

Mm-hmm.

Deputy Town Manager Stueckle stated because the person who just bought the $325,000 house that you're gonna put a tiny home next to--

Chair Thomas stated no, we can't. It's got to be--

Deputy Town Manager Stueckle stated it's probably gonna be calling you on your cell phone multiple times a day to have a conversation with you--

Chair Thomas stated yeah.

Deputy Town Manager Stueckle stated--'cause they're not gonna be happy.

Chair Thomas stated no, that's true.

Deputy Town Manager Stueckle stated so those are the types of things that have to be taken into consideration, so.

Absolutely. Hmm. Okay. Anybody else?

Deputy Town Manager Stueckle stated I think-- I think staff's heard some feedback tonight.

Commissioner Vasconcelos stated I have one more thing to say.

Oh. [crosstalk]--

Commissioner Vasconcelos stated yeah. Uh, I was looking at packet page one s-- uh, 696 and 97, and it's a letter from Western Hills Estates and Ranchos. And it basically was stating this minimum square footage size is for the different tracks that were established within this community. And looking at this and then looking at g-- the map that's, uh, uh, corresponding with showing you where the areas are and where the map is located and where those, those home sizes are. If we were to do anything, uh, uh, I would feel comfortable with is, is, hmm, hmm, bringing it to a minimum of 600 square feet because this is the smallest size that they have here is a 600 square foot home that, that was listed. And then-- and, you know, this is really dated because this is way before even I was born because it's showing it as Twentynine Palms Highway at Victorville Road, which I'm assuming is Old Woman Springs Road, but they renamed it. Uh, so this is a very old, uh, uh, letterhead and, and it's not dated. But I think looking at that number of, like, the 600 square foot home--

Where they're located. Yeah.

Where those tracks are located--

Chair Thomas stated mm-hmm.

Commissioner Vasconcelos stated--um, I think tha-that would be the thing that if we were to-- if we were to lower it. I mean, again, I think we should have the city council, uh, give us, uh, a direction on it, but the 600 square feet, uh, I think that's where I would-- I would land more so than the 400 square feet.

Chair Thomas stated yeah, I think 400 is kinda small.

Sorry.

Chair Thomas stated no. Anybody else?

Commissioner Noonan stated that at least is a methodology for trying to figure out the number. I think that's a pretty decent thing to look at.

Deputy Town Manager Stueckle stated so, I think staff has heard, um, the commission's comments very clearly. Let us go back to the drawing board a little bit, do a little bit more packaging on this, bring it back to you so you can send forward a good comprehensive report or recommendation up to the Town Council.

Chair Thomas stated okay. All right. [crosstalk]--

Deputy Town Manager Stueckle stated so it'd be a recommendation to receive and file and then we'll return it back to you.

Chair Thomas stated okay. Anybody wanna [crosstalk]--

Commissioner Stoker stated I'll make a recommendation to receive and file.

Motion:
That the Planning Commission retains the current minimum standard of 725 square-feet for single-family residential dwelling units and discusses the policy information provided in the Staff Report.

Result: (Yes 5, No 0, Abstained 0)
Mover: Commissioner Clint Stoker
Seconder: Commissioner James Henderson
Ayes: James Henderson, Gerard Noonan, Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

13. Land Development Update

Chair Thomas stated go to item 13, Land Development Update.

Deputy Town Manager Stueckle stated couple of things. We heard from the IT folks at Town Hall that they're gonna push forward for the tablets, the iPads or tablets for the full commission so you won't have--

Thank you.

Deputy Town Manager Stueckle, stated --these full stacks of paper. If you still do want the printed agenda, which some people do prefer the printed agenda, just let staff know. We will still be producing those for whoever makes that request. We recently moved to a new system, a new electronic agenda system. So this was an experiment. Staff figured out how we can print the staff reports and a little bit of backup material, but then put like the 800 pages of CEQA documents, not print that out, but have it availably-- available electronically on the town's webpage. So, at your next meeting in April, you're gonna have this project again. So you're gonna have the mini storage. You're going to have the Walmart fuel station, which has a CEQA document, and you're going to have Dutch Brothers. So it's probably gonna be a s-- taller stack of paper than this. So we're gonna experiment with that, and we'll put the CEQA documents electronically online. We'll print everything else, uh, out in paper and see how that goes. Did I--

[crosstalk]--

--s-state that correctly?

You did state--

All right. Very good.

Right.

Deputy Town Manager Stueckle stated the, um, only other thing that I wanna mention, and then, um, Evan can comment in-- cam on-- comment on, um, the contractor for Starbucks West has walked away from the project, sent us an email indicating that he's no longer associated with the project. Um, I noticed today when driving by, the chain link fence has been removed. The sandbags were left exactly where the posts were for the chain link fence, the construction fencing, but the construction fencing is gone. So what transpired in that business relationship, we're not privileged to have that information, but I just wanted the commission to be aware when you drive by and you say, "What's happening here?" Um, the contractor has indicated he's no longer on the job. Evan, any other updates for the commission tonight?

Assistant Planner Willoughby stated uh, just one very recent update. Earlier, uh, this

week-- I believe just yesterday, we received a resubmittal, uh, for a project. Um, the property next to CNS, the new restaurant that they're proposing, uh, they resubmitted. So that is currently in another round of completeness review and hopefully moving forward in the near future. Uh, that is the only major item to comment on commercial and development-wise.

Chair Thomas stated okay. Well, uh, we wanna receive and file that as well?

Commissioner Henderson stated I'll make a motion to receive and file.

Motion:
That the Planning Commission receives and files the report.

Result:	(Yes 5, No 0, Abstained 0)
Mover:	Commissioner James Henderson
Seconder:	Commissioner Clint Stoker
Ayes:	James Henderson, Gerard Noonan, Clint Stoker, Alejandro Vasconcelos, Mathew Thomas

Future Agenda Items

Chair Thomas stated yes. Go to, uh, future agenda items, planning commission meeting. No, wait a minute. That's kind of-- well, yeah. [crosstalk]--

Deputy Town Manager Stueckle stated so the fourt--

[crosstalk]--

Deputy Town Manager Stueckle stated--yeah, the 14th, you'll have, uh, the fueling station at Super Walmart. You will have Dutch Brothers, and we will have the mini storage facility back in front of you. I don't think we'll be back in front of you with, um, single-family home square footage that's gonna take a little bit more staff time. Is there anything else coming back to the commission?

Assistant Planner Willoughby stated um, one, one, uh, minor but more unique thing. We do have a request for a waiver of a specific plan requirement on our zoning map for a residential parcel. Um, they intend to plan for future single-family residential development. And, uh, there's a SP, which is a specific plan requirement on the parcel, which may not be appropriate for single-family residential, uh, development, which is otherwise by right. But the Planning Commission, uh, will see that staff report and have that discussion at their future meeting.

Chair Thomas stated okay. Great.

Deputy Town Manager Stueckle, stated We are hanging right around 120 available short-term

vacation rental permits. Um, this year, we do have a lot of renewals coming in because this is renewals for those in 2022, which was our largest year. Um, surprisingly, the number of available permits is not increasing. It's slowly going down.

Yeah.

Deputy Town Manager Stueckle stated, so it's still very, very, very active. Um, keeps Janet, um, extremely busy these days. Um, so that's still, still moving forward. Single-family home activity is pretty slow.

Right now, I think we issue--we've issued one so far this month, and we maybe have one other that's gonna be issued. So, um, that part has slowed down. Um, sewer permits, sewer connections are underway in the country club neighborhood. So those are starting to pick up a little bit. Um--

Chair Thomas stated never happened in my house.

[inaudible].

Deputy Town Manager Stueckle asked anything else, Evan, on your list?

Assistant Planner Willoughby stated um, nothing more on my list, uh, to report.

Deputy Town Manager Stueckle stated thank you.

Public Comments

Chair Thomas stated Okay. All right. Now we go to, uh, public comments. Oh boy, I remember reading this thing before. Okay. Planning Commission takes this time to consider your comments on items of concern, which are not on the agenda. When you are called to speak, please state your name and community of res-residents. Please limit your comments to three minutes or less. Inappropriate behavior, which disrupts, disturbs, or otherwise impedes the orderly conduct of the meeting will result in forfeiture of your public comment privileges. The Planning Commission is prohibited by state law from taking action or discussing items not on the printed agenda. Is there anybody in the public that wants to make a comment or online?

Audio/Visual stated uh, yes, we have one speaker online.

Okay.

Audio/Visual stated uh, Eric Linnert, uh, you have three minutes to speak. I've requested you to unmute.

Eric Linnert, public speaker, stated hello. Uh, can you hear me okay?

Audio/Visual stated yes.

Eric Linnert, public speaker stated, great. Um, hi, everybody. Sorry I am late and I missed my item. I do apologize. I will catch up on the conclusion of that after, um, via the recording. I just wanted to add, uh, that I appreciate, um, staff and the commission considering the, uh, housing item, especially around minimum hais-- housing. As Evan mentioned, um, and if you recall, I came through last July to discuss the development code interpretation on that burned house on Encelia. And, uh, we're considering options and looking at a micro-unit, uh, housing project. I'm still having a hard time, like, labeling what smaller than conventional homes are called, whether they're tiny homes or tiny home on wheels or whatever. Um, so we're just kinda, uh, observing the CEQA potential and hoping for an exemption. But just wanted to, uh, you know, again, s-- uh, say that I appreciate the conversation and energy around this topic. I think it's super important. Um, and, uh, just lastly, uh, I think it's great that you're moving to paperless 'cause I know that's probably a lot of paper per meeting, um, across the whole, um, town. So yeah, thanks again for reviewing and looking forward to working together more.

Chair Thomas stated okay. Thank you so much.

Eric Linnert, public speaker, stated, thank you.

Chair Thomas stated all right. Anybody else? No? Okay. We'll close public comment and we'll go to staff reports and comments.

Staff Reports and Comments

Assistant Planner Willoughby stated no other staff reports and comments tonight. Thank you.

Commissioner Reports and Comments

Chair Thomas stated Commissioner reports and comments. Commissioner Noonan, anything?

Commissioner Noonan stated um, no, just wanted say thank you to the, the, the town for sponsoring my, uh, Planning Commission Academy. It was very enlightening. And, uh, uh, again, every time I attend, I, I don't regret it. I, I learn a lot more and it helps me. So thank you for that. And, uh, thank you for all your details, uh, on, uh, tonight's agenda.

Chair Thomas stated okay, Vice Chair Henderson.

Vice Chair Henderson stated yeah. W-- I mean, thanks to staff. That was a stacked-- a stacked agenda. I just wanted to, um, take a moment to thank Commissioner Vasconcelos for a, a fantastic year as the Chairman. Uh, y-you did a great job leading the commission and, and showing respect to the general public and our public speakers and extending time to them when they needed it. So thank you for a great job. And then I wish, uh, Chair Thomas a great

year and--

[crosstalk]--

--thank you [crosstalk].

Chair Thomas stated Commissioner Stoker.

Commissioner Stoker stated, yeah. Um, thanks to staff. Is--that's a boatload of pages. So, um, uh, I'm happy to have my iPad, actually, for this one, just with so-- with so many pages to have to lug around. Um, it's awesome that we're moving to--uh, to tablets, so that'll be great for everybody. It'll be a little bit of a learning curve, I'm sure. Uh, but I think in the-- in the long run, it's gonna be a way to--I don't know how many thousand pages we burn through, but, um, uh, I feel like it's, it's a s-step in the right direction there. Um, uh, Alejandro, um, it has been awesome having you, uh, run the meetings for a year and look forward to Matt, you were continuing, continuing that torch. Um, and--uh, what else was there? Nothing really. Nothing good. Or everything good. It's all good.

Okay.

Uh, thanks so much. Have a good [crosstalk].

You bet. Commissioner Vasconcelos.

Chair Thomas stated okay, Commissioner Vasconcelos

Commissioner Vasconcelos stated, yeah. Um, thank you, staff, for tonight's meeting. You know, you guy-- y-you guys got an extra week, uh, to prepare-- an extra two weeks to prepare since we were at our Planning Commissioner Conference the last time, which we enjoyed and, you know, got to network with people and got to re-refresh ourselves on CEQA and, and-- uh, and whatnot. The riveting information. De-definitely some good information regarding future items like, um, autonomous vehicles and how they might impact, uh, our communities. And then, um, also with, you know, how, uh, AI can help, uh, out communities in, in, in general with whatever they might have. Um, I wanted to thank, uh, my fellow commissioners for the past year a-as, as their chair. Uh, it was entity-enjoyable. And you guys made it very easy and it made an easy transition. And, uh, I did enjoy my sine-- my time as the chair. And, and maybe some-- in four more years, I'll be the chair again. But, uh--

Chair Thomas stated I'm sure you will.

Commissioner Vasconcelos stated--we'll see how that goes. But I appreciate that. I appreciate every one of you and the community. And, uh, uh, thank you for another great meeting.

Chair Thomas stated yeah. And [crosstalk]--

Commissioner Noonan stated wait. And thank you for my cup. I forgot to say that.

Yes, thank you for the cups. Thank you to staff--
[crosstalk]--

Chair Thomas stated--for all of this. Uh, I have to admit that-- I, I think you-- uh, Vice Chair Henderson and myself have been the longest ones on, on the planning commission at the moment. I don't think I've ever seen a stack like this before in five or six years, whatever it's been. In fact, when we were driving home, the staff usually puts it on top of my gate or something 'cause they can't get in. And we just drove up. My wife goes, "Oh my God, you're gonna be late." S-so, uh, glad we're getting the tablets. That'll be a nice change. But, uh, staff, you did a great job on this. You got back the information that we asked for. It was really nicely done, well in depth, and Evan, you did a great job tonight.

Announcements

Chair Thomas stated upcoming Meeting Schedule: The next regular meeting of the Yucca Valley Planning Commission will be held on Tuesday, April 14, 2026, at 6:00 PM in the Yucca Valley Community Center Yucca Room.

Adjournment

Chair Thomas adjourned the meeting at 7:57 pm.

Respectfully submitted,

Janet Yochmowitz
Commission Secretary

Town of Yucca Valley
Planning Commission Staff Report

To: Planning Commission

From: Jared Jerome, Senior Planner

Date: March 25, 2026

Meeting Date: April 14, 2026

Subject: Environmental Assessment, EA 18-23; Site Plan Review, SPR 07-23, Resolution PC 26-02, Sun Mesa Mini Storage. A request to construct and operate an 79,600 square foot self-storage facility with manager's unit, landscaping, and off-site street improvements. The project site is located at 4815 Newton Lane and is also identified as APN: 0597-111-67.

Recommendation:

Environmental Assessment 18-23:

That the Planning Commission adopts the Resolution, the Mitigated Negative Declaration and Mitigation Monitoring Report for Environmental Assessment 18-23.

Site Plan Review 07-23

That the Planning Commission approves SPR 07-23, a request to construct and operate an 79,600 square foot self-storage facility with manager's unit, landscaping, and off-site street improvements.

Prior Review:

The Planning Commission continued the item at their meeting of March 24, 2026.

Discussion:

DISCUSSION

Case:

Site Plan Review (SPR) 07-23, Environmental Assessment (EA) 18-23; Sun Mesa Mini-Storage, 4815 Newton Lane (APN 0597-111-67).

Application Timeline Overview:

Application Submitted On: 12/13/2023

30 Day Completeness Review Letter Sent:	1/9/2024
1st Resubmittal:	2/5/2024
Corrections Letter Sent:	2/22/2024

2nd Completeness review letter:	3/12/2024
2nd Resubmittal:	11/12/2024
3rd Resubmittal:	4/7/2025
Application deemed complete:	4/8/2025
CEQA RFP released:	4/11/2025
CEQA selection letter to applicant:	6/2/2025
Draft IS/MND for public review:	1/16/2026
Public Hearing Notice	2/25/2026

Request:
The original request included the construction and development of an approximate 89,700 square foot multi-structure self-storage facility that is 9'6" in height, located on approximately 4.34-acre property, with parking, landscaping, and drainage improvements. Phase 1 of the project is located approximately on the western half of the property and Phase 2 is located on the eastern half of the property.

On March 23, 2026, the project applicant provided a revised request for a total of 79,600 square foot multi-structure facility. The revised request is consistent with the original project analysis, with a smaller scale and footprint, and therefore consistent with the California Enviornmental Quality Act (CEQA) analysis.

Applicant:
Rob Billings
5024 Wallaby Street
Yucca Valley, CA 92284

Property Owner:
Rob Billings
5024 Wallaby Street
Yucca Valley, CA 92284

Representative:
Dan Patneaude (DRP Enterprises LLC)
PO Box 4428
Yucca Valley, CA 92263

Location: The project is located at 4815 Newton Lane, southeast corner of the intersection of Sun Mesa Drive and Newton Lane, approximately 600 feet east of State Route 247 and approximately 650 feet north of Buena Vista Drive.

APN:
0597-111-67

Existing General Plan Designation:

Industrial (I)

Surrounding General Plan Designations:

North: Rural Living (RL-5) 5 acre minimum
South: Commercial (C)
East: Rural Living (RL) (County of San Bernardino)
West: Industrial (I)

Existing Zoning Designation:

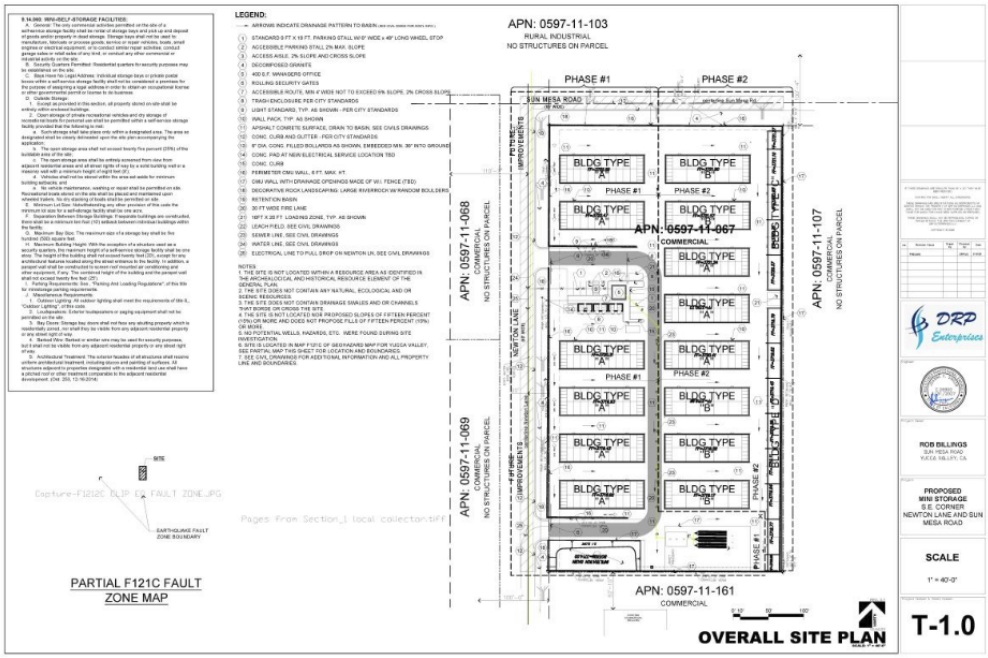
Surrounding Zoning Designations:

North: Rural Living (R-L-5)
South: Neighborhood Commercial (C-N)
East: Rural Living (RL) (County of San Bernardino)
West: Industrial (I)

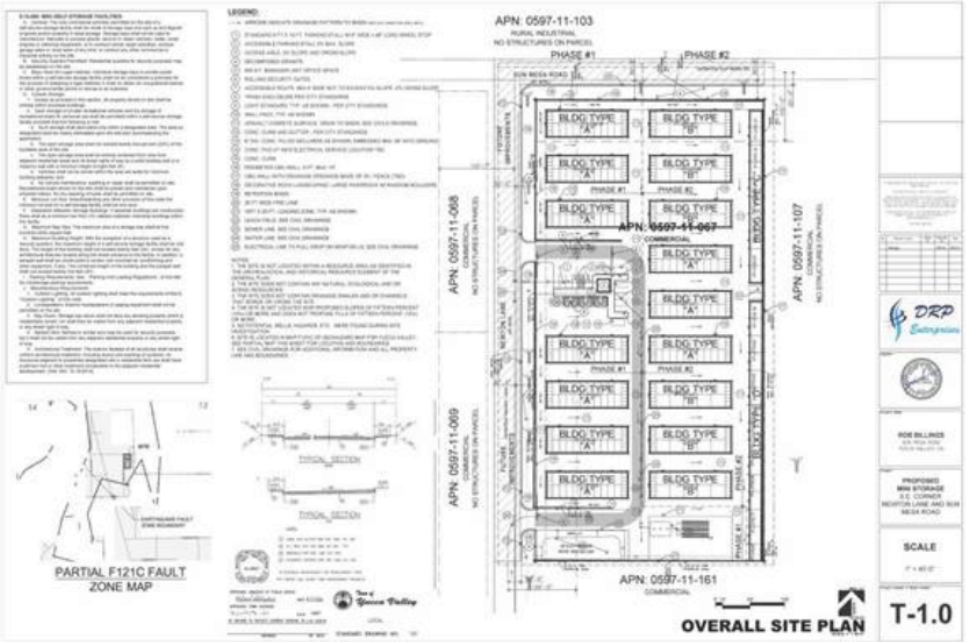
Surrounding Land Use:

North: Vacant Residential
South: Commercial
East: Vacant Residential
West: Vacant/Non-permitted Storage

Revised Site Plan (3-23-2026)



Original Site Plan



PROJECT DESCRIPTION

The proposed project is a self-storage facility southeast of the intersection of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley in San Bernardino County (APN: 0597-11-067). The proposed project includes the development of approximately 478 storage units (541 previously proposed), a manager's office, parking, internal roads, and landscaping on an approximately 4.34-acre site. In addition, offsite improvements (including partial pavement of adjacent roads) would be provided. The total building area is proposed to be approximately 79,600 square feet.

The project consists of: (1) utilities improvements; (2) construction of self-storage units and a manager's office; (4) parking; (5) landscaping; and (6) improvement of half of Newton Lane along the project's west boundary from the project site to Buena Vista Drive, and Sun Mesa Drive along the north boundary.

The project is proposed to be constructed in two phases. Phase 1 is proposed to begin in the first half of 2026 includes construction of approximately 50% of the rental units as well as the manager's unit. Phase 1 is anticipated to take three (3) to four (4) months to complete. Off-site improvements are required to be completed during Phase 1. Phase 2 construction is dependent on Phase 1 sales.

The project site has a General Plan land use designation of Industrial (I) and is zoned Industrial by the Town of Yucca Valley. The proposed self-storage facility is permitted use within the Industrial zoning district and does not require a General Plan Amendment or Zone Change. With approval of a Site Plan Review, the project would conform to the existing land use and zoning designations.

The following conditions of approval are recommended to ensure consistency with the Town's adopted standards and regulations:

P3. All exterior lighting shall comply with Development Code chapter 8.70, Outdoor Lighting and shall be illustrated on all construction plans. The proposed project shall cause no light trespass at all property lines. Light trespass shall be defined as exceeding 0.3 foot candles at any property lines.

P5. Parking and on-site circulation requirements shall be provided and maintained as identified on the approved site plan. Areas reserved for access drive and/or fire lanes shall be clearly designated.

a. All paved parking stalls shall be clearly striped and permanently maintained with double or hairpin lines with the two lines being located an equal 9 inches on either side of the stall sidelines. All regular parking stalls be a minimum 9' x 19'.

b. All marking to include parking spaces, directional designation, no parking designation and fire lane designations shall be clearly defined and said marking shall be maintained in good condition at all times. The Town Traffic Engineer shall approve all signage and markings for the circulation related signage.

c. All two-way drive aisles shall be at least 26 feet in width.

E1. Install asphalt concrete (AC) pavement, curb and gutter and sidewalk, along with any additional required AC pavement, along the project frontages on Newton Lane and Sun Mesa Drive per Town Standard Drawing No. 101. Driveways shall be constructed per Town Standard Drawing No. 213. Pavement shall be twenty-six feet (26') wide when measured from curb face. This will require paving six feet (6') on the other side of the street centerline. Pavement on Newton Lane shall extend to Buena Vista Avenue.

E2. Per Town Standard Drawing No. 213 commercial driveways shall be located 150 feet from the curb return.

E3. The site plan shall be revised to show the existing twenty foot (20') radius property line at the southeast corner of Newton Lane. and Sun Mesa Drive.

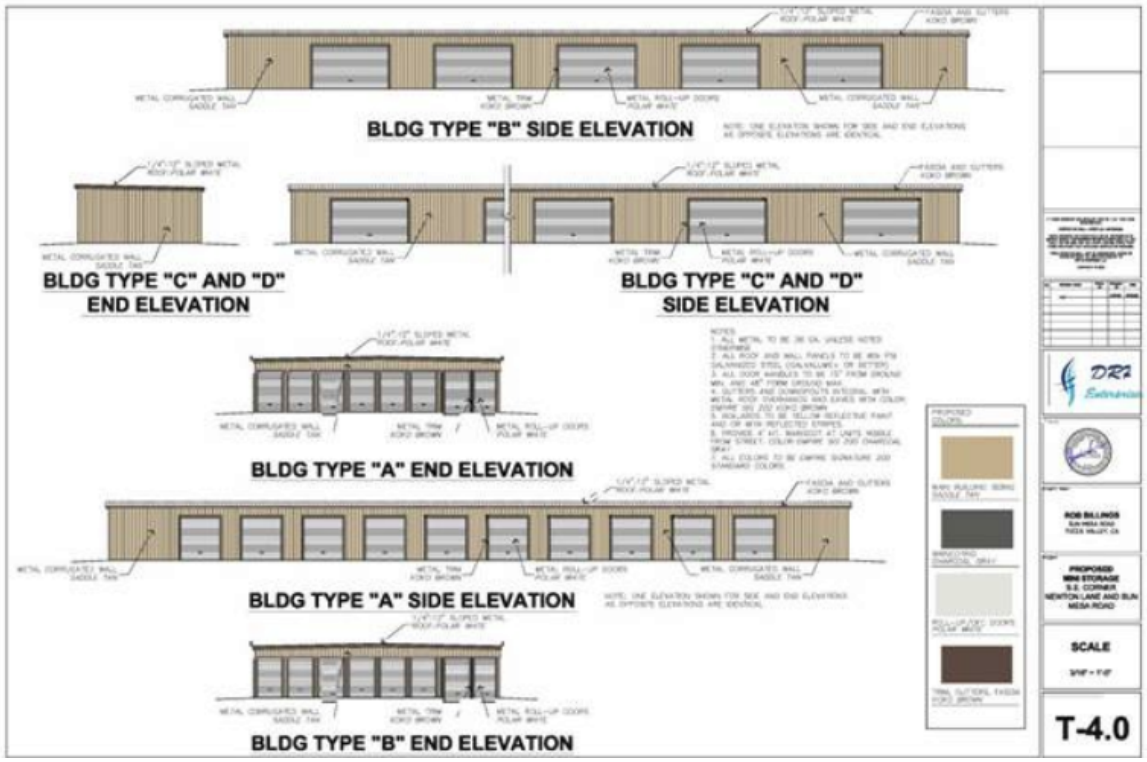
E5. Due to the location of the proposed on-site retention basin an overflow outlet will be required. The outlet shall be designed, and the design included in the project grading plan, to ensure protection of the outlet and the retaining wall footing.

E6. There appears to be a thirty foot (30') error in the property line dimensions when scaled from the drawings submitted for review. This error must be corrected to the satisfaction of the Town Engineer. This may require a Record of Survey be recorded with the County Surveyor's office. A copy of the Record of Survey, if required, shall be submitted to the Town Engineer at the time of submittal to the County Surveyor's office.

E7. The applicant shall ensure that all construction related to the proposed retaining walls and basin overflow facilities occurs on the applicant's property. Proof of any temporary

construction easements, if needed, shall be submitted to the Town at the time of grading permit application.

E8. Prior to issuance of building permits, the applicant shall cause to be formed Community Facilities District (CFD) for infrastructure improvements as required by the Town. The applicant shall initiate the CFD formation by submitting a landowner petition and consent form and deposit necessary fees concurrent with the application for street and grading plan review and approval.



PROJECT ANALYSIS

PROJECT AREA:
4.34 acre

BUILDING AREA:
79,600 square feet

SETBACKS:
Front: 15’ minimum required by Code. 62’ proposed.
Rear: 0’ minimum required by Code. 135’ proposed.
Interior Side: 0’ minimum required by Code. 5’ proposed.
Street Side: 15’ minimum required by Code. 35’ proposed.

MAX BUILDING HEIGHT:

Maximum 75’ allowed by Code. 9’6” and 13’2” proposed.

FAR:
1.0 Maximum allowed by Code. 0.36 proposed.

PHASED CONSTRUCTION:
Yes, two phases. First phase beginning in 2026, and second phase to begin based on sales of Phase 1.

FLOOD ZONE:
No

ALQUIST PRIOLO/EARTHQUAKE FAULT HAZARD ZONE :
Yes. Employee hours and construction consistent with Alquist Priolo requirements.

ACCESS/PARKING: 6 stalls plus 2 for caretaker.
1 standard ADA stall
1 van accessible ADA stall
5 loading stalls (one per 20,000 square feet)

ADA:
ADA compliant parking and access required. One (1) ADA compliant parking space is required. The site plan illustrates one (1) ADA parking space and one
(1) van accessible ADA parking space. ADA access from a public roadway to the building is required.

AIRPORT COMPREHENSIVE LAND USE PLAN:
The project is not located in a Safety Review Area of the Yucca Valley Airport Land Use Plan.

LANDSCAPING:

The preliminary landscape plan for the proposed project includes five (5) 15-gallon Aristocrat pear trees (Pyrus Calleryana), 11 15-gallon

Crepe Myrtle trees (Lagerstroemia Indica), 2 15-gallon Golden Rain trees (Koelreuteria Paniculata), 6 24”-box Chinese pistache trees (Pistacia Chinesis), two (2)

15-gallon Southern Live Oak tree (Quercus Virginiana), 25 5-gallon Prickly Pear cacti (Opuntia), and 8 transplanted Yucca Brevifolia (Western Joshua Tree – as

allowed following CDFW review). Decorative river rocks and boulders are proposed as decorative xeriscaping between the plants identified above.

TRASH ENCLOSURE:
Project includes three (3) trash enclosures located to the south of the manager’s unit.

RIGHT OF WAY DEDICATION REQUIRED:
No, existing road easements adjacent to project site. To be verified by Town Engineer.

OFF SITE IMPROVEMENTS REQ
Yes. Applicant to install off-site improvements including half-width roadway improvements to Sun Mesa Drive adjacent to project site and Newton Lane from project site to Buena Vista Drive.

ASSESSMENT DISTRICTS REQ :
Yes, for on-going road maintenance.

STREET LIGHTS:
No

CAL TRANS PERMIT REQUIRED:
No (required if work is required in Caltrans right-of-way)

UTILITY UNDERGROUNDING
Yes, in accordance with Ordinance 233.

ON-SITE LIGHTING:
All lighting shall be shielded to comply with Development Code Chapter 8.70, Outdoor Lighting.

The photometric plan shows illumination that exceeds 0.3-foot candles at the property lines. Condition of approval P3 is recommended, requiring 0.3-foot. candles or less of lighting output at each property line, to be reviewed by Planning Division staff.

AIRPORT INFLUENCE AREA:
No

TRAILS AND BIKE LANE MASTER PLAN:
No

PUBLIC FACILITY MASTER PLAN:
No

PARKS AND REC MASTER PLAN:
No

MASTER PLAN OF DRAINAGE:
No

SPECIFIC PLAN/PLANNED DEVELOPMENT:
No

GATEWAY REIMBURSEMENT DISTRICT:
No

AVALON SIGNAL REIMBURSEMENT DISTRICT:
No

HDWD SEWER CONNECTION:
No

FUTURE PLANNING COMMISSION ACTION REQ.
No

TOWN COUNCIL ACTION REQUIRED:
The project would be reviewed by Town Council only if an appeal is filed.

GENERAL PLAN CONSIDERATION

The project site is designated Industrial. The description below is provided from the Yucca Valley General Plan, Land Use Element, for reference to the Industrial designation.

Industrial and related uses, including warehousing/distribution, assembly and light manufacturing, repair facilities, and supportive retail uses. Preferred development types include master planned business and industrial parks with integrated access and internal circulation. Outdoor storage is also permitted in this designation; however, special screening and design treatments must be applied to outdoor storage within the Rural Mixed Use Special Policy Area for properties on the north side of Skyline Ranch Road.

Self-storage uses are considered an appropriate use in the Industrial District, and the project is consistent with the General Plan land use designation.

DEVELOPMENT CODE CONSIDERATION

The property has a zoning designation of Industrial.

This designation allows for uses such as mini and personal storage facilities with an approved Site Plan Review per Chapter 9.10.020 of the Town's Development Code. Therefore, the development of a self-storage facility is in conformance with the Town's Development Code.

ENVIRONMENTAL CONSIDERATIONS

An Initial Study/Mitigated Negative Declaration (IS/MND) was prepared for the proposed project pursuant to the California Code of Regulations, Title 14, Sections 15072 and 15105.

The IS/MND identified potentially significant environmental impacts to the following resource areas: Biological Resources, Cultural Resources, Geology/Soils, Noise, Tribal Cultural Resources, and Mandatory Findings of Significance. Mitigation measures are incorporated to mitigate those potentially significant impacts to a level considered less than significant with mitigation incorporated. Please see attached IS/MND for a detailed analysis of potential impacts and

required mitigation measures.

ADJACENT LAND USES

The project is surrounded by commercial/industrial and residential uses, including vacant residential properties located to the north and east, vacant industrial property to the west, outdoor vehicle storage to the southwest, and manufacturing to the south. The proposed use is consistent with surrounding land use activities and no land use conflicts or impacts are anticipated.

SITE CHARACTERISTICS

The proposed project site is approximately 4.34 acres. The site is currently vacant. The north end of the property abuts Sun Mesa Drive and the west side of the property abuts Newton Lane. Access to the property is proposed to be provided from Buena Vista Drive via Newton Lane.

BUILDING ELEVATIONS

The height limit for industrial facilities is 75'. The maximum height of the proposed storage structures are approximately 9'6" high. The structures feature "saddle tan" corrugated metal walls and white metal roll-up doors. The metal roof is proposed to be painted "polar white". The structures are rectangular and feature a sloping roof.

The manager's unit features a similar color scheme, but with charcoal gray accents on the lower portion of the structure. The height of the manager's unit is 13'2".

ACCESS/PARKING

Access to the proposed project site is gained via two driveways on Newton Lane. No driveway is proposed off of Sun Mesa Drive.

Mini-storage or public storage facilities require six (6) spaces plus two (2) for caretaker parking. One (1) ADA compliant parking space is required for up to 25 provided parking spaces.

The proposed project features eight (8) standard parking stalls, one (1) standard ADA compliant parking stall, one (1) ADA van accessible space, and five (5) loading spaces.

AIRPORT COMPREHENSIVE LAND USE PLAN

The project is not located in a Safety Review Area.

FUTURE HDWD SEWER CONNECTION

The project is not required to connect to the HDWD Sewer System.

UTILITES

The project is conditioned to underground utilities in accordance with Ordinance 233.

SIGNAGE

Signage is not currently proposed as part of the SPR application. Permits for signage are to be processed under a separate application and staff approval.

CONCLUSION

Based upon the facts on record, the project is consistent with the Town's General Plan, and Development Code, as recommended and conditioned. Industrial development was anticipated for this site with the adoption of the General Plan. With approval from the Planning Commission, the development meets and satisfies the goals, policies and implementation strategies of the General Plan.

SITE PLAN REVIEW FINDINGS

A. That the location, size, design, density and intensity of the proposed development is consistent with the General Plan, the purpose of the land use district in which the site is located, and the development policies and standards of the Town;

The proposed project site is located in the Industrial General Plan Designation and Industrial zoning district. The proposed size, design, and land use are consistent with the General Plan and Development Code requirements.

B. That the location, size, design and architectural design features of the proposed structures and improvements are compatible with the site's natural landform, surrounding sites, structures and streetscapes;

The proposed development features single-story metal structures, painted white, gray, and tan. The primary color, tan, is anticipated to blend into the surrounding natural landform and is an earth tone that is recommend in the Town's Commercial Design Guidelines. Although "boxlike" structures and metal siding are considered "undesirable elements" in the Commercial Design guidelines; the design of the structures is consistent with other self-storage land uses located in the Town and other structures located in the Industrial zoning district.

C. That the proposed development produces compatible transitions in the scale, bulk, coverage, density and character of the development between adjacent land uses;

The proposed structures are similar in design and scale as compared to other industrial developments and not anticipated to result in any architectural incompatibilities in terms of scale, bulk coverage, density, or character of surrounding land uses.

D. That the building site and architectural design is accomplished in an energy efficient manner;

The proposed project is required to meet all California Building Code requirements for the type of commercial structure including the CALGreen requirements. As such, the building is anticipated to accomplish energy efficiency.

E. That the materials, textures and details of the proposed construction, to the extent feasible,

are compatible with the adjacent and neighboring structures.

The proposed development features single-story metal structures, painted white, gray, and tan. The primary color, tan, is anticipated to blend into the surrounding natural landform and is an earth tone that is recommend in the Town's Commercial Design Guidelines. Although "boxlike" structures and metal siding are considered "undesirable elements" in the Commercial Design guidelines; the design of the structures is consistent with other self-storage land uses located in the Town and other structures located in the Industrial zoning district.

F. That the development proposal does not unnecessarily block views from other buildings or from public ways, or visually dominate its surroundings with respect to mass and scale to an extent unnecessary and inappropriate to the use;

The proposed development ranges from approximately 9'6" to approximately 13'2" in height. Due to its limited height, the proposed project is not anticipated to visually dominate its surroundings or block views from other buildings or the public right of way.

G. That the amount, location, and design of open space and landscaping conforms to the requirements of the Development Code, enhances the visual appeal and is compatible with the design and functions of the structure(s), site and surrounding area;

The preliminary landscape plan for the proposed project includes five (5) 15-gallon Aristocrat pear trees (Pyrus Calleryana), 11 15-gallon Crepe Myrtle trees (Lagerstroemia Indica), 2 15-gallon Golden Rain trees (Koelreuteria Paniculata), 6 24"-box Chinese pistache trees (Pistacia Chinesis), two (2) 15-gallon Southern Live Oak tree (Quercus Virginiana), 25 5-gallon Prickly Pear cacti (Opuntia), and 8 transplanted Yucca Brevifolia (Western Joshua Tree – as allowed following CDFW review). Decorative river rocks and boulders are proposed as decorative xeriscaping between the plants identified above.

Pursuant to Chapter 9.32.070 of the Town's Development Code, the front and street-side yard setback areas shall also be landscaped using xeriscape landscaping techniques, which combines drought tolerant plant and hardscape materials in a variety of aesthetically pleasing designs. The proposed project landscaping is required to comply with the California Model Water Efficiency Landscape Ordinance (MWELO). The proposed project therefore conforms to the requirements in the Town's Development Code.

H. That quality in architectural design is maintained in order to enhance the visual environment of the Town and to protect the economic value of existing structures;

The structures are consistent with the Development Code, surrounding developments, and other similar land uses.

I. That there are existing public facilities, services, and utilities available at the appropriate levels and/or that new or expanded facilities, services and utilities shall be required to be installed at the appropriate time to serve the project as they are needed;

The project is located in an area of developed industrial properties. Each utility provider charges connection and service fees which are designed to include the need for additional facilities as growth occurs. The project applicant will be required to pay these fees as applicable.

Electrical services are provided by Southern California Edison. Water services are provided by the Hi Desert Water District (HDWD). Solid Waste Services are provided by Burrtec, Inc. The Town of Yucca Valley requires mandatory solid waste services, and the project will be served by Burrtec.

J. That access to the site and circulation on and off-site is required to be safe and convenient for pedestrians, bicyclists, equestrians and motorists;

On-site circulation as proposed includes two points of ingress/egress on Newton Lane. ADA access is required to be provided to the public right-of-way and from the vehicle parking lot to the structures. The installation of off-site improvements, in the form of paved roadways and sidewalks, are anticipated to enhance convenience for both motor vehicles and other roadway users such as pedestrians and cyclists.

K. That traffic generated from the proposed project has been sufficiently addressed and mitigated and will not adversely impact the capacity and physical character of surrounding streets;

The traffic analysis for the proposed project identified up to 137 daily vehicle trips at full build-out. Based on the anticipated traffic generation, adverse traffic impacts are not anticipated with the construction of required roadway improvements.

L. That traffic improvements and/or mitigation measures have been applied or required in a manner adequate to maintain a Level of Service C or better on arterial roads, where applicable, and are consistent with the Circulation Element of the Town General Plan;

The traffic analysis and IS/MND for the proposed project identified up to 137 daily vehicle trips. Based on the traffic analysis and required roadway improvements, no significant traffic impacts were identified and mitigation measures are not required.

M. That there will not be significant harmful effects upon environmental quality and natural resources including endangered, threatened, rare species, their habitat, including but not limited to plants, fish, insects, animals, birds or reptiles;

The IS/MND identified potentially significant environmental impacts to Biological Resources. Mitigation measures are incorporated in the IS/MND to mitigate those potentially significant impacts to a level considered less than significant with mitigation incorporated. Please see attached IS/MND for a detailed analysis of potential biological impacts and required mitigation measures.

N. That there are no other relevant or anticipated negative impacts of the proposed use that cannot be mitigated and reduced to a level of non-significance in conformance with CEQA, the California Environmental Quality Act;

An Initial Study/Mitigated Negative Declaration (IS/MND) was prepared for the proposed project pursuant to the California Code of Regulations, Title 14, Sections 15072 and 15105.

The IS/MND identified potentially significant environmental impacts to the following resource areas: Biological Resources, Cultural Resources, Geology/Soils, Noise, Tribal Cultural Resources, and Mandatory Findings of Significance. Mitigation measures are incorporated to mitigate those potentially significant impacts to a level considered less than significant with mitigation incorporated. Please see attached IS/MND for a detailed analysis of potential impacts and required mitigation measures.

O. That the impacts which could result from the proposed development, and the proposed location, size, design and operating characteristics of the proposed development, and the conditions under which it would be operated or maintained will not be detrimental to the public health, safety and welfare of the community or be materially injurious to properties or improvements in the vicinity or be contrary to the adopted General Plan;

An Initial Study/Mitigated Negative Declaration (IS/MND) was prepared for the proposed project pursuant to the California Code of Regulations, Title 14, Sections 15072 and 15105.

The IS/MND identified potentially significant environmental impacts to the following resource areas: Biological Resources, Cultural Resources, Geology/Soils, Noise, Tribal Cultural Resources, and Mandatory Findings of Significance. Mitigation measures are incorporated to mitigate those potentially significant impacts to a level considered less than significant with mitigation incorporated. Please see attached IS/MND for a detailed analysis of potential impacts and required mitigation measures.

P. That the proposed development will comply with each of the applicable provisions of this code, and applicable Town policies; except approved variances.

The project, as conditioned, complies with the standards and requirements of the Development Code and the policies and procedures of the Yucca Valley General

Plan.

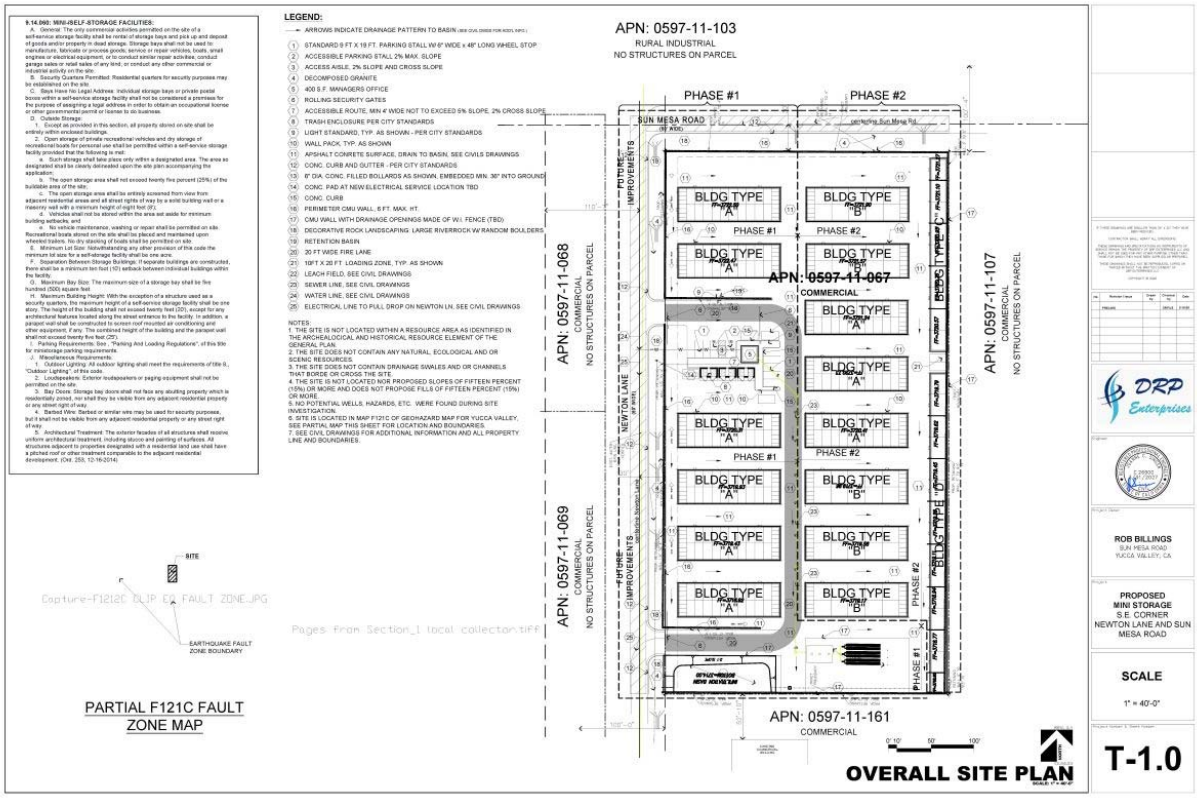
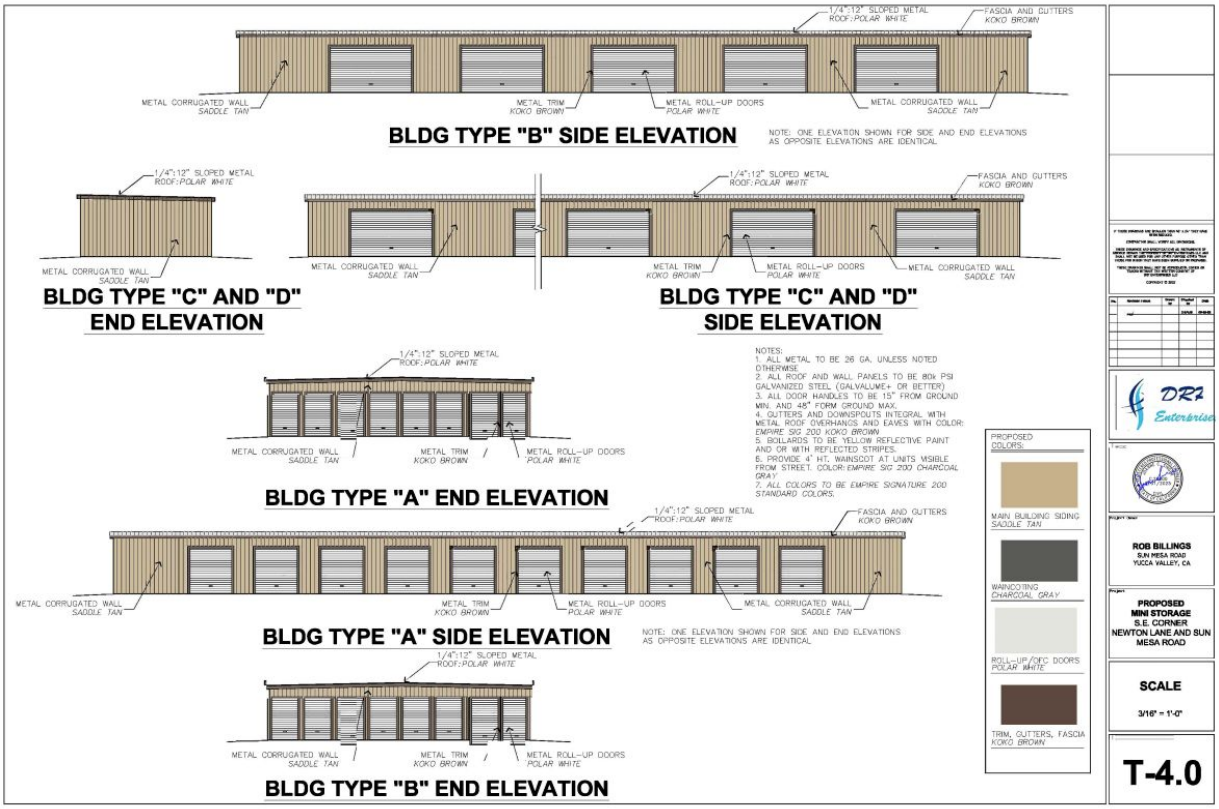
SITE PLAN REVIEW, SPR 07-23
SUN MESA MINI STORAGE

A request for the construction and development of an approximate 79,600 square foot multi-structure self-storage facility that is 9'6" in height, located on approximately 4.34 acre property, with parking, landscaping, and drainage improvements. Phase 1 of the project is located approximately on the western half of the property and Phase 2 is located on the eastern half of the property. The project is located at 4815 Newton Lane, southeast corner of the intersection of Sun Mesa Drive and Newton Lane, and is also identified as APN: 0597-111-67.





GENERAL CONDITIONS

G1. The applicant shall agree to defend, indemnify and hold harmless the Town of Yucca Valley, its agents, officers and employees, at his sole expense, against any action, claim or proceedings brought against the Town or its agents, officers or employees, to attack, set aside, void, or annul this approval or because of the issuance of such approval, or in the alternative, to relinquish such approval, in compliance with the Town of Yucca Valley Development Code. The applicant shall reimburse the Town, its agents, officers, or employees for any court costs, and attorney's fees which the Town, its agents, officers or employees may be required by a court to pay as a result of such action. The Town may, at its sole discretion, participate at its own expense in the defense of any such action but such participation shall not relieve applicant of his obligations under this condition. The Town shall promptly notify the applicant of any claim, action or proceeding arising from the Town's approval of this project, and the Town shall cooperate in the defense.

Applicant Initials_____

G2. This Conditional Use Permit shall become null and void if construction has not commenced within three (3) years of the Town of Yucca Valley date of approval. Extensions of time may be granted by the Planning Commission, in conformance with the Town of Yucca Valley Development Code. The applicant is responsible for the initiation of an extension request.

Approval Date: April 14, 2026
Expiration Date: April 14, 2029

G3. The applicant shall ascertain and comply with requirements of all State, County, Town and local agencies as are applicable to the project. These include, but are not limited to, County of San Bernardino Environmental Health Services, County of San Bernardino Transportation/Flood Control, County of San Bernardino Fire Department, Yucca Valley Building and Safety, Caltrans, High Desert Water District, Airport Land Use Commission, California Regional Water Quality Control Board, Colorado River Region, the Federal Emergency Management Agency, MDAQMD-Mojave Desert Air Quality Management District, Community Development, Engineering, and all other Town Departments.

G4. All conditions are continuing conditions. Failure of the applicant to comply with any or all of said conditions at any time may result in the revocation of any construction permits for the project.

G5. No on-site or off-site work shall commence without obtaining the appropriate permits for the work required by the Town and the appropriate utilities. The approved permits shall be readily available on the job site for inspection by Town personnel.

G6. The applicant shall pay all fees charged by the Town as required for application processing, plan checking, construction and/or inspections. The fee amounts shall be those which are applicable and in effect at the time work is undertaken and accomplished. Fees for entitlement prior to construction permits are based on estimated costs for similar projects. Additional fees may be incurred, depending upon the specific project. If additional fees for services are incurred, they must be paid prior to any further processing, consideration, or approval(s).

G7. One (1) representative for the project applicant shall coordinate and submit all permit applications required by the Town as appropriate. Multiple representatives submitting permit applications are highly discouraged.

DRAFT

Applicant Initials_____

G8. All improvements shall be inspected by the Town as appropriate. Any work completed without proper inspection may be subject to removal and replacement under proper inspection.

G9. All refuse shall be removed from the premises in conformance with Town of Yucca Valley Municipal Code Chapter 8.03, Construction Site Maintenance and Trash Containment.

G10. During construction, the Applicant shall be responsible to sweep public paved roads adjacent to the project as necessary and as requested by the Town to eliminate any site related dirt and debris within the roadways. During business activities, the applicant shall keep the public right-of-way adjacent to the property in a clean and sanitary condition.

G11. No staging of construction equipment or parking of worker's vehicles shall be allowed within the public right-of-way of streets or other public improvements that have been accepted into the Town's maintained system

G12. All existing street and property monuments within or abutting this project site shall be preserved consistent with AB 1414. If during construction of onsite or offsite improvements monuments are damaged or destroyed, the applicant shall retain a qualified licensed land surveyor or civil engineer to reset those monuments per Town Standards and file the necessary information with the County Recorder's office as required by law (AB 1414).

G13. Each phase of the project shall function independently of all other phases. All improvements shall be completed for each phase to ensure that each phase functions separate from the remainder of the project, and shall include, but not be limited to, street improvements, drainage and retention/detention facilities, water delivery systems, fire suppressions systems, post construction erosion and sediment control systems, all utilities necessary to serve the project, and those improvements deemed necessary by the Town. All phasing plans shall be illustrated on rough and precise grading plans, erosion and sediment control plans, all plan required for obtaining native plant plan approval, and on any other plan as deemed necessary by the Town.

G14. At the time of permit issuance the applicant shall be responsible for the payment of fees associated with electronic file storage of documents

G15. The Applicant shall reimburse the Town for the Town's costs incurred in monitoring the developer's compliance with the Conditions of Approval including, but not limited to, inspections and review of developer's operations and activities for compliance with all applicable dust and noise operations. This condition of approval is supplemental and in

DRAFT

addition to normal building permit and public improvement permits that may be required pursuant to the Yucca Valley Municipal Code.

G16. Prior to the issuance of a Certificate of Occupancy for any habitable structure in each phase of the project, all improvements shall be constructed, final inspection performed, punch-list items completed, and all installations approved by the appropriate agency.

G17. After final plan check by the Town, original mylars (4 mil) shall be submitted to the Town for signature by the Town Engineer. All original mylars submitted for Town Engineer's signature must contain the design engineer's wet signature and stamp and all other required signatures.

G18. For any import or export of material, the Project proponent shall provide the following for review by the Town Engineer: the route of travel, number of trucks, daily schedule, and length of time required. No hauling of material shall begin without the Town Engineer's approval.

G19. Prior to any work being performed within the public right-of-way, the Project proponent shall provide the name, address, telephone, facsimile number, and e-mail address of the Contractor to perform the work. A description of the location, purpose, method of construction, and surface and subsurface area of the proposed work shall be supplied. A plat showing the proposed location and dimensions of the excavation and the facilities to be installed, maintained, or repaired in connection with the excavation, shall be provided and such other details as may be required by the Town Engineer.

G20. The site shall be developed in accordance with the approved plans on file with the Town of Yucca Valley, in accordance with the Conditions of Approval approved for the project, and in accordance with the General Plan and Development Code. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Town.

G21. Prior to issuances of building permits, all site plans, grading plans, landscape and irrigation plans, drainage/flood control plans, public improvement plans, erosion and sediment control plans, shall be coordinated for consistency with this approval.

G22. The Town may allow phased constructed of the project provided that the improvements necessary to adequately serve or mitigate the impacts of each phase of development are completed prior to the issuance of a Certificate of Occupancy for that phase.

G23. The applicant or the applicant's successor-in-interest shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust.

DRAFT

Applicant Initials_____

G24. If archaeological, paleontological or historical resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person with appropriate expertise shall be consulted by the applicant regarding mitigation measures to preserve or record the find. Recommendations by the consultant shall be implemented as deemed necessary and feasible by the Town before work commences in the affected area. If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains might be those of a Native American, the California Native American Heritage Commission shall be notified and appropriate measures provided by State law shall be implemented.

G25. All street dedications shall be irrevocably offered to the public and shall continue in force until the Town accepts or abandons such offers. All dedications shall be free of all encumbrances as approved by the Town Engineer.

G26. The street design and circulation pattern of this project shall be coordinated with adjoining developments.

G27. The final conditions of approval issued by the approving authority shall be photographically or electronically placed on bond (blue/black line) paper and included in the Grading and Street Improvement plan sets on 24" x 36" bond (blue/ black line) paper and submitted with the plans for plan check. These conditions of approval shall become part of these plan sets and the approved plans shall be available in the field and during construction. Plan check fees shall not be charged for sheets containing the Conditions of Approval.

G28. Prior to issuance of a certificate of occupancy, the applicant shall submit all improvement plans on compact disks in digital format acceptable to the Town Engineer.

G29. Violations of any condition or restriction or prohibition set forth in these conditions, including all approved construction plans, public and private, for this project and subject to the Town's overall project approval and these conditions of approval, shall subject the owner, applicant, developer or contractor(s) to the remedies as noted in the Municipal Code. In addition, the Town Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

G30. After commencement of business operations, the applicant shall be responsible for daily removal of all windblown trash and debris and shall maintain the property in a clean condition.

DRAFT

Applicant Initials_____

G31. A bicycle parking and locking rack, for a minimum of three (3) bicycles, shall be placed on site in close proximity to building access.

PLANNING CONDITIONS

P1. All mitigation measures identified in the Initial Study/Mitigated Negative Declaration and included in the Mitigation Monitoring and Reporting Program are included as conditions of approval by this reference.

P2. This approval does not include signage. The signage for the project shall be approved by the Planning Commission prior to issuance of any permits.

P3. Utilities shall be underground in conformance with Ordinance 233, or as amended by Town Council.

P4. All exterior lighting shall comply with Development Code chapter 8.70, Outdoor Lighting and shall be illustrated on all construction plans. The proposed project shall cause no light trespass at all property lines. Light trespass shall be defined as exceeding 0.3 foot candles at any property lines.

P5. Prior to the issuance of any permits the applicant/owner shall provide three (3) copies of a landscape and irrigation plan showing the size, type and location of all plant and irrigation systems. Said irrigation system shall incorporate a permanent automatic irrigation system, and all landscaping and irrigation systems shall be maintained in good condition at all times. All ground within proposed landscape planter areas shall be provided with approved ground cover. This shall include but not be limited to drought-tolerant plant materials or colored desert rock.

P6. Parking and on-site circulation requirements shall be provided and maintained as identified on the approved site plan. Areas reserved for access drive and/or fire lanes shall be clearly designated.

a. All paved parking stalls shall be clearly striped and permanently maintained with double or hairpin lines with the two lines being located an equal 9 inches on either side of the stall sidelines. All regular parking stalls be a minimum 9’ x 19’.

b. All marking to include parking spaces, directional designation, no parking designation and fire lane designations shall be clearly defined and said marking shall be maintained in good condition at all times. The Town Traffic Engineer shall approve all signage and markings for the circulation related signage.

c. All two-way drive aisles shall be at least 26 feet in width.

DRAFT

Applicant Initials_____

P7. Applicant shall construct a trash enclosure in compliance with Ordinance 42 of the Town's Development Code.

P8. All roof top mechanical equipment shall be screened from ground and street vistas. This information shall be included on the building plan submittal.

P9. Pursuant to Ordinance 156, Sign Regulations, wall signs are based upon one square foot of signage per one linear foot of lease space oriented towards a street, parking lot or alley. Freestanding signs are based upon one square foot of signage per five linear feet of property frontage.

DRAFT

Applicant Initials_____

ENGINEERING CONDITIONS

E1. **Install asphalt concrete (AC) pavement, curb and gutter and sidewalk, along with any additional required AC pavement, along the project frontages on Newton Lane and Sun Mesa Drive per Town Standard Drawing No. 101. Driveways shall be constructed per Town Standard Drawing No. 213. Pavement shall be twenty-six feet (26') wide when measured from curb face. This will require paving six feet (6') on the other side of the street centerline. Pavement on Newton Lane shall extend to Buena Vista Avenue.**

E2. **Per Town Standard Drawing No. 213 commercial driveways shall be located 150 feet from the curb return.**

E3. **The site plan shall be revised to show the existing twenty foot (20') radius property line at the southeast corner of Newton Lane. and Sun Mesa Drive.**

E4. **The on-site retention basin shall be sized to retain the incremental difference between the existing conditions and the proposed conditions, plus an additional ten percent (10%). The on-site volume calculations shall be based upon the San Bernardino County Flood Control District hydrology manual, synthetic unit hydrograph method. The storm event used shall be the 100-year worst case storm.**

E5. **Due to the location of the proposed on-site retention basin an overflow outlet will be required. The outlet shall be designed, and the design included in the project grading plan, to ensure protection of the outlet and the retaining wall footing.**

E6. **There appears to be a thirty foot (30') error in the property line dimensions when scaled from the drawings submitted for review. This error must be corrected to the satisfaction of the Town Engineer. This may require a Record of Survey be recorded with the County Surveyor's office. A copy of the Record of Survey, if required, shall be submitted to the Town Engineer at the time of submittal to the County Surveyor's office.**

E7. **The applicant shall ensure that all construction related to the proposed retaining walls and basin overflow facilities occurs on the applicant's property. Proof of any temporary construction easements, if needed, shall be submitted to the Town at the time of grading permit application.**

E8. **Prior to issuance of building permits, the applicant shall cause to be formed Community Facilities District (CFD) for infrastructure improvements as required by the Town. The applicant shall initiate the CFD formation by submitting a landowner**

DRAFT

Applicant Initials_____

petition and consent form and deposit necessary fees concurrent with the application for street and grading plan review and approval.

E9. During construction, the Contractor shall be responsible to sweep public paved roads adjacent to the project as necessary and as requested by the Town staff to eliminate any site related dirt and debris within the roadways. During his business activities, the Applicant shall keep the public right-of-way adjacent to his property in a clean and sanitary condition.

E10. No staging of construction equipment or parking of worker's vehicles shall be allowed within the public right-of-way.

E11. Utility undergrounding shall be required for all new Service and Distribution lines that provide direct service to the property being developed; existing Service and Distribution lines that are located within the boundaries being developed; existing Service and Distribution lines between the street frontage property line and the centerline of the adjacent streets of the property being developed; existing Service and Distribution lines located along or within 10 feet of the lot lines of the property being developed; or existing Service and Distribution lines being relocated as a result of a project.

E12. Prior to the issuance of a Grading Permit for the site, a Grading Plan prepared by a registered professional Civil Engineer shall be submitted, and the corresponding fees shall be paid to the Town prior to any grading activity. The final Grading Plan shall be reviewed and approved by the Engineering Division prior to issuance of grading permits. The applicant/owner is responsible for all fees incurred by the Town. Prior to Certificate of Occupancy, the Engineer-of-Record shall survey and certify that the site grading was completed in substantial conformance with the approved Grading Plans.

E13. Prior to the issuance of Permits, the Applicant shall comply with the recommendations of a site-specific Geotechnical and Soils Report which shall be reviewed and subject to Town approval. The report shall include recommendations for any onsite and offsite grading, foundations, compaction, structures, drainage, and existence of fault zones. It shall include recommendations for retention basins, slope stability and erosion control.

E14. All recommended approved measures identified in the Soils Report shall be incorporated into the project design.

E15. Developer shall comply with NPDES requirements as applicable. The Applicant shall install devices on his property to keep erodible material, rocks, and gravel on the site. To eliminate any site related dirt and debris within the roadways, the Applicant shall be responsible to sweep public paved roads adjacent to the project as necessary and as requested by the Town Staff.

DRAFT

Applicant Initials_____

E16. The development of the property shall be in conformance with FEMA and the Town's Floodplain Management Ordinance requirements. Adequate provision shall be made to intercept and conduct the existing tributary drainage flows around or through the site in a manner that will not adversely affect adjacent or downstream properties at the time the site is developed.

E17. No on-site or off-site work shall commence without obtaining the appropriate permits for the work involved from the Town. The approved permits shall be readily available on the job-site for inspection by the Town personnel.

E18. All grading activities shall minimize dust through compliance with AQMD Rule 403.

E19. Prior to issuance of a grading permit, a Fugitive Dust and Erosion Control Plan shall be submitted and approved by the Building Official.

E20. A Notice of Intent to comply with Statewide General Construction Stormwater Permit (Water Quality Order 99-08-DWQ as modified December 2, 2002) is required for the proposed development via the California Regional Water Quality Control Board (phone no. 760-346-7491). A copy of the executed letter issuing a Waste Discharge Identification number shall be provided to the Town prior to issuance of a grading permit.

E21. Prior to any work being performed in the public right-of-way, fees shall be paid and an encroachment permit shall be obtained from the Town. The Applicant shall apply for an encroachment permit from the Town for utility trenching, utility connection, or any other encroachment onto public right-of-way. The Applicant shall be responsible for the associated costs and arrangements with each public utility.

E22. All existing street and property monuments within or abutting this project site shall be preserved consistent with AB 1414. If during construction of onsite or offsite improvements monuments are damaged or destroyed, the Applicant/ Developer shall retain a qualified licensed land surveyor or civil Engineer to reset those monuments per Town Standards and file the necessary information with the County Surveyor's office as required by law (AB 1414).

E23. All improvement plans shall be designed by a Registered Civil Engineer.

E24. The Applicant shall restore any pavement cuts required for installation or extension of utilities for his project within the public right-of-way. In all cases where cuts are allowed, the Applicant is required to patch the cuts to Town standards and the approval of the Town Engineer. The patching shall include a grinding of the pavement to a width 4 feet

DRAFT

beyond the edge of the trench on each side, or as determined by the Town Engineer, and replacement with a full-depth asphalt concrete recommended by the Soils Engineer.

E25. The Applicant shall construct the replacement of any identified damaged curb and gutter, sidewalk, drive approach, asphalt concrete pavement, meter boxes, and other infrastructure that may be required by the Town Engineer or another Agency.

E26. The Applicant shall install all water and sewer systems required to serve the project. The location of the proposed septic system(s) shall be shown on the project grading plan(s).

E27. The Developer and his Contractor(s) shall observe the construction of this project to make certain that no damage or potential for damage occurs to adjacent roadway, existing improvements, adjacent property and other infrastructure. The Developer shall be responsible for the repair of any damage occurring to offsite infrastructure and/or property damage as determined by the Town Engineer. The Developer shall repair any such damage prior to certificate of occupancy. If the damage is such that it is not repairable within a reasonable amount of time as determined by the Town Engineer, the Developer may petition the Town Engineer for additional conditions that may allow him the time, amount of surety and other requirements to repair the damage.

E28. The Developer and his Contractor(s) shall be responsible for all improvements that he has constructed within the public right-of-way as required by the conditions of approval. The improvements shall be constructed to the standards and requirements as determined and approved by the Town Engineer. Any improvements not considered to be to the required standards shall be replaced by the Developer. The Developer shall be required to maintain and repair those improvements prior to and after acceptance by the Town Council for the length of time required by the applicable conditions, standards and ordinances.

E29. The developer shall reimburse the Town for the Town's costs incurred in monitoring the developer's compliance with the Conditions of Approval including, but not limited to, inspections and review of developer's operations and activities for compliance with all applicable dust and noise operations. This condition of approval is supplemental and in addition to normal building permit and public improvement permits that may be required pursuant to the Yucca Valley Municipal Code.

Applicant Initials_____

BUILDING AND SAFETY CONDITIONS

B1. All construction plans must comply with the most current adopted California Building Codes. Including the 2025 California Wildland Urban Interface Code.

B2. All buildings require sprinklers compliant with the 2025 California Fire Code.

B3. All common areas and designated areas are required to comply with Ch. 11B of the 2025 California Building Code.

B4. All solar and electrical storage means are to comply with the 2025 California Energy Code, 2025 California Green Code and 2025 California Electrical Code.

B5. A pre-construction meeting is to be established and completed after issuance of grading and building permits.

B6. Applicant/developer shall provide plans and obtain the required permits that comply with applicable provisions of the 2025 California Building, Plumbing, Electrical, and Mechanical Codes, the 2025 California Green Building Standards Code, and Title 24 Energy Code, Part 6.

B7. All Plans to be stamped and wet signed by California Licensed Engineer or Architect.

B8. Provide all required ADA access plan (Parking, path of travel, building access, restroom, ADA workspace, etc.) per 2025 CBC.

B9. Obtain San Bernardino County Fire approval for building and site improvements.

B10. Obtain will serve letter from Hi-Desert Water.

B11. Prior to final certificate of occupancy, as required by California State Health and Safety Code Section 19850, the applicant shall provide 1 copy of the stamped approved plans and revisions on CD in PDF format to the Town of Yucca Valley Building and Safety Division to serve as the official file copy of the approved building plans.

B12. Submit 3 complete sets of plans and provide 1 electronic copy of all plans and all calculations at the initial plan review submittal.

I HEREBY CERTIFY THAT THE APPROVED CONDITIONS OF APPROVAL WILL BE SATISFIED PRIOR TO OR AT THE TIMEFRAMES SPECIFIED AS SHOWN ABOVE. I UNDERSTAND THAT FAILURE TO SATISFY ANY ONE OF THESE CONDITIONS WILL PROHIBIT THE ISSUANCE OF ANY PERMIT OR ANY FINAL MAP APPROVAL.

Environmental Assessment

1. Property boundaries, dimensions and area (also attach an 8 ½ x 11" site plan):
   See APN map - Lot is 302'x614' approx - 4.34 acres. dedications exist north and west
2. Existing site zoning: Commercial
3. Existing General Plan designation: C-Commercial
4. Precisely describe the existing use and condition of the site: Vacant Lot - No Current Use
5. Existing Zoning of adjacent parcels:

   North Rural Inustrial South Commercial East Commercial West Commercial

6. Existing General Plan designation of adjacent parcels:

   North Industrail South Commercial East Commercial West Commercial

7. Precisely describe existing uses adjacent to the site:

   North Vacant - Sun Mesa Rd North - Inustrial

   South Existing site - Commercial Use

   East Vacant - Commercial Zoning - County of SB

   West Existing site - Commercial Use

8. Describe the plant cover found on the site, including the number and type of all protected plants: Joshua trees, and other species, yucca and normal plant material for Yucca Valley on site
   See the report prepared by LSA for all precise info and related info for the WJT

Note: Explain any "Yes" or '"Maybe" responses to questions below. If the information and responses are insufficient or not complete, the application may be determined incomplete and returned to the applicant.

Yes	Maybe	No	
☐	☐	☑	9. Is the Site on filled or slopes of 15% or more or in a canyon? (A geological and/or soils Investigation report is required with this application.)
☐	☐	☑	10. Has the site been surveyed for historical, paleontological or archaeological resources? (If yes, a copy of the survey report is to accompany this application.)
☐	☐	☑	11. Is the site within a resource area as identified in the archaeological and historical resource element?
☐	☐	☑	12. Does the site contain any unique natural, ecological, or scenic resources?
☐	☐	☑	13. Do any drainage swales or channels border or cross the site?
☐	☐	☑	14. Has a traffic study been prepared? (If yes, a copy of the study is to accompany this application.)
☐	☐	☑	15. Is the site in a flood plain? (See appropriate FIRM)

Project Description New Commercial Storage Facility

Complete the items below as they pertain to your project. Attach any other supplemental information that will assist in the review of the proposed project pursuant to CEQA.

1. **Commercial, Industrial, or Institutional Projects:**

   A. Specific type of use proposed: Storage Facility

   B. Gross square footage by each type of use: 89,700 SF storage

   C. Gross square footage and number of floors of each building: 1 floor all buildings
   Build Type varies on SF - See Floor plan layout - Units A through F

   D. Estimate of employment by shift: 1 shift am only - hours 7 am to 6 pm (varies - part time)

   E. Planned outdoor activities: None

2. **Percentage of project site covered by:**

   Paving 42 % Building 48 % Landscaping 8 % Parking 2 %

3. **Maximum height of structures** 9 ft. 6 in for storage - Office 12 ft.

4. **Amount and type of off street parking proposed**: none proposed

5. **How will drainage be accommodated?** South retention lot - 100 year event 24 hours per Town of Yucca Valley requirements - - SB county Hydrology manual

6. **Off-site construction (public or private) required to support this project:**
   Yes, offsite work is needed for access to the lot.

7. **Preliminary grading plan estimate of cut and fill** See exhibit 4970 cut, 4485 fill

8. **Description of project phasing if applicable:** To be determined. Owner to build office space and then units, will build all access for fire. Owner to have 2 phases of site please see phasing on the site plan for locations. All site work would be in phase 1.

9. **Is this project part of a larger project previously reviewed by the Town? If yes, identify the review process and associated project title(s)** No

11. During construction, will the project: (Explain any "yes" or "maybe" responses to questions below – attach extra pages if necessary.)

Yes	Maybe	No		
☑	☐	☐	A.	Emit dust, ash, smoke, fumes or odors?
☐	☐	☑	B.	Alter existing drainage patterns?
☐	☐	☑	C.	Create a substantial demand for energy or water?
☐	☐	☑	D.	Discharge water of poor quality?
☑	☐	☐	E.	Increase noise levels on site or for adjoining areas?
☐	☑	☐	F.	Generate abnormally large amounts of solid waste or litter?
☐	☐	☑	G.	Use, produce, store, or dispose of potentially hazardous materials such as toxic or radioactive substances, flammable or explosives?
☐	☐	☑	H.	Require unusually high demands for such services as police, fire, sewer, schools, water, public recreation, etc.
☐	☐	☑	I.	Displace any residential occupants?

Owner/Applicant Authorization

Applicant/Representative: I/We have reviewed this completed application and the attached material. The information included with this application is true and correct to the best of my/our knowledge. I/We further understand that the Town may not approve the application as submitted, and may set conditions of approval. Further, I/We understand that all documents, maps, reports, etc., submitted with this application are deemed to be public records. This application does not guarantee approval or constitute a building permit application. Additional fees may be required depending on additional administrative costs.

Signature: Robert Billings

Name: Robert Billings

Date: 11-23-2023

Property Owner: I/We certify that I/We are presently the legal owner(s) of the above described property (If the undersigned is different from the legal property owner, a letter of authorization must accompany the form). Further, I/We acknowledge the filing of this application and certify that all of the above information is true and accurate. I/We understand that I/We are responsible for ensuring compliance with conditions of approval. I/We hereby authorize the Town of Yucca Valley and or/its designated agent(s) to enter onto the subject property to confirm the location of existing conditions and proposed improvements including compliance with applicable Town Code Requirements. Further, I/We understand that all documents, maps, reports, etc., submitted with this application are deemed to be public records. This application does not guarantee approval or constitute a building permit application. Additional fees may be required depending on additional administrative costs. I am hereby authorizing Daniel Patneaude, DRP Enterprises LLC to act as my agent and is further authorized to sign any and all documents on my behalf.

Signature: Robert Billings

Name: Robert Billings

Date: 11-23-2023

The Town of Yucca Valley is hereby granted release to copy and reproduce electronically, in whole or in part, drawings and all other materials submitted with this development application including phone numbers, addresses and e-mail addresses, for the Town's regulatory, administrative, and legal functions, including sharing of information with other governmental entities and for compliance with the California Public Records Act (CPRA). If any of these statements cannot be affirmatively acknowledged, please inform the planner before submitting a development application.

Signature: Robert Billings

Name: Robert Billings

Date: 11-23-2023

Agreement to Pay All Development Application Fees

In accordance with Town Council Resolution 04-38 the Town collects certain fees based on the actual cost of providing service. The application deposit for this project (as indicated below) may not cover the total cost of processing this application. I/We are aware that if the account has 25% or less remaining prior to completion of the project, staff will notify the undersigned in writing, of the amount of additional deposit required to complete the processing of the application, based on Staff's reasonable estimate of the hours remaining to complete this application process.

Further, I understand that if I do not submit the required additional deposit to the Town within 15 business days from the date of notification by the Town, the Town will cease processing of the application and/ or not schedule the project for action by the Planning Commission or Town Council until the fees have been paid.

Any remaining deposit will be refunded to me at time of closeout after I have submitted any required approved project plans and forms, including signed conditions of approval, or upon my written request to withdraw the application.

As the applicant, I understand that I am responsible for the cost of processing this application and I agree that the actual costs incurred processing this application will be paid to the Town of Yucca Valley.

Conditional Use Permit Application Submittal Requirements

Initial Submittal Requirements	# Required
Completed and Signed Applications and Filing Fee Complete	1
Project Description and Existing Conditions Letter Complete	1
Signed completed Environmental Information form Complete	1
Signed Agreement for Cost Recovery Complete	1
Signed Hazardous Waste Site Statement Complete	1
Preliminary Title Report within 60 days of application date	1
Grant Deeds for all involved properties Yes	1
Site Plan (See Section A) Yes	5
Floor Plans yes	5
Building elevations, including a minimum of one (1) color set	5
Preliminary Grading and Drainage Plan (Section B) Yes	5
Detailed slope analysis if project contains any slopes of 15 percent or greater	5
Preliminary Landscape Plans Yes	5
Native Plant Plan Yes, report prepared from LSA	5
Photometric Plan yes	5
Exterior Lighting Cutsheets Yes	1
Utility Plan including location and capacity Yes	5
Materials Board Yes	1
8 1/2 x 11 reductions of all plans Yes	1
Applicable utility service availability letters Yes	1
Water purveyor service letter or ground water report prepared and signed by a registered civil engineer	1 NA
Signed statement indicating method of sewage disposal and if Regional Water Quality Control Board approval is required	1
Signed surrounding property owners list certification yes	1
Surrounding property owners mailing list and labels yes	2
Surrounding properties radius map showing project site yes	1
Underlying Conditions of Approval (if applicable) NA	1
Copy of underlying Recorded Map and Environmental Constraints Sheet (if applicable)	1 NA
Planned Development Document (if applicable) NA	2
Specific Plan (if applicable) NA	2
All maps, plans, special studies, reports, etc. submitted in hard copy as part of this application are also to be delivered electronically, by CD, flash drive or email at time of submittal.	1
Upon review of the initial submittal, the Town will determine which of the following studies will be required for the project:	
Air Quality and Greenhouse Gas Inventory/Analysis	2
Archaeological Survey	2
Biological Report to include Native Plant Inventory and Focused Desert Tortoise	2
Geological Report, if property is located within an Alquist Priolo zone	2
Geotechnical/Soils Report	2
Hydrology Report prepared by a registered Civil Engineer	2
Noise Study	2
Traffic Study/Analysis prepared by a registered Civil Engineer	2
Please note that each project and each property are unique. Some projects may not require the submittal of each item listed above at time of submittal. Some circumstances may require items not included on the above list. Please contact Planning Staff if you have any questions.	

Plan Preparation and Guidelines

All plans shall be drawn on uniform sheets no less than 24" X 36" (or as approved by the Community Development Department). All plans must be collated, stapled and folded as close as possible to 8 ½" x 11" notebook size. All plans shall be clear, legible and accurately scaled. The site plan, preliminary landscape plan, photometric plan, building elevations and native plant plan should all be at the **same** scale and shall be consistent with each other.

Section A. Site Plan Content

Scale: Engineering scale not to exceed 1"=100'.

The following information shall be included on the plan:

- Data table formatted in the following order:
  - Assessor's Parcel Number(s) (book, page and parcel number)
  - Legal description
  - Existing and proposed zoning designation
  - Existing and proposed General Plan designation
  - Specific Plan identification and land use designation (if applicable)
  - Existing and proposed land use
  - Total Gross Area: square feet and acres
  - Total Net Area: square feet and acres
  - Name of utility purveyors and type of sewage disposal

- Name, address, phone number, and email of applicant, owner and registered civil engineer or licensed surveyor.
- Graphic scale (with bar scale) and north arrow
- North arrow (make top of map north)
- Vicinity map with labeled streets
- Date plan prepared
- Revision block indicating date when plan is revised through the development review process
- Surrounding information for adjoining properties including zoning and land use
- Existing buildings and traveled ways within the proposed project and within 100 feet of the exterior boundaries.
- Property lines, dimensions (metes & bounds) and location of adjoining lot lines.
- The locations, names and existing widths of all highways, streets, or easements within 100 feet of the project boundaries that provide legal access to the property.
- The location of existing wells, cesspools, sewers, culverts, drain pipes, underground structures, or excavated areas within 100 feet of any portion of the project noting thereon whether or not they are to be abandoned, removed, or remain in operation.
- The location of all existing and proposed fire hydrants.
- Location of on-site utilities and locations of existing public utilities including sanitary sewers, water mains and storm drains.

- The approximate location of all areas subject to storm water overflow, inundation or flood hazard (indicate limits of FEMA floodplain and floodway), and the location and direction of flow of each watercourse.
- Delineation of special hazard zones (i.e., earthquake faults, liquefaction zones, etc.).
- If the site is proposed to be developed in phases, the proposed sequence of phasing shall be provided.

Section B. Preliminary Grading Plan Content

Scale: Engineering scale not to exceed 1"=40'.

The following grading information shall be included on the plan:

- Title Block
    - Name, address, phone, and email address of applicant, owner, and engineer
- Legend, north arrow, bar and graphic scale
- Data Table
    - Assessor's Parcel Number(s)
    - Project Name
    - Legal Description (i.e. Tract/Parcel Map and lot(s)/parcel(s))
    - Approximate earthwork quantities (CY), include cut and fill
    - Date and Source of Topography (should be current)

- Preliminary pad elevations
- Minimum 1-foot contour interval
- Drainage facilities
- Existing and proposed easements, property lines, rights-of-way
- Overall cut and fill cubic yards (quantity to be called out on the plan)
- Vicinity map, bar and graphic scale
- Existing and proposed improvements within and 50' beyond the site boundaries (label those proposed to remain or to be removed)
- Shade pavement areas and fill slopes 3:1 or steeper
- Streets; typical cross-sections to show existing and proposed improvements, utilities, right-of-way, etc.
- Limits of FEMA floodplain and floodway
- Delineate open space areas
- Delineation of special hazard zones (i.e., earthquake faults, liquefaction zones, etc.)
- Existing topography at least fifty (50) feet beyond project boundary including natural features to be preserved.
- Proposed street grades with arrows indicating the direction of flow.

Property Owners Mailing List

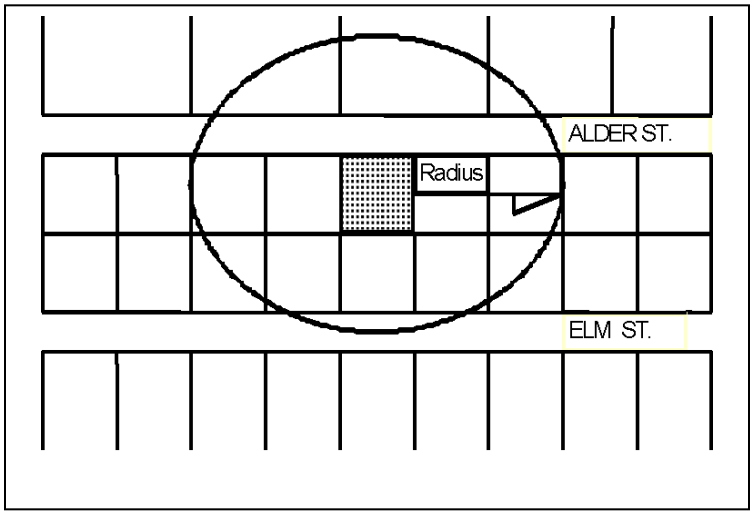
All applications that are subject to a Public Hearing require the applicant to submit a list of property owners who own property contiguous to and within 300 feet of the project site. This process is required by Section 83.010330 of the Development Code to notify residents and property owners in the immediate vicinity. Staff will send public notices to these individuals informing them of the proposed project and scheduled public hearings.

The surrounding property owner information must be obtained from the most current San Bernardino County Assessor's roll or shall be prepared and verified by a title company doing business in San Bernardino County. A County Assessor's office is located at 63665 29 Palms Hwy in Joshua Tree. The general telephone number for the Assessor's office is 760-366-1420.

MATERIALS REQUIRED:

- Two (2) sets of adhesive labels containing the mailing address of the owner(s), applicant(s) and of all surrounding property owners, including vacant properties. Mailing labels must contain: Assessor's Parcel Number, property owners name, address and zip code.
- One (1) copy of the labels sheets.
- One (1) radius map showing the subject property and all surrounding properties. The appropriate radius shall be drawn from the exterior boundaries of the subject property as shown in the sample below. The scale of the radius map shall be large enough to clearly show all surrounding properties.
- One (1) electronic copy of all submitted materials.

Sample Vicinity/Radius Map



SURROUNDING PROPERTY OWNERS LIST CERTIFICATION

(To be submitted with application)

I, Dan Patneaude , certify that on November, 22,2023 the attached property owners list was prepared by Express Mapping pursuant to the requirements of the Town of Yucca Valley. Said list is a complete compilation of the owner(s), applicant(s) and representative of the subject property and all owners of surrounding properties within a radius of 500 feet from all exterior boundaries of the subject property and is based on the latest equalized assessment rolls of the San Bernardino County Assessor's Office dated _____ . I further certify that the information filed is true and correct to the best of my knowledge; I understand that incorrect and erroneous information may be grounds for rejection or denial of the development application.

Signed: Daniel Patneaude

Print Name: Daniel Patneaude Date: 11-23-2023

Developer Disclosure Statement

This portion of the application must be fully completed and signed by the applicant. If not fully completed and signed, the application will be deemed incomplete.

Address of subject property: TBD Subn Mesa Road Yucca Valley CA

Cross street: Sun Mesa Rd and Newton Lane

Hazardous Waste and Substance Sites

Government Code Section 65962.5 requires each applicant for any development project to consult the State List of Hazardous Waste and Substance Sites. Based upon the list, the applicant/representative is required to submit a signed statement to the Town of Yucca Valley indicating whether the project is located on a site which is included on the list before the Town accepts the application as complete. If the project is listed by the State as a hazardous waste or substance site, the applicant must fully describe on the "Environmental Information Form" the nature of the hazard and the potential environmental impact. Attached is a standard statement for the applicant to sign.

The State list of Hazardous Waste and Substance Sites (which is annually updated) may be reviewed at the following web site address:

http://www.dtsc.ca.gov/SiteCleanup/Cortese_List.cfm

Attachment: Hazardous Waste Site Statement

HAZARDOUS WASTE SITE STATEMENT

I have been informed by the Town of Yucca Valley of my responsibilities, pursuant to California Government Code Section 65962.5, to notify the Town as to whether the site for which a development application has been submitted is located within an area which has been designated as the location of a hazardous waste site by the Office of Planning and Research, State of California (OPR).

I am informed and believe that the proposed site, for which a development application has been submitted, is not within any area specified in said Section 65962.5 as a hazardous waste site.

I declare under penalty of perjury of the laws of the State of California that the foregoing is true and correct.

TR 8749, MB 120/50-64 SEC. 13 T1N, R5E., S,B,B,&M.

If needed, you may attach additional documents to provide more detailed information.

Brief description of proposed use:

Current vacant land - Single Lot 4.34 acres to be used for commercial use C2- SCOPE OF WORK: PROPOSED MINISTORAGE FACILITY WITH ONE MANAGERS OFFICE SPACE. ALL STORAGE TO BE ENCLOSED. NO OPEN STORAGE IS PROPOSED. Property north is zoned rural mixed use SPA - industrial.

Brief Description of proposed location and surrounding properties as they currently exist:

Property directly north abutts the dedication and dirt road of Sun Mesa - Lot empty to the north. Property to the north is zoned industrial Mixed use SPA - Property to the east is zoned Commercial and vacant. Property to the south is built with a commercial use. Property to the west is built with commercial use. This use is fitting for the existing surrounding zoning and uses.

Logistics (Truck trips, hours of business, parking, number of employees, etc.):

The project will have a managers office space and expect to employee roughly one person part time to manage the sales and rental of units and maintenance and upkeep of the grounds as well as private businesses to maintain landscape etc. A total amount of daily trips anticipated will not exceed 45 trips at build out but will be detailed in a traffic analysis report if required.

Goals and Objectives:

Build 5 new types of storage units for a total SF of 89,700. The lot will have a manager office unit. Landscape, parking improvements Grading, minor utilities, will include site lighting, security. Offsite improvements as determined by the city engineer and PW conditions.

Project Number & Sheet Number

C-1.0

9.14.060: MINI-/SELF-STORAGE FACILITIES:

A. General: The only commercial activities permitted on the site of a self-service storage facility shall be rental of storage bays and pick up and deposit of goods and/or property in dead storage. Storage bays shall not be used to: manufacture, fabricate or process goods; service or repair vehicles, boats, small engines or electrical equipment, or to conduct similar repair activities; conduct garage sales or retail sales of any kind; or conduct any other commercial or industrial activity on the site.

B. Security Quarters Permitted: Residential quarters for security purposes may be established on the site.

C. Bays Have No Legal Address: Individual storage bays or private postal boxes within a self-service storage facility shall not be considered a premises for the purpose of assigning a legal address in order to obtain an occupational license or other governmental permit or license to do business.

D. Outside Storage:

1. Except as provided in this section, all property stored on site shall be entirely within enclosed buildings.

2. Open storage of private recreational vehicles and dry storage of recreational boats for personal use shall be permitted within a self-service storage facility provided that the following is met:

a. Such storage shall take place only within a designated area. The area so designated shall be clearly delineated upon the site plan accompanying the application;

b. The open storage area shall not exceed twenty five percent (25%) of the buildable area of the site;

c. The open storage area shall be entirely screened from view from adjacent residential areas and all street rights of way by a solid building wall or a masonry wall with a minimum height of eight feet (8');

d. Vehicles shall not be stored within the area set aside for minimum building setbacks; and

e. No vehicle maintenance, washing or repair shall be permitted on site. Recreational boats stored on the site shall be placed and maintained upon wheeled trailers. No dry stacking of boats shall be permitted on site.

E. Minimum Lot Size: Notwithstanding any other provision of this code the minimum lot size for a self-storage facility shall be one acre.

F. Separation Between Storage Buildings: If separate buildings are constructed, there shall be a minimum ten foot (10') setback between individual buildings within the facility.

G. Maximum Bay Size: The maximum size of a storage bay shall be five hundred (500) square feet.

H. Maximum Building Height: With the exception of a structure used as a security quarters, the maximum height of a self-service storage facility shall be one story. The height of the building shall not exceed twenty feet (20'), except for any architectural features located along the street entrance to the facility. In addition, a parapet wall shall be constructed to screen roof mounted air conditioning and other equipment, if any. The combined height of the building and the parapet wall shall not exceed twenty five feet (25').

I. Parking Requirements: See , "Parking And Loading Regulations", of this title for ministorage parking requirements.

J. Miscellaneous Requirements:

1. Outdoor Lighting: All outdoor lighting shall meet the requirements of title 8,, "Outdoor Lighting", of this code.

2. Loudspeakers: Exterior loudspeakers or paging equipment shall not be permitted on the site.

3. Bay Doors: Storage bay doors shall not face any abutting property which is residentially zoned, nor shall they be visible from any adjacent residential property or any street right of way.

4. Barbed Wire: Barbed or similar wire may be used for security purposes, but it shall not be visible from any adjacent residential property or any street right of way.

5. Architectural Treatment: The exterior facades of all structures shall receive uniform architectural treatment, including stucco and painting of surfaces. All structures adjacent to properties designated with a residential land use shall have a pitched roof or other treatment comparable to the adjacent residential development. (Ord. 253, 12-16-2014)

PROPOSED MINI STORAGE
S.E. CORNER
NEWTON LANE AND SUN MESA ROAD

SCALE

1" = 40'-0"

Project Number & Sheet Number

C-1.0

9.14.060: MINI-/SELF-STORAGE FACILITIES:

A. General: The only commercial activities permitted on the site of a self-service storage facility shall be rental of storage bays and pick up and deposit of goods and/or property in dead storage. Storage bays shall not be used to: manufacture, fabricate or process goods; service or repair vehicles, boats, small engines or electrical equipment, or to conduct similar repair activities; conduct garage sales or retail sales of any kind; or conduct any other commercial or industrial activity on the site.

B. Security Quarters Permitted: Residential quarters for security purposes may be established on the site.

C. Bays Have No Legal Address: Individual storage bays or private postal boxes within a self-service storage facility shall not be considered a premises for the purpose of assigning a legal address in order to obtain an occupational license or other governmental permit or license to do business.

D. Outside Storage:

1. Except as provided in this section, all property stored on site shall be entirely within enclosed buildings.

2. Open storage of private recreational vehicles and dry storage of recreational boats for personal use shall be permitted within a self-service storage facility provided that the following is met:

a. Such storage shall take place only within a designated area. The area so designated shall be clearly delineated upon the site plan accompanying the application;

b. The open storage area shall not exceed twenty five percent (25%) of the buildable area of the site;

c. The open storage area shall be entirely screened from view from adjacent residential areas and all street rights of way by a solid building wall or a masonry wall with a minimum height of eight feet (8');

d. Vehicles shall not be stored within the area set aside for minimum building setbacks; and

e. No vehicle maintenance, washing or repair shall be permitted on site. Recreational boats stored on the site shall be placed and maintained upon wheeled trailers. No dry stacking of boats shall be permitted on site.

E. Minimum Lot Size: Notwithstanding any other provision of this code the minimum lot size for a self-storage facility shall be one acre.

F. Separation Between Storage Buildings: If separate buildings are constructed, there shall be a minimum ten foot (10') setback between individual buildings within the facility.

G. Maximum Bay Size: The maximum size of a storage bay shall be five hundred (500) square feet.

H. Maximum Building Height: With the exception of a structure used as a security quarters, the maximum height of a self-service storage facility shall be one story. The height of the building shall not exceed twenty feet (20'), except for any architectural features located along the street entrance to the facility. In addition, a parapet wall shall be constructed to screen roof mounted air conditioning and other equipment, if any. The combined height of the building and the parapet wall shall not exceed twenty five feet (25').

I. Parking Requirements: See , "Parking And Loading Regulations", of this title for ministorage parking requirements.

J. Miscellaneous Requirements:

1. Outdoor Lighting: All outdoor lighting shall meet the requirements of title 8,, "Outdoor Lighting", of this code.

2. Loudspeakers: Exterior loudspeakers or paging equipment shall not be permitted on the site.

3. Bay Doors: Storage bay doors shall not face any abutting property which is residentially zoned, nor shall they be visible from any adjacent residential property or any street right of way.

4. Barbed Wire: Barbed or similar wire may be used for security purposes, but it shall not be visible from any adjacent residential property or any street right of way.

5. Architectural Treatment: The exterior facades of all structures shall receive uniform architectural treatment, including stucco and painting of surfaces. All structures adjacent to properties designated with a residential land use shall have a pitched roof or other treatment comparable to the adjacent residential development. (Ord. 253, 12-16-2014)

NOTES:
ALL PLANTINGS SHALL BE INSTALLED IN ACCORDANCE WITH ALL FEDERAL, STATE AND LOCAL CODES AND NURSERY AND MANUFACTURERS SPECIFICATIONS., RECOMMENDATIONS AND REQUIREMENTS. NOTIFY THE ARCHITECT IMMEDIATELY IN WRITING PRIOR TO SIGNING OF A CONTRACT WITH THE OWNER OF ANY CONFLICTS. CONFLICTS NOTED AFTER CONTRACT SIGNING OR AFTER THE COMMENCEMENT OF WORK SHALL BE THE SOLE RESPONSIBILITY OF THE LANDSCAPE CONTRACTOR.

VERIFICATION:
PLANT MATERIAL AVAILABILITY SHALL BE CONFIRMED BY LANDSCAPE CONTRACTOR PRIOR TO BIDDING. SHOULD SPECIFIED MATERIAL NOT BE AVAILABLE, THE ARCHITECT AND OWNER SHALL BE NOTIFIED PRIOR TO BID DATE. PLANT SUBSTITUTIONS MAY ONLY BE MADE IF A PLANT BECOMES UNAVAILABLE. SUBSTITUTIONS WILL NOT BE PERMITTED UNLESS SUBSTANTIATED WRITTEN PROOF IS SUPPLIED THAT A SPECIFIED PLANT IS NOT OBTAINABLE. IN THIS SITUATION A PLANT CAN ONLY BE SUBMITTED BY A PLANT OF SIMILAR SIZE, HABITAT, AND VALUE. ABSOLUTELY NO SUBSTITUTIONS CAN BE MADE WITHOUT THE APPROVAL OF THE PROJECT ARCHITECT. LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR VERIFICATION OF ALL PLANT QUANTITIES.

SCHEMATIC:
THE FEATURES ARE SHOWN SCHEMATICALLY FOR GRAPHIC CLARITY. PRIOR TO PLANTING VERIFY EXACT LOCATIONS WITH OWNER. VERIFY LOCATION OF ALL UTILITY LINES PRIOR TO INSTALLATION. FIELD ADJUSTMENT FOR GENERAL INTENT IF CONFLICT EXISTS.

FINISH GRADE:
LANDSCAPE CONTRACTORS SHALL NOT FINE GRADE, AMEND SOIL OR DO ANY PLANTING OR IRRIGATION WORK UNTIL FINAL GRADES ARE ESTABLISHED WITHIN 0.1' BY GENERAL CONTRACTOR.

FINISH GRADES IN PLANTING AREAS:
FINISH GRADES SHALL CONFORM TO GRADING PLAN. FINISH GRADES SHALL BE 1" INCH BELOW ADJACENT HARDSCAPE IN TURF AREAS AND 2" INCHES BELOW ADJACENT HARDSCAPE IN FROM AREAS. POSITIVE DRAINAGE AWAY FROM BUILDING AND WALKWAYS SHALL BE MAINTAINED.

ROUTE BARRIERS:
SEE DETAILS REGARDING ROOT BARRIER REQUIREMENTS.

PLANTING DEPTH:
THE LANDSCAPE CONTRACTOR SHALL PLANT ALL PLANTS AS SHOWN ON THE DETAILS. SHOULD THE LANDSCAPE CONTRACTOR OVERDIG PLANTING HOLES, AND THE PLANT OR PLANTS SETTLE, THE CONTRACTOR SHALL BE RESPONSIBLE TO REPLANT THESE PLANTS CORRECTLY. SHOULD REPLANTING WEAKEN IN THE PLANT, THE LANDSCAPE CONTRACTOR SHALL REPLACE PLANT IMMEDIATELY. SHOULD ANY PLANTS SETTLE DURING THE ONE YEAR WARRANTY PERIOD, THEY SHALL BE REPLACED BY THE LANDSCAPE CONTRACTOR. ALL REPLANTING AND REPLACEMENT SHALL BE DONE BY THE CONTRACTOR WITHIN TWO WEEKS OF NOTIFICATION AT NO ADDITIONAL COST TO THE OWNER. ALL REPLACEMENT PLANTINGS SHALL BE PROVIDED BY THE CONTRACTOR TO MATCH THE SAME SIZE OF THE SURROUNDING PLANT (E.I. REPLACEMENT PLANTS FOR ONE GALLON SIZE MAY REQUIRE REPLACEMENT BY FIVE GALLON, FIVE GALLON BY 15 GALLON, 15 GALLON BY 24 INCH BOX ETC.). ARCHITECT SHALL HAVE THE FINAL DECISION AS TO WHICH PLANTS ARE TOO DEEP AND IF ANY PLANTS HAVE BEEN WEAKENED BY REPLANTING AND REQUIRE REPLACEMENT.

TREEPLANTING:
THE LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE TO ADEQUATELY PLAN FOR TREE PLANTING WHILE INSTALLING THE IRRIGATION SYSTEM. NO TREES OR SHRUBS SHALL BE PLANTED DIRECTLY ON TOP OF IRRIGATION LINES.

BACKFILL:
BACKFILL FOR PLANTING WITH 50 PERCENT CLEAN NATIVE SOIL AND 50 PERCENT NITROLIZED FOREST HUMUS NITROLIZED SAWDUST. PLANT TREES AND SHRUBS WITH TOP OF ROOT BALL SLIGHTLY ABOVE GROUND LEVEL. SET PLANT ON NATIVE GRADE. IF HOLE IS OVERDUG BACKFILL WITH THREE-QUARTER INCH GRAVEL TO POINT WHERE PLANT CROWN IS ABOVE GROUND LEVEL. SET PLANT, BACKFILL HALFWAY, TAMP SOIL, AND FERTILIZER TABLETS THEN COMPLETE BACKFILL. SEE DETAIL. SLOW-RELEASE FERTILIZER PACKS SHALL BE ADDED WHEN PLANTING AS FOLLOWS: ONE FOR ONE GALLON, 3 PER 5 GALLON, 6 FOR 15 GALLON, 12 FOR 24" INCH BOX. PROVIDE WATERING BASIN AROUND EACH PLANT. WATER IMMEDIATELY. REMOVE BASINS IN TURF AREAS PRIOR TO PLANTING TURF.

SOIL PREPARATION:
REMOVE STONES, ROOTS AND OTHER DEBRIS FROM THE PLANTING AREA. COMPACTED SOIL SHALL BE RETURNED TO A FRIABLE CONDITION. APPLY WATER AS NEEDED TO OBTAIN OPTIMUM MOISTURE CONTENT FOR SOIL PREPARATION AND PLANTING. SEATED OR HYDROSEEDED TURF AND FLATTED GROUND COVER AREAS; TILL INTO TOP 6 INCH OF SOIL. BEST 6- 20 - 20XB FERTILIZER (OR APPROVED EQUAL) AT 20 POUNDS PER THOUSAND SQUARE FEET. A 2 INCH LAYER (6 CUBIC YARDS PER THOUSAND SQUARE FEET) NITROLIZED HUMUS, AND 92 POUNDS PER THOUSAND SQUARE FEET 95 PERCENT SPREADABLE GYPSUM. SODDED TURF SAME AS ABOVE WITH ONLY ONE CUBIC YARD PER THOUSAND SQUARE FOOT NITROLIZED HUMUS.

HERBICIDES:
LANDSCAPE CONTRACTOR WILL APPLY RONSTAR OR APPROVED EQUAL PER MANUFACTURER'S REQUIREMENTS AFTER PLANTING. CONFORM TO ALL NATIONAL, STATE AND LOCAL REPORTING REQUIREMENTS. LANDSCAPE CONTRACTOR WILL MAINTAIN THE PROJECT IN A WEED FREE CONDITION UNTIL END OF MAINTENANCE PERIOD.

SPECIALTY PLANTS:
THE LANDSCAPE CONTRACTOR SHALL PROVIDE ALL AMENDMENTS AND SPECIALTY MATERIALS NEEDED FOR PLANTS THAT REQUIRES SPECIAL PLANTING MEDIA. AZALEAS, JAPANESE MAPLES AND CAMELLIAS SHALL BE PLANTED IN A MIXTURE OF HALF PRE-MOISTENED PETE MOSS AND HALF NATIVE SOIL. OTHER PLANS REQUIRING SPECIAL PLANTING MEDIA WILL BE NOTED IN THE LEGEND. THE CONTRACTOR SHALL PROVIDE SPECIALTY MEDIA AS A PORTION OF COMPLETE PROJECT AT NO ADDITIONAL COST TO THE OWNER.

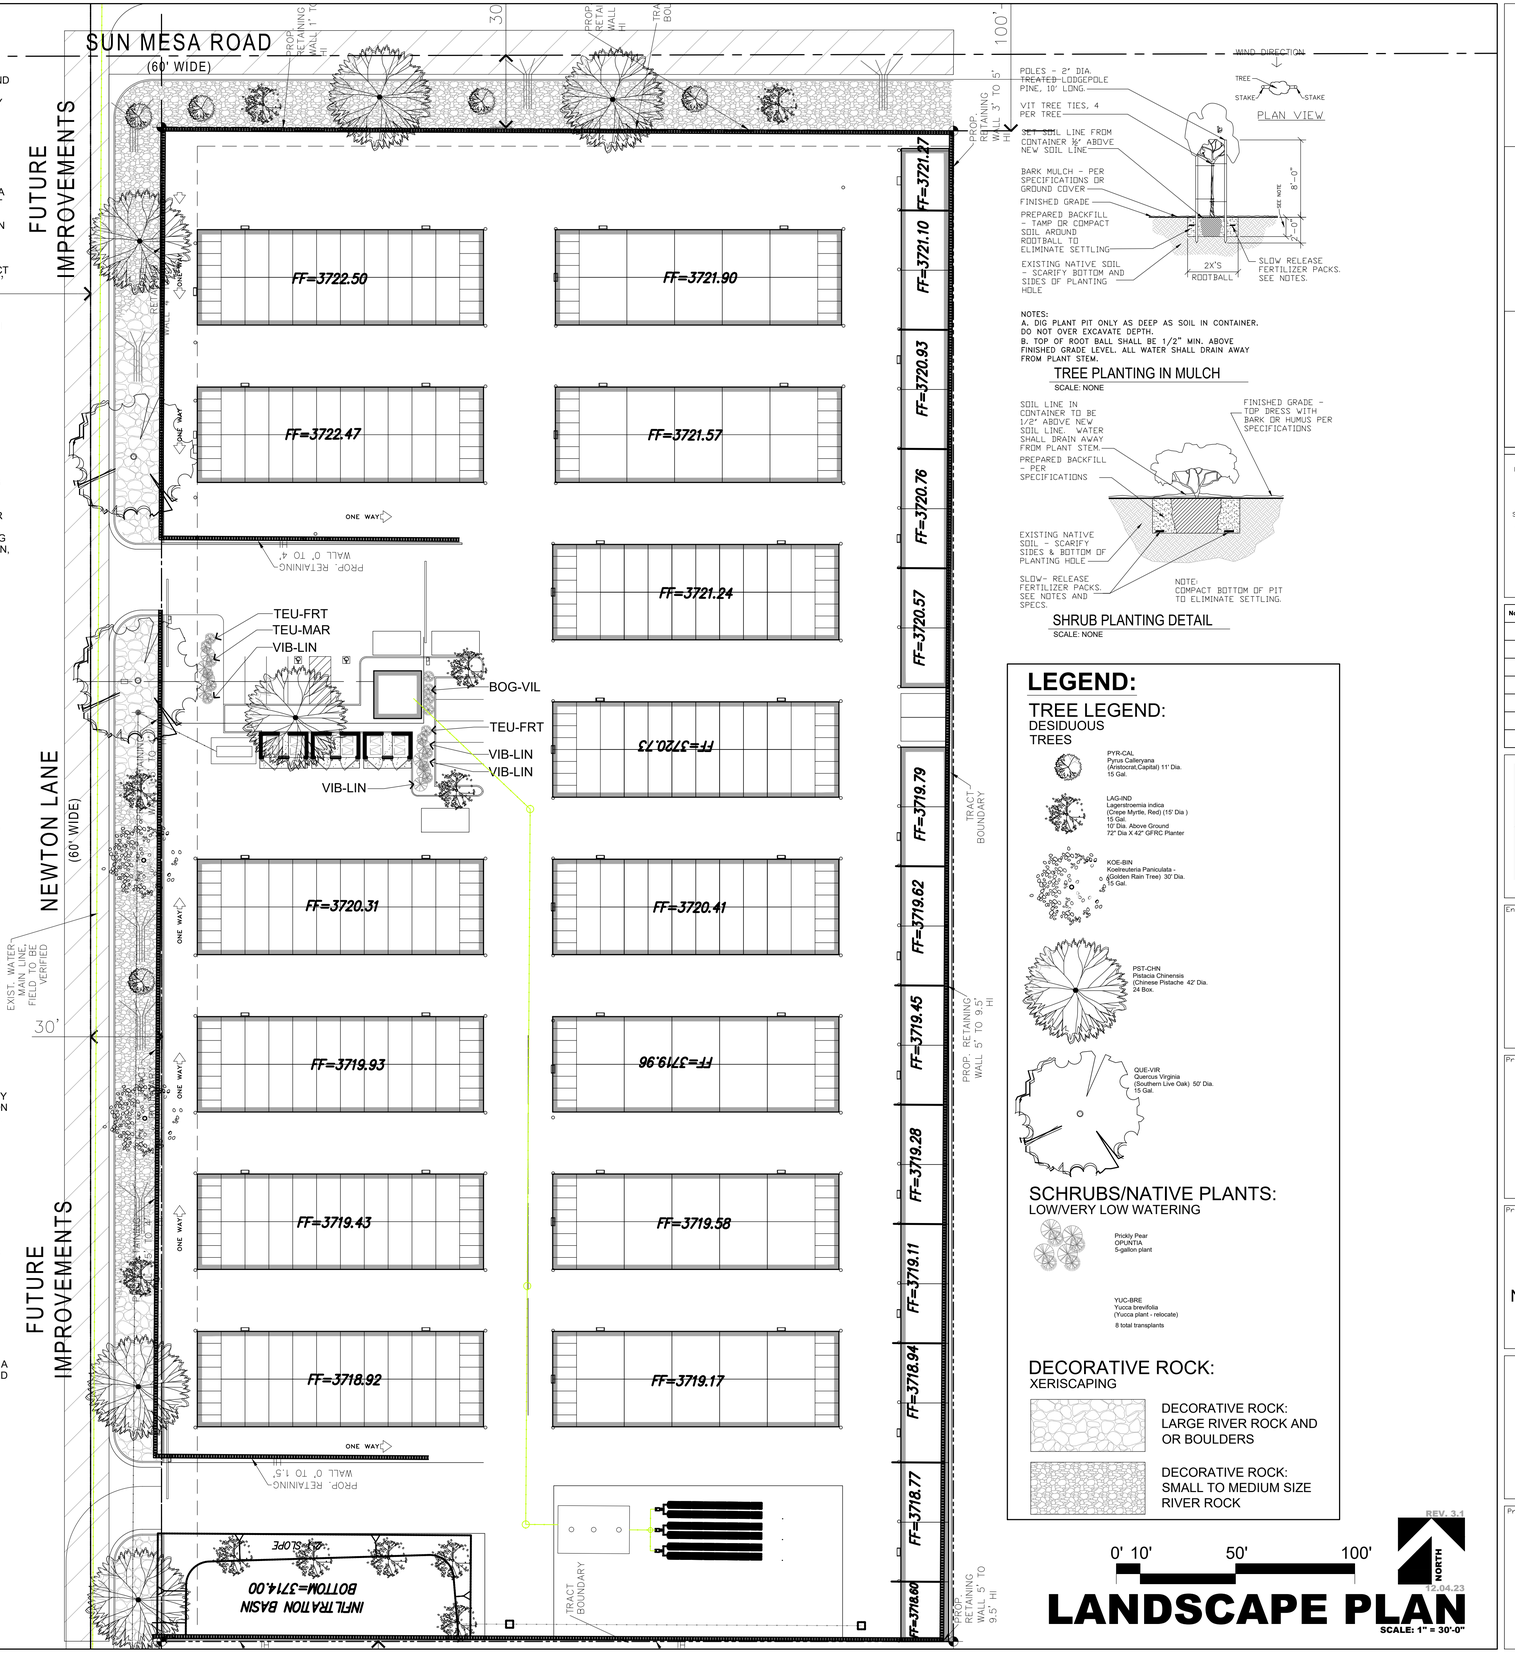
TREES:
ALL THREE SHALL MEET THE REQUIREMENTS OF AMERICAN ASSOCIATION OF NURSERYMEN 'AMERICAN STANDARD OR NURSERY STOCK'. THREE SHALL BE OF EXCELLENT HEALTH WITHOUT DAMAGE OR CIRCLING ROOTS OR FOLIAR DAMAGE FROM FUNGUS, INSECT, SUN OR WIND EXPOSURE OR OTHER BIOLOGICAL OR CLIMATIC CAUSES. THE ARCHITECT OR OWNER RESERVE THE RIGHT TO REJECT UNSUITABLE TREES EVEN AFTER PLANTING. LANDSCAPE CONTRACTOR SHALL REQUEST EVALUATION BY ARCHITECT PRIOR TO PLANTING IF HE/SHE HAS QUESTIONS REGARDING SUITABILITY. IF THE EVALUATION REQUIRES A SITE VISIT NOT PREVIOUSLY SCHEDULED, THE COST OF THE EVALUATION SHALL BE BORNE BY THE CONTRACTOR. TREES SHALL BE STAKED PER DETAIL.

TREE CALIPER:
TREES WILL HAVE THE FOLLOWING CALIPER AND SIX INCH ABOUT GRADE:
5 GALLONS. .5 INCH TO .75 INCH
15 GAL. .75 INCH TO 1.5 IN.
24 IN. BOX 1.5 INCH TO 2.5 IN.

WARRANTY PERIOD, MAINTENANCE PERIOD:
LANDSCAPE CONTRACTOR SHALL WARRANT PLANTING AND ALL OF ITS COMPONENTS FOR 12 MONTHS AFTER FINAL ACCEPTANCE OF PROJECT. LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MATERIALS AND LABOR ASSOCIATED WITH THE GUARANTEE, INCLUDING BUT NOT LIMITED TO THE LOSS OF THE PLANT MATERIAL OR DAMAGED STRUCTURES. LANDSCAPE CONTRACTOR SHALL PROVIDE MAINTENANCE OF THE PROJECT FOR 90 DAYS BEGINNING AT SUBSTANTIAL COMPLETION OF THE PROJECT. IF SUBSTANTIAL COMPLETION PUNCH LIST ITEMS HAVE NOT BEEN CORRECTED WITHIN 10 WORKING DAYS OF THE SUBSTANTIAL COMPLETION REVIEW, THE BEGINNING OF THE MAINTENANCE SHALL BE EXTENDED TO BEGIN AT THE COMPLETION OF THOSE PUNCH LIST ITEMS.

PLANT ALLOWANCE:
THE LANDSCAPE CONTRACTOR IS REQUIRED TO PROVIDE THE OWNER WITH COMPLETE PROJECT. HE/SHE SHALL INSTALLED ANY AND ALL PLANT MATERIAL AS SHOWN ON THE DRAWINGS AND LEGENDS. SHOULD A DISCREPANCY OCCUR BETWEEN THE PLANS, NOTES OR LEGENDS, THE ONE THAT REQUIRES A GREATER NUMBER OF PLANTS SHALL PREVAIL. THE LANDSCAPE CONTRACTOR SHALL MAKE ALL NEEDED CHANGES AS DIRECTED BY THE ARCHITECT AND PROVIDE THE OWNER WITH A COMPLETE PROJECT AT NO ADDITIONAL COST TO THE OWNER.

MULCH:
THE LANDSCAPE CONTRACTOR SHALL INSTALL 2 INCH OF WOOD CHIPS OR BARK ON ALL NON TURF PLANTING AREAS.



NOTES:
A. DIG PLANT PIT ONLY AS DEEP AS SOIL IN CONTAINER. DO NOT OVER EXCAVATE DEPTH.
B. TOP OF ROOT BALL SHALL BE 1/2" MIN. ABOVE FINISHED GRADE LEVEL. ALL WATER SHALL DRAIN AWAY FROM PLANT STEM.

T-5.0

NOTES:
ALL PLANTINGS SHALL BE INSTALLED IN ACCORDANCE WITH ALL FEDERAL, STATE AND LOCAL CODES AND NURSERY AND MANUFACTURERS SPECIFICATIONS., RECOMMENDATIONS AND REQUIREMENTS. NOTIFY THE ARCHITECT IMMEDIATELY IN WRITING PRIOR TO SIGNING OF A CONTRACT WITH THE OWNER OF ANY CONFLICTS. CONFLICTS NOTED AFTER CONTRACT SIGNING OR AFTER THE COMMENCEMENT OF WORK SHALL BE THE SOLE RESPONSIBILITY OF THE LANDSCAPE CONTRACTOR.

VERIFICATION:
PLANT MATERIAL AVAILABILITY SHALL BE CONFIRMED BY LANDSCAPE CONTRACTOR PRIOR TO BIDDING. SHOULD SPECIFIED MATERIAL NOT BE AVAILABLE, THE ARCHITECT AND OWNER SHALL BE NOTIFIED PRIOR TO BID DATE. PLANT SUBSTITUTIONS MAY ONLY BE MADE IF A PLANT BECOMES UNAVAILABLE. SUBSTITUTIONS WILL NOT BE PERMITTED UNLESS SUBSTANTIATED WRITTEN PROOF IS SUPPLIED THAT A SPECIFIED PLANT IS NOT OBTAINABLE. IN THIS SITUATION A PLANT CAN ONLY BE SUBMITTED BY A PLANT OF SIMILAR SIZE, HABITAT, AND VALUE. ABSOLUTELY NO SUBSTITUTIONS CAN BE MADE WITHOUT THE APPROVAL OF THE PROJECT ARCHITECT. LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR VERIFICATION OF ALL PLANT QUANTITIES.

SCHEMATIC:
THE FEATURES ARE SHOWN SCHEMATICALLY FOR GRAPHIC CLARITY. PRIOR TO PLANTING VERIFY EXACT LOCATIONS WITH OWNER. VERIFY LOCATION OF ALL UTILITY LINES PRIOR TO INSTALLATION. FIELD ADJUSTMENT FOR GENERAL INTENT IF CONFLICT EXISTS.

FINISH GRADE:
LANDSCAPE CONTRACTORS SHALL NOT FINE GRADE, AMEND SOIL OR DO ANY PLANTING OR IRRIGATION WORK UNTIL FINAL GRADES ARE ESTABLISHED WITHIN 0.1' BY GENERAL CONTRACTOR.

FINISH GRADES IN PLANTING AREAS:
FINISH GRADES SHALL CONFORM TO GRADING PLAN. FINISH GRADES SHALL BE 1" INCH BELOW ADJACENT HARDSCAPE IN TURF AREAS AND 2" INCHES BELOW ADJACENT HARDSCAPE IN FROM AREAS. POSITIVE DRAINAGE AWAY FROM BUILDING AND WALKWAYS SHALL BE MAINTAINED.

ROUTE BARRIERS:
SEE DETAILS REGARDING ROOT BARRIER REQUIREMENTS.

PLANTING DEPTH:
THE LANDSCAPE CONTRACTOR SHALL PLANT ALL PLANTS AS SHOWN ON THE DETAILS. SHOULD THE LANDSCAPE CONTRACTOR OVERDIG PLANTING HOLES, AND THE PLANT OR PLANTS SETTLE, THE CONTRACTOR SHALL BE RESPONSIBLE TO REPLANT THESE PLANTS CORRECTLY. SHOULD REPLANTING WEAKEN IN THE PLANT, THE LANDSCAPE CONTRACTOR SHALL REPLACE PLANT IMMEDIATELY. SHOULD ANY PLANTS SETTLE DURING THE ONE YEAR WARRANTY PERIOD, THEY SHALL BE REPLACED BY THE LANDSCAPE CONTRACTOR. ALL REPLANTING AND REPLACEMENT SHALL BE DONE BY THE CONTRACTOR WITHIN TWO WEEKS OF NOTIFICATION AT NO ADDITIONAL COST TO THE OWNER. ALL REPLACEMENT PLANTINGS SHALL BE PROVIDED BY THE CONTRACTOR TO MATCH THE SAME SIZE OF THE SURROUNDING PLANT (E.I. REPLACEMENT PLANTS FOR ONE GALLON SIZE MAY REQUIRE REPLACEMENT BY FIVE GALLON, FIVE GALLON BY 15 GALLON, 15 GALLON BY 24 INCH BOX ETC.). ARCHITECT SHALL HAVE THE FINAL DECISION AS TO WHICH PLANTS ARE TOO DEEP AND IF ANY PLANTS HAVE BEEN WEAKENED BY REPLANTING AND REQUIRE REPLACEMENT.

TREEPLANTING:
THE LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE TO ADEQUATELY PLAN FOR TREE PLANTING WHILE INSTALLING THE IRRIGATION SYSTEM. NO TREES OR SHRUBS SHALL BE PLANTED DIRECTLY ON TOP OF IRRIGATION LINES.

BACKFILL:
BACKFILL FOR PLANTING WITH 50 PERCENT CLEAN NATIVE SOIL AND 50 PERCENT NITROLIZED FOREST HUMUS NITROLIZED SAWDUST. PLANT TREES AND SHRUBS WITH TOP OF ROOT BALL SLIGHTLY ABOVE GROUND LEVEL. SET PLANT ON NATIVE GRADE. IF HOLE IS OVERDUG BACKFILL WITH THREE-QUARTER INCH GRAVEL TO POINT WHERE PLANT CROWN IS ABOVE GROUND LEVEL. SET PLANT, BACKFILL HALFWAY, TAMP SOIL, AND FERTILIZER TABLETS THEN COMPLETE BACKFILL. SEE DETAIL. SLOW-RELEASE FERTILIZER PACKS SHALL BE ADDED WHEN PLANTING AS FOLLOWS: ONE FOR ONE GALLON, 3 PER 5 GALLON, 6 FOR 15 GALLON, 12 FOR 24" INCH BOX. PROVIDE WATERING BASIN AROUND EACH PLANT. WATER IMMEDIATELY. REMOVE BASINS IN TURF AREAS PRIOR TO PLANTING TURF.

SOIL PREPARATION:
REMOVE STONES, ROOTS AND OTHER DEBRIS FROM THE PLANTING AREA. COMPACTED SOIL SHALL BE RETURNED TO A FRIABLE CONDITION. APPLY WATER AS NEEDED TO OBTAIN OPTIMUM MOISTURE CONTENT FOR SOIL PREPARATION AND PLANTING. SEATED OR HYDROSEEDED TURF AND FLATTED GROUND COVER AREAS; TILL INTO TOP 6 INCH OF SOIL. BEST 6- 20 - 20XB FERTILIZER (OR APPROVED EQUAL) AT 20 POUNDS PER THOUSAND SQUARE FEET. A 2 INCH LAYER (6 CUBIC YARDS PER THOUSAND SQUARE FEET) NITROLIZED HUMUS, AND 92 POUNDS PER THOUSAND SQUARE FEET 95 PERCENT SPREADABLE GYPSUM. SODDED TURF SAME AS ABOVE WITH ONLY ONE CUBIC YARD PER THOUSAND SQUARE FOOT NITROLIZED HUMUS.

HERBICIDES:
LANDSCAPE CONTRACTOR WILL APPLY RONSTAR OR APPROVED EQUAL PER MANUFACTURER'S REQUIREMENTS AFTER PLANTING. CONFORM TO ALL NATIONAL, STATE AND LOCAL REPORTING REQUIREMENTS. LANDSCAPE CONTRACTOR WILL MAINTAIN THE PROJECT IN A WEED FREE CONDITION UNTIL END OF MAINTENANCE PERIOD.

SPECIALTY PLANTS:
THE LANDSCAPE CONTRACTOR SHALL PROVIDE ALL AMENDMENTS AND SPECIALTY MATERIALS NEEDED FOR PLANTS THAT REQUIRES SPECIAL PLANTING MEDIA. AZALEAS, JAPANESE MAPLES AND CAMELLIAS SHALL BE PLANTED IN A MIXTURE OF HALF PRE-MOISTENED PETE MOSS AND HALF NATIVE SOIL. OTHER PLANS REQUIRING SPECIAL PLANTING MEDIA WILL BE NOTED IN THE LEGEND. THE CONTRACTOR SHALL PROVIDE SPECIALTY MEDIA AS A PORTION OF COMPLETE PROJECT AT NO ADDITIONAL COST TO THE OWNER.

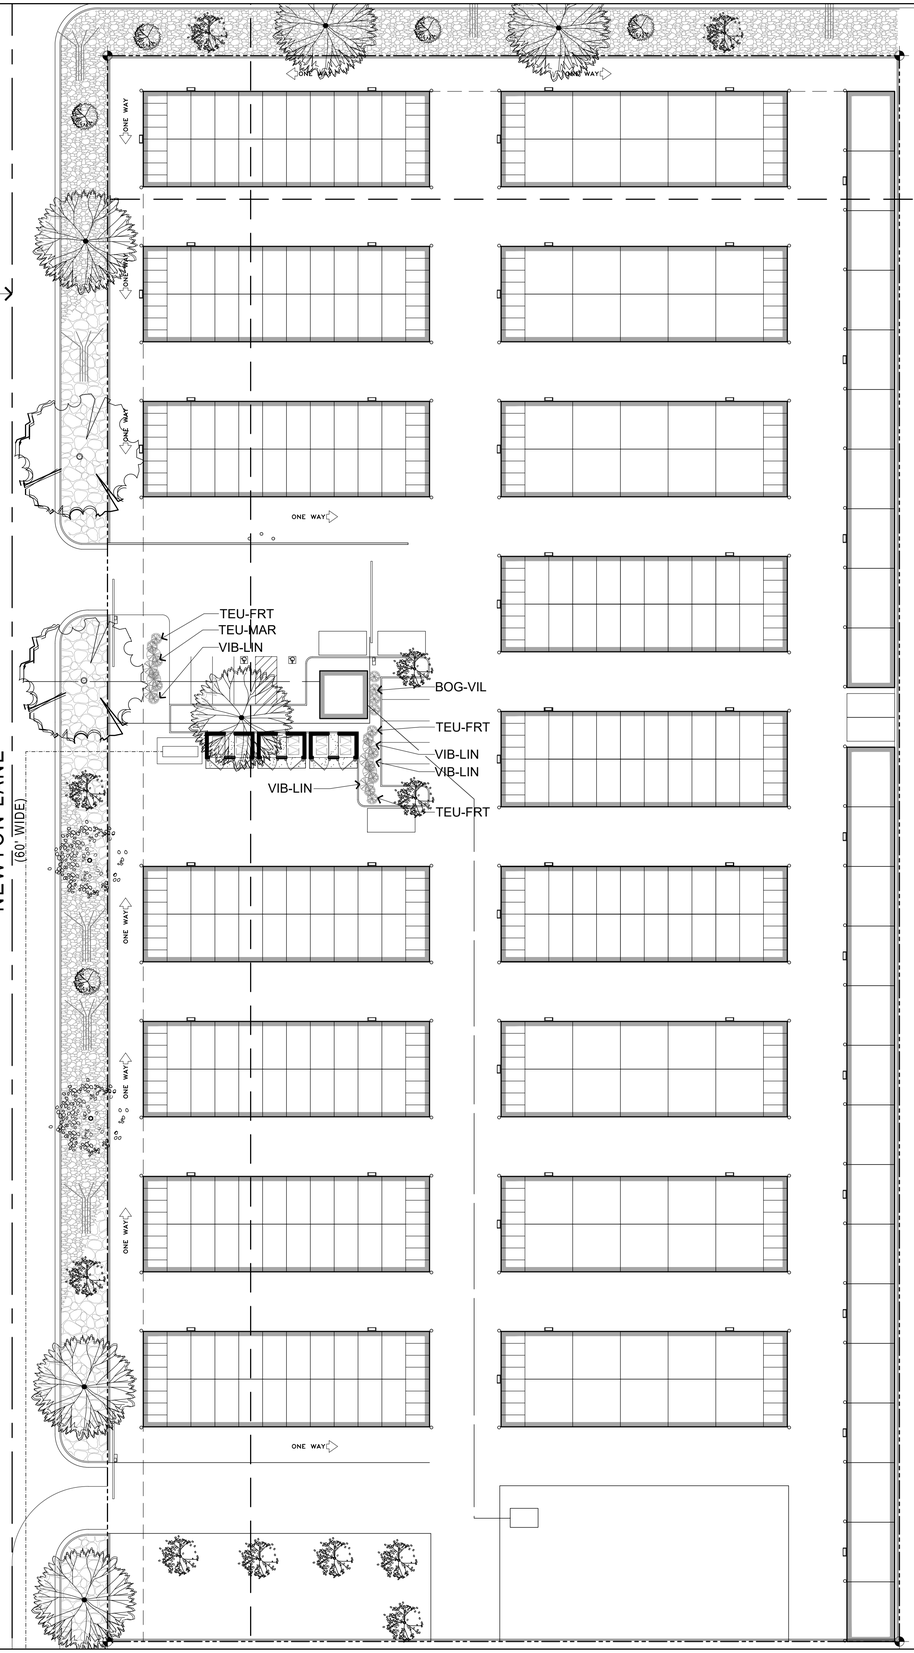
TREES:
ALL THREE SHALL MEET THE REQUIREMENTS OF AMERICAN ASSOCIATION OF NURSERYMEN 'AMERICAN STANDARD OR NURSERY STOCK'. THREE SHALL BE OF EXCELLENT HEALTH WITHOUT DAMAGE OR CIRCLING ROOTS OR FOLIAR DAMAGE FROM FUNGUS, INSECT, SUN OR WIND EXPOSURE OR OTHER BIOLOGICAL OR CLIMATIC CAUSES. THE ARCHITECT OR OWNER RESERVE THE RIGHT TO REJECT UNSUITABLE TREES EVEN AFTER PLANTING. LANDSCAPE CONTRACTOR SHALL REQUEST EVALUATION BY ARCHITECT PRIOR TO PLANTING IF HE/SHE HAS QUESTIONS REGARDING SUITABILITY. IF THE EVALUATION REQUIRES A SITE VISIT NOT PREVIOUSLY SCHEDULED, THE COST OF THE EVALUATION SHALL BE BORNE BY THE CONTRACTOR. TREES SHALL BE STAKED PER DETAIL.

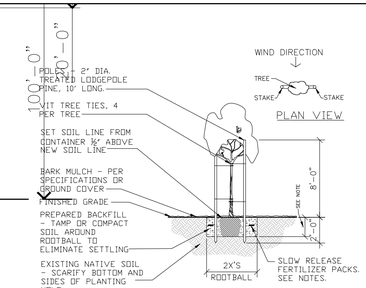
TREE CALIPER:
TREES WILL HAVE THE FOLLOWING CALIPER AND SIX INCH ABOUT GRADE:
5 GALLONS. .5 INCH TO .75 INCH
15 GAL. .75 INCH TO 1.5 IN.
24 IN. BOX 1.5 INCH TO 2.5 IN.

WARRANTY PERIOD, MAINTENANCE PERIOD:
LANDSCAPE CONTRACTOR SHALL WARRANT PLANTING AND ALL OF ITS COMPONENTS FOR 12 MONTHS AFTER FINAL ACCEPTANCE OF PROJECT. LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MATERIALS AND LABOR ASSOCIATED WITH THE GUARANTEE, INCLUDING BUT NOT LIMITED TO THE LOSS OF THE PLANT MATERIAL OR DAMAGED STRUCTURES. LANDSCAPE CONTRACTOR SHALL PROVIDE MAINTENANCE OF THE PROJECT FOR 90 DAYS BEGINNING AT SUBSTANTIAL COMPLETION OF THE PROJECT. IF SUBSTANTIAL COMPLETION PUNCH LIST ITEMS HAVE NOT BEEN CORRECTED WITHIN 10 WORKING DAYS OF THE SUBSTANTIAL COMPLETION REVIEW, THE BEGINNING OF THE MAINTENANCE SHALL BE EXTENDED TO BEGIN AT THE COMPLETION OF THOSE PUNCH LIST ITEMS.

PLANT ALLOWANCE:
THE LANDSCAPE CONTRACTOR IS REQUIRED TO PROVIDE THE OWNER WITH COMPLETE PROJECT. HE/SHE SHALL INSTALLED ANY AND ALL PLANT MATERIAL AS SHOWN ON THE DRAWINGS AND LEGENDS. SHOULD A DISCREPANCY OCCUR BETWEEN THE PLANS, NOTES OR LEGENDS, THE ONE THAT REQUIRES A GREATER NUMBER OF PLANTS SHALL PREVAIL. THE LANDSCAPE CONTRACTOR SHALL MAKE ALL NEEDED CHANGES AS DIRECTED BY THE ARCHITECT AND PROVIDE THE OWNER WITH A COMPLETE PROJECT AT NO ADDITIONAL COST TO THE OWNER.

MULCH:
THE LANDSCAPE CONTRACTOR SHALL INSTALL 2 INCH OF WOOD CHIPS OR BARK ON ALL NON TURF PLANTING AREAS.





NOTES:
A. DIG PLANT PIT ONLY AS DEEP AS SOIL IN CONTAINER. DO NOT OVER EXCAVATE DEPTH.
B. TOP OF ROOT BALL SHALL BE 1/2" MIN. ABOVE FINISHED GRADE LEVEL. ALL WATER SHALL DRAIN AWAY FROM PLANT STEM.

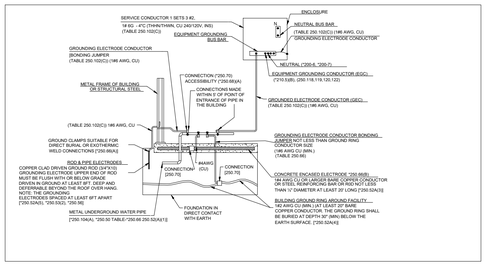
UFER GROUND NOTE :
ALL STEEL REBARS MEASURING 1/2 " OR MORE IN DIAMETER AND 20 ' OR LONGER IN LENGTH THAT IS ENCASED IN NOT LESS THAN 2 INCHES OF CONCRETE SHALL BE BONDED TO THE BUILDING'S GROUNDING ELECTRODE SYSTEM IN ACCORDANCE WITH NEC 250 (ELECTRICAL SUB CODE) SECTION 250.52(A)(3). THE "UFER" GROUND CAN BE 20 L.F. OF #2 OR #4 COPPER WIRING LAID INSIDE THE FOOTING AND THE SAME WIRE IS LONG ENOUGH TO REACH TO THE LOCATION OF THE MAIN ELECTRICAL PANEL OF THE HOUSE UFER GROUND CAN BE (1) L-SHAPED PIECE OF #4 STEEL REBAR CONNECTED TO THE OTHER STEEL REBAR IN THE FOOTING AND STICKING OUT IN SUFFICIENT LENGTH FOR CONNECTION AT THE LOCATION OF THE MAIN ELECTRICAL PANEL OF THE HOUSE



DETAIL "G" OF GROUNDING ELECTRODE SYSTEM (* 250.50)
& GROUNDING ELECTRODES (*250.52) AS SERVICE

PROJECT INFORMATION SHEET

1. Project Title	Sun Mesa Self-Storage Facility
2. CEQA Lead Agency	**Town of Yucca Valley** Community Development Department 58928 Business Center Drive Yucca Valley, CA 92284 Jared Jerome, Associate Planner (760) 369-6579 x317 jjerome@yucca-valley.org
3. Project Applicant	Rob Billings 5024 Wallaby Street Yucca Valley, CA (760) 686-4171 billingstransfer@yahoo.com
4. Project Location	S/E Corner of Sun Mesa Drive and Newton Lane Yucca Valley, California
5. Assessor's Parcel Numbers	APN 0597-111-67
6. Project Site General Plan Designation(s)	Current: Industrial (I)
7. Project Site Zoning Designation(s)	Current: Industrial (I)
8. Surrounding Land Uses and Setting	Residential property and auto repair facility located to the south of the project site. To the west, there is a debris storage and vacant gravel lot by Newton Lane. There is undeveloped land located north and east of the project site.
9. Description of Project	The proposed project entails the construction and operation of a self-storage facility, consisting of 16 detached storage structures, totaling approximately 89,700 square feet, plus a 400 square foot manager's office. Public infrastructure improvements as part of project implementation would include paving 26 feet wide(approximately half width) along Sun Mesa Drive and Newton Lane with curb, gutter, and sidewalk, from the proposed project site south to Buena Vista Drive. Refer to **Section 3.0** of this document for additional information. The project applicant is requesting the following discretionary actions, which are discussed in detail in **Section 3.0** of this document: • Site Plan Review • Design Review

10. Selected Agencies whose Approval is Required	Town of Yucca Valley
11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code § 21080.3.1? If so, has consultation begun?	Letters were sent by the Town of Yucca Valley (the Lead Agency), to local Native American tribes asking if they wished to participate in AB 52 consultation concerning the proposed project in the Town of Yucca Valley. Tribes had up to 30 days in which to respond to notification of the project. For the proposed project, those tribe(s) that requested consultation were contacted by the Town per Public Resources Code § 21074. The Twenty-Nine Palms Band of Mission Indians indicated that the project is within the Tribes Traditional Use Area, but no known cultural resources are located within the project's APE and there exists the possibility of surface or buried materials on the site and asks that the specific conditions for all cultural resources on any development plans be included. The Yuhaaviatam of San Manuel Nation requested consultation and provided a series of measures that are included as Mitigation Measures in this document. The Agua Caliente Band of Cahuilla Indians indicated that the project area is not located within the boundaries of the ACBCI Reservation, but it is within the Tribe's Traditional Use Area and due to this provided Mitigation Measures for the project that are included in this document. The Morongo Band of Mission Indians indicated that the project is within the ancestral territory of the tribe and request consultation and indicated that tribal monitoring is recommended. No consultation occurred. Consultation has been concluded.
12. Other Public Agencies	Agencies that will review the proposed project include the following: • Regional Water Quality Control Board, Colorado River Basin Region • California Department of Fish and Wildlife • U.S. Environmental Protection Agency • U.S. Army Corps of Engineers • Mojave Desert Air Quality Management District

Executive Summary

ES.1 Introduction

This Initial Study (IS) is intended to analyze potential impacts posed by the proposed project. The Town of Yucca Valley (Town) is the Lead Agency under the California Environmental Quality Act (CEQA) and is responsible for preparing the Initial Study for the Sun Mesa Self-Storage Facility (hereby referred to as the "proposed project" or the "project").

ES.2 Overview of the Proposed Project

The Town of Yucca Valley (Town) is processing a request to implement discretionary actions that would ultimately allow for the development of a self-storage facility, consisting of 16 detached storage structures totaling approximately 89,700 square feet plus a 400 square foot manager's office. Public infrastructure improvements would include requiring paving twenty-six (26') half width of a sixty-foot (60') wide local road along Newton Lane with curb, gutter, and sidewalk, from the proposed project site south to Buena Vista Drive (APN 0597-111-67).

ES.3 CEQA Purpose and Need

The purpose of this IS is to evaluate the potential impacts resulting from the implementation of the proposed project, including the construction and operation of the proposed self-storge facility. All "projects" within the State of California are required to undergo an environmental review to determine the environmental impacts associated with implementation of the project in accordance with the requirements of the *California Environmental Quality Act of 1970 (CEQA).* Some projects are determined to be statutorily and categorically exempt from CEQA and no further environmental documentation is needed to be prepared for them. However, if the proposed project may create significant impacts on the environment an environmental analysis (IS/MND or EIR) must be prepared for the project.

ES.4 Project Synopsis

Location

The project site is located southeast of the intersection of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley in San Bernardino County (APN: 0597-111-67).

Project Characteristics

The proposed self-storage facility is located on a parcel designated Industrial (I) in the Town of Yucca Valley General Plan and is zoned Industrial. The project does not require a General Plan Amendment or Zone Change and is subject to approval of a Site Plan Review (SPR).

ES.5 Summary of Significant Effects

As detailed in this document, after the implementation of mitigation, the project would result in less than significant environmental impacts.

ES.6 Project Objectives

Below is a list of objectives for the proposed project:

To provide construction of self-storage units and a manager's office, parking, landscaping, utility improvements, and improvement of half of Newton Lane along the project's west boundary.

ES.7 Areas of Controversy Known to the Lead Agency

The proposed project includes the removal of multiple western Joshua trees, which are currently under consideration by the California Fish & Game Commission as a candidate species under the California Endangered Species Act (CESA). The biological assessment prepared for the proposed project identifies the site as marginally suitable for desert tortoise; however, no desert tortoises were observed. The biological assessment identifies the site as habitat suitable for nesting birds. There are numerous Western Joshua Trees located on the project site and along Lomita Lane.

ES.10 Summary of Environmental Impacts and Mitigation Measures

Refer to **Section 7.0**, Mitigation Monitoring and Reporting Program (MMRP), for a MMRP table that lists impacts, mitigation measures adopted by the Town of Yucca Valley in connection with approval of the proposed project, level of significance after mitigation, responsible and monitoring parties, and the project phase in which the measures are to be implemented.

1.0 INTRODUCTION

1.1 Proposed Project

The Town of Yucca Valley (Town) is processing an application for discretionary actions that would ultimately allow for the approval and development of a proposed self-storage facility southeast of the intersection of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley in San Bernardino County. Project implementation includes public infrastructure improvements from the proposed self-storage site to Buena Vista Drive, south of the project site.

1.1.1 Project Components

The proposed project would consist of:

Proposed Buildings

- Construction of 16 multi-unit metal storage structures, totaling approximately 89,700 square feet including a 400 square foot manager's office

1.1.2 Pavement of half width (26 feet) of local roads along Newton Lane and Sun Mesa Drive with curb, gutter, and sidewalk as delineated in Figure 3.2-1. Estimated Construction Schedule

Project construction would be in two phases and is estimated to start in First Quarter 2026. Phase 1, which includes half the units as well as the manager's office, would take approximately 3 to 4 months. Phase 2, which also includes offsite improvements, would take 3 to 4 months - but timing of construction start would be dependent on sales in Phase 1.

Refer to **Section 3.0 Project Description** for details.

1.2 Lead Agencies – Environmental Review Implementation

The Town of Yucca Valley is the Lead Agency for the proposed project. Pursuant to the California Environmental Quality Act (CEQA) and its implementing regulations,[1] the Lead Agency has the principal responsibility for implementing and approving a project that may have a significant effect on the environment.

1.3 CEQA Overview

1.3.1 Purpose of CEQA

All discretionary projects within California are required to undergo environmental review under CEQA. A Project is defined in CEQA Guidelines § 15378 as the whole of the action having the potential to result in a direct physical change or a reasonably foreseeable indirect change to the environment and is any of the following:

- An activity directly undertaken by any public agency including but not limited to public works construction and related activities, clearing or grading of land, improvements to existing

1 Public Resources Code §§ 21000 - 21177 and California Code of Regulations Title 14, Division 6, Chapter 3.

public structures, enactment and amendment of zoning ordinances, and the adoption and amendment of local General Plans or elements.

- An activity undertaken by a person which is supported in whole or in part through public agency contracts, grants, subsidies, loans, or other forms of assistance from one or more public agencies.

- An activity involving the issuance to a person of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies.

CEQA Guidelines § 15002 lists the basic purposes of CEQA as follows:

- Inform governmental decision makers and the public about the potential significant environmental effects of proposed activities.

- Identify the ways that environmental damage can be avoided or significantly reduced.

- Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures (MMs) when the governmental agency finds the changes to be feasible.

- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

1.3.2 Authority to Mitigate under CEQA

CEQA establishes a duty for public agencies to avoid or minimize environmental damage where feasible. Under CEQA Guidelines § 15041 a Lead Agency for a project has authority to require feasible changes in any or all activities involved in the project in order to substantially lessen or avoid significant effects on the environment, consistent with applicable constitutional requirements such as the "nexus"[2] and "rough proportionality"[3] standards.

CEQA allows a Lead Agency to approve a project even though the project would cause a significant effect on the environment if the agency makes a fully informed and publicly disclosed decision that there is no feasible way to lessen or avoid the significant effect. In such cases, the Lead Agency must specifically identify expected benefits and other overriding considerations from the project that outweigh the policy of reducing or avoiding significant environmental impacts of the project.

1.4 Purpose of Initial Study

The CEQA process begins with a public agency making a determination as to whether the project is subject to CEQA at all. If the project is exempt, the process does not need to proceed any farther. If the project is not exempt, the Lead Agency takes the second step and conducts an Initial Study to determine whether the project may have a significant effect on the environment.

2 A nexus (i.e., connection) must be established between the mitigation measure and a legitimate governmental interest.

3 The mitigation measure must be "roughly proportional" to the impacts of the Project.

The purposes of an Initial Study as listed in § 15063(c) of the CEQA Guidelines are to:

- Provide the Lead Agency with information necessary to decide if an Environmental Impact Report (EIR), Negative Declaration (ND), or Mitigated Negative Declaration (MND) should be prepared.
- Enable a Lead Agency to modify a project to mitigate adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a ND or MND.
- Assist in the preparation of an EIR, if required, by focusing the EIR on adverse effects determined to be significant, identifying the adverse effects determined not to be significant, explaining the reasons for determining that potentially significant adverse effects would not be significant, and identifying whether a program EIR, or other process, can be used to analyze adverse environmental effects of the project.
- Facilitate an environmental assessment early during project design.
- Provide documentation in the ND or MND that a project would not have a significant effect on the environment.
- Eliminate unnecessary EIRs.
- Determine if a previously prepared EIR could be used for the Project.

In cases where no potentially significant impacts are identified, the Lead Agency may issue a ND, and no MMs would be needed. Where potentially significant impacts are identified, the Lead Agency may determine that MMs would adequately reduce these impacts to less than significant levels. The Lead Agency would then prepare an MND for the proposed project. If the Lead Agency determines that individual or cumulative effects of the proposed project would cause a significant adverse environmental effect that cannot be mitigated to less than significant levels, then the Lead Agency would require an EIR to further analyze these impacts.

1.5 Review and Comment by Other Agencies

Other public agencies are provided the opportunity to review and comment on the IS/MND. Each of these agencies is described briefly below.

- A Responsible Agency (14 CCR § 15381) is a public agency, other than the Lead Agency, that has discretionary approval power over the Project, such as permit issuance or plan approval authority.
- A Trustee Agency[4] (14 CCR § 15386) is a state agency having jurisdiction by law over natural resources affected by a project that are held in trust for the people of the State of California.
- Agencies with Jurisdiction by Law (14 CCR § 15366) are any public agencies who have authority (1) to grant a permit or other entitlement for use; (2) to provide funding for the project in question; or (3) to exercise authority over resources which may be affected by the

4 The four Trustee Agencies in California listed in CEQA Guidelines § 15386 are California Department of Fish and Wildlife, State Lands Commission, State Department of Parks and Recreation, and University of California.

project. Furthermore, a city or county will have jurisdiction by law with respect to a project when the city or county having primary jurisdiction over the area involved is: (1) the site of the project; (2) the area in which the major environmental effects will occur; and/or (3) the area in which reside those citizens most directly concerned by any such environmental effects.

1.6 Impact Terminology

The following terminology is used to describe the level of significance of potential impacts:

- A finding of ***no impact*** is appropriate if the analysis concludes that the project would not affect the particular environmental threshold in any way.

- An impact is considered ***less than significant*** if the analysis concludes that the project would cause no substantial adverse change to the environment and requires no mitigation.

- An impact is considered ***less than significant with mitigation incorporated*** if the analysis concludes that the project would cause no substantial adverse change to the environment with the inclusion of environmental commitments, or other enforceable measures, that would be adopted by the lead agency.

- An impact is considered ***significant and unavoidable*** if the analysis concludes that the project could have a substantial adverse effect on the environment and cannot be mitigated to a less than significant level..

1.7 Organization of Initial Study

This document is organized to be consistent with the requirements under CEQA Guidelines § 15063(d), and includes the following sections:

- **Section 1.0 - Introduction**, which identifies the purpose and scope of the IS/MND.

- **Section 2.0 - Environmental Setting**, which describes location, existing site conditions, land uses, zoning designations, topography, and vegetation associated with the project site and surroundings.

- **Section 3.0 - Project Description**, which provides an overview of the project, a description of the proposed development, project phasing during construction, and discretionary actions for project approval.

- **Section 4.0 - Environmental Checklist**, which presents checklist responses for each resource topic to identify and assess impacts associated with the proposed project, and proposes MMs, as needed, to reduce potential environmental impacts to less than significant.

- **Section 5.0 - References**, which includes a list of documents cited in the IS/MND.

- **Section 6.0 - List of Preparers**, which identifies the primary authors and technical experts that prepared the IS/MND.

Technical studies and other documents, which include supporting information or analyses used to prepare the IS/MND, are included in the following appendices:

Appendix A	Project Plans and Drawings
Appendix B	Air Quality, Energy, and Greenhouse Gas Emissions Assessment
Appendix C1	Biological Resources Assessment
Appendix C2	Western Joshuia Tree Census
Appendix C3	Rare Plant Survey Report
Appendix D	Cultural Resources Report
Appendix E	Geotechnical Report
Appendix F	Phase I ESA
Appendix G1	Percolation Testing Report
Appendix G2	Drainage Study
Appendix H	Noise and Vibration Assessment

1.8 Findings from the Initial Study

1.8.1 No Impact or Impacts Considered Less than Significant

Based on IS findings, the project would have no impact or a less than significant impact on the following environmental categories listed from Appendix G of the CEQA Guidelines.

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation and Traffic
- Utilities and Service Systems
- Wildfire

1.8.2 Impacts Considered Less than Significant with Mitigation Measures

Based on IS findings, the project would have a less than significant impact on the following environmental categories listed in Appendix G of the CEQA Guidelines when proposed MMs are implemented.

- Biological Resources
- Cultural Resources
- Geology and Soils
- Tribal Cultural Resources
- Mandatory Findings of Significance

2.0 ENVIRONMENTAL SETTING

2.1 Project Location

The approximately 4.34-acre project site is located at the southeast corner of Sun Mesa Drive and Newton Lane within the northern portion of the Town of Yucca Valley in San Bernardino County. The site lies in a transitional area between established commercial and industrial uses along Old Woman Springs Road (SR-247), and largely undeveloped parcels to the north and east. The project's location provides convenient access to the regional roadway network, including SR-247 approximately 0.15 mile to the west and State Route 62 (SR-62) located approximately 3.11 miles south, both of which function as primary regional corridors through the Morongo Basin.

Refer to **Figure 2.1-1**, which illustrates the project's position within the broader regional context, including nearby transportation routes, community boundaries, and major natural features such as the San Bernardino Mountains to the southwest and the Mojave Desert to the north and east. **Figure 2.1-2** provides an aerial view of the project site and surrounding lands. As shown, the site is vacant with sparse desert vegetation and is bordered by existing commercial development to the south and west, with undeveloped residential -zoned parcels immediately north and east. The aerial photo also highlights the site's rectangular configuration, its frontage along Newton Lane and Sun Mesa Drive, and the absence of existing structures or utilities on the property.

2.2 Project Setting

The project site consists of one legal parcel, identified as Assessor's Parcel Number (APN) 0597-111-67. The entire 4.34-acre property is currently undeveloped and contains no existing structures, utilities, or previous site improvements. Vegetation includes 98 western Joshua trees – both living and dead – (LSA, 2023) and sparse desert scrub typical of the High Desert region. There is evidence of prior disturbance that appears to be limited to fault trenching that may have been conducted in January 2006, for which results were not recorded with the County (Google Earth Pro, 2025).

Figure 2.2-1 illustrates the topography of the project site and the surrounding area. As shown, site elevations vary only slightly, and the property is generally characterized by a flat to gently sloping surface that drains toward the southwest. According to 2025 Google Earth elevation data, the terrain exhibits minimal relief, reflecting the broader geomorphology of the Morongo Basin, where broad alluvial plains transition into upland desert foothills.

Site photographs included in **Figure 2.2-2** provide visual confirmation of existing onsite conditions, including the undeveloped character of the parcel, the absence of structural development, the surrounding roadway network, and the adjacent vacant land and commercial uses. These photographs also illustrate the site's desert setting, surface soils, and existing access from Newton Lane and Sun Mesa Drive, which define the northern and western boundaries of the parcel.

2.2.1 Land Use and Zoning

The land use pattern surrounding the project site consists of a mix of vacant parcels, low-intensity commercial uses, and industrial operations that reflect the transitional character of this portion of the Town of Yucca Valley. The project site itself is designated Industrial (I) under both the Town of Yucca Valley General Plan and Zoning Map (Town of Yucca Valley, 2014). This designation is intended to accommodate a broad range of light industrial, storage, and service-oriented uses that require larger parcels and separation from residential neighborhoods.

Figure 2.2-4
PROJECT SITE PHOTOGRAPHS

Photo 1: View looking south at Joshua tree woodland from the northwest corner of the project site.

Photo 2: View looking south at Joshua tree woodland from the northeast corner of the project site.

Photo 3: View looking west at Joshua tree woodland from the southeast corner of the project site.

Photo 4: View looking north at Joshua tree woodland from the southwest corner of the project site.

Existing land uses immediately surrounding the project site are summarized in **Table 2.2-1**. As shown, the northern and eastern areas consist primarily of vacant land with Rural Living (RL) designations, allowing for large-lot rural residential development consistent with the area's low-density pattern. The parcel to the west is zoned Industrial (I) and is developed with natural gas truck storage, a use compatible with the proposed project. South of the project site lies a Neighborhood Commercial (C-N) zone that supports small-scale commercial services, developed with an existing manufacturing company (Full Circle) adjacent to the project site.

This land use context reflects a logical transition from more intensive commercial and industrial activities along Old Woman Springs Road (SR-247) to lower-density rural residential lands to the north and east. The proposed self-storage facility is consistent with the industrial character along Newton Lane and would not introduce land use conflicts with surrounding zoning districts.

Table 2.2-1
SUMMARY OF EXISTING LAND USE, ZONING AND EXISTING DEVELOPMENT

Location	General Plan Designation	Zoning Designation	Existing Development
Project Site	Industrial (I)	Industrial (I)	Vacant land
North	Rural Living (RL-5)	Rural Living (R-L-5)	Vacant land
South	Commercial (C)	Neighborhood Commercial (C-N)	Manufacturing
East	Rural Living (RL)	Homestead Valley/Rural Living (HV/RL)	Vacant land
West	Industrial (I)	Industrial (I)	Natural gas truck storage

Source: Town of Yucca Valley, 2025c; County of San Bernardino, 2025b

2.3 Existing Characteristics of the Site

The project site consists of an approximately 4.34-acre undeveloped parcel located at the southeast corner of Sun Mesa Drive and Newton Lane in the Town of Yucca Valley. The site contains no existing structures, paved surfaces, utilities, or signs of prior development. Surface conditions are typical of the high desert environment, with exposed sandy soils, limited vegetation, and evidence of informal vehicle access. Surrounding land uses include commercial and industrial development to the south and west, and vacant rural residential land to the north and east. Existing access is provided by the unimproved roadway edges along Sun Mesa Drive and Newton Lane, with stormwater draining naturally across the parcel in a southwest direction.

2.3.1 Climate and Air Quality

The project site is located within the Mojave Desert Air Basin (MDAB), which is characterized by an arid desert climate with hot, dry summers, cool winters, and low annual precipitation. Average summer temperatures frequently exceed 100 degrees Fahrenheit, while winter temperatures commonly range from the mid 30s to mid 60s. Annual precipitation averages approximately four to six inches, most of which occurs during winter frontal storms and occasional late summer monsoonal events (WRCC, 2025).

The region experiences persistent high-pressure systems that limit cloud cover and promote high solar radiation levels. Winds are typically moderate but can become strong during seasonal Santa Ana wind events or monsoonal thunderstorms. These wind patterns influence the dispersion of air pollutants and contribute to the potential for elevated particulate matter levels due to windblown dust.

Air quality in the Yucca Valley area is regulated by the Mojave Desert Air Quality Management District (MDAQMD), which is responsible for setting and enforcing air quality rules, reviewing project emissions, and maintaining attainment planning documents. The MDAB is currently designated nonattainment for ozone (O_3) and particulate matter (PM10) under state and federal standards, and attainment for most other criteria of pollutants (ARB, 2025). Local air quality conditions are influenced by both regional transport from the South Coast Air Basin and locally generated emissions from vehicle travel, commercial activities, and fugitive dust from disturbed soils.

Because the project site is undeveloped, existing onsite emissions are limited to naturally occurring fugitive dust, sparse biological activity, and intermittent vehicle trips associated with surrounding uses. No stationary sources of emissions exist on the property.

2.3.2 Geology and Soils

The project site is located within the Morongo Basin, an area underlain primarily by Quaternary age alluvial deposits consisting of unconsolidated sands, silts, gravels, and cobbles derived from adjacent upland drainages. These valley floor deposits exhibit loose to moderately compacted soil conditions typical of young alluvial fan environments found throughout the high desert region. No bedrock is exposed at the surface, and consolidated formations are expected only at depth beneath the alluvium. The site's topography is relatively flat, with surface elevations between approximately 3,280 and 3,290 feet above mean sea level, gently sloping from northeast to southwest consistent with natural sheet flow drainage patterns. The surrounding landscape exhibits minimal relief, and no steep slopes, landslide hazards, or erosional scarps occur within or adjacent to the property (Sladden, 2025a).

The project site is located within an Alquist-Priolo Earthquake Fault Zone and in a mapped trace of the Johnson Valley Fault Zone traverses the project site as further analyzed in **Section 4.7**. The project geotechnical investigation recommends subsurface fault-rupture studies to evaluate active surface-rupture potential and notes that habitable structures are not permitted across active fault zones. The geotechnical report further states that, based on the proposed project description, the self-storage units and offices are not intended for human occupancy or to exceed 2,000 person hours per year. The applicant anticipates that one part-time employee would be present onsite. Self-storage customer visits would be intermittent and typically short in duration; therefore, estimating total annual customer occupancy time would be speculative. Given the limited on-site occupancy and the absence of habitable structures, the potential for exposure to surface-rupture hazards is reduced; impact significance is addressed in Section **4.7** of this Initial Study.

2.3.3 Hydrology

The project site is located within the Mojave Desert region, which is characterized by arid climatic conditions, low annual precipitation, and episodic stormwater runoff. The site drains generally from the northeast toward the southwest in shallow sheet flow, consistent with the flat alluvial topography of the area. No natural drainage, blue line streams, jurisdictional waters, or defined channels exist onsite. The site is not located within a 100 year or 500-year Federal Emergency Management Agency (FEMA) flood hazard zone and is mapped within Flood Zone X, indicating areas of minimal flood risk. Surface soils consist primarily of sandy alluvium with moderate infiltration capacity, and stormwater currently infiltrates directly into onsite soils or disperses as sheet flows across the undeveloped parcel during storm events.

Groundwater in the region typically occurs at depths greater than 200 feet below ground surface, reflecting the deep basin characteristics of the Morongo groundwater system. As a result, shallow

groundwater does not influence surface hydrologic conditions at the project site, and there is no evidence of perched water, springs, or saturated soil conditions onsite. The Hi Desert Water District manages regional groundwater resources for municipal supply, but no groundwater extraction occurs on the project parcel. The site is not located near a dam inundation zone, alluvial fan flood hazard area, or natural watercourse that would pose elevated hydrologic risk.

Stormwater conveyance in the surrounding area consists primarily of natural sheet flow supported by roadside swales and limited curb and gutter improvements along developed frontage. Because the project site is undeveloped, no existing stormwater infrastructure is present. Future project development will be required to comply with the Town of Yucca Valley Municipal Code Municipal § 9.37.060: Erosion Control, Runoff Control, and Enforcement and the San Bernardino County requirements for onsite stormwater management, including implementation of best management practices to ensure post construction runoff volumes and water quality conditions meet local and regional standards.

2.3.4 Biology

As detailed in **Section 4.4** of this Initial Study, the project site and Biological Study Area (BSA) occur in the Mojave Basin and Range region and are characterized by generally flat topography (approximately 3,710 to 3,726 feet amsl) within a developed setting bordered by industrial, commercial, and largely vacant residential lands. Vegetation within the site is best characterized as disturbed Joshua tree woodland, with dominant species including western Joshua tree and Mojave yucca with common desert scrub and nonnative annual grasses/forbs. LSA documented western Joshua tree onsite, including a census of 98 individuals within the project site and immediate census buffer, and did not observe additional special-status plant species during focused rare plant surveys. Wildlife observed during field surveys included common desert birds and reptiles/mammals, and a special-status bird species (loggerhead shrike) was recorded. No wetlands or other jurisdictional waters were identified on the site, and no USFWS-designated critical habitat was mapped within the BSA. Regional mapping indicates the BSA does not overlap designated habitat connectivity linkages; however, surrounding open lands can provide local movement opportunities for desert wildlife. Applicable biological regulatory considerations in the area include protections for nesting birds (MBTA and California Fish and Game Code), and local/state controls on take or removal of desert native plants and Joshua trees (e.g., California Desert Native Plants Act, Western Joshua Tree Conservation Act, and the Town's native plant/tree permitting requirements).

2.3.5 Public Services

The project site is located within the Town of Yucca Valley and is served by a range of local and regional public service providers. Fire protection and emergency response services are provided by the San Bernardino County Fire Protection District, which operates several stations within the Morongo Basin. Response capabilities in the project area are supported by an established roadway network, including Old Woman Springs Road (SR 247) and State Route 62, which allow personnel and equipment to reach the site within standard response times. The project site is currently undeveloped and does not contain structures or activities that generate demand for fire suppression, emergency medical response, or hazardous materials services.

Law enforcement services are provided by the San Bernardino County Sheriff's Department through the Morongo Basin Station. The surrounding area consists of a mix of commercial, industrial, and

rural residential uses that generate relatively low levels of service demand. The undeveloped condition of the project site results in minimal existing law enforcement needs.

Parks, recreational services, and community facilities are administered by the Town of Yucca Valley Department of Community Services. Several public parks, open space areas, and recreational amenities are located throughout the community; however, no park or recreational facility occurs adjacent to or within the project site. As a vacant parcel, the site does not generate recreational demand or contribute to the use of existing parkland or community facilities.

Public education services in the region are provided by the Morongo Unified School District. Because the project site does not contain residential development, it does not contribute to school enrollment or require educational services. Similarly, library services, public health services, and other general municipal functions experience no measurable demand associated with the existing condition of the property.

The current undeveloped status of the site results in negligible or no demand for public services, and service providers in the area maintain the capacity and infrastructure needed to support existing land uses surrounding the project area.

2.3.6 Utilities

The project site is currently undeveloped and does not contain existing utility connections or built infrastructure. Water service in the area is provided by the Hi-Desert Water District, which maintains groundwater supply wells, storage facilities, and distribution lines throughout the Town of Yucca Valley. Potable water lines are present within adjacent public roadways, although no active service connections extend into the project parcel. Wastewater treatment services are not available in this portion of Yucca Valley, and properties in the vicinity rely on individual septic systems for wastewater disposal. The project site does not contain an existing septic system, leach field, sewer connection, or wastewater conveyance facilities.

Electricity is supplied by Southern California Edison through an established regional distribution network with overhead and underground service lines located in surrounding rights of way. Telecommunications services, including telephone and broadband, are available through local providers operating within the Town; however, the project site lacks direct service extensions or equipment. Solid waste collection and disposal in Yucca Valley is provided by Burrtec Waste and Recycling, and the nearest permitted disposal facility is the Landers Sanitary Landfill.

Stormwater at the site drains as natural sheet flow to the southwest, and no storm drain pipes, inlets, culverts, or engineered drainage improvements exist on the parcel. The absence of development results in minimal utility demand, and the site currently relies on natural hydrologic processes for drainage. Roadway access is limited to the adjacent unimproved edges of Sun Mesa Drive and Newton Lane, with no internal pavement, curbs, or driveways present.

The existing utility and infrastructure conditions reflect the vacant nature of the parcel and do not present constraints that would impede extension of standard municipal services in conjunction with future development consistent with Town requirements.

3.0 PROJECT DESCRIPTION

3.1 Project Background

The Town of Yucca Valley (Town) is processing a request to implement discretionary actions that would allow for the development of a self-storage facility (project) southeast of the intersection of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley in San Bernardino County (APN: 0597-111-67). The proposed project includes the development of approximately 541 storage units, a manager's office, parking, internal roads, and landscaping on an approximately 4.34-acre site. In addition, offsite improvements (including partial pavement of adjacent roads) would be provided. The Town is the Lead Agency for the purposes of the CEQA.

The Town's General Plan Land Use and zoning designation for the site is Industrial. The proposed project requires a Site Plan Review.

3.2 Project Overview

The project would consist of: (1) utilities improvements; (2) construction of self-storage units and a manager's office; (4) parking; (5) landscaping; and (6) improvement of half of Newton Lane along the project's west boundary and Sun Mesa Drive along the north boundary. **Figure 3.2-1** is a site plan depicting the layout of the proposed project buildings and onsite amenities. **Table 3.2-1** summarizes the proposed project features. Project site plans are included as **Appendix A**.

Table 3.2-1
PROJECT SUMMARY

New Construction	Proposed Uses/Features	Area (sf)	No. of Stories	Building Height
Self-Storage Units and Manager's Office	541 self-storage units in 16 buildings (89,300 sf), plus one manager's office (400 sf)	89,700	1	9 ft. 6 in. (storage) 12 ft. (office)
Parking Spaces	10 parking spaces and five loading zones	83,972	N/A	N/A
Landscaping	Variety of trees, shrubs/native plants, and decorative rocks	15,378	N/A	N/A
Improvements of Newton Lane and Sun Mesa Drive	20 feet width of pavement plus 6 feet of curb, gutter and sidewalk on each street (Town of Yucca Valley, 2014).	N/A	N/A	N/A

Sun Mesa Self-Storage Facility

Overall Site Plan

3.3 Proposed Project Features

3.3.1 Self-Storage Units and Manager's Office

Implementation of the proposed project would develop approximately 541 self-storage units within four types of buildings referred to as Type A, Type B, Type C, and Type D. One manager's office would be referred to as Type E. Each type of building would consist of varying storage unit sizes. A breakdown of the units is shown below in **Table 3.3-1**. **Figures 3.3-1 to 3.3-3** depict the project's floor plan, elevations, and perspective. The proposed project includes an architectural style that would complement the surrounding desert development with brown, tan, and white colors. The color board of the project is depicted in **Figure 3.3-4**.

Table 3.3-1
BUILDING TYPE BREAKDOWN

Types	Unit Count				Area per Building (sf)	Number of Buildings	Area per Building Type (sf)
	5 x 10 (50 sf)	10 x 20 (200 sf)	20 x 20 (400 sf)	25 x 20 (500 sf)			
Type A	16	20			4,800	10	48,000
Type B	16		10		4,800	6	28,800
Type C				10	5,000	1	5,000
Type D				15	7,500	1	7,500
Type E[1]			1		400	1	400
Total Units	**256**	**200**	**60[2]**	**25**		**19**	**89,700**

Landscaping

The proposed project includes several landscaped areas along the perimeter and the manager's office as shown in **Figure 3.3-5;** the total landscaped area is approximately 15,378 square feet (eight percent of total site area). Landscaping would consist of several deciduous trees, drought tolerant shrubs/native plants and decorative rocks.

3.3.2 Site Access, Circulation and Parking

Site ingress and egress would be provided by two 30-foot-wide driveways located on Newton Lane. Access to storage units would be provided through several internal lanes that vary from 15 to 30 feet in width. Parking would be at the manager's office area at the western portion of the site. Access to parking would be via a main driveway running north/south through the middle of the site. Sidewalks and pedestrian travel paths are proposed throughout.

The proposed project includes 10 parking spaces, consisting of eight standard parking spots, one standard American Disability Act (ADA) parking spot and one van ADA spot. Additionally, there would be five loading spots.

3.3.3 Exterior Lighting

The proposed project includes area lighting throughout the project site. Lighting for the project would comply with the requirements of the Town's Municipal Code Chapter 8.70. Specifically, the project would be required to comply with Town of Yucca Valley Municipal Code § 8.70.020, "*Any outdoor lighting fixtures shielded or constructed so that light rays are only emitted by the installed fixtures at angles below a horizontal plane passing through the lowest point of the light source and so not to direct light or light trespass onto adjacent property*.."

The proposed project would include installation of exterior lighting fixtures, as necessary, for safety and security. LED exterior fixtures would be mounted on the walls of the buildings. The latest LED lighting fixtures with photosensors and motion sensors would be provided. Cut off shield would be provided as necessary to prevent light spillage beyond the project boundary. Parking lot lighting would also utilize LED technology. Photometric analysis would be conducted to ensure that the exterior lighting provided on site meets the minimum lighting levels required.

3.3.4 Perimeter Fencing and Exterior Walls

A six-foot-tall concreate masonry wall would surround the project site, except at the two driveways on Newton Lane that would have rolling security gates.

Sun Mesa Self-Storage Facility

Landscape Plan

LANDSCAPE PLAN

3.3.5 Utilities

Water supply to the project site is provided by High Desert Water District, and wastewater services are provided by a private septic disposal company. In addition, electricity supply is provided by Southern California Edison, telephone services are provided by Verizon, cable service is provided by Time Warner Cable, and solid waste disposal services are provided by Burrtec. The project would require domestic water, fire water, irrigation and dry utilities connections to existing utility infrastructure in Newton Lane. A septic system, including a leach field at the south end of the project, will handle wastewater.

3.3.6 Offsite Improvements

Construction would need to occur in Newton Lane and Sun Mesa Drive, which would be paved to half-width (26 feet) along the western and northern project boundaries (along with sidewalk and gutters), respectively, and to connect the electric lines and water supply for the proposed project to the existing underground lines in Newton Lane.

3.4 Construction Activities

For safety reasons, temporary barricades would be used to limit access to the site during project construction and maintain safe access for construction workers. Construction would occur during daylight and during regular business hours. Lighting for the construction site would be limited to the minimum amount of light needed for safety and security.

Site grading would involve a cut of 4,970 cubic yards (cy) and fill of 4,485 cy of soil. After site preparation is completed, infrastructure such as sewer laterals and storm drains would be installed and/or connected to existing facilities. The building foundations would be poured and assembly of prefabricated metal panels of the buildings would begin. The final steps of construction would involve interior furnishings, detailed work, and completion of common areas and outside landscaping.

The only offsite improvements would be street-related improvements and installation of utility laterals and connections of laterals to the mains. The construction contractor would use heavy equipment during grading. Construction staging would be limited to the project site; no offsite areas would be used.

Construction Schedule

Construction activities will be conducted in two phases,-. Phase 1 will include construction of seven storage buildings (252 storage units totaling 33,600 sf) plus the 400-sf manager's unit, and Phase 2 will include construction of 11 buildings (290 storage units totaling 29,688 sf).

Construction would start in January 2026. Construction of Phase 1 will take three to four months. Start of Phase 2, which includes the offsite improvements, will be dependent on the lease-up of units in Phase 1. Construction of Phase 2 will take an additional three to four months to complete.

3.5 Discretionary Actions

The proposed project includes an application for a Site Plan Review. No other discretionary actions are required.

3.6 Other Permits and Approvals

Following the Town's approval of the Initial Study/Mitigated Negative Declaration, the following permits/approvals, as shown in **Table 3.6-1,** would be required prior to construction.

Table 3.6-1
PERMITS AND APPROVALS

Agency	Permit or Approval
Town of Yucca Valley Building & Safety Division	Building Permits
Town of Yucca Valley Public Works/Engineering Department	Grading Permit, Street Improvement Plan, and Encroachment Permit
Town of Yucca Valley Planning Division	Site Plan Review and Environmental Assessment
San Bernardino County Fire Protection District	Building plan check and approval. Review for compliance with the current California Fire Code, current California Building Code, California Health & Safety Code and Town of Fontana Municipal Code. Plans for fire detection and alarm systems, and automatic sprinklers.

4.0 ENVIRONMENTAL CHECKLIST

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" or as a "Potentially Significant Unless Mitigation Incorporated," as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agricultural and Forest Resources	☐ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology / Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology / Water Quality	☐ Land Use / Planning	☐ Mineral Resources
☒ Noise	☐ Population / Housing	☐ Public Services
☐ Recreation	☐ Transportation	☒ Tribal Cultural Resources
☐ Utilities/Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

Determination (To Be Completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature	Date
Printed Name	Town of Yucca Valley

Evaluation of Environmental Impacts

(1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors, as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

(2) All answers must take into account the whole action involved, including offsite as well as onsite, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

(3) Once the lead agency has determined that a particular physical impact may occur then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

(4) "Negative Declaration: Less than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures and briefly explain how they reduce the effect to less than significant level.

(5) Earlier analyses may be use where, pursuant to the tiering, Program EIR, or other CEQA process, an affect has been adequately analyzed in an earlier EIR or negative declaration. (See Section 15063(c)(3)(D) of the CEQA Guidelines. In this case, a brief discussion should identify the following:

(a) Earlier Analyses Used. Identify and state where the earlier analysis available for review.

(b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

(c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

(6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated. A source list should be attached and other sources used or individuals contacted should be cited in the discussion.

(7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

(8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

(9) The explanation of each issue should identify:

(a) The significance criteria or threshold, if any, used to evaluate each question; and
(b) The mitigation measure identified, if any, to reduce the impact to less than significant.

4.1 Aesthetics

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?			**X**	
b) Substantially damage scenic resources, including, but not limited to, trees, outcroppings, and historic buildings within a state scenic highway?				**X**
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			**X**	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			**X**	

a) Would the project have a substantial adverse effect on a scenic vista?

Less than Significant Impact

The Town's General Plan does not specify specific scenic vistas. However, Yucca Valley's scenic resources are a valued local asset. The natural setting of the Town is characterized by the ridges and hillsides north, west, and south of the Town and the desert valley lands to the east. The desert environment, natural resources, and active open space opportunities are a core aspect of Yucca Valley's character and are a significant attraction for visitors seeking recreation. Views from the Town situate the community in its local environment and landscape and are an important element of the Town's quality of life. Many of the scenic resources that are valued by Yucca Valley residents and visitors are outside the Town limits and beyond the planning area boundary. Such areas include the views of the Little San Bernardino Mountains of the Peninsular Ranges, the San Bernardino Mountains on the easternmost of the Transverse ranges surrounding the Town, and Yucca Valley's hillside areas (Town of Yucca Valley, 2014, p. 5-34).

There are distant views of surrounding mountains and ridgelines from the project site. The project would develop a storage facility with associated office, parking and landscaping. The height of the proposed buildings would range from nine to 12 feet tall, similar to the height of the surrounding commercial, industrial and residential buildings. Therefore, development would not significantly affect the distant views of the mountains as the proposed project would be of similar height, mass

and scale consistent with the existing land uses in the surrounding area, resulting in less than significant impacts.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact

The California Department of Transportation (Caltrans) provides information regarding officially designated or eligible state scenic highways, designated as part of the California Scenic Highway Program. As shown in **Figure 4.1-1**, the nearest officially designated state scenic highway to the project site is the State Route 62 (SR 62) freeway approximately 13.2 miles southwest. Due to the large distance between the project site and SR 62, construction and implementation of the project would have no impacts on state scenic highways. Therefore, the project would have no impacts on trees, rock outcroppings and historic buildings within a state scenic highway.

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less than Significant Impact

The Town of Yucca Valley is an incorporated municipality with a population of 21,740 as of the 2020 U.S. Census (U.S. Census Bureau, 2020). Because the Town's population is below 100,000 and its density is less than 1,000 persons per square mile, Yucca Valley is considered a non-urbanized area under Public Resources Code § 21071 and, accordingly, the project site is located in a non-urbanized setting. Therefore, the analysis below determines if the project would substantially degrade the existing visual character or quality of the site and its surroundings.

As shown in **Section 2.0 Environmental Setting**, the project site is located in a rural setting characterized by a mix of commercial, industrial and residential land uses and vacant land. Specific land uses include a truck storage yard, natural gas truck storage, gas station, convenience store, and single-family residences. Views of the existing streetscape are characterized by low height (one-story) buildings, utilities (including utility lines, poles, and street lights) and landscaping. The project would develop a commercial mini storage facility with one-story buildings that would be similar in height, mass and scale to the surrounding development. Therefore, impacts under this category would be less than significant.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact

Yucca Valley benefits from its proximity to land uses that emit little or no light pollution. The limited lighting in the Morongo Basin and surrounding region preserves the natural night environment and allows for views of astronomical features. The glow of lights in urbanized areas brightens the night sky, and excessive light at night can interrupt natural cycles and behavior of both humans and wildlife. Focusing lights where they are needed for public safety and direction reduces light pollution and glare, allowing the sky to be observed and enjoyed in a more natural state. Preservation of dark skies continues to be a priority for the Town and will be a consideration in future project design as the community grows (Town of Yucca Valley, 2014, p. 5-34).

The project would introduce interior building lights and exterior lights for security and visibility purposes. However, the project lighting would adhere to Chapter 8.70 Outdoor Lighting of the Town's Municipal Code, which ensures less than significant light, glare and views of the night sky. Therefore, with adherence to the Municipal Code, impacts regarding light and glare would be less than significant.

4.2 Agriculture and Forestry Resources

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				**X**
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				**X**
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code § 12220(g)), timberland (as defined by Public Resources Codes § 4526), or timberland zoned Timberland Production (as defined by Government Code § 51104(g))?				**X**
d) Result in the loss of forest land or conversion of forest land to non-forest use?				**X**
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				**X**

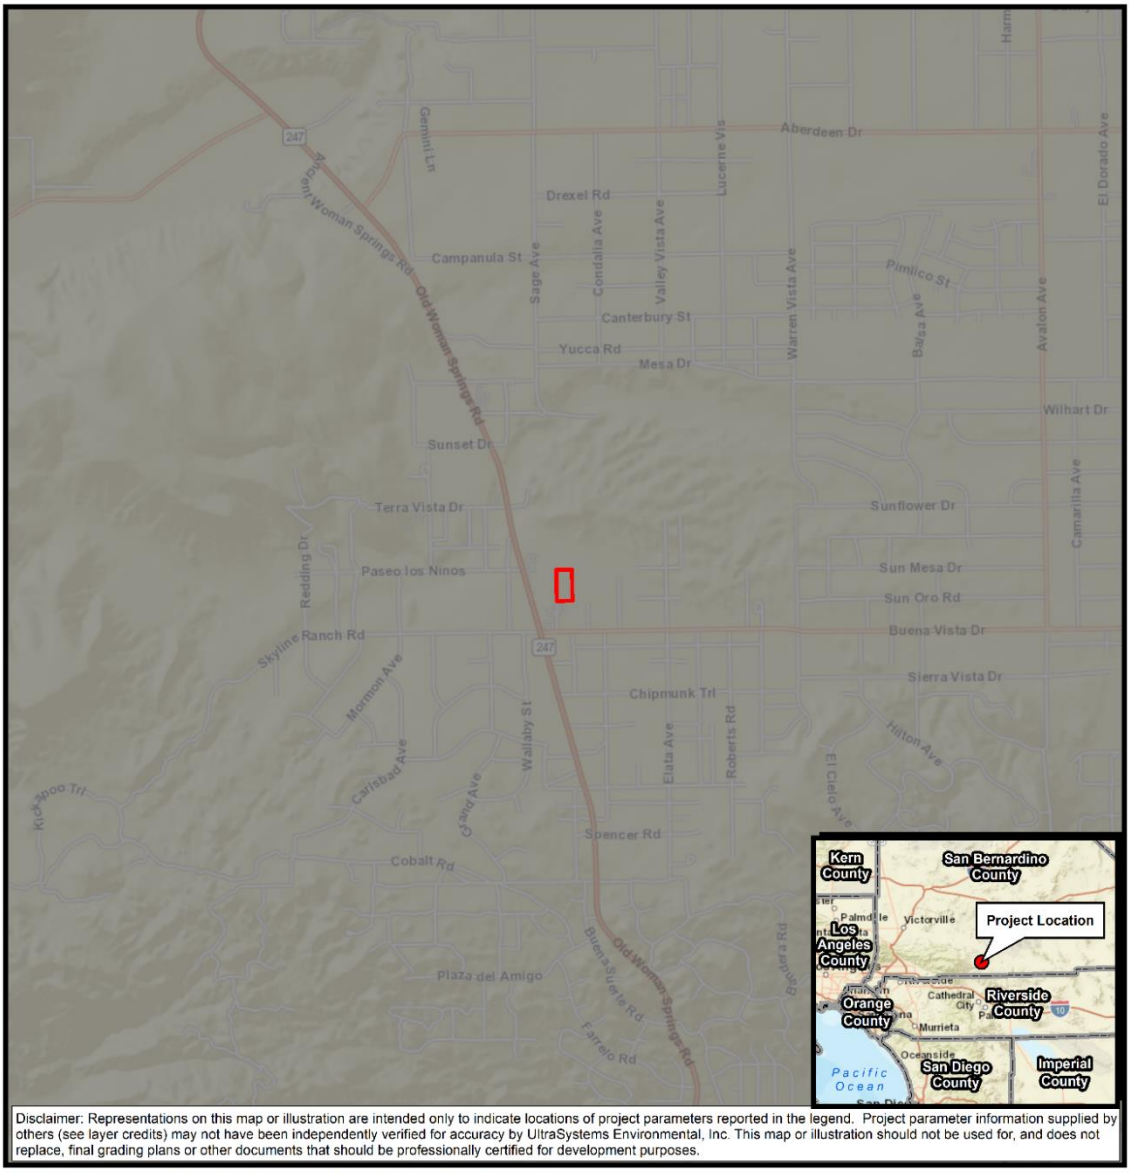
a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact

The project site and surrounding uses are designated by the Division of Land Resource Protection (DLRP) as "Out of Survey Area" (see **Figure 4.2-1** below), which is land that falls outside of the Natural Resources Conservation Service (NRCS) soil survey. Out of Survey Area is not mapped by the Farmland Mapping & Monitoring Program (FMMP).

Therefore, no farmland shown on the maps prepared pursuant to the FMMP would be converted to non-agricultural use and no impacts would occur.

Figure 4.2-1
IMPORTANT FARMLAND CATEGORIES



b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact

The project site is zoned Industrial (I) and is not zoned for agricultural use. Williamson Act contracts restrict the use of privately-owned land to agriculture and compatible open space uses under contract with local governments; in exchange, the land is taxed based on actual use rather than potential market value. Williamson Act contracts are made only on land within agricultural reserves; the project site is not within an agricultural reserve. Therefore, the project would not conflict with existing zoning for agricultural use or a Williamson Act contract, and no impact would occur.

c) Would the project (c) conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code § 12220(g)), timberland (as defined by Public Resources Codes § 4526), or timberland zoned Timberland Production (as defined by Government Code § 51104(g))?

No Impact

The project site is zoned Industrial (I); the site is not zoned for forest, timberland, or timberland production use. Therefore, project development would not conflict with zoning for forest land or timberland, and no impact would occur.

d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact

The project site and surroundings are not cultivated for forest resources. Therefore, project development would not result in the loss of forest land or conversion of forest land to non-forest use, and no impact would occur.

e) Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact

The project site is vacant, and there are no residences surrounding the project site. No important farmland is near the project site, and no forest land is on or near the site. Therefore, project development would not indirectly cause conversion of farmland to non-agricultural use or conversion of forest land to non-forest use, and no impacts would occur.

4.3 Air Quality

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?			**X**	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard?			**X**	
c) Expose sensitive receptors to substantial pollutant concentrations?			**X**	
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			**X**	

The following analysis of the proposed project's Air Quality impacts is based substantially on a memorandum prepared by LSA Associates, Inc (LSA) on September 16, 2025: *Air Quality, Energy, and Greenhouse Gas Technical Memorandum for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California* (LSA., 2025a). This memorandum is included as **Appendix B**. Attachment B to the memorandum includes results of the model (CalEEMod 2022.1.1.28) that LSA used to estimate the proposed project's air pollutant emissions.[5]

4.3.1 Pollutants of Concern

Criteria pollutants are air pollutants for which acceptable levels of exposure can be determined and an ambient air quality standard has been established by the U.S. Environmental Protection Agency (USEPA) and/or the California Air Resources Board (ARB). The criteria air pollutants of concern are nitrogen dioxide (NO_2), carbon monoxide (CO), particulate matter (PM_{10} and $PM_{2.5}$), sulfur dioxide (SO_2), lead (Pb), and ozone, and their precursors, such as reactive organic gases (ROG) (which are ozone precursors). Since the Yucca Valley Sun Mesa Self-Storage Facility Project (project) would not generate appreciable SO_2 or Pb emissions,[6] the analysis doesn't need to include those two pollutants. The following is a description of the air pollutants of concern and their associated health effects.

The project is in the southwestern San Bernardino County portion of the Mojave Desert Air Basin (MDAB), for which the Mojave Desert Air Quality Management District (MDAQMD) is substantially responsible for air pollution control. **Table 4.3-1** shows the attainment status of the MDAB for each criteria pollutant for both the National Ambient Air Quality Standards (NAAQS) and California

5 See **Section 4.8.6**.
6 Sulfur dioxide emissions will be below 0.05 pound per day during construction and operations.

Ambient Air Quality Standards (CAAQS). Presented below is a description of the air pollutants of concern and their known health effects.

Nitrogen oxides (NO_X) serve as integral participants in the process of photochemical smog production and are precursors for certain particulate compounds that are formed in the atmosphere and for ozone. A precursor is a directly emitted air contaminant that, when released into the atmosphere, forms, causes to be formed, or contributes to the formation of a secondary air contaminant for which an ambient air quality standard (AAQS) has been adopted, or whose presence in the atmosphere will contribute to the violation of one or more AAQSs. When NO_X and ROG are released in the atmosphere, they can chemically react with one another in the presence of sunlight to form ozone. The two major forms of NO_X are nitric oxide (NO) and NO_2. NO is a colorless, odorless gas formed from atmospheric nitrogen and oxygen when combustion takes place under high temperature and/or high pressure. NO_2 is a reddish-brown, pungent gas formed by the combination of NO and oxygen. NO_2 acts as an acute respiratory irritant and eye irritant and increases susceptibility to respiratory pathogens (USEPA, 2025a).

Table 4.3-1
FEDERAL AND STATE ATTAINMENT STATUS

Pollutants	Federal Classification	State Classification
Ozone (O_3)	Nonattainment[a]	Nonattainment
Particulate Matter (PM_{10})	Nonattainment[b]	Nonattainment
Fine Particulate Matter ($PM_{2.5}$)	Attainment/Unclassified	Nonattainment[a]
Carbon Monoxide (CO)	Attainment/Unclassified	Attainment
Nitrogen Dioxide (NO_2)	Attainment/Unclassified	Attainment
Sulfur Dioxide (SO_2)	Attainment/Unclassified	Attainment
Lead (Pb)[a]	Attainment/Unclassified	Attainment
All Others	N/A	Attainment/Unclassified

Source: MDAQMD, 2024.
[a] Only the southwest corner of the desert portion of San Bernardino County is Nonattainment.
[b] Only the San Bernardino County portion is Nonattainment.

Carbon monoxide (CO) is a colorless, odorless, non-reactive pollutant produced by the incomplete combustion of fossil fuels. CO is emitted almost exclusively from motor vehicles, power plants, refineries, industrial boilers, ships, aircraft, and trains. In urban areas, such as the project location, automobile exhaust accounts for most CO emissions. CO is a non-reactive air pollutant that dissipates relatively quickly; therefore, ambient CO concentrations generally follow the spatial and temporal distributions of vehicular traffic. CO concentrations are influenced by local meteorological conditions, primarily wind speed, topography, and atmospheric stability. CO from motor vehicle exhaust can become locally concentrated when surface-based temperature inversions are combined with calm atmospheric conditions, a typical situation at dusk in urban areas between November and February. The highest levels of CO typically occur during the colder months of the year when inversion conditions are more frequent. In terms of health, CO competes with oxygen, often replacing it in the blood, thus reducing the blood's ability to transport oxygen to vital organs. The results of

excess CO exposure can be dizziness, fatigue, and impairment of central nervous system functions. High concentrations are lethal (USEPA, 2025c).

Particulate matter (PM) consists of finely divided solids or liquids, such as soot, dust, aerosols, fumes, and mists. Primary PM is emitted directly into the atmosphere from activities such as agricultural operations, industrial processes, construction and demolition activities, and entrainment of road dust into the air. Secondary PM is formed in the atmosphere from predominantly gaseous combustion by-product precursors, such as sulfur oxides, NO_X, and ROGs.

Particle size is a critical characteristic of PM that primarily determines the location of PM deposition along the respiratory system (and associated health effects) as well as the degradation of visibility through light scattering. In the United States, federal and state agencies have focused on two types of PM. PM_{10} corresponds to the fraction of PM no greater than 10 micrometers in aerodynamic diameter and is commonly called respirable particulate matter, while $PM_{2.5}$ refers to the subset of PM_{10} of aerodynamic diameter smaller than 2.5 micrometers, which is commonly called fine particulate matter.

PM_{10} and $PM_{2.5}$ deposition in the lungs results in irritation that triggers a range of inflammation responses, such as mucus secretion and bronchoconstriction, and exacerbates pulmonary dysfunctions, such as asthma, emphysema, and chronic bronchitis. Sufficiently small particles may penetrate the bloodstream and impact functions such as blood coagulation, cardiac autonomic control, and mobilization of inflammatory cells from the bone marrow. Individuals susceptible to higher health risks from exposure to PM_{10} airborne pollution include children, the elderly, smokers, and people of all ages with low pulmonary/cardiovascular function. For these individuals, adverse health effects of PM_{10} pollution include coughing, wheezing, shortness of breath, phlegm, bronchitis, and aggravation of lung or heart disease, leading, for example, to increased risks of hospitalization and mortality from asthma attacks and heart attacks (USEPA, 2025d).

Reactive organic gases (ROG) are defined as any compound of carbon, excluding CO, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions. It should be noted that there are no state or national ambient air quality standards for ROG because ROGs are not classified as criteria pollutants. They are regulated, however, because a reduction in ROG emissions reduces certain chemical reactions that contribute to the formation of ozone. ROGs are also transformed into organic aerosols in the atmosphere, which contribute to higher PM_{10} and lower visibility. The term "ROG" is used by the ARB for this air quality analysis and is defined the same as the federal term "volatile organic compound" (VOC).

Ozone is a secondary pollutant produced through a series of photochemical reactions involving ROG and NO_X. Ozone creation requires ROG and NO_X to be available for approximately three hours in a stable atmosphere with strong sunlight. Because of the long reaction time, peak ozone concentrations frequently occur downwind of the sites where the precursor pollutants are emitted. Thus, ozone is considered a regional, rather than a local, pollutant. The health effects of ozone include eye and respiratory irritation, reduction of resistance to lung infection and possible aggravation of pulmonary conditions in persons with lung disease. Ozone is also damaging to vegetation and untreated rubber (USEPA, 2025e).

4.3.2 Climate/Meteorology

Air quality is affected by both the rate and location of pollutant emissions, and by meteorological conditions that influence the movement and dispersal of pollutants. Atmospheric conditions such as wind speed, wind direction, and air temperature gradients, along with local topography, provide the link between air pollutant emissions and air quality.

The MDAB is an assemblage of mountain ranges interspersed with long, broad valleys that often contain dry lakes. Many of the lower mountains that dot the vast terrain rise from 1,000 to 4,000 feet above the valley floor. The Basin encompasses desert portions of Kern, Los Angeles, Riverside, and San Bernardino counties. It is surrounded by national forests to the south and west and desert to the north and east.

The MDAB is classified as a dry-hot desert (BWh), with portions classified as dry-very hot desert (BWhh), to indicate that at least three months have maximum average temperatures over 100.4 degrees Fahrenheit (°F) (MDAQMD, 2020a, p. 6-7).

The nearest meteorological station is the Joshua Tree station (#044405, latitude 34.1333°, longitude: -116.3166°) (WRCC, 2016), which is approximately 6.35 miles southeast of the project site, with a period of record from June 1, 1959, to June 10, 2016. The average high and low temperatures recorded there are 79.6°F and 51.2°F, respectively. Average winter (December, January, and February) high and low temperatures are 60.63°F and 37.07°F, respectively, and average summer (June, July, and August) high and low temperatures are 98.47°F and 66.97°F, respectively. The annual average of total precipitation is 4.69 inches, which occurs mostly during the winter and relatively infrequently during the summer. Monthly precipitation averages 0.63 inch during the winter (December, January, and February), 0.23 inch during the spring (March, April, and May), 0.42 inch during the fall (September, October, and November), and 0.28 inch during the summer (June, July, and August).

4.3.3 Local Air Quality

The project site is served by four MDAQMD monitoring stations. The nearest station that monitors ozone is the Hesperia-Olive Street air monitoring site (ARB Number 36201), 50 miles west at 17288 Olive Street in Hesperia. The nearest station that monitors PM_{10} is the Lucerne Valley-Middle School air monitoring site (ARB No. 36208), at 33233 Rabbit Springs Road in Lucerne Valley, about 35 miles northwest of the project. The nearest station that monitors $PM_{2.5}$ is the Big Bear City air monitoring site (ARB No. 36001), 501 West Valley Boulevard, in Big Bear, about 25 miles northwest of the project. The nearest station that monitors NO_2 is the Victorville air monitoring site (ARB No. 36306), at 14306 Park Avenue in Victorville, about 56 miles northwest of the project (ARB, 2025).

This was updated using the LSA AQ Memorandum (August 2025) and iADAM Air Resource Board (ARB, 2025).

The ambient air quality data in the project vicinity, as recorded from 2022 through 2024, along with applicable standards, are shown in **Table 4.3-2**. The data in the table were updated from those reported in the LSA Air Quality, Energy, and Greenhouse Gas Technical Memorandum (LSA, 2025a).

Table 4.3-2
AMBIENT AIR QUALITY MONITORING DATA

Air Pollutant	Standard/Exceedance	2022	2023	2024
Ozone – Hesperia-Olive Street	Max. 1-hour Concentration (ppm)	0.108	0.110	0.121
	Max. 8-hour Concentration (ppm)	0.090	0.098	0.106
	# Days > Federal 8-hour Std. of 0.070 ppm	49	53	66
	# Days > California 1-hour Std. of 0.09 ppm	11	11	14
	# Days > California 8-hour Std. of 0.070 ppm	52	54	70
PM_{10} – Lucerne Valley-Middle School	Max. 24-hour Concentration (µg/m^3)	60.2	112	105
	Est. # Days > Fed. 24-hour Std. of 150 µg/m^3	ND	0	0
	Federal Annual Arithmetic Mean (12 µg/m^3)	21.4	19.2	20.9
$PM_{2.5}$ - Big Bear City-501 W. Valley Blvd	Max. 24-hour Concentration (µg/m^3)	31.6	21	372.1

ND - There was insufficient (or no) data available to determine the value.

4.3.4 Regulatory Setting

Under the Federal Clean Air Act and the California Clean Air Act (CCAA),[7] the MDAQMD has adopted a variety of attainment plans for a variety of nonattainment pollutants. The District has primary responsibility for regulating stationary sources of air pollution located within its jurisdictional boundaries. It implements air quality programs required by state and federal mandates, enforces rules and regulations based on air pollution laws and educates businesses and residents about their role in protecting air quality and the risks of air pollution (MDAQMD, 2022).

The 1995 Final Mojave Desert Planning Area, Federal Particulate Matter (PM_{10}) Attainment Plan (MDAQMD, 1995) was adopted by the MDAQMD board on July 31, 1995. A Certification of District Measures to Reduce PM Pursuant to Former Health & Safety Code § 39614(d) was received and filed by the ARB on January 27, 2020 (MDAQMD, 2020b). The 2008 MDAQMD Federal 8-Hour Ozone Attainment Plan (Western Mojave Desert Non-attainment Area) was adopted by the MDAQMD Board. The USEPA designated the Western Mojave Desert area as non-attainment for the 8-hour ozone National Ambient Air Quality Standard (NAAQS) pursuant to the provisions of the Federal Clean Air Act (FCAA). A portion of the MDAQMD is included in the Western Mojave Desert non-attainment area. The most recent attainment plan that was approved by USEPA is the MDAQMD 2008 Ozone Attainment Plan adopted in 2008 (MDAQMD, 2008). The most recently adopted State plan is the 1996 Triennial Revision to the 1991 Air Quality Attainment Plan.

4.3.5 Sensitive Receptors

Some people, such as individuals with respiratory illnesses or impaired lung function because of other illnesses, persons over 65 years of age, and children under 14, are particularly sensitive to

7 CCAA of 1988.

certain pollutants. Facilities and structures where these sensitive people live or spend considerable amounts of time are known as sensitive receptors. For the purposes of a CEQA analysis, the MDAQMD considers a sensitive receptor to be a receptor such as a residence, schools, daycare centers, playgrounds and medical facilities.

The nearest sensitive receptors include a single-family home located southeast of the project site, approximately 200 feet from the project site boundary.

4.3.6 Applicable Mojave Desert Air Quality Management District Rules

Rule 403 (Fugitive Dust Control Rule)

During construction, the project would be subject to the MDAQMD Rule 403 (fugitive dust control) (MDAQMD, 2020c). The purpose of Rule 403 is to reduce the amount of PM_{10} entrained in the ambient air from anthropogenic fugitive dust sources by requiring the implementation of dust prevention, reduction, and mitigation measures. The rule applies to construction and demolition activities that disturb at least five acres of non-residential land or 10 acres of residential land, or that involve the handling or relocation of more than 2,500 cubic yards of bulk material on three consecutive days. Since the proposed project is an approximately 4.34-acre non-residential site, Rule 403 applies.

The rule prohibits any person from causing or allowing visible fugitive dust emissions to remain airborne beyond the property line of the emission source, except during high wind conditions (i.e., sustained wind speeds exceeding 25 miles per hour or average wind speeds over 15 miles per hour). It also prohibits construction-related activities from causing incremental PM_{10} concentrations to exceed 100 micrograms per cubic meter, based on a minimum of five hours of sampling using federal reference method samplers located upwind and downwind at the property boundary.

Rule 403 requires the project owner/operator to obtain and maintain a District-approved Dust Control Plan (DCP) before the start of any active operations. This plan must outline specific measures to prevent visible dust emissions, such as periodic watering of disturbed areas, use of chemical dust suppressants, timely stabilization of inactive surfaces, coverage of haul trucks, prevention and cleanup of track out onto paved roads, and reduced grading activity during high wind conditions.

Rule 1113 (Architectural Coatings)

Construction of this project will include the application of architectural coatings and be subject to MDAQMD Rule 1113 (Architectural Coatings). Rule 1113 requires anyone who supplies, sells, offers for sale, manufactures, blends or repackages any architectural coating for use within the MDAQMD, as well as any person who applies or solicits the application of any architectural coating within the District, to use coatings that contain VOC less than or equal to the VOC limits specified in Table 1 of the rule.

4.3.7 Impact Analysis

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less than significant Impact

The project is compatible with the general plan land use and zoning discussed in detail in **Section 4.11**. The air quality plans are based upon existing and projected land uses in the planning area. The most recent air quality plan is the MDAQMD Federal 8-Hour Ozone Attainment Plan (Western Mojave Desert Non-attainment Area), which was adopted on June 9, 2008. The project is compatible with that plan.

The MDAQMD has developed criteria in the form of emissions thresholds for determining whether emissions from a project are regionally significant. They are useful for estimating whether a project is likely to result in a violation of the NAAQS and/or whether the project is in conformity with plans to achieve attainment. **Table 4.3-3** shows MDAQMD CEQA significance thresholds for both construction and operation. A project is considered to have a regional air quality impact if emissions from its construction and/or operational activities exceed the corresponding MDAQMD significance thresholds.

Table 4.3-3
MDAQMD THRESHOLDS OF SIGNIFICANCE FOR CRITERIA POLLUTANTS

Pollutant	Emission Threshold (lbs/day)	Emission Threshold (short tons/year)
Volatile Organic Compounds (VOC)	137	25
Nitrogen Oxides (NO_x)	137	25
Carbon Monoxide (CO)	548	100
Sulfur Oxides (SO_x)	137	25
Particulate Matter (PM_{10})	82	15
Fine Particulate Matter ($PM_{2.5}$)	65	12

Source: MDAQMD, 2020a, Table 6.

Regional Construction Emissions

These construction activities would temporarily create emissions of dusts, fumes, equipment exhaust, and other air contaminants. Mobile sources (such as diesel-fueled equipment onsite and traveling to and from the project site) would primarily generate NO_X emissions. The quantity of emissions generated daily would vary, depending on the amount and types of construction activities occurring at the same time.

Estimated criteria pollutant emissions from the project's onsite and offsite project construction activities were calculated by LSA (September 2025) using the California Emissions Estimator Model (CalEEMod), Version 2022.1.1.28. CalEEMod is a planning tool for estimating emissions related to land use projects. Model-predicted project emissions are compared with applicable thresholds to

assess regional air quality impacts. Offroad construction equipment information was supplied by the client, but CalEEMod defaults were used for onroad construction traffic inputs.

As shown in **Table 4.3-5**, the project's annual emissions and daily emissions would not exceed Mojave Desert Air Quality Management District significance thresholds for any criteria pollutant during construction.

Table 4.3-5
MAXIMUM ANNUAL REGIONAL CONSTRUCTION EMISSIONS

Construction Year	Maximum Regional Pollutant Emissions					
	VOCs	NO_X	CO	SO_X	Total PM_{10}	Total $PM_{2.5}$
Pounds Per Day						
Site Preparation	3.7	36.1	34.0	<0.1	6.9	4.2
Grading	2.0	18.3	19.7	<0.1	2.9	1.7
Trenching	0.4	2.6	3.8	<0.1	0.2	0.1
Building Construction	1.3	11.1	16.6	<0.1	1.1	0.6
Paving	0.8	6.6	10.5	<0.1	0.5	0.3
Architectural Coating	9.7	0.9	2.4	<0.1	0.2	0.1
Maximum (lbs/day)	11.0	36.1	34.0	<0.1	6.9	4.2
MDAQMD Thresholds	137.0	137.0	548.0	137.0	82.0	65.0
Exceeds?	No	No	No	No	No	No
Tons Per Year						
2024	0.1	0.5	0.5	<0.1	0.1	<0.1
2025	0.1	0.9	1.3	<0.1	0.1	<0.1
2026	0.3	0.7	1.1	<0.1	0.1	<0.1
Maximum (tons/year)	0.3	0.9	1.3	<0.1	0.1	<0.1
MDAQMD Thresholds	25	25	100	25	15	12
Significant?	No	No	No	No	No	No

Source: Calculated by LSA (September 2025) with CalEEMod (Version 2022.1.1.28).

Regional Operational Emissions

The proposed project will develop approximately 541 self-storage units within four types of buildings, referred to as Type A, Type B, Type C, and Type D. A manager's office would be designated as Type E. Each type of building would consist of varying storage unit sizes. Operational emissions generated by area sources, motor vehicles, and energy demand would result from the normal day-to-day activities of the project. The results of these calculations are presented in **Table 4.3-6**. As seen in the table, for each criteria pollutant, operational emissions would be below the pollutant's MDAQMD significance threshold. Therefore, regional operational emissions would be less than significant.

Table 4.3-6
MAXIMUM ANNUAL PROJECT OPERATIONAL EMISSIONS

Emission Type	Pollutant Emissions					
	VOCs	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Pounds Per Day						
Mobile Sources	0.8	0.9	7.9	<0.1	1.5	0.4
Area Sources	2.8	<0.1	4.1	<0.1	<0.1	<0.1
Energy Sources	0.0	0.0	0.0	0.0	0.0	0.0
Total Project Emissions	3.6	0.9	12.0	<0.1	1.5	0.4
MDAQMD Thresholds	137.0	137.0	548.0	137.0	82.0	65.0
Significant?	No	No	No	No	No	No

MDAQMD Thresholds	25	25	100	25	15	12
Significant?	No	No	No	No	No	No

Source: Calculated by LSA (September 2025) with CalEEMod (Version 2022.1.1.28).

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less Than Significant Impact

Since the MDAB is currently in federal nonattainment for ozone and $PM_{2.5}$ and state nonattainment for ozone and PM_{10}, related projects may exceed an air quality standard or contribute to an existing or projected air quality exceedance. However, as discussed above, the mass daily and annual construction and operational emissions generated by the project would not exceed any of the MDAQMD's significance thresholds. Therefore, the project would not result in a cumulatively considerable net increase in emissions of the pollutants for which the MDAB is in nonattainment. Thus, cumulative air quality impacts associated with the project would be less than significant.

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less than Significant Impact

Construction of the project would generate short-term and intermittent emissions. Following the MDAQMD's CEQA Guidelines (MDAQMD, 2020a), residences, schools, daycare centers, playgrounds, and medical facilities are considered sensitive land uses.

The following project types proposed for sites within the specified distance to an existing or planned (zoned) sensitive receptor land use must be evaluated (MDAQMD, 2020a):

- Any industrial project within 1,000 feet.
- A distribution center (40 or more trucks per day) within 1,000 feet.

- A major transportation project (50,000 or more vehicles per day) within 1,000 feet.
- A dry cleaner using perchloroethylene within 500 feet.
- A gasoline dispensing facility within 300 feet.

The proposed project entails the development of self-storage units; it does not meet the criteria listed above. Thus, the impacts on sensitive receptors would be less than significant.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than Significant Impact

A project-related significant adverse effect could occur if the construction or operation of the proposed project would result in the generation of odors that would be perceptible in adjacent sensitive areas. Potential odor sources associated with the Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction associated with the proposed project's long-term operational uses. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the construction and are thus considered less than significant. Therefore, the project would not create substantial objectionable odors and this impact would be less than significant.

4.4 Biological Resources

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?		**X**		
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?		**X**		
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				**X**
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native nursery sites?			**X**	
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?		**X**		
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				**X**

4.4.1 Methodology

This section is based on the results of a desktop analysis using USGS topographic maps, current aerial imagery, as well as the following sources:

- Biological Resources Assessment for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California *(APN 0597-111-67-0000)* prepared by LSA, October 24, 2025 (LSA, 2025b). See **Appendix C1**.

- Western Joshua Tree Census for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California (LSA Project No. 20231230), September 26, 20525 (LSA, 2025c). See **Appendix C2**.

- Rare Plant Survey for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California (LSA Project No. 20231230), September 26, 2025 (LSA, 2025d). See **Appendix C3**.

UltraSystems biologists researched readily available information, including relevant literature, databases, agency websites, previously completed reports and management plans, in-house records, and public domain GIS data, maps, and aerial imagery to identify the following: 1) special-status plant and wildlife species, jurisdictional waters, critical habitats, and wildlife corridors that may occur in and near the project site; and 2) local or regional plans, policies, and regulations that may apply to the project. Sources accessed by UltraSystems for analysis of potential impacts within this Initial Study include:

- California Natural Diversity Database (CNDDB, 2025).

- California Native Plant Society's (CNPS) Manual of California Vegetation (MCV) Online Edition (CNPS, 2025).

- USFWS Critical Habitat Portal (USFWS, 2025a).

- CDFW BIOS Habitat Connectivity Viewer (CDFW, 2025a).

- Other sources as cited in the text.

A Biological Study Area (BSA) was defined for the project to include the project site and a 500-foot buffer zone around its perimeter (see **Figure 4.4-1**). UltraSystems biologists did not visit the project site, but the BSA was studied during UltraSystems' desktop analysis to augment the field surveys conducted by LSA.

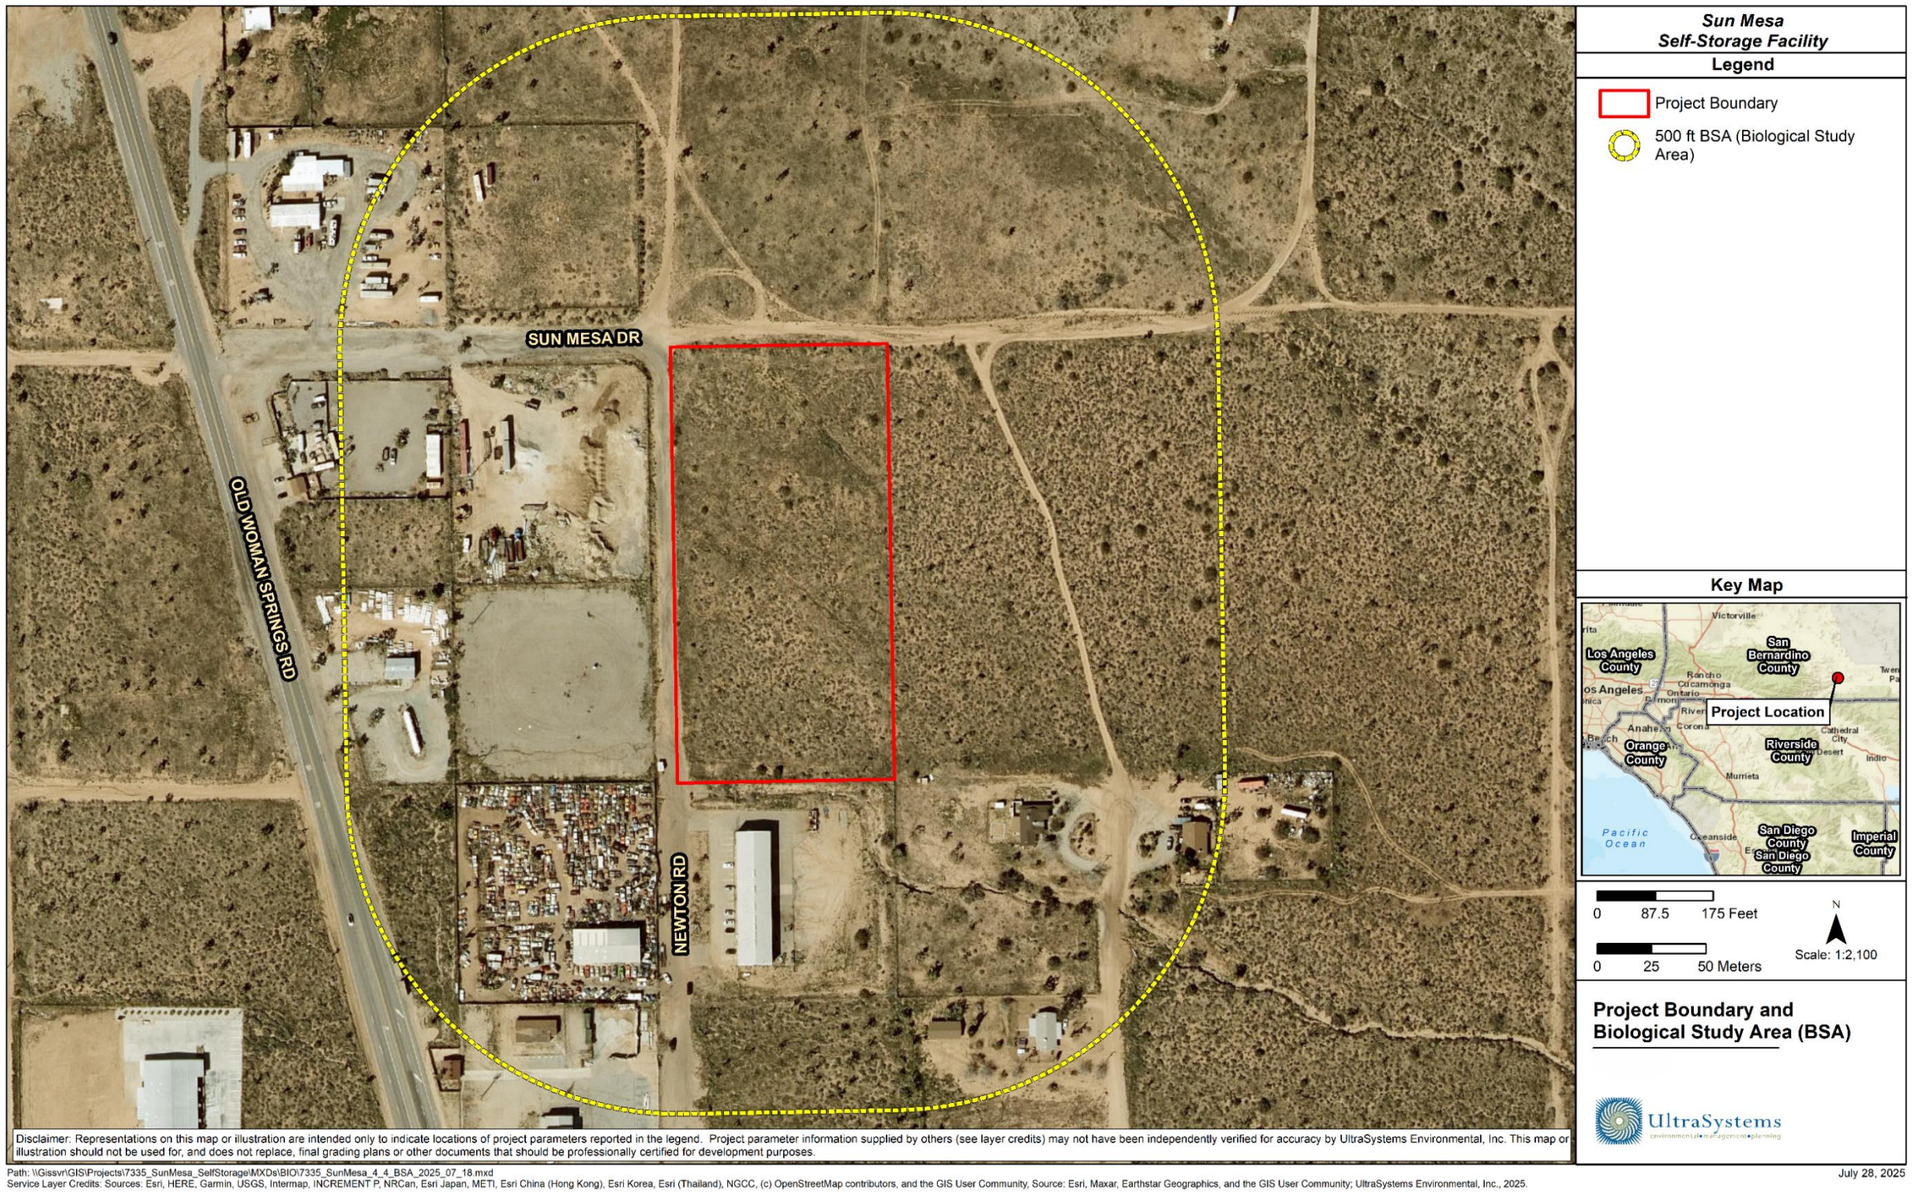
Plant and wildlife species protected by the federal Endangered Species Act (ESA) or by the California Endangered Species Act (CESA) are referred to as *listed species* in this section. Plant and wildlife species not protected under ESA or CESA but still protected by federal agencies, state agencies, local or regional plans and/or nonprofit resource organizations, such as the California Native Plant Society (CNPS), are referred to as *sensitive species* in this section. The term *special-status species* is used when collectively referring to both listed and sensitive species.

4.4.1.1 Environmental Setting

The topography of the biological study area (BSA) and project site are relatively flat, with slight inclines on the north to south plane. The north end of the BSA reaches approximately 3,726 feet above mean sea level (amsl), whereas the southern portion of the BSA reaches approximately 3,710 feet amsl. The project is situated on the southeast corner of Newton Lane and Sun Mesa Drive; it is surrounded by industrial, commercial, and mostly vacant residential areas.

The project site is in the *Yucca Valley North, California* 7.5-minute series topographic quadrangle map in Section 13 of Township 1 North, Range 5 East, San Bernardino Baseline and Meridian (USGS, 2025).

Figure 4.4–1
PROJECT LOCATION AND BIOLOGICAL STUDY AREA (BSA)



The project site and BSA are in the Mojave Basin and Range Major Land Resource Area (MLRA) of the Western Range and Irrigated Region of the U.S. The Mojave Basin and Rangle MLRA is the transition from the hot Sonoran Desert in the south to the cool Great Basin Desert in the north. This area contains both high and low deserts, often within short distances of one another (USDA NRCS, 2022). A strong orographic effect limits the amount of coastal humidity and precipitation entering the Mojave Basin. Precipitation occurs primarily in winter and early spring. Drought years are common, and high amounts of annual precipitation often occur in single storm events. Summers are hot and dry with irregular and sparse, high-intensity, convective thunderstorms (USDA NRCS, 2022).

4.4.1.2 Discussion of Impacts

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Less Than Significant with Mitigation Incorporated

Special Status Plants

LSA identified eight special-status plant species with potential to occur within the project vicinity. One species, triple-ribbed milk-vetch (*Astragalus tricarinatus),* is federally protected, whereas another species, western Joshua tree (*Yucca brevifolia),* is state candidate threatened, and the remaining species are sensitive (not federally or state-listed). LSA's analysis is based on CNDDB data from the *Yucca Valley North, Yucca Valley South, Joshua Tree North, Joshua Tree South, Rimrock, Goat Mountain,* and *Landers, California* quadrangles (LSA, 2025b).

Of these eight species, western Joshua tree (*Yucca brevifolia)* was present onsite in November 2023, and the other seven species were not observed in a focused rare plant survey conducted in May 2024. The Joshua tree census conducted by LSA biologists on November 1, 2023, determined 98 Joshua trees were : 87 Joshua trees were on the project site and there were 11 in the buffer area.(**Figure 4.4-2**; LSA, 2023). LSA biologists surveyed for the presence/absence of San Bernardino milk-vetch (*Astragalus bernardinus*), triple-ribbed milk-vetch (*Astragalus tricarinatus*), Pinyon rock cress (*Boechera dispar*), Pioneertown linanthus (*Linanthus bernardinus*), little San Bernardino mountains linanthus (*Linanthus maculatus* ssp*. maculatus*), Robinson's monardella (*Monardella robisonii*), Latimer's woodland gilia (*Saltugilia latimeri*), and any other special-status species detectable during the time of the surveys (LSA, 2025b). The only special-status species LSA found at the time of either survey (November 2023 or May 2024) is western Joshua tree; no additional special-status species (i.e., species beyond the eight listed) were observed onsite (LSA, 2025b; LSA, 2025c).

Five special-status species were determined to occur within two miles of the BSA by UltraSystems (**Figure 4.4-3**). These five species (i.e., little San Bernardino mountains, Pioneertown linanthus, Robinson's monardella, San Bernardino milk-vetch, and Pinyon rock cress) were considered within LSA's analysis.

It is important to note that the 2024 focused rare plant surveys followed an above average rainfall season (UltraSystems 2025a, 2025c). Therefore, the focused rare plant survey results may be limited by lack of data concerning certain plant taxa, especially for annual or biennial plant species. Although surveys were conducted during the general peak bloom period for the species of interest, the lack of precipitation preceding the 2025 survey season precludes an optimal floristic inventory.

Western Joshua Tree

The western Joshua tree is a State Candidate Threatened species native to California. Tree size and growth form vary with site and climate conditions. In California, the western Joshua tree is an evergreen tree that is present in discontinuous populations within the western Mojave Desert and extends north and east into the southwestern Great Basin. The western Joshua tree typically grows between heights of 16.4 to 66 feet, rarely exceeding 33 feet. Western Joshua trees typically have one main stout stem or trunk that measures 3.3 to 10 feet in diameter and have an expanded base (CDFW, 2025b).

Western Joshua trees are typically found within the Mojave Desert and Great Basin ecoregions on landforms such as alluvial fans, bajadas, flats, ridges, mesas, and gentle to moderate slopes. They benefit from soils with bimodal textures with coarse sand and fine silts that are able to retain soil moisture. Additionally, western Joshua trees are sensitive to temperature and precipitation, which are factors that can determine whether or not the tree or juvenile sprout will be able to survive in a landscape. Important climate factors for these trees are annual heat/moisture index, winter minimum temperature, and mean annual precipitation (CDFW, 2025b)

LSA conducted a Joshua Tree Census on November 1, 2023 (see **Appendix C2**, *Western Joshua Tree Census for the Sun Mesa (Billings) Mini Storage Project*; LSA 2023). The study area for the census includes the 4.34-acre project site plus a 49-foot buffer area around the site (see **Figure 4.4-2**). Each living or dead Joshua tree in the study area was assigned a unique identification number, tagged, photographed, and mapped using Global Positioning System (GPS) technology (datum WGS 84). Each Joshua tree stem or trunk arising from the ground was considered an individual tree. For each Joshua tree, the arborist recorded size class, maturity, and flowering/fruiting status.

The census recorded 98 Joshua trees onsite; 87 Joshua trees on the project site and 11 in the buffer area. Construction of the project would result in the removal of all 98 Joshua trees on the project site and in the buffer area. Impacts to Joshua tree would be potentially significant.

Mitigation Measures

Unless otherwise noted, the project applicant does not plan to transplant or retain any of the 98 Joshua trees on the project site and in the buffer area. All impacts to this parcel will be permanent, as no remaining undeveloped land is proposed by this project. The implementation of the following measures would reduce impacts to less than significant levels.

BIO-1: Biological Monitor

(a) A biological monitor will be onsite to monitor activities that result in the clearing or grading of areas known to contain sensitive biological resources, such as western Joshua tree habitat, as well as ground-disturbing activities that impacts do not exceed the limits of construction and minimize the likelihood of inadvertent impacts to special-status plant and wildlife species.

(b) The biological monitor will ensure that all biological mitigation measures, best management practices (BMPs), avoidance and protection measures described in the relevant project permits and reports are in place and are adhered to. Monitoring will cease when the sensitive habitats and jurisdictional areas have been cleared or impacted. The biological monitor will take photographs

throughout the construction process. Observations of special-status species will be recorded in monitoring logs, mapped, and special-status species records will be submitted to the California Natural Diversity Database (CNDDB) within five working days of the sightings, and CDFW will be provided with copies of the CNDDB forms and survey maps. Monitoring logs will be completed for each day of monitoring.

(c) The biological monitor will have the authority to halt all construction activities and all non-emergency actions if listed species are identified on the project site and will be directly impacted. The monitor will notify the appropriate resource agency and consult if needed. If needed, and if authorized by the resource agencies, the monitoring biologist will relocate the individual outside of the work area where it will not be harmed. Work can continue at the location if CDFW and/or the USFWS determine that the activity will not result in impacts to the species.

(d) If sensitive biological resources are detected in an area to be impacted, then appropriate measures will be implemented by the biological monitor to avoid impacts (i.e., flag and avoid, erect orange snow fencing, biological monitor present during work, etc.). However, if avoidance is not possible and the sensitive biological resources will be directly impacted by project activities, the biological monitor will mark and/or stake the site(s) and map the individuals on an aerial map and with a GPS unit. The biologist will then contact the appropriate resource agencies to develop additional mitigation measures prior to commencing project activities.

(e) The construction crew will inspect excavated areas daily to detect the presence of trapped wildlife.

BIO-2: Project Limits and Designated Areas

To avoid impacts to sensitive biological resources, the following measures will be implemented by the project proponent, contractors, and biological monitor prior to project staging, and commencement of any ground-disturbing activities or vegetation removal.

a) Project boundary would be set at the minimum size to accomplish necessary work, resulting in minimal impacts to sensitive biological resources and jurisdictional areas.

b) Specifications for the project boundary, limits of construction, project-related parking, storage areas, laydown sites, and equipment storage areas will be mapped and clearly marked in the field with temporary fencing, signs, stakes, flags, rope, cord, or other appropriate markers. All markers will be maintained until the completion of activities in that area.

c) To minimize the amount of disturbance, the construction/laydown areas, parking areas, staging areas, storage areas, spoil areas, and equipment access areas will be restricted to designated areas. To the extent possible, designated

areas will comprise existing disturbed areas (parking lots, access roads, graded areas, etc.).

d) Project-related work limits will be defined, and work crews will be restricted to designated work areas. Disturbance beyond the actual construction zone is prohibited without site-specific surveys.

e) Project related vehicle traffic will be restricted to established roads, staging areas, and parking areas. Travel outside construction zones will be prohibited. If sensitive biological resources are detected in an area to be impacted, then appropriate measures will be implemented to avoid impacts (i.e., flag and avoid, erect orange snow fencing, biological monitor present during work, etc.). However, if avoidance is not possible and the sensitive biological resources will be directly impacted by project activities, the biological monitor will mark and/or stake the site(s) and map the individuals on an aerial map and with a GPS unit. The biologist will then contact the appropriate resources agencies to develop additional avoidance, minimization and/or mitigation measures prior to commencing project activities.

BIO-3: Western Joshua Tree Conservation Act

Prior to the initiation of Joshua trees encroachment, trimming, pruning, or any activity that may result in take of Joshua trees (including removal of live and dead Joshua trees), the project proponent should obtain a California Endangered Species Act (CESA) Incidental Take Permits (ITP) under the western Joshua Tree Conservation Act (WJTCA) of Fish and Game Code (§§ 1927.3 and 1927.8). California Fish and Game Code § 86 defines "take" as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill". Mitigation will occur per the stem count per the WJTCA census in lieu fee, or as required by the ITP and WJTCA.

BIO-4: California Desert Native Plants Act

a) Because species of the family Agavaceae (e.g., western Joshua Tree), which have been observed throughout the project site, are covered under § 80073(b) of the California Desert Native Plants Act (CDNPA), any impacts will require a permit issued by the commissioner of the sheriff in San Bernardino County pursuant to Chapter 3 § 80073. Prior to commencement of construction activities, including but not limited to mobilization, fencing, staging, vegetation trimming or removal, or ground-disturbing activities, the project proponent will acquire a permit pursuant to Chapter 3 § 80101 and § 80073 of the California Desert Native Plants Act if any of the following species are observed on the project site:

   a. All species of the family Agavaceae (century plants, nolinas, yuccas)

   b. All species of the family Cactaceae (cacti), except for the plants listed in subdivisions (b) and (c) of Section 80072 which may be harvested under a permit obtained pursuant to that section.

   c. All species of the family Fouquieriaceae (ocotillo, candlewood)

d. All species of the genus Prosopis (mesquites)

e. All species of the genus Cercidium (palos verdes)

f. *Acacia greggii* (catclaw)

g. *Atriplex hymenelytra* (desert-holly)

h. *Dalea spinosa* (smoke tree)

i. *Olneya tesota* (desert ironwood), including both dead and live desert ironwood.

Special-Status Wildlife

LSA identified five special-status wildlife species with potential to occur within the vicinity of the project. Of these species, one is federal and state threatened (Desert tortoise, *Gopherus agassizii),* and one is state candidate threatened/endangered (burrowing owl, *Athene cunicularia*). The remaining three species are special-status and include the loggerhead shrike (*Lanius ludovicianus),* San Joaquin Valley population of Le Conte's thrasher *(Toxostoma lecontei),* and American badger *(Taxidea taxus).* LSA biologists confirmed presence of the loggerhead shrike during the May 2024 field survey and anticipate the remaining species are either not expected to occur or have low potential to occur (LSA, 2025b).

LSA biologists observed California quail *(Callipepla californica),* mourning dove *(Zenaida macroura),* turkey vulture *(Cathartes aura),* loggerhead shrike*,* common raven *(Corvus corax),* house sparrow *(Passer domesticus),* house finch *(Haemorhous mexicanus),* San Diegan tiger whiptail *(Aspidoscelis tigris stejnegeri),* and desert cottontail *(Sylvilagus audubonii)* during the May 2024 survey. LSA adds that the abundant Joshua trees and yucca within the project site may significantly contribute to nesting for native wildlife species, especially birds (LSA, 2025b).

UltraSystems identified two wildlife species within a two-mile radius of the project site (**Figure 4.4- 5**). One of these species, desert tortoise, was considered in LSA's investigations. However, the pallid San Diego pocket mouse (*Chaetodipus fallax pallidus*) was not mentioned in LSA's Biological Resource Assessment LSA, 2025b). UltraSystems biologists determined the pallid San Diego pocket mouse has a moderate potential to occur within the BSA. The pallid San Diego pocket mouse is not a federally or state-listed species, although is ranked by CDFW as either vulnerable (S3) and apparently secure ((S4; combined State rank is S3S4) state-wide (USFWS, 2025b; CDFW, 2025c)).

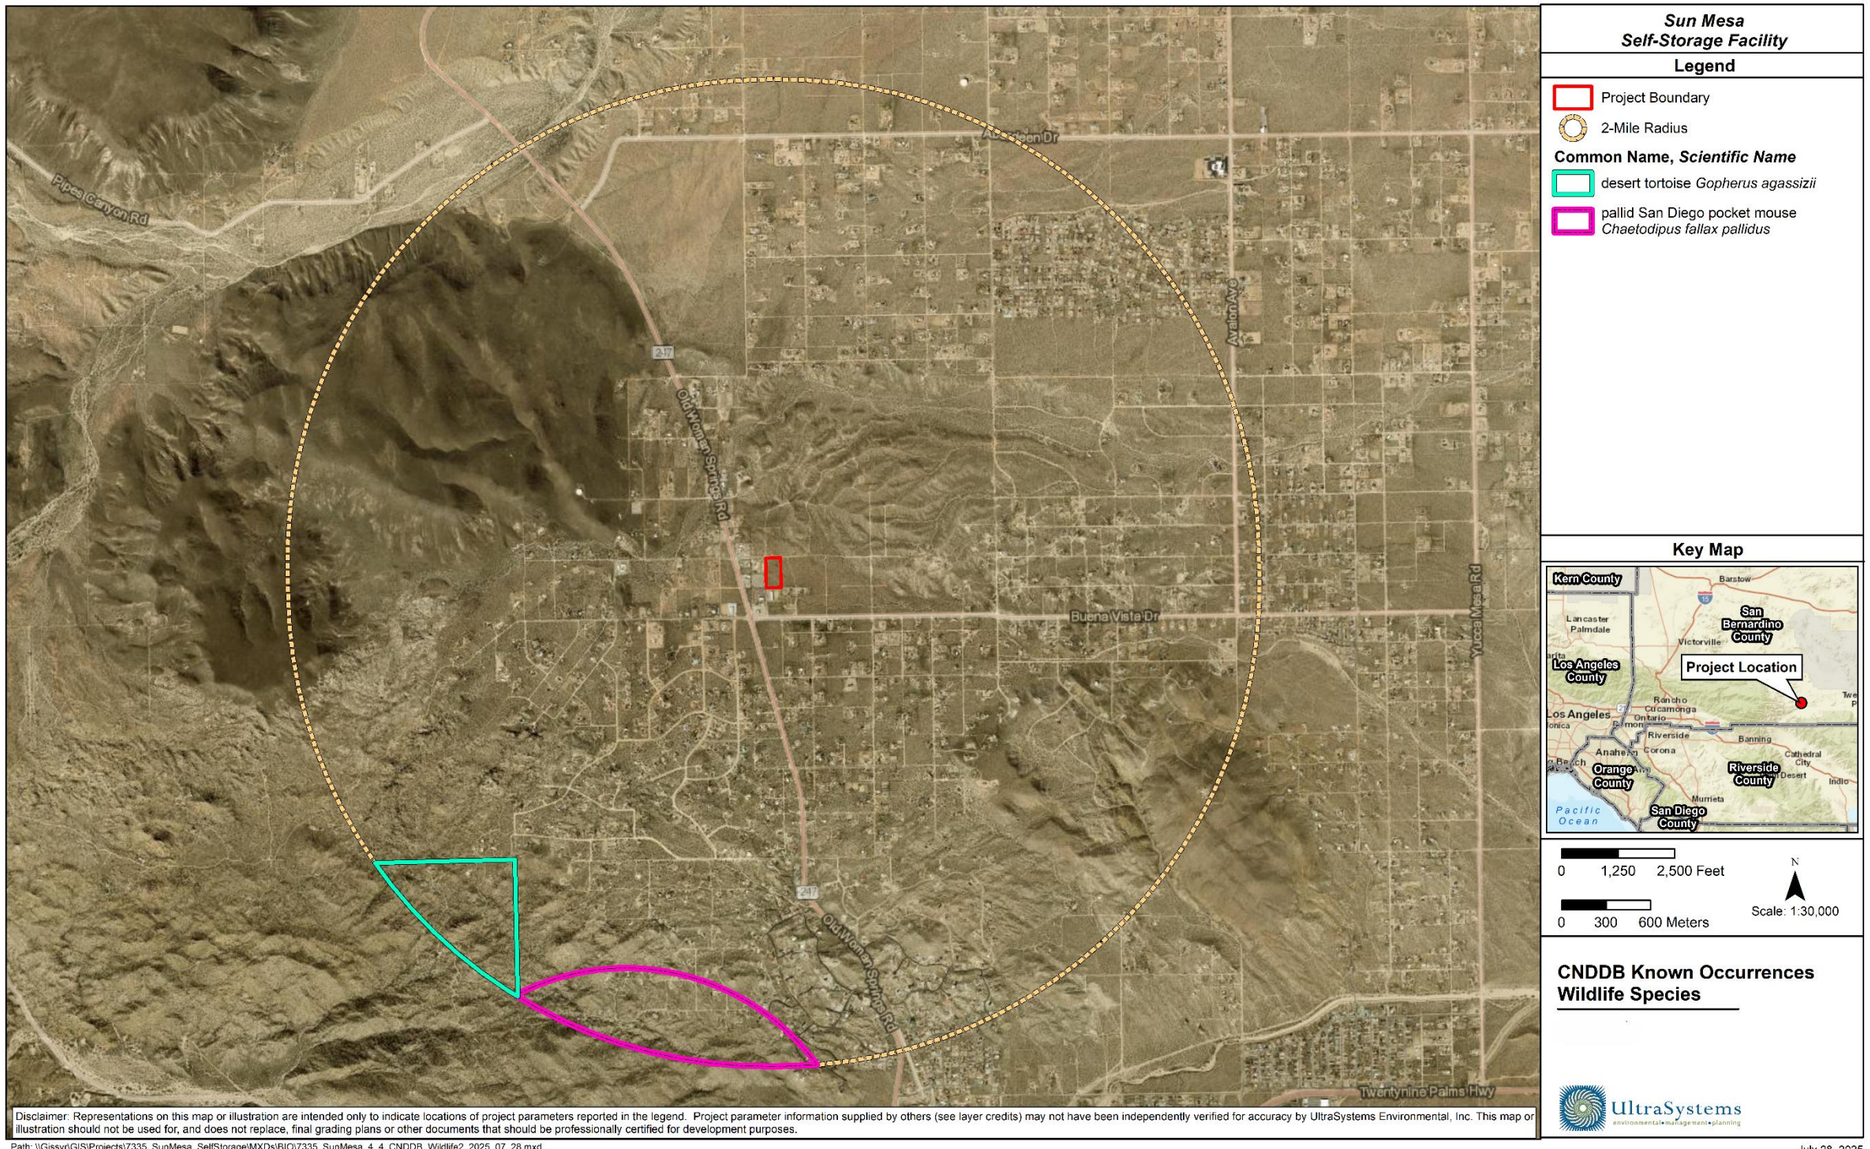
Desert tortoise (Gopherus agassizii)

The desert tortoise occurs in the Mojave, Sonoran, and Colorado deserts in the southwestern United States and the Sonora and northern Sinaloa in Mexico. The designated Mojave population of the desert tortoise is listed as federally and State Threatened and includes those animals living north and west of the Colorado River in the Mojave Desert of California, Nevada, Arizona, and southwestern Utah, and in the Colorado Desert in California (USFWS, 1994 and USFWS, 2011).

Desert tortoises typically occur in desert scrub, desert wash, and Joshua tree habitats below sea level to 7220 feet. Tortoises typically excavate burrows under bushes, and overhanging soil or rock formations (CDFW, 2000). Soils must be friable (easily crumbled) enough for digging burrows, but firm enough so that burrows do not collapse. During the winter, tortoises will opportunistically use burrows of various lengths, deep caves, rock and caliche crevices, or overhangs for cover (USFWS, 2011).

No observations of desert tortoise were made by LSA in the November 2023 or May 2024 surveys. However, desert tortoise is a mobile species, and direct impacts may result from project activities, including (but not limited to) staging, vegetation removal, and grading, Desert tortoises may also seek shelter in the shade of parked construction vehicles and equipment. For these reasons, mitigation is recommended (**BIO-1**, *Biological Monitor*, **BIO-5**, *Worker Environmental Awareness Program*, **BIO-7**, *Pre-Construction Desert Tortoise Survey*).

Figure 4.4-5
CNDDB KNOWN OCCURRENCES: WILDLIFE SPECIES



Burrowing Owl (Athene cunicularia)

The burrowing owl (BUOW) is a small, crepuscular (active at dusk and dawn), ground-inhabiting owl that is found largely throughout the United States (Wilkerson, and Siegel, 2011). Its overall length is about seven to ten inches. Its coloring is sandy brown on its head, back and upper wings, with noticeable white spotting on its back and upper wings (Sibley, 2000). Adults are barred on their breast, while juveniles are buffy with a white collar. The brown and white mottling helps to provide camouflage in their dry habitat. BUOWs have yellow eyes, long legs, a short tail, with relatively long, narrow wings and a flat, round head (Sibley, 2000). Their long legs help them to see over grasses and short vegetation and aid them in catching their prey.

Burrowing owls are the only North American owl species that lives underground; typical BUOW habitat is open, dry, on level to mildly sloping topography with short and sparse vegetation structure and available burrows for nesting and roosting (Gallagher, 1997; Haug et al., 1993; Shuford et al., 2008; Center for Biological Diversity et al., 2024). BUOWs spend most of their time on the ground or on low perch sites such as fence posts and dirt mounds. Typical habitat includes prairies, grasslands, shrub steppe, deserts, and some agricultural areas (Haug et al., 1993). Nesting habitat also includes rolling hills, and occasionally on steep slopes or cliffs (Center for Biological Diversity, 2024). BUOW nesting habitat also occurs in urban landscaped areas and includes ruderal grassy fields, roadsides, airport infields, rural parks, college campuses, golf courses, athletic fields, and other similar areas (Center for Biological Diversity et al., 2024). In California, BUOW nesting habitat also includes fallow agricultural fields, the edges of cultivated fields (e.g., along roads or agricultural canals; Rosenberg and Haley, 2004). They are the only small owls likely to be seen perched in the open daylight (Sibley, 2000).

Though no sign, direct observation, or suitable burrow was observed in the November 2023 or May 2024 surveys, LSA determined burrowing owl are known to commonly occur within the project vicinity. Therefore, LSA recommended a Pre-Construction Presence/Absence Survey for burrowing owl (LSA, 2025b). UltraSystems biologists agree in recommending burrowing owl surveys presented under mitigation measures (**BIO-10,** *Pre-Construction Burrowing Owl Surveys*).

Loggerhead shrike

The loggerhead shrike is a large, predatory songbird. They are known to inhabit and forage over open country within areas of short vegetation and well-spaced shrubs or low trees, particularly those with spines or thorns. They frequent agricultural fields, pastures with fence rows, old orchards, savannas, prairies mowed roadsides, cemeteries, golf courses, riparian areas, open woodland, agricultural fields, desert washes, desert scrub, grassland, broken chaparral and beach with scattered shrubs. They prefer tall shrubs or trees (also fences or power lines) for hunting perches and territorial advertisement; open areas of short grasses, forbs, or bare ground for hunting; and large shrubs or trees for nest placement. Human disturbance does not seem to be a major concern to this species. The shrike is often seen next to well-traveled roads and near houses built in suitable habitat. In California, loggerhead shrikes breed mainly in shrublands or open woodlands with a fair amount of grass cover and areas of bare ground. They often nest in isolated trees or large shrubs.

Le Conte's thrasher

LeConte's thrasher is a passerine in the family Mimidae. This species occurs in the deserts of southeastern California, southern Nevada, extreme southwestern Utah south into west-central and southwestern Arizona, northeastern Baja California, and northwestern Sonora, with recent range

extensions into the Carrizo Plain and Cuyama Valley, much of the San Joaquin Valley, and the Panoche Hills. Occupied habitats are generally moderately to sparsely vegetated by saltbush scrub with bare ground or patches of sparse grasses. Habitat loss and degradation, particularly conversion of habitat to agriculture, are the major threats to populations. They are considered a Species of Special Concern by the CDFW and a Bird of Conservation Concern by the USFWS. Their nests are protected by the MBTA and Fish and Game codes pertaining to native nesting avian species.

American badger

The California Department of Fish and Wildlife (CDFW) considers American badger (*Taxidea taxus*) to be a Species of Special Concern (SSC). The American badger is found in a dry, open stages of a variety of habitats throughout California including woodlands, shrublands, and grasslands. The American badger is a fossorial carnivore and feeds primarily on small fossorial mammals including mice, chipmunks, rats, and particularly ground squirrels and pocket gophers. This species is fossorial and digs its dens in loose, friable soil. American badger is active year-round and has been observed to be diurnal at times or nocturnal.

Breeding and Nesting Birds (Migratory Bird Treaty Act)

The BSA supports trees, shrubs, and other vegetation (including landscaping/ornamental vegetation) that could potentially provide foraging, nesting, and cover habitats to support a diverse assortment of bird species (yearround residents, seasonal residents, and migrants). LSA biologists observed loggerhead shrike during the May 2024 field visits (LSA, 2025b). A majority of the birds observed during the field surveys and those birds that could potentially breed and nest within the project site and BSA are protected by the MBTA, and by Fish and Game Code § 3503, § 3503.5, and § 3513.

Activities which are most likely to result in take of migratory birds during the breeding bird season and when eggs or young are likely to be present include, but are not limited to, clearing or grubbing of bird nesting habitat; excavations and ground movement; or vegetation trimming or clearing. The project has the potential to directly take individual breeding birds, their nests, young, or eggs; therefore, avoidance and minimization are required. Indirect impacts to breeding birds could occur from increased noise, vibration, lighting and dust during construction, which could adversely affect the breeding behavior of some birds and lead to the loss (take) of eggs and chicks, or nest abandonment.

It is anticipated that the project may cause direct and indirect impacts to breeding birds, their nests, young, or eggs. Implementing the recommended avoidance and minimization **BIO-1** through **BIO-4** and **BIO-5** through **BIO-13**, described below, will minimize or avoid potential impacts to breeding birds, their nests, young, or eggs to less than significant levels. Impacts would then be less than significant.

Mitigation Measures

It is possible that impacts, such as unauthorized take or burrow collapse, occur to special-status species due to project activity. With the implementation of **BIO-1** through **BIO-4**, and the following mitigation measures (**BIO-5** through **BIO-12**), impacts are anticipated to be less than significant.

BIO-5: Worker Environmental Awareness Program

Worker Environmental Awareness Program (WEAP) for construction personnel shall be conducted and documented prior to onsite disturbances. The training shall include a discussion of the sensitive biological resources within the project site and the potential presence of special-status species. The WEAP shall also include a discussion of special-status species' habitats, protection measures to ensure species are not impacted by project activities, project boundaries, penalties for non-compliance, and biological conditions outlined in the project permits. All new employees shall be trained before they access the work site. New employees shall be trained and certified by the Construction Supervisor with the approval of the Project Biologist as approved by CDFW. Each trained individual shall be given a distinctive helmet sticker that will identify those who have received training, signed the training log, and demonstrated the required level of environmental awareness.

BIO-6: Construction Best Management Practices

Project work crews will use CASQA (or similar) stormwater BMPs as directed by the project's Storm Water Pollution Prevention Plan (SWPPP). These measures will be identified prior to construction and incorporated into construction operations. The project's Qualified SWPPP Practitioner shall ensure that construction activities will incorporate all applicable BMPs specified in the SWPPP to prevent erosion from water or wind, sedimentation of receiving waters, and introduction of other pollutants, including non-stormwater pollutants, into drainages crossed by or adjacent to the project site, accidental spills in the project site, including laydown yards and parking areas. BMPs will be maintained on a regular basis pursuant to the requirements of the SWPPP.

Bio-7: Pre-Construction Desert Tortoise Survey

Prior to the commencement of project activities, including but not limited to ground disturbance, pre-construction surveys following guidance in the U.S. Fish and Wildlife's (USFWS) 2018 *Preparing for Any Action That May Occur Within the Range of the Mojave Desert Tortoise* (*Gopherus agassizii;* "Guidelines") shall be conducted by an authorized biologist in possession of an active §.10(a)(1)(B) Incidental Take Permit from the USFWS. The Guidelines recommend the applicant contact USFWS prior to surveys. Qualified biologists shall conduct pre-construction surveys for desert tortoise no more than 48 hours prior to initiation of Project activities and after any pause in Project activities lasting 30 days or more. The qualified biologists shall follow USFWS's Desert Tortoise (Mojave Population) Field Manual (*Gopherus agassizii; "*Field Manual"). The qualified biologist shall record all signs of desert tortoise, such as scat, burrows, carcasses, courtship rings, drinking depressions, and live sightings, as described in the Field Manual. The qualified biologist shall provide a report with a map of the surveyed area (including transects, desert tortoises, and sign) and description of habitat conditions. Should positive survey results occur, the project applicant shall secure an incidental take permit under Section 10 of FESA and State incidental take permit under Section 2081 of the Fish and Game Code.

BIO-8: Pre-construction Wildlife Surveys

Prior to issuance of grading permits, a qualified biologist shall conduct pre-construction surveys within areas of suitable habitat for special-status terrestrial wildlife species identified as having moderate or greater potential to occur onsite. Pre-construction surveys shall be conducted three days before the commencement of construction activities. If construction activities onsite lapse for one week or more, approved work areas will be re-surveyed by the biologist for new occurrences of

the special-status wildlife species. Further consultation with wildlife agencies will be necessary if special-status species are observed onsite and prior to commencing construction activities.

BIO-9: General Wildlife Avoidance and Protection Measures

The project proponent shall implement the following general avoidance and protection measures to protect wildlife.

a) To minimize construction-related mortalities of nocturnally active wildlife species, it is recommended that all non-emergency work be conducted during daylight hours. All unnecessary lights shall be turned off at night to avoid attracting wildlife. Nighttime work (and use of artificial lighting) would not be permitted unless specifically authorized.

b) If any wildlife is encountered during project activities, it will be allowed to freely leave the area unharmed or the biological monitor shall capture the animal, if authorized, and relocate it outside of the construction work limits out of harm's way.

c) Listed wildlife species shall not be captured, handled, or relocated without specific written authorization from CDFW and/or USFWS.

d) Wildlife shall not be disturbed, captured, harassed, or handled, unless to relocate the animal out of imminent threat of injury or death. Animal nests, burrows and dens shall not be disturbed without prior survey and authorization from the biological monitor.

e) Active and inactive nests cannot be removed or disturbed.

f) Contractors, subcontractors, employees, and site visitors shall be prohibited from feeding or collecting wildlife.

g) To avoid the potential for mortality and harassment of wildlife, all non-security related firearms, weapons, and domestic dogs would be prohibited from the project site.

h) Contractors, subcontractors, employees, and site visitors shall inspect their vehicles and equipment for the presence of wildlife prior to moving their vehicles and equipment. The biological monitor shall be contacted if a special-status species is detected and is in danger of being harmed.

i) All steep-walled pitfalls (trenches, holes, bores, and other excavations) greater than two feet deep used during the project would be completely covered at all times except when being actively used, to prevent wildlife entrapment (i.e. reptiles and small mammals). If trenches cannot be covered, escape ramps (maximum slope of 2:1) shall be provided to allow trapped animals to escape. Exclusion fencing shall be installed around the trench or excavation. Trenches shall be inspected and wildlife removed immediately before backfilling.

j) All onsite project workers shall look under their vehicles and equipment before movement. If wildlife is observed, no vehicles or equipment shall be moved until the animal has left the area voluntarily or can be legally relocated.

k) Equipment maintenance, lighting, and staging shall occur only in designated areas, and shall not block or impede wildlife movement.

BIO-10: Pre-Construction Burrowing Owl Surveys

A qualified biologist shall conduct a pre-construction BUOW survey in accordance with the *Staff Report on Burrowing Owl Mitigation* (CDFW, 2012) or current CDFW guidance/protocol if changes to the aforementioned 2012 guidance have occurred. A pre-construction BUOW survey (Take Avoidance Survey) shall be conducted no more than 14 days prior to any site disturbance (grubbing, grading, and construction) and again 24 hours prior to ground disturbing activities.

Although BUOW was not detected on site during the reconnaissance-level surveys, the BSA contains suitable habitat to potentially support BUOW. The qualified biologist shall identify, record, and map with a global positioning system (GPS) unit BUOWs and their sign. Detailed notes and wildlife species encountered during the surveys shall be recorded in field notes.

If an occupied burrow is found (as indicated by the observation of a burrowing owl or the presence of burrowing owl sign), a 250-foot buffer around the burrow shall be staked and flagged and no construction activities will be allowed within the buffer area during the breeding season (February 1 through August 31). The qualified biologist will contact CDFW to assist in the preparation of an Incidental Take Permit (ITP), and development of avoidance, minimization, and mitigation measures, prior to commencing project activities. A relocation program may be necessary and shall be approved by CDFW prior to commencing project activities.

If no BUOWs or signs of BUOWs are observed during the preconstruction surveys and concurrence is received from CDFW, project activities may begin, and no further mitigation shall be required.

BIO-11: Pre-Construction Breeding Bird Survey

If vegetation removal is scheduled within the nesting season, a qualified biologist shall conduct a pre-construction nesting bird survey to maintain compliance with the Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code (§§ 3503 and 3503.5), which prohibit take of nesting birds and nests of migratory and non-game bird species. Nesting season is generally considered to be:

- January 1-July 30 for raptors.
- February 1-September 15 for non-raptors.

a) A qualified biologist will conduct pre-construction surveys no more than five days prior to when project activities (e.g., mobilization, excavation, grading, vegetation removal) are underway. Should a lapse in project activity be greater than five days, a qualified biologist will conduct additional surveys to maintain compliance.

To maximize the detection of nesting birds, surveys must be conducted in work areas (e.g., staging, stockpiling, storage, equipment yards, access roads) during favorable weather conditions. A wide variety of shelters and resources are used by avian species; these include barren ground, grasses, forbs, shrubs, trees, rocky outcrops, and man-made structures (dependent on species and conditions). The qualified biologists will interpret physical signs for nesting structures (e.g., manipulation of materials like mud or grass) and direct signs of life (e.g., courtship behaviors, gathering, swooping, alarm calls, pellets).

b) If nests are encountered, a qualified biologist shall consider individual species tolerance, proximity to construction activity, noise impacts, line-of-sight barriers, and distance (horizontal and vertical) to determine if planned construction activities would impact nesting success. The rate and duration of construction activities shall also be considered should the modification of scheduled activities be required to maintain healthy nesting outcomes.

c) If the qualified biologist determines construction activities shall potentially adversely affect a nest, the biologist must immediately inform the construction manager to halt construction activities (i.e., establish a no-work zone) within a minimum exclusion buffer of 100 feet for songbird nests and 200-500 feet for raptor nests. This no-work zone lawfully avoids the "take" of nesting birds and the mortality of eggs and younglings. Construction activities within the no-work buffer may proceed after a qualified biologist determines the young have successfully fledged the nest and are no longer dependent upon the nest or parents.

d) If federal or state protected species are observed during surveys, USFWS and CDFW shall be consulted to determine the appropriate time for project activities to proceed and what specific measures will be taken to ensure protected species are not impacted.

BIO-12: Pre-Construction Desert Kit Fox and American Badger Surveys

Desert kit fox is a protected species under CCR Title 14, § 460. No more than 14 days prior to the beginning of ground disturbance and/or Project activities, a qualified biologist shall conduct pre-construction surveys to determine if potential desert kit fox burrows/dens are present in the project area. Pre-construction surveys should include transect surveys at a 20-meter transect distance to ensure 100 percent visual coverage of the project area. Surveys may be combined for similar fossorial mammals, such as American badger; combined, concurrent surveys for dissimilar taxa (e.g. plants or birds) shall be prohibited.

Use of wildlife camera monitoring to determine presence/absence and burrow/den use is strongly encouraged, in accordance with CDFW approved methods, including *Remote Camera Trap Installation and Servicing Protocol Citizen Wildlife Monitoring Project 2017 Field Season* (Moskowitz and Huyett, 2017) and *Camera-trapping for conservation: a guide to best-practices* (Oliver R. Wearn & Paul Glover-Kapfer, 2017).

The pre-construction survey reports will include: (1) the number, location, and status determination of potential desert kit fox and/or badger dens identified during the reporting period, (2) occupancy monitoring status, (3) species present, and (4) estimated number of individuals and associated behaviors observed. Desert kit fox

and badger images will additionally be stored on a cloud-based server and additional relevant data will be made available to CDFW upon request.

If the pre-construction surveys confirm occupied desert kit fox habitat, project activities shall be immediately halted, and the qualified biologist shall notify CDFW to develop avoidance, minimization, and mitigation measures within a Desert Wildlife Management Plan.

No disturbance of active dens shall take place when juvenile desert kit fox may be present and dependent on parental care. Sick or injured animals will be reported to CDFW within 24 hours of discovery.

Level of Significance After Mitigation

With the implementation of mitigation measures **BIO-1** through **BIO-13,** implementation of the proposed project would result in less significant impact to special-status plant and wildlife species.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Less Than Significant with Mitigation Incorporated

Communities of Concern

LSA noted a disturbed Joshua tree woodland within the entirety of the project site. There are no additional communities of concern immediately near the project site (LSA, 2025b).

Critical Habitat

Literature review determined that no critical habitat, including USFWS-designated critical habitat, occupies the BSA (**Figure 4.4-6**; LSA, 2025b).

Land Cover

LSA classified all of the project site as a Joshua tree woodland, through remarks on disturbed portions making up roadways (LSA, 2025b). Joshua tree woodland *(Yucca brevifolia* Woodland Alliance) generally occurs on gentle alluvial fans, ridges, gentle to moderate slopes. Soils are typically coarse sands, very fine silts, gravel, or sandy loams, and many sites have bimodal soils with both coarse sands and fine silts (CNPS, 2025). LSA reported dominant vegetation to include western Joshua tree (*Yucca brevifolia*), Mojave yucca (*Yucca schidigera*), creosote bush (*Larrea tridentata*), Mediterranean grass (*Schismus* sp.), red brome (*Bromus rubens*), Sahara mustard (*Brassica tournefortii*), shortpod mustard (*Hirschfeldia incana*), and redstem stork's bill (*Erodium cicutarium*). LSA determined the Joshua tree woodland alliance to take up all of the project site; as such, no other plant communities were found present onsite (**Figure 4.4-7**; LSA, 2025b). The Joshua tree woodland alliance (33.170.00) is considered sensitive with a rarity ranking of apparently secure globally and vulnerable state-side (G4/S3; CDFW, 2025d).

The take of Joshua trees is expected during project development. As such, it is recommended that a Joshua Tree Incidental Take Permit be attained by the project proponent (**BIO-3,** *Western Joshua Tree Conservation Act*; described in **Section 4.4[a]**).

Figure 4.4-7
LAND COVER

Mitigation Measures

It is anticipated that no Joshua trees would be transplanted or retained as part of project activities, therefore all impacts within the project boundary will be permanent. The implementation of **BIO-3** Western Joshua Tree Conservation Act will reduce impacts to less than significant levels.

Level of Significance After Mitigation

The project is not anticipated to have substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by CDFW or USFWS. Impacts to individual western Joshua trees would be mitigated through the implementation of measures **BIO-1** through **BIO-4** as described in **Section 4.4(a)**; additionally, implementing the recommended avoidance and minimization mitigation measures **BIO-5** and **BIO-6** would minimize or avoid impacts to sensitive vegetation communities to less than significant.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact

The project site does not contain waters of the U.S. or State, including wetlands, and would not directly impact jurisdictional waters. Direct, indirect, or permanent impacts to jurisdictional waters are not anticipated as a result of the project.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact

LSA concluded that the BSA is not located within connectivity areas, natural landscape blocks, natural areas small, or potential riparian connections (LSA, 2025b).

Although the BSA does not overlap with such areas, the large amount of open space within and surrounding the BSA serves as a wildlife corridor because this area supports habitat and species that would be used as shelter, foraging, or prey by wildlife species moving to the east and north toward adjacent open space.

No direct impacts to wildlife movement corridors or native wildlife nursery sites are anticipated as a result of construction of the project. Project construction would result in temporary, indirect impacts to wildlife movement within areas located adjacent to the project work sites. Temporary indirect impacts would be considered less than significant because they would be temporary and would cease when construction is complete. During project operation, permanent indirect impacts may occur due to increased lighting and human activity; however, wildlife using the adjacent vacant lot would either be acclimated to low levels of human activities and lighting, or they would shift to the north or east, away from the project site. For this reason, permanent indirect impacts are anticipated to be less than significant.

Direct and indirect impacts to wildlife corridors would be either temporary in nature or would not significantly affect use of the area by wildlife for movement, shelter, foraging, or feeding due to the presence of large areas of open space north and east of the project site. Avoidance and minimization measures would not be required.

The project is not anticipated to have significant direct or indirect impacts on wildlife movement corridors or native wildlife nursery sites, and it is anticipated that the project will not adversely modify them. Impacts would be less than significant, and mitigation is not required.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less Than Significant with Mitigation Incorporated

California Desert Native Plants Act Section 80073

Chapter 3, § 80073 of the CDNPA regulates certain species of California desert native plants from unlawful harvesting. The CDNPA protects all species of yuccas (family Agavaceae), all species of cacti (family Cataceae), all species of candlewoods (family Fouquieriaceae), all species of the mesquites (genus *Prosopis*), all species of palos verdes (genus *Cercidium*), catclaw (*Acacia greggii*), desert-holly (*Atriplex hymenelytra*), smoke tree (*Dalea spinosa*), and desert ironwood (*Olneya tesota*). The CDNPA protects these species from harvest unless under a permit issued by the commissioner or the sheriff of the county in which the native plants are growing. There were six species protected by the CDNPA that were observed on the Project Site: silver cholla (*Cylindropuntia echinocarpa*), diamond cholla (*Cylindropuntia ramosissima*), hedgehog cactus (*Echinocereus engelmannii*), catclaw (*Senegalia gregii*), western Joshua tree (*Yucca brevifolia*), and Mojave yucca (*Yucca schidigera*). Western Joshua trees on the site were mapped as part of the Joshua tree census conducted for this project. The remaining five species will need to be surveyed on the Project Site as required for a permit under the CDNPA (LSA, 2025b).

Town of Yucca Valley Development Code Section 9.10.040

Yucca Valley Ordinance, western Joshua tree, Mojave yucca, Parry's nolina (*Nolina parryi*), California juniper (*Juniperus californica*), Our Lord's candle (*Yucca whipplei*), and Pinon pine (*Pinus monophylla*) require a tree removal permit under the Town of Yucca Valley's Development Code Section 9.10.040 (LSA, 2025b). Project activities are likely to impact western Joshua tree, Mojave yucca and California juniper. Section 9.10.040 states that the clearing or removal of native plants from canal, lateral ditch, survey line, building site, or road or other right of way by the landowner or his agent are not subjected to state regulations should they not be transported from the land or offered for sale. Otherwise, the Town shall issue permits for regulated desert native plants (i.e., Mojave yucca, Parry's nolina, California Juniper, our lord's candle, and pinon pine; Town of Yucca Valley, 2025a).

Mitigation Measures

With the implementation of **BIO-3,** *Western Joshua Tree Conservation Act***, BIO-4,** *California Desert Native Plants Act* (see **Section 4.4[a]**), and the following mitigation measures, impacts are anticipated to be less than significant.

BIO-13: Protective Fencing of No Work Areas

Protective fencing shall be installed around the perimeter of ecologically sensitive areas, which will be designated as No Work Areas, including around the perimeter of western Joshua trees scheduled to be transplanted, and native vegetation communities adjacent to work areas, before commencement of staging, fencing, clearing, grading, or other construction activities. The installation of fencing and protection measures around trees and vegetation will comply with the Town's Native Desert Vegetation Ordinance. The tree protection zone for Joshua tree is a 40-foot radius around the trunk of the tree. Fencing shall be maintained in place during all construction. No construction, grading, staging, or material storage will be allowed within the fence exclusion areas, or within the protected zones of any onsite native trees.

BIO-14: Yucca Valley Development Code Section 9.10.040

A native landscaping documentation package (report) shall be submitted to the division and at the time of filing land use applications (i.e., prior to any land disturbing or development activity) and may be combined with landscaping and water conservation requirements (Town of Yucca Valley, 2014). The report shall include a) the botanical and common names of regulated native desert plants, b) the precise location of each regulated desert native plant, c) the trunk or stem diameter of each regulated desert native plant, d) the height of each desert regulated native plant, e) the health or condition, including those unlikely to survive transplanting, of all regulated desert native plants, and f) the proposed placement of the regulated desert plant (i.e., the transplant site, removal determination, or adopt offsite).

Should a plant be determined as likely to survive transplanting by a qualified biologist, it shall be made available for adoption or transplanted onsite as part of the project's landscaping plan, which should maximize the use of native desert plants. The project applicant shall provide a thirty-day notice followed by a thirty-day adoption period; the adoption period may be less than thirty days should all plants be adopted. Adoption shall be prioritized in the Town of Yucca Valley, with second priority to the Morongo Basin. It is recommended the thirty-day adoption signage period commences with the submittal of the desert native plant permit. Signage posting will follow the requirements found in § 9.10.040E. All regulated desert native plants within the adoption program shall a) receive written permission to be obtained by the property owner, b) have consideration of plant's original and transplanted physical orientation, prevailing wind direction, soil type of the original and transplanted locations, and other related attributes which may affect the successful transplantation, and c) have a maintenance plan considering watering schedules, stockpile location, support, and the method of trap fencing. Plants which are not adopted within the thirty-day period may be removed.

July 28, 2025

Level of Significance After Mitigation

With implementation of measure **BIO-13**, conflicts with local policies or ordinances would be considered less than significant.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact

The literature review determined that the project site is not located within an HCP or NCCP. Biological Resources

4.5 Cultural Resources

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to in § 15064.5?				**X**
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?		**X**		
c) Disturb any human remains, including those interred outside of formal cemeteries?		**X**		

Information from the LSA *Cultural Resources Assessment Report*, *dated August 2025* (LSA, 2025e) (see **Appendix D**), *prepared for the Sun Mesa Mini Storage Project, Town of Yucca Valley* has been included within this section. (see **Figure 4.5-1,** *Topographic Map*)

4.5.1 Impact Analysis

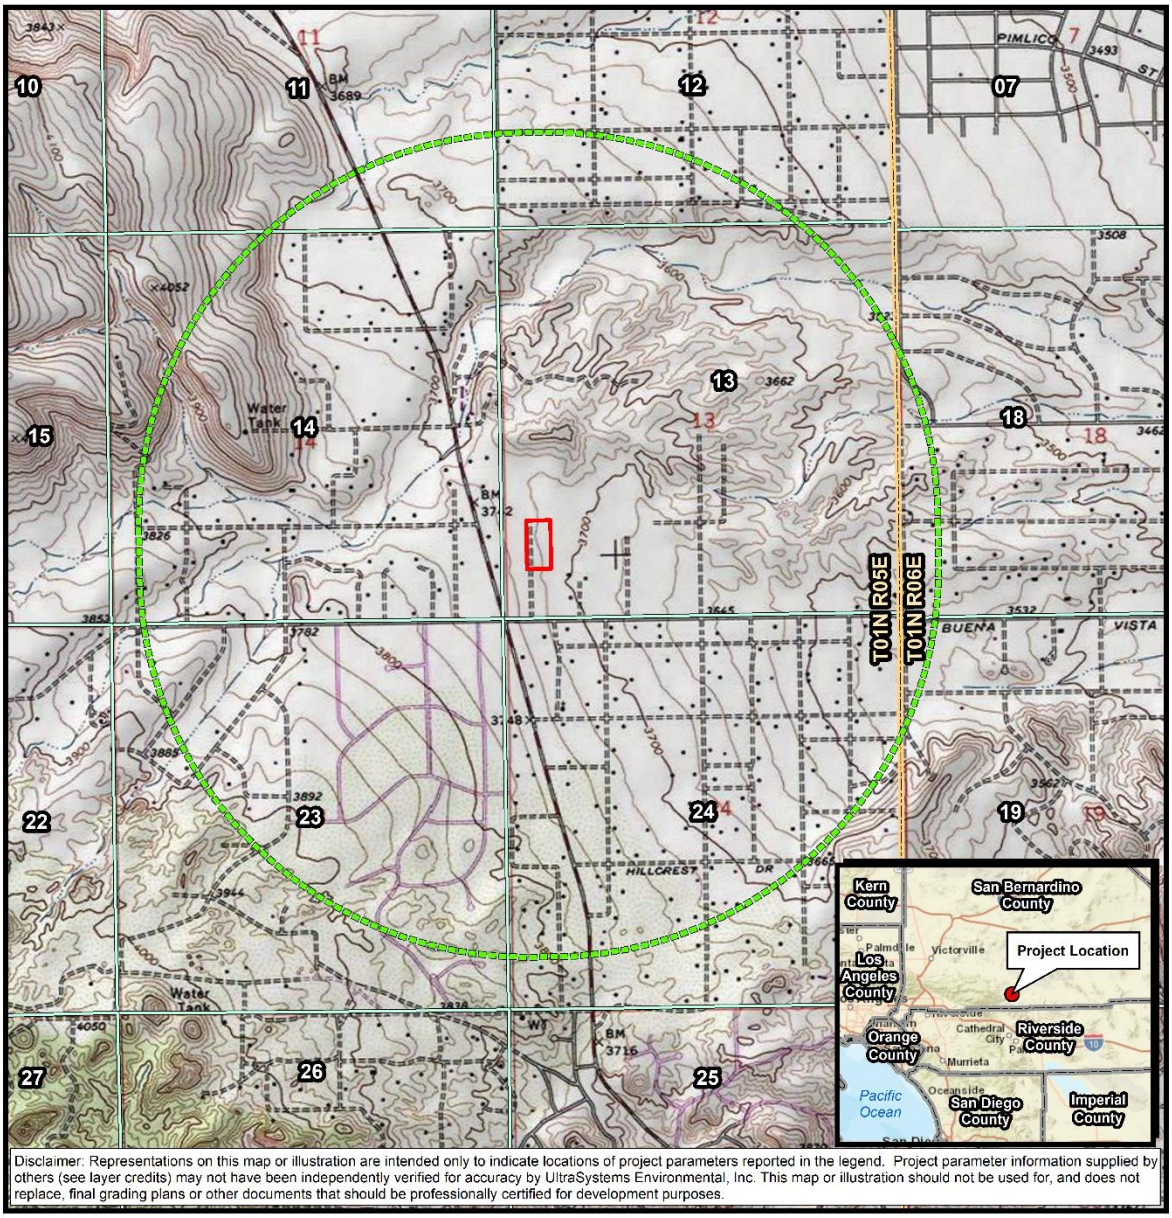
a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?

No Impact

A historical resource is defined in § 15064.5(a)(3) of the *CEQA Guidelines* as any object, building, structure, site, area, place, record, or manuscript determined to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Historical resources are further defined as being associated with significant events, important persons, or distinctive characteristics of a type, period or method of construction; representing the work of an important creative individual; or possessing high artistic values. Resources listed in or determined eligible for the California Register, included in a local register, or identified as significant in a historic resource survey are also considered as historical resources under CEQA.

Similarly, the National Register criteria (contained in Code of Federal Regulations Title 36 Section 60.4) are used to evaluate resources when complying with Section 106 of the National Historic Preservation Act. Specifically, the National Register criteria state that eligible resources comprise districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and that (a) are associated with events that have made a significant contribution to the broad patterns of our history; or (b) that are associated with the lives of persons significant in our past; or (c) that embody the distinctive characteristics of a type, period, or method of construction, or that possess high artistic values, or that represent a significant distinguishable entity whose components may lack individual distinction; or (d) that have yielded or may be likely to yield, information important to history or prehistory.

Figure 4.5-1
TOPOGRAPHIC MAP



A substantial adverse change in the significance of an historical resource, as a result of a project or development, is considered a significant impact on the environment. Substantial adverse change is defined as physical demolition, relocation, or alteration of a resource or its immediate surroundings such that the significance of the historical resource would be materially impaired. Direct impacts are those that cause substantial adverse physical change to a historic property. Indirect impacts are those that cause substantial adverse change to the immediate surroundings of a historic property, such that the significance of a historical resource would be materially impaired.

The cultural resources records search conducted at the South Central Coastal Information Center (SCCIC) at California State University Fullerton determined that no historic-era resources have been recorded at the project site. Within the one-mile radius of the project boundary (the area of Potential Impact, or APE), two historic resources were recorded, one being a 1950s residence at 4451 Old Woman Springs Road (36-027695) and the second a segment of Old Woman Springs Road (36-010716), a route dating to the 19th century. This historic period road (36-010716) is the nearest historic resource to the project site, approximately 160 meters/530 feet to the west of the project site.

According to records at the SCCIC, no previous cultural resource surveys have included a portion of the project site (APE), but there have been 16 surveys conducted within the one-mile radius project buffer that were not within the project APE (**Appendix D**).

No historic buildings were identified within the project site as a result of the project site's field survey.

No buildings or structures were present within the project area in historic period aerial photos or indicated on maps (NETR Online 2024).

Based on the results of the records search and the onsite field survey. there would be no substantial adverse change in the significance of a historical resource pursuant to in § 15064.5, and therefore the project would have no impact in this regard.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Less than Significant Impact with Mitigation Incorporated

An archaeological resource is defined in § 15064.5(c) of the CEQA Guidelines as a site, area or place determined to be historically significant as defined in § 15064(a) of the CEQA Guidelines, or as a unique archaeological resource defined in § 21083.2 of the Public Resources Code as an artifact, object, or site that contains information needed to answer important scientific research questions of public interest or that has a special and particular quality such as being the oldest or best example of its type, or that is directly associated with a scientifically-recognized important prehistoric or historic event or person.

The cultural resources investigation conducted by LSA, which included a CHRIS records search of the project site and buffer zone, and the pedestrian field survey suggest that a potential for undisturbed unique archeological resources exists on the project site due to the natural state of the project area. A search of the Sacred Lands File was not conducted by the Native American Heritage Commission for this project.

Based on the SCCIC cultural resources records search, it was determined that there are no prehistoric or historic cultural resources previously recorded within the project site boundary. Within the one-mile buffer zone, there have been three recorded resources, one of them prehistoric and two historic-era.

The single prehistoric site within the one-mile buffer of the project boundary is a lithic artifact scatter (36-002379). This artifact scatter is located approximately 0.29 mile southwest of the project site.

The two historic period resources include a 1950s residence at 4451 Old Woman Springs Road (36-027695) and a segment of Old Woman Springs Road (36-010716), a route dating to the 19th century that is located approximately 160 meters/530 feet to the west.

There have been 16 previous cultural resource studies within the one-mile buffer of the project. None of these surveys intersects the current project boundary.

A request was not made by LSA to the Native American Heritage Commission (NAHC) to conduct a search of their Sacred Lands File (SLF) for potential traditional cultural properties. LSA was not scoped to conduct the NAHC Sacred Lands File contact, and no such effort was made by LSA. However, UltraSystems contacted the NHAC on September 10, 2025 to request a SLF as well as a list of local Native American tribal organizations to contact. The NAHC SLF response was received September 11, 2025 and indicated that there are no SLF sites within the project area.

The NAHC provided 20 representatives of nine Native American tribes that are traditionally and culturally affiliated with the project's geographic area. The tribes listed below were contacted through email and USPS mail on September 17, 2025 requesting a reply if they have knowledge of cultural resources in the area that they wished to share and were also asked if they had any questions or concerns regarding the project. These tribes included:

- Agua Caliente Band of Cahuilla Indians
- Cahuilla Band of Indians
- Morongo Band of Mission Indians
- Quechan Tribe of the Fort Yuma Reservation
- Santa Rosa Band of Mission Indians
- Serrano Nation of Mission Indians
- Soboba Band of Luiseño Indians
- Twenty-Nine Palms Band of Mission Indians
- Yuhaaviatam of San Manuel Nation

UltraSystems is in the process of conducting follow-up telephone calls to the respective tribes, and as part of the CEQA process, all responses will be included in the Final IS/MND once they are received.

A pedestrian field survey of the project site was conducted on July 20, 2024, by LSA Archaeologist Cassidy Sharp. The field survey revealed that there was light disturbance in the area from foot and bicycle traffic. Overall visibility was poor, at approximately 50 percent with the surface substantially obscured by vegetation. Access was not inhibited by vegetation. Soils are sandy alluvial silt. Trace historic period isolated rusted cans were noted. Concrete debris were noted, along with modern refuse throughout the project area. No cultural resources were identified.

Through the various avenues of research by LSA with a CHRIS records and a pedestrian field survey and by UltraSystems with a NAHC SLF search this study did not identify cultural resources within or adjacent to the project. However, a prehistoric lithic artifact scatter was documented less than 0.33 miles away, and approximately half of the project area surface was not visible. As a result, it is reasonable to assume that the project parcel retains some potential for in situ subsurface cultural

resources, and therefore, archaeological monitoring may be considered. Grading activities would cause new subsurface disturbance and may result in the unanticipated discovery of prehistoric and/or historic archeological resources.

Mitigation Measure

MM CUL-1 If archaeological resources are discovered during construction activities, the contractor will halt construction activities in the immediate area and notify the Town of Yucca Valley (California Code of Regulations, Title 14, Chapter 3, Section 15064.5(f)). The project applicant shall retain an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology who will be notified and afforded the necessary time to recover, analyze, and curate the find(s). The qualified archaeologist will recommend the extent of archaeological monitoring necessary to ensure the protection of any other resources that may be in the area. Any identified cultural resources shall be recorded on the appropriate DPR 523 (A-L) form and filed with the South Central Coastal Information Center. Construction activities may continue on other parts of the project site while evaluation and treatment of prehistoric archaeological resources takes place.

Level of Significance After Mitigation

With implementation of Mitigation Measure **MM CUL-1** above, the project would result in less than significant impacts to archeological resources.

e) Would the project disturb any human remains, including those interred outside of formal cemeteries?

Less than Significant Impact with Mitigation Incorporated

As previously discussed in **Section 4.5.b)** above**,** the project would be built on relatively undisturbed land that has not been previously graded and is in a suburban area. No human remains have been previously identified or recorded onsite.

The proposed project includes grading activities for the installation of infrastructure including water, wastewater, and utility lines; and for construction of the proposed buildings. Grading would involve new subsurface disturbance and could result in the unanticipated discovery of unknown human remains, including those interred outside of formal cemeteries. In the unlikely event of an unexpected discovery, implementation of mitigation measure **CUL-2** would ensure that impacts related to the accidental discovery of human remains would be less than significant.

Mitigation Measure

MM CUL-2 If human remains are encountered during excavations associated with this project, all work will stop within a 30-foot radius of the discovery and the San Bernardino County Coroner will be notified (§ 5097.98 of the Public Resources Code). The Coroner will determine whether the remains are recent human origin or older Native American ancestry. If the coroner, with the aid of the supervising archaeologist, determines that the remains are prehistoric, they will contact the NAHC. The NAHC will be responsible for designating the Most Likely Descendant (MLD). The MLD (either an individual or sometimes a committee) will be responsible for the ultimate

disposition of the remains, as required by § 7050.5 of the California Health and Safety Code. The MLD will make recommendations within 24 hours of their notification by the NAHC. These recommendations may include scientific removal and nondestructive analysis of human remains and items associated with Native American burials (§ 7050.5 of the Health and Safety Code).

Level of Significance After Mitigation

With adherence to applicable codes and regulations protecting cultural resources and with implementation of Mitigation Measure **MM CUL-2** above, the proposed project would result in less than significant impacts to human remains.

4.6 Energy

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			**X**	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			**X**	

The following analysis is based substantially on a memorandum prepared by LSA on September 13, 2025: *Air Quality, Energy, and Greenhouse Gas Technical Memorandum for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California* (LSA, 2025a).

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less than Significant Impact

According to CEQA Guidelines § 15126.2(d), "uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement that provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified." Therefore, the purpose of this analysis is to identify any significant irreversible environmental effects of project implementation that cannot be avoided.

Construction

The anticipated construction schedule assumes that the proposed project will be built in six to eight months. Construction-specific phases were assessed for their energy consumption under each construction sub-phase: grading, site preparation, building construction, paving, architectural coating, and trenching activities.

Construction would require energy for the manufacture and transportation of construction materials, preparation of the site for grading and building activities, and construction of the building. All or most of this energy would be derived from nonrenewable resources. Petroleum fuels (e.g., diesel and gasoline) would be the primary sources of energy for these activities. However, construction activities are not expected to result in inefficient use of energy, as gasoline and diesel fuel would be supplied by construction contractors who would conserve the use of their supplies to

minimize their costs on the project. Energy (i.e., fuel) usage on the project site during construction would be temporary and would be relatively small in comparison to the state's available energy sources.

Operation

Table 4.6-1 shows the estimated potential increase in electricity, gasoline, and diesel demand associated with the proposed project, which was calculated by LSA (LSA, 2025a). The electricity and natural gas rates are from the CalEEMod analysis.[8] while the gasoline and diesel rates are based on the traffic analysis in conjunction with USDOT fuel efficiency data, and using the USEPA's fuel economy estimates for 2020, and the California diesel fuel economy estimates for 2021.

Table 4.6-1
ESTIMATED PROJECT OPERATIONAL ENERGY USE

	Electricity Use (kWh per year)	Natural Gas Use (kBTU per year)	Gasoline (gallons per year)	Diesel (gallons per year)
Proposed Project	962,994	0	27,218	19,120

Source: Compiled by LSA (LSA, 2025a).
kBTU = thousand British thermal units
kWh = kilowatt hours

As shown in **Table 4.6-**1, the estimated increase in electricity demand associated with the operation of the proposed project would be 962,994 kWh per year. Total electricity consumption in San Bernardino County in 2022 was 16,629,614,195 kWh;[9] therefore, operation of the proposed project would negligibly increase the annual electricity consumption in San Bernardino County (by less than 0.1 percent).

In addition, the project would result in energy usage associated with motor vehicle gasoline to fuel project-related trips. As shown above in **Table 4.6-1**, the proposed project would result in the consumption of 27,218 gallons of gasoline and 19,120 gallons of diesel per year. Based on fuel consumption obtained from EMFAC2021[10], approximately 328.0 million gallons of gasoline and approximately 856.3 million gallons of diesel will be consumed from vehicle trips in San Bernardino County in 2026. Therefore, vehicle trips associated with the proposed project would increase the annual fuel use in San Bernardino County by approximately less than 0.1 percent for gasoline fuel usage and approximately less than 0.1 percent for diesel fuel usage. The proposed project would result in fuel usage that is a negligible fraction of current annual fuel use in San Bernardino County, and fuel consumption associated with vehicle trips generated by project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Therefore, gasoline demand generated by vehicle trips associated with the proposed project would be a minimal fraction of gasoline and diesel fuel consumption in California.

Furthermore, the proposed project would be constructed using energy-efficient modern building materials and construction practices. Additionally, the proposed project would utilize new, modern appliances and equipment, in accordance with the Appliance Efficiency Regulations (Title 20, CCR

8 See **Section 4.8.2**.
9 CEC. 2022. Electricity Consumption by County. Website: www.ecdms.energy.ca.gov/elecbycounty.aspx (accessed September 2024).
10 EMFAC2021 was used by LSA in preparation of their September 12, 2024 memorandum.

Sections 1601 through 1608). The expected energy consumption during construction and operation of the proposed project would be consistent with typical usage rates for commercial uses; however, energy consumption is largely a function of personal choice and the physical structure and layout of buildings. Therefore, the proposed project would not result in a potential significant impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less than Significant Impact

According to the LSA Memorandum (2025), the California Energy Commission (CEC) recently adopted the 2023 Integrated Energy Policy Report (IEPR) (LSA, 2025a). The 2023 IEPR provides the results of the CEC's assessments of a variety of energy issues facing California. Many of these issues will require action if the state is to meet its climate, energy, air quality, and other environmental goals while maintaining energy reliability and controlling costs. The 2023 IEPR covers a broad range of topics, including decarbonizing buildings, integrating renewables, energy efficiency, energy equity, integrating renewable energy, updates on Southern California electricity reliability, climate adaptation activities for the energy sector, natural gas assessment, transportation energy demand forecasts, and the California Energy Demand Forecast.

As indicated above, energy usage on the project site during construction would be temporary in nature and would be relatively small in comparison to the state's available energy sources. In addition, energy usage associated with operation of the proposed project would be relatively small in comparison to the region's available energy sources, and energy impacts would be negligible at the regional level. Because California's energy conservation planning actions are conducted at a regional level, and because the project's total impact on regional energy supplies would be minor, the proposed project would not conflict with or obstruct California's energy conservation plans as described in the CEC's 2023 IEPR. Therefore, the proposed project would not lead to new or substantially more severe energy impacts.

4.7 Geology and Soils

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			**X**	
ii) Strong seismic ground shaking?			**X**	
iii) Seismic-related ground failure, including liquefaction?			**X**	
iv) Landslides?				**X**
b) Result in substantial soil erosion or the loss of topsoil?			**X**	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			**X**	
d) Be located on expansive soil, as defined in Table 18-1 B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			**X**	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?			**X**	
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		**X**		

The information in this section is based on the following technical report:

- Geotechnical Investigation, Proposed Self-Storage Facility, APN 0597-111-67, SEC Sun Mesa Drive & Newton Lane Town Of Yucca Valley, California. Prepared by Sladden Engineering,

dated January 22, 2025 (Sladden, 2025a). A complete copy of this report is included as **Appendix E** to this IS/MND.

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less than Significant Impact

The Alquist-Priolo Zones Special Studies Act defines active faults as those that have experienced surface displacement or movement during the last 11,000 years. The act requires that cities and counties mandate that proponents of projects within Alquist-Priolo Earthquake Fault Zones have geologic investigations conducted to determine whether the sites are threatened by surface displacements from future faulting before cities or counties may issue development permits for such projects. Pursuant to this act, structures for human occupancy are not allowed within 50 feet of the trace of an active fault. The project site is within an Alquist-Priolo Earthquake Fault Zone, as shown on **Figure 4.7-1**. A trace of the Johnson Valley Fault Zone passes within the project site, as shown on **Figure 4.7-2**. The project geotechnical investigation report includes the following text (Sladden, 2025a, p. 8):

> In accordance with current State of California guidelines, subsurface fault studies should be performed to identify the active surface rupture potential. Habitable structures are not permitted to be constructed across active fault splays. Local planning agencies are responsible for regulating and enforcing the applicable laws and ordinances regarding building and construction in accordance with state and local requirements. This includes oversight regarding the construction of structures not intended for human occupancy on parcels delineated to be within the fault zone. **Based on the nature of the project, it is our understanding the proposed self-storage units and office are not intended for human occupancy or to exceed 2,000 person-hours per year** (emphasis added).

The project applicant anticipates that one part-time employee would be present onsite (Billings, 2025). Self-storage customers are typically onsite only occasionally and any attempt to estimate the total durations of such visits annually would be speculative. Impacts arising from surface rupture of a known active fault would be less than significant, and impacts would be less than significant.

Figure 4.7-1
ALQUIST PRIOLO FAULT ZONES

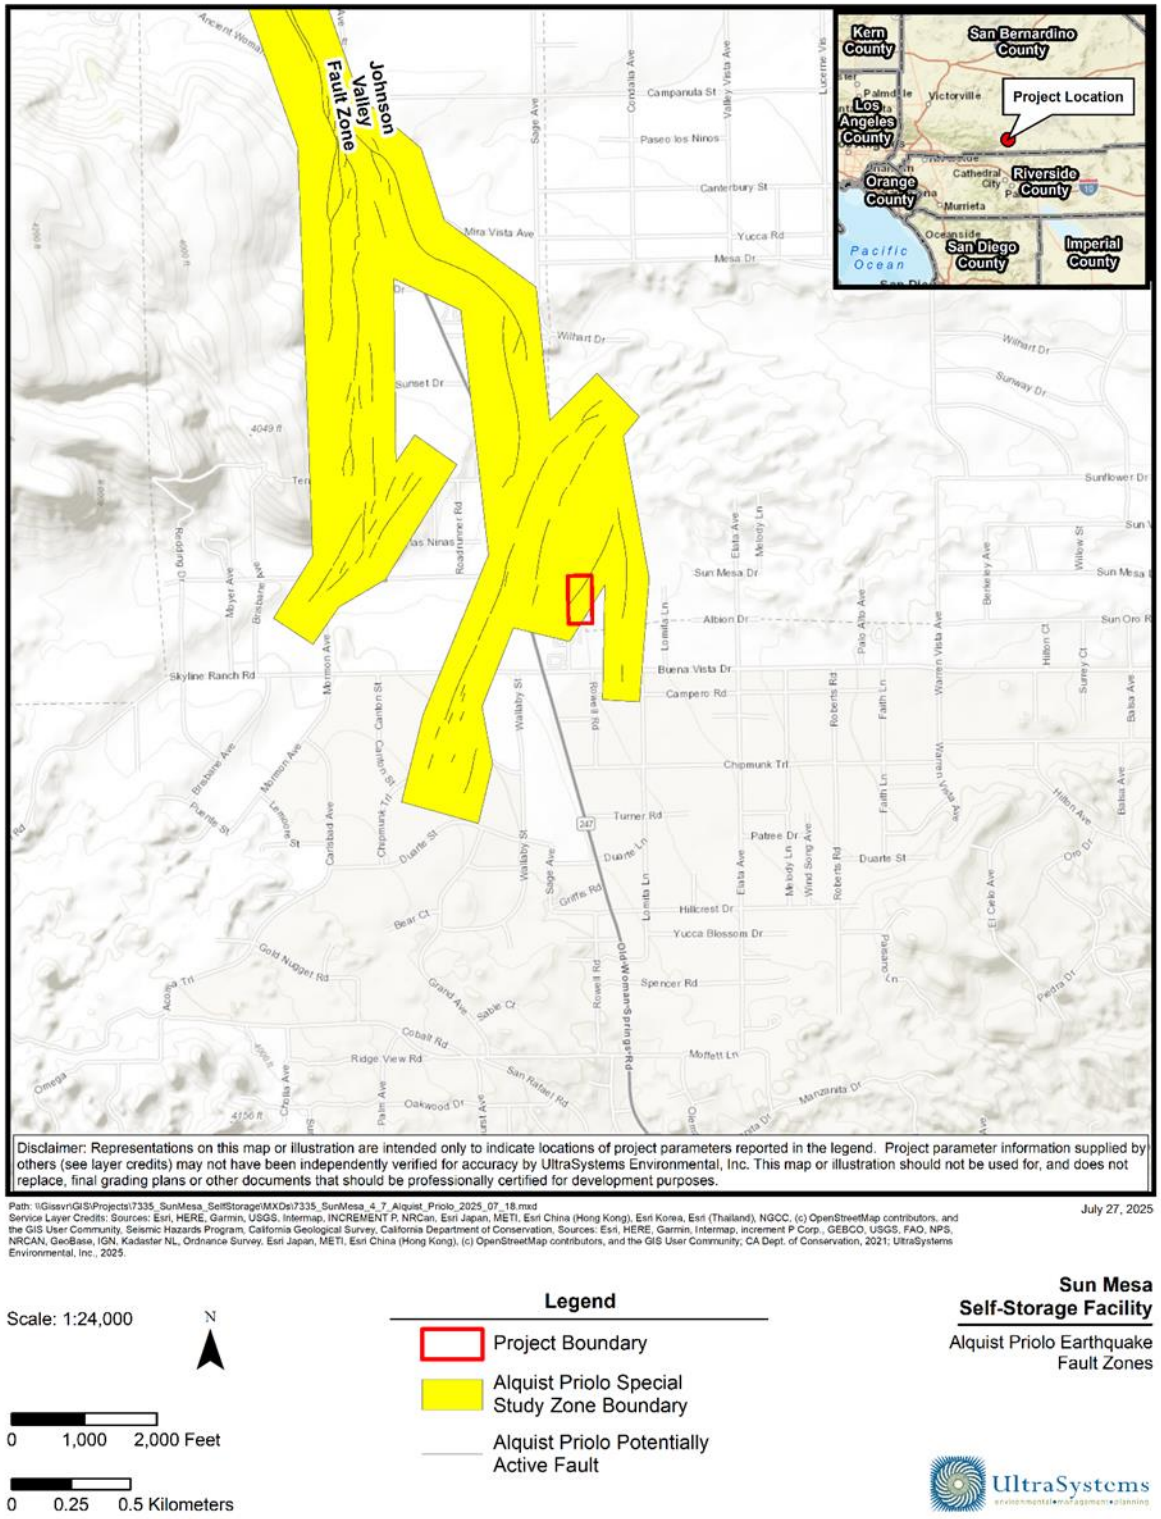


Figure 4.7-2
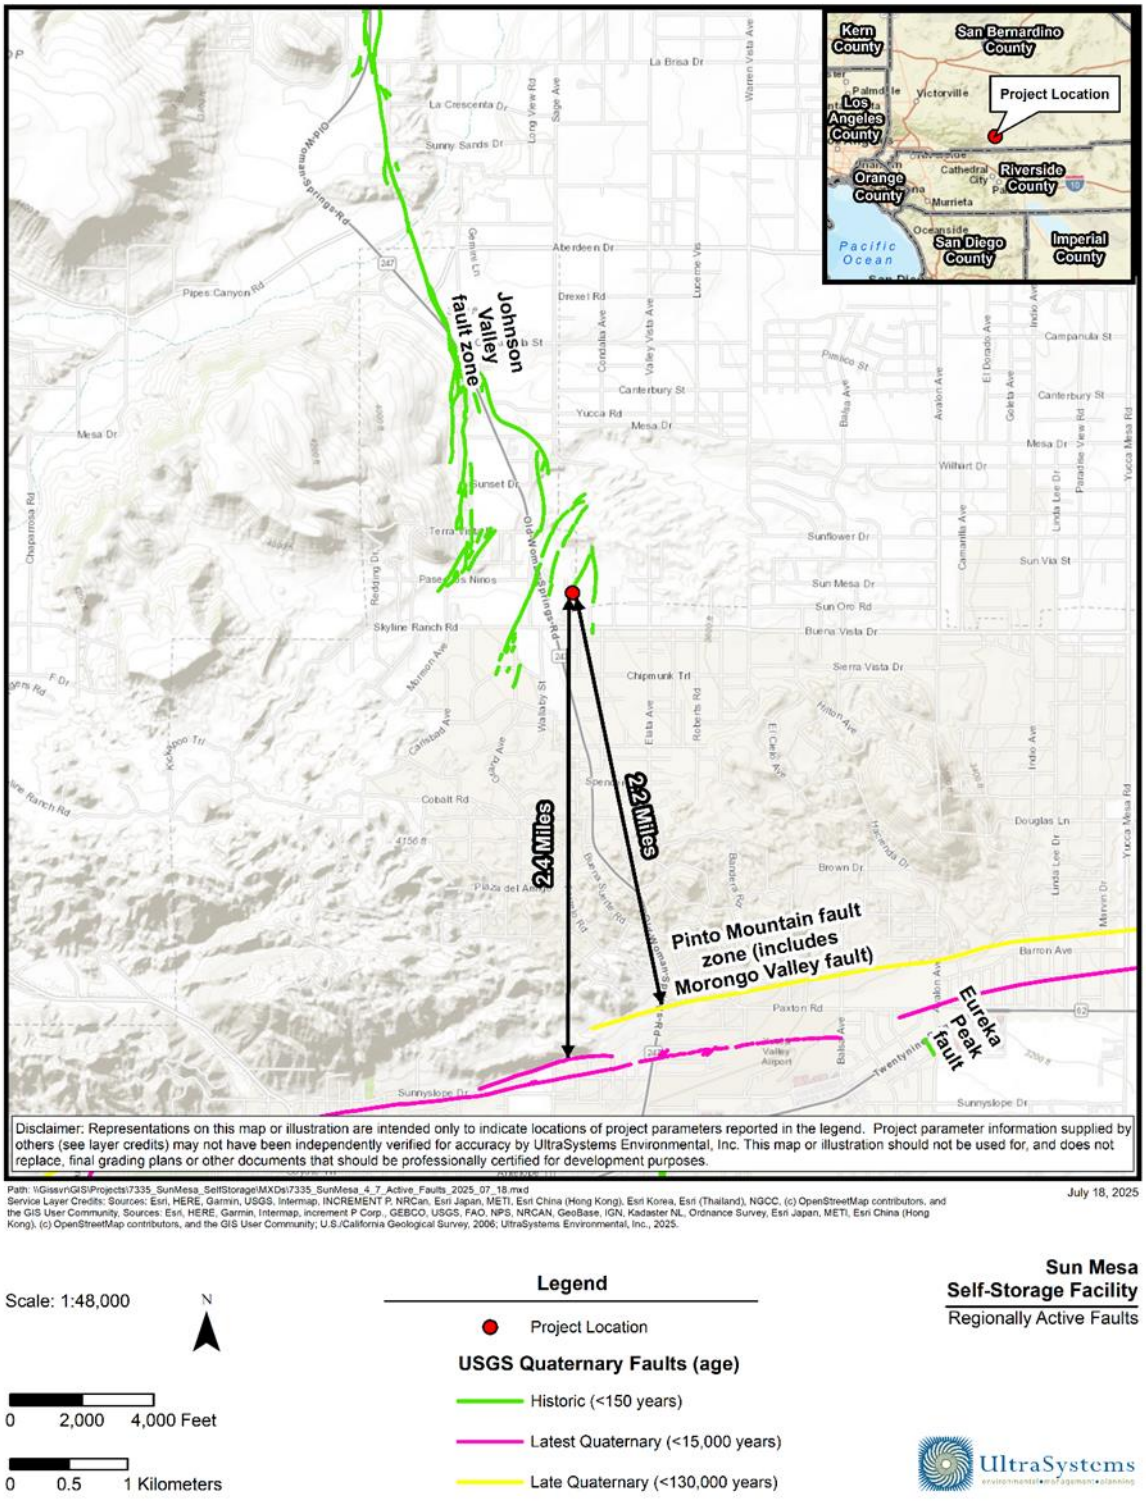
REGIONALLY ACTIVE FAULTS



ii) Strong seismic ground shaking?

Less than Significant Impact

As shown in **Figure 4.7-2**, the project is located within a seismically active region of Southern California, and all structures in the region are susceptible to collapse, buckling of walls, and damage to foundations from strong seismic ground shaking. A trace of the Johnson Valley Fault, which is active, passes through the project site. Several other fault traces are within one mile of the project site. One other active fault, the Pinto Mountain Fault Zone, is about 2.2 miles south of the project site.

The project would be constructed in accordance with the applicable 2025 California Building Code (CBC) issued by the California Building Standards Commission and used throughout the state (California Code of Regulations, Title 24).[11] In addition, the CBC is adopted as § 8.02.020 of the Town's Municipal Code and provides minimum standards to protect property and for public welfare by regulating the design and construction of excavations, foundations, building frames, retaining walls, and other building elements to mitigate the effects of seismic shaking and adverse soil conditions. The CBC contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock onsite, and the strength of ground motion with specified probability of occurring at the site.

Although the project site is susceptible to occasional moderate/high ground shaking from active faults in and near the project site, design and construction in accordance with the CBC would address issues related to potential seismic ground shaking at the site. For these reasons, impacts from strong seismic ground shaking would be less than significant and mitigation is not proposed.

iii) Seismic-related ground failure, including liquefaction?

Less than Significant Impact

General types of ground failures that might occur as a consequence of severe ground shaking typically include landslides, ground subsidence, ground lurching and shallow ground rupture. The probability of occurrence of each type of ground failure depends on the severity of the earthquake, distance from the faults, topography, subsoils and relatively shallow groundwater tables (approximately 50 feet or less below ground surface), in addition to other factors.

Liquefaction typically occurs when saturated or partially saturated soils behave like a liquid, as a result of losses in strength and stiffness in response to an applied stress caused by ground shaking or other sudden change in stress conditions.

The historic high groundwater levels in measured wells nearest the project site are 167 and 100 feet below ground surface, respectively (Sladden, 2025a, p. 5). The potential for liquefaction in subsurface site sediments is considered low due to the lack of shallow groundwater (Sladden, 2025a, p. 8).

Compliance with federal, state, and local regulations, including the CBC and the Town's Municipal Code, would minimize hazards from potential seismic-related ground failure, including liquefaction, that could be exacerbated by project development. Impacts would be less than significant, and mitigation is not required.

[11] The 2025 CBC will take effect on January 1st 2026; the 2022 CBC is effective till then.

iv) Landslides?

No Impact

The project site is relatively flat, consisting of a southeast-facing slope of approximately two percent grade. Existing landslide risk onsite is considered negligible (Sladden, 2025a, p. 8), and project development would not exacerbate landslide risk. No impact would occur.

b) Would the project result in substantial soil erosion or the loss of topsoil?

Less than Significant Impact

Construction

Project construction would involve extensive disturbance and exposure of soil, and thus could cause substantial soil erosion if effective soil erosion measures were not used. The Town of Yucca Valley Municipal Code, Chapter 9.37 requires that applicants for grading permits submit a soil erosion, sediment and dust control plan with their permit application; and the Director of Community Development must approve the soil erosion, sediment and dust control plan (Amlegal.com, 2025). Construction, grading, excavation, and land clearing operations are required to use measures to minimize wind erosion under MDAQMD Rule 403 (MDAQMD, 2020c). Grading and construction activities pursuant to the General Plan Update would comply with existing laws and regulations aimed at minimizing or eliminating pollution of stormwater with trash and debris and pollution of air and water by dust (Town of Yucca Valley, 2014, p. 5.8-24). Construction water quality impacts would be less than significant after compliance with the above-specified municipal code chapter and regulations.

Note that while construction projects one acre or larger in much of California must obtain coverage under the Statewide General Construction Permit (SGCP) issued by the State Water Resources Control Board, the SGCP only applies to areas where receiving waters are Waters of the United States (WOUS). Surface waters in Yucca Valley are not WOUS, and thus the SGCP does not apply to construction projects in Yucca Valley.

Operational Pollutant Controls

The project would be developed with a mix of impervious surfaces such as concrete and pavement and landscaped areas, including landscaping along the site boundary. The project includes drainage improvements consisting of two concrete ribbon gutters (that is, shallow, v-shaped concrete gutters, typically in the medians of driveways or drive aisles) extending north-south: one through the middle of the site, and one near the east site boundary; and an infiltration basin in the southwest corner of the site. The design capture volume of the infiltration basin is 13,243 cubic feet (DRP, 2024b, p. 17). Infiltration basins are highly effective at removing sediment (CASQA, 2003, p. TC-11-1). The project would have less than significant impacts related to soil erosion or loss of topsoil and mitigation is not proposed.

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less than Significant Impact

Sediments underlying the site, to the maximum depth of 21.5 feet below ground surface explored during the geotechnical investigation, are native alluvium consisting of granular soil that is dry and medium dense (Sladden, 2025a, p. 4).

Impacts related to liquefaction and landslides are discussed above in **Section 4.7 a)**. Furthermore, as described in previous responses, the site possesses low probability of landslides and liquefaction. Additionally, the project would be constructed in accordance with the requirements of the Town of Yucca Valley Municipal Code Section 8.02.020 (Building Code) and the Occupational Safety and Health Administration, which are designed to assure safe construction and include building foundation requirements appropriate to site-specific conditions.

Lateral Spreading

Lateral spreading is the downslope movement of surface sediment due to liquefaction in a subsurface layer. The downslope movement is due to gravity and earthquake shaking combined. The potential for lateral spreading onsite is considered low due to the low potential for liquefaction in subsurface site sediments (Sladden, 2025a). Impacts would be less than significant.

Collapsible Soils

Collapsible soils shrink upon being wetted and/or being subject to a load. Collapse typically occurs in young, unconsolidated, low-density, loose, dry soils common in arid to semi-arid regions. Collapsible soils are usually composed of granular particles cemented together by clay bonds. When such soils become saturated the clay bonds dissolve, causing substantial shrinkage (NRCS, 2004, p. 60). The geotechnical investigation determined that existing soils within two feet of the ground surface are unsuitable for supporting the proposed structures, and recommends over-excavation and re-compaction to a depth of two feet below existing grade or two feet below the bottoms of proposed footings, whichever is deeper (Sladden, 2025a, p. 10). Project site grading and project design and construction would comply with the preceding recommendations of the Geotechnical Evaluation Report, and project development would not exacerbate hazards arising from collapsible soils. Impacts would be less than significant.

Subsidence

The major cause of ground subsidence is the excessive withdrawal of groundwater. Soils with high silt or clay content are particularly susceptible to subsidence. The project site is not in an area of subsidence mapped by the USGS (USGS, 2025). Groundwater extraction from the Warren and Ames groundwater basins is managed pursuant to a court judgment (Warren basin) and settlement agreement (Ames Basin) (HDWD, 2021, pp. 3-4 and 3-12); thus, substantial ground subsidence in HDWD's service area is not anticipated. Project development would not exacerbate hazards related to ground subsidence. Impacts would be less than significant.

d) Would the project be located on expansive soil, as defined in Table 18-1 B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less than Significant Impact

Expansive soils shrink and swell with changes in soil moisture. Soil moisture may change from landscape irrigation, rainfall, and utility leakage. A measurement of expansion index in one subsurface soil sample conducted as part of the geotechnical evaluation yielded an expansion index of 1, indicating low expansion potential (Sladden, 2025a, p. 8). Impacts arising from expansive soils would be less than significant.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

Less than Significant Impact

A septic system including a septic tank and leach lines are proposed for wastewater disposal. The percolation testing report for the proposed project determined that leach lines may be used for sewage disposal on the site (Sladden, 2025b, p. 5). The percolation testing report is included as **Appendix G1**. Impacts related to capability of soils to support septic tanks would be less than significant.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less than Significant Impact with Mitigation Incorporated

The project site is mapped as having moderate paleontological resource sensitivity in the Town of Yucca Valley General Plan (Yucca Valley, 2014, p. 5-35). The project site is underlain by Quaternary-aged older alluvium consisting of poorly bedded to non-bedded cobble-gravel and sand; and Quaternary-aged older gravel consisting of poorly-bedded cobble gravel and coarse sand (Sladden, 2025a, p.3; Dibblee and Minch, 2008). The Quaternary Period extends from approximately 2.58 million years before present to the present (ICS, 2024). Soils and sediment found onsite during the geotechnical investigation, to the maximum depth explored of 21.5 feet below ground surface (bgs), are alluvium consisting of granular soil that is dry, medium dense, and grayish brown (Sladden, 2025a, p. 4).

Two vertebrate fossils, one of an extinct horse and the other a desert tortoise, are known within the west-central portion of Town. Additional fossils are known regionally and include extinct animals such as mammoth, ground sloths, camel, horse, llama, dwarf pronghorn, and saber-toothed cat. Other regional fossils produced by older sediment and bedrock include extinct animals such as a zebra-like horse and Furlong's rabbit in addition to cotton rat, wood rat, and brown bat (Town of Yucca Valley, 2014, pp. 5-31 to -32).

Excavations or grading that extend into the uppermost layers of soil and deeper excavation into the older Quaternary sediments in the proposed project area may encounter fossils. Any substantial excavations below the uppermost layers should be closely monitored to quickly and professionally collect any specimens. Mitigation measure GEO-1 is required.

Mitigation Measure

MM GEO-1 Prior to the issuance of the grading permit, the applicant shall provide a letter to the Town of Yucca Valley Planning Division, or designee, from a qualified paleontologist stating that the paleontologist has been retained to provide services for the project. The paleontologist shall develop, as needed, a Paleontological Resources Impact Mitigation Plan (PRIMP) to mitigate the potential impacts to unknown buried paleontological resources that may exist onsite for the review and approval by the City. The PRIMP shall require that the paleontologist perform periodic paleontological monitoring of any ground disturbing activities within undisturbed native sediments during mass grading, site preparation, and underground utility installation. The project paleontologist may reevaluate the necessity for paleontological monitoring after 50 percent or greater of the excavations have been completed. In the event paleontological resources are encountered, ground-disturbing activity within 50 feet of the area of the discovery shall cease. The paleontologist shall examine the materials encountered, assess the nature and extent of the find, and recommend a course of action to further investigate and protect or recover and salvage those resources that have been encountered. Criteria for discarding specific fossil specimens shall be made explicit. If the qualified paleontologist determines that impacts to a sample containing significant paleontological resources cannot be avoided by project planning, then recovery may be applied. Actions may include recovering a sample of the fossiliferous material prior to construction, monitoring work and halting construction if a significant fossil needs to be recovered, and/or cleaning, identifying, and cataloging specimens for curation and research purposes. Recovery, salvage and treatment shall be done at the Applicant's expense. All recovered and salvaged resources shall be prepared to the point of identification and permanent preservation by the paleontologist. Resources shall be identified and curated into an established accredited professional repository such as the San Bernardino County Museum. The paleontologist shall have a repository agreement in hand prior to initiating recovery of the resource.

Level of Significance After Mitigation

With implementation of **MM GEO-1**, potential impacts to paleontological resources would be reduced to a less than significant level.

4.8 Greenhouse Gas Emissions

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			**X**	
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			**X**	

4.8.1 Introduction

The following analysis of the proposed project's greenhouse gas (GHG) emissions is based substantially on a memorandum prepared by LSA on September 13, 2025: *Air Quality, Energy, and Greenhouse Gas Technical Memorandum for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California* (LSA, 2025a). Attachment B to the memorandum includes results of the model that LSA used to estimate the proposed project's air quality and GHG emissions.[12]

4.8.2 Background Information on Greenhouse Gas Emissions

Life on Earth depends on energy coming from the sun. About half the light reaching Earth's atmosphere passes through the air and clouds to the surface, where it is absorbed and then radiated upward in the form of infrared heat. About 90 percent of this heat is then absorbed by carbon dioxide (CO_2) and other greenhouse gases (GHGs) and radiated back toward the surface, which is warmed to a life supporting average of 59 degrees Fahrenheit (°F) (NASA, 2024).

Human activities are changing the natural greenhouse. Over the last century, the burning of fossil fuels such as coal and oil has increased the concentration of atmospheric CO_2. This happens because the coal or oil burning process combines carbon in the fuel with oxygen in the air to make CO_2. To a lesser extent, the clearing of land for agriculture, industry, and other human activities has increased concentrations of GHGs (NASA, 2024).

GHGs are defined under the California Global Warming Solutions Act of 2006 as CO_2, methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs) and sulfur hexafluoride (SF_6). HFCs, PFCs, and SF_6 would not be emitted in significant amounts by the new activities in the proposed project, so they will not be discussed further.

Associated with each GHG species is a "global warming potential" (GWP), which is a value used to compare the abilities of different GHGs to trap heat in the atmosphere. GWPs are based on the heat absorbing ability of each gas relative to that of CO_2, as well as the decay rate of each gas (the amount removed from the atmosphere over a given number of years). The GWPs of CO_2, CH_4 and N_2O are 1,

[12] See **Section 4.8.6**.

25 and 298, respectively (GMI, 2019). Carbon dioxide equivalent (CO_2e) emissions are calculated by weighting each GHG compound's emissions by its GWP and then summing the products.

Carbon Dioxide (CO_2). Carbon dioxide is a colorless, odorless gas consisting of molecules made up of two oxygen atoms and one carbon atom. CO_2 is produced when an organic carbon compound (such as wood) or fossilized organic matter (such as coal, oil, or natural gas) is burned in the presence of oxygen. Since the industrial revolution began in the mid-1700s, industrial activities have increased in scale and distribution. Prior to the industrial revolution, CO_2 concentrations were stable at a range of 275 to 285 parts per million (ppm) (IPCC, 2007a). The National Oceanic and Atmospheric Administration's Earth System Research Laboratory indicates that the global concentration of CO_2 was 426.89 ppm in May 2025 (NOAA, 2025). These concentrations of CO_2 exceed by far the natural range over the last 650,000 years (180 to 300 ppm) as determined from ice cores.

Methane (CH_4). Methane is a colorless, odorless non-toxic gas consisting of molecules made up of four hydrogen atoms and one carbon atom. CH_4 is combustible, and is the main constituent of natural gas, a fossil fuel. CH_4 is released when organic matter decomposes in low oxygen environments. Natural sources include wetlands, swamps and marshes, termites, and oceans. Anthropogenic sources include the mining of fossil fuels and transportation of natural gas, digestive processes in ruminant animals such as cattle, rice paddies, and the buried waste in landfills. Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of CH_4. Other anthropogenic sources include fossil-fuel combustion and biomass burning.

Nitrous Oxide (N_2O). Nitrous oxide is a colorless, non-flammable gas with a sweetish odor, commonly known as "laughing gas," and sometimes used as an anesthetic. N_2O is naturally produced in the oceans and in rainforests (USEPA, 2025f). Manmade sources of N_2O include the use of fertilizers in agriculture, nylon and nitric acid production, cars with catalytic converters and the burning of organic matter. Concentrations of N_2O also began to rise at the beginning of the industrial revolution.

4.8.3 Regulatory Setting

GHGs are regulated at the national, state, and air basin level; each agency has a different degree of control. The United States Environmental Protection Agency (USEPA) regulates at the national level; the California Air Resources Board (ARB) regulates at the state level; and the Mojave Desert Air Quality Management District (MDAQMD) regulates at the air basin level in the project area.

4.8.3.1 Federal Regulations

The USEPA collects several types of GHG emissions data. These data help policy makers, businesses, and the USEPA track GHG emissions trends and identify opportunities for reducing emissions and increasing efficiency. The USEPA has been maintaining a national inventory of GHG emissions since 1990 and in 2009 established mandatory reporting of GHG emissions from large GHG emissions sources.

EPA is also getting GHG reductions through partnerships and initiatives; evaluating policy options, costs, and benefits; advancing the science; partnering internationally and with states, localities, and tribes; and helping communities adapt.

4.8.3.2 Corporate Average Fuel Economy (CAFE) Standards

The National Highway Traffic Safety Administration's (NHTSA's) Corporate Average Fuel Economy (CAFE) standards regulate the distance vehicles must cover per gallon of fuel. The agency establishes CAFE standards for passenger cars and light trucks (referred to as light-duty vehicles), as well as separate guidelines for fuel consumption by medium- and heavy-duty trucks and engines. The CAFE standards that became effective August 23, 2024 increased fuel efficiency for passenger cars by 2 percent annually for model years 2027–31. Light trucks were increased by 2 percent annually for model years 2029–31. Additionally, NHTSA is setting final fuel efficiency standards for heavy-duty pickup trucks and vans (HDPUVs) with a 10 percent annual increase for model years 2030–32 and further increases for model years 2033–35. However, the One Big Beautiful Bill Act, signed into law on July 4, 2025, removed civil penalties for failing to comply with federal fuel economy standards.

4.8.3.3 State Regulations

Executive Order S 3-05

On June 1, 2005, the governor issued EO S 3-05, which set the following GHG emission reduction targets:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

To meet these targets, the Climate Action Team (CAT)[13] prepared a report to the Governor in 2006 that contained recommendations and strategies to help ensure that the targets in EO S-3-05 are met.

Assembly Bill 32 (AB 32)

In 2006, the California State Legislature enacted the California Global Warming Solutions Act of 2006, also known as AB 32. AB 32 focuses on reducing GHG emissions in California. GHGs, as defined under AB 32, include CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6. AB 32 required that GHGs emitted in California be reduced to 1990 levels by the year 2020. The ARB is the state agency charged with monitoring and regulating sources of emissions of GHGs that cause global warming. AB 32 also required that by January 1, 2008, the ARB determine what the statewide GHG emissions level was in 1990, and it must approve a statewide GHG emissions limit, so it may be applied to the 2020 benchmark. The ARB approved a 1990 GHG emissions level of 427 million metric tons of CO_2e ($MMTCO_2e$), on December 6, 2007, in its Staff Report. Therefore, emissions in California were required to be at or below 427 $MMTCO_2e$ by 2020.

Under the "business as usual" or BAU scenario established in 2008, statewide emissions were increasing at a rate of approximately one percent per year as noted below. It was estimated that the 2020 estimated BAU of 596 $MMTCO_2e$ would have required a 28 percent reduction to reach the 1990 level of 427 $MMTCO_2e$.

[13] The Climate Action Team (CAT) members are state agency secretaries and the heads of agencies, boards, and departments, led by the Secretary of the California Environmental Protection Agency (Cal/EPA). They coordinate statewide efforts to implement global warming emission reduction programs and the state's Climate Adaptation Strategy.

As part of the 2014 update to the AB 32 Scoping Plan (see below), the ARB revised the 2020 Statewide limit to 431 million MT of CO_2e, an approximately one percent increase from the original estimate. The 2020 business-as-usual forecast in the update is 509 $MMTCO_2e$. The state would need to reduce those emissions by 15.3 percent to meet the 431 $MMTCO_2e$ 2020 limit.

Climate Change Scoping Plan

The first AB 32 Scoping Plan (ARB, 2008) contained the main strategies to achieve the 2020 emissions cap. The strategies included direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, and market-based mechanisms such as a cap-and-trade system.

In December 2022, the ARB approved its Final 2022 Scoping Plan Update (ARB, 2022), which adds carbon neutrality to the former Scoping Plan. The 2022 Plan identifies a technologically feasible, cost-effective path to reduce GHG emissions by 85 percent below 1990 levels and achieve carbon neutrality by 2045 or earlier. Through the lens of carbon neutrality, the 2022 Plan expands the scope to more meaningfully consider how our natural and working lands (NWL) contribute to our long-term climate goal through carbon capture. The 2022 Plan focuses on efforts to shift away from fossil fuels, resulting in a 94 percent decrease in liquid petroleum demand, a 71 percent decrease in smog-related pollutants, a job increase of 4 million, and $200 billion of health cost savings for Californians (ARB, 2022).

Renewables Portfolio Standard (Scoping Action E-3)

The California Energy Commission estimates that in 2000 about 12 percent of California's retail electric load was met with renewable resources. Renewable energy includes (but is not limited to) wind, solar, geothermal, small hydroelectric, biomass, anaerobic digestion, and landfill gas. California's current Renewables Portfolio Standard (RPS) was intended to increase that share to 33 percent by 2020. It was reported that in 2021, over 37 percent of California's retail electricity sales were provided by RPS-certified renewables (CEC, 2023). Increased use of renewables will decrease California's reliance on fossil fuels, thus reducing emissions of GHGs from the electricity sector. In October 2015, Governor Brown signed into law Senate Bill (SB) 350, which requires retail sellers and publicly owned utilities to procure 50 percent of their electricity from eligible renewable energy resources by 2030. Signed in 2018, SB 100 requires an increase in the RPS to 60 percent by 2030, along with a long-term goal of 100 percent of RPS and zero-carbon energy by 2045 (CEC, 2023).

Senate Bill 375 (SB 375)

Senate Bill (SB) 375 passed the Senate on August 30, 2008, and was signed by the governor on September 30, 2008. Per SB 375, the transportation sector is the largest contributor of GHG emissions and contributes approximately 45 percent of the GHG emissions in California, with automobiles and light trucks alone contributing almost 30 percent. SB 375 indicates that GHGs from automobiles and light trucks can be reduced by new vehicle technology. However, significant reductions from changed land use patterns and improved transportation also are necessary. SB 375 states, "Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32." SB 375 (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies.

Executive Order B-30-15

On April 29, 2015, the governor issued EO B-30-15, which added an interim target of GHG emissions reductions to help ensure the State meets its 80-percent reduction by 2050, as set in EO S-3-05. The interim target is to reduce GHG emissions by 40 percent by 2030. It also directs state agencies to update the Scoping Plan, update an Adaptation Strategy every three years, and take climate change into account in their planning and investment strategies. Additionally, it requires the State's Five-Year Infrastructure Plan to take current and future climate change impacts into account in all infrastructure projects.

Title 24

Although not originally intended to reduce GHGs, California Code of Regulations Title 24 Part 6: California's Building Energy Efficiency Standards for Residential and Nonresidential Buildings was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy-efficient technologies and methods. The California Energy Commission updates the standards every three years. The 2025 standard, which will go into effect effective January 1, 2026, encourages efficient electric heat pumps, establishes electric-ready requirements for new homes, expands solar photovoltaic and battery storage standards, strengthens ventilation standards, and more (CEC, 2025).

4.8.3.4 Local Regulations

4.8.3.5 Southern California Association of Governments (SCAG)

The Southern California Association of Governments (SCAG) is the designated Metropolitan Planning Organization (MPO) for Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. Covering 191 cities over 38,000 square miles, SCAG operates as a Joint Powers Authority and serves as both the Regional Transportation Planning Agency and the Council of Governments under state law. SCAG is responsible for preparing long-range transportation planning documents, including the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) and the 2008 Regional Comprehensive Plan. On April 4, 2024, SCAG adopted Connect SoCal, the 2024–2050 RTP/SCS, which outlines a regional development pattern designed to reduce VMT from passenger vehicles and light-duty trucks. This, in turn, supports the reduction of GHG emissions from the transportation sector (SCAG, 2024).

The ARB has established GHG reduction targets for the SCAG region of eight percent below 2005 per capita emissions levels by 2020, and 19 percent below 2005 levels by 2035. The RTP/SCS includes strategies to help the region meet these targets through coordinated land use and transportation planning. Key land use strategies include promoting new development near high-quality transit areas, along livable corridors, and within neighborhood mobility areas to encourage active transportation and reduce reliance on personal vehicles.

Although the RTP/SCS provides a regional framework for reducing GHG emissions, it does not mandate consistency with local General Plans, Specific Plans, or zoning ordinances. Instead, SCAG offers incentives to jurisdictions and developers that align local planning efforts with the SCS strategies.

4.8.3.6 The Mojave Desert Air Quality Management District (MDAQMD)

The Mojave Desert Air Quality Management District maintains a set of rules and regulations to improve and maintain healthy air quality for the entire population within its jurisdiction. When developing new regulations, the MDAQMD must comply with complex procedures established by statutes in federal and state codes. Its regulations development process is based on the specific nature of the regulation and its potential impacts. The MDAQMD has established GHG emissions thresholds in its CEQA Guidelines but has not implemented a comprehensive GHG reduction strategy. The adopted threshold is 100,000 metric tons of carbon dioxide equivalent ($MTCO_2e$) per year, or 548,000 pounds per day (LSA, 2025a, p.17).

San Bernardino Council of Governments (SBCOG)

The Town of Yucca Valley falls within the jurisdiction of the dual entity of San Bernardino County Transportation Authority (SBCTA) and San Bernardino Council of Governments (SBCOG); SBCTA primarily focuses on transportation. In response to the adoption of AB 32 and the SB 32 Scoping Plan, SBCOG developed and adopted a San Bernardino County Regional GHG Reduction Plan in 2021 that will support the county's GHG reduction target for 2030 (SBCTA, 2021). The plan includes a baseline GHG inventory and forecasts, reduction measures, and information on the implementation of a climate action plan for each of the jurisdictions included in the plan.

SBCOG, along with the two other councils of governments in the Riverside–San Bernardino–Ontario metropolitan statistical area (MSA), the Coachella Valley Association of Governments (CVAG) and the Western Riverside Council of Governments (WRCOG), has developed the Priority Climate Action Plan (PCAP), dated March 1, 2024 (SBCTA, 2024). This PCAP outlines a strategy to reduce GHG emissions across the entire MSA, drawing from both existing and newly conducted analyses. It incorporates comprehensive GHG inventories for all major sectors such as energy, transportation, solid waste, water, wastewater, and agriculture, and evaluates each sector's potential for emissions reductions based on current climate action plans. The PCAP identifies regional measures to achieve near-term GHG reductions, need for funding, and anticipated benefits for low-income and disadvantaged communities (LIDACs), among other key criteria. It also examines the costs associated with implementing these regional measures, the legal and operational authority of local jurisdictions and agencies within the MSA to carry them out, and the potential workforce impacts tied to their implementation.

Yucca Valley General Plan

The Town of Yucca Valley addresses climate change through the Open Space and Conservation Element of its General Plan (Town of Yucca Valley, 2014). This section outlines goals and policies aimed at improving and preserving air quality to support the health of residents and the local economy. The following GHG-related policies from the Open Space and Conservation Element are relevant to the proposed project:

Policy OCS 11-1: Continue participating in and supporting the San Bernardino County Regional Greenhouse Gas Reduction Plan.

Policy OCS 11-2: Promote the design of new development that utilizes the desert climate through solar orientation, strategic shading, and other sustainable building practices and technologies.

Policy OCS 11-3: Ensure the General Plan's land use, housing, and transportation goals and policies remain consistent with and contribute to the Southern California Association of Governments (SCAG) Regional Transportation Plan and Sustainable Communities Strategy to help reduce greenhouse gas emissions.

4.8.4 GHG Emissions

4.8.4.1 National Emissions

The United States is the second largest emitter of GHGs globally (behind China) and emitted approximately 6,343 million metric tons of carbon dioxide equivalent in 2022 ($MMTCO_2e$) (USEPA, 2025g), not including GHG absorbed by forests and agricultural land. The largest source of GHG in the United States (28 percent) is burning fossil fuels for transportation (USEPA, 2025g). Generating electric power accounted for the second largest portion (25 percent). The remaining 47 percent of U.S. GHG emissions were contributed by the agriculture, industry, and residential and commercial sectors.

4.8.4.2 State Emissions

The California Air Resources Board (CARB) reports that in 2022, total GHG emissions in California were 371.1 $MMTCO_2e$ (ARB, 2024). The largest source of GHG in California is burning fossil fuels for transportation (39 percent) (ARB, 2024). The industrial sector accounted for the second largest portion (23 percent). The remaining 38 percent of state GHG emissions were contributed by the agriculture, electricity, and residential and commercial sectors.

4.8.4.3 Local Emissions

The Town of Yucca Valley has not developed a climate action plan. However, the PCAP presents the town's baseline and projected emissions and compares them with the 2030 GHG Target. In 2008, Yucca Valley's community-wide GHG inventory was 20,652 $MTCO_2e$ and in 2016 it was 21,445 $MTCO_2e$. The town's GHG forecast for 2030 is 94,254 $MTCO_2e$ which falls below the goal of 106,543 $MTCO_2e$ (SBCTA, 2024).

4.8.5 Impact Thresholds

CEQA Guidelines §15064.4 provides discretion to the lead agency whether to: (1) use a model or methodology to quantify GHG emissions resulting from a project, and which model or methodology to use; or (2) rely on a qualitative analysis or performance-based standards. In addition, CEQA does not provide guidance to determine whether the project's estimated GHG emissions are significant, but recommends that lead agencies consider several factors that may be used in the determination of significance of project-related GHG emissions, including:

- The extent to which the project may increase or reduce GHG emissions as compared to the existing environmental setting.
- Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
- The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.

CEQA Guidelines § 15130(f) states that the effects of GHG emissions are by their very nature cumulative and should be analyzed in the context of CEQA's requirements for cumulative impact analysis. Additionally, CEQA Guidelines § 15064(h)(3) states that a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides requirements to avoid or lessen the cumulative problem.

The Town of Yucca Valley has not established GHG significance thresholds but has adopted the 2021 San Bernardino GHG reduction Plan, which outlines a GHG Development Review Process (DRP) (Atkins, 2015). All proposed projects are required to implement the GHG performance standards identified in the DRP and comply with applicable state regulations. For projects that exceed the screening threshold of 3,000 $MTCO_2e$ per year, the use of screening tables or preparation of a project-specific technical analysis is required to quantify and mitigate GHG emissions (LSA, 2025a, p. 23). Projects with emissions below 3,000 $MTCO_2e$ per year that demonstrate compliance with applicable GHG performance standards and state requirements are generally considered to have a less than significant impact on both project-level and cumulative GHG emissions.

Based on the foregoing guidance, the proposed project is evaluated against the San Bernardino County GHG screening threshold of 3,000 $MTCO_2e$ per year. In addition, the project is reviewed for consistency with the 2022 Scoping Plan and the 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).

4.8.6 Impact Analysis

4.8.6.1 Methodology

Short-term construction GHG emissions and long-term operational GHG emissions were assessed by LSA using the California Environmental Emissions Estimator Model (CalEEMod) Version 2022.1.1.28 (CAPCOA, 2017). This analysis focused upon emissions of CO_2, CH_4, and N_2O only. HFCs, PFCs, and SF_6 would be emitted in negligible quantities by the proposed project, so they are not discussed further.

a) Would the project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than Significant Impact

California has enacted several pieces of legislation that relate to GHG emissions and climate change, many of which set aggressive goals for GHG reductions within the state. Per Senate Bill 97, the California Natural Resources Agency adopted amendments to the CEQA Guidelines, which address the specific obligations of public agencies when analyzing GHG emissions under CEQA to determine a project's effects on the environment. However, neither a threshold of significance nor any specific mitigations are included or provided in these CEQA Guideline amendments.

GHG Significance Threshold

Neither the Town of Yucca Valley, the MDAQMD, nor the State CEQA Guidelines Amendments have adopted quantitative thresholds of significance for addressing a project's construction-related GHG emissions. Nonetheless, § 15064.4 of the CEQA Guidelines serves to assist lead agencies in determining the significance of the impacts of GHGs. As required in § 15064.4 of the CEQA Guidelines, this analysis includes an impact determination based on the following: (1) an estimate of the amount

of GHG emissions resulting from the proposed project; (2) a qualitative analysis or performance based standards; (3) a quantification of the extent to which the proposed project increases GHG emissions as compared to the existing environmental setting; and (4) the extent to which the proposed project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.

As noted above, this analysis evaluates the proposed project against the San Bernardino County GHG screening threshold of 3,000 $MTCO_2e$ per year. Construction-related GHG emissions are amortized over a 30-year project lifespan, combined with annual operational emissions, and then compared to the applicable significance threshold to assess potential impacts.

Construction GHG Emissions

Construction is an episodic, temporary source of GHG emissions. Emissions are generally associated with the operation of construction equipment and the disposal of construction waste. Only GHG emissions from onsite construction activities and offsite hauling and construction worker commuting are considered project-generated. As explained by the California Air Pollution Control Officers Association (CAPCOA) in its 2008 white paper (CAPCOA, 2008), the information needed to characterize GHG emissions from manufacture, transport, and end-of-life of construction materials would be speculative at the CEQA analysis level. CEQA does not require an evaluation of speculative impacts (*CEQA Guidelines* § 15145). Therefore, the construction analysis does not consider such GHG emissions, but does consider non-speculative onsite construction activities, and offsite hauling, and construction worker trips. All GHG emissions are identified on an annual basis.

Estimated criteria pollutant emissions from the proposed project's onsite and offsite project construction activities were calculated by LSA using CalEEMod, Version 2022.1.1.28, which was described in **Section 4.3.6**. The results of this analysis are presented in **Table 4.8-2**. The proposed project's total construction GHG emissions are estimated to be 495.4 $MTCO_2e$. To ensure that construction emissions are assessed in a quantitative sense, construction GHG emissions have been amortized over the life of the project, which is considered to be 30 years. The amortized value, **16.5 $MTCO_2e$**, has been added to the proposed project's annual operational GHG emissions.

Table 4.8-2
PROJECT CONSTRUCTION-RELATED GHG EMISSIONS

Year	Annual Emissions (MT)			
	CO_2	CH_4	N_2O	CO_2e
2024	74.1	< 0.005	< 0.005	74.4
2025	223	0.01	0.01	225
2026	194	0.01	0.01	196
Total	**491.1**	**0.02**	**0.15**	**495.4**

Source: Calculated by LSA using CalEEMod Version 2022.1.1.28 (LSA, 2025a, Attachment B).

Operational GHG Emissions

For a reasonable maximum emissions case, it was assumed that GHG emissions from the Sun Mesa Self Storage Project site are currently zero. Operational GHG emissions calculated by CalEEMod are shown in **Table 4.8-3**. Total annual unmitigated emissions from the proposed project would be 627.8 $MTCO_2e$ per year. Energy production and mobile sources account for about 83 percent of annual operational emissions.

Table 4.8-3
PROJECT OPERATIONAL GHG EMISSIONS

Emissions Source	Estimated Project Generated CO_2e Emissions (Metric Tons per Year)
Area Sources	1.4
Energy Demand (Electricity & Natural Gas)	233.3
Mobile (Motor Vehicles)	288.6
Solid Waste Generation	27.7
Water Demand	60.3
Construction Emissions[a]	16.5
Total	**627.8**

Source: Calculated by LSA using CalEEMod version 2022.1.1.28 (LSA, 2025a, Attachment B).
[a]*Total construction GHG emissions were amortized over 30 years and added to those resulting from the operation of the project.*

Therefore, under the first significance criterion, GHG emissions would be less than significant, and no mitigation is necessary.

b) Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHG?

Less than Significant Impact

The proposed project is required to be consistent with GHG reduction goals established in CARB's 2022 Scoping Plan and SCAG's 2024–2050 RTP/SCS.

The 2022 Scoping Plan outlines California's strategy to meet its climate goals, including reducing GHG emissions to 40 percent below 1990 levels by 2030, as set by EO B-30-15 and codified in SB 32. It builds on previous plans under AB 32 and supports the path towards the State's goal of carbon neutrality by 2045, as established by AB 1279. The scoping plan evaluates progress toward 2030 targets and identifies strategies across clean energy, transportation, land use, and natural systems to achieve long-term climate, health, and equity outcomes.

Energy-efficient measures outlined in the scoping plan aim to reduce building-related emissions through improved standards, new technologies, and broader use of green practices. The proposed project will eliminate natural gas use and comply with current Title 24 energy efficiency and green building standards. Because the project does not rely on natural gas, it is consistent with California's 2045 carbon neutrality target and would comply with applicable energy measures. The proposed project supports water conservation goals by incorporating low-water landscaping and complying with the latest Title 24 standards and the California Model Water Efficient Landscape Ordinance. These measures help reduce water use and related GHG emissions, ensuring the project does not conflict with state water efficiency objectives. Although regional transportation GHG targets don't directly apply to the project, vehicles accessing the site would comply with state clean car standards such as Pavley II (LEV III), which significantly reduce emissions. Therefore, the project would not conflict with transportation-related GHG reduction measures. The proposed project would not conflict with existing State regulations adopted to achieve the overall GHG emission reduction goals identified in the 2022 Scoping Plan.

SCAG's 2024–2050 RTP/SCS promotes land use and transportation strategies that reduce GHG emissions through transit-oriented development, complete streets, and integrated planning. While local plans aren't required to align with the RTP/SCS, incentives are provided for consistency. The proposed project aligns with local land use and zoning, does not trigger CEQA criteria for regional significance, and would not conflict with SCAG's regional GHG reduction goals.

The project will comply with all relevant energy-reducing provisions of Title 24, which indirectly reduce GHG emissions by reducing energy use. Implementation of the proposed project would not interfere with SCAG's ability to implement the regional strategies outlined in the RTP/SCS. The proposed project will be consistent with state and regional GHG reduction goals and would not conflict with any plan adopted for reducing GHG emissions. Therefore, the project's GHG emissions impacts will be less than significant.

4.9 Hazards and Hazardous Materials

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			**X**	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			**X**	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one quarter mile of an existing or proposed school?				**X**
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				**X**
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				**X**
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			**X**	
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?				**X**

The analysis in this section relies on the findings of the Phase I Environmental Site Assessment (Phase I ESA) prepared by DRP Enterprises, LLC., initially dated October 31, 2024, and updated on July 17, 2025 (DRP, 2024a) (see **Appendix F**). The Phase I ESA was conducted in accordance with ASTM E1527-21 standards and includes a site reconnaissance, historical land use review, and regulatory database search. The assessment evaluates whether the project site contains Recognized Environmental Conditions (RECs), defined as the presence or likely presence of hazardous substances or petroleum products under conditions that indicate a potential threat to human health or the environment.

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact

The proposed project would involve standard construction activities that may require the temporary use and transport of hazardous materials such as fuels, lubricants, and solvents. These materials would be used in accordance with all applicable local, state, and federal regulations, including those enforced by the California Department of Toxic Substances Control (DTSC) and the Occupational Safety and Health Administration (OSHA). All hazardous materials would be stored, handled, and disposed of in compliance with regulatory standards to minimize risks to workers, the public, and the environment.

No industrial uses or operations involving large-scale hazardous materials are proposed as part of the project. The Phase I ESA did not identify any RECs that would elevate the baseline risk. Therefore, the project would have a less than significant impact to the public or the environment through the routine transport, use, or disposal of hazardous materials.

b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than Significant Impact

The project involves typical construction-related activities that could result in the temporary use and storage of hazardous materials such as fuels, lubricants, and adhesives. These activities inherently carry a low potential for accidental release; however, the risk is minimized through compliance with existing federal, state, and local regulations, and applicable California Fire Code provisions.

The Phase I ESA did not identify any RECs or existing contamination that would increase the likelihood of hazardous material release due to upset conditions. No unusually hazardous uses or activities are proposed.

Compliance with best management practices (BMPs) and regulatory oversight ensures that the potential for upset or accident conditions resulting in the release of hazardous materials would be adequately managed and contained and have a less than significant impact.

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No Impact

A review of available data indicates no existing or proposed schools within 0.25 mile of the project site. The nearest school, Yucca Mesa Elementary School, is located approximately 1.7 miles northwest of the project site.

The project would involve only typical construction activities and would not emit hazardous emissions or handle acutely hazardous substances, wastes, or operations. Any temporary use of fuels, lubricants, or adhesives would be managed under standard regulatory controls, including requirements under California Health and Safety Code §25507, Cal/OSHA, and local Fire Code.

Given the lack of nearby schools and the implementation of appropriate handling practices for any minor hazardous materials used during construction, the project would not result in any impacts related to hazardous emissions or exposure near schools.

d) Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact

A review of the Phase I ESA confirms that the site is not listed on any hazardous materials registries, including those identified under Government Code § 65962.5 (the "Cortese List"), such as leaking underground storage tanks (GeoTracker), hazardous waste facilities (EnviroStor), or active cleanup orders as shown on **Figure 4.9-1**. Regulatory database searches and agency queries identified no records associating the site or adjoining parcels with any listed hazardous site.

The absence of listing under § 65962.5 indicates no heightened baseline risk. Accordingly, the project would not create a significant hazard to the public or environment due to its presence on any such list. Therefore, the project would have no impact.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact

The project site is not located within any designated airport influence area or safety zones established by the Airport Comprehensive Land Use Plan (CLUP) for Yucca Valley Airport (County of San Bernardino, 1992). Although the project site lies 2.5 miles north of the Yucca Valley Airport as detailed in **Figure 4.9-2**, it is situated outside of all airport compatibility zones identified in the CLUP. Therefore, the project would not result in a safety hazard or expose people residing or working in the project area to excessive noise levels associated with airport operations. No land use conflicts, or safety concerns related to airport proximity have been identified, and there would be no impact.

f) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact

The project would not impair the implementation of, or physically interfere with, any adopted emergency response or evacuation plan. Located at the southeast corner of Newton Lane and Sun Mesa Drive, the project includes two 30-foot-wide driveways and internal circulation aisles designed in accordance with the California Fire Code and the Town of Yucca Valley's regulations. Offsite improvements, such as half-width roadway paving, sidewalks, and curb and gutter along the project's boundaries, would be completed under an encroachment permit issued by the Town's Engineering Department, ensuring that emergency access is preserved throughout construction and operation.

The project is consistent with the Town's Local Hazard Mitigation Plan (LHMP), which emphasizes emergency access and hazard avoidance, and supports the goals of the San Bernardino County Emergency Operations Plan (EOP), which prioritizes route clearance and emergency coordination. Construction traffic will be managed to preserve roadway access, and plans will be reviewed by the County Fire Protection District for compliance with fire and emergency access standards. Therefore, the project would have a less than significant impact on emergency response or evacuation plans.

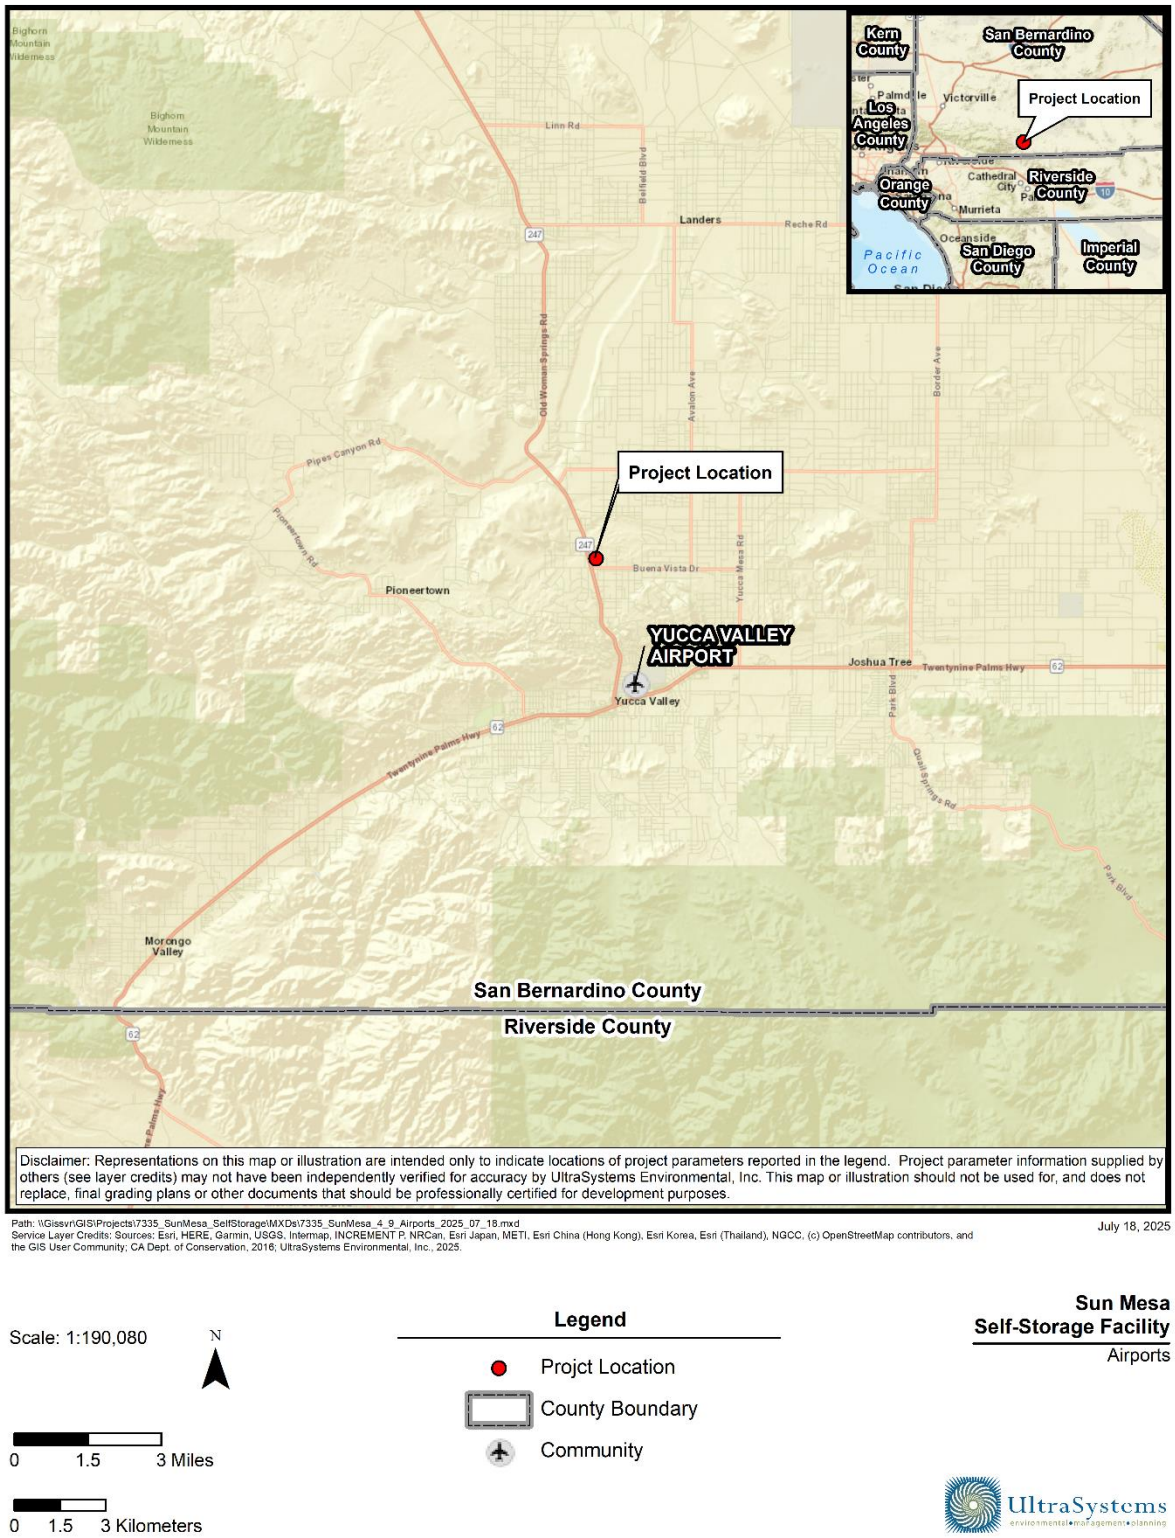
Figure 4.9-2
AIRPORT LOCATION MAP



g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact

As detailed further in **Section 4.20**, the project site is located within a State Responsibility Area (SRA) but is not designated as a "Very High Fire Hazard Severity Zone" (VHFHSZ) per the most recent CAL FIRE Fire Hazard Severity Zone maps. The surrounding area consists of low-density development and natural desert vegetation with moderate fuel loads. Local fire protection services are provided by San Bernardino County Fire Protection District, and the site is served by existing fire infrastructure, including maintained access routes.

The project will implement all applicable California Building Code Chapter 7A Fire-Safe Construction Standards, including fire-resistant materials, defensible space, and fire apparatus access. Construction and operation will also adhere to the requirements of Public Resources Code §§ 4290 and 4291, including vegetation clearance and emergency water supply availability.

Given the site's location outside of a VHFHSZ and compliance with modern fire safety regulations, the project would not expose people or structures to a significant wildfire risk and no impact would occur.

4.10 Hydrology and Water Quality

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			**X**	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			**X**	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:			**X**	
i) result in substantial erosion or siltation on or offsite;			**X**	
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;			**X**	
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or			**X**	
iv) impede or redirect flood flows?				**X**
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?				**X**
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?				**X**

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less than Significant Impact

The California State Water Resources Control Board requires its nine Regional Water Quality Control Boards (RWQCBs) to develop water quality control plans (Basin Plans) designed to preserve and enhance water quality and protect the beneficial uses of all Regional waters. Specifically, Basin Plans

designate beneficial uses for surface waters and groundwater, set narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the State antidegradation policy, and describe implementation programs to protect all waters in the Regions (RWQCB 1995). In addition, Basin Plans incorporate by reference all applicable State and Regional Board plans and policies, and other pertinent water quality policies and regulations. The proposed project is under the jurisdiction of the Colorado River (Region 7) RWQCB.

As shown in **Figure 4.10-1,** *USGS Surface Waters and Watersheds*, the project site is located within the USGS Town of Joshua Tree sub-watershed that spans about 20 square miles of the central and western Morongo Basin. Drainage within the Joshua Tree sub-watershed is internal, meaning that it terminates into desert valleys, and does not reach the ocean (USGS, 2009).

Much of the project site is a southeast-facing slope with grades up to 14 percent in the southern section of the site and as slight as 0.1 percent in the northern section of the site (DRP, 2024a, p. 7).

A drainage study for the project was completed DRP Enterprises, LLC November 10, 2024 (DRP, 2024b) and is included as **Appendix G2**. The project site and the area tributary to the site (i.e., west of the site) is divided into two drainage areas, Area A and Area B, depicted on **Figure 4.10-2**. The areas in acres, and the peak runoff estimated from a 100-year, 1-hour storm are listed below in **Table 4.10-1**.

Table 4.10-1
PROJECT SITE AND TRIBUTARY AREA RUNOFF RATES

Drainage Area	Area, Acres			Peak Flow (Q), cubic feet per second (cfs), 100-year storm, existing conditions		
	Onsite	Offsite	Total	Onsite	Offsite	Total
A	2.46	4.48	6.94	6.51	17.54	24.05
B	2.11	7.89	10	3.30	30.09	33.40

Source: DRP, 2024b

Development of the project has the potential to result in two types of water quality impacts: (1) short-term impacts due to construction-related discharges; and (2) long-term impacts from operation. Temporary soil disturbance would occur during project construction, due to earth-moving activities such as excavation and trenching for foundations and utilities, soil compaction and moving, cut and fill activities, and grading. Disturbed soils are susceptible to high rates of erosion from wind and rain, resulting in sediment transport via stormwater runoff from the project area. Erosion and sedimentation affect water quality of receiving waters through interference with photosynthesis, oxygen exchange, and respiration, growth, and reproduction of aquatic species. Runoff from construction sites may include sediments and contaminants such as oils, fuels, paints, and solvents. Additionally, other pollutants such as nutrients, trace metals, and hydrocarbons can attach to sediment and be carried by stormwater into storm drains which discharge eventually to the Pacific Ocean.

Spills and mishandling of construction materials and waste may also potentially leave the project site and negatively impact water quality. The use of construction equipment and machinery may potentially result in contamination from petroleum products, hydraulic fluids, and heavy metals. Contamination from building preparation materials such as paints and solvents, and landscaping materials such as fertilizers, pesticides, and herbicides may also potentially degrade water quality

during project construction. Trash and demolition debris may also be carried into storm drains and discharged into receiving waters.

Construction Pollutants Control

Project construction could generate contaminants – including bacteria and viruses, metals, nutrients, pesticides, organic compounds, sediments, trash and debris, oil and grease, and oxygen-demanding substances – that could contaminate stormwater. Grading or construction operations under Town grading or construction permits are prohibited from allowing loose trash or debris to accumulate or to be carried offsite by wind or water; are required to contain trash and debris; and are required to provide for waste collection to prevent trash containers from overfilling, by Town Municipal Code Chapter 8.03, Construction Site Maintenance and Trash Containment (Codelibrary.amlegal.com, 2025). Construction, grading, excavation, and land clearing operations are required to use measures to minimize wind erosion under MDAQMD Rule 403 (MDAQMD, 2020c). Grading and construction activities pursuant to the General Plan Update would comply with existing laws and regulations aimed at minimizing or eliminating pollution of stormwater with trash and debris and pollution of air and water by dust (Town of Yucca Valley, 2014, p. 5.8-24). Construction water quality impacts would be less than significant after compliance with the above-specified municipal code chapter and regulations.

Note that while construction projects one acre or larger in much of California must obtain coverage under the Statewide General Construction Permit (SGCP) issued by the State Water Resources Control Board, the SGCP only applies to areas where receiving waters are Waters of the United States (WOUS).[14] Surface waters in Yucca Valley are not WOUS, and thus the SGCP does not apply to construction projects in Yucca Valley.

Operational Pollutant Controls

Project operation could generate the same categories of pollutants that project construction could generate. The project includes an infiltration basin in the southwest corner of the project site with capacity of 13,243 cubic feet. Infiltration basins are highly effective at removing sediment, nutrients, trash, metals, bacteria, oil and grease, and organics (CASQA, 2003, p. TC-11-1). Project operational water quality impacts would be less than significant.

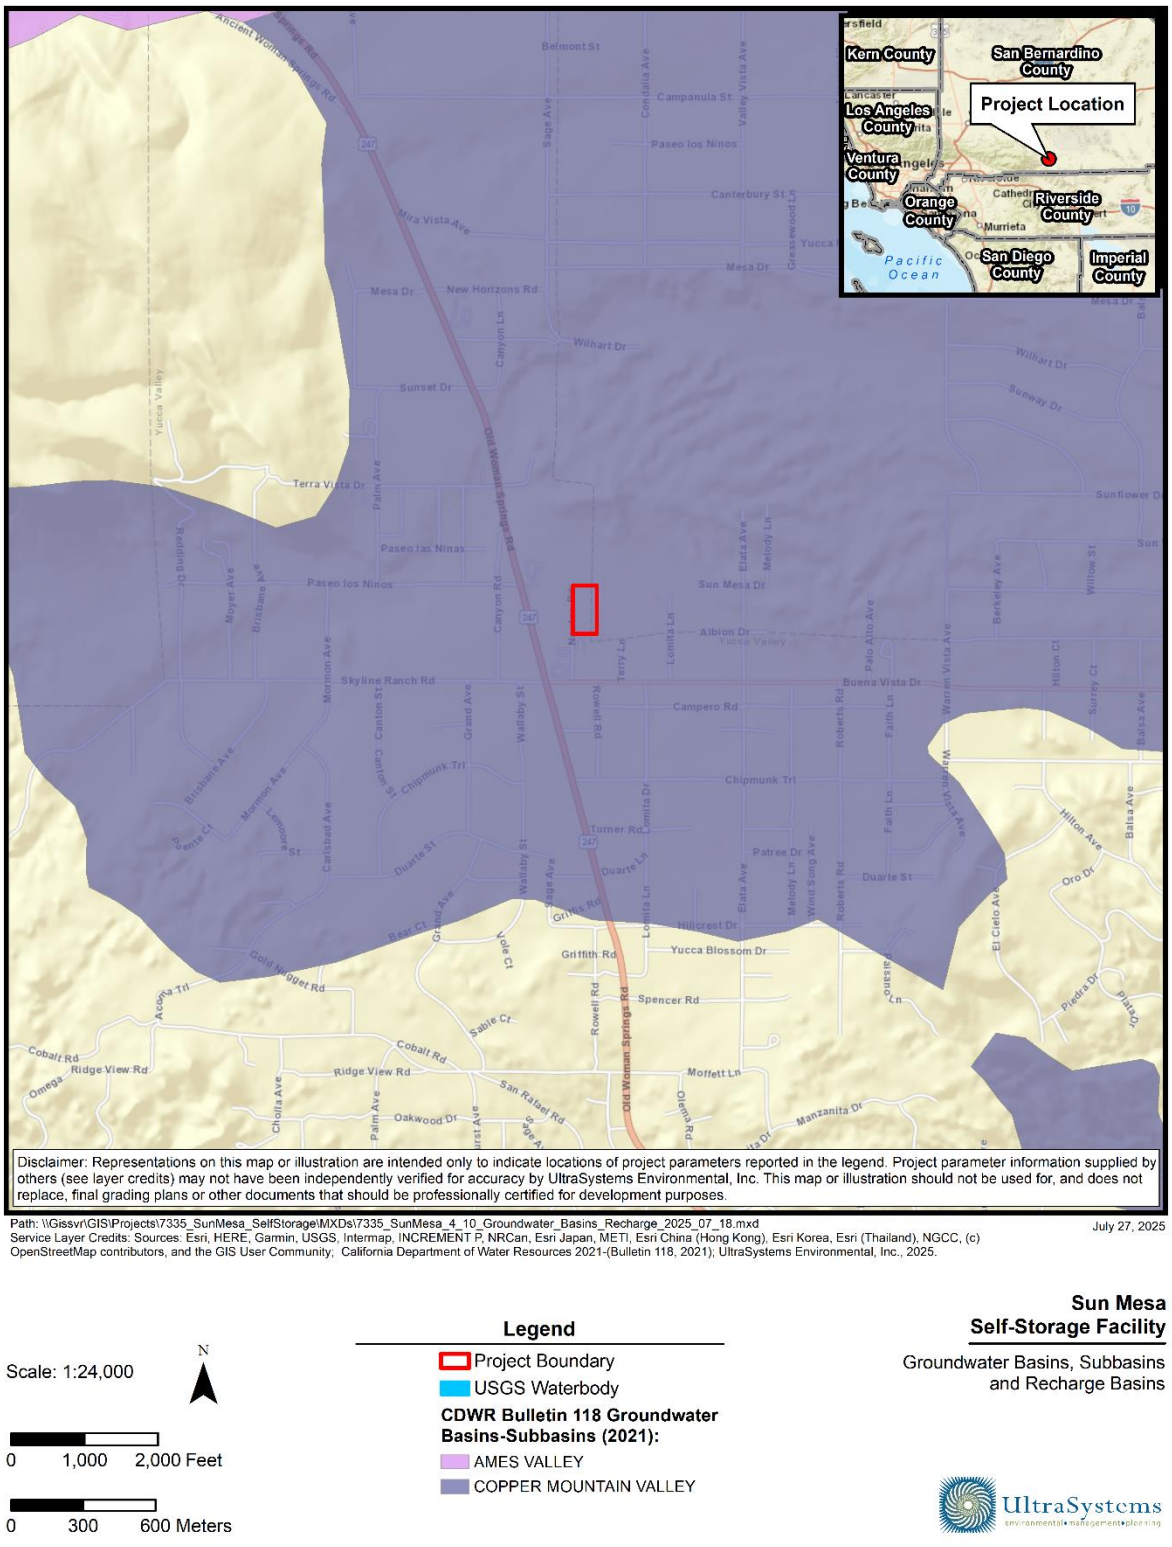
b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less than Significant Impact

The project site is above the Copper Mountain Valley groundwater basin (CMVGWB), as shown on **Figure 4.10-3**. The Basin covers approximately 47 square miles in the north-central part of the Morongo Basin (DWR, 2003). While the project site is pervious, it is not used for intentional groundwater recharge.

[14] Waters of the U.S. include waters that are or have been used, or could be used, in interstate or foreign commerce; interstate waters including interstate wetlands; tributaries of those categories of waters; impoundments of any of the preceding categories of waters; territorial seas; and wetlands adjacent to those categories of waters (USEPA, 2025).

Figure 4.10-3
GROUNDWATER BASINS MAP



The project site is in the Hi-Desert Water District (HDWD) service area. HDWD water supplies are groundwater from the Warren Valley Groundwater Basin south of the CMVGWB, and the Ames Valley Groundwater Basin north of the CMVGWB (HDWD, 2021, p. 3-2). HDWD forecasts that it will have sufficient water supplies to meet demands in normal water year, single-dry-year, and multiple-dry-year conditions over the 2020-2040 period (HDWD, 2021, p. 5-2). Project operation is estimated to use about 2,243 gallons per day (gpd) of water based on a wastewater generation factor of 20 gpd per 1,000 square feet (City of Los Angeles, 2006); and taking water demand to be 125 percent of wastewater generation.

Project water demand would not substantially decrease groundwater supplies or interfere with groundwater recharge, and impacts would be less than significant.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on or offsite;

Less Than Significant Impact

The project site is divided into two drainage areas. Runoff from offsite portions of the project site (extending west from the site to SR-247) passes through the site, combining with runoff from the site, and continues eastward (DRP, 2024b, p. 7). The project site is in the Town of Joshua Tree sub-watershed.

Construction

The project site would be most susceptible to erosion during the construction phase, when soil is exposed, and before landscaped areas have been installed. To minimize the potential for water and wind erosion, the project would be required to obtain coverage under the Statewide General Construction Permit issued by the State Water Resources Control Board (Order No. 2022-0057-DWQ). Projects obtain coverage by developing and implementing a Stormwater Pollution Prevention Plan (SWPPP) estimating sediment risk from construction activities to receiving waters and specifying Best Management Practices (BMPs) that would be used by the project to minimize pollution of stormwater.

Construction BMPs are grouped in six categories: erosion control (prevents soil particles from being detached from soil surface), sediment control (prevents soil particles from being transported offsite by water and being deposited elsewhere), wind erosion control, tracking control (prevents soil from being tracked offsite by vehicles), non-stormwater management controls (prohibits discharges other than stormwater, such as those from cleaning, maintenance, and fueling of vehicles and equipment), and waste management and controls (good housekeeping practices) (CASQA, 2023). Construction impacts would be less than significant after implementation of erosion control and sediment control BMPs.

Operation

The project would be developed with a mix of impervious surfaces such as concrete and pavement and landscaped areas, including landscaping along the site boundary. The project includes drainage improvements consisting of two concrete ribbon gutters (i.e., shallow v-shaped concrete gutters,

typically in the medians of driveways or drive aisles) extending north-south – one through the middle of the site, and one near the east site boundary – and an infiltration basin in the southwest corner of the site. The design capture volume of the infiltration basin is 13,243 cubic feet (DRP, 2024b, p. 17). Infiltration basins are highly effective at removing sediment (CASQA, 2003, p. TC-11-1). The project would have less than significant impacts related to soil erosion or loss of topsoil and mitigation is not required.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less than Significant Impact

The proposed infiltration basin would have capacity for runoff from the project site in post-project conditions; that is, 13,243 cubic feet. The site is estimated to be 90 percent impervious at project completion (DRP, 2024b, p. 17). Project development would not increase the rate or amount of runoff in a manner that would cause flooding on- or off-site.

Project stormwater quality impacts would be less than significant, as previously shown in the analysis under 4.10.a above.

iv) Impede or redirect flood flows?

No Impact

The project site is in Flood Hazard Zone X, meaning that it is outside of 100-year and 500-year flood zones (FEMA, 2022), as shown on **Figure 4.10-4**. The project site is located outside the nearest floodplain and the proposed project would not impede or redirect flood flows. No impact would occur, and mitigation is not required.

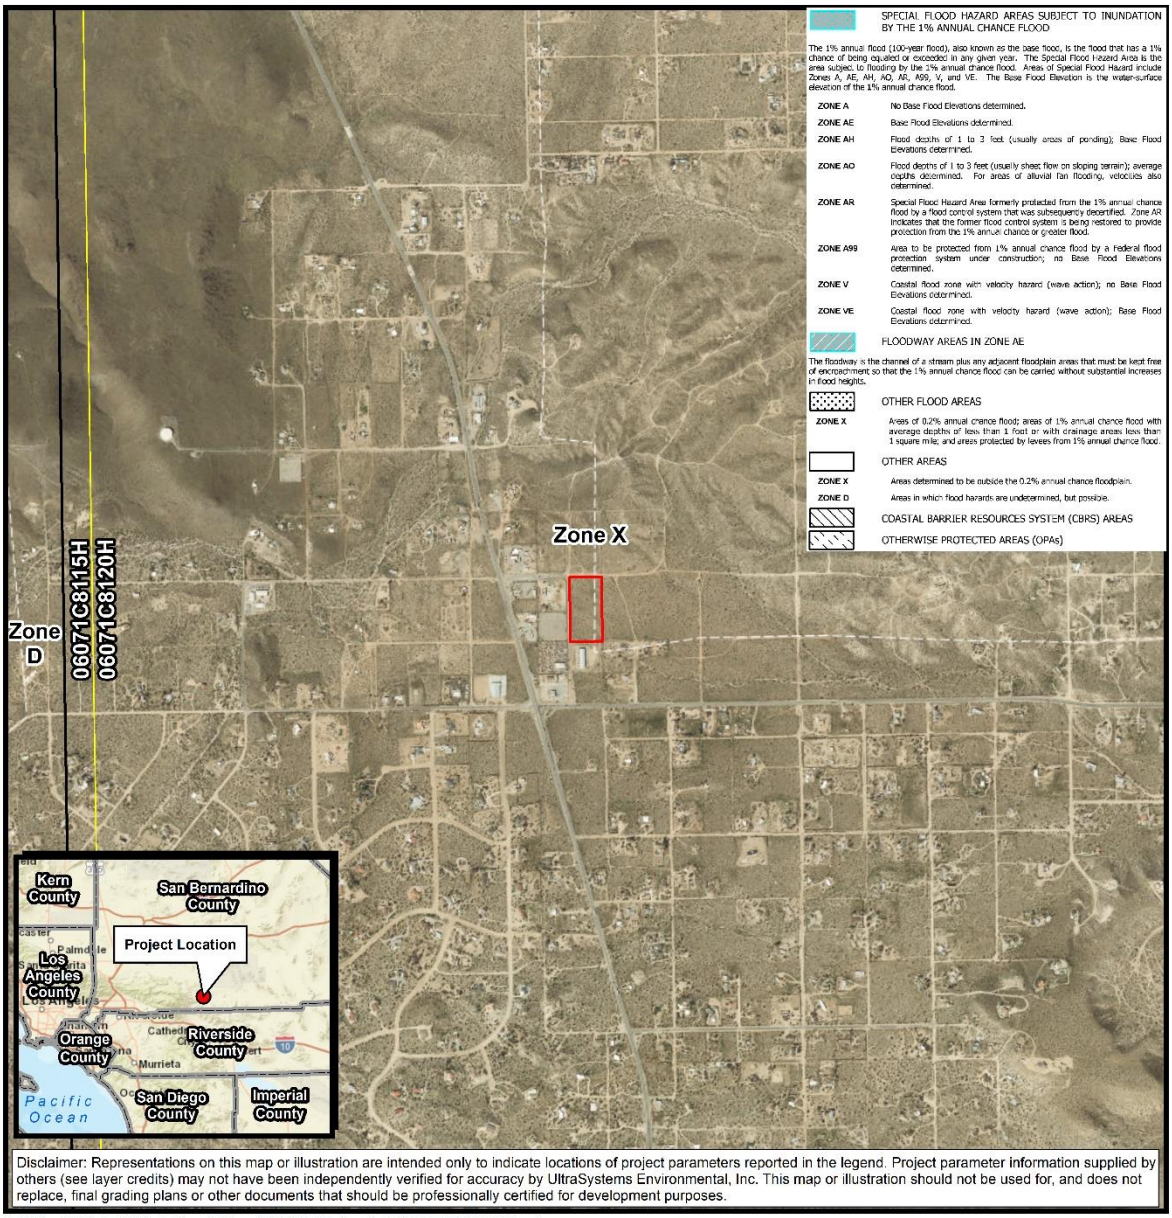
d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

No Impact

The project site is not within any dam inundation areas mapped by the California Division of Safety of Dams (DWR, 2025). The project site is also not within any dam inundation areas mapped on the U.S. Army Corps of Engineers National Inventory of Dams (USACE, 2025). A seiche is a surface wave created when an inland water body is shaken, usually by an earthquake. No water bodies are near enough to the project site such that project development would risk release of pollutants due to flooding from a seiche or from dam inundation.

As discussed previously, the project site is located outside the 500-year floodplain and would not be at risk of inundation by flood hazards.

Figure 4.10-4
FLOOD HAZARD ZONES MAP



A tsunami is a series of ocean waves caused by a sudden displacement of the ocean floor, most often due to earthquakes. Several mountain ranges and topographical barriers are interposed between the project site and the Pacific Ocean; thus, the project is not at risk of flooding due to tsunamis.

No impact would occur.

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

No Impact

The water quality control plan ("basin plan") in effect for the project region is that for the Colorado River Basin, issued by the Colorado River RWQCB in 2023. The project would comply with the basin plan through adherence with the Town of Yucca Valley Municipal Code Chapter 8.03; MDAQMD Rule 403; and construction, operation, and maintenance of the proposed infiltration basin.

No sustainable groundwater management plan has been prepared for the Copper Mountain Valley groundwater basin, and the basin is designated very low priority for development of such a plan (DWR, 2025a). No impact would occur.

4.11 Land Use and Planning

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Physically divide an established community?				X
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?				X

a) Would the project physically divide an established community?

No Impact

The project site is located to the southeast of the intersection of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley. The surrounding area includes vacant desert land and sparse industrial development. The property directly to the north abuts the Sun Mesa dedication and dirt roadway; this adjacent lot is currently vacant. The parcel to the north is zoned as Industrial Mixed Use SPA. To the east, the neighboring parcel is commercially zoned and also vacant. The properties to both the south and west are developed with existing commercial uses. The site is currently undeveloped and does not function as a thoroughfare or access point between any residential areas. As such, development of the proposed self-storage facility would not physically divide an established community, and no impact would occur.

b) Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact

The project site has a General Plan land use designation of Industrial (I) (see **Figure 4.11-1**) and is zoned Industrial (see **Figure 4.11-2**) within the Rural Mixed Use Special Policy Area (SPA) of the Town of Yucca Valley as shown on the Town of Yucca Valley General Plan Land Use Map (Town of Yucca Valley, 2014. p. Figure LU-1).

The "Rural Mixed Use SPA" in the City of Yucca Valley is a specific zoning overlay that allows for a blend of rural and light industrial/commercial uses, including the potential for a single-family residence when associated with an industrial business. The SPA often functions as an overlay on areas already zoned for industrial use, allowing for the unique addition of a single-family residence when associated with a business on the same property (Town of Yucca Valley, 2014. p. 2-22).

The proposed self-storage facility is consistent with the intent of the SRA. The project does not include residential or sensitive uses and is designed to maintain compatibility with adjacent developments. The project would not conflict with the land use goals or policies established for the Mixed Uses SRA and would represent an appropriate use that aligns with the Town's long-term land use planning objectives. Therefore, the project would have no impact in this regard.

Figure 4.11-1
GENERAL PLAN LAND USE DESIGNATION

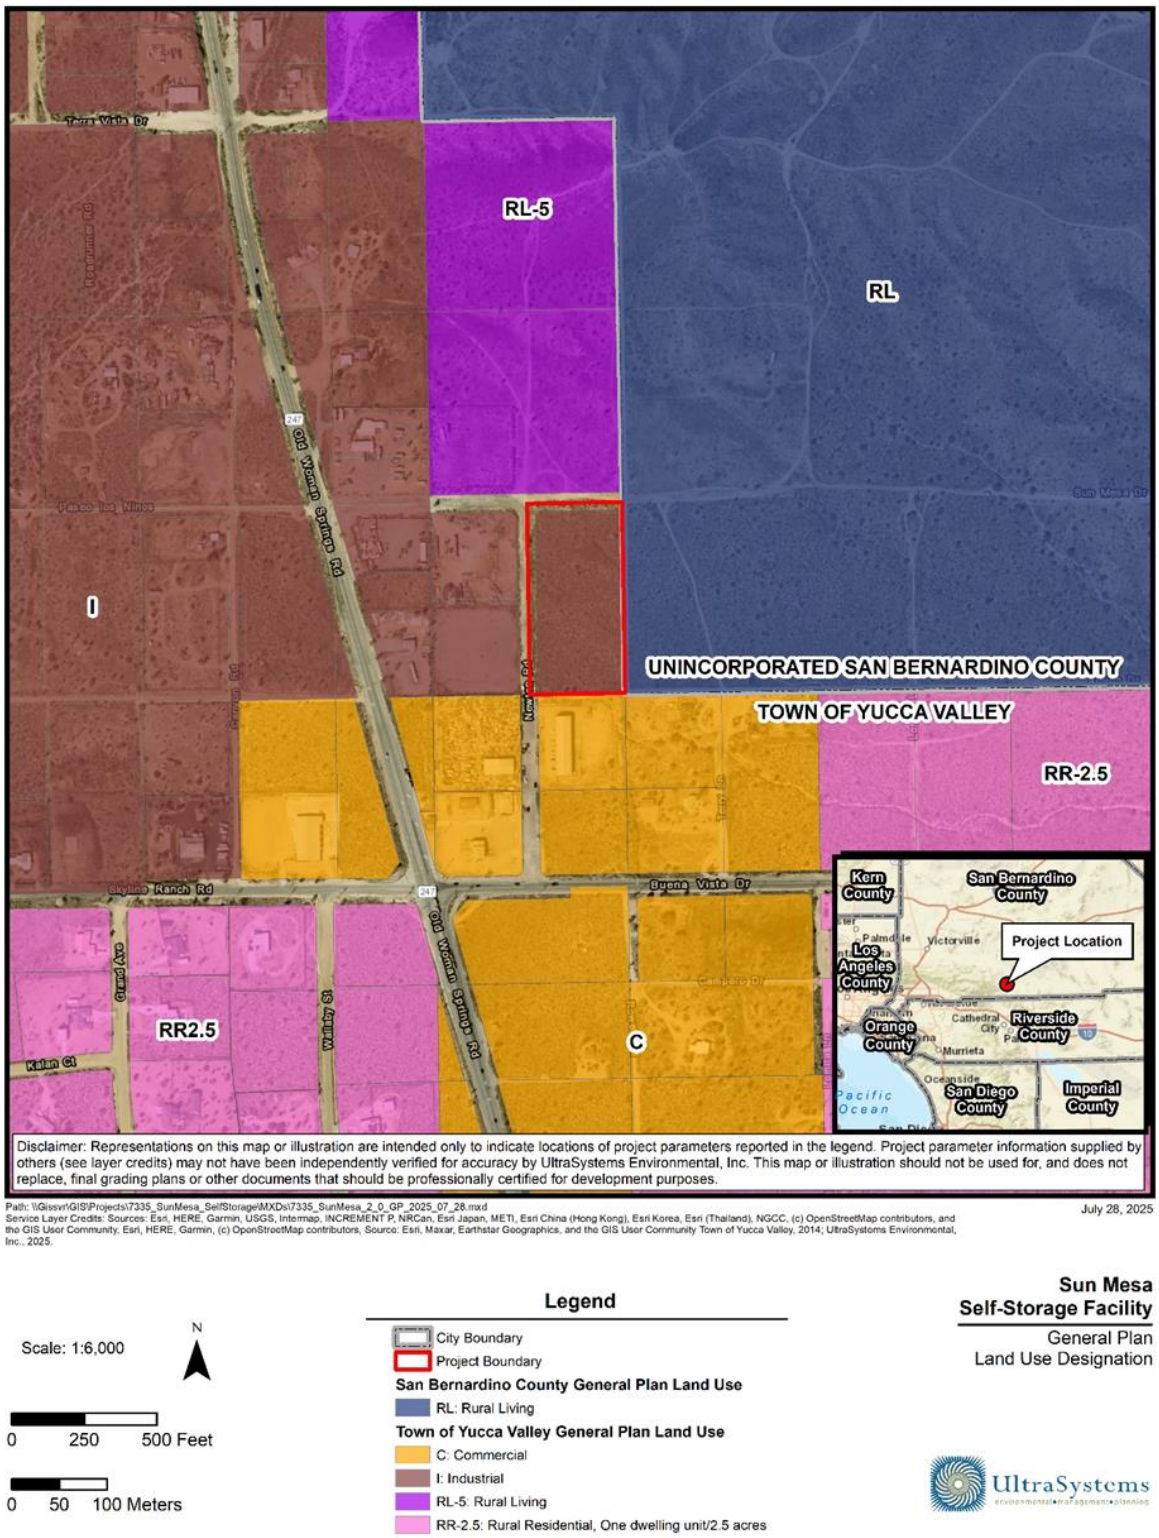


Figure 4.11-2
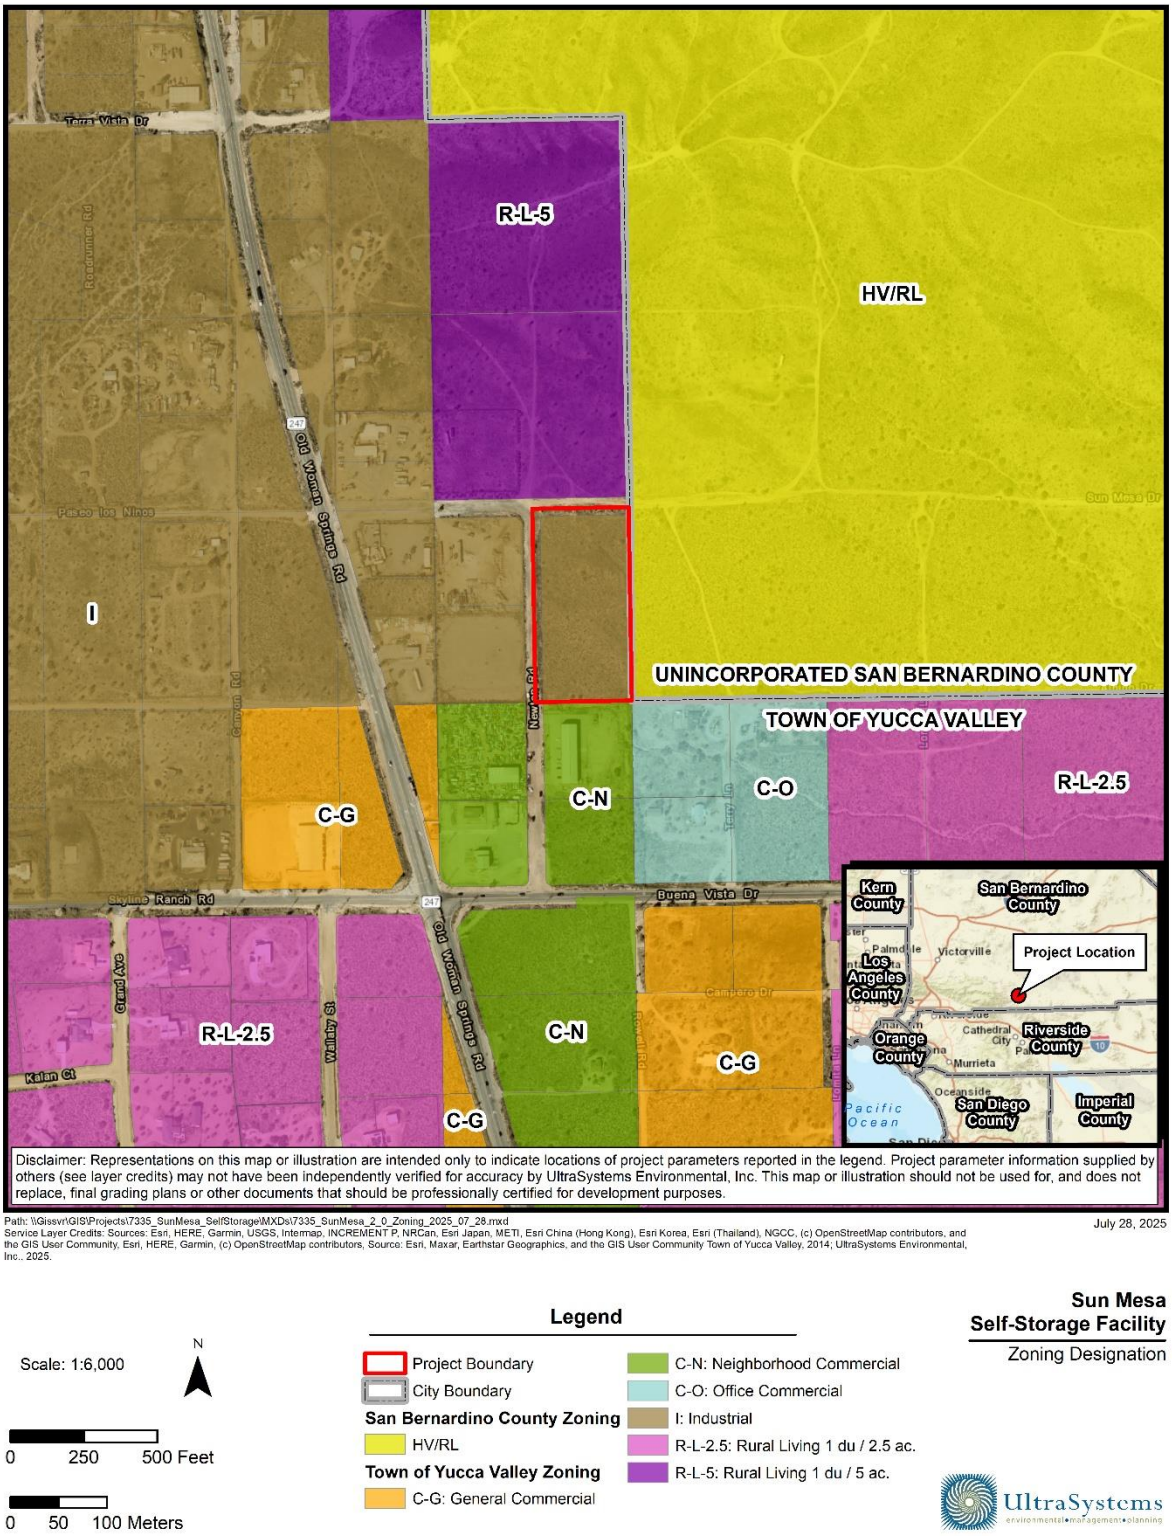
ZONING DESIGNATION



Under CEQA, a conflict may be significant if the project would conflict with an applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. For the Town's General Plan Land Use Element, applicable provisions include:

- Policy LU 1-1 Encourage infill development to maximize the efficiency of existing and planned: Although the project is not considered infill, it would not conflict with Policy LU 1-1 because it would be developed within the Town's existing service context and would not require extension of major public utilities (e.g., it would use an on-site septic system rather than new sewer trunk extensions). In addition, the required frontage improvements along Newton Lane and Sun Mesa Drive (e.g., paving and associated curb/gutter/sidewalk improvements where required) would enhance the efficiency and safety of existing and planned local circulation infrastructure serving the site, consistent with the intent of maximizing efficiency of services, facilities, and infrastructure under LU 1-1.

- Policy LU 1-2 Require that adjacent land uses and development types complement one another: : A self-storage facility is typically a low-occupancy, low-intensity use that can be designed to complement surrounding commercial/industrial uses, consistent with Policy LU 1-2.

- Policy LU 1-16 Require high quality building design, property maintenance, amenities for pedestrian access, and adequate circulation, utilities, and infrastructure: The project would be consistent with Policy LU 1-16 because it includes a planned site layout that can be conditioned through the Town's development review process to meet high-quality building design and ongoing property maintenance standards, and it incorporates features that support pedestrian access and circulation. The project also provides adequate infrastructure and circulation improvements through required frontage improvements (e.g., paving and associated curb/gutter/sidewalk improvements where required) along Newton Lane and Sun Mesa Drive, and internal drive aisles that facilitate vehicle and emergency access. Utilities and infrastructure would be provided through standard utility connections and an on-site septic system designed to applicable County requirements, ensuring adequate service without requiring off-site wastewater extensions.

Table 4.11-1
LAND USE CONSISTENCY ANALYSIS

Goal / Policy	Consistency Analysis
GOAL LU 1: A balanced mixture of integrated land uses that provide desirable neighborhoods, vibrant commercial districts, passive and active open spaces, a strong economic and employment base, appropriate public facilities and services, and fiscal sustainability.	
General Policies	
Policy LU 1-1: Encourage infill development to maximize the efficiency of existing and planned public services, facilities, and infrastructure.	**Consistent.** The project is a proposed development within an existing industrially zoned area, maximizing use of existing roads and utilities on Newton Lane and Sun Mesa Drive and proposing improvements where necessary.
Policy LU 1-2: Require that adjacent land uses and development types complement one another.	**Consistent.** The proposed self-storage use is low-impact and compatible with industrial zoning; it includes perimeter fencing and landscaping to visually buffer any adjacent residential or commercial areas.

Goal / Policy	Consistency Analysis
Policy LU 1-3: Require new projects to pay their fair share cost of or make necessary improvements to public facilities, infrastructure, and services that are impacted by the demands generated by new development.	**Consistent.** The project includes off-site road improvements, water connections, septic system and fire access per Town requirements, fulfilling obligations for infrastructure impact mitigation.
Policy LU 1-5: Encourage land use development patterns that preserve the Town's scenic resources, such as ridgelines and hillsides.	**Consistent.** The site is in a flat, previously disturbed area and avoids visual intrusion on ridgelines or hillsides.
Commercial and Industrial Policies	
Policy LU 1-15: Maintain Yucca Valley's position as the economic hub of the Morongo Basin. Support a broad range of commercial retail, service, office, business park, research and development, light industrial, and industrial uses to provide employment opportunities and contribute to the Town's economic sustainability.	**Consistent.** The self-storage facility contributes to the industrial sector with low-trip generating, clean operations and is consistent with the economic hub vision for Yucca Valley.
Policy LU 1-16: Require high quality building design, property maintenance, amenities for pedestrian access, and adequate circulation, utilities, and infrastructure.	**Consistent.** The self-storage facility contributes to the industrial sector with low-trip generating, clean operations and is consistent with the economic hub vision for Yucca Valley.
Policy LU 1-17: Encourage the renovation of existing commercial and industrial areas to improve appearance, environmental responsiveness, use of infrastructure, and functionality.	**Consistent.** The project transforms an underutilized parcel into a well-designed, functional facility with upgraded utilities and roads.
Policy LU 1-18: Locate industrial uses near commercial uses when feasible to create synergy between the uses and established business nodes.	**Consistent.** Although not adjacent to commercial zones, the facility supports business operations needing offsite storage, indirectly supporting commercial functionality.
Policy LU 1-20: Focus commercial development along SR-62 to take advantage of infrastructure improvements.	**Consistent.** While not directly on SR-62, the site is within a nearby industrial area that complements the corridor by supporting non-retail uses that reduce traffic impacts.
Policy LU 1-22: Attract and retain nonpolluting, clean industrial development that expands the economic opportunities in the Town.	**Consistent.** The project is a clean, non-polluting facility with no hazardous operations.
Policy LU 1-23: Adequately buffer or otherwise ensure compatibility between commercial and industrial uses and residential areas (See also Policy LU 1-17).	**Consistent.** The site includes six-foot masonry walls and landscaping to buffer any adjacent uses, ensuring visual and operational compatibility.
Policy LU 1-24: Plan for the adequate and logical expansion of public facilities that are compatible with surrounding land uses, reflect community character, are educationally enriching, and meet a broad range of local needs.	**Consistent.** Utility extensions and road improvements are compatible with the surrounding land uses and support logical service expansion.

Goal / Policy	Consistency Analysis
Policy LU 1-26: Seek opportunities to collaborate with other public/quasi-public organizations in an effort to build new facilities to meet demand or develop joint use facilities.	**Consistent.** While the self-storage project is privately developed and does not directly involve shared public facilities, it supports local service needs (e.g., small businesses, transitional residential storage) and indirectly reduces demand on public space. Opportunities for collaboration—such as emergency access agreements with local fire services or shared utility infrastructure—can be explored during final project approvals to align with this policy.

4.12 Mineral Resources

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				**X**
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				**X**

a) Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b) Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

No Impact

The proposed project site encompasses approximately 4.34 acres at the southeast corner of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley (APN: 0597-111-67). The site has a General Plan Land Use Designation of Industrial and is zoned Industrial (I), which permits a range of employment and service-oriented uses, including light manufacturing, warehousing, and related activities. While this zoning supports industrial development, neither the Town of Yucca Valley's General Plan nor zoning regulations identify the site or surrounding parcels as designated for mineral resource extraction or conservation (Town of Yucca Valley, 2014).

According to the Mineral Land Classification of San Bernardino County by the California Geological Survey (CGS, 2020), the site is not located within a Mineral Resource Zone 2 (MRZ-2)—an area identified as containing regionally significant mineral deposits. The site is not designated within any SMARA-regulated mineral resource overlay, as defined under the California Surface Mining and Reclamation Act (SMARA; Public Resources Code §§ 2710–2796). Therefore, the project site is not subject to conservation requirements or mineral resource impact findings pursuant to CEQA Guidelines Appendix G or Public Resources Code § 21100(d).

Figure 4.12-1, Geothermal Wells, and **Figure 4.12-2, Oil and Gas Wells** indicate there are no active wells on or near the project site. The site is located in an industrial part of Yucca Valley and is not near any active mining operations, Aggregate Resource Areas, or Bureau of Land Management for designated mining claims. Chapter 5.11 of the San Bernardino Countywide Plan identifies mineral resource protection priorities primarily in unincorporated areas of the county where mining remains economically feasible. The subject property is outside those identified zones.

Development of the proposed self-storage facility, consistent with the site's Industrial zoning designation, would not obstruct or remove access to any known mineral resources of regional or statewide importance. Furthermore, the site is not identified as a locally important mineral resource recovery area in any local general plan, specific plan, or other land use plan. Therefore, the project would not result in the loss of availability of a significant mineral resource, and no impact would occur.

Figure 4.12-1
GEOTHERMAL WELLS

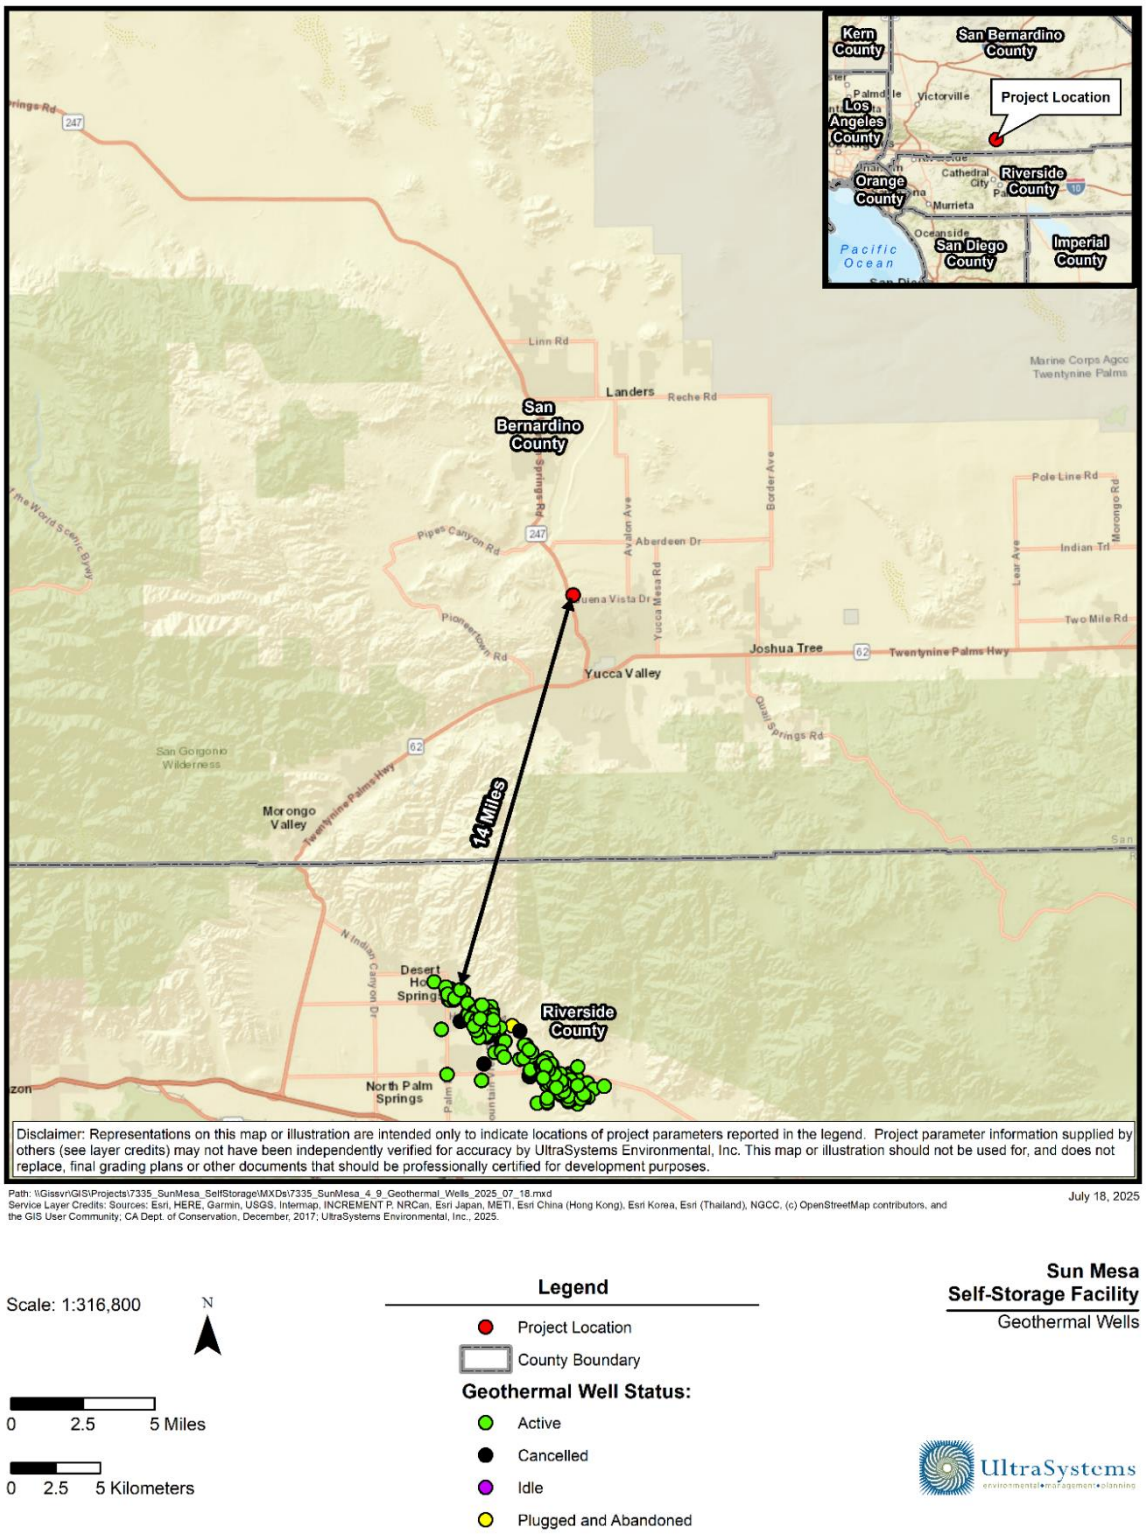


Figure 4.12-2
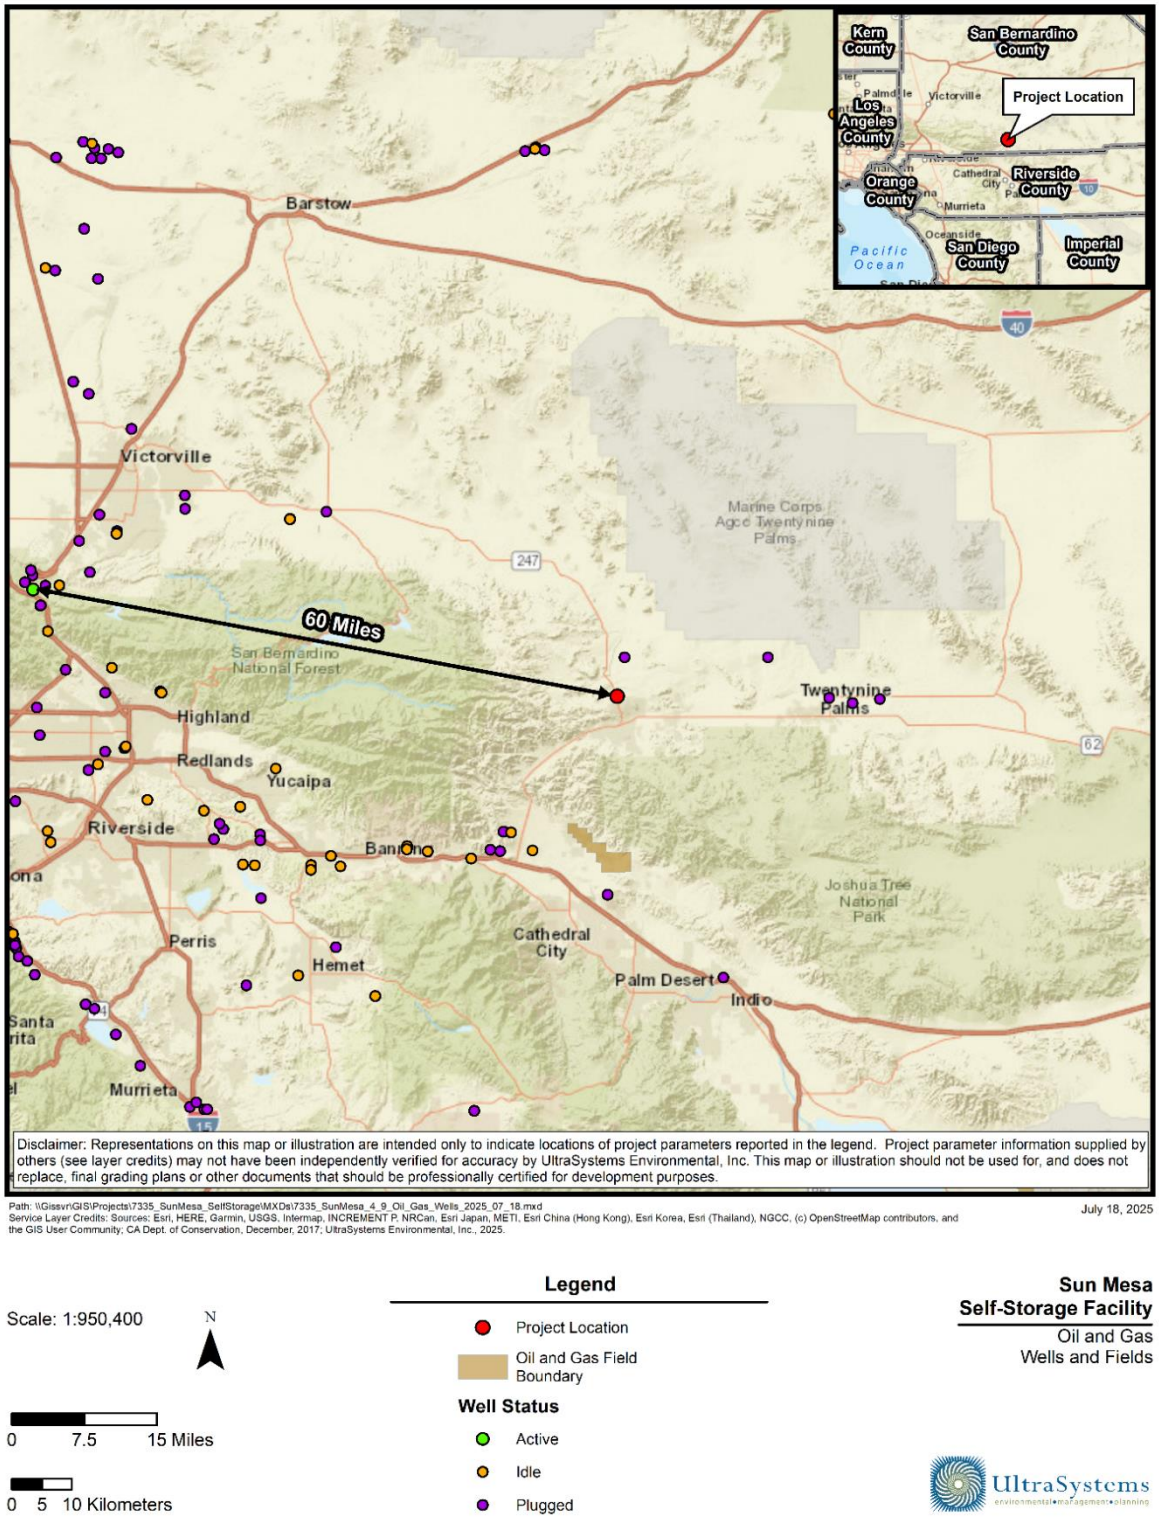
OIL AND GAS WELLS



4.13 Noise

Would the project result in:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b) Generation of excessive groundborne vibration or groundborne noise levels?			X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				X

4.13.1 Characteristics of Sound

Sound is a pressure wave transmitted through the air. It is described in terms of loudness or amplitude (measured in decibels), frequency or pitch (measured in hertz or cycles per second), and duration (measured in seconds or minutes). The decibel (dB) scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound. The pitch of the sound is related to the frequency of the pressure vibration. Because the human ear is not equally sensitive to all frequencies, a special frequency-dependent rating scale is used to relate noise to human sensitivity. The A-weighted decibel scale (dBA) provides this compensation by discriminating against upper and lower frequencies in a manner approximating the sensitivity of the human ear. The scale is based on a reference pressure level of 20 micro pascals (zero dBA). The scale ranges from zero (for the average least perceptible sound) to about 130 (for the average human pain level).

4.13.2 Noise Measurement Scales

Several rating scales have been developed to analyze adverse effects of community noise on people. Since environmental noise fluctuates over time, these scales consider that the effect of noise on people depends largely upon the total acoustical energy content of the noise, as well as the time of day when the noise occurs. Those that are applicable to this analysis are as follows:

- L_{eq}, the equivalent noise level, is an average of sound level over a defined time period (such as 1 minute, 15 minutes, 1 hour or 24 hours). Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure.
- L_{90} is a noise level that is exceeded 90 percent of the time at a given location; it is often used as a measure of "background" noise.

- L_{max} is the root mean square (RMS) maximum noise level during the measurement interval. This measurement is calculated by taking the RMS of all peak noise levels within the sampling interval. L_{max} is distinct from the peak noise level, which only includes the single highest measurement within a measurement interval.
- CNEL, the Community Noise Equivalent Level, is a 24-hour average L_{eq} with a 4.77-dBA "penalty" added to noise during the hours of 7:00 p.m. to 10:00 p.m., and a 10-dBA penalty added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime (Hendriks, 2013). The logarithmic effect of these additions is that a 60-dBA 24-hour L_{eq} would result in a calculation of 66.7 dBA CNEL.
- L_{dn}, the day-night average noise, is a 24-hour average L_{eq} with an additional 10-dBA "penalty" added to noise that occurs between 10:00 p.m. and 7:00 a.m. The L_{dn} metric yields values within 1 dBA of the CNEL metric. As a matter of practice, L_{dn} and CNEL values are considered to be equivalent and are treated as such in this assessment.

4.13.3 Existing Noise

The following discussion is based largely on a memorandum prepared by LSA Associate Inc. (LSA), Noise and Vibration Impact Analysis for the Sun Mesa (Billings) Mini Storage Project, Yucca Valley, San Bernardino County, California (LSA, 2024a) included as **Appendix H**.

The primary existing noise sources in the project area are transportation facilities and industrial activities. Traffic on SR-247, Buena Vista Drive, Sun Mesa Drive, and Newton Lane contributes to the ambient noise levels in the project vicinity. Industrial uses are located immediately west and south of the project site. Existing land uses within the project area include single-family residences, vacant land, and industrial uses. Single-family residences are located southeast of the project site. Industrial uses are located south and west of the project site. Vacant land is located north and east of the project site.

LSA conducted two long-term (24-hour) noise level measurements from July 9 to July 10, 2024, and one long-term (24-hour) noise level measurement from July 10 to July 11, 2024, using Larson Davis Spark 706RC dosimeters to document the existing noise environment within the project area. Table G in the LSA technical report summarizes the results of the long-term noise level measurements along with a description of the measurement locations and noise sources that occurred during the measurements. As shown in Table G (**Appendix H,** page 9), daytime noise levels ranged from 40.7 to 63.1 dBA Leq and nighttime noise levels ranged from 43.1 to 53.5 dBA Leq. Also, the calculated CNEL levels at LT-1, LT-2, and LT-3 were 57.3, 57.7, and 57.9 dBA Leq, respectively.

4.13.4 Regulatory Setting

State of California

The California Department of Health Services (DHS) Office of Noise Control has studied the correlation of noise levels with effects on various land uses. (The Office of Noise Control no longer exists.) The most current guidelines prepared by the state noise officer are contained in the "General Plan Guidelines" issued by the Governor's Office of Planning and Research in 2003 and reissued in 2017 (Governor's Office of Planning and Research, 2017). These guidelines establish four categories for judging the severity of noise intrusion on specified land uses:

- **Normally Acceptable**: Is generally acceptable, with no mitigation necessary.

- **Conditionally Acceptable**: May require some mitigation, as established through a noise study.
- **Normally Unacceptable**: Requires substantial mitigation.
- **Clearly Unacceptable**: Probably cannot be mitigated to a less-than-significant level.

The types of land uses addressed by the state standards, and the acceptable noise categories for each, are presented in **Table 4.13-1**. There is some overlap between categories, which indicates that some judgment is required in determining the applicability of the numbers in a given situation.

Table 4.13-1
CALIFORNIA LAND USE COMPATIBILITY FOR COMMUNITY NOISE SOURCES

	Noise Exposure (dBA, CNEL)						
	55	60	65	70	75	80	
Residential – Low-Density Single-Family, Duplex, Mobile Homes							
Residential – Multiple Family							
Transient Lodging – Motel, Hotels							
Schools, Libraries, Churches, Hospitals, Nursing Homes							
Auditoriums, Concert Halls, Amphitheaters							
Sports Arena, Outdoor Spectator Sports							
Playgrounds, Neighborhood Parks							
Golf Courses, Riding Stables, Water Recreation, Cemeteries							
Office Buildings, Business Commercial and Professional							
Industrial, Manufacturing, Utilities, Agriculture							

	Noise Exposure (dBA, CNEL)
	Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.
	Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system or air conditioning will normally suffice.
	Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.
	Clearly Unacceptable: New construction or development should generally not be undertaken.

Source: Governor's Office of Planning and Research, 2017.

Town of Yucca Valley General Plan Noise Element

The Town's General Plan Noise Element (Town of Yucca Valley, 2014) has established policies to meet the Town's noise-related goal. The applicable policies for the proposed project are listed below.

Goal N1: A noise environment where excessive noise from stationary, transportation related, and temporary sources of noise are appropriately managed.

> **Policy N 1-3:** Require daytime only truck deliveries to commercial and industrial uses adjacent to residential uses and other sensitive receptors unless there is no feasible alternative.
>
> **Policy N 1-13:** Enforce Town noise standards and monitor compliance with noise standards.
>
> **Policy N 1-18:** Enforce standards on the hours of operation for nonemergency construction.

Town of Yucca Valley Municipal Code

Section 9.34.080(B) of the Town's Municipal Code establishes noise standards for stationary and mobile noise sources affecting adjacent properties. Table E shows the exterior noise standards for stationary noise sources, and Table F shows the exterior and interior noise standards for mobile noise sources.

4.13.5 Significance Thresholds

Two criteria were used for analyzing noise impacts. First, noise levels generated by the proposed project must comply with all applicable relevant federal, state, and local standards and regulations. Noise impacts on the surrounding community are limited by local noise ordinances, which are implemented through investigations in response to nuisance complaints. It is assumed that all existing regulations for the construction and operation of the proposed project will be enforced. In addition, the proposed project should not produce noise levels that are incompatible with adjacent noise-sensitive land uses.

The second measure of impact used in this analysis is a significant increase in noise levels above existing ambient noise levels as a result of the introduction of a new noise source. An increase in noise level due to a new noise source has a potential to adversely impact people. The proposed project would have a significant noise impact if it would:

- Expose persons to or generate noise levels in excess of standards prescribed by the Town of Yucca Valley Municipal Code.
- Include construction activities within the hours prohibited by the Municipal Code, without a permit.
- Expose nearby sensitive receivers to construction noise greater than the FTA 80 dBA threshold (FTA, 2018).
- Contribute, with other local construction projects, to a significant cumulative noise impact.
- Increase operational exposures at sensitive receivers (mainly because of an increase in traffic flow) by 5 dBA L_{eq} or more.

4.13.6 Impact Analysis

a) Would the project result in generation of substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less than Significant Impact

Noise impacts associated with storage facilities include short-term and long-term impacts. Construction activities, especially heavy equipment operation, would create noise effects on and adjacent to the construction site. Long-term noise impacts include project-generated onsite and offsite operational noise sources. Onsite (stationary) noise sources from the storage facility would include operation of mechanical equipment such as air conditioners, landscape and building maintenance. Offsite noise would be attributable to project-induced traffic, which would cause an incremental increase in noise levels within and near the project vicinity.

Construction

Noise impacts from construction activities are a function of the noise generated by the operation of construction equipment and on-road delivery and worker commuter vehicles, the location of equipment, and the timing and duration of the noise-generating activities. For the purpose of this

analysis, it was estimated that the proposed project would start in January 2026 and would take anywhere from six to eight months to complete the first two phases.

The types and numbers of pieces of equipment to be deployed during each construction phase were determined as part of the air quality and greenhouse gas emissions analyses for this project.[15] For each equipment type, **Table I** of the LSA technical report shows a summary of construction phase, equipment and noise levels for the project.

Using calculation methods published by the Federal Transit Administration (FTA 2018), LSA estimated the average hourly exposures at the nearest sensitive receiver for each construction subphase. The receivers evaluated included single-family residences along the north side of the project site and single-family houses along the southwest side of the project site. The distances used for the calculation were measured from the receivers to the approximate center of activity of each construction phase, since that would be the average location of construction equipment most of the time.

The closest residential property line is approximately 375 feet from the center of the project site and may be subject to short-term construction noise reaching 71.0 dBA L_{eq}. Construction noise is temporary and would stop once project construction is completed. Compliance with the Town's hours of construction pursuant to § 9.34.080(F)(3) of the Town's Municipal Code listed below would ensure construction-related noise would not be generated during the more sensitive nighttime hours. Furthermore, construction related noise levels would be below the FTA noise level standard of 80 dBA L_{eq} for residential uses.

Therefore, noise levels generated from project construction would be less than significant. No mitigation measures are required.

Operational Noise

Onsite

Onsite operational stationary noise would include parking activities and heating, ventilation, and air conditioning (HVAC) equipment. Noise generated from parking lot activities would include noise generated by vehicles traveling at slow speeds, engine start-up noise, car door slams, car horns, car alarms, and tire squeals (LSA, 2024a, pp. 13-14). Noise levels generated from project operations during daytime and nighttime hours at the closest residential property line would reach up to a combined stationary noise level of 38.2 and 35.4 dBA L_{eq}, respectively. Also, maximum noise levels generated from project operations during both daytime and nighttime hours at the closest residential property line would reach up to 51.5 dBA L_{max} (LSA, 2024a, p. 14). This maximum noise level would not exceed the Town's daytime and nighttime maximum noise standards of 55 dBA and 45 dBA for residential uses, respectively (LSA, 2024a, p. 7).

Mobile Sources

According to the *Sun Mesa Mini Storage Project Trip Generation and Vehicle Miles Traveled Memorandum* (LSA, 2024b) in **Appendix I**, the project is estimated to generate an average daily traffic (ADT) volume of 137. The existing ADT volume on SR-247 ranges between 2,950 and 11,837 according to the 2022 Caltrans Annual Average Daily Truck Traffic for Truck Traffic on California

[15] See **Section 4.3** and **Section 4.8**.

State Highways (Caltrans 2022). Also, the existing ADT volume on Buena Vista Drive is 3,643 based on the Yucca Valley General Plan Update Environmental Impact Report (Town of Yucca Valley, 2014). In addition, Sun Mesa Drive is a two-lane road similar to Buena Vista Drive and would experience a similar noise increase. It takes a doubling of traffic to increase traffic noise levels by 3 dBA, which represents the threshold change in noise level that is perceptible to the human ear. Based on the information above, project-related traffic on SR-247, Buena Vista Drive, and Sun Mesa Drive would increase traffic noise levels by up to 0.2 dBA. A noise level increase of less than 1 dBA would not be perceptible to the human ear. Therefore, no traffic noise impacts from project-related traffic on off-site sensitive receptors would occur. No mitigation measures are required.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Less than Significant Impact

Vibration is sound radiated through the ground. It can result from a source (e.g., subway operations, vehicles, machinery equipment, etc.) causing the adjacent ground to move, thereby creating vibration waves that propagate through the soil to the foundations of nearby buildings. This effect is referred to as groundborne vibration. The peak particle velocity (PPV) or the RMS velocity is usually used to describe vibration levels. PPV is defined as the maximum instantaneous peak of the vibration level, while RMS is defined as the square root of the average of the squared amplitude of the level. PPV is typically used for evaluating potential building damage, while RMS velocity in dB is typically more suitable for evaluating human response.

The background vibration velocity level in residential areas is usually around 50 vibration decibels (VdB). The vibration velocity level threshold of perception for humans is approximately 65 VdB. A vibration velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels for most people. Most perceptible indoor vibration is caused by sources within buildings such as operation of mechanical equipment, movement of people, or the slamming of doors. Typical outdoor sources of perceptible groundborne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the groundborne vibration from traffic is rarely perceptible. The range of interest is from approximately 50 VdB to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings.

Construction Vibration

Construction activities for the project have the potential to generate low levels of groundborne vibration. The operation of construction equipment generates vibrations that propagate though the ground and diminish in intensity with distance from the source. Vibration impacts can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage of buildings at the highest levels. The construction activities associated with the project could have an adverse impact on both sensitive structures (i.e., building damage) and populations (i.e., annoyance).

Table K in the LSA noise memorandum lists the projected vibration levels from various types of construction equipment expected to be used on the project site at the project construction boundary to the nearest buildings in the project vicinity. As shown in Table K, the residential and industrial buildings to the southeast and south of the project site are approximately 200 feet and 80 feet from the project construction boundary respectively and would experience a vibration level of up to 0.004 PPV (in/sec) and 0.016 PPV (in/sec), respectively. These vibration levels would not result in building

damage because residential and industrial buildings would be constructed equivalent to or better than nonengineered timber and masonry, and vibration levels would not exceed the FTA vibration damage threshold of 0.20 PPV (in/sec). Other building structures that surround the project site would experience lower vibration levels because they are located further away.

Operational Vibration

The proposed project would not generate operational vibration. In addition, vibration levels generated from project-related traffic on the roadways (SR-247, Buena Vista Drive, Sun Mesa Drive, and Newton Lane) leading to the project site are unusual for on-road vehicles because the rubber tires and suspension systems of on-road vehicles provide vibration isolation. Vibration generated from operations of the project would be minimal to negligible and would not exceed the Town's vibration standard of 0.2 in/sec. Therefore, vibration impacts from project-related operations would be less than significant. No mitigation measures are required.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact

The closest public airport to the project site is Yucca Valley Airport, which is 2.5 miles southeast of the project site. Based on the *Airport Comprehensive Land Use Plan for Yucca Valley Airport* (San Bernardino County 1992), the project site is well beyond the 60 dBA CNEL noise contour. Also, there are no private airstrips within two miles of the project site. Therefore, the project would not expose people working in the project vicinity to aviation-related excessive noise levels. Impacts would not be significant.

4.14 Population and Housing

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				**X**
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				**X**

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

No Impact

The proposed project entails the development of a self-storage facility consisting of approximately 541 storage units, a manager's office, parking areas, and associated landscaping on an approximately 4.34-acre site in the Town of Yucca Valley. The project does not include residential units or commercial uses that would accommodate a residential workforce. The staffing requirements are minimal and would not generate housing demand or population influx.

Additionally, although the project includes utility connections and limited road improvements (half-width improvements to Newton Lane), these upgrades are typical infrastructure improvements necessary to serve the proposed project and are not designed or sized to facilitate broader regional development. No new roadways or major infrastructure extensions beyond what is required for the project's internal circulation and direct access are proposed. Therefore, the project would not directly or indirectly induce substantial unplanned population growth and there is no impact.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact

The proposed project site is currently vacant and does not contain any existing residential structures or occupied housing. As such, implementation of the proposed self-storage facility would not displace any residents or existing housing units. There would be no need for construction of replacement housing, no displacement-related impacts would occur, and there is no impact.

4.15 Public Services

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a) Fire protection?				**X**
b) Police protection?				**X**
c) Schools?				**X**
d) Parks?				**X**
e) Other public facilities?				**X**

a) Fire protection?

No Impact

Public service impacts, including fire protection, are based on whether a project would increase the population in the area. The proposed storage facility, which does not include a residential element, would not increase the population in the area and would employ people living in the area. Therefore, there would be no impact.

b) Police protection?

No Impact

Public service impacts, including police protection, are based on whether a project would increase the population in the area. The proposed storage facility, which does not include a residential element, would not increase the population in the area and would likely employ people already in the area. Therefore, there would be no impact.

c) Schools?

No Impact

Public service impacts, including schools, are based on whether a project would increase the population. The proposed storage facility, which does not include a residential element, would not increase the population in the area and would employ people in the area. Therefore, there would be no impact.

d) Parks?

No Impact

Public service impacts, including parks, are based on whether a project would increase the population. The proposed storage facility, which does not include a residential element, would not increase the population in the area and would employ people in the area. Therefore, there would be no impact.

e) Other Public Facilities?

No Impact

Public service impacts, including libraries and hospitals, are based on whether a project would increase the population in the area. The proposed storage facility, which does not include a residential element, would not increase the population in the area and would employ people in the area. Therefore, there would be no impact.

4.16 Recreation

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				**X**
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				**X**

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact

Recreational services in the Town of Yucca Valley are provided by the Town's Department of Community Services, which maintains nine built parks and two open spaces (Town of Yucca Valley 2025a). The Town's Park acreage standard is three acres of public park land per 1,000 residents. The City currently has approximately 270 acres total in parks and land for public use, enough to meet this performance standard. Existing parks within approximately 3 to 5 linear miles of the project site include (Town of Yucca Valley 2014, 2025):

Community Center Park – approximately **2.8 miles south**

- About 10 acres.
- Includes open turf areas, walking/jogging paths, basketball courts, baseball field, and soccer field.
- Serves as a general community recreation area for passive and active uses.

Brehm Park – approximately **2.75 miles southwest**

- Community park (approx. 12 acres).
- Contains walking paths, open play areas, turf fields, and passive recreation amenities.
- Used by local residents for walking, running, and informal outdoor activities.

Paradise Park – approximately **3 miles southeast**

- Neighborhood park (~2–3 acres).
- Includes a playground, picnic areas, and at least one pickleball court.

- Serves nearby residential neighborhoods for children's play and small-scale recreational use.

North Park – approximately **4.5 miles southwest**

- Local community-serving park.
- Provides neighborhood-level open space and outdoor recreation opportunities.
- (No formal acreage or detailed amenity description available through public sources.)

Essig Park – approximately **4.6 miles south**

- Community park with playground areas, turf, seating/picnic space, and dog-friendly features.
- Recently improved with upgraded walkways, new shade structures, and irrigation enhancements.
- Serves families and local residents for passive recreation.

Demand for parks is generated by the population in the parks' service areas. The proposed project involves a self-storage facility, consisting of 16 detached storage structures, totaling approximately 89,700 square feet and a 400 square foot manager's office. The proposed project would not increase population in the parks' service areas and thus would not increase use of the parks. Therefore, there would be no impacts on parkland and park facilities.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

No Impact

The proposed project is on undeveloped land. Project development does not include recreation facilities and would not require the construction or expansion of existing recreational facilities. Therefore, there would be no impact.

4.17 Transportation

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			**X**	
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			**X**	
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			**X**	
d) Result in inadequate emergency access?			**X**	

The following analysis is based upon the Trip Generation and Vehicle Miles Traveled (VMT) Analysis (LSA, 2024b) that was prepared following the San Bernardino County Transportation Impact Study Guidelines and the CEQA Guidelines (ref. **Appendix I**).

a) Would the project conflict with a program plan, ordinance or policy addressing circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less than Significant Impact

San Bernardino County Congestion Management Program (CMP)

The proposed project would not conflict with or result in inconsistencies with the San Bernardino County Congestion Management Program (CMP), administered by the San Bernardino County Transportation Authority (SBCTA). The CMP requires further evaluation for projects that generate more than 250 peak-hour trips, or that are expected to impact designated CMP facilities.

According to the Trip Generation Analysis prepared for the project, the project would generate approximately nine a.m. peak-hour and 15 p.m. peak-hour trips, for a total of 137 daily trips. These volumes fall well below the 250-trip CMP screening threshold (LSA, 2024b). Additionally, the project site is not located adjacent to or expected to generate measurable traffic on CMP-designated facilities, such as State Route 247 (SR-247) or State Route 62 (SR-62).

Therefore, based on its type and size, location, and trip generation, the project would not result in a significant impact to the regional transportation network and is considered to be exempt from CMP review requirements and no conflict with the CMP would occur.

San Bernardino County Active Transportation Plan

The proposed project would not conflict with the goals or policies of the San Bernardino County Active Transportation Plan, which promotes safe, connected infrastructure for pedestrians and

bicyclists throughout the County, including coordination with local jurisdictions such as the Town of Yucca Valley.

While no existing bicycle or pedestrian facilities are located along Newton Lane or Sun Mesa Drive adjacent to the project site, the Town of Yucca Valley General Plan Circulation Element identifies future Class II bicycle lanes along Buena Vista Drive, located south of the project area. The project would not obstruct or preclude these planned facilities and does not involve road widening or alterations that would degrade pedestrian or bicycle safety or connectivity.

Internally, the project includes sidewalks and pedestrian pathways to facilitate safe access between the parking areas and the manager's office, which aligns with the Active Transportation Plan's goal to support pedestrian accessibility within private developments. Because the project does not reduce or impair any existing or proposed regional active transportation routes and includes provisions for onsite pedestrian circulation, it is considered consistent with the SBCTA Active Transportation Plan. Therefore, no impact would occur with respect to regional active transportation policies.

San Bernardino Countywide Complete Streets Policy

The proposed project would not conflict with the San Bernardino Countywide Complete Streets Policy, adopted by the San Bernardino County Transportation Authority (SBCTA) to promote the design and development of transportation networks that safely accommodate all users, including motorists, pedestrians, bicyclists, and transit riders of all ages and abilities.

The project is located on Newton Lane in the Town of Yucca Valley, where existing pedestrian and bicycle infrastructure is currently limited as detailed above. However, the proposed project would not alter public rights-of-way in a manner that would preclude future multimodal improvements. It also includes internal pedestrian pathways consistent with the policy's emphasis on accessible internal circulation.

Although the project is not directly adjacent to any active transportation corridors, it would not obstruct planned infrastructure identified in the Town of Yucca Valley General Plan Circulation Element, including proposed Class II bicycle lanes along Buena Vista Drive. In addition, the project's scale and use are low traffic-generating and do not introduce safety conflicts for non-motorized users.

The project supports the intent of the SBCTA Complete Streets Policy by maintaining flexibility for future multimodal enhancements and providing safe internal pedestrian access. Therefore, the project is considered consistent with the Countywide Complete Streets Policy, and no impact would occur.

Town of Yucca Valley General Plan – Mobility and Transportation

As previously mentioned, the project is expected to generate approximately 137 daily vehicle trips, including nine a.m. peak-hour trips and 15 p.m. peak-hour trips. These volumes fall well below San Bernardino County's threshold of 100 peak-hour trips, which would otherwise necessitate a full Transportation Impact Study (TIS). Further, the proposed project does not include a zone change or a General Plan amendment. As such, the project would not result in a substantial increase in vehicle traffic or roadway congestion and is consistent with applicable circulation policies outlined in the Town of Yucca Valley General Plan Circulation Element (Town of Yucca Valley, 2014).

Table 4.17 below provides a detailed validation of the project's consistency with the Mobility and Transportation goals and policies outlined in the Town of Yucca Valley General Plan.

Table 4.17-1
COMPLIANCE WITH YUCCA VALLEY GENERAL PLAN – CIRCULATION ELEMENT

Goal / Policy	Consistency Analysis
GOAL C 1: A constraints-based circulation system that balances the needs of goods movement, nonautomotive use, and complete streets.	
Roadway Classification Policies	
Policy C 1-1 Utilize a constraints-based planning process to evaluate future transportation improvements.	*Consistent.* Project adheres to local street constraints and does not require capacity beyond typical industrial use; improvements along Newton Lane and Sun Mesa Drive reflect localized constraints-based planning.
Policy C 1-2 Pursue funding, including updating the transportation impact mitigation fee program, to assist in implementing the transportation system by expanding its roadway capacity, pedestrian sidewalk facilities, bicycle facilities, and trail facilities.	*Consistent.* Offsite improvements are proposed; development impact fees and future Town updates to the fee program will assist in network-wide transportation funding.
Policy C 1-3 Strive to maintain vehicle level of service (LOS) D on all roadways within the Town. Utilize the roadway capacities, as identified in Table C-1, to evaluate roadway operations.	*Consistent.* Project generates minimal traffic and would not degrade LOS below D. If a transportation study is prepared, LOS D compliance will be verified against Table C-1 capacities.
Policy C 1-6 Protect rights-of-way for SR-62 and SR-247, major arterials, collectors, residential streets, and for all other planned infrastructure as shown on the figures above.	*Consistent.* Improvements respect existing ROW on Newton Lane and Sun Mesa Drive; the project does not encroach on SR-62/SR-247 alignments.
Policy C 1-7 Encourage development designs that integrate multiple modes of access, including pedestrian, bicycle, and public transportation.	*Consistent.* The project includes internal pedestrian paths, ADA access, and driveways wide enough for service vehicles, integrating multimodal access on-site.
Complete Streets Policies	
Policy C 1-8 Apply complete street strategies that accommodate pedestrian, bicycle, and transit.	*Consistent.* While not a typical complete streets project, the facility integrates sidewalks and ADA features, promoting internal pedestrian safety.
Policy C 1-9 Require sidewalk improvements concurrent with new development where commercial and school uses are planned and where residential densities exceed two units per acre, or as required by the Planning Commission.	*Consistent.* Sidewalks are proposed along Newton Lane and Sun Mesa Drive consistent with Town requirements.
Efficient Goods and Services Movement Policies	
Policy C 1-15 Design designated truck routes such that the pavement, roadway width, and curb return radii support anticipated heavy vehicle use.	*Consistent.* Driveways and internal circulation lanes are designed to accommodate moving trucks and delivery vehicles, consistent with industrial roadway geometry.
Policy C 1-16 Support and work with Caltrans to coordinate signals along SR-62 and SR-247 in Town.	*Consistent.* While the project does not front SR-62/SR-247, its location and access points support the local freight network, especially with paved improvements and loading zones.
Policy C 1-17 Ensure funding is available to implement and maintain signal coordination.	

Policy C 1-18 Maintain truck route designations to support heavy vehicle use and connections to the Yucca Valley Airport as noted on Figure C-3.	
Traffic Management Policies	
Policy C 1-20 Require future development to pave roadways that will serve 500 or more daily trips as noted in Table C-1 unless paving of that facility is considered infeasible by the Town, there is no funding for the improvement, or when the majority of the residents on that facility desire it to be unpaved.	*Consistent.* Project proposes paving of Newton Lane and Sun Mesa Drive, supporting this policy's directive for roads serving 500+ ADT.
Policy C 1-21 Pursue funding to pave unpaved roadways where the traffic volume exceeds 500 daily trips unless paving of that facility is infeasible or when the majority of the residents on that facility desire it to be unpaved.	*Consistent. Dust control will be implemented during construction; paved access will reduce future dust emissions and aligns with the Town's dust minimization goals.*
Policy C 1-22 Minimize dust emissions on existing and new unpaved roads where traffic volumes exceed 500 daily trips.	
Policy C 1-25 Maintain truck routes through town for efficient freight transportation service to businesses and industry while limiting impacts to residents and visitors.	*Consistent.* Project supports local freight and delivery needs without impacting residential zones, thus maintaining appropriate use of designated truck routes.
GOAL C 2: A full range of public utilities and related services that provide for the immediate and long-term needs of the community.	
Policies	
Policy C 2-1 Work with utility providers in the planning, designing, and siting of distribution and support facilities to comply with the standards of the General Plan and Development Code.	*Consistent.* Utility coordination with High Desert Water District, SCE, and septic provider has been incorporated into project planning.
Policy C 2-2 Work with utility providers to increase service capacity as demand increases.	*Consistent.* The project's infrastructure extensions support capacity growth; future service expansions can accommodate increased demand in the industrial area.
Policy C 2-3 Coordinate public infrastructure improvements through the Town's Capital Improvement Program.	*Consistent.* Project improvements are consistent with Town capital improvement priorities and will be subject to coordination during final approvals.
Policy C 2-4 Encourage the shared use of right-of-way, transmission corridors, and other appropriate measures to minimize the visual impact of utilities infrastructure throughout Town.	*Consistent.* Utility connections will use existing corridors. Visual impacts are minimized via undergrounding and site screening.
Policy C 2-5 Require that approval of new development be contingent upon the project's ability to secure appropriate infrastructure services.	*Consistent.* No development approval will be granted without full confirmation of water, electricity, and septic availability and feasibility.

Bicycle and Pedestrian Circulation

There are currently no existing bicycle lanes or continuous sidewalk facilities adjacent to the project site. In addition, the project would not interfere with any proposed bicycle infrastructure outlined in the Town of Yucca Valley General Plan Circulation Element, including future Class II bike lanes along Buena Vista Drive, located south of the project site. Pedestrian infrastructure in the area is limited,

and the project would not result in the removal or obstruction of any sidewalks or pedestrian pathways.

Public Transit

The nearest fixed-route transit service in the vicinity is provided by Basin Transit (formerly Morongo Basin Transit Authority). The closest stop is located at the Yucca Valley Transit Center, situated at Yucca Trail & Airway Road, which is part of Basin Transit's Route 21 -Landers–Yucca Valley loop. This transit center is approximately two miles west of the project site at Newton Lane and Sun Mesa Drive, confirming that no fixed-route stops are located along Newton Lane or Sun Mesa Drive, and the project site lies outside of immediate transit coverage (Basin Transit, 2025). The project would not alter or conflict with Basin Transit service routes or schedules, and no transit stop improvements are proposed or required.

As detailed above, the proposed project would not conflict with any applicable policies from the town's General Plan addressing circulation system, including transit, roadway, bicycle and pedestrian facilities. Therefore, the project would have a less than significant impact in this regard.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)

Less Than Significant Impact

Under the 2025 CEQA Guidelines §15064.3(b), vehicle miles traveled (VMT) is the required metric for determining transportation impacts as the basis for significance under CEQA. A Trip Generation and VMT Analysis was prepared for the proposed project by LSA Associates, Inc. (LSA, 2024b). included as **Appendix I**, consistent with the San Bernardino County Transportation Impact Study Guidelines and SBCTA screening protocols.

Based on the analysis, the project is located in a low-VMT zone, defined as a traffic analysis zone (TAZ) where baseline VMT is at least four percent below the County average. The San Bernardino County average VMT per worker is 16.9, while the proposed project's TAZ has a VMT of 9.6 per worker, which is 43.19 percent below the County average and detailed in **Table 4.17-2**. Therefore, the project qualifies for screening and is presumed to result in a less than significant impact, unless there is pertinent information to the contrary.

Table 4.17-2
PROJECT VMT ANALYSIS

Metric	County Threshold	Project Value	Difference	Significance
VMT per worker (County average)	16.9	9.6	–43.19 percent	Less than significant
Screening threshold (low-VMT zone)	≥4 percent below average	Yes	Met	No detailed analysis required

Source: LSA Associates, 2024

Because the project falls below both the screening threshold and trip generation thresholds and is located within a low-VMT zone, it is exempt from detailed VMT modeling and would not conflict with CEQA Guidelines §15064.3(b). Therefore, the project would have a less than significant impact.

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less than Significant Impact

The proposed project includes two standard 30-foot-wide driveways along Newton Lane, which provide adequate access for vehicles, including emergency responders, in accordance with the Town of Yucca Valley development standards and California Fire Code access requirements. Internal drive aisles range from 15 to 30 feet in width, sufficient to accommodate typical passenger vehicles and service trucks associated with self-storage operations. The site plan will be reviewed for compliance with applicable geometric design standards, and no unusual roadway features—such as sharp curves, blind intersections, or non-standard turning radii—are proposed.

The proposed self-storage facility is consistent with the site's Industrial zoning and would not introduce an incompatible use, such as agricultural or heavy industrial operations requiring farm equipment or off-road vehicles. No hazardous design elements or incompatible land use conflicts have been identified. Therefore, the project would not result in hazardous conditions due to design features or surrounding uses, and a **less than significant** impact would occur.

d) Would the project result in inadequate emergency access?

Less than Significant Impact

Construction

The project would not result in inadequate emergency access during construction. All construction activities, including grading, utility installation, and building erection, would be confined to the 4.34-acre project site with the exception of half-roadway improvements along Newton Lane and Sun Mesa Drive. Temporary barricades and perimeter fencing would be installed for safety, but access points along Newton Lane would remain unobstructed for emergency vehicles. Construction staging and worker parking would occur entirely on-site, ensuring that public roads remain clear. Compliance with the California Fire Code and coordination with the San Bernardino County Fire Protection District will be required to ensure that emergency access routes are maintained throughout all construction phases. Therefore, a **less than significant** to emergency access during construction would occur.

Operation

During project operation, emergency access would be fully accommodated via two 30-foot-wide driveways off Newton Lane, which exceed minimum width requirements for emergency vehicle ingress and egress. Internal circulation lanes range from 15 to 30 feet wide, which allows sufficient turning radii and maneuverability for fire apparatus and emergency responders. The site will also feature rolling security gates at driveway entrances that are designed to be accessible to first responders per Fire District specifications. The project's design and circulation layout have been or will be reviewed by the San Bernardino County Fire Protection District during the permitting process to ensure full compliance with emergency access standards. Therefore, a **less than significant** to emergency access during operation would occur.

4.18 Tribal Cultural Resources

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a tribal cultural resource that is listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources as defined in Public Resources Code § 5020.1(k)?				**X**
b) Cause a substantial adverse change in the significance of a tribal cultural resource that is determined to be a significant resource to a California Native American tribe pursuant to the criteria set forth in subdivision (c) of Public Resource Code § 5024.1(c)?		**X**		

Information from the LSA Phase I Cultural Resources Assessment Report, dated August 2025 for the proposed project (refer to **Appendix D**) is included in the analysis below.

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource that is listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources as defined in Public Resources Code § 5020.1(k)?

No Impact

No resources as defined by Public Resources Code §21074 have been identified. Additionally, the project site has not been recommended for historic designation for prehistoric and Tribal Cultural Resources (TCRs). No tribal cultural sites were documented in the Native American Heritage Commission's Sacred Lands File (SLF) search. No specific tribal resources have been identified.

No prehistoric or historic archaeological resources were observed during the field survey conducted on July 20, 2024, by LSA Archaeologist Cassidy Sharp as part of the cultural resources investigation (**Appendix D**).

Based on the SCCIC cultural resources records search on July 11, 2024, it was determined that there are no prehistoric or historic cultural resources previously recorded within the project site boundary. Within the one-mile buffer zone, there have been three recorded resources, one of them prehistoric and two historic-era. The single prehistoric site within the one-mile buffer of the project boundary is a lithic artifact scatter (36-002379). This artifact scatter is located approximately 0.29 mile southwest of the project site. The two historic period resources include a 1950s residence at 4451 Old Woman Springs Road (36-027695) and a segment of Old Woman Springs Road (36-010716), a route dating to the 19th century that is located approximately 160 meters/530 feet to the

west. There have been 16 previous cultural resource studies within the one-mile buffer of the project. None of these surveys intersects the current project boundary. (**Appendix D** to this IS/MND).

No tribal cultural resources onsite are listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources as defined in Public Resources Code § 5020.1(k). Therefore, the project would have no impact in this regard.

b) Would the project cause a substantial adverse change in the significance of a tribal cultural resource that is determined to be a significant resource to a California Native American tribe pursuant to the criteria set forth in subdivision (c) of Public Resource Code § 5024.1(c)?

Less than Significant Impact with Mitigation Incorporated

Assembly Bill 52 (AB 52) requires meaningful consultation with California Native American Tribes on potential impacts on TCRs, as defined in Public Resources Code § 21074. TCRs are sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either eligible or listed in the California Register of Historical Resources or local register of historical resources (CNRA, 2007).

As part of the AB 52 process, Native American tribes must submit a written request to the lead agency to be notified of projects within their traditionally and culturally affiliated area. The lead agency must provide written, formal notification to those tribes within 14 days of deciding to undertake a project. The tribe must respond to the lead agency within 30 days of receiving this notification if they want to engage in consultation on the project, and the lead agency must begin the consultation process within 30 days of receiving the tribe's request. Consultation concludes when either (1) the parties agree to mitigation measures to avoid a significant effect on a tribal cultural resource, or (2) a party, acting in good faith and after reasonable effort, concludes mutual agreement cannot be reached.

The Town of Yucca Valley (the lead agency) is conducting AB 52 outreach with local tribes for the Sun Mesa Mini Storage Project. The Lead Agency has prepared and sent letters via certified mail and emails on April 4, 2024 and again on July 30, 2025 with the corrected project number to the several tribes on the City's list for AB 52 contact, and to the Agua Caliente Band of Cahuilla Indians on October 8, 2025 informing them of the project. The letters convey that the recipient has 30 days from the receipt of the letter to request AB 52 consultation regarding the project.

The tribes contacted included:

- Lacy Padilla, Director of Historic Preservation/THPO, Agua Caliente Band of Cahuilla Indians
- Ann Brierty, THPO, Morongo Band of Mission Indians
- Robert Martin, Chairperson, Morongo Band of Mission Indians
- Jill McCormick, Historic Preservation Officer, Quechan Tribe of the Fort Yuma Reservation
- Vanessa Minott, Tribal Administrator Santa Rosa Band of Cahuilla Indians
- Mark Cochrane, Co-Chairperson, Serrano Nation of Mission Indians
- Wayne Walker, Co-Chairperson, Serrano Nation of Mission Indians
- Joseph Ontiveros, Tribal Historic Preservation Officer, Soboba Band of Luiseno Indians

- Manfred Scott, Acting Chairman - Kw'ts'an Cultural Committee; Quechan Tribe of the Fort Yuma Reservation
- Jordan Joaquin, President, Quechan Tribal Council; Quechan Tribe of the Fort Yuma Reservation
- Alexandra McCleary, Senior Manager of Cultural Resources Management, San Manuel Band of Mission Indians
- Steven Estrada, Tribal Chairman, Santa Rosa Band of Cahuilla Indians
- Jessica Valdez, Cultural Resource Specialist Soboba Band of Luiseno Indians
- Nicolas Garza, Cultural Resources Specialist, Twenty-Nine Palms Band of Mission Indians
- Sarah O'Brien, Tribal Archivist Twenty-Nine Palms Band of Mission Indians
- Christopher Nicosia, Cultural Resources Manager/THPO Manager Twenty-Nine Palms Band of Mission Indians

The Twenty-Nine Palms Band of Mission Indians responded by email to Jared Jerome, Town of Yucca Valley Associate Planner, on September 15, 2025 with a letter attached dated September 12, 2025. The letter from Chairman Darrell Mike indicated that the project is within the Chemehuevi Traditional Use Area but no known cultural resources are located within the project's APE but there exists the possibility of surface or buried materials on the site. Chairman Mike asked that the Lead Agency follow specific conditions for all cultural resources on any development plans and indicated that Mr. Nicolas Garza, Tribal Historic Preservation Officer can be contacted for further consultation. Mr. Jerome responded on September 15, 2025 with a question about a potential missing sentence and providing projects documents including the Cultural Resources Assessment. Mr. Jerome also asked if Mr. Garza would like to have a meeting or if there are specific mitigation measures or conditions you would like to be included with the project. No further response has been received from Twenty-Nine Palms Band of Mission Indians.

The Yuhaaviatam of San Manuel Nation (formerly the San Manuel Band of Mission Indians) responded by email on April 12, 2024 . Ms. Kristine Tuosto, Tribal Archaeologist, requested the following for review: Cultural report, Geotechnical report, project plans showing the depth of proposed disturbance. This information will assist Yuhaaviatam of San Manuel Nation in ascertaining how the Tribe will assume consulting party status under CEQA. Ms. Tuosto sent a second request for this information on July 12, 2024. Mr. Jerome responded on July 22, 2025 that these studies are still being prepared and should be completed between August and October. Ms. Raylene Borrego, Cultural Resources Technician contacted Mr. Jerome through email on December 2, 2024 asking about the update on the required studies. Mr. Jerome responded that all of the technical studies have not been completed but that the grading plan and Cultural study was completed and those were provided. Ms. Borrego responded on December 2, 2024 indicating that after reviewing the cultural report and with their knowledge of the area the tribe has determined the project may have potential for inadvertent discoveries of Tribal Cultural Resources and requests that a series of Cultural and Tribal Mitigation Measures provided be made part of the project's mitigation measures. These Tribal Cultural Resources measures are included in the Mitigation Measures for this project as **MM TCR-1** and **MM TCR-2**.

The Morongo Band of Mission Indians responded by email to Mr. Jerome on May 8, 2024. Ms. Bernadette Ann Brierty, Tribal Historic Preservation Officer, indicated that the Project is located within the ancestral territory and traditional use area of the Cahuilla and Serrano people of the Morongo Band of Mission Indians and requested government-to-government consultation with the Town of Yucca Valley. The tribe indicated that tribal monitoring is recommended during the cultural resource surveys and future construction phases of the Project. The tribe requests a California

Historical Resources Information System (CHRIS) records search conducted with at least a 1.0-mile search radius from the project boundary, tribal participation (a.k.a. tribal monitors) during the pedestrian survey and testing and copies of the Phase I study if this work has taken place, shape files of the Project's area of effect, Geotechnical Report, and current Project design and Mass Grading Maps. Mr. Jerome responded by email on September 18, 2025 with much of the requested materials except the shapefiles as they don't have that for the proposed project. Mr. Jerome also asked if the tribe had any questions, would like to have a meeting or would like to add specific conditions of approval for the project to please contact him. Mr. Jerome responded by email on November 5, 2025 asking if the tribe is interested in consulting on this project and asked for dates and times for a meeting if preferred. No response has been received.

The Agua Caliente Band of Cahuilla Indians responded by email on October 10, 2025 indicating that the project area is not located within the boundaries of the ACBCI Reservation, but it is within the Tribe's Traditional Use Area, Due to this, the Tribe requests consultation on this project. In a follow up letter received November 3, 2025, Anthony Kline, Cultural Resources Analyst indicated that for this project a Cultural Resource Monitor(s) from a Consulting tribe should be onsite during all ground disturbing activities, including testing and surveys and can request that construction halt if resources are encountered. The tribe also requested that the archaeologist on site must meet the Secretary of Interior's standards. The last request from the tribe is that if any Tribal Cultural Material is found, in collaboration with Agua Caliente, it be reburied on site if avoidance is not feasible. The tribe also asked to review San Manuel's Mitigation measure and that it no other consultation tribe requests monitoring to please contact Agua Caliente to provide that service. The Mitigation Measures from the San Manuel Band of Indians was provided to the tribe on November 3, 2025. Mr. Jerome provided the TCR section for review and the tribe provided two comments.

Given the local Native American tribal concerns for potential traditional cultural resources, mitigation measures provided by the Yuhaaviatam of San Manuel Nation will be implemented to further reduce potential impacts to less than significant levels. At the request of the Morongo Band of Mission Indians a Mitigation Measure for Tribal Monitoring will be included. Consultation has been concluded for this project as of November 17, 2025.

Construction activities associated with development of the project would involve new subsurface disturbance and could result in the unanticipated discovery of cultural resources, with the implementation of mitigation measure **MM TCR-1** and **MM TCR-3** this impact would be less than significant. In the unlikely event of an unexpected discovery of human remains, **MM TCR-2** would ensure that impacts related to the accidental discovery of human remains would be less than significant.

Mitigation Measures

MM TCR-1: **Treatment of Cultural Resources During Project Implementation**. If a pre-contact cultural resource is discovered during project implementation, ground-disturbing activities shall be suspended 60 feet around the resource(s), and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed.

The Secretary of the Interior Qualified Project Archaeologist shall develop a research design that shall include a plan to evaluate the resource for significance under CEQA criteria. Representatives from the Consulting Tribes (Yuhaaviatam of San Manuel Nation (YSMN), Morongo Band of Mission

Indians (Morongo), and the Agua Caliente Band of Cahuilla Indians), the Archaeologist, and the Lead Agency shall confer regarding the research design, as well as any testing efforts needed to delineate the resource boundary. Following the completion of evaluation efforts, all parties shall confer regarding the resource's archaeological significance, its potential as a Tribal Cultural Resource (TCR), and avoidance (or other appropriate treatment) of the discovered resource. Removal of any cultural resource(s) shall be conducted with the presence of a Tribal monitor representing the Tribes, unless otherwise decided by YSMN and Morongo. All plans for analysis shall be reviewed and approved by the applicant and YSMN and Morongo prior to implementation, and all removed material shall be temporarily curated on-site.

It is the preference of the Consulting Tribes, that removed cultural material be reburied as close to the original find location as possible. However, should reburial within/near the original find location during project implementation not be feasible, then a reburial location for future reburial shall be decided upon by The Consulting Tribes, the landowner, and the Lead Agency, and all finds shall be reburied within this location. Additionally, in this case, reburial shall not occur until all ground-disturbing activities associated with the project have been completed, all monitoring has ceased, all cataloguing and basic recordation of cultural resources have been completed, and a final monitoring report has been issued to Lead Agency, CHRIS, and the Consulting Tribes. All reburials are subject to a reburial agreement that shall be developed between the landowner, and Consulting Tribes outlining the determined reburial process/location, and shall include measures and provisions to protect the reburial area from any future impacts.

Should it occur that avoidance, preservation in place, and on-site reburial are not an option for treatment, the landowner shall relinquish all ownership and rights to this material and confer with the Consulting Tribes to identify an American Association of Museums (AAM)-accredited facility within the County that can accession the materials into their permanent collections and provide for the proper care of these objects in accordance with the 1993 CA Curation Guidelines. A curation agreement with an appropriate qualified repository shall be developed between the landowner and museum that legally and physically transfers the collections and associated records to the facility. This agreement shall stipulate the payment of fees necessary for permanent curation of the collections and associated records and the obligation of the Project developer/applicant to pay for those fees.

All draft records/reports containing the significance and treatment findings and data recovery results shall be prepared by the archaeologist and submitted to the Lead Agency and the Consulting Tribes for their review and comment. After approval from all parties, the final reports and site/isolate records are to be submitted to the local CHRIS Information Center, the Lead Agency, and the Consulting Tribes.

MM TCR-2: **Inadvertent Discoveries of Human Remains.** If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.

MM TCR-3: **Tribal Cultural Resources Monitoring.** In consultation with Consulting tribes (San Manuel and Morongo. If they are unable to provide a monitor, Agua Caliente can provide one), the developer, and the Town of Yucca Valley, a Tribal Monitoring Plan (TMP) will be prepared to address the details, timing, and responsibility Tribal Monitoring activities that will occur on the project site. Details in the TMP shall include:

1. Monitoring of project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, archaeological testing, surveys, etc.) coordinated with these construction-related activities.

2. The development of a concurrent monitoring schedule in coordination with the developer and the designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with the project archaeologist.

3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent TCR discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

Level of Significance After Mitigation

With implementation of Mitigation Measure **MM TCR-1** and **MM TCR-3,** potential project impacts on TCRs would be less than significant. With implementation of **MM TCR-2** above, the proposed project would result in less than significant impacts to human remains and associated funerary objects.

4.19 Utilities and Service Systems

Would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Require or result in the relocation or construction of new or expanded water wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of whi1ch could cause significant environmental effects?			**X**	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			**X**	
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?				**X**
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			**X**	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			**X**	

a) Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less than Significant Impact

As discussed in **Section 3.0** the proposed project would require offsite improvements including sewer, domestic water, fire water, irrigation, and dry utilities connections to existing utility infrastructure in Newton Lane.

Wastewater Treatment and Conveyance – The proposed project includes construction of a septic tank and leach field, as the site is outside the service area of a wastewater treatment plant. The project

includes construction of wastewater lines within the project site discharging to the septic tank but would not involve connections to offsite sewers.

The proposed septic tank would have 750 gallons capacity. The project includes one proposed restroom, in the manager's office, that would contain one sink and one toilet. The septic tank would have adequate capacity for estimated project wastewater generation per the percolation testing report completed for the project by Sladden Engineering included as **Appendix G1** (Sladden, 2025b, p. 4).

Hi-Desert Water District (HDWD) is building a sewer system serving much of the town of Yucca Valley. However, the project site is outside the sewer system service area (HDWD, 2020, Figure 3A).

Domestic Water – The project site is in the HDWD service area. HDWD water supplies consist of local groundwater from the Warren Valley Groundwater Basin underlying the southern part of HDWD's service area, and the Ames Valley Groundwater Basin underlying the northern part of HDWD's service area (HDWD, 2021, p. 3-2). As analyzed below in Threshold 4.19 b), the project would result in a nominal increase in water demand and therefore, the project would have a less than significant impact regarding domestic water supplies.

Water Treatment – HDWD water supplies meet state and federal water quality standards and does not require treatment before delivery to customers (HDWD, 2021, p. 3-14).

Stormwater – Existing storm drainage onsite is via surface flow to the southwest. The project includes construction of an infiltration basin in the southwest corner of the project site that would have design capture volume of 13,243 cubic feet (DRP, 2024b). The proposed infiltration basin would meet San Bernardino County requirements for site drainage, and project impacts on stormwater drainage systems would be less than significant.

Electric Power: Electric power for the City of Yucca Valley is provided by Southern California Edison (SCE) (CEC, 2023). The proposed project is in a developed area, and infrastructure for providing electric power to the area is well established. SCE typically utilizes existing utility corridors to reduce environmental impacts and has energy-efficiency programs to reduce energy usage and maintain reliable service throughout the year (Southern California Edison, 2025. Total electricity consumption in SCE's service area is forecast to be 111,672GWh[16] in 2022 and 122,931 GWh in 2030 (CEC, 2020, Form 1.2).

The project would be constructed in accordance with applicable Title 24 regulations and would not necessitate the construction or relocation of electric power facilities. Therefore, a less than significant impact would occur.

Natural Gas: The proposed development would be all-electric, and no gas service would be provided to the project. No impacts on natural gas supplies or natural gas distribution infrastructure would occur.

Telecommunications Facilities: Frontier Communications provides telecommunications services near the project site (digalert.com, 2025). It is expected that Frontier facilities would be extended to the project site from existing lines in adjacent roadways. The proposed project would not interfere

[16] One GWH is equivalent to one million kilowatt-hours.

with the operation of telecommunications facilities, and therefore a less than significant impact would occur.

b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less than Significant Impact

Water Supplies and Demands

The Hi Desert Water District (HDWD) provides water to part of the town of Yucca Valley including the project site. HDWD water supplies consist of groundwater from two local groundwater basins, Warren Valley and Ames Valley. HDWD forecasts that it will have sufficient water supplies to meet demands in normal water year, single-dry-year, and multiple-dry-year conditions over the 2020-2040 period (HDWD, 2021, p. 5-2).

Table 4.19-1
HDWD RETAIL WATER SUPPLIES AND DEMANDS, AFY

	2025	2030	2035	2040	2045
Supplies	3,056	3,149	3,222	3,292	3,354
Demands	3,056	3,149	3,222	3,292	3,354
Difference	0	0	0	0	0

Source: HDWD, 2021, p. 5-2
AFY= Acre-Feet per Year

Self-storage businesses are estimated to use 25 gallons per day (gpd) of water per 1,000 square feet of building area (City of Los Angeles, 2006).[17] The proposed project includes development of 89,700 square feet of building area; thus, project water demand is estimated at about 2,243 gpd. HDWD demand forecasts are based on a population projection by the UC Riverside School of Business Center for Economic Forecasting and Development in 2020. The demand forecasting model includes economic indicators such as residential housing stock, home prices, and employment trends (HDWD, 2021, p. 2-6). The self-storage business is accounted for in HDWD's demand forecast. Therefore, impacts under this category are anticipated to be less than significant.

c) Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

No Impact

The proposed project includes installation and operation of a septic tank and leach field for wastewater disposal and treatment. The project site is outside of the service area of the sewer system that is under construction in the town of Yucca Valley. Project wastewater generation would have no impact on the treatment capacity of a wastewater treatment provider, and no impact would occur.

[17] The water demand factor is 125percent of the wastewater generation factor for self-storage uses from the City of Los Angeles (City of Los Angeles, 2006).

d) Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less than Significant Impact

The city contracts with Burrtec Waste & Recycling, Inc., for collection and disposal of the city's solid waste (Yucca Valley, 2025). Solid waste is disposed of at the Landers Sanitary Landfill (CalRecycle, 2025a), which is described below in **Table 4.19-2**.

Table 4.19-2
LANDFILLS SERVING YUCCA VALLEY

Facility and Nearest City/Community	Remaining Capacity, cubic yards	Daily Permitted Disposal Capacity, tons	Actual Daily Disposal, tons[1]	Residual Daily Disposal Capacity, tons	Estimated Closing Date
Landers Sanitary Landfill	11,063,811	1,200	202	998	2072

[1] Daily disposal calculated based on annual disposal tonnage assuming 300 operating days per year: that is, six days per week less certain holidays.
Sources: CalRecycle. 2025b.

Construction

Project construction would generate solid waste requiring disposal at local landfills. Materials generated during construction of the project may include paper, cardboard, metal, plastics, glass, concrete and other materials. Section 5.408 of the 2022 California Green Building Standards Code (CALGreen; California Code of Regulations, Title 24, Part 11) requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse (DGS, 2025). Project construction would include recycling and/or salvaging at least 65 percent of construction and demolition waste in accordance with the 2022 CALGreen.

Operation

No solid waste generation factor for self-storage uses is available. The solid waste generation factor for commercial uses, 0.006 pounds per day (ppd) per square foot, is for purposes of this analysis (CalRecycle, 2025c). The 89,700-square-foot project is thus estimated to generate about 538 pounds of solid waste per day (this is a conservative estimate). Adequate capacity is available at the Landers Sanitary Landfill for project-generated solid waste. Impacts would therefore, be less than significant.

e) Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less Than Significant Impact

In 1989, the California Legislature enacted the California Integrated Waste Management Act (AB 939), to address solid waste problems and capacities in a comprehensive manner. The law required each city and county to divert 50 percent of its waste from landfills by the year 2000. San Bernardino County developed a Source Reduction and Recycling Element in 1994 that aims at recycling, composting, special waste disposal, and education and public information programs.

Assembly Bill 341 (AB 341; Chapter 476, Statutes of 2011) increases the statewide waste diversion goal to 75 percent by 2020, and mandates recycling for commercial and multi-family residential land uses. The project would include storage areas for recyclable materials in accordance with AB 341.

Assembly Bill 1826 (AB 1826; California Public Resources Code Sections 42649.8 et seq.) requires recycling of organic matter by businesses, and multifamily residences of five or more units, generating such wastes in amounts over certain thresholds. Organic waste means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste. The project does not include food preparation facilities or spaces dedicated to food storage. The project includes limited landscaping along the north and west site boundaries. The project would include organics cans for storage of landscaping waste in accordance with AB 1826. The proposed project would comply with applicable local, state and federal solid waste disposal standards; therefore, impacts would be less than significant.

4.20 Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?			**X**	
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			**X**	
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			**X**	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			**X**	

a) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact

The proposed project is located within the Town of Yucca Valley, which maintains local responsibility for fire protection services and is served by the San Bernardino County Fire Department. According to CalFire's Fire Hazard Severity Zone (FHSZ) maps, the project site is within a Local Responsibility Area (LRA) (ref. **Figure 4.20-1**) and is not located in a State Responsibility Area (SRA) or within a Very High Fire Hazard Severity Zone (VHFHSZ) (ref. **Figure 4.20-2**). However, surrounding areas of Yucca Valley do include VHFHSZ designations, and the Town has adopted fire safety standards accordingly.

The project involves the development of a self-storage facility, internal drive aisles, perimeter fencing, and improved access along Newton Lane. The site plan includes two 30-foot-wide driveways providing ingress and egress, which would facilitate emergency vehicle access and on-site circulation. These design features are consistent with Town of Yucca Valley General Plan Safety Element and San Bernardino County Fire Department requirements for emergency response access.

Implementation of the project would not conflict with the Town's adopted local Hazard Mitigation Plan (Town of Yucca Valley, 2014) or the San Bernardino County Multi-Jurisdictional Hazard Mitigation Plan (County of San Bernardino, 2022). The proposed improvements do not involve road closures or modifications that would hinder evacuation routes. The project would also be subject to standard fire code compliance, including hydrant spacing, fire-flow requirements, and emergency access provisions under the California Fire Code. Therefore, while the project is in proximity to fire-prone areas, it is not situated within a designated VHFHSZ and would not impair emergency response or evacuation plans. The project would have a less than significant impact.

Figure 4.20-1
FIRE HAZARD SEVERITY ZONE - LOCAL RESPONSIBILITY AREA

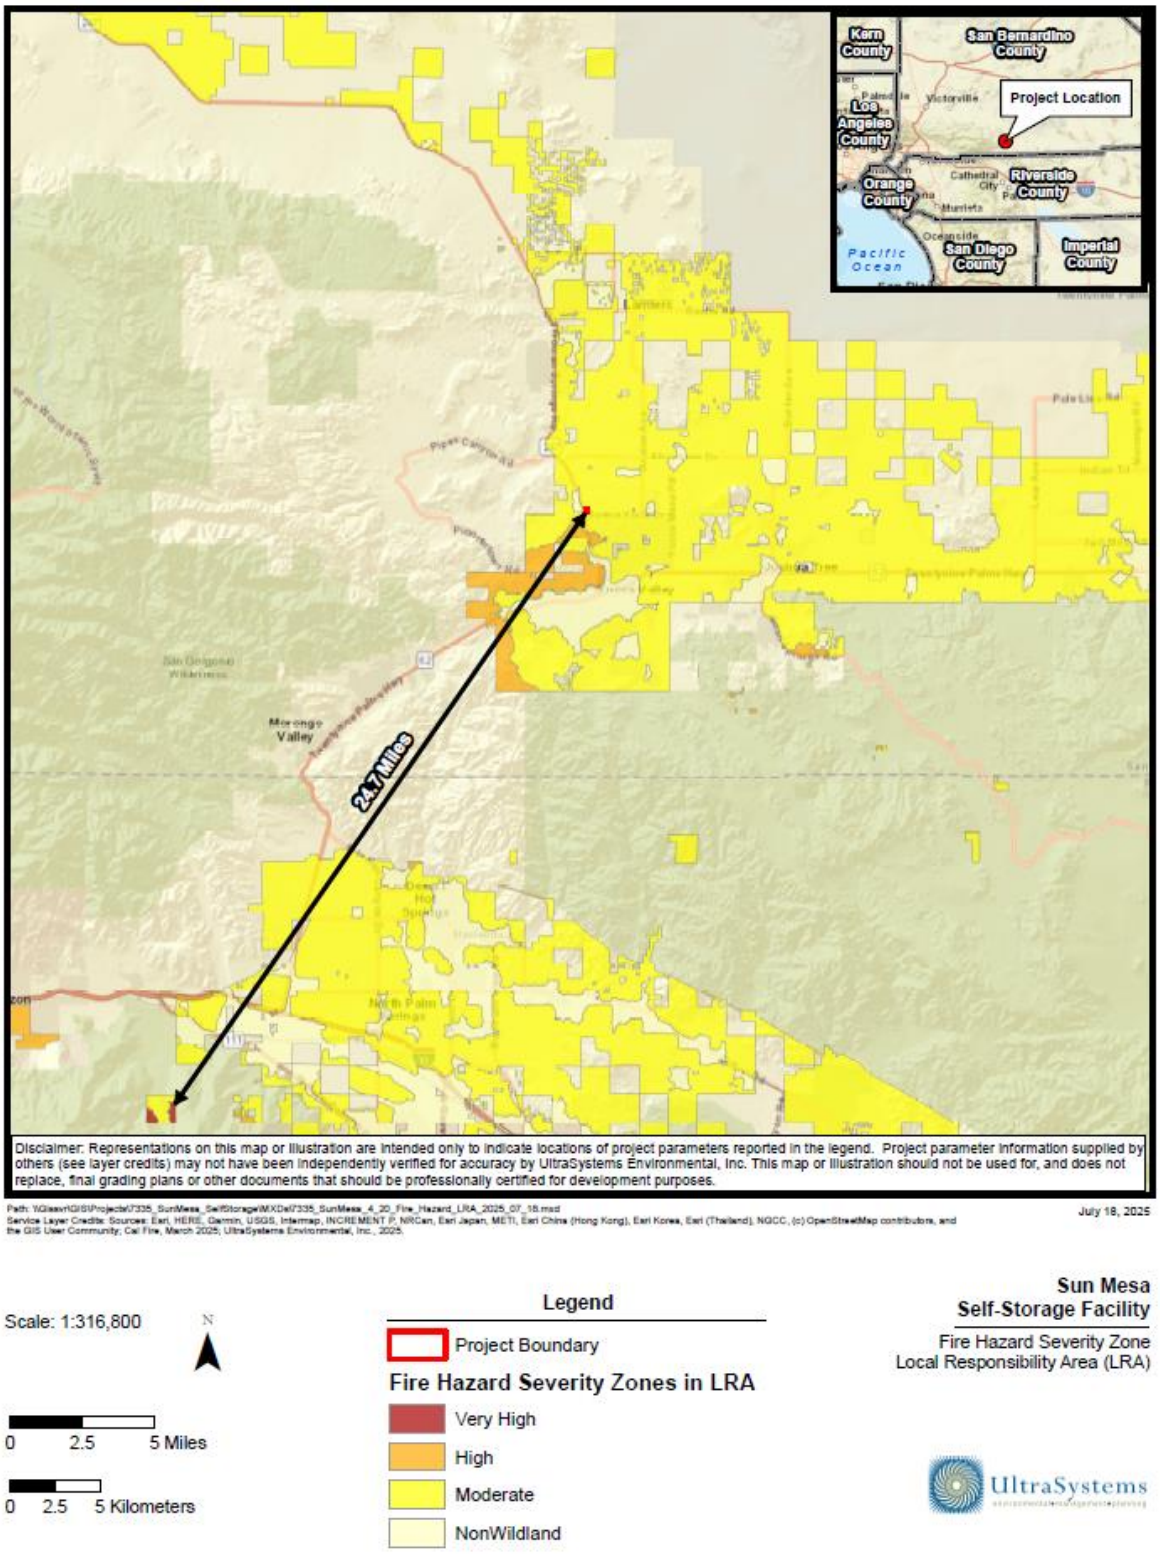


Figure 4.20-2
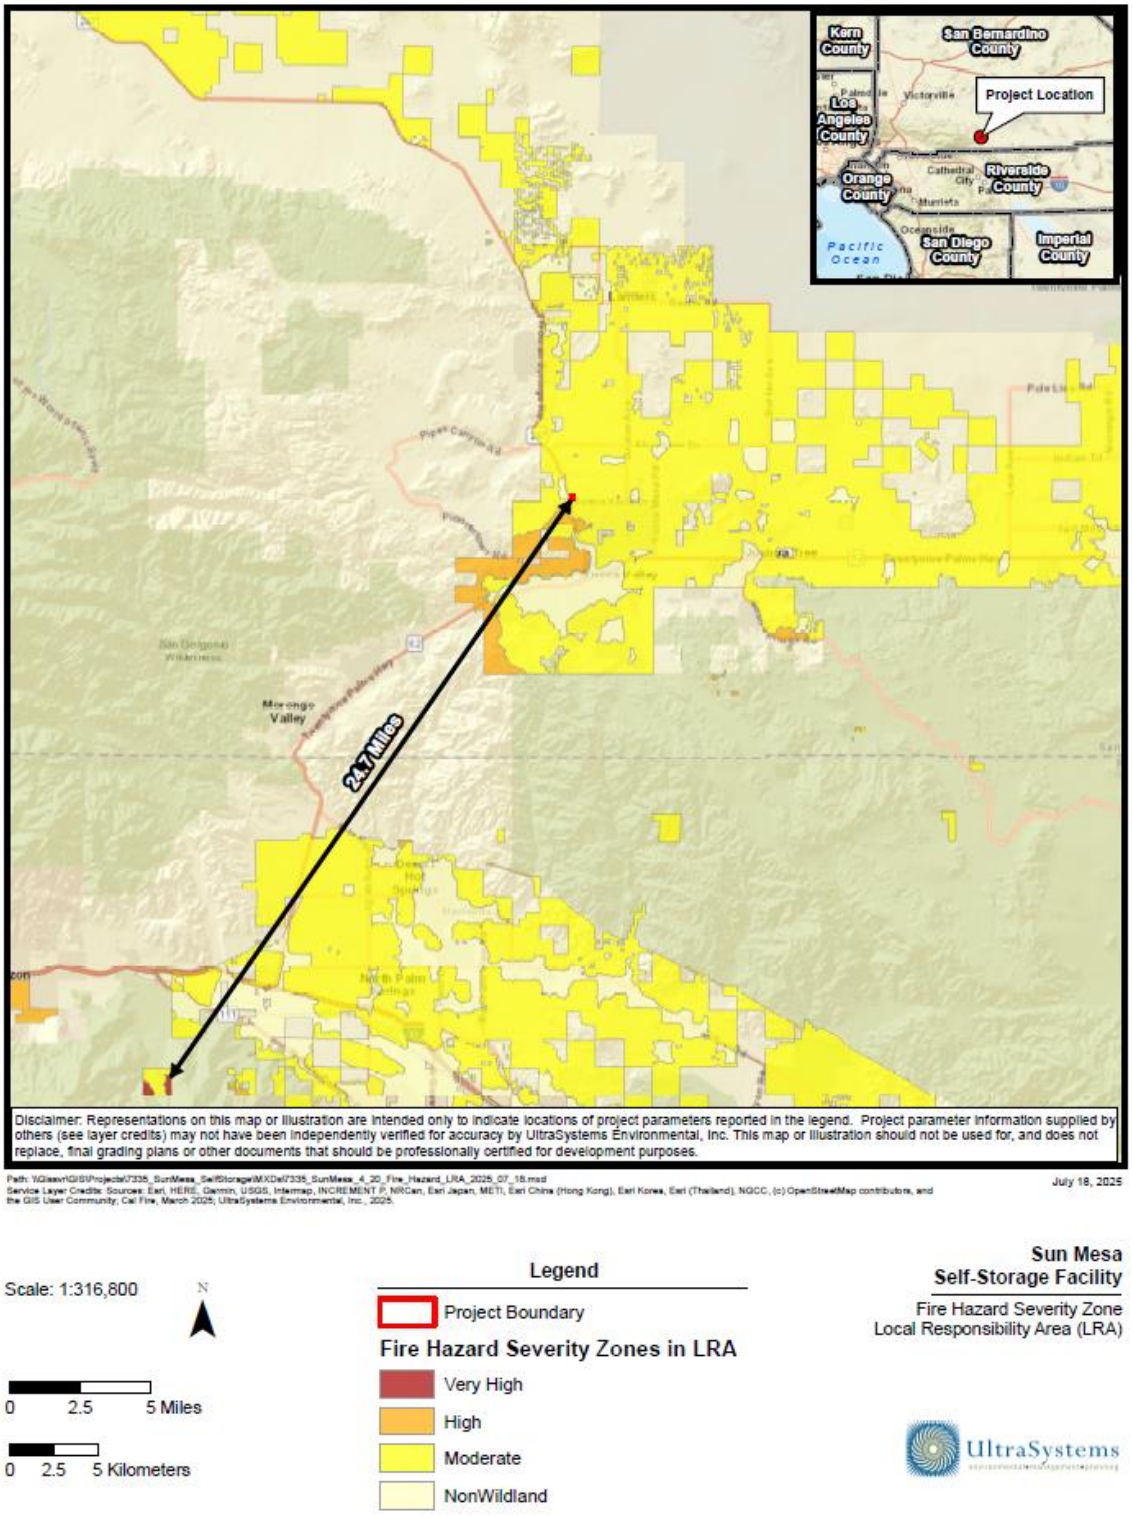
FIRE HAZARD SEVERITY ZONE - STATE RESPONSIBILITY AREA



If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less Than Significant Impact

The project site is located within a LRA (not an SRA) and is not classified as a VHFHSZ per CalFire mapping, but areas surrounding the Town do contain VHFHSZ designations, and the regional landscape, characterized by desert scrub vegetation and seasonal winds, poses moderate fire risk.

The project site is relatively flat and is not situated on or near significant slopes that would contribute to fire intensity or spread. Site improvements include the removal of existing combustible vegetation, installation of irrigated landscaping using drought-tolerant, low-fuel species, and a six-foot-tall concrete masonry wall around the project perimeter will reduce opportunities for off-site wildfire intrusion. Additionally, the use of non-combustible building materials and on-site hydrants would further minimize fire risks.

Although Yucca Valley is subject to periodic high winds (including Santa Ana-type events), The facility consists primarily of enclosed, non-habitable self-storage units, with minimal on-site human presence aside from a manager's office reducing the potential exposure to wildfire-related pollutant concentrations.

The project would also comply with applicable provisions of the California Building Code (Chapter 7A, Wildland-Urban Interface Building Standards) and the Town's adopted fire prevention requirements, including defensible space and ember-resistant construction features, where applicable.

Given the site's LRA classification, low topographic risk, and limited occupancy characteristics, the project would not exacerbate wildfire risks or significantly expose occupants to fire-related pollutants and would have a less than significant impact.

b) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less Than Significant Impact

The project site lies in a portion of Yucca Valley surrounded by similar urban infrastructure and land uses. The project includes limited infrastructure improvements typical for current development, such as internal driveways, frontage improvements along Newton Lane, utility tie-ins, and installation of a private on-site septic system for wastewater disposal. The septic system will be located entirely within the project site and designed in accordance with San Bernardino County Environmental Health Services requirements, including setbacks, leach field sizing, and maintenance access. This system does not increase wildfire risk, as it does not involve combustible materials or elevated fire exposure.

The project does not require the installation of new underground power lines, off-site fuel management areas, or expanded emergency access corridors beyond those required by local development standards. Water supply infrastructure will tie into existing municipal systems, and fire hydrants will be installed as required by the San Bernardino County Fire Department to serve the site.

Construction activities will result in temporary ground disturbance and minor air emissions, but these impacts will be addressed through compliance with construction best management practices and mitigation identified in the Initial Study.

As such, the required infrastructure is not located in areas of high fire risk and would not contribute to increased wildfire hazards. Therefore, fire risk associated with infrastructure installation or maintenance would have a less than significant impact.

c) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less Than Significant Impact

The site is relatively flat and does not exhibit steep slopes or topographical features that would be prone to landslides or significant post-fire slope instability. As detailed in **Section 4.11**, the surrounding area consists of vacant desert land and sparse industrial development. The property directly north abuts the dedication and dirt road of Sun Mesa Drive, with an undeveloped parcel beyond. That parcel is zoned Industrial. To the east, the adjacent property is zoned Commercial and is also vacant. The property to the south is developed with a commercial use, and the property to the west is developed with another commercial use.

Because the site and its surroundings do not include hillside areas or significant drainage channels, and the site is not located downstream of areas prone to wildfire burn scars, the risk of exposure to post-fire debris flows, flooding, or slope failure is minimal. Additionally, the project will be subject to a grading and drainage plan approved by the Town of Yucca Valley and the San Bernardino County Flood Control District, which will ensure proper site runoff management and minimize erosion or instability.

Therefore, the project would not expose people or structures to significant risk related to wildfire-induced hydrologic or geologic hazards would have a less than significant impact.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less Than Significant Impact

As discussed in **Section 4.10**, Hydrology and Water Quality, the project site is relatively flat, with no steep slopes or natural drainage courses onsite or in the immediate vicinity. The site is not located within a mapped landslide hazard zone or area of slope instability (Town of Yucca Valley, 2014). Drainage improvements would consist of curb, gutter, and an infiltration basin designed in accordance with Town of Yucca Valley Municipal Code \ Code § 9.37.060: Erosion Control, Runoff, and Enforcement and San Bernardino County Flood Control District standards.

The project would not substantially alter existing drainage patterns or create conditions that could lead to downstream flooding or post-fire slope instability. As noted in **Section 4.10(c)**, the project site lies within FEMA Flood Zone X, outside both the 100-year and 500-year flood hazard areas.

Because the site is level, located outside mapped flood or landslide zones, and would comply with applicable drainage and stormwater regulations, the project would not expose people or structures to significant risks from flooding, landslides, or post-fire slope instability. Therefore, impacts would be less than significant.

4.21 Mandatory Findings of Significance

Would the project have:	Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?		**X**		
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?		**X**		
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?		**X**		

a) Would the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less Than Significant Impact with Mitigation Incorporated

The project would not substantially degrade the environment because all potentially significant impacts related to biological resources, cultural resources, and tribal cultural resources are reduced to less than significant levels through implementation of the adopted mitigation measures. Biological mitigation measures, including **MM BIO-1** through **MM BIO-14**, require preconstruction surveys, burrowing owl protection, breeding bird protections, habitat avoidance, and construction best management practices that prevent disturbance to sensitive species. Cultural resource mitigation measures **MM CUL-1** and **MM CUL-2** ensure that any inadvertent discovery of archaeological resources or human remains is properly evaluated and treated by qualified professionals consistent

with state law. Tribal cultural resource measures **MM TCR-1** through **MM TCR-3** require tribal monitoring, treatment protocols, and avoidance procedures to protect potential tribal cultural materials during ground disturbance. Therefore, the project would not substantially degrade the environment or reduce populations of sensitive species, nor would it eliminate important examples of California prehistory or history. Impacts under this threshold would be less than significant with mitigation.

b) Would the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Less Than Significant Impact with Mitigation Incorporated

The project does not result in cumulatively considerable impacts because all potentially significant environmental effects are reduced to less than significant levels through implementation of project specific mitigation. Geologic hazards and paleontological impacts are addressed through **MM GEO-1** and **MM GEO2**, which require implementation of geotechnical recommendations and paleontological monitoring during ground disturbance. Biological mitigation measures **MM BIO-1** through **MM BIO-14** avoid and minimize impacts to sensitive species and habitat. Cultural resource measures **MM CUL-1** and **MM CUL-2** ensure proper evaluation and handling of archaeological resources and human remains. Tribal resource measures **MM TCR-1** through **MM TCR-3** ensure tribal participation and protection of potential tribal cultural resources. Because these measures fully mitigate project level impacts to less than significant levels, the project would not contribute to a cumulatively significant environmental effect. Therefore, the project's contribution to cumulative impacts is not considerable under CEQA Guidelines §15064(h)(1), and impacts would be less than significant with mitigation incorporated.

c) Would the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than Significant Impact with Mitigation Incorporated

The project would not cause substantial adverse effects on human beings because all potentially significant hazards are mitigated to less than significant levels. Geotechnical risks such as liquefaction or unstable soils are reduced through **MM GEO-1**, which requires incorporation of site specific geotechnical recommendations, and **MM GEO-2**, which establishes paleontological monitoring protocols that prevent unsafe or unregulated excavation activity. Construction phase biological and cultural mitigation (**MM BIO-1** through **MM BIO-14**, **MM CUL-1**, **MM CUL-2**) also reduce risks to workers and the public by requiring controlled procedures during ground disturbance. Noise, air quality, hazardous materials, and hydrology impacts analyzed in the technical sections were found to be less than significant or less than significant with mitigation incorporated. With implementation of all required mitigation measures, the project would not result in substantial adverse effects on human beings. Therefore, the project would not result in substantial adverse effects on human beings, either directly or indirectly, and impacts would be less than significant with mitigation.

7.0 MITIGATION MONITORING AND REPORTING PROGRAM

The Mitigation Monitoring and Reporting Program (MMRP) has been prepared in conformance with Section 21081.6 of the California Public Resources Code and Section 15097 of the CEQA Guidelines. These provisions require that all state and local agencies establish a monitoring or reporting program whenever approval of a project is based on a Mitigated Negative Declaration (MND) or an Environmental Impact Report (EIR) that identifies significant environmental impacts which can be mitigated to a less than significant level. The MMRP serves as a critical compliance mechanism to ensure that mitigation measures adopted as conditions of project approval are properly implemented throughout the course of project development and operation.

> Public Resources Code § 21081.6(a)(1): *"The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment."*.
>
> CEQA Guidelines § 15097(a): *"In order to ensure that the mitigation measures and project revisions identified in the EIR or negative declaration are implemented, the public agency shall adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects."*.

The MMRP is designed to ensure that the mitigation measures identified to reduce or avoid potentially significant adverse environmental effects are carried out as intended. Monitoring generally consists of ongoing or periodic oversight activities which may include field inspections, review of documentation, and evaluation of compliance actions. Reporting generally involves the preparation and submission of written compliance reviews or summary memos that are presented to the decision-making body or designated staff representative of the lead agency. These compliance reports serve to confirm whether each mitigation measure is being implemented in accordance with the conditions of approval and provide a basis for corrective action if noncompliance is observed.

The purpose of the MMRP is fourfold. First, it provides a structured framework for documenting the implementation of each required mitigation measure. Second, it identifies the specific agencies, departments, or parties responsible for implementing and monitoring each measure. Third, it creates a formal record of all monitoring and reporting actions to demonstrate full compliance with the environmental commitments made under CEQA. Fourth, it ensures that all mitigation measures that fall under the jurisdiction of the Town of Yucca Valley or the project applicant are fully and effectively carried out in a timely and verifiable manner.

The following table, titled **Table 7.0.1** Mitigation Monitoring and Reporting Program, presents a detailed summary of the environmental impacts and corresponding mitigation measures adopted by the Town of Yucca Valley in connection with the proposed project. The table also includes the level of significance remaining after mitigation, the parties responsible for implementation and monitoring, and the phase of the project during which the measure is to be applied, such as during planning, construction, or long-term operation.

Only those environmental topics for which mitigation is required are included in this Mitigation Monitoring and Reporting Program. This targeted approach ensures that mitigation tracking is manageable, legally sufficient, and appropriately focused on measures that are essential to reducing the project's potentially significant environmental impacts.

Table 7.0-1
MITIGATION MONITORING AND REPORTING PROGRAM

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
4.4 Biological Resources				
Threshold a): Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	**BIO-1: Biological Monitor** a) A biological monitor will be onsite to monitor activities that result in the clearing or grading of areas known to contain sensitive biological resources, such as western Joshua tree habitat, as well as ground-disturbing activities that impacts do not exceed the limits of construction and minimize the likelihood of inadvertent impacts to special-status plant and wildlife species. b) The biological monitor will ensure that all biological mitigation measures, best management practices (BMPs), avoidance and protection measures described in the relevant project permits and reports are in place and are adhered to. Monitoring will cease when the sensitive habitats and jurisdictional areas have been cleared or impacted. The biological monitor will take photographs throughout the construction process. Observations of special-status species will be recorded in monitoring logs, mapped, and special-status species records will be submitted to the California Natural Diversity Database (CNDDB) within five working days of the sightings, and CDFW will be provided with copies of the CNDDB forms and survey maps. Monitoring logs will be completed for each day of monitoring. c) The biological monitor will have the authority to halt all construction activities and all non-emergency actions if listed species are identified on the project site and will be directly impacted. The monitor will notify the appropriate resource agency and consult if needed. If needed, and if authorized by	Project Applicant Biological Monitor	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	the resource agencies, the monitoring biologist will relocate the individual outside of the work area where it will not be harmed. Work can continue at the location if CDFW and/or the USFWS determine that the activity will not result in impacts to the species. d) d) If sensitive biological resources are detected in an area to be impacted, then appropriate measures will be implemented by the biological monitor to avoid impacts (i.e., flag and avoid, erect orange snow fencing, biological monitor present during work, etc.). However, if avoidance is not possible and the sensitive biological resources will be directly impacted by project activities, the biological monitor will mark and/or stake the site(s) and map the individuals on an aerial map and with a GPS unit. The biologist will then contact the appropriate resource agencies to develop additional mitigation measures prior to commencing project activities. e) The construction crew will inspect excavated areas daily to detect the presence of trapped wildlife.			
	a) **BIO-2: Project Limits and Designated Areas** b) To avoid impacts to sensitive biological resources, the following measures will be implemented by the project proponent, contractors, and biological monitor prior to project staging, and commencement of any ground-disturbing activities or vegetation removal. c) Project boundary would be set at the minimum size to accomplish necessary work, resulting in minimal impacts to sensitive biological resources and jurisdictional areas. d) Specifications for the project boundary, limits of construction, project-related parking, storage areas, laydown sites, and equipment storage areas will be mapped and clearly marked in	Project Applicant Biological Monitor	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	the field with temporary fencing, signs, stakes, flags, rope, cord, or other appropriate markers. All markers will be maintained until the completion of activities in that area. e) To minimize the amount of disturbance, the construction/laydown areas, parking areas, staging areas, storage areas, spoil areas, and equipment access areas will be restricted to designated areas. To the extent possible, designated areas will comprise existing disturbed areas (parking lots, access roads, graded areas, etc.). f) Project-related work limits will be defined, and work crews will be restricted to designated work areas. Disturbance beyond the actual construction zone is prohibited without site-specific surveys. g) Project related vehicle traffic will be restricted to established roads, staging areas, and parking areas. Travel outside construction zones will be prohibited.			
	BIO-3: Western Joshua Tree Conservation Act Prior to the initiation of Joshua trees encroachment, trimming, pruning, or any activity that may result in take of Joshua trees (including removal of live and dead Joshua trees), the project proponent should obtain a California Endangered Species Act (CESA) Incidental Take Permits (ITP) under the western Joshua Tree Conservation Act (WJTCA) of Fish and Game Code (§§ 1927.3 and 1927.8). California Fish and Game Code § 86 defines "take" as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill". Mitigation will occur per the stem count per the WJTCA census in lieu fee, or as required by the ITP and WJTCA.	Project Applicant	Field Verification	1. CDFW 2. Town of Yucca Valley 3. Before Construction
	BIO-4: California Desert Native Plants Act Because species of the family Agavaceae (e.g., western Joshua Tree), which have been observed throughout the project site, are covered	Project Applicant	Field Verification	1. Town of Yucca Valley

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	under § 80073(b) of the California Desert Native Plants Act (CDNPA), any impacts will require a permit issued by the commissioner of the sheriff in San Bernardino County pursuant to Chapter 3 § 80073. Prior to commencement of construction activities, including but not limited to mobilization, fencing, staging, vegetation trimming or removal, or ground-disturbing activities, the project proponent will acquire a permit pursuant to Chapter 3 § 80101 and § 80073 of the California Desert Native Plants Act if any of the following species are observed on the project site: a) All species of the family Agavaceae (century plants, nolinas, yuccas) b) All species of the family Cactaceae (cacti), except for the plants listed in subdivisions (b) and (c) of Section 80072 which may be harvested under a permit obtained pursuant to that section c) All species of the family Fouquieriaceae (ocotillo, candlewood) d) All species of the genus Prosopis (mesquites) e) All species of the genus Cercidium (palos verdes) f) Acacia greggii (catclaw) g) Atriplex hymenelytra (desert-holly) h) Dalea spinosa (smoke tree) i) Olneya tesota (desert ironwood), including both dead and live desert ironwood.			2. Town of Yucca Valley 3. Before Construction
	BIO-5: Worker Environmental Awareness Program Worker Environmental Awareness Program (WEAP) for construction personnel shall be conducted and documented prior to onsite disturbances. The training shall include a discussion of the sensitive biological resources within the project site and the potential presence of special-status species. The WEAP shall also include a discussion of special-status species' habitats, protection measures to ensure species	Construction Supervisor Project Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	are not impacted by project activities, project boundaries, penalties for non-compliance, and biological conditions outlined in the project permits. All new employees shall be trained before they access the work site. New employees shall be trained and certified by the Construction Supervisor with the approval of the Project Biologist as approved by CDFW. Each trained individual shall be given a distinctive helmet sticker that will identify those who have received training, signed the training log, and demonstrated the required level of environmental awareness.			
	BIO-6: Construction Best Management Practices Project work crews will use CASQA (or similar) stormwater BMPs as directed by the project's Storm Water Pollution Prevention Plan (SWPPP). These measures will be identified prior to construction and incorporated into construction operations. The project's Qualified SWPPP Practitioner will ensure that construction activities will incorporate all applicable BMPs specified in the SWPPP to prevent erosion from water or wind, sedimentation of receiving waters, and introduction of other pollutants, including non-stormwater pollutants, into drainages crossed by or adjacent to the project site, accidental spills in the project site, including laydown yards and parking areas. BMPs will be maintained on a regular basis pursuant to the requirements of the SWPPP	Project Applicant Qualified SWPPP Practitioner	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction
	Bio-7: Pre-Construction Desert Tortoise Survey Prior to the commencement of project activities, including but not limited to ground disturbance, pre-construction surveys following guidance in the United States Fish and Wildlife's (USFWS) *Preparing for Any Action That May Occur Within the Range of the Mojave Desert Tortoise* (*Gopherus agassizii;* "Guidelines") will be implemented. The Guidelines recommend the applicant contact USFWS prior to surveys. Qualified biologists will conduct pre-construction surveys for desert tortoise no more than 48 hours prior to initiation of Project activities	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	and after any pause in Project activities lasting 30 days or more. The qualified biologists will follow USFWS's Desert Tortoise (Mojave Population) Field Manual (*Gopherus agassizii; "*Field Manual"). The qualified biologist will record all signs of desert tortoise, such as scat, burrows, carcasses, courtship rings, drinking depressions, and live sightings, as described in the Field Manual. The qualified biologist will provide a report with a map of the surveyed area (including transects, desert tortoises, and sign) and description of habitat conditions. Should positive survey results occur, the project applicant will secure an incidental take permit under Section 10 of FESA and State incidental take permit under Section 2081 of the Fish and Game Code.			
	BIO-8: Pre-construction Wildlife Surveys Prior to issuance of grading permits, a qualified biologist will conduct pre-construction surveys within areas of suitable habitat for special-status terrestrial wildlife species identified as having moderate or greater potential to occur onsite. Pre-construction surveys will be conducted three days before the commencement of construction activities. If construction activities onsite lapse for one week or more, approved work areas will be re-surveyed by the biologist for new occurrences of the special-status wildlife species. Further consultation with wildlife agencies will be necessary if special-status species are observed onsite and prior to commencing construction activities.	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction
	a) **BIO-9: General Wildlife Avoidance and Protection Measures** b) The project proponent would implement the following general avoidance and protection measures to protect wildlife. c) To minimize construction-related mortalities of nocturnally active wildlife species, it is recommended that all non-emergency work be conducted during daylight	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	hours. All unnecessary lights shall be turned off at night to avoid attracting wildlife. Nighttime work (and use of artificial lighting) would not be permitted unless specifically authorized. d) If any wildlife is encountered during project activities, it will be allowed to freely leave the area unharmed or the biological monitor will capture the animal, if authorized, and relocate it outside of the construction work limits out of harm's way. e) Listed wildlife species will not be captured, handled, or relocated without specific written authorization from CDFW and/or USFWS. f) Wildlife would not be disturbed, captured, harassed, or handled, unless to relocate the animal out of imminent threat of injury or death. Animal nests, burrows and dens would not be disturbed without prior survey and authorization from the biological monitor. g) Active and inactive nests cannot be removed or disturbed. h) Contractors, subcontractors, employees, and site visitors would be prohibited from feeding or collecting wildlife. i) To avoid the potential for mortality and harassment of wildlife, all non-security related firearms, weapons, and domestic dogs would be prohibited from the project site. j) Contractors, subcontractors, employees, and site visitors shall inspect their vehicles and equipment for the presence of wildlife prior to moving their vehicles and equipment. The biological monitor shall be contacted if a special-status species is detected and is in danger of being harmed. k) All steep-walled pitfalls (trenches, holes, bores, and other excavations) greater than two feet deep used during the			

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	project would be completely covered at all times except when being actively used, to prevent wildlife entrapment (i.e. reptiles and small mammals). If trenches cannot be covered, escape ramps (maximum slope of 2:1) will be provided to allow trapped animals to escape. Exclusion fencing shall be installed around the trench or excavation. Trenches shall be inspected and wildlife removed immediately before backfilling. l) All onsite project workers shall look under their vehicles and equipment before movement. If wildlife is observed, no vehicles or equipment shall be moved until the animal has left the area voluntarily or can be legally relocated. m) Equipment maintenance, lighting, and staging will occur only in designated areas, and shall not block or impede wildlife movement.			
	BIO-10: Pre-Construction Burrowing Owl Surveys A qualified biologist shall conduct a pre-construction BUOW survey in accordance with the *Staff Report on Burrowing Owl Mitigation* (CDFW, 2012) or current CDFW guidance/protocol if changes to the aforementioned 2012 guidance have occurred. A pre-construction BUOW survey (Take Avoidance Survey) shall be conducted no more than 14 days prior to any site disturbance (grubbing, grading, and construction) and again 24 hours prior to ground disturbing activities. Although BUOW was not detected on site during the reconnaissance-level surveys, the BSA contains suitable habitat to potentially support BUOW. The qualified biologist will identify, record, and map with a global positioning system (GPS) unit BUOWs and their sign. Detailed notes and wildlife species encountered during the surveys shall be recorded in field notes.	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	If an occupied burrow is found (as indicated by the observation of a burrowing owl or the presence of burrowing owl sign), a 250-foot buffer around the burrow will be staked and flagged and no construction activities will be allowed within the buffer area during the breeding season (February 1 through August 31). The qualified biologist will contact CDFW to assist in the preparation of an Incidental Take Permit (ITP), and development of avoidance, minimization, and mitigation measures, prior to commencing project activities. A relocation program may be necessary and shall be approved by CDFW prior to commencing project activities. If no BUOWs or signs of BUOWs are observed during the preconstruction surveys and concurrence is received from CDFW, project activities may begin, and no further mitigation shall be required.			
	a) **BIO-11: Pre-Construction Breeding Bird Survey** b) If vegetation removal is scheduled within the nesting season, a qualified biologist will conduct a pre-construction nesting bird survey to maintain compliance with the Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code (§§ 3503 and 3503.5), which prohibit take of nesting birds and nests of migratory and non-game bird species. Nesting season is generally considered to be: c) January 1-July 30 for raptors. d) February 1-September 15 for non-raptors. e) A qualified biologist will conduct pre-construction surveys no more than five days prior to when project activities (e.g., mobilization, excavation, grading, vegetation removal) are underway. Should a lapse in project activity be greater than five days, a qualified biologist will conduct additional surveys to maintain compliance. To maximize the detection of nesting birds, surveys must be conducted	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	in work areas (e.g., staging, stockpiling, storage, equipment yards, access roads) during favorable weather conditions. A wide variety of shelters and resources are used by avian species; these include barren ground, grasses, forbs, shrubs, trees, rocky outcrops, and man-made structures (dependent on species and conditions). The qualified biologists will interpret physical signs for nesting structures (e.g., manipulation of materials like mud or grass) and direct signs of life (e.g., courtship behaviors, gathering, swooping, alarm calls, pellets). f) If nests are encountered, a qualified biologist will consider individual species tolerance, proximity to construction activity, noise impacts, line-of-sight barriers, and distance (horizontal and vertical) to determine if planned construction activities would impact nesting success. The rate and duration of construction activities will also be considered should the modification of scheduled activities be required to maintain healthy nesting outcomes. g) If the qualified biologist determines construction activities will potentially adversely affect a nest, the biologist must immediately inform the construction manager to halt construction activities (i.e., establish a no-work zone) within a minimum exclusion buffer of 100 feet for songbird nests and 200-500 feet for raptor nests. This no-work zone lawfully avoids the "take" of nesting birds and the mortality of eggs and younglings. Construction activities within the no-work buffer may proceed after a qualified biologist determines the young have successfully fledged the nest and are no longer dependent upon the nest or parents. h) If federal or state protected species are observed during surveys, USFWS and CDFW will be consulted to determine			

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	the appropriate time for project activities to proceed and what specific measures will be taken to ensure protected species are not impacted.			
	BIO-12: Pre-Construction Desert Kit Fox and American Badger Surveys Desert kit fox is a protected species under CCR Title 14, § 460. No more than 14 days prior to the beginning of ground disturbance and/or Project activities, a qualified biologist shall conduct pre-construction surveys to determine if potential desert kit fox burrows/dens are present in the project area. Pre-construction surveys should include transect surveys at a 20-meter transect distance to ensure 100 percent visual coverage of the project area. Surveys may be combined for similar fossorial mammals, such as American badger; combined, concurrent surveys for dissimilar taxa (e.g. plants or birds) shall be prohibited. Use of wildlife camera monitoring to determine presence/absence and burrow/den use is strongly encouraged, in accordance with CDFW approved methods, including *Remote Camera Trap Installation and Servicing Protocol Citizen Wildlife Monitoring Project 2017 Field Season* (Moskowitz and Huyett, 2017) and *Camera-trapping for conservation: a guide to best-practices* (Oliver R. Wearn & Paul Glover-Kapfer, 2017). The pre-construction survey reports will include: (1) the number, location, and status determination of potential desert kit fox and/or badger dens identified during the reporting period, (2) occupancy monitoring status, (3) species present, and (4) estimated number of individuals and associated behaviors observed. Desert kit fox and badger images will additionally be stored on a cloud-based server and additional relevant data will be made available to CDFW upon request. If the pre-construction surveys confirm occupied desert kit fox habitat, project activities shall be immediately halted, and the qualified biologist	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	shall notify CDFW to develop avoidance, minimization, and mitigation measures within a Desert Wildlife Management Plan. No disturbance of active dens shall take place when juvenile desert kit fox may be present and dependent on parental care. Sick or injured animals will be reported to CDFW within 24 hours of discovery.			
Threshold b): Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	Reference **MM BIO-1** thru **MM BIO 6** above.			
Threshold e): Would the project conflict with any local policies or ordinances protecting biological resources, such as	**BIO-13: Protective Fencing of No Work Areas** Protective fencing shall be installed around the perimeter of ecologically sensitive areas, which will be designated as No Work Areas, including around the perimeter of western Joshua trees scheduled to be transplanted, and native vegetation communities adjacent to work areas, before commencement of staging, fencing, clearing, grading, or other construction activities. The installation of fencing and protection measures around trees and vegetation will comply with the Town's	Project Applicant	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
a tree preservation policy or ordinance?	Native Desert Vegetation Ordinance. The tree protection zone for Joshua tree is a 40-foot radius around the trunk of the tree. Fencing shall be maintained in place during all construction. No construction, grading, staging, or material storage will be allowed within the fence exclusion areas, or within the protected zones of any onsite native trees.			
	BIO-14: Yucca Valley Development Code Section 9.10.040 A native landscaping documentation package ("report") will be submitted to the division and at the time of filing land use applications (i.e., prior to any land disturbing or development activity) and may be combined with landscaping and water conservation requirements (Town of Yucca Valley, 2014). The report will include a) the botanical and common names of regulated native desert plants, b) the precise location of each regulated desert native plant, c) the trunk or stem diameter of each regulated desert native plant, d) the height of each desert regulated native plant, e) the health or condition, including those unlikely to survive transplanting, of all regulated desert native plants, and f) the proposed placement of the regulated desert plant (i.e., the transplant site, removal determination, or adopt offsite). Should a plant be determined as likely to survive transplanting by a qualified biologist, it shall be made available for adoption or transplanted onsite as part of the project's landscaping plan, which should maximize the use of native desert plants. The project applicant shall provide a thirty-day notice followed by a thirty-day adoption period; the adoption period may be less than thirty days should all plants be adopted. Adoption should be prioritized in the Town of Yucca Valley, with second priority to the Morongo Basin. It is recommended the thirty-day adoption signage period commences with the submittal of the desert native plant permit. Signage posting will follow the requirements found in 9.10.040E. All regulated desert native plants within the adoption program will a) receive written permission to be obtained by the property owner, b) have consideration of lant's original	Project Applicant	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	and transplanted physical orientation, prevailing wind direction, soil type of the original and transplanted locations, and other related attributes which may affect the successful transplantation, and c) have a maintenance plan considering watering schedules, stockpile location, support, and the method of trap fencing. Plants which are not adopted within the thirty-day period may be removed.			
4.5 Cultural Resources				
Threshold 4.5 b): Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5.	**MM CUL-1:** If archaeological resources are discovered during construction activities, the contractor will halt construction activities in the immediate area and notify the Town of Yucca Valley (California Code of Regulations, Title 14, Chapter 3, Section 15064.5(f)). The project applicant shall retain an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology who will be notified and afforded the necessary time to recover, analyze, and curate the find(s). The qualified archaeologist will recommend the extent of archaeological monitoring necessary to ensure the protection of any other resources that may be in the area. Any identified cultural resources shall be recorded on the appropriate DPR 523 (A-L) form and filed with the South Central Coastal Information Center. Construction activities may continue on other parts of the project site while evaluation and treatment of prehistoric archaeological resources takes place.	Project Construction Contractor Qualified Archaeologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. During Construction
Threshold 4.5 c): Disturb any human remains, including those interred	**MM CUL-2:** If human remains are encountered during excavations associated with this project, all work will stop within a 30-foot radius of the discovery,	Project Construction Contractor	Field Verification	1. Town of Yucca Valley

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
outside of formal cemeteries.	and the San Bernardino County Coroner will be notified (§ 5097.98 of the Public Resources Code). The Coroner will determine whether the remains are recent human origin or older Native American ancestry. If the coroner, with the aid of the supervising archaeologist, determines that the remains are prehistoric, they will contact the NAHC. The NAHC will be responsible for designating the Most Likely Descendant (MLD). The MLD (either an individual or sometimes a committee) will be responsible for the ultimate disposition of the remains, as required by § 7050.5 of the California Health and Safety Code. The MLD will make recommendations within 24 hours of their notification by the NAHC. These recommendations may include scientific removal and nondestructive analysis of human remains and items associated with Native American burials (§ 7050.5 of the Health and Safety Code).	San Bernardino County Coroner		2. Town of Yucca Valley 3. Before Construction
4.7 Geology and Soils				
Threshold 4.7 e): Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	**MM GEO-1:** Prior to the issuance of the grading permit, the applicant shall provide a letter to the Town of Yucca Valley Planning Division, or designee, from a qualified paleontologist stating that the paleontologist has been retained to provide services for the project. The paleontologist shall develop, as needed, a Paleontological Resources Impact Mitigation Plan (PRIMP) to mitigate the potential impacts to unknown buried paleontological resources that may exist onsite for the review and approval by the City. The PRIMP shall require that the paleontologist perform periodic paleontological monitoring of any ground disturbing activities within undisturbed native sediments during mass grading, site preparation, and underground utility installation. The project paleontologist may reevaluate the necessity for paleontological monitoring after 50 percent or greater of the excavations have been completed. In the event paleontological resources are encountered, ground-disturbing activity within 50 feet of the area of the discovery shall cease. The paleontologist shall examine the materials encountered, assess the nature and extent of	Project Applicant Qualified Paleontologist Construction Contractor	Monitoring, Assessment, Recovery, and Curation	1. Town of Yucca Valley 2. Town of Yucca Valley 3. During Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	the find, and recommend a course of action to further investigate and protect or recover and salvage those resources that have been encountered. Criteria for discarding specific fossil specimens shall be made explicit. If the qualified paleontologist determines that impacts to a sample containing significant paleontological resources cannot be avoided by project planning, then recovery may be applied. Actions may include recovering a sample of the fossiliferous material prior to construction, monitoring work and halting construction if a significant fossil needs to be recovered, and/or cleaning, identifying, and cataloging specimens for curation and research purposes. Recovery, salvage and treatment shall be done at the Applicant's expense. All recovered and salvaged resources shall be prepared to the point of identification and permanent preservation by the paleontologist. Resources shall be identified and curated into an established accredited professional repository such as the San Bernardino County Museum. The paleontologist shall have a repository agreement in hand prior to initiating recovery of the resource.			
4.18 Tribal Cultural Resources				
Threshold 4.18 b): Cause a substantial adverse change in the significance of a tribal cultural resource that is determined to be a significant resource to a California Native American tribe pursuant to the	**MM TCR-1:** Treatment of Cultural Resources During Project Implementation. If a pre-contact cultural resource is discovered during project implementation, ground-disturbing activities shall be suspended 60 feet around the resource(s), and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed. The Project Archaeologist shall develop a research design that shall include a plan to evaluate the resource for significance under CEQA criteria. Representatives from Yuhaaviatam of San Manuel Nation (YSMN) and Morongo Band of Mission Indians (Morongo), the Archaeologist, and the Lead Agency shall confer regarding the research design, as well as any testing efforts needed to delineate the resource boundary. Following the completion of evaluation efforts, all parties	Project Applicant	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Prior to commencement of any "ground-disturbing activity"

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
criteria set forth in subdivision (c) of Public Resource Code § 5024.1(c)?	shall confer regarding the resource's archaeological significance, its potential as a Tribal Cultural Resource (TCR), and avoidance (or other appropriate treatment) of the discovered resource. Removal of any cultural resource(s) shall be conducted with the presence of a Tribal monitor representing the Tribes, unless otherwise decided by YSMN and Morongo. All plans for analysis shall be reviewed and approved by the applicant and YSMN and Morongo prior to implementation, and all removed material shall be temporarily curated on-site. It is the preference of YSMN that removed cultural material be reburied as close to the original find location as possible. However, should reburial within/near the original find location during project implementation not be feasible, then a reburial location for future reburial shall be decided upon by YSMN and Morongo, the landowner, and the Lead Agency, and all finds shall be reburied within this location. Additionally, in this case, reburial shall not occur until all ground-disturbing activities associated with the project have been completed, all monitoring has ceased, all cataloguing and basic recordation of cultural resources have been completed, and a final monitoring report has been issued to Lead Agency, CHRIS, YSMN and Morongo. All reburials are subject to a reburial agreement that shall be developed between the landowner, YSMN and Morongo outlining the determined reburial process/location, and shall include measures and provisions to protect the reburial area from any future impacts. Should it occur that avoidance, preservation in place, and on-site reburial are not an option for treatment, the landowner shall relinquish all ownership and rights to this material and confer with YSMN and Morongo to identify an American Association of Museums (AAM)-accredited facility within the County that can accession the materials into their permanent collections and provide for the proper care of these objects in accordance with the 1993 CA Curation Guidelines. A curation agreement with an appropriate qualified repository shall be developed between the landowner and museum that legally and

1.0 INTRODUCTION

This Responses to Comments (RTC) document, in conjunction with the Draft Initial Study/Mitigated Negative Declaration (IS/MND) responds to comments on the proposed Sun Mesa Self-Storage Facility (project). While the State of California Environmental Quality Act (CEQA) Guidelines do not require a final initial study or the preparation of formal responses to comments received during the public review period for an Initial Study/Mitigated Negative Declaration,[1] to provide further disclosure about the proposed project the Town of Yucca Valley (Town) is making available responses to the comments it received during the public review process.

1.1 Background of Environmental Review Process for the Project

The IS/MND, along with a Notice of Intent to Adopt a Mitigated Negative Declaration (NOI, see **Attachment A**), was released for public and agency review on January 23, 2026, with a 30-day review period ending on February 23, 2026. In addition, the NOI was posted on the State Clearinghouse on June 19, 2025. See **Attachment B**.

The NOI was also posted at the San Bernardino County Clerk-Recorder on or around January 16, 2026 (see **Attachment C**), and copies of the IS/MND were made available for review at the following locations:

- Town of Yucca Valley Website: https://www.yucca-valley.org/home/showpublisheddocument/9478/639041777702868221

- Town of Yucca Valley – Community Development Department, 58928 Business Center Drive, Yucca Valley, CA 92284

A hard copy of the NOI was mailed to:

- Residents and property owners, located within 500 feet of the project site.

A hard copy of the NOI was sent via US Mail on July 18, 2025 to the following entities:

- Burrtec Waste Industries
- California Regional Water Quality Control Board/Colorado River Regional Water Board
- Caltrans-District 8
- City of Twentynine Palms
- Copper Mountain Community College
- Frontier Communications Engineering Department
- Hi-Desert Water District
- Joshua Tree National Park
- MAGTFTC/MCAGCC
- Mojave Desert Air Quality Management District
- Morongo Basin Transit Authority

1 CEQA only requires the lead agency to respond to comments that are received in response to an environmental impact report (Title 14, California Code of Regulations, § 15088, Evaluation of and Response to Comments).

- Morongo Unified School District
- SBCTA
- San Bernardino County Fire
- San Bernardino County - Department of Public Health
- San Bernardino County - Land Use Service
- San Bernardino County - Public Works/Flood Control
- San Bernardino County - Sheriff's Department
- Southern California Edison
- Southern California Gas
- State Department of Fish & Game
- U.S. Fish and Wildlife Service
- U.S. Postal Service
- Yucca Valley Airport District
- Yucca Valley Fire District
- NRO

1.2 Tribal Consultation

The Town of Yucca Valley (the lead agency) initiated AB 52 outreach to nine local native American tribes for the Sun Mesa Self-Storage Facility Project on or around April, 04, 2024, pursuant to Public Resources Code § 21074. (see **Attachment D**) The Town prepared letters to these tribes on their list for AB 52 contact, informing them of the project. The letters were sent by Jared Jarome, Associate Planner, on April 04, 2024 via email to the following tribes:

- Colorado River Indian Tribe
- Fort Mojave Indian Tribe
- Chemehuevi Reservation
- Coachella Indians
- Morongo Band of Mission Indians
- Ramona Band of Cahuilla Mission Indians
- San Manuel Band of Mission Indians
- Serrano Nation of Indians
- Twenty-Nine Palms Band of Mission Indians

The Agua Caliente Band of Cahuilla Indians responded by email on October 10, 2025 indicating that the project area is not located within the boundaries of the ACBCI Reservation, but it is within the Tribe's Traditional Use Area, Due to this, the Tribe requests consultation on this project. In a follow up letter received November 3, 2025, Anthony Kline, Cultural Resources Analyst indicated that for this project a Cultural Resource Monitor(s) from a Consulting tribe should be onsite during all ground disturbing activities, including testing and surveys and can request that construction halt if resources are encountered. The tribe also requested that the archaeologist on site must meet the Secretary of Interior's standards. The last request from the tribe is that if any Tribal Cultural Material is found, in collaboration with Agua Caliente, it be reburied on site if avoidance is not feasible. The tribe also asked to review San Manuel's Mitigation measure and that it no other consultation tribe requests monitoring to please contact Agua Caliente to provide that service. The Mitigation Measures from the San Manuel Band of Indians was provided to the tribe on November 3, 2025. Mr. Jerome provided the TCR section for review and the tribe provided two comments.

Given the local Native American tribal concerns for potential traditional cultural resources, mitigation measures provided by the Yuhaaviatam of San Manuel Nation will be implemented to further reduce potential impacts to less than significant levels. At the request of the Morongo Band of Mission Indians a Mitigation Measure for Tribal Monitoring will be included. Consultation has been concluded for this project as of November 17, 2025.

1.3 Responses to Comments

This document provides a response to comments received on the IS/MND. Two comment letters were received during the public review period. These letters are in **Section 2.0**, Public Comment Letters.

1.4 Intended Uses of this IS/MND

The IS/MND will be used by the Town in considering approval of the proposed project. In accordance with CEQA Guidelines § 15074, the IS/MND will be used as the primary environmental document in consideration of all subsequent planning and permitting actions associated with the proposed project, to the extent such actions require CEQA compliance and as otherwise permitted under applicable law.

15074. CONSIDERATION AND ADOPTION OF A NEGATIVE DECLARATION OR MITIGATED NEGATIVE DECLARATION.

(a) Any advisory body of a public agency making a recommendation to the decision-making body shall consider the proposed negative declaration or mitigated negative declaration before making itsrecommendation.

(b) Prior to approving a project, the decision-making body of the lead agency shall consider the proposed negative declaration or mitigated negative declaration together with any comments received during the public review process. The decision-making body shall adopt the proposed negative declaration or mitigated negative declaration only if it finds on the basis of the whole record before it (including the initial study and any comments received), that there is no substantial evidence that the project will have a significant effect on the environment and that the negative declaration or mitigated negative declaration reflects the lead agency's independent judgment and analysis.

(c) When adopting a negative declaration or mitigated negative declaration, the lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based.

(d) When adopting a mitigated negative declaration, the lead agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to mitigate or avoid significant environmental effects.

(e) A lead agency shall not adopt a negative declaration or mitigated negative declaration for a project within the boundaries of a comprehensive airport land use plan or, if a comprehensive airport land use plan has not been adopted, for a project within two nautical miles of a public airport or public use airport, without first considering whether the project will result in a safety hazard or noise problem for persons using the airport or for persons residing or working in the project area.

(f) When a non-elected official or decision-making body of a local lead agency adopts a negative declaration or mitigated negative declaration, that adoption may be appealed to the agency's elected decision-making body, if one exists. For example, adoption of a negative declaration for a project by a city's planning commission may be appealed to the city council. A local lead agency may establish procedures governing such appeals.

Upon review and consideration of the IS/MND, the Town may take action to adopt, revise, or reject the proposed project. A decision to approve the proposed project would be made in a resolution recommending certification of the IS/MND as part of the consideration of the proposed project. The Town has prepared this IS/MND and has determined that the environmental impacts of the proposed project have been reduced to a less than significant level through mitigation measures.

2.0 PUBLIC COMMENT LETTERS

The following agencies and entitles submitted written comments on the IS/MND, during the public review period. The comment letters are provided in **Attachment E** of this document.

Letter	Agency, Organization, or Individual	Date
A	**Madison Jaimes**	**02/02/2026**
Comment A-1	To whom it may concern, Recently I received a Notice of Intent to Adopt a Mitigated Negative Declaration for the Sun-Mesa Self-Storage Facility. I am a very nearby resident and I am inquiring for more information regarding the proposed facility. After doing my own research, I cannot find much on the proposed project besides a very long document with minor details. In the proposal, multiple promises are made for deliverables concerning the project's impact on the environment and surrounding communities, but those were not included in the notice I received, nor were instructions on how to retrieve them. I would like to provide a more educated comment before the comment period is over or the tentatively scheduled public hearing, but without any materials whatsoever concerning project plans, timeline, or impact I am asking for more. As a nearby resident I strongly oppose the proposal of a business that is not needed in this community as we already have plenty of local storage facilities in town that are under capacity. Not only would it be a disturbance to our peaceful lives, but it would destroy multiple Western Joshua Trees, disturbing animal and wildlife habitats, and create prolonged and needless construction noise in an otherwise peaceful area of Yucca Valley. I urge you to reconsider the facility. Thank you for your time.	
Response A-1	Comments noted. Mitigation measures are included to minimize or mitigate impact on western Joshua Trees, wildlife and habitat.	
B	**Brendan Fugate**	**02/02/2026**
Comment B-1	Hello, I recently received a Notice of Intent to Adopt a Mitigated Negative Declaration for the Sun-Mesa Self-Storage Facility. As someone who lives very near the proposed site, I would very much like some more information. The only thing I was able to turn up from a document search through the town website was what appears to be the initial lengthy proposal by UltraSystems on June 3, 2025. In this proposal, multiple promises are made for deliverables concerning the project's impact on the environment and surrounding communities, but those were not included in my notice, nor were instructions on how to retrieve them. It's difficult to provide an educated comment during the current comment period, or the tentatively scheduled public hearing, without any materials whatsoever concerning project plans, timeline, or impact. If you could direct me to such documents, I would be appreciative. Otherwise, I must express my opposition to the proposal of a seemingly redundant business (local storage facilities are not operating anywhere close to capacity) that would destroy multiple Western Joshua Trees, disturb animal habitat, and create prolonged and needless construction noise in an otherwise peaceful area of Yucca Valley. Thank you for your time.	
Response B-1	Comments noted. Mitigation measures are included to minimize or mitigate impact on western Joshua Trees, wildlife and habitat.	

B	Claire Armstrong	02/13/2026
Comment C-1	hello i'm writing to address the proposed construction of a storage facility on sun mesa & newton on the yucca mesa. please do not allow this plan to move forward! this is a beautiful peace of untouched land, which is sadly becoming rarer. i live within a few blocks of this intersection; my dog & i take daily walks here. we do not need another storage facility in the desert, let alone in this specific & gorgeous area. thank you	
Response C-1	Comments noted.

Comment Letter B

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello,

I recently received a Notice of Intent to Adopt a Mitigated Negative Declaration for the Sun-Mesa Self-Storage Facility. As someone who lives very near the proposed site, I would very much like some more information. The only thing I was able to turn up from a document search through the town website was what appears to be the initial lengthy proposal by UltraSystems on June 3, 2025. In this proposal, multiple promises are made for deliverables concerning the project's impact on the environment and surrounding communities, but those were not included in my notice, nor were instructions on how to retrieve them. It's difficult to provide an educated comment during the current comment period, or the tentatively scheduled public hearing, without any materials whatsoever concerning project plans, timeline, or impact. If you could direct me to such documents, I would be appreciative. Otherwise, I must express my opposition to the proposal of a seemingly redundant business (local storage facilities are not operating anywhere close to capacity) that would destroy multiple Western Joshua Trees, disturb animal habitat, and create prolonged and needless construction noise in an otherwise peaceful area of Yucca Valley. B-1

Thank you for your time.

Respectfully,

Branden Fugate

4.0 FINAL MITIGATION MONITORING AND REPORTING PROGRAM

The Final Mitigation Monitoring and Reporting Program (MMRP) has been prepared in conformance with § 21081.6 of the Public Resources Code and § 15097 of the CEQA Guidelines, which requires all state and local agencies to establish monitoring or reporting programs whenever approval of a project relies upon a MND or an EIR. The MMRP ensures implementation of the measures being imposed to mitigate or avoid the significant adverse environmental impacts identified through the use of monitoring and reporting. Monitoring is generally an ongoing or periodic process of project oversight; reporting generally consists of a written compliance review that is presented to the decision-making body or authorized staff person.

It is the intent of the MMRP to: (1) provide a framework for document implementation of the required mitigation; (2) identify monitoring/reporting responsibility; (3) provide a record of the monitoring/reporting; and (4) ensure compliance with those MMs that are within the responsibility of the City and/or Applicant to implement.

The following table lists impacts, mitigation measures adopted by the Town of Joshua Tree in connection with approval of the proposed project, level of significance after mitigation, responsible and monitoring parties, and the project phase in which the measures are to be implemented.

Only those environmental topics for which mitigation is required are listed in this Mitigation Monitoring and Reporting Program.

Table 4.0-1
FINAL MITIGATION MONITORING AND REPORTING PROGRAM

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
4.4 Biological Resources				
Threshold a): Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	**BIO-1: Biological Monitor** a) A biological monitor will be onsite to monitor activities that result in the clearing or grading of areas known to contain sensitive biological resources, such as western Joshua tree habitat, as well as ground-disturbing activities that impacts do not exceed the limits of construction and minimize the likelihood of inadvertent impacts to special-status plant and wildlife species. b) The biological monitor will ensure that all biological mitigation measures, best management practices (BMPs), avoidance and protection measures described in the relevant project permits and reports are in place and are adhered to. Monitoring will cease when the sensitive habitats and jurisdictional areas have been cleared or impacted. The biological monitor will take photographs throughout the construction process. Observations of special-status species will be recorded in monitoring logs, mapped, and special-status species records will be submitted to the California Natural Diversity Database (CNDDB) within five working days of the sightings, and CDFW will be provided with copies of the CNDDB forms and survey maps. Monitoring logs will be completed for each day of monitoring. c) The biological monitor will have the authority to halt all construction activities and all non-emergency actions if listed	Project Applicant Biological Monitor	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	species are identified on the project site and will be directly impacted. The monitor will notify the appropriate resource agency and consult if needed. If needed, and if authorized by the resource agencies, the monitoring biologist will relocate the individual outside of the work area where it will not be harmed. Work can continue at the location if CDFW and/or the USFWS determine that the activity will not result in impacts to the species. d) d) If sensitive biological resources are detected in an area to be impacted, then appropriate measures will be implemented by the biological monitor to avoid impacts (i.e., flag and avoid, erect orange snow fencing, biological monitor present during work, etc.). However, if avoidance is not possible and the sensitive biological resources will be directly impacted by project activities, the biological monitor will mark and/or stake the site(s) and map the individuals on an aerial map and with a GPS unit. The biologist will then contact the appropriate resource agencies to develop additional mitigation measures prior to commencing project activities. e) The construction crew will inspect excavated areas daily to detect the presence of trapped wildlife.			
	a) **BIO-2: Project Limits and Designated Areas** b) To avoid impacts to sensitive biological resources, the following measures will be implemented by the project proponent, contractors, and biological monitor prior to project staging, and commencement of any ground-disturbing activities or vegetation removal. c) Project boundary would be set at the minimum size to accomplish necessary work, resulting in minimal impacts to sensitive biological resources and jurisdictional areas.	Project Applicant Biological Monitor	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	d) Specifications for the project boundary, limits of construction, project-related parking, storage areas, laydown sites, and equipment storage areas will be mapped and clearly marked in the field with temporary fencing, signs, stakes, flags, rope, cord, or other appropriate markers. All markers will be maintained until the completion of activities in that area. e) To minimize the amount of disturbance, the construction/laydown areas, parking areas, staging areas, storage areas, spoil areas, and equipment access areas will be restricted to designated areas. To the extent possible, designated areas will comprise existing disturbed areas (parking lots, access roads, graded areas, etc.). f) Project-related work limits will be defined, and work crews will be restricted to designated work areas. Disturbance beyond the actual construction zone is prohibited without site-specific surveys. g) Project related vehicle traffic will be restricted to established roads, staging areas, and parking areas. Travel outside construction zones will be prohibited.			
	BIO-3: Western Joshua Tree Conservation Act Prior to the initiation of Joshua trees encroachment, trimming, pruning, or any activity that may result in take of Joshua trees (including removal of live and dead Joshua trees), the project proponent should obtain a California Endangered Species Act (CESA) Incidental Take Permits (ITP) under the western Joshua Tree Conservation Act (WJTCA) of Fish and Game Code (§§ 1927.3 and 1927.8). California Fish and Game Code § 86 defines "take" as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill". Mitigation will occur per the stem count per the WJTCA census in lieu fee, or as required by the ITP and WJTCA.	Project Applicant	Field Verification	1. CDFW 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	BIO-4: California Desert Native Plants Act Because species of the family Agavaceae (e.g., western Joshua Tree), which have been observed throughout the project site, are covered under § 80073(b) of the California Desert Native Plants Act (CDNPA), any impacts will require a permit issued by the commissioner of the sheriff in San Bernardino County pursuant to Chapter 3 § 80073. Prior to commencement of construction activities, including but not limited to mobilization, fencing, staging, vegetation trimming or removal, or ground-disturbing activities, the project proponent will acquire a permit pursuant to Chapter 3 § 80101 and § 80073 of the California Desert Native Plants Act if any of the following species are observed on the project site: a) All species of the family Agavaceae (century plants, nolinas, yuccas) b) All species of the family Cactaceae (cacti), except for the plants listed in subdivisions (b) and (c) of Section 80072 which may be harvested under a permit obtained pursuant to that section c) All species of the family Fouquieriaceae (ocotillo, candlewood) d) All species of the genus Prosopis (mesquites) e) All species of the genus Cercidium (palos verdes) f) Acacia greggii (catclaw) g) Atriplex hymenelytra (desert-holly) h) Dalea spinosa (smoke tree) i) Olneya tesota (desert ironwood), including both dead and live desert ironwood.	Project Applicant	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction
	BIO-5: Worker Environmental Awareness Program Worker Environmental Awareness Program (WEAP) for construction personnel shall be conducted and documented prior to onsite	Construction Supervisor	Field Verification	1. Town of Yucca Valley

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	disturbances. The training shall include a discussion of the sensitive biological resources within the project site and the potential presence of special-status species. The WEAP shall also include a discussion of special-status species' habitats, protection measures to ensure species are not impacted by project activities, project boundaries, penalties for non-compliance, and biological conditions outlined in the project permits. All new employees shall be trained before they access the work site. New employees shall be trained and certified by the Construction Supervisor with the approval of the Project Biologist as approved by CDFW. Each trained individual shall be given a distinctive helmet sticker that will identify those who have received training, signed the training log, and demonstrated the required level of environmental awareness.	Project Biologist		2. Town of Yucca Valley 3. Before Construction
	BIO-6: Construction Best Management Practices Project work crews will use CASQA (or similar) stormwater BMPs as directed by the project's Storm Water Pollution Prevention Plan (SWPPP). These measures will be identified prior to construction and incorporated into construction operations. The project's Qualified SWPPP Practitioner will ensure that construction activities will incorporate all applicable BMPs specified in the SWPPP to prevent erosion from water or wind, sedimentation of receiving waters, and introduction of other pollutants, including non-stormwater pollutants, into drainages crossed by or adjacent to the project site, accidental spills in the project site, including laydown yards and parking areas. BMPs will be maintained on a regular basis pursuant to the requirements of the SWPPP	Project Applicant Qualified SWPPP Practitioner	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction
	Bio-7: Pre-Construction Desert Tortoise Survey Prior to the commencement of project activities, including but not limited to ground disturbance, pre-construction surveys following guidance in the United States Fish and Wildlife's (USFWS) *Preparing for Any Action That May Occur Within the Range of the Mojave Desert*	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	Tortoise (*Gopherus agassizii;* "Guidelines") will be implemented. The Guidelines recommend the applicant contact USFWS prior to surveys. Qualified biologists will conduct pre-construction surveys for desert tortoise no more than 48 hours prior to initiation of Project activities and after any pause in Project activities lasting 30 days or more. The qualified biologists will follow USFWS's Desert Tortoise (Mojave Population) Field Manual (*Gopherus agassizii; "*Field Manual"). The qualified biologist will record all signs of desert tortoise, such as scat, burrows, carcasses, courtship rings, drinking depressions, and live sightings, as described in the Field Manual. The qualified biologist will provide a report with a map of the surveyed area (including transects, desert tortoises, and sign) and description of habitat conditions. Should positive survey results occur, the project applicant will secure an incidental take permit under Section 10 of FESA and State incidental take permit under Section 2081 of the Fish and Game Code.			3. Before Construction
	BIO-8: Pre-construction Wildlife Surveys Prior to issuance of grading permits, a qualified biologist will conduct pre-construction surveys within areas of suitable habitat for special-status terrestrial wildlife species identified as having moderate or greater potential to occur onsite. Pre-construction surveys will be conducted three days before the commencement of construction activities. If construction activities onsite lapse for one week or more, approved work areas will be re-surveyed by the biologist for new occurrences of the special-status wildlife species. Further consultation with wildlife agencies will be necessary if special-status species are observed onsite and prior to commencing construction activities.	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction
	a) **BIO-9: General Wildlife Avoidance and Protection Measures**	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	b) The project proponent would implement the following general avoidance and protection measures to protect wildlife. c) To minimize construction-related mortalities of nocturnally active wildlife species, it is recommended that all non-emergency work be conducted during daylight hours. All unnecessary lights shall be turned off at night to avoid attracting wildlife. Nighttime work (and use of artificial lighting) would not be permitted unless specifically authorized. d) If any wildlife is encountered during project activities, it will be allowed to freely leave the area unharmed or the biological monitor will capture the animal, if authorized, and relocate it outside of the construction work limits out of harm's way. e) Listed wildlife species will not be captured, handled, or relocated without specific written authorization from CDFW and/or USFWS. f) Wildlife would not be disturbed, captured, harassed, or handled, unless to relocate the animal out of imminent threat of injury or death. Animal nests, burrows and dens would not be disturbed without prior survey and authorization from the biological monitor. g) Active and inactive nests cannot be removed or disturbed. h) Contractors, subcontractors, employees, and site visitors would be prohibited from feeding or collecting wildlife. i) To avoid the potential for mortality and harassment of wildlife, all non-security related firearms, weapons, and domestic dogs would be prohibited from the project site.			3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	j) Contractors, subcontractors, employees, and site visitors shall inspect their vehicles and equipment for the presence of wildlife prior to moving their vehicles and equipment. The biological monitor shall be contacted if a special-status species is detected and is in danger of being harmed. k) All steep-walled pitfalls (trenches, holes, bores, and other excavations) greater than two feet deep used during the project would be completely covered at all times except when being actively used, to prevent wildlife entrapment (i.e. reptiles and small mammals). If trenches cannot be covered, escape ramps (maximum slope of 2:1) will be provided to allow trapped animals to escape. Exclusion fencing shall be installed around the trench or excavation. Trenches shall be inspected and wildlife removed immediately before backfilling. l) All onsite project workers shall look under their vehicles and equipment before movement. If wildlife is observed, no vehicles or equipment shall be moved until the animal has left the area voluntarily or can be legally relocated. m) Equipment maintenance, lighting, and staging will occur only in designated areas, and shall not block or impede wildlife movement.			
	BIO-10: Pre-Construction Burrowing Owl Surveys A qualified biologist shall conduct a pre-construction BUOW survey in accordance with the *Staff Report on Burrowing Owl Mitigation* (CDFW, 2012) or current CDFW guidance/protocol if changes to the aforementioned 2012 guidance have occurred. A pre-construction BUOW survey (Take Avoidance Survey) shall be conducted no more than 14 days prior to any site disturbance (grubbing, grading, and construction) and again 24 hours prior to ground disturbing activities.	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	Although BUOW was not detected on site during the reconnaissance-level surveys, the BSA contains suitable habitat to potentially support BUOW. The qualified biologist will identify, record, and map with a global positioning system (GPS) unit BUOWs and their sign. Detailed notes and wildlife species encountered during the surveys shall be recorded in field notes. If an occupied burrow is found (as indicated by the observation of a burrowing owl or the presence of burrowing owl sign), a 250-foot buffer around the burrow will be staked and flagged and no construction activities will be allowed within the buffer area during the breeding season (February 1 through August 31). The qualified biologist will contact CDFW to assist in the preparation of an Incidental Take Permit (ITP), and development of avoidance, minimization, and mitigation measures, prior to commencing project activities. A relocation program may be necessary and shall be approved by CDFW prior to commencing project activities. If no BUOWs or signs of BUOWs are observed during the preconstruction surveys and concurrence is received from CDFW, project activities may begin, and no further mitigation shall be required.			
	a) **BIO-11: Pre-Construction Breeding Bird Survey** b) If vegetation removal is scheduled within the nesting season, a qualified biologist will conduct a pre-construction nesting bird survey to maintain compliance with the Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code (§§ 3503 and 3503.5), which prohibit take of nesting birds and nests of migratory and non-game bird species. Nesting season is generally considered to be: c) January 1-July 30 for raptors. d) February 1-September 15 for non-raptors.	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	e) A qualified biologist will conduct pre-construction surveys no more than five days prior to when project activities (e.g., mobilization, excavation, grading, vegetation removal) are underway. Should a lapse in project activity be greater than five days, a qualified biologist will conduct additional surveys to maintain compliance. To maximize the detection of nesting birds, surveys must be conducted in work areas (e.g., staging, stockpiling, storage, equipment yards, access roads) during favorable weather conditions. A wide variety of shelters and resources are used by avian species; these include barren ground, grasses, forbs, shrubs, trees, rocky outcrops, and man-made structures (dependent on species and conditions). The qualified biologists will interpret physical signs for nesting structures (e.g., manipulation of materials like mud or grass) and direct signs of life (e.g., courtship behaviors, gathering, swooping, alarm calls, pellets). f) If nests are encountered, a qualified biologist will consider individual species tolerance, proximity to construction activity, noise impacts, line-of-sight barriers, and distance (horizontal and vertical) to determine if planned construction activities would impact nesting success. The rate and duration of construction activities will also be considered should the modification of scheduled activities be required to maintain healthy nesting outcomes. g) If the qualified biologist determines construction activities will potentially adversely affect a nest, the biologist must immediately inform the construction manager to halt construction activities (i.e., establish a no-work zone) within a minimum exclusion buffer of 100 feet for songbird nests and 200-500 feet for raptor nests. This no-work zone			

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	lawfully avoids the "take" of nesting birds and the mortality of eggs and younglings. Construction activities within the no-work buffer may proceed after a qualified biologist determines the young have successfully fledged the nest and are no longer dependent upon the nest or parents. h) If federal or state protected species are observed during surveys, USFWS and CDFW will be consulted to determine the appropriate time for project activities to proceed and what specific measures will be taken to ensure protected species are not impacted.			
	BIO-12: Pre-Construction Desert Kit Fox and American Badger Surveys Desert kit fox is a protected species under CCR Title 14, § 460. No more than 14 days prior to the beginning of ground disturbance and/or Project activities, a qualified biologist shall conduct pre-construction surveys to determine if potential desert kit fox burrows/dens are present in the project area. Pre-construction surveys should include transect surveys at a 20-meter transect distance to ensure 100 percent visual coverage of the project area. Surveys may be combined for similar fossorial mammals, such as American badger; combined, concurrent surveys for dissimilar taxa (e.g. plants or birds) shall be prohibited. Use of wildlife camera monitoring to determine presence/absence and burrow/den use is strongly encouraged, in accordance with CDFW approved methods, including *Remote Camera Trap Installation and Servicing Protocol Citizen Wildlife Monitoring Project 2017 Field Season* (Moskowitz and Huyett, 2017) and *Camera-trapping for conservation: a guide to best-practices* (Oliver R. Wearn & Paul Glover-Kapfer, 2017). The pre-construction survey reports will include: (1) the number, location, and status determination of potential desert kit fox and/or badger dens identified during the reporting period, (2) occupancy	Project Applicant Qualified Biologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	monitoring status, (3) species present, and (4) estimated number of individuals and associated behaviors observed. Desert kit fox and badger images will additionally be stored on a cloud-based server and additional relevant data will be made available to CDFW upon request. If the pre-construction surveys confirm occupied desert kit fox habitat, project activities shall be immediately halted, and the qualified biologist shall notify CDFW to develop avoidance, minimization, and mitigation measures within a Desert Wildlife Management Plan. No disturbance of active dens shall take place when juvenile desert kit fox may be present and dependent on parental care. Sick or injured animals will be reported to CDFW within 24 hours of discovery.			
Threshold b): Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	Reference **MM BIO-1** thru **MM BIO 6** above.			

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
Threshold e): Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	**BIO-13: Protective Fencing of No Work Areas** Protective fencing shall be installed around the perimeter of ecologically sensitive areas, which will be designated as No Work Areas, including around the perimeter of western Joshua trees scheduled to be transplanted, and native vegetation communities adjacent to work areas, before commencement of staging, fencing, clearing, grading, or other construction activities. The installation of fencing and protection measures around trees and vegetation will comply with the Town's Native Desert Vegetation Ordinance. The tree protection zone for Joshua tree is a 40-foot radius around the trunk of the tree. Fencing shall be maintained in place during all construction. No construction, grading, staging, or material storage will be allowed within the fence exclusion areas, or within the protected zones of any onsite native trees.	Project Applicant	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction
	BIO-14: Yucca Valley Development Code Section 9.10.040 A native landscaping documentation package ("report") will be submitted to the division and at the time of filing land use applications (i.e., prior to any land disturbing or development activity) and may be combined with landscaping and water conservation requirements (Town of Yucca Valley, 2014). The report will include a) the botanical and common names of regulated native desert plants, b) the precise location of each regulated desert native plant, c) the trunk or stem diameter of each regulated desert native plant, d) the height of each desert regulated native plant, e) the health or condition, including those unlikely to survive transplanting, of all regulated desert native plants, and f) the proposed placement of the regulated desert plant (i.e., the transplant site, removal determination, or adopt offsite). Should a plant be determined as likely to survive transplanting by a qualified biologist, it shall be made available for adoption or transplanted onsite as part of the project's landscaping plan, which should maximize the use of native desert plants. The project applicant	Project Applicant	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	shall provide a thirty-day notice followed by a thirty-day adoption period; the adoption period may be less than thirty days should all plants be adopted. Adoption should be prioritized in the Town of Yucca Valley, with second priority to the Morongo Basin. It is recommended the thirty-day adoption signage period commences with the submittal of the desert native plant permit. Signage posting will follow the requirements found in 9.10.040E. All regulated desert native plants within the adoption program will a) receive written permission to be obtained by the property owner, b) have consideration of lant's original and transplanted physical orientation, prevailing wind direction, soil type of the original and transplanted locations, and other related attributes which may affect the successful transplantation, and c) have a maintenance plan considering watering schedules, stockpile location, support, and the method of trap fencing. Plants which are not adopted within the thirty-day period may be removed.			
4.5 Cultural Resources				
Threshold 4.5 b): Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5.	**MM CUL-1:** If archaeological resources are discovered during construction activities, the contractor will halt construction activities in the immediate area and notify the Town of Yucca Valley (California Code of Regulations, Title 14, Chapter 3, Section 15064.5(f)). The project applicant shall retain an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology who will be notified and afforded the necessary time to recover, analyze, and curate the find(s). The qualified archaeologist will recommend the extent of archaeological monitoring necessary to ensure the protection	Project Construction Contractor Qualified Archaeologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. During Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	of any other resources that may be in the area. Any identified cultural resources shall be recorded on the appropriate DPR 523 (A-L) form and filed with the South Central Coastal Information Center. Construction activities may continue on other parts of the project site while evaluation and treatment of prehistoric archaeological resources takes place.			
Threshold 4.5 c): Disturb any human remains, including those interred outside of formal cemeteries.	**MM CUL-2:** If human remains are encountered during excavations associated with this project, all work will stop within a 30-foot radius of the discovery, and the San Bernardino County Coroner will be notified (§ 5097.98 of the Public Resources Code). The Coroner will determine whether the remains are recent human origin or older Native American ancestry. If the coroner, with the aid of the supervising archaeologist, determines that the remains are prehistoric, they will contact the NAHC. The NAHC will be responsible for designating the Most Likely Descendant (MLD). The MLD (either an individual or sometimes a committee) will be responsible for the ultimate disposition of the remains, as required by § 7050.5 of the California Health and Safety Code. The MLD will make recommendations within 24 hours of their notification by the NAHC. These recommendations may include scientific removal and nondestructive analysis of human remains and items associated with Native American burials (§ 7050.5 of the Health and Safety Code).	Project Construction Contractor San Bernardino County Coroner	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Before Construction
4.7 Geology and Soils				
Threshold 4.7 e): Would the project directly or indirectly destroy a unique paleontological	**MM GEO-1:** Prior to the issuance of the grading permit, the applicant shall provide a letter to the Town of Yucca Valley Planning Division, or designee, from a qualified paleontologist stating that the paleontologist has been retained to provide services for the project. The paleontologist shall develop, as needed, a Paleontological Resources Impact Mitigation Plan (PRIMP) to	Project Applicant Qualified Paleontologist Construction Contractor	Monitoring, Assessment, Recovery, and Curation	1. Town of Yucca Valley 2. Town of Yucca Valley 3. During Construction

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
resource or site or unique geologic feature?	mitigate the potential impacts to unknown buried paleontological resources that may exist onsite for the review and approval by the City. The PRIMP shall require that the paleontologist perform periodic paleontological monitoring of any ground disturbing activities within undisturbed native sediments during mass grading, site preparation, and underground utility installation. The project paleontologist may reevaluate the necessity for paleontological monitoring after 50 percent or greater of the excavations have been completed. In the event paleontological resources are encountered, ground-disturbing activity within 50 feet of the area of the discovery shall cease. The paleontologist shall examine the materials encountered, assess the nature and extent of the find, and recommend a course of action to further investigate and protect or recover and salvage those resources that have been encountered. Criteria for discarding specific fossil specimens shall be made explicit. If the qualified paleontologist determines that impacts to a sample containing significant paleontological resources cannot be avoided by project planning, then recovery may be applied. Actions may include recovering a sample of the fossiliferous material prior to construction, monitoring work and halting construction if a significant fossil needs to be recovered, and/or cleaning, identifying, and cataloging specimens for curation and research purposes. Recovery, salvage and treatment shall be done at the Applicant's expense. All recovered and salvaged resources shall be prepared to the point of identification and permanent preservation by the paleontologist. Resources shall be identified and curated into an established accredited professional repository such as the San Bernardino County Museum. The paleontologist shall have a repository agreement in hand prior to initiating recovery of the resource.			

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
4.18 Tribal Cultural Resources				
Threshold 4.18 b): Cause a substantial adverse change in the significance of a tribal cultural resource that is determined to be a significant resource to a California Native American tribe pursuant to the criteria set forth in subdivision (c) of Public Resource Code § 5024.1(c)?	**MM TCR-1:** Treatment of Cultural Resources During Project Implementation. If a pre-contact cultural resource is discovered during project implementation, ground-disturbing activities shall be suspended 60 feet around the resource(s), and an Environmentally Sensitive Area (ESA) physical demarcation/barrier constructed. The Project Archaeologist shall develop a research design that shall include a plan to evaluate the resource for significance under CEQA criteria. Representatives from Yuhaaviatam of San Manuel Nation (YSMN) and Morongo Band of Mission Indians (Morongo), the Archaeologist, and the Lead Agency shall confer regarding the research design, as well as any testing efforts needed to delineate the resource boundary. Following the completion of evaluation efforts, all parties shall confer regarding the resource's archaeological significance, its potential as a Tribal Cultural Resource (TCR), and avoidance (or other appropriate treatment) of the discovered resource. Removal of any cultural resource(s) shall be conducted with the presence of a Tribal monitor representing the Tribes, unless otherwise decided by YSMN and Morongo. All plans for analysis shall be reviewed and approved by the applicant and YSMN and Morongo prior to implementation, and all removed material shall be temporarily curated on-site. It is the preference of YSMN that removed cultural material be reburied as close to the original find location as possible. However, should reburial within/near the original find location during project implementation not be feasible, then a reburial location for future reburial shall be decided upon by YSMN and Morongo, the landowner, and the Lead Agency, and all finds shall be reburied within this location. Additionally, in this case, reburial shall not occur until all ground-disturbing activities associated with the project have been completed,	Project Applicant	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley 3. Prior to commencement of any "ground-disturbing activity"

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	all monitoring has ceased, all cataloguing and basic recordation of cultural resources have been completed, and a final monitoring report has been issued to Lead Agency, CHRIS, YSMN and Morongo. All reburials are subject to a reburial agreement that shall be developed between the landowner, YSMN and Morongo outlining the determined reburial process/location, and shall include measures and provisions to protect the reburial area from any future impacts. Should it occur that avoidance, preservation in place, and on-site reburial are not an option for treatment, the landowner shall relinquish all ownership and rights to this material and confer with YSMN and Morongo to identify an American Association of Museums (AAM)-accredited facility within the County that can accession the materials into their permanent collections and provide for the proper care of these objects in accordance with the 1993 CA Curation Guidelines. A curation agreement with an appropriate qualified repository shall be developed between the landowner and museum that legally and physically transfers the collections and associated records to the facility. This agreement shall stipulate the payment of fees necessary for permanent curation of the collections and associated records and the obligation of the Project developer/applicant to pay for those fees. All draft records/reports containing the significance and treatment findings and data recovery results shall be prepared by the archaeologist and submitted to the Lead Agency and YSMN and Morongo for their review and comment. After approval from all parties, the final reports and site/isolate records are to be submitted to the local CHRIS Information Center, the Lead Agency, YSMN and Morongo.			
	MM TCR-2: Inadvertent Discoveries of Human Remains. If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of	Project Applicant Qualified Archeologist	Field Verification	1. Town of Yucca Valley 2. Town of Yucca Valley

TOPICAL AREA IMPACT	MITIGATION MEASURE	RESPONSIBLE PARTY	MONITORING ACTION	1. ENFORCEMENT AGENCY 2. MONITORING AGENCY 3. MONITORING PHASE
	the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project			3. During Construction
	MM TCR-3: **Tribal Cultural Resources Monitoring.** In consultation with interested tribes, the developer, and the Town of Yucca Valley, a Tribal Monitoring Plan (TMP) will be prepared to address the details, timing, and responsibility Tribal Monitoring activities that will occur on the project site. Details in the TMP shall include: 1. Monitoring of project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) coordinated with these construction-related activities. 2. The development of a concurrent monitoring schedule in coordination with the developer and the designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with the project archaeologist. 3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent TCR discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation. ATTACHMENT A: NOTICE OF INTENT

Town of Yucca Valley

Notice of Intent to Adopt a Mitigated Negative Declaration

To: Agencies, Organizations, and Interested Parties

From: Town of Yucca Valley

Subject: Notice of Intent to Adopt an Initial Study/Mitigated Negative Declaration (IS/MND) for the Sun Mesa Self-Storage Facility

Town of Yucca Valley is the Lead Agency under the California Environmental Quality Act (CEQA) for the proposed projects identified below and has prepared this notice in accordance with the California Code of Regulations, Title 14, Sections 15072 and 15105.

Project Title: Sun Mesa Self-Storage Facility

Project Location: S/E Corner of Sun Mesa Road and Newton Road (APN 0597-111-67)

Project Description: The Town of Yucca Valley (Town) is processing a request to implement discretionary actions that would allow for the development of a self-storage facility (project) southeast of the intersection of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley in San Bernardino County (APN: 0597-11-067). The proposed project includes the development of approximately 541 storage units, a manager's office, parking, internal roads, and landscaping on an approximately 4.34-acre site. In addition, offsite improvements (including partial pavement of adjacent roads) would be provided.

The project would consist of: (1) utilities improvements; (2) construction of self-storage units and a manager's office; (4) parking; (5) landscaping; and (6) improvement of half of Newton Lane along the project's west boundary and Sun Mesa Drive along the north boundary.

The project site has a General Plan land use designation of Industrial (I) and is zoned Industrial by the Town of Yucca Valley. The proposed self-storage facility is permitted use within the Industrial zoning district and does not require a General Plan Amendment or Zone Change. With approval of a Site Plan Review, the project would conform to the existing land use and zoning designations.

Public Hearing/Meeting: A public hearing for the adoption of the MND has been tentatively scheduled for Tuesday, March 10, 2026, at 6:00 PM, during the Town's regular Planning Commission meeting at the location shown below:

Yucca Valley Community Center – Yucca Room
57090 Twentynine Palms Highway, Yucca Valley, CA 92284

Public Review Period/Responses and Comments: The IS/MND will be available for public review and comment pursuant to California Code of Regulations, Title 14, Section 15073. Town will accept comments for 30 days, starting on **January 16, 2026 to February 15, 2026, by 5:00 PM**. All comments must be submitted in writing, either in a letter or email. Please indicate a contact person for your agency or organization and send your responses or comments to:

Document Title
Sun Mesa Self-Storage Facility

Document Type
MND - Mitigated Negative Declaration

Received
1/23/2026

Present Land Use
Industrial (I)

Document Description
The proposed project entails the construction and operation of a self-storage facility, consisting of 16 detached storage structures, totaling approximately 89,700 square feet, plus a 400 square foot manager's office. Public infrastructure improvements as part of project implementation would include a sixty-foot (60') wide local road, requiring paving twenty-six (26') half width along Newton Lane with curb, gutter, and sidewalk, from the proposed project site south to Buena Vista Drive.

Town of Yucca Valley

Notice of Intent to Adopt a Mitigated Negative Declaration

To: Agencies, Organizations, and Interested Parties

From: Town of Yucca Valley

Subject: Notice of Intent to Adopt an Initial Study/Mitigated Negative Declaration (IS/MND) for the Sun Mesa Self-Storage Facility

Town of Yucca Valley is the Lead Agency under the California Environmental Quality Act (CEQA) for the proposed projects identified below and has prepared this notice in accordance with the California Code of Regulations, Title 14, Sections 15072 and 15105.

Project Title: Sun Mesa Self-Storage Facility

Project Location: S/E Corner of Sun Mesa Road and Newton Road (APN 0597-111-67)

Project Description: The Town of Yucca Valley (Town) is processing a request to implement discretionary actions that would allow for the development of a self-storage facility (project) southeast of the intersection of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley in San Bernardino County (APN: 0597-11-067). The proposed project includes the development of approximately 541 storage units, a manager's office, parking, internal roads, and landscaping on an approximately 4.34-acre site. In addition, offsite improvements (including partial pavement of adjacent roads) would be provided.

The project would consist of: (1) utilities improvements; (2) construction of self-storage units and a manager's office; (4) parking; (5) landscaping; and (6) improvement of half of Newton Lane along the project's west boundary and Sun Mesa Drive along the north boundary.

The project site has a General Plan land use designation of Industrial (I) and is zoned Industrial by the Town of Yucca Valley. The proposed self-storage facility is permitted use within the Industrial zoning district and does not require a General Plan Amendment or Zone Change. With approval of a Site Plan Review, the project would conform to the existing land use and zoning designations.

Public Hearing/Meeting: A public hearing for the adoption of the MND has been tentatively scheduled for Tuesday, March 10, 2026, at 6:00 PM, during the Town's regular Planning Commission meeting at the location shown below:

Yucca Valley Community Center – Yucca Room
57090 Twentynine Palms Highway, Yucca Valley, CA 92284

Public Review Period/Responses and Comments: The IS/MND will be available for public review and comment pursuant to California Code of Regulations, Title 14, Section 15073. Town will accept comments for 30 days, starting on **January 16, 2026 to February 15, 2026, by 5:00 PM**. All comments must be submitted in writing, either in a letter or email. Please indicate a contact person for your agency or organization and send your responses or comments to:

hello
i'm writing to address the proposed construction of a storage facility on sun mesa & newton on the yucca mesa. please do not allow this plan to move forward! this is a beautiful peace of untouched land, which is sadly becoming rarer. i live within a few blocks of this intersection; my dog & i take daily walks here. we do not need another storage facility in the desert, let alone in this specific & gorgeous area.
thank you
claire armstrong

Mr. Jerome,

Thank you for your quick response and the documentation. I have read it carefully and remain opposed to the proposed project, particularly on the proposed lot, now even more so than before. I am not opposed to growth or industry, but this is sprawl. Yucca Valley is replete with already developed and underutilized/vacant land, particular along I-62, that would be tailor made for such a project (leaving the actual need for said project aside).

Furthermore, I was not able to find an updated timeline for the proposed project. The nearest I saw predicted project completion in 2024. If you could provide me with updated projections, or direct me to the appropriate area of the documentation, I would be grateful.

Thank you,
Branden Fugate

> Hello,
>
> I recently received a Notice of Intent to Adopt a Mitigated Negative Declaration for the Sun-Mesa Self-Storage Facility. As someone who lives very near the proposed site, I would very much like some more information. The only thing I was able to turn up from a document search through the town website was what appears to be the initial lengthy proposal by UltraSystems on June 3, 2025. In this proposal, multiple promises are made for deliverables concerning the project's impact on the environment and surrounding communities, but those were not included in my notice, nor were instructions on how to retrieve them. It’s difficult to provide an educated comment during the current comment period, or the tentatively scheduled public hearing, without any materials whatsoever concerning project plans, timeline, or impact. If you could direct me to such documents, I would be appreciative. Otherwise, I must express my opposition to the proposal of a seemingly redundant business (local storage facilities are not operating anywhere close to capacity) that would destroy multiple Western Joshua Trees, disturb animal habitat, and create prolonged and needless construction noise in an otherwise peaceful area of Yucca Valley.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To whom it may concern,
Recently I received a Notice of Intent to Adopt a Mitigated Negative Declaration for the Sun-Mesa Self-Storage Facility. I am a very nearby resident and I am inquiring for more information regarding the proposed facility. After doing my own research, I cannot find much on the proposed project besides a very long document with minor details. In the proposal, multiple promises are made for deliverables concerning the project's impact on the environment and surrounding communities, but those were not included in the notice I received, nor were instructions on how to retrieve them. I would like to provide a more educated comment before the comment period is over or the tentatively scheduled public hearing, but without any materials whatsoever concerning project plans, timeline, or impact I am asking for more. As a nearby resident I strongly oppose the proposal of a business that is not needed in this community as we already have plenty of local storage facilities in town that are under capacity. Not only would it be a disturbance to our peaceful lives, but it would destroy multiple Western Joshua Trees, disturbing animal and wildlife habitats, and create prolonged and needless construction noise in an otherwise peaceful area of Yucca Valley. I urge you to reconsider the facility. Thank you for your time.
Sincerely,
Madison Jaimes

Town of Yucca Valley

Notice of Intent to Adopt a Mitigated Negative Declaration

To: Agencies, Organizations, and Interested Parties

From: Town of Yucca Valley

Subject: Notice of Intent to Adopt an Initial Study/Mitigated Negative Declaration (IS/MND) for the Sun Mesa Self-Storage Facility

Town of Yucca Valley is the Lead Agency under the California Environmental Quality Act (CEQA) for the proposed projects identified below and has prepared this notice in accordance with the California Code of Regulations, Title 14, Sections 15072 and 15105.

Project Title: Sun Mesa Self-Storage Facility

Project Location: S/E Corner of Sun Mesa Road and Newton Road (APN 0597-111-67)

Project Description: The Town of Yucca Valley (Town) is processing a request to implement discretionary actions that would allow for the development of a self-storage facility (project) southeast of the intersection of Newton Lane and Sun Mesa Drive in the Town of Yucca Valley in San Bernardino County (APN: 0597-11-067). The proposed project includes the development of approximately 541 storage units, a manager's office, parking, internal roads, and landscaping on an approximately 4.34-acre site. In addition, offsite improvements (including partial pavement of adjacent roads) would be provided.

The project would consist of: (1) utilities improvements; (2) construction of self-storage units and a manager's office; (4) parking; (5) landscaping; and (6) improvement of half of Newton Lane along the project's west boundary and Sun Mesa Drive along the north boundary.

The project site has a General Plan land use designation of Industrial (I) and is zoned Industrial by the Town of Yucca Valley. The proposed self-storage facility is permitted use within the Industrial zoning district and does not require a General Plan Amendment or Zone Change. With approval of a Site Plan Review, the project would conform to the existing land use and zoning designations.

Public Hearing/Meeting: A public hearing for the adoption of the MND has been tentatively scheduled for Tuesday, March 10, 2026, at 6:00 PM, during the Town's regular Planning Commission meeting at the location shown below:

Yucca Valley Community Center – Yucca Room
57090 Twentynine Palms Highway, Yucca Valley, CA 92284

Public Review Period/Responses and Comments: The IS/MND will be available for public review and comment pursuant to California Code of Regulations, Title 14, Section 15073. Town will accept comments for 30 days, starting on **January 16, 2026 to February 15, 2026, by 5:00 PM**. All comments must be submitted in writing, either in a letter or email. Please indicate a contact person for your agency or organization and send your responses or comments to:

Jared Jerome, Associate Planner
Town of Yucca Valley
58928 Business Center Drive, Yucca Valley, CA 92284
T: (760) 369-6579 x317
E: jjerome@yucca-valley.org

DOCUMENT AVAILABILITY: This IS/MND and associated materials are available for review on Town's website https://www.yucca-valley.org/our-town/town-manager/town-clerk/request-for-public-record and during regular business hours at the following location:

Town of Yucca Valley
57090 Twentynine Palms Highway
Yucca Valley, CA 92284

RESOLUTION NO. PC 26-02

RESOLUTION OF THE PLANNING COMMISSION OF THE TOWN OF YUCCA VALLEY APPROVING EA 18-23 AND SPR 07-23 (PROJECT), FOR WHICH AN INITIAL STUDY/MITIGATED NEGATIVE DECLARATION WAS PREPARED IN ACCORDANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AND ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM

WHEREAS, prior to the adoption of this Resolution, the Town of Yucca Valley prepared an Initial Study and adopted a Mitigated Negative Declaration for the EA 18-23 and Site Plan Review SPR 07-23 (Project) in accordance with the requirements of the California Environmental Quality Act of 1970, as amended ("CEQA"), and state guidelines implementing CEQA; and

WHEREAS, the Project analyzed under the Initial Study/Mitigated Negative Declaration consisted of the construction and development of an approximate 89,700 square foot multi-structure self-storage facility that is 9'6" in height, located on approximately 4.34-acre property, with parking, landscaping, and drainage improvements. The project is located at 4815 Newton Lane and is also identified as APN: 0597-111-67; and

WHEREAS, the Initial Study/Mitigated Negative Declaration concluded that implementation of the Project could result in a number of significant effects on the environment and identified mitigation measures that would reduce the significant effects to a less-than-significant level; and

WHEREAS, in connection with the approval of a project involving the preparation of an initial study/mitigated negative declaration that identifies one or more significant environmental effects, CEQA requires the decision-making body of the lead agency to incorporate feasible mitigation measures that would reduce those significant environment effects to a less-than-significant level; and

WHEREAS, whenever a lead agency approves a project requiring the implementation of measures to mitigate or avoid significant effects on the environment, CEQA also requires a lead agency to adopt a Mitigation Monitoring and Reporting Program to ensure compliance with the mitigation measures during project implementation; and

WHEREAS, the Town of Yucca Valley is the lead agency on the Project, and the Planning Commission is the decision-making body for the proposed Project; and

WHEREAS, the Planning Commission has reviewed and considered the Initial Study/Mitigated Negative Declaration and related Mitigation Monitoring and Reporting Program for the Project and intends to take actions on the Project in compliance with CEQA and state guidelines implementing CEQA; and

WHEREAS, the Initial Study/Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program for the Project are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, the Project will not individually or cumulatively have an adverse effect on wildlife resources, as defined in Section 711.2 of the California Department of Fish and Game Code.

NOW THEREFORE BE IT RESOLVED BY THE PLANNING COMMISSION OF THE TOWN OF YUCCA VALLEY AS FOLLOWS:

THAT THE PLANNING COMMISSION does hereby make the following findings: (1) it has independently reviewed and analyzed the Initial Study/Mitigated Negative Declaration and other information in the record and has considered the information contained therein, prior to acting upon or approving the Project, (2) the Initial Study/Mitigated Negative Declaration prepared for the Project has been completed in compliance with CEQA and consistent with state and local guidelines implementing CEQA, and (3) the Initial Study/Mitigated Negative Declaration represents the independent judgment and analysis of the Town as lead agency for the Project.

THAT THE PLANNING COMMISSION does hereby approve construction of the Project (Planning File No. EA 18-23 and SPR 07-23) and adopt the Mitigation Monitoring and Reporting Program prepared for the Project. The Initial Study/Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are: (1) on file in the Community Development Department Office, located at 58928 Business Center Drive, Yucca Valley, CA, 92284 (2) and area available for inspection by any interested person.

ADOPTED this 14th day of April, 2026.

_____
Alejandro Vasconcelos, Chairperson

ATTEST:

Project Number & Sheet Number

C-1.0

9.14.060: MINI-/SELF-STORAGE FACILITIES:

A. General: The only commercial activities permitted on the site of a self-service storage facility shall be rental of storage bays and pick up and deposit of goods and/or property in dead storage. Storage bays shall not be used to: manufacture, fabricate or process goods; service or repair vehicles, boats, small engines or electrical equipment, or to conduct similar repair activities; conduct garage sales or retail sales of any kind; or conduct any other commercial or industrial activity on the site.

B. Security Quarters Permitted: Residential quarters for security purposes may be established on the site.

C. Bays Have No Legal Address: Individual storage bays or private postal boxes within a self-service storage facility shall not be considered a premises for the purpose of assigning a legal address in order to obtain an occupational license or other governmental permit or license to do business.

D. Outside Storage:

1. Except as provided in this section, all property stored on site shall be entirely within enclosed buildings.

2. Open storage of private recreational vehicles and dry storage of recreational boats for personal use shall be permitted within a self-service storage facility provided that the following is met:

a. Such storage shall take place only within a designated area. The area so designated shall be clearly delineated upon the site plan accompanying the application;

b. The open storage area shall not exceed twenty five percent (25%) of the buildable area of the site;

c. The open storage area shall be entirely screened from view from adjacent residential areas and all street rights of way by a solid building wall or a masonry wall with a minimum height of eight feet (8');

d. Vehicles shall not be stored within the area set aside for minimum building setbacks; and

e. No vehicle maintenance, washing or repair shall be permitted on site. Recreational boats stored on the site shall be placed and maintained upon wheeled trailers. No dry stacking of boats shall be permitted on site.

E. Minimum Lot Size: Notwithstanding any other provision of this code the minimum lot size for a self-storage facility shall be one acre.

F. Separation Between Storage Buildings: If separate buildings are constructed, there shall be a minimum ten foot (10') setback between individual buildings within the facility.

G. Maximum Bay Size: The maximum size of a storage bay shall be five hundred (500) square feet.

H. Maximum Building Height: With the exception of a structure used as a security quarters, the maximum height of a self-service storage facility shall be one story. The height of the building shall not exceed twenty feet (20'), except for any architectural features located along the street entrance to the facility. In addition, a parapet wall shall be constructed to screen roof mounted air conditioning and other equipment, if any. The combined height of the building and the parapet wall shall not exceed twenty five feet (25').

I. Parking Requirements: See , "Parking And Loading Regulations", of this title for ministorage parking requirements.

J. Miscellaneous Requirements:

1. Outdoor Lighting: All outdoor lighting shall meet the requirements of title 8,, "Outdoor Lighting", of this code.

2. Loudspeakers: Exterior loudspeakers or paging equipment shall not be permitted on the site.

3. Bay Doors: Storage bay doors shall not face any abutting property which is residentially zoned, nor shall they be visible from any adjacent residential property or any street right of way.

4. Barbed Wire: Barbed or similar wire may be used for security purposes, but it shall not be visible from any adjacent residential property or any street right of way.

5. Architectural Treatment: The exterior facades of all structures shall receive uniform architectural treatment, including stucco and painting of surfaces. All structures adjacent to properties designated with a residential land use shall have a pitched roof or other treatment comparable to the adjacent residential development. (Ord. 253, 12-16-2014)

NOTES:
ALL PLANTINGS SHALL BE INSTALLED IN ACCORDANCE WITH ALL FEDERAL, STATE AND LOCAL CODES AND NURSERY AND MANUFACTURERS SPECIFICATIONS., RECOMMENDATIONS AND REQUIREMENTS. NOTIFY THE ARCHITECT IMMEDIATELY IN WRITING PRIOR TO SIGNING OF A CONTRACT WITH THE OWNER OF ANY CONFLICTS. CONFLICTS NOTED AFTER CONTRACT SIGNING OR AFTER THE COMMENCEMENT OF WORK SHALL BE THE SOLE RESPONSIBILITY OF THE LANDSCAPE CONTRACTOR.

VERIFICATION:
PLANT MATERIAL AVAILABILITY SHALL BE CONFIRMED BY LANDSCAPE CONTRACTOR PRIOR TO BIDDING. SHOULD SPECIFIED MATERIAL NOT BE AVAILABLE, THE ARCHITECT AND OWNER SHALL BE NOTIFIED PRIOR TO BID DATE. PLANT SUBSTITUTIONS MAY ONLY BE MADE IF A PLANT BECOMES UNAVAILABLE. SUBSTITUTIONS WILL NOT BE PERMITTED UNLESS SUBSTANTIATED WRITTEN PROOF IS SUPPLIED THAT A SPECIFIED PLANT IS NOT OBTAINABLE. IN THIS SITUATION A PLANT CAN ONLY BE SUBMITTED BY A PLANT OF SIMILAR SIZE, HABITAT, AND VALUE. ABSOLUTELY NO SUBSTITUTIONS CAN BE MADE WITHOUT THE APPROVAL OF THE PROJECT ARCHITECT. LANDSCAPE CONTRACTOR IS RESPONSIBLE FOR VERIFICATION OF ALL PLANT QUANTITIES.

SCHEMATIC:
THE FEATURES ARE SHOWN SCHEMATICALLY FOR GRAPHIC CLARITY. PRIOR TO PLANTING VERIFY EXACT LOCATIONS WITH OWNER. VERIFY LOCATION OF ALL UTILITY LINES PRIOR TO INSTALLATION AND ADJUSTMENT FOR GENERAL INTENT IF CONFLICT EXISTS.

FINISH GRADE:
LANDSCAPE CONTRACTORS SHALL NOT FINE GRADE, AMEND SOIL OR DO ANY PLANTING OR IRRIGATION WORK UNTIL FINAL GRADES ARE ESTABLISHED WITHIN 0.1' BY GENERAL CONTRACTOR.

FINISH GRADES IN PLANTING AREAS:
FINISH GRADES SHALL CONFORM TO GRADING PLAN. FINISH GRADES SHALL BE 1" INCH BELOW ADJACENT HARDSCAPE IN TURF AREAS AND 2" INCHES BELOW ADJACENT HARDSCAPE IN FROM AREAS. POSITIVE DRAINAGE AWAY FROM BUILDING AND WALKWAYS SHALL BE MAINTAINED.

ROUTE BARRIERS:
SEE DETAILS REGARDING ROOT BARRIER REQUIREMENTS.

PLANTING DEPTH:
THE LANDSCAPE CONTRACTOR SHALL PLANT ALL PLANTS AS SHOWN ON THE DETAILS. SHOULD THE LANDSCAPE CONTRACTOR OVERDIG PLANTING HOLES, AND THE PLANT OR PLANTS SETTLE, THE CONTRACTOR SHALL BE RESPONSIBLE TO REPLANT THESE PLANTS CORRECTLY. SHOULD REPLANTING WEAKEN IN THE PLANT, THE LANDSCAPE CONTRACTOR SHALL REPLACE PLANT IMMEDIATELY. SHOULD ANY PLANTS SETTLE DURING THE ONE YEAR WARRANTY PERIOD, THEY SHALL BE REPLACED BY THE LANDSCAPE CONTRACTOR. ALL REPLANTING AND REPLACEMENT SHALL BE DONE BY THE CONTRACTOR WITHIN TWO WEEKS OF NOTIFICATION AT NO ADDITIONAL COST TO THE OWNER. ALL REPLACEMENT PLANTINGS SHALL BE PROVIDED BY THE CONTRACTOR TO MATCH THE SAME SIZE OF THE SURROUNDING PLANT (E.I. REPLACEMENT PLANTS FOR ONE GALLON SIZE MAY REQUIRE REPLACEMENT BY FIVE GALLON, FIVE GALLON BY 15 GALLON, 15 GALLON BY 24 INCH BOX ETC.). ARCHITECT SHALL HAVE THE FINAL DECISION AS TO WHICH PLANTS ARE TOO DEEP AND IF ANY PLANTS HAVE BEEN WEAKENED BY REPLANTING AND REQUIRE REPLACEMENT.

TREE PLANTING:
THE LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE TO ADEQUATELY PLAN FOR TREE PLANTING WHILE INSTALLING THE IRRIGATION SYSTEM. NO TREES OR SHRUBS SHALL BE PLANTED DIRECTLY ON TOP OF IRRIGATION LINES.

BACKFILL:
BACKFILL FOR PLANTING WITH 50 PERCENT CLEAN NATIVE SOIL AND 50 PERCENT NITROLIZED FOREST HUMUS NITROLIZED SAWDUST. PLANT TREES AND SHRUBS WITH TOP OF ROOT BALL SLIGHTLY ABOVE GROUND LEVEL. SET PLANT ON NATIVE GRADE. IF HOLE IS OVERDUG BACKFILL WITH THREE-QUARTER-INCH GRAVEL TO POINT WHERE PLANT CROWN IS ABOVE GROUND LEVEL. SET PLANT, BACKFILL HALFWAY, TAMP SOIL, AND FERTILIZER TABLETS THEN COMPLETE BACKFILL. SEE DETAIL. SLOW-RELEASE FERTILIZER PACKS SHALL BE ADDED WHEN PLANTING AS FOLLOWS: ONE FOR ONE GALLON, 3 PER 5 GALLON, 6 FOR 15 GALLON, 12 FOR 24" INCH BOX. PROVIDE WATERING BASIN AROUND EACH PLANT. WATER IMMEDIATELY. REMOVE BASINS IN TURF AREAS PRIOR TO PLANTING TURF.

SOIL PREPARATION:
REMOVE STONES, ROOTS AND OTHER DEBRIS FROM THE PLANTING AREA. COMPACTED SOIL SHALL BE RETURNED TO A FRIABLE CONDITION. APPLY WATER AS NEEDED TO OBTAIN OPTIMUM MOISTURE CONTENT FOR SOIL PREPARATION AND PLANTING. SEATED OR HYDROSEEDED TURF AND FLATTED GROUND COVER AREAS; TILL INTO TOP 6 INCH OF SOIL BEST 6- 20 - 20XB FERTILIZER (OR APPROVED EQUAL) AT 20 POUNDS PER THOUSAND SQUARE FEET, A 2 INCH LAYER (6 CUBIC YARDS PER THOUSAND SQUARE FEET) NITROLIZED HUMUS, AND 92 POUNDS PER THOUSAND SQUARE FEET 95 PERCENT SPREADABLE GYPSUM. SODDED TURF SAME AS ABOVE WITH ONLY ONE CUBIC YARD PER THOUSAND SQUARE FOOT NITROLIZED HUMUS.

HERBICIDES:
LANDSCAPE CONTRACTOR WILL APPLY RONSTAR OR APPROVED EQUAL PER MANUFACTURER'S REQUIREMENTS AFTER PLANTING. CONFORM TO ALL NATIONAL, STATE AND LOCAL REPORTING REQUIREMENTS. LANDSCAPE CONTRACTOR WILL MAINTAIN THE PROJECT IN A WEED FREE CONDITION UNTIL END OF MAINTENANCE PERIOD.

SPECIALTY PLANTS:
THE LANDSCAPE CONTRACTOR SHALL PROVIDE ALL AMENDMENTS AND SPECIALTY MATERIALS NEEDED FOR PLANTS THAT REQUIRES SPECIAL PLANTING MEDIA. AZALEAS, JAPANESE MAPLES AND CAMELLIAS SHALL BE PLANTED IN A MIXTURE OF HALF PRE-MOISTENED PETE MOSS AND HALF NATIVE SOIL. OTHER PLANS REQUIRING SPECIAL PLANTING MEDIA WILL BE NOTED IN THE LEGEND. THE CONTRACTOR SHALL PROVIDE SPECIALTY MEDIA AS A PORTION OF COMPLETE PROJECT AT NO ADDITIONAL COST TO THE OWNER.

TREES:
ALL THREE SHALL MEET THE REQUIREMENTS OF AMERICAN ASSOCIATION OF NURSERYMEN 'AMERICAN STANDARD OR NURSERY STOCK'. THREE SHALL BE OF EXCELLENT HEALTH WITHOUT DAMAGE OR CIRCLING ROOTS OR FOLIAR DAMAGE FROM FUNGUS, INSECT, SUN OR WIND EXPOSURE OR OTHER BIOLOGICAL OR CLIMATIC CAUSES. THE ARCHITECT OR OWNER RESERVE THE RIGHT TO REJECT UNSUITABLE TREES EVEN AFTER PLANTING. LANDSCAPE CONTRACTOR SHALL REQUEST EVALUATION BY ARCHITECT PRIOR TO PLANTING IF HE/SHE HAS QUESTIONS REGARDING SUITABILITY. IF THE EVALUATION REQUIRES A SITE VISIT NOT PREVIOUSLY SCHEDULED, THE COST OF THE EVALUATION SHALL BE BORNE BY THE CONTRACTOR. TREES SHALL BE STAKED PER DETAIL.

TREE CALIPER:
TREES WILL HAVE THE FOLLOWING CALIPER AND SIX INCH ABOUT GRADE:
5 GALLONS. .5 INCH TO .75 INCH
15 GAL. .75 INCH TO 1.5 IN.
24 IN. BOX 1.5 INCH TO 2.5 IN.

WARRANTY PERIOD, MAINTENANCE PERIOD:
LANDSCAPE CONTRACTOR SHALL WARRANT PLANTING AND ALL OF ITS COMPONENTS FOR 12 MONTHS AFTER FINAL ACCEPTANCE OF PROJECT. LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MATERIALS AND LABOR ASSOCIATED WITH THE GUARANTEE, INCLUDING BUT NOT LIMITED TO THE LOSS OF THE PLANT MATERIAL OR DAMAGED STRUCTURES. LANDSCAPE CONTRACTOR SHALL PROVIDE MAINTENANCE OF THE PROJECT FOR 90 DAYS BEGINNING AT SUBSTANTIAL COMPLETION OF THE PROJECT. IF SUBSTANTIAL COMPLETION PUNCH LIST ITEMS HAVE NOT BEEN CORRECTED WITHIN 10 WORKING DAYS OF THE SUBSTANTIAL COMPLETION REVIEW, THE BEGINNING OF THE MAINTENANCE SHALL BE EXTENDED TO BEGIN AT THE COMPLETION OF THOSE PUNCH LIST ITEMS.

PLANT ALLOWANCE:
THE LANDSCAPE CONTRACTOR IS REQUIRED TO PROVIDE THE OWNER WITH COMPLETE PROJECT. HE/SHE SHALL INSTALLED ANY AND ALL PLANT MATERIAL AS SHOWN ON THE DRAWINGS AND LEGENDS. SHOULD A DISCREPANCY OCCUR BETWEEN THE PLANS, NOTES OR LEGENDS, THE ONE THAT REQUIRES A GREATER NUMBER OF PLANTS SHALL PREVAIL. THE LANDSCAPE CONTRACTOR SHALL MAKE ALL NEEDED CHANGES AS DIRECTED BY THE ARCHITECT AND PROVIDE THE OWNER WITH A COMPLETE PROJECT AT NO ADDITIONAL COST TO THE OWNER.

MULCH:
THE LANDSCAPE CONTRACTOR SHALL INSTALL 2 INCH OF WOOD CHIPS OR BARK ON ALL NON TURF PLANTING AREAS.

Bianca Martinez, Air Quality Specialist

SUBJECT: Air Quality, Energy, and Greenhouse Gas Technical Memorandum for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California

INTRODUCTION

LSA has prepared this Air Quality, Energy, and Greenhouse Gas Technical Memorandum to evaluate the impacts associated with construction and operation of the proposed Sun Mesa (Billings) Mini Storage Project (project) in Yucca Valley, unincorporated San Bernardino County, California. This analysis follows the guidelines identified by the Mojave Desert Air Quality Management District (MDAQMD) in its California Environmental Quality Act (CEQA) and Federal Air Conformity Guidelines.[1] In keeping with these guidelines, this analysis describes existing air quality, air quality and greenhouse gas (GHG) emissions generated from project-related sources, regional air pollution, and global climate change. In addition, this analysis discusses energy use resulting from implementation of the proposed project and evaluates whether the proposed project would result in the wasteful, inefficient, or unnecessary consumption of energy resources or conflict with any applicable plans for renewable energy and energy efficiency.

PROJECT LOCATION AND DESCRIPTION

The 4.34-acre project site is located on Assessor's Parcel Number 0597-111-067, which is east of State Route 247 and north of Buena Vista Drive in Yucca Valley, unincorporated San Bernardino County, California. The project site is currently undeveloped. Access to the project site is provided by Buena Vista Drive, Sun Mesa Drive, and Newton Lane. Figure 1 and Figure 2 (all figures provided in Attachment A) show the project location and conceptual site plan, respectively.

As originally analyzed, the proposed project would have involved the development of a 20-building, 94,500 total square foot (sf) mini storage facility. The project now involves the development of a 17-building, 89,700 total sf mini storage facility. The reduced size of the proposed project would have

[1] Mojave Desert Air Quality Management District (MDAQMD). 2020. California Environmental Quality Act (CEQA) and Federal Air Conformity Guidelines. Website: www.mdaqmd.ca.gov/home/showpublisheddocument/8510/638126583450270000 (accessed September 2024).

fewer emissions because there would be fewer vehicle trips and fewer buildings consuming energy. Therefore, the existing emissions analysis is considered more conservative than the currently proposed project.

The site would be bounded by a maximum 10-foot-high security fence and would consist of 16 storage buildings of approximately 5,580 sf each, evenly distributed around the site. Two entrances would be located on the west side of the site and would be gated. A 400 sf manager's unit would be located at the northern entry gate. Additionally, outdoor parking stalls would be located on the north and east sides of the proposed manager's unit building. These parking areas would accommodate approximately 10 vehicles. A 9,600 sf retention basin would be located on the southwest corner of the project site. The proposed project would include associated site improvements including new internal roadways and utility improvements. Access to the proposed project site would be between the hours of 6:00 a.m. and 10:00 p.m. 7 days per week.

The Town of Yucca Valley General Plan Land Use Map designates the project site as Commercial (C).[2] The proposed project is consistent with this land use designation. The Town of Yucca Valley Zoning Map identifies the project site as Neighborhood Commercial (C-N), and the proposed project is consistent with this zoning designation.[3] Once operational, the proposed project would generate approximately 137 average daily trips. Additionally, the proposed project would be all electric and would include low water landscape.

As originally analyzed, construction was anticipated to begin in the fall of 2024 and be completed within 24 months. As construction would now commence at a date later than the fall of 2024, but all activities and duration would remain unchanged, the construction analysis conducted for this analysis adequately represents the projected construction. This is because when construction occurs, the equipment will either be the same age or newer than was analyzed. It is expected that newer equipment will either have the same or lower emissions than the equipment included in the current analysis. All other aspects of construction would remain the same. Construction activities would include site preparation, grading, building construction, paving, architectural coating, and trenching. The maximum depth of excavation for construction would be approximately 7 feet below the ground surface, with all soil balanced on the project site. Connections to utilities may require additional excavation up to 15 feet below the ground surface at limited locations on site.

SENSITIVE RECEPTORS IN THE PROJECT AREA

For this analysis, sensitive receptors are considered areas of the population that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include residences, schools, daycare centers, hospitals, parks, and similar uses that are sensitive to air quality. Impacts on sensitive receptors are of particular concern because those receptors are the

population most vulnerable to the effects of air pollution. The project site is surrounded primarily by industrial and residential uses. The areas adjacent to the project site include industrial uses to the south and west, residential uses to the southeast, and vacant land to the north and east. The nearest sensitive receptors include a single-family home located southeast of the project site at approximately 200 feet from the project site boundary.

ENVIRONMENTAL SETTING

Air Quality Background

Air quality is primarily a function of local climate, local sources of air pollution, and regional pollution transport. The amount of a given pollutant in the atmosphere is determined by the amount of the pollutant released and the atmosphere's ability to transport and dilute the pollutant. The major determinants of transport and dilution are wind, atmospheric stability, terrain, and, for photochemical pollutants, sunshine.

A region's topographic features have a direct correlation with air pollution flow and therefore are used to determine the boundary of air basins. The project site is in Yucca Valley in unincorporated San Bernardino County and is within the jurisdiction of MDAQMD, which regulates air quality in the Mojave Desert Air Basin (Basin).

The Basin is an assemblage of mountain ranges interspersed with long, broad valleys that often contain dry lakes. Many of the lower mountains that dot the vast terrain rise from 1,000 to 4,000 feet above the valley floor. The Basin encompasses desert portions of Kern, Los Angeles, Riverside, and San Bernardino counties. The Basin is surrounded by national forests to the south and west and desert to the north and east.

Both State and federal governments have established health-based ambient air quality standards for six criteria air pollutants: carbon monoxide (CO), ozone (O_3), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead (Pb), and suspended particulate matter (PM). In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety. Two criteria pollutants, O_3 and NO_2, are considered regional pollutants because they (or their precursors) affect air quality on a regional scale. Pollutants such as CO, SO_2, and Pb are considered local pollutants that tend to accumulate in the air locally. PM is considered to be both a regional pollutant and local pollutant.

Attainment Status

The CARB is required to designate areas of the state as attainment, nonattainment, or unclassified for all State standards. An *attainment* designation for an area signifies that pollutant concentrations did not violate the standard for that pollutant in that area. A *nonattainment* designation indicates that a pollutant concentration violated the standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. An *unclassified* designation signifies that data do not support either an attainment or nonattainment status. The California Clean Air Act (CCAA) divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

Data collected at permanent monitoring stations are used by the United States Environmental Protection Agency (USEPA) to identify regions as "attainment" or "nonattainment" depending on whether the regions meet the requirements stated in the applicable National Ambient Air Quality Standards (NAAQS). Nonattainment areas are imposed with additional restrictions as required by the USEPA. In addition, different classifications of attainment (e.g., marginal, moderate, serious, severe, and extreme) are used to classify each air basin in the State on a pollutant-by-pollutant basis. The classifications are used as a foundation to create air quality management strategies to improve air quality and to comply with the NAAQS. As shown in Table A, the Basin is designated as nonattainment by the federal standards for O_3 and particulate matter less than 10 microns in diameter (PM_{10}) and nonattainment by the State standards for O_3, particulate matter less than 2.5 microns in diameter ($PM_{2.5}$), and PM_{10}.

Table A: Attainment Status of Criteria Pollutants in the Mojave Desert Air Basin

Pollutant	State	Federal
O_3	Nonattainment	Nonattainment[1]
PM_{10}	Nonattainment	Nonattainment[2]
$PM_{2.5}$	Nonattainment[1]	Attainment/Unclassified
CO	Attainment	Attainment/Unclassified
NO_2	Attainment	Attainment/Unclassified
SO_2	Attainment	Attainment/Unclassified
Lead[1]	Attainment	Attainment/Unclassified
All Others	Attainment/Unclassified	N/A

[1] Only the southwest corner of the desert portion of San Bernardino County is Nonattainment.

[2] Only the San Bernardino County portion is Nonattainment.

CO = carbon monoxide
N/A = not applicable
NO_2 = nitrogen dioxide
O_3 = ozone
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
SO_2 = sulfur dioxide

Air Quality Monitoring Results

Air quality monitoring stations are located throughout the nation and are maintained by the local air districts and State air quality regulating agencies. The SCAQMD, together with the CARB, maintains ambient air quality monitoring stations in the Basin. The air quality monitoring stations closest to the project sites are located at the Joshua Tree National Monument, 24302 4th Street in San Bernardino, 500 North Dearborn in Redlands, and 14360 Arrow Boulevard in Fontana.

Pollutant monitoring results for years 2022 to 2024 at the Joshua Tree National Monument, San Bernardino, Redlands, and Fontana ambient air quality monitoring stations, shown in Table B, indicate that air quality in the area has generally been moderate. As indicated in the monitoring results, the federal and State PM_{10} standard had no exceedances in the 3-year period. The State PM_{10} standard had 3 exceedances in 2024 only. The $PM_{2.5}$ federal standard had 2 exceedances in 2022, 1 in 2023, and 4 in 2024. The 1-hour ozone State standard was exceeded 2 times in 2022, 1

time in 2023, and 3 times in 2024. The 8-hour ozone State standard was exceeded 39 times in 2022, 29 times in 2023, and 35 times in 2024. The 8-hour ozone federal standard was exceeded 37 times in 2022, 24 times in 2023, and 32 times in 2024. In addition, the CO, NO_2, and SO_2 standards were not exceeded in this area during the 3-year period.

Table B: Ambient Air Quality at the Nearby Monitoring Stations

Pollutant	Standard	2022	2023	2024
Carbon Monoxide (CO)[1]

Energy Background

Electricity

Electricity is a man-made resource. The production of electricity requires the consumption or conversion of energy resources (including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources) into energy. Electricity is used for a variety of purposes (e.g., lighting, heating, cooling, and refrigeration, and for operating appliances, computers, electronics, machinery, and public transportation systems).

According to the most recent data available, in 2023, California's electricity was generated primarily by natural gas (43.7 percent), solar (19.2 percent), large hydroelectric (12.6 percent), nuclear (8.2 percent), wind (6.5 percent), coal (<1.0 percent), and other miscellaneous sources. Total electric generation in California in 2023 was 281,140 gigawatt-hours (GWh).[4]

The project site is within the service territory of Southern California Edison (SCE). SCE provides electricity to more than 15 million people in a 50,000-square-mile (sq mi) area of Central, Coastal, and Southern California.[5] According to the California Energy Commission (CEC), total electricity consumption in the SCE service area in 2022 was 85,870 GWh (31,604 GWh for the residential sector and 54,266 GWh for the non-residential sector). Total electricity consumption in San Bernardino County in 2022 was 16,629.6 GWh (16,629,614,195 kilowatt-hours [kWh]).[6]

Natural Gas

Natural gas is a nonrenewable fossil fuel. Fossil fuels are formed when layers of decomposing plant and animal matter are exposed to intense heat and pressure under the surface of the Earth over millions of years. Natural gas is a combustible mixture of hydrocarbon compounds (primarily methane) that is used as a fuel source. Natural gas is found in naturally occurring reservoirs in deep underground rock formations. Natural gas is used for a variety of uses (e.g., heating buildings, generating electricity, and powering appliances such as stoves, washing machines and dryers, gas fireplaces, and gas grills).

5 Southern California Edison (SCE). 2020. About Us. Website: www.sce.com/about-us/who-we-are (accessed September 2024).

6 CEC. 2020. Electricity Consumption by County and Entity. Websites: www.ecdms.energy.ca.gov/elecbycounty.aspx and www.ecdms.energy.ca.gov/elecbyutil.aspx (accessed September 2024).

Natural gas consumed in California is used for electricity generation (45 percent), residential uses (21 percent), industrial uses (25 percent), and commercial uses (9 percent). California continues to depend on out-of-state imports for nearly 90 percent of its natural gas supply.[7]

The Southern California Gas Company (SoCalGas) is the natural gas service provider for the project site. SoCalGas provides natural gas to approximately 21.8 million people in a 24,000 sq mi service area throughout Central and Southern California, from Visalia to the Mexican border.[8] According to the CEC, total natural gas consumption in the SoCalGas service area in 2022 was 5,026 million therms (2,230 million therms for the residential sector). Total natural gas consumption in San Bernardino County in 2022 was 562 million therms (562,123,065 therms).[9]

Fuel

Petroleum is also a nonrenewable fossil fuel. Petroleum is a thick, flammable, yellow-to-black mixture of gaseous, liquid, and solid hydrocarbons that occurs naturally beneath the Earth's surface. Petroleum is primarily recovered by oil drilling. It is refined into a large number of consumer products, primarily fuel oil, gasoline, and diesel.

The average fuel economy for light-duty vehicles (autos, pickups, vans, and sport utility vehicles [SUVs]) in the United States has steadily increased from about 14.9 miles per gallon (mpg) in 1980 to 22.9 mpg in 2021.[10] Federal fuel economy standards have changed substantially since the Energy Independence and Security Act was passed in 2007. This act, which originally mandated a national fuel economy standard of 35 mpg by year 2020[11], applies to cars and light trucks of Model Years 2011 through 2020. In March 2020, the USEPA and National Highway Traffic Safety Administration (NHTSA) finalized the Corporate Average Fuel Economy standards for Model Years 2024–2026 Passenger Cars and Light Trucks, further detailed below.

Gasoline is the most-used transportation fuel in California, with 97 percent of all gasoline being consumed by light-duty cars, pickup trucks, and SUVs. According to the most recent data available, in 2022, total gasoline consumption in California was 316,425 thousand barrels or 1,597.6 trillion British Thermal Units (BTU).[12] Of the total gasoline consumption, 299,304 thousand barrels or

1,511.2 trillion BTU were consumed for transportation.[13] Based on fuel consumption data obtained from the California Air Resources Board's California Emissions Factor Model, Version 2021 (EMFAC2021), approximately 893.9 million gallons of gasoline and approximately 327.1 million gallons of diesel will be consumed from vehicle trips in San Bernardino County in 2024.

Greenhouse Gas Background

GHGs are present in the atmosphere naturally, are released by natural sources, or form from secondary reactions taking place in the atmosphere. Over the last 200 years, humans have caused substantial quantities of GHGs to be released into the atmosphere. These extra emissions are increasing GHG concentrations in the atmosphere and enhancing the natural greenhouse effect, which is believed to be causing global warming. Although man-made GHGs include naturally occurring GHGs such as carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O), some gases such as hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), nitrogen trifluoride (NF_3), and sulfur hexafluoride (SF_6) are completely new to the atmosphere.

Certain gases, such as water vapor, are short-lived in the atmosphere. Others remain in the atmosphere for significant periods of time, contributing to climate change in the long term. Water vapor is excluded from the list of GHGs above because it is short-lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation.

These gases vary considerably in terms of global warming potential (GWP), which is a concept developed to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The GWP is based on several factors, including the relative effectiveness of a gas in absorbing infrared radiation and the length of time that the gas remains in the atmosphere ("atmospheric lifetime"). The GWP of each gas is measured relative to CO_2, the most abundant GHG; the definition of GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to the ratio of heat trapped by one unit mass of CO_2 over a specified time period. GHG emissions are typically measured in terms of pounds or tons of CO_2 equivalents (CO_2e).

REGULATORY SETTING

This section provides regulatory background information for air quality and GHGs.

Air Quality

Applicable federal, State, regional, and local air quality regulations are discussed below.

Federal Regulations

The 1970 federal Clean Air Act (CAA) authorized the establishment of national health-based air quality standards and set deadlines for their attainment. The CAA Amendments of 1990 changed deadlines for attaining national standards as well as the remedial actions required for areas of the nation that exceed the standards. Under the CAA, State and local agencies in areas that exceed the

[13] Ibid.

national standards are required to develop State Implementation Plans to demonstrate how they will achieve the national standards by specified dates.

State Regulations

In 1988, the California Clean Air Act (CCAA) required that all air districts in the State endeavor to achieve and maintain California Ambient Air Quality Standards (CAAQS) for CO, O_3, SO_2, and NO_2 by the earliest practical date. The CCAA provides districts with the authority to regulate indirect sources and mandates that air quality districts focus particular attention on reducing emissions from transportation and areawide emission sources. Each nonattainment district is required to adopt a plan to achieve a 5 percent annual reduction, averaged over consecutive 3-year periods, in districtwide emissions of each nonattainment pollutant or its precursors. A Clean Air Plan shows how a district would reduce emissions to achieve air quality standards. Generally, the State standards for these pollutants are more stringent than the national standards.

The California Air Resources Board (CARB) is the State's "clean air agency." CARB's goals are to attain and maintain healthy air quality, protect the public from exposure to toxic air contaminants, and oversee compliance with air pollution rules and regulations.

Regional Regulations

Mojave Desert Air Quality Management District. The MDAQMD is the regional agency responsible for monitoring air quality, as well as planning, implementing, and enforcing programs designed to attain and maintain State and federal ambient air quality standards in the San Bernardino County portion of the Mojave Desert Air Basin. Programs include air quality rules and regulations that regulate stationary sources, area sources, point sources, and certain mobile source emissions. The MDAQMD is also responsible for establishing stationary source permitting requirements and for ensuring that new, modified, or relocated stationary sources do not create net emission increases.

All areas designated as nonattainment under the CCAA are required to prepare plans showing how they will meet the air quality standards. The most recent air quality plans are the PM_{10} Attainment Demonstration and Attainment Plan and the O_3 Attainment Plan.

In addition, emissions that would result from mobile, area, and stationary sources during construction and operation of the project are subject to the rules and regulations of the MDAQMD. The MDAQMD rules applicable to the project may include, but are not limited to, the following:

- **Rule 401 – Visible Emissions:** This rule establishes the limit for visible emissions from stationary sources.

- **Rule 402 – Nuisance:** This rule prohibits the discharge of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or that endanger the comfort, repose, health, or safety of any such persons or the public, or that cause, or have a natural tendency to cause, injury or damage to business or property.

- **Rule 403.2 – Fugitive Dust Control for the Mojave Desert Planning Area:** This rule ensures that the NAAQS for PM_{10} will not be exceeded due to anthropogenic sources of fugitive dust within the Mojave Desert Planning Area and implements the control measures contained in the Mojave Desert Planning Area Federal PM_{10} Attainment Plan.

- **Rule 442 – Usage of Solvents:** The purpose of this rule is to reduce volatile organic compound (VOC) emissions from VOC-containing materials or equipment that is not subject to limits of any rule found in District Regulation XI – Source Specific Standards.

- **Rule 1113 – Architectural Coatings:** This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories.

Southern California Association of Governments. The Southern California Association of Governments (SCAG) is a council of governments for Los Angeles, Orange, Riverside, San Bernardino, Imperial, and Ventura counties. It is a regional planning agency and serves as a forum for regional issues relating to transportation, the economy and community development, and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the Southern California region and is the largest MPO in the nation. With regard to air quality planning, SCAG prepares the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP), which address regional development and growth forecasts and form the basis for the land use and transportation control portions of the Air Quality Management Plan (AQMP) and are utilized in the preparation of the air quality forecasts and consistency analysis included in the AQMP. The RTP, RTIP, and AQMP are based on projections originating within local jurisdictions.

Although SCAG is not an air quality management agency, it is responsible for developing transportation, land use, and energy conservation measures that affect air quality. SCAG's Regional Comprehensive Plan (RCP) provides growth forecasts that are used in the development of air quality-related land use and transportation control strategies by the MDAQMD. The RCP is a framework for decision-making for local governments, assisting them in meeting federal and State mandates for growth management, mobility, and environmental standards, while maintaining consistency with regional goals regarding growth and changes. Policies within the RCP include consideration of air quality, land use, transportation, and economic relationships by all levels of government.

SCAG adopted the 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) on April 4, 2024[14]. Connect SoCal is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. Connect SoCal is an important planning document for the region, allowing project sponsors to qualify for federal

[14] Southern California Association of Governments (SCAG). 2024. *Connect SoCal: The 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy of the Southern California Association of Governments*. Website: scag.ca.gov/sites/main/files/file-attachments/23-2987-connect-socal-2024-final-complete-040424.pdf?1712261565 (accessed September 2024).

funding, and takes into account operations and maintenance costs, to ensure reliability, longevity, and cost effectiveness. The forecasted development pattern, when integrated with the financially constrained transportation investments identified in Connect SoCal, would reach the regional target of reducing GHG emissions from autos and light-duty trucks by 19 percent by 2035 (compared to 2005 levels).

Local Regulations

Yucca Valley General Plan. The Town of Yucca Valley addresses air quality in the Open Space and Conservation Element of its Policy Plan.[15] The Open Space and Conservation Element includes goals and policies that work to improve and maintain air quality for the benefit of the health and vitality of the residents and the local economy. The following policies from the Open Space and Conservation Element are applicable to the proposed project:

- **Policy OSC 10-1:** Participate in the monitoring of all air pollutants of regional concern on a continuous basis.
- **Policy OSC 10-2:** Coordinate air quality planning efforts with other local, regional, and federal agencies.
- **Policy OSC 10-4:** Coordinate land use planning efforts to assure that sensitive receptors are reasonably separated from polluting point sources.
- **Policy OSC 10-5:** Provide consistent and effective code enforcement for construction and grading activities to assure ground disturbances do not contribute to blowing sand and fugitive dust emissions.

Energy

Federal and State agencies regulate energy use and consumption through various means and programs. On the federal level, the United States Department of Transportation (USDOT), the United States Department of Energy, and the USEPA are three federal agencies with substantial influence over energy policies and programs. Generally, federal agencies influence and regulate transportation energy consumption through establishment and enforcement of fuel economy standards for automobiles and light trucks, through funding of energy-related research and development projects, and through funding for transportation infrastructure improvements. On the State level, the California Public Utilities Commission (CPUC) and the CEC are two agencies with authority over different aspects of energy.

The CPUC regulates privately owned electric, natural gas, telecommunications, water, railroad, rail transit, and passenger transportation companies and serves the public interest by protecting consumers and ensuring the provision of safe, reliable utility service and infrastructure at

[15] Town of Yucca Valley. n.d. *2022 General Plan, Open Space and Conservation Element*. Website: www.yucca-valley.org/our-town/departments/community-development/planning/general-plan-update (accessed September 2024).

reasonable rates, with a commitment to environmental enhancement and a healthy California economy.

The CEC is the State's primary energy policy and planning agency. The CEC forecasts future energy needs, promotes energy efficiency, supports energy research, develops renewable energy resources, and plans for/directs State response to energy emergencies. The applicable federal, State, regional, and local regulatory framework is discussed below.

Federal Regulations

Energy Policy Act of 2005. The Energy Policy Act of 2005 seeks to reduce reliance on nonrenewable energy resources and provide incentives to reduce current demand on these resources. For example, under this Act, consumers and businesses can obtain federal tax credits for purchasing fuel-efficient appliances and products (including hybrid vehicles), building energy-efficient buildings, and improving the energy efficiency of commercial buildings. Additionally, tax credits are available for the installation of qualified fuel cells, stationary microturbine power plants, and solar power equipment.

Corporate Average Fuel Economy Standards. On March 31, 2022, the NHTSA finalized the Corporate Average Fuel Economy (CAFE) standards for Model Years 2024–2026 Passenger Cars and Light Trucks. The amended CAFE standards would require an industry wide fleet average of approximately 49 mpg for passenger cars and light trucks in model year 2026, by increasing fuel efficiency by 8 percent annually for model years 2024–2025, and 10 percent annually for model year 2026. The final standards are estimated to save about 234 billion gallons of gasoline between model years 2030 to 2050.

State Regulations

Assembly Bill 1575, Warren-Alquist Act. In 1975, largely in response to the oil crisis of the 1970s, the State Legislature adopted Assembly Bill (AB) 1575 (also known as the Warren-Alquist Act), which created the CEC. The statutory mission of the CEC is to forecast future energy needs; license power plants of 50 megawatts or larger; develop energy technologies and renewable energy resources; plan for and direct State responses to energy emergencies; and, perhaps most importantly, promote energy efficiency through the adoption and enforcement of appliance and building energy efficiency standards. AB 1575 also amended Public Resources Code Section 21100(b)(3) and *State CEQA Guidelines* Section 15126.4 to require Environmental Impact Reports (EIRs) to include, where relevant, mitigation measures proposed to minimize the wasteful, inefficient, and unnecessary consumption of energy caused by a project. Thereafter, the State Resources Agency created Appendix F to the *State CEQA Guidelines*. Appendix F assists EIR preparers in determining whether a project will result in the inefficient, wasteful, and unnecessary consumption of energy. Appendix F of the *State CEQA Guidelines* also states that the goal of conserving energy implies the wise and efficient use of energy and the means of achieving this goal, including (1) decreasing overall per capita energy consumption; (2) decreasing reliance on fossil fuels such as coal, natural gas, and oil; and (3) increasing reliance on renewable energy sources.

Senate Bill 1389, Energy: Planning and Forecasting. In 2002, the State Legislature passed Senate Bill (SB) 1389, which required the CEC to develop an integrated energy plan every 2 years for electricity,

natural gas, and transportation fuels for the California Energy Policy Report. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for zero emission vehicles and their infrastructure needs, and encouragement of urban designs that reduce vehicle miles traveled and accommodate pedestrian and bicycle access.

In compliance with the requirements of SB 1389, the CEC adopts an Integrated Energy Policy Report every 2 years and an update every other year. The most recently adopted report includes the *2023 Integrated Energy Policy Report.*[16] The *Integrated Energy Policy Report* covers a broad range of topics, including decarbonizing buildings, integrating renewables, energy efficiency, energy equity, integrating renewable energy, updates on Southern California electricity reliability, climate adaptation activities for the energy sector, natural gas assessment, transportation energy demand forecast, and the California Energy Demand Forecast. The *Integrated Energy Policy Report* provides the results of the CEC's assessments of a variety of energy issues facing California. Many of these issues will require action if the State is to meet its climate, energy, air quality, and other environmental goals while maintaining energy reliability and controlling costs.

Renewable Portfolio Standard. SB 1078 established the California Renewable Portfolio Standards program in 2002. SB 1078 initially required that 20 percent of electricity retail sales be served by renewable resources by 2017; however, this standard has become more stringent over time. In 2006, SB 107 accelerated the standard by requiring that the 20 percent mandate be met by 2010. In April 2011, SB 2 required that 33 percent of electricity retail sales be served by renewable resources by 2020. In 2015, SB 350 established tiered increases to the Renewable Portfolio Standards of 40 percent by 2024, 45 percent by 2027, and 50 percent by 2030. In 2018, SB 100 increased the requirement to 60 percent by 2030 and required that all the State's electricity come from carbon-free resources by 2045. SB 100 took effect on January 1, 2019.[17]

California Energy Code. Energy consumption by new buildings in California is regulated by the Building Energy Efficiency Standards in Part 6 of Title 24 of the California Code of Regulations (CCR), known as the Energy Code. The CEC first adopted the Building Energy Efficiency Standards for Residential and Non-residential Buildings in 1978 in response to a legislative mandate to reduce energy consumption in the State. The Energy Code is updated every 3 years, with the most recent update consisting of the 2022 Energy Code that became effective January 1, 2023. Mid-cycle supplements to the 2022 Code will become effective on July 1, 2024. The efficiency standards apply to both new construction and rehabilitation of both residential and nonresidential buildings, and regulate energy consumed for heating, cooling, ventilation, water heating, and lighting. The building efficiency standards are enforced through the local building permit process. Local government

16 CEC. 2023. *2023 Integrated Energy Policy Report*. California Energy Commission. Docket Number: 23-IEPR-01.

17 California Public Utilities Commission (CPUC). 2019. Renewables Portfolio Standard Program. Website: cpuc.ca.gov/rps (accessed September 2024).

agencies may adopt and enforce energy standards for new buildings, provided these standards meet or exceed those provided in the Energy Code.

California Green Building Standards Code (CALGreen Code). In 2010, the California Building Standards Commission adopted Part 11 of the Title 24 Building Energy Efficiency Standards, referred to as the CALGreen Code. The CALGreen Code took effect on January 1, 2011. The CALGreen Code is updated on a regular basis, with the most recent update consisting of the 2022 CALGreen Code standards that became effective January 1, 2023. The CALGreen Code established mandatory measures for residential and nonresidential building construction and encouraged sustainable construction practices in the following five categories: (1) planning and design, (2) energy efficiency, (3) water efficiency and conservation, (4) material conservation and resource efficiency, and (5) indoor environmental quality. Although the CALGreen Code was adopted as part of the State's efforts to reduce GHG emissions, the CALGreen Code standards have co-benefits of reducing energy consumption from residential and nonresidential buildings subject to the standard.

California Energy Efficiency Strategic Plan. On September 18, 2008, the CPUC adopted California's first Long-Term Energy Efficiency Strategic Plan, presenting a roadmap for energy efficiency in California. The Strategic Plan was updated in 2011. The Plan articulates a long-term vision and goals for each economic sector and identifies specific near-term, mid-term, and long-term strategies to assist in achieving those goals. The Plan also reiterates the following four specific programmatic goals known as the "Big Bold Energy Efficiency Strategies" that were established by the CPUC in Decisions D.07-10-032 and D.07-12-051:

- All new residential construction will be zero net energy (ZNE) by 2020.
- All new commercial construction will be ZNE by 2030.
- 50 percent of commercial buildings will be retrofitted to ZNE by 2030.
- 50 percent of new major renovations of State buildings will be ZNE by 2025.

Regional Regulations

There are no regional regulations that apply to the proposed project.

Local Regulations

Yucca Valley General Plan. The Town of Yucca Valley's General Plan[18] Open Space and Conservation Element includes objectives and policies that work to reduce the consumption of nonrenewable energy resources by requiring and encouraging conservation measures and the use of alternative energy sources. The following policies related to energy are applicable to the proposed project:**Policy OCS 9-1:** Develop, promote, and implement long-term energy efficiency and demand management policies and standards for Town facilities, vehicles, and new development.

[18] Town of Yucca Valley. n.d. *2022 General Plan, Open Space and Conservation Element*. Website: www.yucca-valley.org/our-town/departments/community-development/planning/general-plan-update (accessed September 2024).

- **Policy OCS 9-3:** Encourage the use of clean and/or renewable alternative energy sources for transportation, heating, cooling, and construction.

- **Policy OCS 9-5:** Ensure that any planned construction, demolition, addition, alteration, repair, remodel, landscaping, or grading projects divert all reusable, salvageable, and recyclable debris from landfill disposal.

- **Policy OCS 9-9:** Promote building design and construction that integrates alternative energy systems, including but not limited to solar, thermal, photovoltaics, and other clean energy systems.

Greenhouse Gas Emissions

This section describes regulations related to global climate change at the federal, State, and local levels.

Federal Regulations

The United States has historically had a voluntary approach to reducing GHG emissions. However, on April 2, 2007, the United States Supreme Court ruled that the USEPA has the authority to regulate CO_2 emissions under the CAA.

Although there currently are no adopted federal regulations for the control or reduction of GHG emissions, the USEPA commenced several actions in 2009 to implement a regulatory approach to global climate change, including the 2009 USEPA final rule for mandatory reporting of GHGs from large GHG emission sources in the United States. Additionally, the USEPA Administrator signed an endangerment finding action in 2009 under the CAA, finding that seven GHGs (CO_2, CH_4, N_2O, HFCs, NF_3, PFCs, and SF_6) constitute a threat to public health and welfare, and that the combined emissions from motor vehicles cause and contribute to global climate change, leading to national GHG emission standards.

State Regulations

CARB is the lead agency for implementing climate change regulations in the State. Since its formation, CARB has worked with the public, the business sector, and local governments to find solutions to address climate change. In addition to the Energy Code and the Green Building Code described above, Key efforts by the State are described below.

Assembly Bill 32 (2006), California Global Warming Solutions Act. California's major initiative for reducing GHG emissions is AB 32, passed by the State Legislature on August 31, 2006. This effort set a target to reduce GHG emissions to 1990 levels by 2020. CARB has established the level of GHG emissions in 1990 at 427 million metric tons (MMT) of CO_2e. The emission target of 427 MMT requires the reduction of 169 MMT from the State's projected business-as-usual 2020 emissions of 596 MMT. AB 32 requires CARB to prepare a Scoping Plan that outlines the main State strategies for meeting the 2020 deadline and to reduce GHGs that contribute to global climate change. CARB approved the Scoping Plan on December 11, 2008, which contains the main strategies California will

implement to achieve the reduction goals and includes CARB-recommended GHG reductions for each emissions sector of the State's GHG inventory.

The CARB approved the First Update to the Climate Change Scoping Plan on May 22, 2014. The First Update identifies opportunities to leverage existing and new funds to further drive GHG emission reductions through strategic planning and targeted low carbon investments. The First Update defines CARB climate change priorities until 2020 and sets the groundwork to reach long-term goals set forth in Executive Orders (EO) S-3-05 and B-16-2012. The First Update highlights California's progress toward meeting the "near-term" 2020 GHG emission reduction goals as defined in the initial Scoping Plan. It also evaluates how to align the State's "longer-term" GHG reduction strategies with other State policy priorities for water, waste, natural resources, clean energy, transportation, and land use. CARB released a second update to the Scoping Plan, the 2017 Scoping Plan,[19] to reflect the 2030 target that was set by EO B-30-15 and codified by SB 32.

The 2022 Scoping Plan[20] was approved in December 2022 and assesses progress toward the statutory 2030 target while laying out a path to achieving carbon neutrality no later than 2045. The 2022 Scoping Plan Update focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

The 2022 Scoping Plan focuses on building clean energy production and distribution infrastructure for a carbon-neutral future, including transitioning existing energy production and transmission infrastructure to produce zero-carbon electricity and hydrogen and utilizing biogas resulting from wildfire management or landfill and dairy operations, among other substitutes. The 2022 Scoping Plan states that in almost all sectors, electrification will play an important role. The 2022 Scoping Plan evaluates clean energy and technology options and the transition away from fossil fuels, including adding four times the solar and wind capacity by 2045 and about 1,700 times the amount of current hydrogen supply. As discussed in the 2022 Scoping Plan, EO N-79-20 requires that all new passenger vehicles sold in California be zero-emission by 2035 and that all other fleets transition to zero-emission as fully as possible by 2045, which will reduce the percentage of fossil fuel combustion vehicles.

Senate Bill 375 (2008). Signed into law on October 1, 2008, SB 375 supplements GHG reductions from new vehicle technology and fuel standards with reductions from more efficient land use patterns and improved transportation. Under the law, CARB approved GHG reduction targets in February 2011 for California's 18 federally designated regional planning bodies, known as MPOs. CARB may update the targets every 4 years and must update them every 8 years. MPOs, in turn, must demonstrate how their plans, policies, and transportation investments meet the targets set by CARB through Sustainable Community Strategies (SCSs). The SCSs are included with the Regional Transportation Plan (RTP), a report required by State law. However, if an MPO finds that its SCS will

19 CARB. 2017. *California's 2017 Climate Change Scoping Plan*. November.

20 CARB. 2022. *2022 Scoping Plan Update*. May 10. Website: ww2.arb.ca.gov/sites/default/files/2023-04/2022-sp.pdf (accessed September 2024).

not meet the GHG reduction targets, it may prepare an Alternative Planning Strategy. The Alternative Planning Strategy identifies the impediments to achieving the targets.

Executive Order B-30-15 (2015). Governor Jerry Brown signed EO B-30-15 on April 29, 2015, which added the immediate target of:

- GHG emissions reduced to 40 percent below 1990 levels by 2030

All State agencies with jurisdiction over sources of GHG emissions were directed to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 targets. CARB was directed to update the AB 32 Scoping Plan to reflect the 2030 target and, therefore, is moving forward with the update process. The mid-term target is critical to help frame the suite of policy measures, regulations, planning efforts, and investments in clean technologies and infrastructure needed to continue reducing emissions.

Senate Bill 350 (2015) Clean Energy and Pollution Reduction Act. SB 350, signed by Governor Jerry Brown on October 7, 2015, updates and enhances AB 32 by introducing the following set of objectives in clean energy, clean air, and pollution reduction for 2030:

- Raise California's renewable portfolio standard from 33 percent to 50 percent
- Increase energy efficiency in buildings by 50 percent by the year 2030

The 50 percent renewable energy standard will be implemented by the California Public Utilities Commission for private utilities and by the California Energy Commission for municipal utilities. Each utility must submit a procurement plan showing it will purchase clean energy to displace other nonrenewable resources. The 50 percent increase in energy efficiency in buildings must be achieved through the use of existing energy efficiency retrofit funding and regulatory tools already available to State energy agencies under existing law. The addition made by this legislation requires State energy agencies to plan for and implement those programs in a manner that achieves the energy efficiency target.

Senate Bill 32, California Global Warming Solutions Act of 2016, and Assembly Bill 197. In summer 2016, the Legislature passed, and the Governor signed, SB 32 and AB 197. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emission reduction target of at least 40 percent below 1990 levels by 2030 contained in Governor Brown's April 2015 EO B-30-15. SB 32 builds on AB 32 and keeps California on the path toward achieving the State's 2050 objective of reducing emissions to 80 percent below 1990 levels, consistent with an Intergovernmental Panel on Climate Change analysis of the emission trajectory that would stabilize atmospheric GHG concentrations at 450 ppm CO_2e and reduce the likelihood of catastrophic impacts from climate change.

AB 197, the companion bill to SB 32, provides additional direction to CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 meant to provide easier public access to air emission data that are collected by CARB was posted in December 2016.

Senate Bill 100. On September 10, 2018, Governor Brown signed SB 100, which raises California's renewable portfolio standard requirements to 60 percent by 2030, with interim targets, and 100 percent by 2045. The bill also establishes a State policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045. Under the bill, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Executive Order B-55-18.EO B-55-18, signed September 10, 2018, sets a goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." EO B-55-18 directs CARB to work with relevant State agencies to ensure that future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal. The goal of carbon neutrality by 2045 is in addition to other statewide goals, meaning that, not only should emissions be reduced to 80 percent below 1990 levels by 2050, but that, by no later than 2045, the remaining emissions should be offset by equivalent net removals of CO_2e from the atmosphere, including through sequestration in forests, soils, and other natural landscapes.

Assembly Bill 1279. AB 1279 was signed in September 2022 and codifies the State goals of achieving net carbon neutrality by 2045 and maintaining net negative GHG emissions thereafter. This bill also requires California to reduce statewide GHG emissions by 85 percent compared to 1990 levels by 2045 and directs CARB to work with relevant State agencies to achieve these goals.

Regional Regulations

Mojave Desert Air Quality Management District. The MDAQMD has adopted GHG emissions thresholds in its CEQA Guidelines but has not adopted a comprehensive strategy for reducing GHG emissions. The MDAQMD threshold is 100,000 MT/year CO2e and 548,000 pounds per day.

Southern California Association of Governments. SCAG is a regional council consisting of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. In total, the SCAG region encompasses 191 cities and more than 38,000 square miles within Southern California. SCAG is the MPO serving the region under federal law and serves as the Joint Powers Authority, the Regional Transportation Planning Agency, and the Council of Governments under State law. As the Regional Transportation Planning Agency, SCAG prepares long-range transportation plans for the Southern California region, including the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) and the 2008 Regional Comprehensive Plan.

On April 4, 2024, SCAG adopted *Connect SoCal: The 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy* (2024–2050 RTP/SCS).[21] In general, the SCS outlines a development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, would reduce vehicle miles traveled from automobiles and light-duty trucks and thereby reduce GHG emissions from these sources. For the SCAG region,

[21] Southern California Association of Governments (SCAG). 2024. *Connect SoCal: The 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy of the Southern California Association of Governments*. Website: scag.ca.gov/connect-socal (accessed September 2024).

CARB has set GHG reduction targets at 8 percent below 2005 per-capita emission levels by 2020 and 19 percent below 2005 per capita emission levels by 2035. The RTP/SCS lays out a strategy for the region to meet these targets. Overall, the SCS is meant to provide growth strategies that will achieve the regional GHG emission reduction targets. Land use strategies to achieve the region's targets include planning for new growth around high-quality transit areas and livable corridors and creating neighborhood mobility areas to integrate land use and transportation and to plan for more active lifestyles.[22] However, the SCS does not require that local General Plans, Specific Plans, or zoning be consistent with the SCS; instead, it provides incentives to governments and developers for consistency.

Local Regulations

San Bernardino County Greenhouse Gas Reduction Plan. As a response to the 2006 AB 32 law, a project partnership led by the San Bernardino Associated Governments, the predecessor agency to the San Bernardino County Transportation Authority, has compiled an inventory of GHG emissions and developed reduction measures that were both adopted by the 21 Partnership Cities of San Bernardino County. The regional GHG reduction plan[23] was adopted in 2021 and will serve as the basis for cities in San Bernardino County to develop more detailed community level climate action plans.

The Town of Yucca Valley was a participant in the San Bernardino County Regional Greenhouse Gas Reduction Plan, which identifies the County's vision and goals on reducing GHG emissions in the different cities, local government facilities, and communities. In response to these initiatives, an informal project partnership, led by the San Bernardino Council of Governments, compiled a GHG emissions inventory and an evaluation of reduction measures that could be adopted by the 25 partnership cities of San Bernardino County. This partnership has committed to undertake the following actions that will reduce GHG emissions associated with its regional (or countywide) activities:

- Prepare a baseline (2016) GHG emissions inventory for each of the 25 Partnership Jurisdictions in the County;
- Prepare a future year (2020, 2030, and 2045) GHG emissions forecast for each of the jurisdictions;
- Develop general GHG reduction measures and jurisdiction-specific measures appropriate for each jurisdiction; and
- Develop consistent baseline in information for jurisdictions to use for their development of community climate action plans meeting jurisdiction-identified reduction goals.

---

23 San Bernardino Council of Governments (SBCOG). 2021. San Bernardino County Regional Greenhouse Gas Reduction Plan. Website: www.gosbcta.com/wp-content/uploads/2019/09/San_Bernardino_ Regional_GHG_Reduction_Plan_Main_Text_Mar_2021.pdf (accessed September 2024).

Yucca Valley General Plan. The Town of Yucca Valley addresses climate change in the Open Space and Conservation Element of its General Plan.[24] The Open Space and Conservation Element includes goals and policies that work to improve and maintain air quality for the benefit of the health and vitality of residents and the local economy. The following policies from the Open Space and Conservation Element are applicable to the proposed project:

- **Policy OCS 11-1:** Continue to participate in and support the provisions of the San Bernardino Regional Greenhouse Gas Reduction Plan.

- **Policy OCS 11-2:** Encourage new development to be designed to take advantage of the desert climate through solar orientation, shading patterns, and other green building practices and technologies.

- **Policy OCS 11-3:** Maintain General Plan Land Use, Housing, and Transportation goals and policies to be aligned with, support, and enhance SCAG's Regional Transportation Plan and Sustainable Communities Strategy to achieve reductions in GHG emissions.

METHODOLOGY

Construction Emissions

Construction activities can generate a substantial amount of air pollution. Construction activities are considered temporary; however, short-term impacts can contribute to exceedances of air quality standards. Construction activities include site preparation, earthmoving, and general construction. The emissions generated from these common construction activities include fugitive dust from soil disturbance and fuel combustion from mobile heavy-duty, diesel- and gasoline-powered equipment, portable auxiliary equipment, vendor and waste haul trucks, and worker commute trips.

LSA used the California Emissions Estimator Model version 2022.1 (CalEEMod) computer program to calculate emissions from on-site construction equipment and emissions from worker and vehicle trips to the site. This analysis assumes that construction would begin in the fall of 2024 and be completed in 24 months, which was included in CalEEMod. The proposed project would require excavation to provide connections to utilities. Therefore, this analysis included a trenching phase and associated equipment for trenching operations, such as trenchers and tractors/loaders/ backhoes, which was included in CalEEMod. The proposed project would not require any soil import or export, which was specified in CalEEMod. This analysis also assumes that the proposed project would comply with MDAQMD Rule 403 measures. All other construction details are not yet known; therefore, default assumptions (e.g., construction equipment, construction worker and truck trips, and fleet activities) from CalEEMod were used.

[24] Town of Yucca Valley. n.d. *2022 General Plan, Open Space and Conservation Element*. Website: www.yucca-valley.org/our-town/departments/community-development/planning/general-plan-update (accessed September 2024).

Operational Emissions

This air quality analysis includes estimating emissions associated with long-term operation of the project. Indirect emissions of criteria pollutants with regional impacts would be emitted by project-generated vehicle trips. In addition, localized air quality impacts (i.e., higher CO concentrations or "hot-spots") near intersections or roadway segments in the project vicinity would also potentially occur due to project-generated vehicle trips.

Consistent with MDAQMD guidance for estimating emissions associated with land use development projects, the CalEEMod computer program was used to calculate the long-term operational emissions associated with the project. As previously discussed in the Project Location and Description section, the proposed project would construct a 94,500 sf mini storage facility and associated improvements. Therefore, the proposed project analysis was conducted using the land use codes *Unrefrigerated Warehouse No-Rail.* Trip generation rates used in CalEEMod for the project were based on the project's trip generation analysis, which estimates that the project would generate approximately 137 new average daily trips.[25] In addition, consistent with the project design plans, this CalEEMod analysis incorporates selections to reflect no natural gas usage during construction and operation of the proposed project. Therefore, the default natural gas data were converted to kWh and added to the default electricity estimates to account for all energy use for the proposed project, which was included in CalEEMod. When project-specific data were not available, default assumptions from CalEEMod were used to estimate project emissions.

Energy Use

The analysis focuses on the sources of energy that are relevant to the proposed project: electricity, the equipment fuel necessary for project construction, and vehicle fuel necessary for project operations. For the purposes of this analysis, the amounts of electricity, construction fuel, and fuel use from operations are quantified and compared to that consumed in San Bernardino County. The electricity uses of the proposed project are analyzed on an annual basis. Electricity uses were estimated for the project using default energy intensities by land use type in CalEEMod.

Greenhouse Gas Emissions

GHG emissions associated with the project would occur over the short term from construction activities, consisting primarily of emissions from equipment exhaust. There would also be long-term GHG emissions associated with project-related vehicular trips. Recognizing that the field of global climate change analysis is rapidly evolving, the approaches advocated most recently indicate that, for determining a project's contribution to GHG emissions, lead agencies should calculate, or estimate, emissions from vehicular traffic, energy consumption, water conveyance and treatment, waste generation, construction activities, and any other significant source of emissions within the project area. The CalEEMod results were used to quantify GHG emissions generated by the project.

[25] LSA Associates, Inc. 2024. *Sun Mesa Mini Storage Project Trip Generation and Vehicle Miles Traveled Memorandum, Table A.* July 18.

THRESHOLDS OF SIGNIFICANCE

The thresholds of significance used in this analysis are described in this section.

Air Quality

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse air quality impact if project-generated pollutant emissions would do any of the following:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project is in nonattainment under applicable NAAQS or CAAQS;
- Expose sensitive receptors to substantial pollutant concentrations; or
- Result in other emissions (such as those leading to odors) affecting a substantial number of people.

Certain air districts (e.g., MDAQMD) have created guidelines and requirements to conduct air quality analysis. The MDAQMD's current guidelines, the *CEQA* and Federal Air Conformity Guidelines[26], were followed in this assessment of air quality impacts for the proposed project.

Regional Emissions Thresholds

MDAQMD has established daily emission thresholds for construction and operation of proposed projects. Specific criteria for determining whether the potential air quality impacts of a project are significant are set forth in the MDAQMD's *CEQA and Federal Conformity Guidelines*. The criteria include emissions thresholds, compliance with State and national air quality standards, and consistency with the current air quality plans. The emission thresholds were established based on the attainment status of the air basins within the MDAQMD with regard to air quality standards for specific criteria pollutants. Because the concentration standards were set at a level that protects public health with an adequate margin of safety, these emission thresholds are regarded as conservative and would overstate an individual project's contribution to health risks. Table C lists the CEQA significance thresholds for construction and operational emissions established for the MDAQMD.

[26] Mojave Desert Air Quality Management District (MDAQMD). 2020. California Environmental Quality Act (CEQA) and Federal Air Conformity Guidelines. Website: www.mdaqmd.ca.gov/home/showpublisheddocument/8510/638126583450270000 (accessed September 2024).

Table C: Regional Thresholds for Construction and Operational Emissions

Emissions Source	Pollutant Emissions Threshold					
	VOCs	NO_X	CO	PM_{10}	$PM_{2.5}$	SO_X
Tons Per Year						
Construction	25	25	100	25	15	12
Operations	25	25	100	25	15	12
Pounds Per Day						
Construction	137	137	548	82	65	137
Operations	137	137	548	82	65	137

Source: MDAQMD Air Quality Significance Thresholds (MDAQMD 2020).

CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
MDAQMD = Mojave Desert Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compounds

Projects in the MDAQMD with construction- or operations-related emissions that exceed any of their respective emission thresholds would be considered significant under MDAQMD guidelines. These thresholds, which the MDAQMD developed and which apply throughout the MDAQMD, apply as both project and cumulative thresholds. If a project exceeds these standards, it is considered to have a project-specific and cumulative impact.

Local Microscale Concentration Standards

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the project vicinity are above or below State and federal CO standards. Because ambient CO levels are below the standards throughout the MDAQMD, a project would be considered to have a significant CO impact if project emissions would result in an exceedance of one or more of the 1-hour or 8-hour standards. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20 ppm
- California State 8-hour CO standard of 9 ppm

Energy

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse impact related to energy if the project would:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or

- Conflict with or obstruct a State or local plan for renewable energy or energy efficiency

Greenhouse Gas Thresholds

Appendix G of the *State CEQA Guidelines* includes significance thresholds for GHG emissions. A project would normally have a significant effect on the environment if it would do either of the following:

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or

- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

Currently, there is no statewide GHG emissions threshold that has been used to determine the potential GHG emissions impacts of a project. Threshold methodology and thresholds are still being developed and revised by air districts in California.

The Town of Yucca Valley adopted San Bernardino County's *Greenhouse Gas Emissions Reduction Plan Update*[27] in 2021 and GHG Development Review Process (DRP)[28] in 2015. The DRP procedures need to be followed to evaluate GHG impacts and determine significance for CEQA purposes. All projects need to apply the GHG performance standards identified in the DRP and comply with State requirements. For projects exceeding the review standard of 3,000 MT CO_2e per year, the use of screening tables or a project-specific technical analysis to quantify and mitigate project emissions is required. If the GHG emissions from the project are less than 3,000 MT CO_2e per year and the project would apply GHG performance standards and State requirements, project-level and cumulative GHG emissions would be less than significant.

For the purpose of this analysis, the proposed project will be compared to the San Bernardino County Review Threshold of 3,000 MT CO_2e/yr. The project is also evaluated for compliance with the 2022 Scoping Plan, and the 2024–2050 RTP/SCS.

IMPACT ANALYSIS

This section identifies potential air quality, energy, and GHG impacts associated with implementation of the proposed project.

Air Quality Impacts

Air pollutant emissions associated with the project would occur over the short term from construction activities and over the long term from project-related vehicular trips and energy consumption.

---

Consistency with Applicable Air Quality Plans

A consistency determination plays an essential role in local agency project review by linking local planning and unique individual projects to the air quality plans. A consistency determination fulfills the CEQA goal of fully informing local agency decision-makers of the environmental costs of the project under consideration at a stage early enough to ensure that air quality concerns are addressed. Only new or amended General Plan elements, Specific Plans, and significantly unique projects need to undergo a consistency review due to the air quality plan strategy being based on projections from local General Plans. The Town of Yucca Valley General Plan Land Use and Zoning Maps designate the project site as Commercial (C)[29] and Neighborhood Commercial (C-N). The proposed project site is consistent with this land use and zoning designation. Therefore, the proposed project would not require a land use or zoning designation change.

As identified above, all areas designated as nonattainment under the CCAA are required to prepare plans showing how they will meet the air quality standards. The most recent air quality plans are the PM_{10} Attainment Demonstration and Attainment Plan and the O_3 Attainment Plan. The attainment plans are based on regional growth projections developed by SCAG. Under CEQA, a project has the potential to be regionally significant if it would house more than 1,000 persons, occupy more than 40 acres of land, or encompass more than 650,000 sf of floor area. The proposed project would include a 94,500 sf mini storage facility; therefore, the proposed project would not be considered regionally significant.

Additionally, as discussed below, the regional emissions generated by construction and operation phases of the proposed project would be less than the MDAQMD emissions thresholds, and MDAQMD would not consider the project a substantial source of air pollutant emissions that would have the potential to affect the attainment designations in the air basin. Therefore, the proposed project would not affect the regional emissions inventory or conflict with strategies in the applicable air quality plans.

Criteria Pollutant Analysis

The Basin is designated as nonattainment for O_3 and PM_{10} for federal standards and nonattainment for O_3, PM_{10}, and $PM_{2.5}$ for State standards. The MDAQMD's nonattainment status is attributed to the region's development history. Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant.

In developing thresholds of significance for air pollutants, the MDAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project

[29] Town of Yucca Valley. 2014. Yucca Valley General Plan, Figure LU-1: General Plan Land Use. Website: chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/www.yucca-valley.org/home/showpublisheddocument/2778/637009499961530000 (accessed September 2024).

exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Therefore, additional analysis to assess cumulative impacts is unnecessary. The following analysis assesses the potential project-level construction- and operation-related air quality impacts.

Construction Emissions. During construction, short-term degradation of air quality may occur due to the release of particulate matter emissions (i.e., fugitive dust) generated by building construction, paving, and other activities. Emissions from construction equipment are also anticipated and would include CO, nitrogen oxides (NO_X), VOCs, directly emitted $PM_{2.5}$ or PM_{10}, and toxic air contaminants such as diesel exhaust particulate matter.

Project construction activities would include grading, site preparation, building construction, architectural coating, paving, and trenching activities. Construction-related effects on air quality from the proposed project would be greatest during the grading and site preparation phases due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Sources of fugitive dust would include disturbed soils at the construction site. Unless properly controlled, vehicles leaving the site would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries. PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and amount of operating equipment. Larger dust particles would settle near the source, whereas fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. MDAQMD has established Rule 403.2: Fugitive Dust Control, which would require the applicant to implement measures that would reduce the amount of particulate matter generated during the construction period.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, sulfur oxides (SO_X), NO_X, VOCs, and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for the project using CalEEMod and are summarized in Table D (CalEEMod output sheets are provided in Attachment B).

The results shown in Table D indicate the proposed project would not exceed the significance criteria for daily VOCs, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$ emissions. Therefore, construction of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under applicable NAAQS or CAAQS.

Table D: Short-Term Regional Construction Emissions

Construction Year	Maximum Regional Pollutant Emissions					
	VOCs	NO_X	CO	SO_X	Total PM_{10}	Total $PM_{2.5}$
Pounds Per Day						
Site Preparation	3.7	36.1	34.0	<0.1	6.9	4.2

Note: Maximum emissions of VOCs occurred during the overlapping building construction and architectural coating phases
CO = carbon monoxide
lbs/day = pounds per day
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in size
PM_{10} = particulate matter less than 10 microns in size
MDAQMD = Mojave Desert Air Quality Management District
SO_X = sulfur oxides
VOCs = volatile organic compounds

Operational Air Quality Impacts. Long-term air pollutant emissions associated with operation of the proposed project include emissions from area, energy, and mobile sources. Area-source emissions include architectural coatings, consumer products, and landscaping. Energy-source emissions result from activities in buildings that use natural gas. Mobile-source emissions are from vehicle trips associated with operation of the project.

Mobile source emissions include VOC and NO_X emissions that contribute to the formation of O_3. Additionally, PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways.

Energy-source emissions result from activities in buildings that use natural gas. The quantity of emissions is the product of usage intensity (i.e., the amount of natural gas) and the emission factor of the fuel source. However, the proposed project would not use natural gas. Therefore, energy-source emissions would be minimal.

Area-source emissions consist of direct sources of air emissions at the project site, including architectural coatings, consumer products, and use of landscape maintenance equipment.

Long-term operational emissions associated with the proposed project were calculated using CalEEMod. Table E provides the estimated existing emission estimates and the proposed project's estimated operational emissions.

The results shown in Table E indicate the proposed project would not exceed the significance criteria for daily VOC, NO_X, CO, SO_X, PM_{10}, or $PM_{2.5}$ emissions. Therefore, operation of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under applicable NAAQS or CAAQS.

Table E: Project Operational Emissions

Emission Type	Pollutant Emissions					
	VOCs	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$

Long-Term Microscale (CO Hot-Spot) Analysis. Vehicular trips associated with the proposed project would contribute to congestion at intersections and along roadway segments in the vicinity of the proposed project site. Localized air quality impacts would occur when emissions from vehicular traffic increase as a result of the proposed project. The primary mobile-source pollutant of local concern is CO, a direct function of vehicle idling time and, thus, of traffic flow conditions. CO transport is extremely limited. Under normal meteorological conditions, it disperses rapidly with distance from the source. However, under certain extreme meteorological conditions, CO concentrations near a congested roadway or intersection may reach unhealthful levels, thereby affecting local sensitive receptors (e.g., residents, schoolchildren, the elderly, and hospital patients).

Typically, high CO concentrations are associated with roadways or intersections operating at unacceptable levels of service or with extremely high traffic volumes. In areas with high ambient background CO concentrations, modeling is recommended to determine a project's effect on local CO levels.

An assessment of project-related impacts on localized ambient air quality requires that future ambient air quality levels be projected. Existing CO concentrations in the immediate project vicinity are not available. Ambient CO levels monitored at the San Bernardino 4th Street station (the closest

station to the project site monitoring CO) showed a highest recorded 1-hour concentration of 3.8 ppm (the State standard is 20 ppm) and a highest 8-hour concentration of 2.9 ppm (the State standard is 9 ppm) from 2022 to 2024. The highest CO concentrations would normally occur during peak traffic hours; hence, CO impacts calculated under peak traffic conditions represent a worst-case analysis. Reduced speeds and vehicular congestion at intersections result in increased CO emissions.

The proposed project is expected to generate 137 average daily trips, with 9 trips occurring in the a.m. peak hour and 15 trips occurring in the p.m. peak hour.[30] Therefore, given the extremely low level of CO concentrations in the project area and the lack of traffic impacts at any intersections, project-related vehicles are not expected to result in CO concentrations exceeding the State or federal CO standards. No CO hot spots would occur, and the project would not result in any project-related impacts on CO concentrations.

Health Risk on Nearby Sensitive Receptors

Sensitive receptors are defined as people that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include schools, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential dwelling units. As described above, the project site is surrounded primarily by industrial uses, vacant land, and residential uses. The nearest sensitive receptors include a single-family home located southeast of the project site at approximately 200 feet from the project site boundary.

As detailed in Table D and Table E, the emission levels indicate that the project would not exceed MDAQMD thresholds during project construction or operation. Due to the small size of the proposed project in relation to the overall Basin, the level of emissions is not sufficiently high enough to use a regional modeling program to correlate health effects on a Basin-wide level. On a regional scale, the quantity of emissions from the project is incrementally minor. Therefore, the proposed project would not expose sensitive receptors to substantial levels of pollutant concentrations.

Odors

Heavy-duty equipment on the project site during construction would emit odors, primarily from equipment exhaust. However, the construction activity would cease after individual construction is completed. The proposed project would not include any activities or operations that would generate objectionable odors, and once operational, the project would not be a source of odors. Therefore, the proposed project would not result in other emissions (such as those leading to odors) affecting a substantial number of people.

Energy Use

This section discusses energy use resulting from implementation of the proposed project and evaluates whether the proposed project would result in the wasteful, inefficient, or unnecessary

[30] LSA Associates, Inc. 2024. *Sun Mesa Mini Storage Project Trip Generation and Vehicle Miles Traveled Memorandum, Table A.* July 18.

consumption of energy resources or conflict with any applicable plans for renewable energy and energy efficiency.

Construction

The anticipated construction schedule assumes that the proposed project would be built in approximately 24 months. Construction-specific phases were assessed for their energy consumption under each construction sub-phase: grading, site preparation, building construction, paving, architectural coating, and trenching activities.

Construction would require energy for the manufacture and transportation of construction materials, preparation of the site for grading and building activities, and construction of the building. All or most of this energy would be derived from nonrenewable resources. Petroleum fuels (e.g., diesel and gasoline) would be the primary sources of energy for these activities. However, construction activities are not anticipated to result in an inefficient use of energy as gasoline and diesel fuel would be supplied by construction contractors who would conserve the use of their supplies to minimize their costs on the project. Energy (i.e., fuel) usage on the project site during construction would be temporary in nature and would be relatively small in comparison to the State's available energy sources.

Operation

Energy use associated with the proposed project would consist of natural gas, electricity, and vehicle fuel use associated with project operations.

Table F shows the estimated potential increased electricity, gasoline, and diesel demand associated with the proposed project. The electricity and natural gas rates are from the CalEEMod analysis, while the gasoline and diesel rates are based on the traffic analysis in conjunction with USDOT fuel efficiency data and using the USEPA's fuel economy estimates for 2020 and the California diesel fuel economy estimates for 2021.

Table F: Estimated Annual Energy Use of Proposed Project

	Electricity Use (kWh per year)	Natural Gas Use (kBTU per year)	Gasoline (gallons per year)	Diesel (gallons per year)
Proposed Project	962,994	0	27,218	19,120

Source: Compiled by LSA (September 2024).
kBTU = thousand British thermal units
kWh = kilowatt hours

As shown in Table F, the estimated increase in electricity demand associated with the operation of the proposed project would be 962,994 kWh per year. Total electricity consumption in San Bernardino County in 2022 was 16,629,614,195 kWh;[31] therefore, operation of the proposed project

[31] CEC. 2022. Electricity Consumption by County. Website: www.ecdms.energy.ca.gov/elecbycounty.aspx (accessed September 2024).

would negligibly increase the annual electricity consumption in San Bernardino County by approximately less than 0.1 percent.

In addition, the project would result in energy usage associated with motor vehicle gasoline to fuel project-related trips. As shown above in Table F, the proposed project would result in the consumption of 27,218 gallons of gasoline and 19,120 gallons of diesel per year. Based on fuel consumption obtained from EMFAC2021, approximately 328.0 million gallons of gasoline and approximately 856.3 million gallons of diesel will be consumed from vehicle trips in San Bernardino County in 2026. Therefore, vehicle trips associated with the proposed project would increase the annual fuel use in San Bernardino County by approximately less than 0.1 percent for gasoline fuel usage and approximately less than 0.1 percent for diesel fuel usage. The proposed project would result in fuel usage that is a small fraction of current annual fuel use in San Bernardino County, and fuel consumption associated with vehicle trips generated by project operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. Therefore, gasoline demand generated by vehicle trips associated with the proposed project would be a minimal fraction of gasoline and diesel fuel consumption in California.

Furthermore, the proposed project would be constructed using energy efficient modern building materials and construction practices, and the proposed project also would use new modern appliances and equipment, in accordance with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1608). The expected energy consumption during construction and operation of the proposed project would be consistent with typical usage rates for commercial uses; however, energy consumption is largely a function of personal choice and the physical structure and layout of buildings. Therefore, the proposed project would not result in a potential significant impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation.

Conflict with or Obstruction of a State or Local Plan for Renewable Energy or Energy Efficiency

The CEC recently adopted the *2023 Integrated Energy Policy Report*.[32] The *2023 Integrated Energy Policy Report* provides the results of the CEC's assessments of a variety of energy issues facing California. Many of these issues will require action if the State is to meet its climate, energy, air quality, and other environmental goals while maintaining energy reliability and controlling costs. The *2023 Integrated Energy Policy Report* covers a broad range of topics, including decarbonizing buildings, integrating renewables, energy efficiency, energy equity, integrating renewable energy, updates on Southern California electricity reliability, climate adaptation activities for the energy sector, natural gas assessment, transportation energy demand forecasts, and the California Energy Demand Forecast.

As indicated above, energy usage on the project site during construction would be temporary in nature and would be relatively small in comparison to the State's available energy sources. In addition, energy usage associated with operation of the proposed project would be relatively small in comparison to the region's available energy sources, and energy impacts would be negligible at

[32] CEC. 2023. *2023 Integrated Energy Policy Report*. California Energy Commission. Docket Number: 23-IEPR-01.

the regional level. Because California's energy conservation planning actions are conducted at a regional level, and because the project's total impact on regional energy supplies would be minor, the proposed project would not conflict with or obstruct California's energy conservation plans as described in the CEC's *2023 Integrated Energy Policy Report*. Therefore, the proposed project would not lead to new or substantially more severe energy impacts.

Greenhouse Gas Emission Impacts

The following sections describe the proposed project's construction- and operation-related GHG impacts and consistency with applicable GHG reduction plans.

Generation of Greenhouse Gas Emissions

The following section details the proposed project's construction- and operational-related GHG emissions and contribution to global climate change.

Construction Greenhouse Gas Emissions. Construction activities associated with the proposed project would produce combustion emissions from various sources. During construction, GHGs would be emitted through the operation of construction equipment and from worker and builder supply vendor vehicles, each of which typically use fossil-based fuels to operate. The combustion of fossil-based fuels creates GHGs such as CO_2, CH_4, and N_2O. Furthermore, CH_4 is emitted during the fueling of heavy equipment. Exhaust emissions from on-site construction activities would vary daily as construction activity levels change.

As indicated above, MDAQMD does not have an adopted threshold of significance for construction-related GHG emissions. However, lead agencies are required to quantify and disclose GHG emissions that would occur during construction. As described above, for the purpose of this analysis, the proposed project will be compared to the San Bernardino County Review threshold of 3,000 MT/year CO_2e. Construction GHG emissions are amortized over the life of the project (considered to be 30 years), added to the operational emissions, and compared to the applicable GHG significance threshold.

Using CalEEMod, it is estimated that the project would generate approximately 495.3 MT CO_2e during construction of the project. When amortized over the 30-year life of the project, annual emissions would be 16.5 MT CO_2e.

Operational Greenhouse Gas Emissions. Long-term operation of the proposed project would generate GHG emissions from area, mobile, waste, and water sources, as well as indirect emissions from sources associated with energy consumption. Mobile-source GHG emissions would include project-generated vehicle trips associated with trips to the proposed project. Area-source emissions would be associated with activities such as landscaping and maintenance on the project site and other sources. Waste-source emissions generated by the proposed project include energy generated by landfilling and other methods of disposal related to transporting and managing project-generated waste. In addition, water-source emissions associated with the proposed project are generated by water supply and conveyance, water treatment, water distribution, and wastewater treatment.

GHG emissions were estimated using CalEEMod. Table G shows the estimated operational GHG emissions for the proposed project. Motor vehicle emissions are the largest source of GHG emissions for the project, at approximately 47 percent of the project total. Energy sources are the next largest category, at approximately 38 percent. Water and waste sources are about 10 and 5 percent of the total emissions, respectively. Area sources make up less than 1 percent of the total emissions.

Table G: Greenhouse Gas Emissions

Emission Type	Operational Emissions (MT/yr)				
	CO_2	CH_4	N_2O	CO_2e	Percentage of Total
Mobile Source	283.9	<0.1	<0.1	288.6	47
Area Source	1.4	<0.1	<0.1	1.4	<1
Energy Source	232.4	<0.1	<0.1	233.3	38
Water Source	37.4	0.7	<0.1	60.3	10
Waste Source	7.9	0.8	0.0	27.7	5
Total Operational Emissions				**611.3**	
Amortized Construction Emissions				16.5	—
Total Annual Emissions				**627.8**	—
San Bernardino County Review Threshold				**3,000**	
Exceedance?				**No**	

Source: Compiled by LSA (September 2024).
Note: Figures may not appear to add correctly due to rounding.
CH_4 = methane
CO_2 = carbon dioxide
CO_2e = carbon dioxide equivalent
MT/yr = metric tons per year
N_2O = nitrous oxide

As discussed above, a project would have less than significant GHG emissions if it would result in operational-related GHG emissions of less than 3,000 MT CO_2e/yr. Based on the analysis results, the proposed project would result in approximately 627.8 MT CO_2e/yr, which would not exceed the San Bernardino County Review Threshold of 3,000 MT CO_2e/yr. Therefore, project-level and cumulative GHG emissions would be less than significant. Therefore, operation of the proposed project would not generate significant GHG emissions that would have a significant effect on the environment.

Consistency with Greenhouse Gas Reduction Plans

The following discussion evaluates the proposed project according to the goals of the 2022 Scoping Plan and SCAG's 2024–2050 RTP/SCS.

2022 Scoping Plan. EO B-30-15 added the immediate target of reducing GHG emissions to 40 percent below 1990 levels by 2030. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reduction target of at least 40 percent below 1990 levels by 2030 contained in EO B-30-15. CARB released the 2017 Scoping Plan to reflect the 2030 target set by EO B-30-15 and codified by SB 32.[33] SB 32 builds on AB 32 and keeps California on the path toward achieving the State's 2050 objective of reducing emissions to 80 percent below 1990 levels.

[33] CARB. 2017. *California's 2017 Climate Change Scoping Plan*. November

AB 197, the companion bill to SB 32, provides additional direction to CARB that is related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 that is intended to provide easier public access to air emission data collected by CARB was posted in December 2016. AB 1279 codifies the State goals of achieving net carbon neutrality by 2045 and maintaining net negative GHG emissions thereafter.

In addition, the 2022 Scoping Plan[34] assesses progress toward the statutory 2030 target while laying out a path to achieving carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

- **Energy-efficient measures** are intended to maximize energy-efficiency building and appliance standards, pursue additional efficiency efforts including new technologies and new policy and implementation mechanisms, and pursue comparable investment in energy efficiency from all retail providers of electricity in California. In addition, these measures are designed to expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings. As mentioned above, the proposed project would not be powered by natural gas, and no natural gas demand is anticipated during construction or operation of the proposed project. The elimination of natural gas in new development would help projects implement their "fair share" of achieving long-term 2045 carbon neutrality consistent with State goals. Therefore, if a project does not use natural gas, a lead agency can conclude that it would be consistent with achieving the 2045 neutrality goal and will not have a cumulative considerable impact on climate change.[35] The proposed project does not include natural gas. In addition, the proposed project would comply with the latest Title 24 standards regarding energy conservation and green building standards. Therefore, the proposed project would comply with applicable energy measures.

- **Water conservation and efficiency measures** are intended to continue efficiency programs and use cleaner energy sources to move and treat water. Increasing the efficiency of water transport and reducing water use would reduce GHG emissions. As noted above, the project would be required to comply with the latest Title 24 standards, which include a variety of different measures, including reduction of wastewater and water use. The proposed project would also include low water landscape in their design. In addition, the proposed project would be required to comply with the California Model Water Efficient Landscape Ordinance. Therefore, the

---

35 Bay Area Air Quality Management District (BAAQMD). 2022. *Justification Report: CEQA Thresholds for Evaluating the Significance of Climate Impacts From Land Use Projects and Plans.* April. Website: www.baaqmd.gov/~/media/files/planning-and-research/ceqa/final-ceqa-thresholds-report-for-climate-impacts-02092022-alt-pdf.pdf?rev=a3f6b70f316b4637864fb0b2cff78ebd&sc_lang=vi-vn (accessed September 2024).

proposed project would not conflict with any of the water conservation and efficiency measures.

- **Transportation and motor vehicle measures** are intended to develop regional GHG emission reduction targets for passenger vehicles. Specific regional emission targets for transportation emissions would not directly apply to the proposed project. However, vehicles traveling to the project site would comply with the Pavley II (LEV III) Advanced Clean Cars Program. The second phase of Pavley standards will reduce GHG emissions from new cars by 34 percent from 2016 levels by 2025, resulting in a 3 percent decrease in average vehicle emissions for all vehicles by 2020. Therefore, the proposed project would not conflict with the identified transportation and motor vehicle measures.

The proposed project would comply with existing State regulations adopted to achieve the overall GHG emission reduction goals identified in the 2022 Scoping Plan.

SCAG's Regional Transportation Plan/Sustainable Communities Strategy. SCAG's 2024–2050 RTP/SCS identifies land use strategies that focus on new housing and job growth in areas served by high-quality transit, and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The core vision in the 2024–2050 RTP/SCS is to better manage the existing transportation system through design management strategies, integrate land use decisions and technological advancements, create complete streets that are safe for all roadway users, preserve the transportation system, and expand transit and foster development in transit-oriented communities. The 2024–2050 RTP/SCS contains transportation projects to help more efficiently distribute population, housing, and employment growth, as well as providing a forecast development pattern that is generally consistent with regional-level General Plan data. The forecast development pattern, when integrated with the financially constrained transportation investments identified in the 2024–2050 RTP/SCS, would reach the regional target of reducing GHG emissions from automobiles and light-duty trucks by 8 percent by 2020 and 19 percent by 2035 (compared to 2005 levels per capita emission levels). The 2024–2050 RTP/SCS does not require that local General Plans, Specific Plans, or zoning be consistent with the 2024–2050 RTP/SCS, but it provides incentives for consistency for governments and developers.

Implementing SCAG's RTP/SCS will greatly reduce the regional GHG emissions from transportation, helping to achieve statewide emissions reduction targets. As demonstrated in the Consistency with Applicable Air Quality Plans section, above, the proposed project does not meet the criteria identified in *State CEQA Guidelines* Section 15205.b.2 (Projects of Statewide, Regional, or Areawide Significance) for projects of statewide, regional, or area-wide significance. In addition, the proposed project would not require a change to the General Plan land use designation or the current zoning, and would be consistent with the Town's General Plan and Zoning Ordinance. Therefore, the proposed project would not interfere with SCAG's ability to achieve the region's GHG reduction target of 19 percent below 2005 per capita emissions levels by 2035. Furthermore, the proposed project is not regionally significant per *State CEQA Guidelines* Section 15206 and, therefore, it would not conflict with the SCAG RTP/SCS targets since those targets were established and are applicable on a regional level.

The proposed project would construct a 94,500 sf mini storage facility and associated improvements that are consistent with existing local and regional planning assumptions for the project site. Therefore, it is anticipated that implementation of the proposed project would not interfere with SCAG's ability to implement the regional strategies outlined in the RTP/SCS.

CONCLUSION

Based on the analysis presented above, construction and operation of the proposed project would not result in the generation of criteria air pollutants that would exceed MDAQMD thresholds of significance. Compliance with MDAQMD Rule 403: Fugitive Dust would further reduce construction dust impacts. The proposed project is not expected to produce significant emissions that would affect nearby sensitive receptors. The project would also not result in objectionable odors affecting a substantial number of people. GHG emissions released during construction and operation of the project are estimated to be minimal and would not be cumulatively considerable. In addition, the proposed project would generally be consistent with both the 2022 Scoping Plan and the SCAG RTP/SCS.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%
Sweep paved roads once per month	9%	9%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Phase 2 Architectural Coating	0.00	0.00	141,750	47,250	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Preparation	0.00	0.00	7.50	0.00	—
Grading	0.00	0.00	15.0	0.00	—
Paving	0.00	0.00	0.00	0.00	0.23

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Unrefrigerated Warehouse-No Rail	0.23	33%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2024	0.00	532	0.03	< 0.005
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year

Unrefrigerated Warehouse-No Rail	137	137	137	49,980	2,127	2,127	2,127	776,263

5.9.2. Mitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Unrefrigerated Warehouse-No Rail	137	137	137	49,980	2,127	2,127	2,127	776,263

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
0	0.00	141,750	47,250	—

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

5.10.4. Landscape Equipment - Mitigated

Season	Unit	Value
Snow Days	day/yr	0.00

Summer Days	day/yr	180

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Unrefrigerated Warehouse-No Rail	962,994	532	0.0330	0.0040	0.00

5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Unrefrigerated Warehouse-No Rail	962,994	532	0.0330	0.0040	0.00

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Unrefrigerated Warehouse-No Rail	21,853,125	168,696

5.12.2. Mitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Unrefrigerated Warehouse-No Rail	21,853,125	78,373

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Unrefrigerated Warehouse-No Rail	88.8	—

5.13.2. Mitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Unrefrigerated Warehouse-No Rail	88.8	—

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced

5.14.2. Mitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor

5.15.2. Mitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor

5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)

5.17. User Defined

Equipment Type	Fuel Type

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Land Use	Site is 4.34 acres, buildings take 94,500sf, parking 1,710sf, other pavement takes 75,620sf (assuming pavement is 40% of total based on site plan), retention pond 9,600sf. Leaves 7,620 for landscaping.
Construction: Construction Phases	Construction plans start in Fall 2024. Assume that architectural coatings applied during latter part of building construction phase.
Construction: Paving	Planning 7,250 sf of AC and 2,675 sf of PCC
Construction: Dust From Material Movement	Site will be balanced.
Construction: Off-Road Equipment	Added equipment for trenching operations.
Operations: Vehicle Data	The proposed project would generate 137 ADT. Trip rate = 137 ADT/ 94.5 tsf = 1.449
Operations: Energy Use	The proposed project would not include natural gas. Electricity consumption was adjusted.

EXECUTIVE SUMMARY

LSA Associates, Inc. (LSA) was retained by DRP Enterprises, LLC to conduct a general biological study of the approximately 4.34-acre Sun Mesa (Billings) Mini Storage Project (project) site located within Assessor's Parcel Number (APN) 0597-111-67-0000, located in the Town of Yucca Valley, San Bernardino County (County), California. The study was conducted to address compliance with the California Environmental Quality Act (CEQA), the California Endangered Species Act (CESA), and the Federal Endangered Species Act (FESA). Results of the general biological study are summarized below.

The project site contains potentially suitable habitat for burrowing owl (*Athene cunicularia hypugaea*), desert tortoise (*Gopherus agassizii*), and Crotch's bumble bee (*Bombus crotchii*). Pre-construction surveys for these species will be required to ensure any direct impacts to these species will be avoided.

The project site does provide suitable habitat for nesting birds protected under the California Fish and Game Code and the Migratory Bird Treaty Act (MBTA). It is recommended that vegetation removal be conducted between September 1 and January 15 (outside the general bird nesting season) to avoid impacts to nesting birds. If vegetation cannot be removed outside the bird nesting season, a pre-construction nesting bird survey by a qualified biologist is required 72 hours prior to vegetation removal.

There were no drainage features identified within the project site that are considered potential jurisdiction waters that may be subject to the regulatory authority of the United States Army Corps of Engineers (USACE), the California Department of Fish and Wildlife (CDFW), or the Regional Water Quality Control Board (RWQCB).

The project will apply for an incidental take permit (ITP) for western Joshua tree (*Yucca brevifolia)* under the Western Joshua Tree Conservation Act (WJTCA), a tree removal permit for Mojave yucca (*Yucca schidigera*) and California juniper (*Juniperus californica*) under Development Code Section 9.09.050 for the Town of Yucca Valley, and a permit for removal of other protected desert native plants under the California Desert Native Plant Act (CDNPA). The project will not conflict with any local policies or ordinances and is not within an adopted habitat conservation plan area. The project site does not contain wildlife corridors, nursery sites, or natural communities of concern. Additionally, standard Best Management Practices (BMPs) shall be implemented during construction activities to reduce impacts to wildlife resources in the project vicinity.

INTRODUCTION

DRP Enterprises, LLC, retained LSA to conduct a Biological Resources Assessment (BRA) for the Sun Mesa (Billings) Mini Storage Project (project) on Assessor's Parcel Numbers (APN) 0597-111-67-0000 in San Bernardino County, California (Figure 1; all figures are provided in Appendix A). The project proposes an approximately 89,700-square-foot (4.34-acre) mini storage facility and associated parking facilities.

The survey identified vegetation communities, the potential for the occurrence of special-status species, or habitats that could support special-status wildlife species, and recorded all plants and animals observed or detected within the project boundary. This BRA is designed to address the potential effects of the proposed project on designated critical habitats and/or special-status species. Information contained in this document is in accordance with accepted scientific and technical standards that are consistent with the requirements of the United States Fish and Wildlife Service (USFWS) and the CDFW. Additionally, the site was surveyed for any drainage features that would meet the definition of the waters of the United States, waters of the State, or CDFW jurisdiction.

SITE DESCRIPTION

The 4.34-acre project site is a currently undeveloped parcel within the Town of Yucca Valley, in San Bernardino County, California, as depicted on the United States Geological Survey (USGS) *Yucca Valley North, California* 7.5-minute series topographic quadrangle map in Section 13 of Township 1 North, Range 5 East, San Bernardino Baseline and Meridian (USGS 1989).

Specifically, the site is approximately 680 feet (ft) east of California State Route 247 (SR-247), located on the southeast corner of Newton Lane and Sun Mesa Drive; Figure 1 (all figures are provided in Appendix A) details the project location.

METHODS

LITERATURE REVIEW

A literature review and record search were conducted to identify the existence and potential for occurrence of sensitive or special-status plant and animal species in the project vicinity. Species occurrence records were reviewed for the following quadrangles containing and surrounding the project site: *Yucca Valley North*, *Bighorn Canyon, Landers, Goat Mountain, Rimrock, Yucca Valley South, Joshua Tree North*, and *Joshua Tree South, California,* USGS 7.5-minute quadrangles. These quadrangles were selected based on proximity and topographic and elevational similarity to the project site.

Federal and State lists of sensitive species were examined. Current electronic database records reviewed include the following.

- **California Natural Diversity Database information (CNDDB – RareFind 5)** (CDFW 2024a, 2025), which is administered by the CDFW, formerly known as the California Department of Fish and Game. This database covers sensitive plant and animal species, as well as sensitive natural communities that occur in California.

- **California Native Plant Society's (CNPS) Electronic Inventory of Rare and Endangered Vascular Plants** (CNPS 2024, 2025), which uses four specific categories or "lists" of sensitive plant species to assist with the conservation of rare or endangered botanical resources. All of the plants constituting California Rare Plant Ranks 1A, 1B, 2A, and 2B are intended to meet the status definitions of "threatened" or "endangered" in CESA and the California Fish and Game Code and are considered by CNPS to be eligible for State listing. At the discretion of the CEQA Lead Agency, impacts to these species may be analyzed as such, pursuant to *State CEQA Guidelines* Sections 15125(c) and 15380. Plants in Rank 3 (limited information; review list), Rank 4 (limited distribution; watch list), or other species that are considered Locally Unusual and Significant may be analyzed under CEQA if there is sufficient information to assess potential significant impacts.

- **United States Fish and Wildlife Service's (USFWS) Information for Planning and Consultation (IPaC) Online System** (USFWS 2024a, 2025), which lists all proposed, candidate, threatened, and endangered species managed by the Endangered Species Program of the USFWS that have the potential to occur on or near a particular site. This database also lists all known critical habitats. An IPaC Resource Report was generated for the project area.

In addition to the databases listed above, historic and current aerial imagery, existing environmental reports for developments in the project vicinity, and regional habitat conservation plans and local land use policies related to biological resources were reviewed. Wetland resources including riparian corridors were determined using the USFWS Wetlands Mapper online edition (USFWS 2024b).

SOILS

Before conducting the surveys, soil maps of the project vicinity were referenced online to determine the types of soil found within the project site. During review of the United States Department of

Agriculture (USDA) Natural Resources Conservation Service WebSoil Survey (USDA 2024), it was determined that no digital soils data were available for the project site and the surrounding areas. Soils observed on the site varied from sandy loam to loamy sand.

RECONNAISSANCE FIELD SURVEY

LSA Biologists Stanley Spencer, Christina Van Oosten, and Julia Lung conducted a general reconnaissance-level, pedestrian field survey and plant survey on May 7, 2024, between 0945 and 1150 hours. All areas within the 4.34-acre project site were surveyed on foot, and binoculars were used to aid in the identification of animal species. Notes were taken on general site conditions, vegetation, and suitability of habitat for various special-status elements. Weather conditions during the survey included temperatures ranging from 70 to 77 degrees Fahrenheit, with sunny skies, no precipitation, and 0 to 3 mile-per-hour winds.

JURISDICTIONAL FEATURES

The project site was assessed for areas that may potentially be considered jurisdictional wetlands, waters of the United States, or streambeds/habitats as defined by the USACE, RWQCB, and CDFW, respectively.

VEGETATION

All plant species observed within the project site were recorded. Vegetation communities within the project site were identified and qualitatively described. Plant communities were determined in accordance with *A Manual of California Vegetation*, Second Edition (Sawyer et al. 2009). Plant nomenclature follows that of *The Jepson Manual*, Second Edition (Baldwin et al. 2012). A comprehensive list of the plant species observed during the survey is provided in Appendix B.

The Joshua tree census survey was conducted to comply with the permitting requirements of the Western Joshua Tree Conservation Act (WJTCA) and CDFW guidelines.

WILDLIFE

All wildlife and wildlife signs observed and detected, including tracks, scat, carcasses, burrows, excavations, and vocalizations, were recorded. Additional survey time was spent in those habitats most likely to be utilized by wildlife (native vegetation, wildlife trails, etc.) or in habitats with the potential to support State- and/or Federally listed or otherwise special-status species. Notes were made on the general habitat types, species observed, and the conditions of the project site. A comprehensive list of the wildlife species observed during the survey is provided in Appendix C. Representative photographs of the project site that document existing conditions are provided in Appendix D.

RESULTS

LITERATURE REVIEW RESULTS

According to the records collected from relevant literature and databases, 32 special-status species (15 plant species and 17 animal species), 9 of which are Federally or State listed as threatened, endangered, or fully protected, or are candidates for listing, have been documented or may be expected in the project vicinity.

An analysis of the likelihood of the occurrence of these species is provided in Table A. This analysis takes into account species range as well as documentation within the vicinity of the project site and includes the habitat requirements for each species and the potential for their occurrence on the site, based on required habitat elements and range relative to the current site conditions. No USFWS-designated critical habitat occurs within or adjacent to the project site. CDFW natural communities of concern are discussed below.

EXISTING SITE CONDITIONS

Topography and Soils

The elevation of the project site ranges from approximately 3,710 to 3,726 ft above mean sea level (amsl). Review of the USDA Natural Resources Conservation Service WebSoil Survey resulted in soils within the project site and the surrounding areas as not being defined. Based on the May 7, 2024, field survey, soil types were identified as sandy loam and loamy sand.

Vegetation and Land Cover

Vegetation on the site consists of disturbed Joshua tree woodland (*Yucca brevifolia* Woodland Alliance) and was classified using *A Manual of California Vegetation*, Second Edition (Sawyer et al. 2009) (Appendix A, Figure 3). Dirt roads have been present with the current configurations since at least 1989 based on historic aerial imagery (Google Earth, 1989, 1995). Dominant vegetation within Joshua tree woodland includes western Joshua tree (*Yucca brevifolia*), Mojave yucca (*Yucca schidigera*), creosote bush (*Larrea tridentata*), Mediterranean grass (*Schismus* sp.), red brome (*Bromus ruben*), Sahara mustard (*Brassica tournefortii*), shortpod mustard (*Hirschfeldia incana*), and redstem stork's bill (*Erodium cicutarium*). No other plant communities are present on the site.

Table A: Special-Status Species Occurrence Probability

Species	Status	Habitat and Distribution	Activity Period	Occurrence Probability
Plants				
Astragalus bernardinus **San Bernardino milk-vetch**	US: – CA: 1B	Granitic or carbonate (limestone) substrates in Joshua tree woodland and pinyon and juniper woodland at 900 to 2,290 meters (2,950 to 7,500 feet) elevation. Occurs only in Riverside and San Bernardino Counties, in the San Bernardino, New York, and Ivanpah Mountains.	Blooms April through June (perennial herb)	**Not Expected:** No granitic or carbonate substrates were found on the site. Species not identified during May 2024 floristic survey.
Astragalus tricarinatus **Triple-ribbed milk-vetch**	US: FE CA: 1B	Metamorphic rock outcrops weathering into gravelly soil in semi-desert chaparral, or (probably as waifs) at the edges of boulder-strewn desert washes and adjacent slopes in rocky incised canyons in Joshua tree woodland and Sonoran Desert scrub; known from west edge of desert at 450 to 1,200 meters (1,500 to 3,900 feet) elevation in Riverside and extreme southern San Bernardino Counties.	Blooms February through May (perennial herb)	**Not Expected:** No metamorphic rock outcrops or other habitat features on site. Species not identified during May 2024 floristic survey.
Berberis fremontii **Fremont barberry**	US: – CA: 2B	Rocky sites in chaparral, Joshua tree, pinyon and juniper woodland at elevations of 840 to 1,850 meters (2,750 to 6,070 feet).	Blooms April through June (perennial evergreen shrub)	**Not Expected:** No rocky areas on site. Species not identified during May 2024 floristic survey.
Boechera dispar **Pinyon rock cress**	US: – CA: 2B	Granitic, gravelly slopes and mesas in Joshua tree woodland, pinyon-juniper woodland, and Mojave Desert scrub at 1,200 to 2,400 meters (4,000 to 7,900 feet) elevation. In California, known from Inyo, Mono, San Bernardino, and Tulare Counties.	Blooms March through June (perennial herb)	**Not Expected:** No granitic, gravelly slopes on site. Species not identified during May 2024 floristic survey.
Boechera shockleyi **Shockley's rock cress**	US: – CA: 2B	Limestone or quartzite on ridges, rocky outcrops, or in openings in pinyon-juniper woodland at 875 to 2,205 meters (2,900 to 7,200 feet) in elevation. In California, known only from Inyo and San Bernardino counties.	Blooms May through June (perennial herb)	**Not Expected:** No suitable habitat on ridges, rocky outcrops, or pinyon-juniper woodland on site. Species not identified during May 2024 floristic survey.
Calochortus palmeri var. *palmeri* **Palmer's mariposa-lily**	US: – CA: 1B	Mesic sites in chaparral and lower montane coniferous forest at 600 to 2,400 meters (2,000 to 7,900 feet) in elevation. Known from Riverside, San Bernardino, Santa Barbara, Los Angeles, Ventura, Kern, and San Luis Obispo counties.	Blooms April through July (perennial herb)	**Not Expected:** No mesic areas, chaparral, or coniferous forest on site. Species not identified during May 2024 floristic survey.

Cymopterus multinervatus **Purple-nerve cymopterus**	US: – CA: 2B	Sandy or gravelly slopes, rocky outcrops, along ridges in Mojavean desert scrub and pinyon and juniper woodland at 765 to 2,195 meters (2,500 to 7,200 feet) in elevation. In California, known only from Inyo, Riverside, and San Bernardino counties. Also occurs in Arizona, Nevada, New Mexico, Texas, Utah, and Mexico.	Blooms March through April (perennial herb)	**Not Expected:** Site is outside the known range of this species. Nearest location is a 1978 collection about 12 miles north of the project site at the south end of its known range. Species not identified during May 2024 floristic survey; would have been detectable as a perennial even if past flower.
Erigeron parishii **Parish's daisy**	US: FT CA: 1B	Generally found on or near carbonates (e.g. limestone); usually on steep rocky slopes, or in washes or on adjacent benches in canyons; usually in pinyon woodland, pinyon-juniper woodland, or blackbrush scrub at 800 to 2,000 meters (2,600 to 6,600 feet) in elevation (usually above 3,600 feet). Known only from San Bernardino and Riverside counties.	Blooms May through June (perennial herb)	**Not Expected:** Site is outside the known range of this species, which occurs in mountainous areas to the west. No carbonates or other suitable habitat areas on site.
Grusonia parishii **Parish's club-cholla**	US: – CA: 2B	Sandy or rocky areas in Mojavean desert scrub, Sonoran desert scrub, Joshua tree woodland at 300 to 1,524 meters (985 to 5,000 feet) in elevation. In California, known only from Riverside and San Bernardino counties. Also occurs in Arizona, Nevada, and possibly Texas.	Blooms May through June or July (perennial stem succulent)	**Not expected:** Site is outside the known range of this species. Nearest locations are 1932 collections from about 7 miles southeast of the site. Species not identified during May 2024 floristic survey; readily detected year-round.
Linanthus bernardinus **Pioneertown linanthus**	US: – CA: 1B	Joshua tree woodland and pinyon and juniper woodland at 1,120 to 1,345 meters (3,670 –4,410 feet). Known only from the Sawtooth Range in San Bernardino County.	Blooms March through May (annual herb)	**Not Expected:** Project site is outside the known range of this species (Sawtooth Mountains). Not identified during May 2024 floristic survey.
Linanthus maculatus ssp. *maculatus* (*Gilia maculata*) **Little San Bernardino Mountains linanthus**	US: – CA: 1B	Loose, well-aerated sand on wash-margin benches with few or no competing species and void of large shrubs or trees, in areas of desert dune, desert scrub, and Joshua tree woodland at 195 to 2,075 meters (600 to 6,800 feet) elevation. Loosely associated shrubs include creosote bush (Larrea tridentata), brittle bush (Encelia farinosa), burro bush (Ambrosia dumosa), cheesebush (Hymenoclea salsola) and desert catalpa (Chilopsis linearis). Not found in loose sands away from washes, nor in dense stands of weedy annuals. Known only from Riverside and San Bernardino Counties. Known only from edges of washes associated with the San Bernardino	Blooms March through May (annual herb)	**Not Expected:** No wash margin benches on site. Not identified during May 2024 floristic survey.

		Mountains (north and east sides), the Little San Bernardino Mountains, and the northern part of the Coachella Valley.		
Monardella robisonii **Robinson's monardella**	US: – CA: 1B	Rocky, granitic slopes often among boulders in pinyon-juniper woodland and Joshua tree woodland at 610 to 1,525 meters (2,000 to 5,000 feet) elevation. In California, known only from the immediate vicinity of the Little San Bernardino Mountains in Riverside and San Bernardino Counties.	Blooms in April through October (perennial herb)	**Not Expected:** No rocky, granitic slopes on site. Not identified during May 2024 floristic survey.
Penstemon clevelandii var. *mohavensis* **Mohave beardtongue**	US: – CA: 1B	Rocky, often granitic areas in Mojavean desert scrub and pinyon and juniper woodland at 925 to 1,620 meters (3035 to 5,315 feet) in elevation. Known only from Riverside and San Bernardino Counties, California.	Blooms March through May (perennial herb)	**Not expected:** No rocky areas on site. Not identified during May 2024 floristic survey.
Saltugilia latimeri **Latimer's woodland gilia**	US: – CA: 1B	Dry desert slopes of coarse sandy to rocky soils in chaparral and Mojavean desert scrub at 400 to 1,900 meters (1,300 to 6,200 feet) elevation.	Blooms March through June (annual herb)	**Not Expected:** No slopes with coarse sandy to rocky soils on site. Not identified during May 2024 floristic survey.
Yucca brevifolia **Western Joshua tree**	US: – CA: SCT/SCE	Various plant communities from Sonoran Desert scrub to yellow pine forest in desert and desert edge areas (up to about 6,600 feet elevation in California). In California, known from Kern, San Bernardino, Los Angeles, Riverside, Inyo, and Mono Counties. Also occurs in Nevada, Utah, and Arizona.	Blooms March through June (perennial evergreen tree)	**Present:** Project site contains 98 individual trees.
Insects				
Danaus plexippus plexippus pop. 1 **Monarch butterfly (California overwintering population)**	US: FPT CA: SA	Overwintering habitat is located in wind-protected tree groves (eucalyptus, Monterey pine, Monterey cypress) with nectar and water sources nearby. The majority of the overwintering habitat sites are located within 1.5 miles of the Pacific Ocean or San Francisco Bay. Sites are typically found at low elevations (200 to 300 feet) and situated on slopes oriented to the south, southwest or west, or in shallow canyons or gullies. The sites need to have dappled sunlight, high humidity, fresh water, and an absence of freezing temps or high winds. Monarchs breed only where milkweeds are found. They forage on a wide variety of flowers.	September through March at overwintering sites	**No wintering or breeding habitat present.** Monarch may move through the site during migration or occasionally forage on the site comparable to its use of desert and urban ornamental vegetation throughout the region.

Bombus crotchii **Crotch's bumble bee**	US: – CA: SCE	Inhabits open scrub (including chaparral) and grassland with high floral diversity from coastal California to the crest of Sierra-Cascade and in desert edge areas, south into Mexico. Suitable bumble bee habitat requires the continuous availability of sufficient flowers suitable for foraging to sustain the colony throughout its duration (spring through summer), as well as sites suitable for colony nesting and for overwintering of the new queens. Preferred foraging plants of this species include milkweeds (*Asclepias* spp.), phacelias (*Phacelia* spp.), sages (*Salvia* spp.), vetches (*Vicia* spp.), deerweed (*Acmispon glaber*), lupines (*Lupinus* spp.), and poppies (*Eschscholzia spp.*) (Robert Thorpe et al, 1983, *Bumble Bees and Cuckoo Bumble Bees of California*). Nests underground in abandoned rodent burrows but may also nest in other cavities such as rock piles, fallen logs, or thatched grasses (California Department of Fish and Wildlife, *Survey Considerations for California Endangered Species Act [CESA] Candidate Bumble Bee Species)*. Overwintering is poorly understood but likely includes sloping areas insulated with leaf litter under trees or large shrubs (*ibid*.).	Spring and summer	**Low.** This species occurs infrequently in the desert but habitat appears potentially suitable.
Paranomada californica **California cuckoo bee**	US: – CA: SA	Parasitic on other bees. Occurs within desert scrub, but habitat requirements are unknown. The California Natural Diversity Database (CNDDB) has only two occurrence records for this species: a 1971 record from near Pioneertown, San Bernardino County, and a 1944 record from the vicinity of Yucca Valley, San Bernardino County.	Spring and summer	**Not exptected.** There are no recent records of this species in the region and habitat on the site is unexceptional compared with the overall desert habitat in the region.
Reptiles				

Anniella stebbinsi **Southern California legless lizard**	US: – CA: SSC	Inhabits sandy or loose loamy soils with high moisture content under sparse vegetation. Found primarily in cismontane southern California from Santa Barbara County to northwestern Baja California, with a few outlying populations in the deserts of southern California.	Nearly year round, at least in southern areas	**Not expected.** No areas with moist, loose soil on site.
Crotalus ruber **Red diamond rattlesnake**	US: – CA: SSC	Desert scrub, thornscrub, open chaparral and woodland; occasional in grassland and cultivated areas. Prefers rocky areas and dense vegetation. Morongo Valley in San Bernardino and Riverside counties to the west and south into Baja California.	Primarily Mid-spring through mid-fall	**Not expected.** Site is outside the expected range of this species and lacks rocky habitat.
Gopherus agassizii **Desert tortoise**	US: FT CA: ST	Historically found throughout most of the Mojave and Sonoran Deserts into Arizona, Nevada, and Utah. Believed to have been extirpated from the western and southern portions of the Antelope Valley. Found in creosote bush scrub, saltbush scrub, thornscrub (in Mexico), and Joshua tree woodland. Found in the open desert as well as in oases, riverbanks, washes, dunes, and occasionally rocky slopes.	Spring, and again in early fall in areas of summer rains, with brief periods of activity at other times	**Low:** Suitable habitat is present within the project site. However, no suitable burrows or sign of this species occurred on site during the May 2024 field survey. Two CNDDB records occur approximately 2 miles southwest of the project site, west of SR-247.
Phrynosoma blainvillii (coronatum) **Coast horned lizard**	US: – CA: SSC	Primarily in sandy soil in open areas, especially washes and floodplains, in many plant communities. Requires open areas for sunning, bushes for cover, patches of loose soil for burial, and an abundant supply of ants or other insects. Occurs west of the deserts from northern Baja California north to Shasta County below 2,400 meters (8,000 feet) in elevation.	Primarily April through July with reduced activity August through October	**Low to Moderate:** This species was not observed during any of the site visits, but portions of the site may be suitable.
Uma scoparia **Mojave fringe-toed lizard**	US: – CA: SSC	Requires fine wind-blown sand, generally in relatively sparse creosote scrub on loose sand dunes with sand grains <0.5 mm. Not present where sand is too firm for sand swimming; and washes and desert flats are generally unsuitable. Patchily distributed in Mojave Desert areas of Los Angeles, Riverside, and San Bernardino counties. Also occurs in Arizona.	March to October (breeding April to July)	**Not expected:** Site lacks dunes or similar habitat.
Birds				
Athene cunicularia (burrow sites)	US: – CA: SSC/SCT/SCE	Open country in much of North and South America. Usually occupies ground squirrel burrows in open, dry grasslands, agricultural and range lands, railroad	Year-round	**Low:** Suitable habitat is present within the project site. Species is common in the area. However, during the time of

Burrowing owl		rights-of-way, and margins of highways, golf courses, and airports. Often utilizes man-made structures, such as earthen berms, cement culverts, cement, asphalt, rock, or wood debris piles. They avoid thick, tall vegetation, brush, and trees, but may occur in areas where brush or tree cover is less than 30 percent.		the May 2024 field survey the project site was highly vegetated with no suitable burrows or sign of this species. One CNDDB record occurs approximately 6.5 miles east of the project site.
Lanius ludovicianus (nesting) **Loggerhead shrike**	US: – CA: SSC (breeding)	Prefers open habitats with scattered small trees and with fences, utility lines, or other perches. Inhabits open country with short vegetation, pastures, old orchards, cemeteries, golf courses, riparian areas, and open woodlands. Highest density occurs in open-canopied valley foothill hardwood, valley foothill hardwood-conifer, valley foothill riparian, pinyon-juniper, juniper, desert riparian, and Joshua tree habitats. Occurs only rarely in heavily urbanized areas, but often found in open cropland. Found in open country in much of North America.	Year-round	**Present:** Adults and fledglings were observed adjacent to the project site during the May 2024 field survey.
Setophagia petechia (nesting) **Yellow warbler**	US: – CA: SSC (breeding)	Nests primarily in riparian woodland. More widespread in brushy habitats, woodland, and forest during migration and in winter. Nests across much of North America from Alaska and Northwest Territories to central Mexico. Winters primarily from Mexico to northern South America.	April through September, rare in winter.	**Not expected:** No riparian habitat on site.
Toxostoma bendirei **Bendire's thrasher**	US: BCC CA: SSC (breeding)	Inhabits Joshua tree woodland with scattered desert shrubs such as creosote bush and sweet bush. Also occurs in the eastern Mojave in areas with plentiful cholla (*Cylindropuntia* spp.) (Garret and Dunn 1981). Common summer resident in Joshua Tree National Monument (Remsen 1978).	April through September, rare in winter.	**Low:** Habitat (Joshua tree woodland) present with the project site may be suitable. Species not detected during May 2024 field survey. There are two CNDDB records of observations of this species in 1991 from approximately 12 miles north northwest of the project site.
Toxostoma lecontei	US: BCC CA: SSC	Inhabits sparsely vegetated desert flats, dunes, alluvial fans, or gently rolling hills having a high proportion of saltbush (Atriplex spp.) or cholla (Cylindropuntia spp.), often occurring along small washes or sand dunes. Prefers dense thorny shrubs (most often saltbush or cholla) for nesting. Uncommon and local resident in low desert scrub throughout most of the Mojave Desert, extending up	Year-round	**Low:** Suitable habitat (desert scrub) present with the project site may be suitable. Species not detected during May 2024 field survey. Two CNDDB records occur approximately 2 miles west and north of the project site.

		into the southwestern corner of the San Joaquin Valley. Breeding range in California extends from these areas into eastern Mojave, north into the Owens Valley and south into the lower Colorado Desert and eastern Mojave. Only the San Joaquin Valley population of this species is considered a BLM Sensitive species or California Species of Concern.		
Vireo bellii pusillus **Least Bell's vireo**	US: FE CA: SE	Riparian forests and willow thickets. The most critical structural component of Least Bell's Vireo habitat in California is a dense shrub layer 2 to 10 feet (0.6–3.0 meter) above ground. Willows usually dominant. Nests from central California to northern Baja California Sur. Winters primarily in Baja California Sur.	March through September	**Not expected:** No riparian habitat on site.
Mammals				
Lasiurus xanthinus **Western yellow bat**	US: – CA: SSC	Found mostly in desert and desert riparian areas of the southwest US, but also expanding its range with the increased usage of native and non-native ornamental palms in landscaping. Individuals typically roost amid dead fronds of palms but have also been documented roosting in cottonwood trees. Forage over many habitats.	Year-round; nocturnal	**Not expected**: No palms or other typical roosting habitat on site; may occasionally forage over site.
Ovis canadensis nelsoni (excluding peninsular Distinct Population Segment) **Desert bighorn sheep**	US: – CA: CFP (except rams when hunting is authorized) BLM: S	Occurs in open, rocky, steep areas with available water and herbaceous forage; widely distributed from the White Mountains in Mono County to the Chocolate Mountains in Imperial County.	Year-round	**Not expected**: No rocky, steep habitat areas on site.

Taxidea taxus **American badger**	US: – CA: SSC	Primary habitat requirements seem to be sufficient food and friable soils in relatively open uncultivated ground in grasslands, woodlands, and desert. Widely distributed in North America.	Year-round	**Not expected:** Marginally suitable (friable soils) habitat is present on site. However, no suitable burrows or sign for this species were detected during the May 2024 field survey. Site is small and not expected to provide enough food. One CNDDB record occurs approximately 7 miles west of the project site, west of SR-247.

ST State-listed as Threatened.
SR State-listed as Rare.
SCE Candidate for State-listing as Endangered.
SCT Candidate for State-listing as Threatened.
SC Candidate for State-listing as Threatened or Endangered.
SSC Species of Special Concern. Refers to animals with vulnerable or seriously declining populations.
CFP California Fully Protected. Refers to animals protected from take under Fish and Game Code sections 3511, 4700, 5050, and 5515.
SA Special Animal. Refers to any other animal monitored by the Natural Diversity Data Base, regardless of its legal or rarity status.
1A California Rare Plant Rank 1A – presumed extinct in California.
1B California Rare Plant Rank 1B – rare, threatened or endangered in California and elsewhere.
2B California Rare Plant Rank 2B – rare, threatened or endangered in California, but more common elsewhere.
3 California Rare Plant Rank 3 – a review list of plants about which more information is needed.
4 California Rare Plant Rank 4 – a watch list of plants of limited distribution.
MSHCP: Western Riverside County MSHCP Status
C Species is covered and adequately conserved under the MSHCP.
S Species is covered and adequately conserved under the MSHCP, but surveys are required within indicated habitats and/or survey areas.
P Species is covered and will be adequately conserved when MSHCP specified requirements are met.
CNDDB = California Natural Diversity Database

A census of Joshua trees was conducted on November 1, 2023, by LSA biologists Stan Spencer, Christina Van Oosten, and Eva Newby. The census survey resulted in a total of 98 Joshua trees present within the site and buffer area (Appendix E). A total of 35 vascular plant species were identified within the project site during the May 7, 2024, field survey. Appendix F can be referenced for the findings of the spring plant survey. See Appendix B for a complete list of plant species observed on site.

Wetlands and Other Jurisdictional Waters

The USACE, under Section 404 of the Federal Clean Water Act (CWA), regulates discharges of dredged or fill material into "waters of the United States." These waters include wetlands and non-wetland bodies of water that meet specific criteria, including a connection to interstate commerce. This connection may be direct (through a tributary system linking a stream channel with traditional navigable waters used in interstate or foreign commerce) or it may be indirect (through a connection identified in USACE regulations). The USACE typically regulates as non-wetland waters of the United States any body of water displaying an "ordinary high water mark." To be considered a "jurisdictional wetland" under Section 404, an area must possess hydrophytic vegetation, hydric soils, and wetland hydrology. The CDFW, under Sections 1600 et seq. of the California Fish and Game Code, regulates alterations to lakes, rivers, and streams. A stream is defined by the presence of a bed, channel, and banks and at least an occasional flow of water. The RWQCB is responsible for the administration of Section 401 of the CWA through water quality certification of any activity that may result in a discharge to jurisdictional waters of the United States. The RWQCB may also regulate discharges to "waters of the State," including wetlands, under the California Porter-Cologne Water Quality Control Act.

No drainage features, ponded areas, wetlands, or riparian habitat subject to jurisdiction by the CDFW, USACE, and/or RWQCB were found within the project site. Neither CWA Section 404 and 401 permits nor a CDFW Streambed Alteration Agreement is necessary. The findings represent the professional opinion of LSA and are subject to verification by the regulatory agencies.

Wildlife

The abundant Joshua trees and yucca within the project site are considered potential habitat for some native wildlife species, especially birds. There are many trees on the project site that could significantly contribute to nesting, and could be directly impacted by the proposed development. A total of 9 wildlife species were observed in (or foraging over) the project parcel during the May 2024 general field survey: California quail *(Callipepla californica),* mourning dove *(zenaida macroura),* turkey vulture *(Cathartes aura),* loggerhead shrike *(Lanius ludovicianus),* common raven *(Corvus corax),* house sparrow *(Passer domesticus),* house finch *(Haemorhous mexicanus),* San Diegan tiger whiptail *(Aspidoscelis tigris stejnegeri),* desert cottontail *(Sylvilagus audubonii).* Other common desert wildlife species of the region are also expected to occur on site. One special-status species, loggerhead shrike, was observed during the field survey.

Special-Status Species

This section discusses special-status species potentially occurring within the limits of the project site. Legal protection for special-status species varies widely, from the comprehensive protection

extended to listed threatened/endangered species to no legal status at present. The CDFW, USFWS, local agencies, and special-status groups such as CNPS publish watch lists of declining species.

The special-status species analysis in Table A includes species that are listed as threatened or endangered by the State or Federal government or fully protected by the State, candidates for State and/or ederal listing, and other species considered rare, threatened, or endangered by CDFW or CNPS, including animals designated by CDFW as California Species of Special Concern and other species that are unique to a region or listed as of concern by a local jurisdiction. Inclusion of species described in the special-status species analysis is based on the following criteria:

- Direct observation of the species or its sign on the project site or immediate vicinity during previous biological studies;
- Sighting by other qualified observers;
- Records reported by the CNDDB and published by the CDFW;
- Presence or location information for specific species provided by private groups (e.g., CNPS); and
- Project site lies within known distribution of a given species and contains appropriate habitat.

Table A summarizes special-status species known to occur in the region.

Threatened and Endangered Species

Under provisions of Section 7(a)(2) of the FESA, a Federal agency that permits, licenses, funds, or otherwise authorizes a project activity must consult with the USFWS to ensure that its actions would not jeopardize the continued existence of any listed threatened or endangered species or destroy or adversely modify critical habitat. The USFWS designates as threatened or endangered species that are at risk of extinction and may also adopt recovery plans that identify specific areas that are essential to the conservation of a listed species. Critical habitat areas that may require special management considerations or protections can also be designated.

The CESA is administered by the CDFW and prohibits the "take" of plant and animal species identified as either threatened, endangered, or candidates for listing in the State of California by the Fish and Game Commission (Fish and Game Code Sections 2050 to 2097). "Take" is defined as to hunt, pursue, catch, capture, or kill. Sections 2091 and 2081 of CESA allow the CDFW to authorize exceptions to the prohibition of "take" for purposes such as public and private development. The CDFW requires formal consultation to ensure that a proposed project's actions would not jeopardize the continued existence of any listed species or destroy or adversely affect listed species' habitats.

As identified in Table A, the following Federally/State-listed species or candidates for state listing have the potential to occur on the project site based on the literature review:

- Triple-ribbed milk-vetch (*Astragalus tricarinatus*): Federally listed as endangered, California Rare Plant Rank (CRPR) 1B;

- Parish's daisy (Erigeron parishii): Federally listed as threatened, CRPR 1B;
- Western Joshua tree: State candidate for listing as threatened or endangered;
- Monarch butterfly (*Danaus plexippus plexipus*, western population): Federally proposed for listing as threatened;
- Crotch's bumble bee (Bombus crotchii): State Candidate for listing as endangered;
- Desert tortoise (*Gopherus agassizii*, [DETO]): Federally and State-listed as threatened;
- Burrowing owl (*Athene cunicularia*, [BUOW]): State Candidate for listing as threatened or endangered, California Species of Special Concern (SSC);
- Least Bell's vireo (Vireo bellii pusillus): Federally and State-listed as endangered; and
- Desert bighorn sheep (*Ovis canadensis nelsonii*): State-listed as fully protected.

The project site may provide low quality habitat for desert tortoise, Crotch's bumble bee, or burrowing owl. Monarch butterfly may move through the site for migration or occasionally forage on the site, but the site does not have wintering or breeding habitat, and potential use for foraging would not be expected to exceed that of the overall desert or urban areas in the region; therefore, no substantial impacts to this species by the project are expected. Triple-ribbed milk-vetch, Parish's daisy, least Bell's vireo, and desert bighorn sheep are not expected based on lack of suitable habitat, while western Joshua tree is known to be present.

Non-Listed Special-Status Species

The other, non-listed, special-status plant species identified and discussed in Table A are not expected to occur on the project site based on habitat quality or geographic location, and none were observed during the floristic survey on May 7, 2024.

Three wildlife species, coast horned lizard (*Phrynosoma blainvillii*), Bendire's thrasher (*Toxostoma bendirei*) and Le Conte's thrasher (*Toxostoma lecontei*), have a low to moderate potential of occurring on site. One special-status bird species, loggerhead shrike, was observed during the field survey. None of the other non-listed special-status species are expected to occur on the site. The project site has suitable vegetation that could support nesting birds.

Natural Communities of Concern

Riparian habitats, oak woodlands, and vernal pools are among some of the natural communities of interest to the CDFW. In addition, CDFW maintains a list of natural communities occurring in the State and identifies those that are sensitive as having ranks of S1–S3.

The CDFW CNDDB database search did not list any communities of concern occurring within the project site or its immediate surroundings. The western Joshua tree census survey, conducted on November 1, 2023, noted the occurrence of disturbed Joshua tree woodland within the entirety of

the project site. Joshua tree woodland has a rank of S3, Vulnerable. The habitat within the project site contains a mostly non-native understory and is dominated by western Joshua tree. Refer to Appendix E Joshua Tree Report. This habitat will be directly impacted by project activities taking place within the site. No other natural communities of concern, including those that have a State rank of S1-S3, are present within the site.

IMPACT FINDINGS

VEGETATION AND HABITAT IMPACTS

The project would result in direct impacts to native habitats and/or sensitive natural communities in the form of Joshua tree woodland. This species is discussed below.

THREATENED AND ENDANGERED SPECIES

One State-listed species, western Joshua tree, was observed during the November 1, 2023, field survey. Two Federal and/or State-listed animal species have a low potential of occurrence on the project site.-No other listed plant or animal species were observed during the site surveys.

Western Joshua Tree

Direct impacts to western Joshua tree are expected with project implementation. Western Joshua tree is known to commonly occur within the general project vicinity. The Joshua tree census conducted on November 1, 2023, resulted in 98 individual trees within the project site and the buffer area. LSA recommends the following impact avoidance measure:

- **Joshua Tree Incidental Take Permit.** An incidental take permit (ITP) application under the Western Joshua Tree Conservation Act (WJTCA) shall be submitted to and approved by the California Department of Fish and Wildlife (CDFW) for any unavoidable impacts to western Joshua tree (*Yucca brevifolia*), prior to the onset of construction activities.

Desert Tortoise

The project site is within the range of DETO. Direct impacts to desert tortoise may occur with project implementation. No DETO, their sign, or suitable burrows were observed during the November 1, 2023 or May 7, 2024 site visits; however, focused surveys for this species were not conducted. LSA recommends the following impact avoidance measure:

- **Desert Tortoise Survey.** Prior to any vegetation or ground disturbance activities, surveys shall be conducted for the species according to the United States Fish and Wildlife's (USFWS) 2019 *Preparing for Any Action That May Occur Within the Range of the Mojave Desert Tortoise* (*Gopherus agassizii*) (USFWS 2019b). Should there be positive survey results, a Federal incidental take permit under Section 10 of FESA and State incidental take permit under Section 2081 of the Fish and Game Code would be required.

Crotch's Bumble Bee

The project site is within the range of Crotch's bumble bee, although this species occurs relatively infrequently in desert areas. Direct impacts to this may occur with project implementation. LSA recommends the following impact avoidance measure:

- **Crotch's Bumble Bee Survey:** To avoid impacts to Crotch's bumble bee, prior to vegetation removal or issuance of a grading permit, a qualified biologist shall conduct a focused Crotch's

bumble bee surveys to determine the presence or absence of Crotch's bumble bee within the proposed area of disturbance. The surveys shall consist of three separate visits spaced two to four weeks apart. The pre-construction survey shall be conducted between April 1 and June 15, early in the colony active period, prior to the issuance of the grading permit and within one year prior to the initiation of project activities (including removal of vegetation). The survey shall be conducted by a qualified biologist meeting the qualifications discussed in the California Department of Fish and Wildlife (CDFW) guidance (i.e., *Survey Considerations for California Endangered Species Act Candidate Bumble Bee Species*, dated June 6, 2023) with a memorandum of understanding for Crotch's bumble bee surveys. The survey shall consist of photographic surveys conducted in accordance with the CDFW guidance. The qualified biologist shall send all photographic vouchers to a CDFW-approved taxonomist to confirm the identifications of the bumble bees encountered during surveys. Survey results will be considered valid until the start of the next colony active period (April 1 of the following year). The results of the pre-construction survey shall be submitted to the City. Survey data shall also be submitted by the qualified biologist to the California Natural Diversity Database, as applicable, in accordance with the requirements of the biologist's memorandum of understanding and scientific collecting permit with CDFW. If pre-construction surveys identify Crotch's bumble bee individuals on-site, the qualified biologist or project proponant shall notify and consult with CDFW to determine whether project activities would result in impacts to Crotch's bumble bee, in which case, an Incidental Take Permit may be required. If an Incidental Take Permit is required, it shall be obtained prior to issuance of the grading permit.

Burrowing Owl

Direct impacts to BUOW may occur with project implementation. BUOW is known to commonly occur within the general project vicinity. No BUOW, their sign, or suitable burrows were observed during the November 1, 2023 or May 7, 2024 site visits; however, focused surveys for this species and potential burrows were not conducted. At the time of the May 2024 survey, the Joshua tree woodland had a highly vegetated understory that may deter BUOW. LSA recommends the following impact avoidance measure:

- **Pre-Construction Presence/Absence Survey:** A burrowing owl take avoidance survey shall be performed by a qualified biologist not more than 14 days prior to any site disturbance (grubbing, grading, and construction) in accordance with California Department of Fish and Wildlife (CDFW) guidelines (*Staff Report on Burrowing Owl Mitigation,* March 7, 2012). If an occupied burrow is found (as indicated by the observation of a burrowing owl or the presence of burrowing owl sign), a 250-foot buffer around the burrow will be staked and flagged and no construction activities will be allowed within the buffer area during the breeding season (February 1 through August 31). If the burrow is within the project disturbance area, CDFW will be consulted to coordinate relocation of the owl in accordance with accepted protocols. Work on the site will be stopped until CDFW issues an Incidental Take Permit, or other resolution is determined. Non-Listed Special-Status Species

One non-listed animal species, loggerhead shrike, was observed during the May 7, 2024, field survey and is considered present. Three non-listed animal species, Le Conte's thrasher, Bendire's thrasher, and coast horned lizard, have a low (for Bendire's and Le Conte's thrashers) or low to moderate (for

coast horned lizard) potential of occurring within the project site. Given that these species are not listed as threatened or endangered and are widespread, and that the project size is relatively small, the project would not result in substantial impacts to these species. No other non-listed plant or animal species were observed during the site surveys nor are they anticipated to be adversely affected by the project.

Nesting Birds

Nesting birds protected by the MBTA and California Fish and Game Code may occur on site (potentially including Bendire's thrasher, Le Conte's thrasher and loggerhead shrike) and may be directly affected without avoidance and minimization measures. With successful implementation of the measures described below, impacts to nesting birds would be avoided, and no additional avoidance or minimization measures are warranted. LSA recommends the following impact avoidance measure:

- **Pre-Construction Nesting Bird Survey.** To ensure compliance with California Fish and Game Code and the Migratory Bird Treaty Act (MBTA) and to avoid potential impacts to nesting birds, vegetation removal activities shall be conducted outside the general bird nesting season (January 15 through August 31). Any vegetation removal and/or construction activities that occur during the nesting season will require that all suitable habitats be thoroughly surveyed for the presence of nesting birds by a qualified biologist. Prior to commencement of clearing, a qualified biologist shall conduct a pre-construction survey within 3 days prior to ground-disturbing activities. Should nesting birds be found, an exclusionary buffer will be established by the qualified biologist. The buffer may be up to 500 feet in diameter, depending on the species of nesting bird found. This buffer will be clearly marked in the field by construction personnel under guidance of the qualified biologist, and construction or clearing will not be conducted within this zone until the qualified biologist determines that the young have fledged or the nest is no longer active. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biologist to minimize impacts. Nesting bird habitat within the project site will be resurveyed during bird breeding season if there is a lapse in construction activities longer than 7 days.

WILDLIFE MOVEMENT

Wildlife movement includes seasonal migration along corridors and daily movements for foraging. Migration corridors may include areas of unobstructed movement of deer, riparian corridors providing cover for migrating birds, routes between breeding waters and upland habitat for amphibians, and areas between roosting and feeding areas for birds.

The project site does not contain any essential connectivity areas, natural landscape blocks, natural areas small, or potential riparian connections, as documented in the California Essential Habitat Connectivity Project report (Spencer et al. 2010).

The project site is adjacent to existing commercial development and SR-247 that already restricts wildlife movement to the west and south in the project vicinity. The majority of wildlife movement within the project site is anticipated to be limited to wildlife present on site or within an adjacent

vacant lot to the east and north. The noise, vibration, light, dust, or human disturbance within construction areas would only temporarily deter wildlife from using areas in the immediate vicinity of construction activities. These indirect effects could temporarily alter migration behaviors, territories, or foraging habitats in select areas. However, because these are temporary effects, it is likely that wildlife already living and moving close to urban development would alter their normal functions for the duration of the project construction and then re-establish these functions once all temporary construction effects have been removed. Additionally, the proposed project's activities would not place any permanent barriers within any known wildlife movement corridors or interfere with habitat connectivity. Therefore, the proposed project would not substantially limit wildlife movement, and no mitigation is warranted.

OTHER STATE AND LOCAL POLICIES AND ORDINANCES PROTECTING BIOLOGICAL RESOURCES

Western Joshua Tree Conservation Act

The WJTCA is a law passed in California in July 2023 to set forth protections and guidelines for the western Joshua tree. The law prohibits the importation, export, take, possession, purchase, or sale of any western Joshua tree in California unless authorized by CDFW. The proposed project is in the standard fee area (not the reduced fee area), as these areas are defined in Fish and Game Code Section 1927.3 (d) and (e). The project must comply with the permitting requirements of the Western Joshua Tree Conservation Act and California Department of Fish and Wildlife guidelines. As noted above, an ITP application under the WJTCA is required prior to project implementation (see Mitigation Measure [MM] BIO-1). It should be noted that the CDFW has not entered into an agreement with any county or city to delegate limited authority to permit the taking of western Joshua tree. While the western Joshua tree is regulated under the Town of Yucca Valley Development Code Section 9.09.050, the WJTCA supersedes previous ordinances or policies put in place prior to its implementation.

California Desert Native Plants Act (CDNPA)

Division 23 of the California Food and Agriculture Code consists of the California Desert Native Plants Act (CDNPA). The CDNPA was developed to protect certain species of California desert native plants from unlawful harvesting on both public and private lands. This act protects all native cacti (family Cactaceae), Joshua tree and other yuccas (*Yucca* spp.), century plants (*Agave* spp.), nolinas (*Nolina* spp.), ocotillo (*Fouquieria splendens*), mesquites (*Prosopis* spp.), palos verdes (*Cercidium* spp.), elephant trees (*Bersura* sp.) crucifixion thorn (*Castela emoryi*), panamint dudleya (*Dudleya saxosa*), bristlecone pine (*Pinus longaeva*), California fan palm (*Washingtonia filifera*), catclaw (*Senegalia greggii*), desert-holly (*Atriplex hymemelytra*), smoke tree (*Dalea spinosa*), and desert ironwood (*Olneya tesota*). It should be noted that most of the species protected by CDNPA are not considered rare or special-status species. The CDNPA only applies within the boundaries of Imperial, Inyo, Kern, Los Angeles, Mono, Riverside, San Bernardino, and San Diego Counties. Within these counties, the CDNPA prohibits the harvest, transport, sale, or possession of these desert plants unless a person has a valid permit from the county sheriff or agricultural commissioner. Six species protected by the CDNPA were observed on the Project Site (see Appendix B): silver cholla (*Cylindropuntia echinocarpa*), diamond cholla (*Cylindropuntia ramosissima*), hedgehog cactus (*Echinocereus engelmannii*), catclaw (*Senegalia gregii*), western Joshua tree (*Yucca brevifolia*), and

Mojave yucca (*Yucca schidigera*). Western Joshua trees on the site were mapped as part of the Joshua tree census conducted for this project. The remaining five species will need to be surveyed on the Project Site as required for a permit under the CDNPA.

Town of Yucca Valley Development Code Section 9.09.050

Under the Town of Yucca Valley Ordinance, western Joshua tree, Mojave yucca, Parry's nolina (*Nolina parryi*), California juniper (*Juniperus californica*), Our Lord's candle (*Yucca whipplei*), and Pinon pine (*Pinus monophylla*) require a tree removal permit. Yucca Valley Development Code Section 9.09.050 requires mapping for any regulated native plant within 40 feet of ground disturbance within the project site. A photograph must be provided for each plant or plant cluster. The diameter of each plant or plant cluster and the approximate height of each plant or cluster should be included in the photo caption or in a separate table. A determination of general plant condition and whether the plant or cluster is likely to survive transplanting must also be provided.

Through project implementation, the project may conflict with local policies or policies related to biological resources for Mojave yucca and California juniper. With implementation of MM BIO-1, MM BIO-6, and MM BIO-7 the project would not conflict with other state and local policies or policies related to biological resources. The project is not subject to any other local policies or ordinances.

MITIGATION MEASURE SUMMARY

MM BIO-1 **Joshua Tree Incidental Take Permit.** An incidental take permit (ITP) application under the Western Joshua Tree Conservation Act (WJTCA) shall be submitted to and approved by the California Department of Fish and Wildlife (CDFW) for any unavoidable impacts to western Joshua tree (*Yucca brevifolia*), prior to its removal.

MM BIO-2 **Desert Tortoise Survey.** Prior to any vegetation or ground disturbance activities, surveys shall be conducted for the species according to the United States Fish and Wildlife's (USFWS) 2019 *Preparing for Any Action That May Occur Within the Range of the Mojave Desert Tortoise* (*Gopherus agassizii*) (USFWS 2019b). Should there be positive survey results, a Federal incidental take permit under Section 10 of the Federal Endangered Species Act (FESA) and State incidental take permit under Section 2081 of the Fish and Game Code would be required.

MM BIO-3 **Crotch's Bumble Bee Survey:** To avoid impacts to Crotch's bumble bee, prior to vegetation removal or issuance of a grading permit, a qualified biologist shall conduct a focused Crotch's bumble bee surveys to determine the presence or absence of Crotch's bumble bee within the proposed area of disturbance. The surveys shall consist of three separate visits spaced two to four weeks apart. The pre-construction survey shall be conducted between April 1 and June 15, early in the colony active period, prior to the issuance of the grading permit and within one year prior to the initiation of project activities (including removal of vegetation). The survey shall be conducted by a qualified biologist meeting the qualifications discussed in the California Department of Fish and Wildlife (CDFW) guidance (i.e., *Survey Considerations for California Endangered Species Act Candidate Bumble Bee*

Species, dated June 6, 2023) with a memorandum of understanding for Crotch's bumble bee surveys. The survey shall consist of photographic surveys conducted in accordance with the CDFW guidance. The qualified biologist shall send all photographic vouchers to a CDFW-approved taxonomist to confirm the identifications of the bumble bees encountered during surveys. Survey results will be considered valid until the start of the next colony active period (April 1 of the following year). The results of the pre-construction survey shall be submitted to the City. Survey data shall also be submitted by the qualified biologist to the California Natural Diversity Database, as applicable, in accordance with the requirements of the biologist's memorandum of understanding and scientific collecting permit with CDFW. If pre-construction surveys identify Crotch's bumble bee individuals on-site, the qualified biologist or project proponant shall notify and consult with CDFW to determine whether project activities would result in impacts to Crotch's bumble bee, in which case, an Incidental Take Permit may be required. If an Incidental Take Permit is required, it shall be obtained prior to issuance of the grading permit.

MM BIO-4 **Pre-Construction Burrowing Owl Survey.** A burrowing owl take avoidance survey shall be performed by a qualified biologist not more than 14 days prior to any site disturbance (grubbing, grading, and construction) in accordance with CDFW guidelines (*Staff Report on Burrowing Owl Mitigation*, March 7, 2012). If an occupied burrow is found (as indicated by the observation of a burrowing owl or the presence of burrowing owl sign), a 250-foot buffer around the burrow will be staked and flagged and no construction activities will be allowed within the buffer area during the breeding season (February 1 through August 31). If the burrow is within the project disturbance area, CDFW will be consulted to coordinate relocation of the owl in accordance with accepted protocols. Work on the site will be stopped until CDFW issues an Incidental Take Permit, or other resolution is determined. Determination of the appropriate method of relocation, such as eviction/ passive relocation or active relocation, shall be based on the specific site conditions (e.g., distance to nearest suitable habitat and presence of burrows within that habitat) in coordination with the CDFW. Active relocation and eviction/passive relocation require the preservation and maintenance of suitable burrowing owl habitat determined through coordination with the CDFW.

MM BIO-5 **Pre-Construction Nesting Bird Survey.** To ensure compliance with the California Fish and Game Code and the Migratory Bird Treaty Act (MBTA) and to avoid potential impacts to nesting birds, vegetation removal activities shall be conducted outside the general bird nesting season (January 15 through August 31). Any vegetation removal and/or construction activities that occur during the nesting season will require that all suitable habitats be thoroughly surveyed for the presence of nesting birds by a qualified biologist. Prior to commencement of clearing, a qualified biologist shall conduct a pre-construction survey within 3 days prior to ground-disturbing activities. Should nesting birds be found, an exclusionary buffer will be established by the qualified biologist. The buffer may be up to 500 feet in diameter, depending on the species of nesting bird found. This buffer will be clearly marked in

the field by construction personnel under guidance of the qualified biologist, and construction or clearing will not be conducted within this zone until the qualified biologist determines that the young have fledged or the nest is no longer active. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biologist to minimize impacts. Nesting bird habitat within the project site will be resurveyed during the bird breeding season if there is a lapse in construction activities longer than 7 days.

MM BIO-6 **Town of Yucca Valley Development Code Section 9.09.050**. A tree removal permit application under Development Code Section 9.09.050 shall be submitted to and approved by the Town of Yucca Valley for any unavoidable impacts to Mojave yucca and California juniper.

MM BIO-7 **California Desert Native Plants Act**. The Applicant shall obtain a permit from the San Bernardino County Agricultural Commissioner before disturbing or removing any CDNPA-protected plants from the Project Site.

APPENDIX B

VASCULAR PLANT SPECIES OBSERVED

The following vascular plant species were observed within the project site by LSA biologists on May 7, 2024.

* Introduced species not native to California

CONIFERS	
Cupressaceace	**Cypress family**
Juniperus californica	California juniper
GNETOPHYTES	
Ephedraceae	**Ephedra family**
Ephedra nevadensis	Nevada jointfir
EUDICOT FLOWERING PLANTS	
Asteraceae	**Sunflower family**
Acamptopappus sphaerocephalus	Rayless goldenhead
Adenophyllum cooperi	Adenophyllum
Ambrosia dumosa	White bur-sage
Ambrosia salsola	Burrobrush
Baileya multiradiata	Desert marigold
Ericameria cooperi	Cooper's goldenbush
Stephanomeria exigua	Small wreath-plant
Boraginaceae	**Borage family**
Amsinckia tessellata	Bristly fiddleneck
Brassicaceae	**Mustard family**
*Brassica tournefortii**	Sahara mustard
*Hirschfeldia incana**	Shortpod mustard
*Sisymbrium altissimum**	Tall tumblemustard
*Sisymbrium irio**	London rocket
Cactaceae	**Cactus family**
Cylindropuntia echinocarpa	Silver cholla
Cylindropuntia ramosissima	Diamond cholla
Echinocereus engelmannii	Hedgehog cactus
Chenopodiaceae	**Saltbush family**
Atriplex canescens	Fourwing saltbush
Euphorbiaceae	**Spurge family**
Euphorbia albomarginata	Rattlesnake weed

Fabaceae	**Pea family**
Senegalia greggii	Catclaw
Senna armata	Spiny senna
Geraniaceae	**Geranium family**
*Erodium cicutarium**	Redstem stork's bill
Lamiaceae	**Mint family**
Salvia columbariae	Chia
Scutellaria mexicana	Bladder sage
Malvaceae	**Mallow family**
Sphaeralcea ambigua	Desert mallow
Nyctaginaceae	**Four-o'clock family**
Mirabilis laevis	Wishbone bush
Polygonaceae	**Buckwheat family**
Eriogonum fasciculatum	California buckwheat
Eriogonum maculatum	Buckwheat
Solanaceae	**Nightshade family**
Lycium andersonii	Water jacket
Lycium cooperi	Peach thorn
Zygophyllaceace	**Caltrop family**
Larrea tridentata	Creosote bush
MONOCOTS FLOWERING PLANTS	
Agavaceae	**Agave family**
Yucca brevifolia	Western Joshua tree
Yucca schidigera	Mojave yucca
Poaceae	**Grass family**
*Bromus rubens**	Red brome
Schismus sp.*	Mediterranean grass

Taxonomy and scientific nomenclature generally conform to Baldwin, B.G., D.H. Goldman et al., eds. (2012; *The Jepson Manual: Vascular Plants of California,* 2nd edition; University of California Press, Berkeley and Los Angeles, California).

Common names for each taxa generally conform to Roberts, F.M., Jr. (2008; *The Vascular Plants of Orange County, California: An Annotated Checklist*; F.M. Roberts Publications, San Luis Rey, California) except where Abrams, L. (1923, 1944, and 1951; *Illustrated Flora of the Pacific States: Washington, Oregon, and California*, vols. I–III; Stanford University Press, Stanford, California) and Abrams, L. and Ferris, R.S. (1960; *Illustrated Flora of the Pacific States: Washington, Oregon, and California*, vol. IV; Stanford University Press, Stanford, California) were used, particularly when species-specific common names were not identified in Roberts, F.M., Jr. (2008).

APPENDIX C

ANIMAL SPECIES DETECTED

This is a list of the bony fishes, amphibians, reptiles, birds, and mammals noted in the study area by LSA biologists. Presence may be noted if a species is seen or heard, or identified by the presence of tracks, scat, or other signs. Please note that most species are listed in phylogenetic order of relation.

* Species not native to the project site

BIRDS	
Odontophoridae	**New World Quail**
Callipepla californica	California quail
Columbidae	**Pigeons and Doves**
Zenaida macroura	mourning dove
Cathartidae	**American Vultures**
Cathartes aura	turkey vulture
Laniidae	**Shrikes**
Lanius ludovicianus	loggerhead shrike
Corvidae	**Crows and Ravens**
Corvus corax	common raven
Passeridae	**Old World Sparrows**
*Passer domesticus**	house sparrow
Fringillidae	**Finches**
Haemorhous mexicanus	house finch
REPTILES	
Teiidae	**Whiptails**
Aspidoscelis	San Diego tiger whiptail
MAMMALS	
Leporidae	**Rabbits and Hares**
Sylvilagus audubonii	desert cottontail

Subject: Western Joshua Tree Census for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California (LSA Project No. 20252490)

Dear Mr. Patneaude:

This letter report documents the results of a census of western Joshua trees (*Yucca brevifolia var. brevifolia*) conducted at the request of DRP Enterprises, LLC, for the Sun Mesa (Billings) Mini Storage project (project) on Assessor's Parcel Numbers 0597-111-67-0000. The 4.34-acre site is on the southwest corner of Newton Lane and Sun Mesa Road, north of Buena Vista Drive in Yucca Valley, San Bernardino County, California. Figure 1 (all figures provided in Attachment A) provides project location.

The Joshua tree census survey was conducted to comply with the permitting requirements of the Western Joshua Tree Conservation Act and California Department of Fish and Wildlife guidelines. This project is in the reduced fee area, as described in Fish and Game Code section 1927.3.

METHODS

The Western Joshua tree census was conducted on November 1, 2023, from 6:30 a.m. to 3:15 p.m. by LSA arborist Stan Spencer, senior biologist Christina Van Oosten and assistant biologist Eva Newby. Weather conditions during the census were clear, with winds of 0-2 miles per hour (mph) and temperatures from 66-78 Degrees Fahrenheit (°F).

The study area for the census includes the 4.34-acre project site plus a 15-meter (49-foot) buffer area around the site (Figure 2). They surveyed the study area on foot by walking 30-foot transects. The transect spacing provided for complete visual coverage of Joshua trees of all size classes on the site. As access was not provided to the buffer area, Joshua trees were surveyed from the edge of the project site (Assessor's Parcel Numbers 0597-111-67-0000). Each living or dead Joshua tree in the study area was assigned a unique identification number, tagged, photographed, and mapped using Global Positioning System (GPS) technology (datum WGS 84). Each Joshua tree stem or trunk arising from the ground was considered an individual tree. For each Joshua tree, the arborist recorded size class, maturity, and flowering/fruiting status. The collected information for each Joshua tree is provided in Table A (Attachment B). Figure 2 shows Joshua tree locations. Photographs of the Joshua trees are provided in Figure 3.

STAFF BACKGROUND

Dr. Spencer has a Ph.D. in botany from Claremont Graduate University (1997) and is an International Society of Arboriculture Certified Arborist (WE-9358A). He has conducted arborist studies throughout Southern California since 2003, including Joshua tree inventories in Los Angeles and San

Bernardino counties as well as Joshua tree relocation monitoring. Dr. Spencer is knowledgeable of Joshua tree ecology and identification and experienced in inventorying and assessing Joshua trees for general health and suitability for transplanting. Dr. Spencer can be contacted at 951-232-4124 or stan.spencer@lsa.net. Ms. Van Oosten has a B.S. in Zoology from California State Polytechnic University, Pomona (2008) and is a desert ecologist with more than 10 years' experience in the Southwest. She is knowledgeable of Joshua tree ecology and identification and experienced in inventorying and assessing Joshua trees for general health. Ms. Van Oosten is under the tutelage of Dr. Spencer to become an arborist herself and has conducted Joshua tree inventories in Kern and San Bernardino counties.

RESULTS

As shown in Table A, Joshua Tree Census Data, 98 Joshua trees were found in the study area: 87 on the project site and 11 in the buffer area. Fifty-eight of the 87 within the project site are alive, with 4 greater than 5 meters (16.4 feet), 27 are between 1 meter (3.8 feet) to less than 5 meters (16.4 feet), and the remaining 27 are less than 1 meter (3.8 feet) in height.

The 11 Joshua trees in the buffer area are spread through the eastern side of the project. Eight of the 11 are alive, with 1 greater than 5 meters (16.4 feet), 5 are between 1 meter (3.8 feet) to less than 5 meters (16.4 feet), and 2 are less than 1 meter (3.8 feet) in height. No Joshua tree seedlings were found in the study area or the buffer. No flowering or fruiting was observed for the current year.

If you have any questions about this Joshua tree census, please contact me at (626) 215-0329 or christina.vanoosten@lsa.net.

Sincerely,

LSA Associates, Inc.

Christina Van Oosten
Senior Biologist

Subject: Plant Survey for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California (LSA Project No. 20252490)

Dear Mr. Patneaude:

This letter report documents the findings of a spring plant survey conducted at the request of DRP Enterprises, LLC, for the Sun Mesa (Billings) Mini Storage Project (project) on Assessor's Parcel Number 0597-111-67-0000. The 4.34-acre site is on the southwest corner of Newton Lane and Sun Mesa Road, north of Buena Vista Drive in Yucca Valley, San Bernardino County, California. The elevation of the project site ranges from approximately 3,710 to 3,726 ft above mean sea level (amsl). Figure 1 (provided in Attachment B) shows the project location.

The survey was conducted to document the presence of any special-status species detectable during the time of the survey. Yucca Valley's annual rainfall varies significantly year-to-year but generally receives around 3-6 inches of rain annually. The rainy season occurs from approximately late November to late March. The 2023-2024 season rainfall to date at the time of the survey, based on records at the Yucca Valley Airport, was 7.9 inches.[1] A survey had previously been conducted for Western Joshua tree (*Yucca brevifolia*), a State candidate species.

METHODS

The plant survey was conducted by LSA botanist Stan Spencer, PhD, and LSA biologists Christina Van Oosten and Julia Lung on May 7, 2024, from 9:45 and 11:50 a.m., for a total of 6 person hours of survey effort. The survey was conducted in a manner consistent with California Native Plant Society (CNPS) 2001 guidelines.[2] The entire project site and adjacent right-of-way areas were surveyed by systematically walking along 15-meter (50-foot) wide, parallel line transects. Adjacent habitat in private properties to the south and east of the project site were visually surveyed from the property boundary, as no access was provided to those properties. The survey was floristic in nature, and all species observed on the site, including annual species that were past flower or dessicated, were identified to the degree required to determine rarity status.

[2] California Native Plant Society. *CNPS Botanical Survey Guidelines*. June 2, 2001.

RESULTS AND DISCUSSION

No special-status plant species were observed during the survey except Western Joshua tree. A list of plant species observed in the study area is provided in Table A (Attachment A).

Please contact me at (951) 690-6309 or Christina Van Oosten at (626) 215-0329 if you have any questions regarding the results of this study.

Sincerely,

LSA Associates, Inc.

Stan Spencer
Associate/Botanist

Subject: Western Joshua Tree Census for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California (LSA Project No. 20252490)

Dear Mr. Patneaude:

This letter report documents the results of a census of western Joshua trees (*Yucca brevifolia var. brevifolia*) conducted at the request of DRP Enterprises, LLC, for the Sun Mesa (Billings) Mini Storage project (project) on Assessor's Parcel Numbers 0597-111-67-0000. The 4.34-acre site is on the southwest corner of Newton Lane and Sun Mesa Road, north of Buena Vista Drive in Yucca Valley, San Bernardino County, California. Figure 1 (all figures provided in Attachment A) provides project location.

The Joshua tree census survey was conducted to comply with the permitting requirements of the Western Joshua Tree Conservation Act and California Department of Fish and Wildlife guidelines. This project is in the reduced fee area, as described in Fish and Game Code section 1927.3.

METHODS

The Western Joshua tree census was conducted on November 1, 2023, from 6:30 a.m. to 3:15 p.m. by LSA arborist Stan Spencer, senior biologist Christina Van Oosten and assistant biologist Eva Newby. Weather conditions during the census were clear, with winds of 0-2 miles per hour (mph) and temperatures from 66-78 Degrees Fahrenheit (°F).

The study area for the census includes the 4.34-acre project site plus a 15-meter (49-foot) buffer area around the site (Figure 2). They surveyed the study area on foot by walking 30-foot transects. The transect spacing provided for complete visual coverage of Joshua trees of all size classes on the site. As access was not provided to the buffer area, Joshua trees were surveyed from the edge of the project site (Assessor's Parcel Numbers 0597-111-67-0000). Each living or dead Joshua tree in the study area was assigned a unique identification number, tagged, photographed, and mapped using Global Positioning System (GPS) technology (datum WGS 84). Each Joshua tree stem or trunk arising from the ground was considered an individual tree. For each Joshua tree, the arborist recorded size class, maturity, and flowering/fruiting status. The collected information for each Joshua tree is provided in Table A (Attachment B). Figure 2 shows Joshua tree locations. Photographs of the Joshua trees are provided in Figure 3.

STAFF BACKGROUND

Dr. Spencer has a Ph.D. in botany from Claremont Graduate University (1997) and is an International Society of Arboriculture Certified Arborist (WE-9358A). He has conducted arborist studies throughout Southern California since 2003, including Joshua tree inventories in Los Angeles and San

Bernardino counties as well as Joshua tree relocation monitoring. Dr. Spencer is knowledgeable of Joshua tree ecology and identification and experienced in inventorying and assessing Joshua trees for general health and suitability for transplanting. Dr. Spencer can be contacted at 951-232-4124 or stan.spencer@lsa.net. Ms. Van Oosten has a B.S. in Zoology from California State Polytechnic University, Pomona (2008) and is a desert ecologist with more than 10 years' experience in the Southwest. She is knowledgeable of Joshua tree ecology and identification and experienced in inventorying and assessing Joshua trees for general health. Ms. Van Oosten is under the tutelage of Dr. Spencer to become an arborist herself and has conducted Joshua tree inventories in Kern and San Bernardino counties.

RESULTS

As shown in Table A, Joshua Tree Census Data, 98 Joshua trees were found in the study area: 87 on the project site and 11 in the buffer area. Fifty-eight of the 87 within the project site are alive, with 4 greater than 5 meters (16.4 feet), 27 are between 1 meter (3.8 feet) to less than 5 meters (16.4 feet), and the remaining 27 are less than 1 meter (3.8 feet) in height.

The 11 Joshua trees in the buffer area are spread through the eastern side of the project. Eight of the 11 are alive, with 1 greater than 5 meters (16.4 feet), 5 are between 1 meter (3.8 feet) to less than 5 meters (16.4 feet), and 2 are less than 1 meter (3.8 feet) in height. No Joshua tree seedlings were found in the study area or the buffer. No flowering or fruiting was observed for the current year.

If you have any questions about this Joshua tree census, please contact me at (626) 215-0329 or christina.vanoosten@lsa.net.

Sincerely,

LSA Associates, Inc.

Christina Van Oosten
Senior Biologist

Subject: Plant Survey for the Sun Mesa (Billings) Mini Storage Project in Yucca Valley, San Bernardino County, California (LSA Project No. 20252490)

Dear Mr. Patneaude:

This letter report documents the findings of a spring plant survey conducted at the request of DRP Enterprises, LLC, for the Sun Mesa (Billings) Mini Storage Project (project) on Assessor's Parcel Number 0597-111-67-0000. The 4.34-acre site is on the southwest corner of Newton Lane and Sun Mesa Road, north of Buena Vista Drive in Yucca Valley, San Bernardino County, California. The elevation of the project site ranges from approximately 3,710 to 3,726 ft above mean sea level (amsl). Figure 1 (provided in Attachment B) shows the project location.

The survey was conducted to document the presence of any special-status species detectable during the time of the survey. Yucca Valley's annual rainfall varies significantly year-to-year but generally receives around 3-6 inches of rain annually. The rainy season occurs from approximately late November to late March. The 2023-2024 season rainfall to date at the time of the survey, based on records at the Yucca Valley Airport, was 7.9 inches.[1] A survey had previously been conducted for Western Joshua tree (*Yucca brevifolia*), a State candidate species.

METHODS

The plant survey was conducted by LSA botanist Stan Spencer, PhD, and LSA biologists Christina Van Oosten and Julia Lung on May 7, 2024, from 9:45 and 11:50 a.m., for a total of 6 person hours of survey effort. The survey was conducted in a manner consistent with California Native Plant Society (CNPS) 2001 guidelines.[2] The entire project site and adjacent right-of-way areas were surveyed by systematically walking along 15-meter (50-foot) wide, parallel line transects. Adjacent habitat in private properties to the south and east of the project site were visually surveyed from the property boundary, as no access was provided to those properties. The survey was floristic in nature, and all species observed on the site, including annual species that were past flower or dessicated, were identified to the degree required to determine rarity status.

[2] California Native Plant Society. *CNPS Botanical Survey Guidelines*. June 2, 2001.

RESULTS AND DISCUSSION

No special-status plant species were observed during the survey except Western Joshua tree. A list of plant species observed in the study area is provided in Table A (Attachment A).

Please contact me at (951) 690-6309 or Christina Van Oosten at (626) 215-0329 if you have any questions regarding the results of this study.

Sincerely,

LSA Associates, Inc.

Stan Spencer
Associate/Botanist

MANAGEMENT SUMMARY

LSA conducted a cultural resources assessment for the Sun Valley Mini Storage Project located in the Town of Yucca Valley, San Bernardino County, California. The assessment included a records search, archival research, field surveys, and this report. The subject property is approximately 5 acres. As the Lead Agency for the project, the Town of Yucca Valley (Town) required this study as part of the environmental review process to comply with the California Environmental Quality Act (CEQA).

The purpose of the study is to provide the County with the necessary information and analysis to determine, as mandated by CEQA, whether the proposed project would cause substantial adverse changes to any historical/archaeological resources that may exist in or around the project area. In order to identify and evaluate such resources, LSA conducted a historical/archaeological resources records search, pursued historical background research, and carried out pedestrian field surveys.

Through the various avenues of research, this study did not identify cultural resources within or adjacent to the project area. However, a prehistoric resource was documented less than 0.33 mile away, and approximately half of the project area surface was not visible. Therefore, the project parcel retains some potential for in situ subsurface cultural resources, and archaeological monitoring may be considered.

If buried cultural materials are encountered during earthmoving operations associated with the project, all work in that area should be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds.

In the event human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be Native American, the County Coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD will have the opportunity to offer recommendations for the disposition of the remains.

B: RECORDS SEARCH BIBLIOGRAPHY

INTRODUCTION

At the request of Mr. Daniel R. Patneaude, LSA performed a cultural resources study on 4.34 acres of land in the Town of Yucca Valley, San Bernardino County, California (see Figure 1). The subject property of the study, Assessor's Parcel Number (APN) 0597-111-67, is located at 4815 Newton Lane in Township 1 North, Range 5 East, Section 13, San Bernardino Baseline and Meridian, as depicted on the United States Geological Survey (USGS) *Yucca Valley North, California* 7.5-minute topographic quadrangle map. The study is part of the environmental review process for residential development. The County of San Bernardino (County), as Lead Agency for the project, required the study in compliance with the California Environmental Quality Act (CEQA) (Public Resources Code [PRC] § 21000, et seq.).

LSA performed the present study to provide the County with the necessary information and analysis to determine, as mandated by CEQA, whether the proposed project would cause substantial adverse changes to any historical/archaeological resources that may exist in or around the project area. In order to identify and evaluate such resources, LSA conducted a historical/archaeological resources records search, pursued historical background research, and carried out pedestrian field surveys. This report is a complete account of the methods, results, and final conclusion of the study.

PROJECT LOCATION

The proposed Sun Mesa (Billings) Mini Storage development project site is located on Assessor's Parcel Number 0597-11-067, which is east of State Route 247 (SR-247) and north of Buena Vista Drive in the Town of Yucca Valley in San Bernardino County, California. The 4.34-acre project site is currently undeveloped. Access to the project site is provided by Buena Vista Drive, Sun Mesa Drive, and Newton Lane. Figure 1 (all figures provided in Attachment B) shows the project location.

PROJECT DESCRIPTION

The proposed project would involve the development of a 19-building, 89,700 total square foot (sf) mini storage facility. The site would be bounded by a maximum 10-foot (ft) high security fence and would consist of 18 storage buildings ranging from 4,800 to 7,500 sf in size evenly distributed around the site and one 400 sf manager's unit building. Two gated access driveways would be located along Newton Lane on the west side of the site. The manager's unit would be located at the northern entry gate. Additionally, outdoor parking stalls would be located on the north and east sides of the proposed manager's unit building. These parking areas would accommodate approximately 10 vehicles. A 5,911 sf retention basin would be located on the southwest corner of the project site. The proposed project would include associated site improvements including new internal roadways and utility improvements. Hours of operation of the proposed project would be between the hours of 6:00 a.m. and 10:00 p.m. 7 days per week.

The maximum depth of excavation for construction would be approximately 7 ft below the ground surface. Connections to utilities may require additional excavation up to 15 ft below the ground surface at limited locations on site. Construction is anticipated to begin later than the fall of 2024 and is anticipated to be completed within 12 months.

SETTING

CURRENT NATURAL SETTING

Climate and Watershed

The project region is characterized by an arid climate, with dry, hot summers and moderate winters. Rainfall averages from 4.57 inches annually. Precipitation usually occurs in the form of winter rain, with warm monsoonal showers in summer. The project area is bracketed by two ephemeral drainages, which drain to the east.

Flora and Fauna

At an elevation of approximately 3,720 feet, the project is just within the Upper Sonoran Life Zone of California (Schoenherr 1992), which ranges from below sea level to 3,500 to 7,000 feet. Creosote, cholla, Joshua tree, and other native species were noted on the property. Extensive fauna are known locally, including many endemic species of reptiles, birds, and insects.

Geology

The project is located in the Mojave Desert Geomorphic Province, which forms an elevated alluvial plain with large expanses of desert punctuated by isolated mountain ranges (California Geological Survey 2002; Norris and Webb 1976). This province is located on a wedge-shaped fault block bounded by the San Andreas Fault Zone and Transverse Ranges to the southwest and the Garlock Fault Zone and Tehachapi Mountains to the north (California Geological Survey 2002; Norris and Webb 1976). Because the province extends into Nevada, the state line forms the eastern boundary for California (California Geological Survey 2002; Norris and Webb 1976). Precambrian through Mesozoic igneous, metamorphic, and sedimentary rocks comprise the basement and many of the mountains ranges throughout the province, while Cenozoic sedimentary and igneous rocks fill the basins, line the flanks of the mountain ranges, and form subordinate features (Norris and Webb 1976; Sharp 1976). The province has an enclosed drainage with many playas, or dry lakes, that currently only fill with water for a short period of time during storm events (California Geological Survey 2002; Sharp 1976). During the Pleistocene, however, these dry lakes may have been filled with water year-round (Norris and Webb 1976).

CULTURAL SETTING

Prehistory

Chronologies of prehistoric cultural change in Southern California area have been attempted numerous times, and several are reviewed in Moratto (2004). No single description is universally accepted as the various chronologies are based primarily on material developments identified by researchers familiar with sites in a particular region and variation exists essentially due to the differences in those items found at the sites. Small differences occur over time and space, which combine to form patterns that are variously interpreted.

Currently, two primary regional culture chronology syntheses are commonly referenced in the archaeological literature. The first chronology, developed by Wallace in 1955, describes four cultural

horizons or time periods: Horizon I – Early Man (9000–6000 BC), Horizon II – Milling Stone Assemblages (6000–3000 BC), Horizon III – Intermediate Cultures (3000 BC–AD 500), and Horizon IV – Late Prehistoric Cultures (AD 500–historic contact). This chronology was refined by Wallace in 1978 using absolute chronological dates obtained after 1955.

The second cultural chronology, developed by Warren in 1968, is based broadly on Southern California prehistoric cultures and was also later revised (Warren 1984; Warren and Crabtree 1986). Warren's revised chronology includes five periods in prehistory: Lake Mojave (7000–5000 BC), Pinto (5000–2000 BC), Gypsum (2000 BC–AD 500), Saratoga Springs (AD 500–1200), and Protohistoric (AD 1200–historic contact). Changes in settlement pattern and subsistence focus are viewed as cultural adaptations to a changing environment. These environmental changes began with gradual warming in the late Pleistocene, continued with the desiccation of the desert lakes followed by a brief return to pluvial conditions, and concluded with a general warming and drying trend, with periodic reversals that continue to the present (Warren and Crabtree 1986).

Ethnography

The project area is within the traditional cultural territory of the Serrano (Bean and Smith 1978). Like other Native American groups in Southern California, the Serrano were seminomadic hunter-gatherers who subsisted by exploitation of seasonably available plant and animal resources. They were first encountered by the Spanish missionaries in the late 18th century. The first written accounts of the Serrano are attributed to the mission fathers; later documentation was by Benedict (1924), Kroeber (1925), Strong (1929), and others.

Ethnohistorically, the Serrano Indians occupied portions of the central and western Mojave Desert, including the length of the Mojave River and much of present-day San Bernardino County and northeastern Los Angeles County (Sutton and Earle 2017). The term Serrano is Spanish for "mountaineer, highlander" (Bean and Smith 1978) and is derived from sierra, meaning "mountain range" (Bean and Smith 1978). This term was given to people who inhabited the areas of the San Bernardino Mountains that had no associated mission. The Serrano culture group actually incorporates distinct cultures of people that have similar linguistic patterns. These people are the Desert Serrano and the Mountain Serrano (Sutton and Earle 2017).

The Serrano were hunter-gatherers who relied on the women to do much of the collecting while the men captured various animals. The primary flora that they exploited depended on the exact area they inhabited but, generally speaking, they collected acorns, pinion nuts, honey, mesquite, yucca, and cactus fruits, in addition to various seeds, bulbs, and roots. The men hunted hare, rabbits, and rodents as the basis of their animal protein along with pronghorn, desert bighorn, and deer (Sutton and Earle 2017).

The most common hunting implements were the bow and arrow, throwing stick, traps, snares, and deadfalls. The bow and arrow were used for hunting large game, while the other items were used for smaller game and birds (Bean and Smith 1978). Meat was prepared in earth ovens, by boiling in watertight baskets, or by parching. Plants were consumed both raw and cooked. Food processing involved the use of manos, metates, mortars, and pestles. Flint knives, stone and bone scrapers,

ceramic trays and bowls, baskets, and horn and bone spoons and stirrers were also used (Bean and Smith 1978).

Most Serrano lived in small villages near water, primarily the Mojave River (Sutton and Earle 2017), and also perennial seeps, streams, and small lakes. The availability of water largely determined the nature, duration, and distribution of Serrano settlements (Benedict 1924 in Bean and Smith 1978). Family dwellings were circular, domed, willow-frame structures covered with tule thatching (Bean and Smith 1978). Dwellings contained a central fire pit and were used primarily for sleeping and storage.

The Late Prehistoric natives of the Serrano area practiced cremation of the dead. Most of a deceased individual's personal possessions were burned with the body. One month after death, other possessions were burned. A seven-day mourning ceremony was held annually. At this time, gifts and shell money were distributed (Strong 1929 in Bean and Smith 1978).

With the Spanish intrusion came a drastic change in lifestyle for the natives of Southern California. Incorporation of the indigenous populations into the mission system led to the disruption of native cultures and changes in subsistence and land use practices. Mission San Gabriel, established in 1771, probably had a limited effect on the Serrano population until the asistencia was established near Redlands, perhaps as early as 1819 (Harley 1988). Cattle ranches/farms were established on or near Indian villages, primarily in the major drainages conducive to horticulture and animal husbandry. Within a short time, the missions controlled many ranchos where Indians lived and worked.

After 1820, most of the Serrano in the San Bernardino Valley were moved to Mission San Gabriel. Land near ancestral villages was cleared for farming and water was diverted for irrigation and stock. The mission's expansion drastically affected native plants and animals, and human populations were decimated by European introduced diseases, conflicts, and forced labor. Further declines in local population occurred as the Native Americans retreated to isolated sanctuaries in the mountains (Bean and Smith 1978).

History

In California, the historic era is generally divided into three periods: the Spanish Period (1769–1821), the Mexican Period (1821–1848), and the American Period (1848–present). As there were no resources within the project area, the historic context will focus on the County and local community during the American Period.

San Bernardino County was created from parts of Los Angeles and San Diego Counties in 1853. In 1854, the City of San Bernardino was incorporated as the County Seat. Produce ultimately assumed prominence as the County's economic base, with tens of thousands of acres under cultivation by the beginning of World War I (McGroarty 1914).

Yucca Valley

The remote region of the Mojave Desert that includes the area that would become the community of Yucca Valley was initially explored for watering holes and transportation routes by individuals such as Paulino Weaver, who pioneered a route for cattle in the early 1850s. The "Morongo Pass

and Route" ran through Morongo and Yucca Valleys to the Oasis of Mara (Twentynine Palms) and ultimately to the Colorado River. State Route 62 follows much of this original route (Warren and Roske 1981). Cattle were driven from Arizona and New Mexico into Yucca Valley for spring pasturage for a few years during the 1870s (Brock and Elliot 1987). By the early 1910s, the first local homesteads were established on 160-acre tracts under the provisions of the Homestead Act of 1862 (O'Neal 1980; Garrett 1992). Homesteading continued in the area, primarily for the purposes of cattle ranching, until the end of the Depression era (Wilson and Grubb 1984).

From the early 1920s, the community that would become Yucca Valley was initially known as Lone Star, for Walter Harrell's Lone Star Ranch that introduced the first gas pump to the Valley (Wilson and Grubb 1984, Hernandez 2005). By the end of World War II, the local population had increased to the point of warranting their own post office, which was established in 1945 (Wilson and Grubb 1984). Three thousand acres were purchased that same year by the Yucca Village Company, subdivided the following year, water service was acquired and the area was tentatively named Yucca Village in 1947 (Wilson and Grubb 1984, Hernandez 2005). The community grew in the ensuing decades but the name was ultimately unsatisfactory, and the community was incorporated as Yucca Valley in 1991 (Hernandez 2005).

METHODS

Records Search

On July 11, 2024, a cultural resources records search was conducted for the current project area at the South Central Coastal Information Center (SCCIC) at California State University, Fullerton. The SCCIC houses the pertinent archaeological site and survey information necessary to determine whether cultural resources are recorded within the study area boundaries and which specific areas have been previously surveyed. The research included a review of all recorded historic and prehistoric archaeological sites within one mile of the project, as well as a review of known cultural resource survey and excavation reports.

Additional Research

In July 2024, Mr. Goodwin reviewed online historic period aerial photographs (NETR Online 2024) and USGS (United States Geological Survey) topographic maps (*Yucca Valley North,* Calif. 7.5 minute quadrangle, 1989, 1975, 1965, 1958, and 1957).

Archaeological Field Survey

On July 20, 2024, LSA Archaeologist Cassidy Sharp surveyed the project area for any cultural residues (prehistoric or historic artifacts, deposits, or features). Linear transects at 10-meter intervals were utilized to systematically examine the surface. Particular attention given to all areas of potentially native (undisturbed) soils, exposed rocks, and rodent back dirt.

RESULTS

RECORDS SEARCH

Data from the SCCIC indicate there have been 16 previous cultural resources studies conducted within the 1-mile study radius, none of which included portions of the project area (see Appendix A). Although no cultural resources have been recorded within or near the project area, three are documented within 1 mile: one prehistoric resource (36-002379, an artifact scatter), and two historic period resources (36-027695, a 1950s residence at 4451 Old Woman Springs Road and 36-010716, a segment of Old Woman Springs Road, a route dating to the 19th century). The historic period road (36-010716) is the nearest historic resource to the project site, approximately 160 meters/530 feet to the west, and the nearest prehistoric resource (36-002379) is approximately 0.29 mile southwest of the project site.

Additional Research

No buildings or structures were present within the project area in historic period aerial photos or indicated on maps (NETR Online 2024).

ARCHAEOLOGICAL FIELD SURVEY

The field survey revealed that there was light disturbance in the area from foot and bicycle traffic. Overall visibility was poor, at approximately 50 percent with the surface substantially obscured by vegetation. Access was not inhibited by vegetation. Soils are sandy alluvial silt. Trace historic period isolated rusted cans were noted. Concrete debris were noted, along with modern refuse throughout the project area. No cultural resources were identified.

RECOMMENDATIONS

Through the various avenues of research, this study did not identify cultural resources within or adjacent to the project. However, a prehistoric resource was documented less than 0.33 mile away, and approximately half of the project area surface was not visible. Therefore, the project parcel retains some potential for in situ subsurface cultural resources, and archaeological monitoring may be considered.

If archaeological materials are encountered during construction, all construction work should be halted and a qualified archaeologist consulted to determine the appropriate treatment of the discovery (California Code of Regulations, Title 14, Chapter 3, Section 15064.5(f)).

If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be Native American, the County Coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD will have the opportunity to offer recommendations for the disposition of the remains.

APPENDIX A

PERSONNEL QUALIFICATIONS

RIORDAN GOODWIN, RA
ASSOCIATE / ARCHAEOLOGIST

EXPERTISE

- Historical and Military Archaeology
- Historical Research
- Phase I Surveys
- Phase II Test Excavation Programs
- Cultural Resources Monitoring
- Native American Consultation

EDUCATION

Anthropology Graduate Program, San Diego State University, 1993

B.A. in Anthropology, San Diego State University, 1987

Undergraduate Studies, Palomar Community College, San Marcos, California, 1984-1986

PROFESSIONAL EXPERIENCE

Archaeologist, Laboratory Manager, Field Supervisor Project Manager, Paleontological Technician, LSA, Riverside, California, 2001–Present

Senior Archaeologist, Earth Tech, Colton, California, 2000

Staff Archaeologist/Historian, Archaeological Resource Management, San Jose, California, 1998–2000

Field Archaeologist, Archaeor, Mission San Jose, California, 1998

PROFESSIONAL RESPONSIBILITIES

Mr. Goodwin has extensive experience as Principal Investigator, Co-principal Investigator, and contributing specialist on cultural resource assessments, historic architectural evaluations, constraints analyses, Phase II testing, and Phase III data recovery programs. He has written, co-written, contributed to and peer-reviewed CEQA and National Historic Preservation Act (NHPA) Section 106-level California Office of Historic Preservation (OHP) and Caltrans-format cultural resource assessments, archaeological testing and monitoring reports, historic building inventories and evaluations, management plans, Historic American Buildings Survey/Historic American Engineering Record (HABS/HAER) documentation, and Department of Parks and Recreation (DPR) forms. His 33 years of experience includes both California Register of Historical Resources (California Register) and National Register of Historic Places (National Register)-level work in Riverside and San Bernardino counties involving survey, testing, data recovery, monitoring programs, and Native American consultation.

PROJECT EXPERIENCE

Mr. Goodwin has performed hundreds of Phase I cultural resources assessments, which included resource documentation, and many Phase II archaeological testing programs for projects ranging in size from a fraction of an acre to more than 1,000 acres. Selected projects include the following.

AIRPORTS

CITY OF PALM SPRINGS, PALM SPRINGS INTERNATIONAL AIRPORT

Palm Springs, Riverside County, California

Mr. Goodwin conducted the Phase I field survey of World War II-era U.S. Army airfield features, documented historic period airfield features, updated resource documentation, assisted with architectural survey, prepared the report, and responded to comments from the Federal Aviation Administration.

City of Camarillo, Camarillo Airport
Camarillo, Ventura County, California

Mr. Goodwin conducted historical research and contributed to the evaluation of Cold War-era built environment associated with Tactical Air Command activities at the airport.

ALTERNATIVE ENERGY

SUNPEAK SOLAR, LLC, CHUCKWALLA VALLEY SOLAR

Desert Center, Riverside County, California

Mr. Goodwin led the Phase I survey of more than 700 acres of former World War II-era U.S. Army training areas, documented prehistoric and historic-period resources, prepared draft district records, and coordinated with the Bureau of Land Management.

Staff Archaeologist, Holman & Associates, San Francisco, California, 1997

Staff Archaeologist/Historical Researcher, Computer Sciences Corporation, Edwards Air Force Base, California, 1994–1996

Staff Archaeologist, BFSA, Poway, California, 1989–1992

PROFESSIONAL CERTIFICATIONS/ REGISTRATIONS

Registered Archaeologist (RA)

SPECIALIZED TRAINING

BNSF Railway Safety Training

County of Riverside Cultural Sensitivity Training

HAZMAT 40 Hour

Unexploded Ordnance Awareness 8 hour

Desert Tortoise Awareness Training

PROFESSIONAL AFFILIATIONS

Register of Professional Archaeologists, Society for California Archaeology

COMMERCIAL DEVELOPMENT

OSI PARTNERSHIP I, LLC BANNING BUSINESS PARK PROJECT

Banning, Riverside County, California

Mr. Goodwin conducted the Phase II testing program, documented and evaluated historic period resources, managed the laboratory, contributed to the report, and arranged for disposition of the artifact collection for this project.

City of Murrieta, CarMax Murrieta Project
Murrieta, Riverside County, California

Mr. Goodwin conducted the record search and Phase I field survey, updated resource documentation, and prepared the report for this project.

City of Murrieta, CVS Pharmacy Project
Murrieta, Riverside County, California

Mr. Goodwin conducted the records search and Phase I field survey, documented and evaluated resources, and prepared the report for this project.

City of Murrieta, Murrieta Hot Springs
Murrieta, Riverside County, California

Mr. Goodwin conducted the record search, Phase I survey, site record update, Phase II archaeological testing, and laboratory analysis, and prepared the report for this project.

County of Riverside, Alessandro Commerce Center
Riverside County, California

Mr. Goodwin assisted with the Phase I survey, conducted the Phase II testing program, supervised the monitoring program, coordinated with Native American tribes, updated resource recordation, and prepared the report.

County of Riverside, Gateway Center Specific Plan
Riverside County, California

Mr. Goodwin led the Phase I field survey, updated prehistoric resource documentation, conducted Phase II testing, evaluated resources, conducted Native American consultation on behalf of the County, and prepared the report for this project.

EDUCATION/INSTITUTIONAL

CITY OF PERRIS, CLEARWATER ELEMENTARY SCHOOL PROJECT

Perris, Riverside County, California

Mr. Goodwin conducted the records search and Phase I field survey and prepared the report for this project.

Perris Union High School District, Perris Union High School No. 4
Riverside County, California

Mr. Goodwin conducted the Phase I field survey, site record update, Phase II testing, laboratory analysis of prehistoric artifacts, protracted Native American consultation on behalf of Perris Union High School District, and prepared the report for this project. He also supervised the Phase IV monitoring program, prepared the monitoring report, and arranged for curation of the artifact collection with Pechanga Band of Luiseño Indians.

INDUSTRIAL

CITY OF RIALTO, WILLOW AVENUE WAREHOUSE PROJECT

Rialto, San Bernardino County, California

Mr. Goodwin conducted the record search and Phase I field survey and prepared the report for this project.

City of Riverside, Cottonwood Warehouse Project
Riverside, Riverside County, California

Mr. Goodwin conducted the record search and Phase I field survey and prepared the report for this project.

MISCELLANEOUS

BRENT ENGINEERING, RIVERSIDE PROJECT

Riverside County, California

Mr. Goodwin coordinated the Phase I field survey, documented resources, conducted research and documentation, and prepared the report and follow-up revised report for this project.

MIXED-USE

CITY OF INDIO, INDIO VARNER ROAD MIXED-USE PROJECTS

Indio, Riverside County, California

Mr. Goodwin conducted the record search and Phase I field survey, and prepared the report for this project.

NATIVE AMERICAN TRIBES

DESERT CAHUILLA AGRICULTURAL CORPORATION/TORRES-MARTINEZ DESERT CAHUILLA INDIANS, SMTC PROJECT

Riverside County, California

Mr. Goodwin conducted the Phase I survey and research, coordinated with the president of the Torres-Martinez Desert Cahuilla Indians' Desert Cahuilla Agricultural Corporation, and prepared the report for this project.

County of Riverside, SunCal, McSweeny Farms Residential Development
Riverside County, California

Mr. Goodwin participated in Phase II testing of prehistoric sites and coordinated disposition of the artifact collection with designated Most Likely Descendant, Soboba Band of Luiseño Indians.

Perris Union High School District, Perris Union High School No. 4
Riverside County, California

Mr. Goodwin conducted the Phase I field survey, site record update, Phase II testing, laboratory analysis of prehistoric artifacts, protracted Native American consultation on behalf of Perris Union High School District, and prepared the report for this project. He also supervised the Phase IV monitoring program, prepared the monitoring report, and arranged for curation of the artifact collection with Pechanga Band of Luiseño Indians.

Caltrans, State Route 210 Project
San Bernardino, San Bernardino County, California

Mr. Goodwin conducted the archaeological monitoring program, recovered prehistoric human remains, coordinated closely with Native American tribes and the County Coroner, and prepared a monitoring report in accordance with Caltrans Standard Environmental Reference guidelines, Section 106, and CEQA for District 8. Caltrans approved the report.

United States Army Corps of Engineers, Monteolivo Project
Corona, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, and assisted with Section 106 Native American consultation on behalf of the United States Army Corps of Engineers. He documented historic period resources and prepared the report for this project.

City of Hemet, Exchange Club Park
Hemet, Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, coordinated with Native American tribes and the County Inspector, and prepared the monitoring report.

Caltrans and County of Riverside, Cajalco Road and Alexander Road Project
Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, conducted research, coordinated with Native American tribes, Caltrans, and the County Inspector, and prepared the monitoring report.

County of Riverside, 42500 Washington Street Project
Bermuda Dunes, California

Mr. Goodwin conducted Native American scoping, cultural resources research, a record search and Phase I field survey, coordinated with the County of Riverside and other consultants, and prepared the report.

County of Riverside, Briggs Road Improvements at Warm Springs
Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, coordinated with Native American tribes and the County Inspector, and prepared the monitoring report.

County of Riverside, Gateway Center Specific Plan
Riverside County, California

Mr. Goodwin led the Phase I field survey, updated prehistoric resource documentation, conducted Phase II testing, evaluated resources, conducted Native American consultation on behalf of the County of Riverside, and prepared the report.

County of Riverside, Santa Ana River Trail Project
Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, assisted the County of Riverside with Native American consultation, documented and evaluated historic period resources, and prepared the report.

PUBLIC AGENCIES

CITY OF MENIFEE, CHIC-FIL-A MENIFEE PROJECT

Riverside County, California

Mr. Goodwin supervised and conducted the Phase IV cultural resources monitoring program, compiled the administrative record, provided logistical support, prepared the monitoring report.

City of Menifee, Newport Towne Square II Project
Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, prepared an assessment report, supervised and conducted the Phase IV cultural resources monitoring program, compiled the administrative record, and prepared the monitoring report.

City of Menifee, Menifee Boulders Project
Riverside County, California

Mr. Goodwin conducted the Phase I survey, documented prehistoric resources, Native American consultation on behalf of Caltrans District 8, and prepared the Historic Property Survey Report (HPSR) and the Archaeological

Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference guidelines, Section 106, and CEQA. Caltrans approved the HPSR and ASR.

City of Menifee, Caliber Collision Body Shop Project
Riverside County, California

Mr. Goodwin conducted the Phase I field survey, prepared the report, coordinated with the City and responded to tribal comments for a revised report.

City of Menifee, Boulders Mixed-Use Project
Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, obtained Sacred Lands File search results from the NAHC and coordinated with tribes on behalf of the City, documented prehistoric resources and prepared the assessment report.

City of Menifee, Menifee Valley Specific Plan Project
Riverside County, California

Mr. Goodwin peer-reviewed a Phase I assessment and conducted follow-up on response to comments.

County of Sonoma, Adobe Road and Main Street Intersection Improvements Project
Sonoma County, California

Mr. Goodwin directed the Phase I survey, research, and coordinated Native American consultation on behalf of the County of Sonoma. He noted historic period resources and prepared the report.

Riverside County Flood Control and Water Conservation District, Banning MDP Line H Stage 1 Storm Drain Project
Banning, Riverside County, California

Mr. Goodwin supervised and conducted the Phase IV cultural resources monitoring program, documented and evaluated historic period resources, compiled the administrative record, provided logistical support, prepared the monitoring report, and coordinated closely with the Riverside County Flood Control and Water Conservation District, including curation of the artifact collection at the District office.

Caltrans, Potrero Road/State Route 60 Project
Beaumont, Riverside County, California

Mr. Goodwin conducted the Phase I survey, Native American consultation on behalf of Caltrans District 8, and prepared the Historic Property Survey Report (HPSR) and the Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference guidelines, Section 106, and CEQA. Caltrans approved the HPSR and ASR.

Caltrans and City of Colton, Colton Crossing Grade Separation
Colton, San Bernardino County, California

Mr. Goodwin conducted the Phase I survey and Extended Phase I (XPI) archaeological testing of a segment of BNSF Railway; designed and supervised the ground-penetrating radar program; documented and evaluated historic-period resources; coordinated research; supervised laboratory analysis; conducted Native American consultation on behalf of Caltrans; prepared a Caltrans-format Historic Property Survey Report, Archaeological Resources Report, and XPI Report; and contributed to the Historic Resources Evaluation Report in accordance with Caltrans Standard Environmental Reference guidelines, Section 106, and CEQA. He also arranged for disposition of the artifact collection.

City of Corona, Corona 720 Project
Corona, Riverside County, California

Mr. Goodwin conducted the Phase I field survey, documented resources, updated resource documentation, prepared the report, and conducted follow-up for a revised report.

United States Army Corps of Engineers, Monteolivo Project
Corona, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of the United States Army Corps of Engineers. He documented historic period resources and prepared the report.

Caltrans, I-15/I-215 Interchange
Devore, San Bernardino County, California

Mr. Goodwin conducted the Phase I survey, assisted with Extended Phase I (XPI) survey/mapping; documented and evaluated historic-period resources; conducted research with the San Bernardino County Archaeologist; conducted additional research on equestrian trails; coordinated and collated multiple record searches; supervised and participated in an archaeological monitoring program; conducted Native American consultation on behalf of Caltrans; prepared Caltrans-format Historic Property Survey Report (HPSR), Archaeological Resources Report (ASR), and monitoring report; and contributed to the Historic Resources Evaluation Report (HRER) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA. The project received State Historic Preservation Office concurrence on the HPSR/HRER/ASR.

City of Fontana, Sierra Crest II Project
Fontana, San Bernardino County, California

Mr. Goodwin supervised and led the archaeological monitoring program, updated resource documentation, evaluated resources, and prepared the monitoring report.

City of Hemet, Exchange Club Park
Hemet, Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, coordinated with Native American tribes and the County of Riverside Inspector, and prepared the monitoring report.

Caltrans, Avenue 44 Bridge over the Coachella Valley Storm Water Channel
Indio, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of Caltrans, and prepared a Historic Property Survey Report and Archaeological Resources Report in accordance with Caltrans Standard Environmental Reference guidelines, Section 106, and CEQA.

City of Indio, Avenue 50 Improvements Project
Indio, Riverside County, California

Mr. Goodwin conducted the record search and Phase I field survey and co-authored the report.

City of Indio, Indio Varner Road Mixed-Use Projects
Indio, Riverside County, California

Mr. Goodwin conducted the record search and Phase I field survey and prepared the report.

City of Lake Elsinore, The Village Estates
Lake Elsinore, Riverside County, California

Mr. Goodwin conducted the Phase I field survey, site recordation, Phase II testing, and laboratory analysis of historic period artifacts. He also assisted with architectural evaluation and co-authored the report.

Caltrans, State Route 710 Extension
Los Angeles County, California

Mr. Goodwin participated in the historic architectural survey of several alternative routes for the transportation corridor from East Los Angeles to Pasadena. He assisted with preparation of the Historic Resources Evaluation Report.

City of Morgan Hill, Borello Ranch Project
Morgan Hill, Santa Clara County, California

Mr. Goodwin participated in Phase III salvage/data recovery of multiple inhumations at a prehistoric Ohlone mortuary complex including documentation of subsurface features, recovery of artifacts, laboratory analysis, monitoring, and logistical support. He contributed the historic context to the report.

City of Murrieta, CarMax Murrieta Project
Murrieta, Riverside County, California

Mr. Goodwin conducted the records search and Phase I field survey, updated resource documentation, and prepared the report.

City of Murrieta, CVS Pharmacy Project
Murrieta, Riverside County, California

Mr. Goodwin conducted the record search and Phase I field survey, documented and evaluated resources, and prepared the report.

City of Murrieta, Murrieta Hot Springs
Murrieta, Riverside County, California

Mr. Goodwin conducted the record search, Phase I survey, site record update, Phase II archaeological testing and laboratory analysis, and prepared the report.

Caltrans, Mid-Valley Bike Path
Palm Desert, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, Native American consultation on behalf of Caltrans, documented historic period resources, and prepared a Historic Property Survey Report and Archaeological Resources Report in accordance with Caltrans Standard Environmental Reference guidelines, Section 106, and CEQA.

Caltrans, Gene Autry Trail
Palm Springs, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of Caltrans, and prepared a Historic Property Survey Report (HPSR) and Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference guidelines, Section 106, and CEQA. The project received State Historic Preservation Office concurrence on the HPSR/ASR.

City of Palm Springs, Boulders Development Project
Palm Springs, Riverside County, California

Mr. Goodwin conducted the record search and Phase I field survey, updated resource documentation, and prepared the report.

City of Palm Springs, Palm Springs International Airport
Palm Springs, Riverside County, California

Mr. Goodwin conducted the Phase I field survey of World War II-era U.S. Army airfield features, documented historic period airfield features, updated resource documentation, assisted with architectural survey, prepared the report, and responded to comments from the Federal Aviation Administration.

City of Perris, Clearwater Elementary School Project
Perris, Riverside County, California

Mr. Goodwin conducted the records search and Phase I field survey, and prepared the report.

City of Perris, Mercado Park Project
Perris, Riverside County, California

Mr. Goodwin conducted the archaeological monitoring program, coordinated with the City Inspector, and prepared the monitoring report.

City of Perris, Perris Circle Project
Perris, Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, coordinated with the City Inspector, and prepared the monitoring report.

City of Perris, Stratford Ranch Residential
Perris, Riverside County, California

Mr. Goodwin conducted the Phase I field survey, site record update, Phase II testing, and laboratory analysis, and prepared the report. He arranged for curation of artifact collection.

City of Rialto, Willow Avenue Warehouse Project
Rialto, San Bernardino County, California

Mr. Goodwin conducted the records search and Phase I field survey, and prepared the report.

Caltrans, Mission Boulevard Bridge Replacement
Riverside, Riverside County, California

Mr. Goodwin supervised the Phase I survey, assisted with mapping, conducted research, coordinated and collated records searches, supervised archaeological survey, conducted Native American consultation on behalf of Caltrans, prepared a Historic Property Survey Report (HPSR), Archaeological Resources Report (ASR), and monitoring report, and assisted with the Historic Resources Evaluation Report (HRER) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA. The project received State Historic Preservation Office (SHPO) concurrence on the HPSR/HRER/ASR.

City of Riverside, Cottonwood Warehouse Project
Riverside, Riverside County, California

Mr. Goodwin conducted the records search and Phase I field survey, and prepared the report.

Caltrans, Community Environmental Transportation Acceptability Process (CETAP) Project
Riverside County, California

Mr. Goodwin conducted an expansive historic architectural survey, compiled a built environment inventory, participated in Phase II testing, and edited the Historic Property Survey Report (HPSR).

Caltrans and County of Riverside, Cajalco Road and Alexander Road Project
Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, conducted research, coordinated with Native American tribes, Caltrans, and the County Inspector, and prepared the monitoring report.

County of Riverside, Alessandro Commerce Center
Riverside County, California

Mr. Goodwin assisted with the Phase I survey, conducted the Phase II testing program, supervised the monitoring program, coordinated with Native American Tribes, updated resource recordation, and prepared the report.

County of Riverside, Briggs Road Improvements at Warm Springs
Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, coordinated with Native American Tribes and the County Inspector, and prepared the monitoring report.

County of Riverside, Gateway Center Specific Plan
Riverside County, California

Mr. Goodwin led the Phase I field survey, updated prehistoric resource documentation, conducted Phase II testing, evaluated resources, conducted Native American consultation on behalf of the County, and prepared the report.

County of Riverside, Santa Ana River Trail Project
Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of the County of Riverside. He documented and evaluated historic period resources and prepared the report.

County of Riverside, South Coast Winery Resort and Spa
Riverside County, California

Mr. Goodwin supervised monitoring, acted as lead monitor, and prepared the report. No cultural resources were identified.

Riverside County Transportation Commission, Mid County Parkway
Riverside County, California

Mr. Goodwin participated in the Phase I survey and Phase II testing of prehistoric sites, and assisted with report for the Riverside County Transportation Commission.

Caltrans, State Street Extension Project
San Bernardino, San Bernardino County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of Caltrans, and prepared a Historic Property Survey Report (HPSR) and Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA. The project received State Historic Preservation Office (SHPO) concurrence on the HPSR/ASR.

City of San Diego, BAE Systems Pier 4
San Diego, San Diego County, California

Mr. Goodwin conducted research, assisted with the architectural survey, and contributed to the report.

City of San Diego, Otay II Pipeline Project
San Diego, San Diego County, California

Mr. Goodwin conducted the archaeological monitoring program, recovered, documented, and evaluated historic period refuse, coordinated with City Inspector, and prepared monitoring the report.

City of San Jacinto, Ramona Expressway Widening Project
San Jacinto, Riverside County, California

Mr. Goodwin conducted the Phase I survey and research, documented historic period resources, and prepared the report.

City of Victorville, Space Center Project
Victorville, San Bernardino County, California

Mr. Goodwin conducted the records search, coordinated the Phase I field survey, and prepared the report.

RECREATIONAL

CALTRANS, MID-VALLEY BIKE PATH

Palm Desert, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, Native American consultation on behalf of Caltrans, documented historic period resources, and prepared a Historic Property Survey Report (HPSR) and

Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA.

City of Hemet, Hemet Valley Bikeway
Hemet, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, Native American consultation on behalf of Caltrans, documented historic period resources, and prepared a Historic Property Survey Report (HPSR) and Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA.

City of Fontana, Bird Farm Dog Park Project
Fontana, San Bernardino County, California

Mr. Goodwin conducted the Phase I survey, research, Native American notification on behalf of the City, and prepared the report.

City of Moreno Valley, Rancho Verde Park Project
Moreno Valley, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, Native American notification on behalf of the City, and prepared the report.

County of Riverside, Santa Ana River Trail Project
Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of the County of Riverside. He documented and evaluated historic period resources and prepared the report.

County of Riverside, South Coast Winery Resort and Spa
Riverside County, California

Mr. Goodwin supervised monitoring, acted as lead monitor, and prepared the report. No cultural resources were identified.

City of Perris, Mercado Park Project
Perris, Riverside County, California

Mr. Goodwin conducted monitoring and prepared the report. No cultural resources were identified.

RESIDENTIAL DEVELOPMENT

CITY OF PERRIS, STRATFORD RANCH RESIDENTIAL

Perris, Riverside County, California

Mr. Goodwin conducted the Phase I field survey, site record update, Phase II testing, and laboratory analysis, and prepared the report. He arranged for curation of artifact collection.

County of Riverside, SunCal, McSweeny Farms Residential Development
Riverside County, California

Mr. Goodwin participated in Phase II testing of prehistoric sites and coordinated disposition of the artifact collection with designated Most Likely Descendant, Soboba Band of Luiseño Indians.

Pulte Homes, Tract 18917
Riverside County, California

Mr. Goodwin conducted the records search and Phase I field survey, and prepared the report.

TRANSPORTATION

CALTRANS, POTRERO ROAD/STATE ROUTE 60 PROJECT

Beaumont, Riverside County, California

Mr. Goodwin conducted the Phase I survey, Native American consultation on behalf of Caltrans, and prepared the Historic Property Survey Report (HPSR) and Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA for District 8. The HPSR and ASR were approved by Caltrans.

Caltrans and City of Colton, Colton Crossing Grade Separation
Colton, San Bernardino County, California

Mr. Goodwin conducted the Phase I survey and Extended Phase I (XPI) archaeological testing of a segment of BNSF Railroad, designed and supervised the ground-penetrating radar (GPR) program, documented and evaluated historic-period resources, coordinated research, supervised laboratory analysis, conducted Native American consultation on behalf of Caltrans, prepared Caltrans-format Historic Property Survey Report (HPSR), Archaeological Resources Report (ASR), and XPI Report, and contributed to the Historic Resources Evaluation Report (HRER) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA. He also arranged for disposition of the artifact collection.

Caltrans, I-15/I-215 Interchange
Devore, San Bernardino County, California

Mr. Goodwin conducted the Phase I survey, assisted with XPI survey/mapping, documented and evaluated historic-period resources, conducted research with the San Bernardino County Archaeologist, conducted additional research on equestrian trails, coordinated and collated multiple records searches, supervised and participated in an archaeological monitoring program, conducted Native American consultation on behalf of Caltrans, prepared Caltrans-format Historic Property Survey Report (HPSR), Archaeological Resources Report (ASR), and monitoring report, and contributed to the Historic Resources Evaluation Report (HRER) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA. The project received State Historic Preservation Office (SHPO) concurrence on the HPSR/HRER/ASR.

Caltrans, Avenue 44 Bridge over the Coachella Valley Storm Water Channel
Indio, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of Caltrans, and prepared a Historic Property Survey Report (HPSR) and Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA.

City of Indio, Avenue 50 Improvements Project
Indio, Riverside County, California

Mr. Goodwin conducted the records search and Phase I field survey, and co-authored the report.

Caltrans, State Route 710 Extension
Los Angeles County, California

Mr. Goodwin participated in the historic architectural survey of several alternative routes for the transportation corridor from East Los Angeles to Pasadena. He assisted with preparation of the Historic Resources Evaluation Report (HRER).

Caltrans, Gene Autry Trail
Palm Springs, Riverside County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of Caltrans, and prepared a Historic Property Survey Report (HPSR) and Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA. The project received State Historic Preservation Office (SHPO) concurrence on the HPSR/ASR.

Caltrans, Mission Boulevard Bridge Replacement
Riverside, Riverside County, California

Mr. Goodwin supervised the Phase I survey, assisted with mapping, conducted research, coordinated and collated records searches, supervised archaeological survey, conducted Native American consultation on behalf of Caltrans, prepared a Historic Property Survey Report (HPSR), Archaeological Resources Report (ASR), and monitoring report, and assisted with the Historic Resources Evaluation Report (HRER) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA. The project received State Historic Preservation Office (SHPO) concurrence on the HPSR/HRER/ASR.

Caltrans, Community Environmental Transportation Acceptability Process (CETAP) Project
Riverside County, California

Mr. Goodwin conducted an expansive historic architectural survey, compiled a built environment inventory, participated in Phase II testing, and edited the Historic Property Survey Report (HPSR).

Caltrans and County of Riverside, Cajalco Road and Alexander Road Project
Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, conducted research, coordinated with Native American Tribes, Caltrans, and the County Inspector, and prepared the monitoring report.

County of Riverside, Briggs Road Improvements at Warm Springs
Riverside County, California

Mr. Goodwin supervised and led the archaeological monitoring program, coordinated with Native American Tribes and the County Inspector, and prepared the monitoring report.

Riverside County Transportation Commission, Mid County Parkway
Riverside County, California

Mr. Goodwin participated in the Phase I survey and Phase II testing of prehistoric sites, and assisted with report for the Riverside County Transportation Commission.

Caltrans, State Route 210 Project
San Bernardino, San Bernardino County, California

Mr. Goodwin conducted the archaeological monitoring program, recovered prehistoric human remains, coordinated with the County Coroner and Native American Tribes, and prepared a monitoring report in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA for District 8. The report was approved by Caltrans.

Caltrans, State Street Extension Project
San Bernardino, San Bernardino County, California

Mr. Goodwin conducted the Phase I survey, research, and Native American consultation on behalf of Caltrans, and prepared a Historic Property Survey Report (HPSR) and Archaeological Resources Report (ASR) in accordance with Caltrans Standard Environmental Reference (SER) guidelines, Section 106, and CEQA. The project received State Historic Preservation Office (SHPO) concurrence on the HPSR/ASR.

City of San Jacinto, Ramona Expressway Widening Project
San Jacinto, Riverside County, California

Mr. Goodwin conducted the Phase I survey and research, documented historic period resources, and prepared the report.

UTILITIES

SOUTHERN CALIFORNIA EDISON, SUPERSTITION SOLAR PROJECT

El Centro, California

Mr. Goodwin participated in the Phase I survey, documented cultural resources, and contributed to the report.

Southern California Edison, On-Call Biological, Cultural, and Water Quality Support
Inyo, Kern, Los Angeles, Mono, Orange, Riverside, San Bernardino, San Diego, Santa Barbara, Tulare, and Ventura Counties, California

Mr. Goodwin conducted multiple surveys, documented historic-period resources and prepared letter reports and memos.

Southern California Edison, West Of Devers Project
Riverside County, California

Mr. Goodwin conducted the Phase I survey and research, documented historic period resources, and contributed to the report.

City of San Diego, Otay II Pipeline Project
San Diego, San Diego County, California

Mr. Goodwin conducted the archaeological monitoring program, recovered, documented, and evaluated historic period refuse, coordinated with City Inspector, and prepared monitoring the report.

Southern California Edison, El Casco Substation Project
San Timoteo Canyon, Riverside County, California

Mr. Goodwin conducted the cultural resources monitoring program, documented historic period resources, managed the laboratory and provided logistical support to the paleontological monitoring/fossil specimen recovery program.

SELECTED REPORTS

Archaeological Monitoring Program, Briggs Road Improvements at Warm Springs Creek, Riverside County Transportation Department, Riverside County, California 2016.

Archaeological Monitoring Program, Perris Circle Industrial Park Project, Riverside County, California 2015.

Cultural Resources Assessment and Archaeological Testing, Gateway Center Specific Plan, Riverside County, California 2015.

Cultural Resources Assessment, Brent Engineering Riverside Project, Riverside County, California 2017.

PROFESSIONAL RESPONSIBILITIES

Ms. Sharp is an archaeologist at LSA. She is a Registered Professional Archaeologist (RPA) and cross-trained paleontologist with more than 10 years of experience in cultural and paleontological resources monitoring, survey, excavation, preparation of fossils and artifacts for curation, and screening and sorting sediments for artifacts and fossils. Ms. Sharp has managed archaeology and paleontology labs in addition to serving as a supervisor for projects and personnel. She has worked on a variety of projects in the water, transportation, energy, development, public, and private sectors. For these projects, Ms. Sharp has served as a primary point of contact for the client, created and managed schedules, conducted crew sensitivity trainings, and authored relevant reports. Her field and laboratory experience include a range of projects throughout California, Utah, New Mexico, Mexico, Ecuador, and England.

PROJECT EXPERIENCE

Purple Line Extension (Westside Subway) Sections 1 and 2 Construction Management, Los Angeles County Metropolitan Transportation Authority, Los Angeles County, California.

Ms. Sharp supervised paleontological monitoring, fossil recovery, and fossil preparation in the lab. She contributed to monthly reporting during construction of seven stations from the existing Purple Line at Wilshire/Western Avenue along Wilshire Boulevard to the Veterans Administration Hospital in Westwood for 8.6 miles and managed paleontological services for Sections 1 and 2 of the subway project including budgets, Workers Environmental Awareness Program (WEAP) training, monitoring, fossil recovery, fossil preparation, identification, cataloguing, curation with the Natural History Museum of Los Angeles County, and reporting.

The Cooper Laboratory
Santa Ana, Orange County, California

Ms. Sharp provided archaeological and paleontological supervision including preparation and curation services for Orange County's John D. Cooper Archaeological and Paleontological Center. Archaeological and paleontological tasks included preparation and stabilization of vertebrate fossils from field jackets; screen washing matrix from jackets; molding and casting selected fossils for the creation of exhibits; building metal armatures to safely hold select fossils for exhibits; repairing and stabilizing previously prepared specimens that have degraded over time; processing bulk soil samples for the recovery of plants, charcoal, shells, and other finds; processing unsorted midden; and faunal identification. Fossil Preparation and archaeological collections supervision 2021-2024.

Los Angeles World Airports Ongoing Technical Support for Environmental, Mitigation Reporting, and Sustainability Issues Associated with Los Angeles World Airports Construction Projects
Los Angeles International Airport, Los Angeles County, California

Ms. Sharp served as paleontology supervisor and helped prepare and present a paleontological Workers Environmental Awareness Program training and conducted and supervised paleontological resources monitoring during construction activities for six task orders. Upon completion of monitoring for each project, Paleontological Resources Monitoring Compliance Reports were prepared. The City of Los Angeles functioned as lead agency for the project.

Los Angeles World Airports Los Angeles International Airport North Airfield Taxiway
Los Angeles, Los Angeles County, California

Ms. Sharp provided cultural and paleontological resources monitoring during construction. Ground-disturbing activities consisted of the construction of four new high-speed exit taxiways, the reconstruction of approximately 5,400 linear feet of the keel section along an existing runway, and the reconstruction of existing taxiway pavement. Several 18- to 48-inch-in-diameter reinforced concrete pipe storm drains in the infield areas surrounding the proposed taxiways were also constructed, including drain improvements and construct

aircraft related inlet structures and manholes to facilitate the proposed storm drains. Drainage swales in the infield areas surrounding the proposed taxiways were also completed. The project was completed in compliance with Los Angeles World Airports' (LAWA) Archaeological Treatment Plan and Paleontological Management Treatment Plan as well as all Mitigation Measures for Los Angeles International Airport. LAWA is the lead agency under the CEQA.

Southern California Edison Environmental Clearance On-Call Program
Statewide, California
Ms. Sharp provided on-call cultural resource monitoring services for various Southern California Edison projects throughout California for more than 100 task orders.

Pacific Gas and Electric Environmental Clearance On-Call Program
Statewide, California
Ms. Sharp provided on-call cultural resource monitoring services for various Pacific Gas & Electric Co. projects throughout California.

Los Angeles County Museum of Art Building for the Permanent Collection Project
Los Angeles, Los Angeles County, California
Ms. Sharp conducted paleontological resources monitoring, supervision, and fossil recovery during construction of a 347,500-gross-square-foot museum building, which will replace four buildings (Ahmanson Building, Hammer Building, the Art of Americas Building, and the Bing Center) within Los Angels County Museum of Art East. The new building and the outdoor experience provide enhanced outdoor landscaped plazas, public programming and educational spaces, sculpture gardens, and native and drought-tolerant plants, integrated with the museum building and within Hancock Park.

Palo Verde
La Quinta, Riverside County, California
Ms. Sharp provided archaeological and paleontological resources monitoring during excavations for the construction of single-family residences.

Preserve School
City of Chino, San Bernadino County, California
Ms. Sharp provided archaeological monitoring for the Chino Valley Unified School District's development of a 12-acre lot for the operation of a K-8 school campus with a total footprint of approximately 82,000 square feet to house up to 1,200 students on a four-track, year-round schedule.

Bureau of Land Management El Centro Recreation Project
Imperial, Imperial County, California
The Bureau of Land Management's (BLM) El Centro Field Office requested Class III Cultural Resources Inventory Surveys and archaeological site assessments to prevent potential adverse effects to cultural resources within BLM managed lands identified for temporary or permanent disturbance due to implementation of recreation program projects on 47 acres in the Superstition and Plaster City Open Areas. Ms. Sharp completed this work to satisfy BLM's responsibilities for compliance under Section 106 of the NHPA. Ms. Sharp provided an intensive pedestrian survey. Although the record search did not identify any previously recorded cultural resources in the proposed APE, 41 previously recorded cultural resources were identified within a 1-mile radius, some of which may have subsurface potential. Cultural resources monitoring was recommended due to the sensitivity for buried cultural resources. The BLM is the lead federal agency under NEPA.

West Lincoln Ave. Mixed Use
Anaheim, Orange County, California

Ms. Sharp provided archaeological and paleontological monitoring for the construction of a new four-story mixed-use development project consisting of 315 residential apartment units with 653 parking spaces and 3,413 square feet of retail space on 5.25 acres within Assessor Parcel Numbers 250-091-09, -10, and -11 at 1600 West Lincoln Avenue in Anaheim, Orange County.

Mirador Project
Altadena, Los Angeles County, California

This project included the construction of residential apartments featuring 71 affordable and supportive housing units geared towards low-income senior citizens. Ms. Sharp provided archaeological and paleontological monitoring for this project.

Cold Canyon Landfill Expansion Module 11B
Arroyo Grande, San Luis Obispo County, California

Ms. Sharp conducted archaeological and paleontological resources monitoring for the expansion of an existing landfill. In addition, Worker Environmental Awareness Program training was provided for all construction personnel. Upon completion of monitoring, preparation of a Paleontological Resources Monitoring Compliance Report was completed at the conclusion of ground disturbance.

Duarte Station Specific Plan
Duarte, Los Angeles County, California

Ms. Sharp provided archaeological monitoring for the development of a new mixed-use space including a two-building residential development with 619 dwelling units, parking structures, and 157,195 feet of open space in addition to a ground floor commercial use and up to 80 units of rent-restricted affordable housing.

North Outfall Sewer Rehabilitation Project
Los Angeles, Los Angeles County, California

Ms. Sharp provided archaeological monitoring for the rehabilitation of the North Outfall Sewer in Los Angeles. The North Outfall Sewer was constructed in the 1920s and needed rehabilitation due to its poor condition. To rehabilitate the sewer, eight access pits were excavated to slip-line a new pipe in the existing sewer. The excavation depths varied from 25 feet to 42 feet.

Rancho Los Cerritos Stormwater Retention Project
City of Long Beach, Los Angeles County, California

Ms. Sharp provided cultural resources monitoring during ground-disturbing construction activities for the Rancho Los Cerritos Stormwater Retention Project. The project consists of constructing a stormwater retention system to allow the site to capture and reuse 95 percent of rainwater. Construction consists of permeable pavers, pervious concrete, an underground cistern, bioswales, detention pond, and an eco-parking lot. Rancho Los Cerritos is the lead agency under the CEQA and Section 106 of the NHPA. Rancho Los Cerritos was listed in the National Register of Historic Places (NRHP Number 978) on April 15, 1970, and this project must conform to (1) the United States Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings, and (2) the Standards of Rehabilitation measures adopted by the Rancho Los Cerritos Master Plan (City of Long Beach 2002), and the other mitigation measures for the project. The project's Area of Potential Effects (APE) measures 4.77 acres and was established as the area where the project could directly or indirectly affect historic properties.

William R. Mason Regional Park Entry Driveway and Road Improvements Project
Irvine, Orange County, California

Ms. Sharp provided archaeological monitoring for OC Parks, in collaboration with OC Public Works, at William Mason Park. This project enhances the park visitor experience by improving the entryway, providing an accessible path of travel into the park and fixing drainage issues. Work consisted of removing existing deteriorated asphalt pavement and replacing it with a combination of regular and permeable asphalt to alleviate drainage issues while improving the quality of stormwater runoff; removing and replacing the damaged curb and gutter and adding of Americans with Disabilities Act-compliant curb ramps, removing and replacing landscape and irrigation within the roundabout and medians to include drought-tolerant and low-water-consumption plants, adding lighting to the roundabout, adding a raised crosswalk and wayfinding signs, and striping pavement to enhance the bike trail crossing and assist vehicular traffic more efficiently and safely navigate the entrance.

Morro Bay Water Facility Project Phases I and II
Morro Bay, San Luis Obispo County, California

Ms. Sharp provided archaeological and paleontological resources monitoring during ground-disturbing activities during the City of Morro Bay's Water Reclamation Facility Lift Stations and Offsite Pipelines Construction Project. Excavation in a portion of the project required a permit from the United States Fish and Wildlife Service. The project was being completed in compliance with mitigation measures contained within the EIR for the project. A Cultural and Paleontological Resources Monitoring Compliance Report was completed upon the conclusion of ground disturbance for the project. The City of Morro Bay is the lead agency under the CEQA.

Rose Hill Courts Redevelopment Project
Los Angeles, Los Angeles County, California

Ms. Sharp provided archaeological supervision for the project. Archaeological and paleontological resources monitoring was conducted during the proposed demolition of 15 buildings with 100 existing public housing units and the construction of 185 new multifamily units contained within 9 buildings, a 6,366 square-foot office/community building, and 174 parking spaces. Ms. Sharp prepared a Paleontological Resource Monitoring Compliance Report following the completion of ground disturbance for the project. Archaeology Supervisor.

Hilltop and Euclid Mixed-Use Project
San Diego, San Diego County, California

Ms. Sharp provided paleontological resources monitoring during excavations for the proposed construction of 20 single-family residences, 27 two-story townhome residences, 113 affordable apartment units, a parking garage, and approximately 8,300 square feet of commercial space. A Paleontological Resources Monitoring Compliance Report was completed at the conclusion of ground disturbance for the project.

Fort Bidwell Northern Paiute Indian Reservation
Fort Bidwell Reservation, Modoc County, California

Ms. Sharp conducted archaeological monitoring of a waterline construction project to ensure compliance of all cultural laws and regulations and coordinated with a tribal liaison/monitor to protect cultural values and collect artifacts for curation in the tribal museum at Fort Bidwell.

Ganahl Lumber Project
City of San Juan Capistrano, Orange County, CA

Ms. Sharp provided archaeological and paleontological resources monitoring during the geotechnical boring of 20 auger holes for the Ganahl Lumber Project in San Juan Capistrano, Orange County, California. A total of 20 geotechnical boring holes were drilled using an auger to depths that varied from 5 to 60 feet deep. This project was conducted in compliance with the City of San Juan Capistrano Council Policy 601.

Deep Soil Mixing Pilot Project
Pacific Palisades, Los Angeles County, California
Ms. Sharp provided archaeological and paleontological monitoring as part of an on-call contract with the Los Angeles Bureau of Engineering, resources monitoring, and managed Native American monitoring during ground-disturbing activities. The City of Los Angeles was the lead agency under the CEQA. Monitoring for the project was conducted in compliance with the Contingency Plan conditions form the Coastal Development Permit from the California Coastal Commission.

Spalding—A Cell
City of Beverly Hills, Los Angeles County, California
Ms. Sharp conducted a record search review and site visit for the candidate site in anticipation of changes to equipment in use at the existing facility. This study was conducted in accordance with Section 106 of the National Historic Preservation Act of 1966. The Spalding – A cell facility is at 9735 Wilshire Boulevard, Beverly Hills, California 90212 on top of the Beverly-Linden Medical Office Building.

State Route 132 West Freeway/Expressway- Phase 1, Caltrans District 10
Modesto, Stanislaus County, California
Ms. Sharp provided paleontology monitoring for the construction of approximately 4 miles of a four-lane freeway/expressway connecting SR-132 with Modesto on a new alignment south of Kansas Avenue from Dakota Avenue to east of Needham Street.

Windsor Pointe Project
Carlsbad, San Diego County, California
Ms. Sharp conducted cultural resources monitoring for the Windsor Pointe Project. The project involves the construction of 50 affordable multifamily housing units on two sites, which are aimed at providing housing for homeless and lower-income veterans and their families as well as for homeless people with severe mental illnesses. In total, the project would include two three-story buildings with a unit mix of 24 studio units, 17 one-bedroom units, seven two-bedroom units, and two three-bedroom units. To support the project, Ms. Sharp provided archaeological monitoring, meeting the qualifications required by the Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation.

Indian Health Clinic Project
Torres Martinez Desert Cahuilla Indian Reservation, Riverside and San Bernadino Counties, California
Ms. Sharp conducted cultural resources monitoring during ground-disturbing activities for the construction of a new Indian Health Clinic within the Torres Martinez Desert Cahuilla Reservation. Cultural resources monitoring followed the Final Cultural Resources Monitoring Plan and Native American Graves Protection and Repatriation Act Plan of Action for the project in compliance with Section 106 of the NHPA.

Jack Ranch Tract
San Luis Obispo County, California
Ms. Sharp provided archaeological and paleontological monitoring during construction for residential development of a 299-acre parcel just south of San Luis Obispo. The County of San Luis Obispo is the lead agency for this project under CEQA.

Ladera Park Regional Stormwater Improvements Project
Los Angeles, Los Angeles County, California
Ms. Sharp conducted cultural and paleontological resources monitoring during improvements to Ladera Park that will allow the capture and storage of stormwater runoff. Monitoring complied with program mitigation

measures and as defined by the County of Los Angeles, Department of Public Works (LACDPW), Project Management Division II. LACDPW was the project proponent and functioned as the lead agency under CEQA.

LAX United Airlines East Aircraft Maintenance and Ground Support Equipment Project
City of Los Angeles, Los Angeles County, California

Ms. Sharp provided archaeological and paleontological monitoring for the project, which consolidates and modernizes existing United Airlines aircraft maintenance and Ground Support equipment (GSE) facilities at LAX, allowing for more efficient and effective maintenance of existing aircraft and GSE. The project redeveloped a 37-acre site in the eastern portion of the airport with a new 411,000 sf. facility. The consolidation alters on and off-airport vehicular movements and movements on the airfield.

Los Angeles World Airports Terminal 4 and Terminal 5 Modernization Project
Los Angeles, Los Angeles County, California

Ms. Sharp provided archaeological and paleontological monitoring for a part of the project, which modernizes existing Terminal 4 and Terminal 5 including American Airlines, JetBlue and Spirit Airlines through a $1.6 billion modernization slated to end in 2027 that will create a centralized location for ticketing, screening and baggage claim with enhanced amenities for guests and will provide direct connection to the Automated People Mover train system**.** Archaeology and Paleontology Monitoring 2020.

San Juan Capistrano Memory Care Development Project
San Juan Capistrano, Orange County, California

Ms. Sharp conducted cultural and paleontological resources monitoring and coordinated Native American monitoring during construction of an adult memory care facility with associated parking and exterior lighting.

Florence Mills Apartments Project
Los Angeles, Los Angeles County, California

Ms. Sharp provided prehistoric and historic archaeological monitoring for the development of affordable and subsidized multifamily apartment buildings along the Historic Central Avenue Corridor in Southeast Los Angeles.

Gates Canyon Park
Calabasas, Los Angeles County, California

Ms. Sharp conducted cultural and paleontological resources monitoring during improvements to Gates Canyon Park to allow the capture and storage of stormwater runoff from an adjacent 105-acre residential area. Monitoring complied with program mitigation measures and as defined by the County of Los Angeles,

Department of Public Works (LACDPW), Project Management Division II. LACDPW was the project proponent and functioned as the lead agency under CEQA.

Los Angeles World Airports Police Facility Project
Los Angeles, Los Angeles County, California

Ms. Sharp conducted cultural and paleontological resources monitoring during construction of two L-shaped structures including a 64,000 sf, two-story police headquarters and a 108,000 sf, four-story parking garage. A 60,000 sf quad area will be located between the two structures. Both structures included partially subterranean levels. Monitoring was conducted during the grading phase of the project, prior to construction of the headquarters and parking garage structures. All work was completed in compliance with LAX Northside Plan Update Project Design Features, Commitments, and the Mitigation Monitoring and Reporting Program.

Dodd's Circle Survey
East Los Angeles, Los Angeles County, California

Ms. Sharp provided an archaeological survey for Sprint's proposed cell tower installation. The project proposed to install one new wooden pole and to install six new antennas, nine new Remote Radio Heads, and one new Microwave dish onto the proposed pole.

Corona Affordable Housing Project
City of Corona, Riverside County, California

Ms. Sharp conducted cultural and paleontological resources monitoring during grading for the development of affordable multifamily apartment buildings.

Archaeological and Paleontological Resources Training for the Los Angeles World Airports Utilities and LAMP Enabling Projects
City of Los Angeles, Los Angeles County, California

Ms. Sharp provided in-person archaeological and paleontological resources WEAP training to all construction personnel for the R23 A Street Project as part of the LAWA Utilities and Land Access Modernization Program Enabling Projects.

SR-46 Union Road Realignment, Caltrans District 5
Paso Robles, San Luis Obispo County, California

Ms. Sharp conducted an intensive pedestrian survey of accessible areas containing late Pleistocene alluvium and the Paso Robles Formation.

Hope Steet Bridge Housing Project
Los Angeles, Los Angeles County, California

Ms. Sharp conducted an intensive pedestrian survey for this project. The purpose of the study was to determine the potential effects to paleontological resources for the proposed temporary emergency homeless shelter. This project was a task order from an on-call contract with the Los Angeles Bureau of Engineering.

Woolsey Fire Emergency Monitoring
Malibu, Los Angeles County, California

As cultural resources monitor, Ms. Sharp conducted an emergency environmental survey and assessments of fire damaged pole locations for archaeological and historical resources prior replacement and also monitored ground-disturbance activities during the pole replacement.

Roosevelt Park Regional Stormwater Capture Project
Los Angeles, Los Angeles Couty, California

Ms. Sharp provided paleontological and archaeological monitoring for a project involving the construction of three diversion structures and pipelines, during all ground-disturbing activities in native sediments.

Subject: Geotechnical Investigation

Project: Proposed Self-Storage Facility
APN 0597-111-67
SEC Sun Mesa Drive & Newton Lane
Yucca Valley, California

Sladden Engineering is pleased to present the results of the geotechnical investigation performed for the storage facility proposed for the property located at the southeast corner of Sun Mesa Drive and Newton Lane in the Town of Yucca Valley, California. Our services were completed in accordance with our proposal for geotechnical engineering services dated November 15, 2024 and your authorization to proceed with the work. The purpose of our investigation was to explore the subsurface conditions at the site to provide recommendations for foundation design and the design of the various site improvements. Evaluation of environmental issues and hazardous wastes was not included within the scope of services provided.

The opinions, recommendations and design criteria presented in this report are based on our field exploration program, laboratory testing and engineering analyses. Based on the results of our investigation, it is our professional opinion that the proposed project should be feasible from a geotechnical perspective provided that the recommendations presented in this report are implemented in design and carried out through construction.

We appreciate the opportunity to provide service to you on this project. If you have any questions regarding this report, please contact the undersigned.

Respectfully submitted,

INTRODUCTION

This report presents the results of the geotechnical investigation performed by Sladden Engineering (Sladden) for the storage facility proposed for the property located at the southeast corner of Sun Mesa Drive and Newton Lane in the Town of Yucca Valley, California. The site is located at approximately 34.1669 degrees north latitude and 116.4207 degrees west longitude. The approximate location of the site is indicated on the Site Location Map (Figure 1).

Figure 1 (USGS, 2021)

Our investigation was conducted to evaluate the engineering properties of the subsurface materials, to evaluate their *in-situ* characteristics, and to provide engineering recommendations and design criteria for site preparation, foundation design and the design of various site improvements. This study also includes a review of published and unpublished geotechnical and geological literature regarding seismicity at and near the subject site.

PROJECT DESCRIPTION

Based on the provided Site Plan (DRP Enterprises, 2022), it is our understanding that the proposed project will consist of constructing a mini/self-storage facility and a 400-square-foot office on the subject property. Concrete flat work, landscape areas and various other associated site improvements. For our analyses, we expect that the proposed buildings will consist of reinforced masonry, concrete tilt-up, lightweight wood-frame or steel-frame structures supported on conventional shallow spread footings and concrete slabs-on-grade.

Based on the provided preliminary grading plans (DRP Enterprises, undated) grading will be limited to minor cuts of 4,970 cubic yards and 4,485 cubic yards of fill to accomplish the desired elevations and to provide adequate gradients for site drainage. This does not include the removal and re-compaction of the loose surface soil and primary foundation-bearing soil within the proposed foundation areas. Upon completion of precise grading plans, Sladden should be retained to verify that the recommendations presented within in this report are properly incorporated into the design of the proposed project.

Structural foundation loads were not available at the time of this report. Based on our experience with relatively lightweight structures, we expect that isolated column loads will be less than 50 kips and continuous wall loads will be less than 3.0 kips per linear foot. If these assumed loads vary significantly from the actual loads, we should be consulted to verify the applicability of the recommendations provided.

SCOPE OF SERVICES

The purpose of our investigation was to determine specific engineering characteristics of the surface and near-surface soil to develop foundation design criteria and recommendations for site preparation. Specifically, our site characterization consisted of the following tasks:

- Site reconnaissance to assess the existing surface conditions on and adjacent to the site.
- Drilling two (2) exploratory boreholes and four (4) percolation test holes to depths between approximately 5 and 21.5 feet bgs to characterize the subsurface soil conditions. Representative samples of the soil were classified in the field and retained for laboratory testing and engineering analyses.
- Performing laboratory testing on selected samples to evaluate their engineering characteristics.
- Reviewing geologic literature and discussing geologic hazards.
- Performing site-specific ground motion procedures for the subject property.
- Performing engineering analyses to develop recommendations for foundation design and site preparation.
- The preparation of this report summarizing our work at the site.

SITE CONDITIONS

The subject property is located at the Southeast corner of Sun Mesa Drive and Newton Lane in the Town of Yucca Valley, California. The property is formally identified by the County of San Bernardino as APN 0597-111-67 and occupies a total area of approximately 4.34 acres. At the time of our investigation, the site was undeveloped and covered in scattered native low-growth desert vegetation. The site is near the elevation of the adjacent properties and roadways and is bounded by Sun Mesa Drive to the north, undeveloped property to the east, commercial property to the south, and Newton Lane to the west.

Based on our review of the Yucca Valley North 7.5-Minute Quadrangle Map (USGS, 2021), the site is situated at an approximate elevation of 3,719 feet above mean sea level (MSL).

No natural ponding of water or surface seeps were observed at or near the sites during our investigation conducted on December 3, 2024 Site drainage appears to be controlled via sheet flow and surface infiltration. A blue line stream is located approximately 0.40 km northwest of the project site.

GEOLOGIC SETTING

The site is located within the Transverse Ranges Geomorphic province. The Transverse Ranges are characterized by roughly east-west trending, convergent (north-south compressional) deformational structural features. The convergent deformational features of the Transverse Ranges are a result of north-south crustal shorting due to plate tectonics, locally folding and uplifting of the mountains and lowering of the intervening valleys, along with propagation of thrust faults (including blind thrusts) and in filling of the valley basins with sediments. The Transverse Ranges are considered to be one of the most rapidly rising orogenic regions on earth (CGS, 2002). The site has been mapped by Dibblee (1967) to be immediately underlain by Quaternary-age older alluvium (Qoa) and Quaternary-age older gravel. The regional geologic setting for the site vicinity is presented on the Regional Geologic Map (Figure 2).

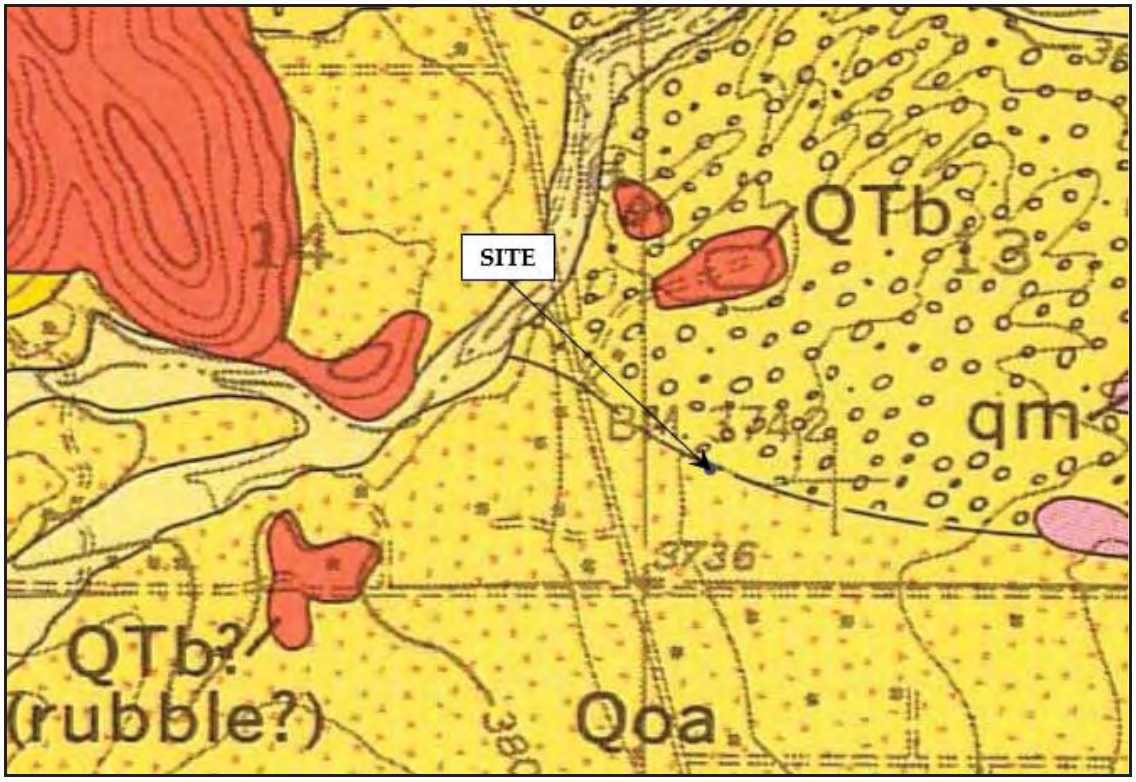

Figure 2 (Dibblee, 1997)

SUBSURFACE CONDITIONS

The subsurface conditions at the site were investigated by drilling two (2) exploratory boreholes and four (4) percolation test holes on the property depths between approximately 5 and 21.5 feet bgs. The approximate locations of the boreholes are illustrated on the Exploration Location Photograph (Figure 3). The boreholes were advanced using a truck-mounted Mobile B-61 drill-rig equipped with 8-inch outside diameter hollow stem augers. A representative of Sladden was on-site to log the materials encountered and retrieve samples for laboratory testing and engineering analysis.

During our field investigation, native alluvium was encountered to the maximum explored depth of 21.5 feet bgs. Generally, the native earth materials consist of granular soil was found to be dry, medium dense, and grayish brown in in-situ color.

The final logs represent our interpretation of the contents of the field logs, and the results of the laboratory observations and tests of the field samples. The final logs are included in Appendix A of this report. The stratification lines represent the approximate boundaries between soil types although the transitions may be gradual and variable across the site.

Figure 3

GROUNDWATER CONDITIONS

Groundwater was not encountered to the maximum deplored depth of approximately 21.5 feet bgs during our field investigation. Based on the depth to groundwater in the immediate project vicinity (CDWR, 2024), it is our opinion that groundwater should not be a factor in the design or construction of the proposed project. The following table provides a summary of the historic high groundwater depths in the project vicinity.

TABLE 1
GROUNDWATER DEPTHS

STATE WELL	LAT/LONG	DISTANCE (KM)	DATE	DEPTH (FT)
01N05E14J001S	34.1697/-116.4255	0.52	01/23/1958	167

SEISMICITY AND FAULTING

The southwestern United States is a tectonically active and structurally complex region, dominated by northwest-trending dextral faults. The faults of the region are often part of complex fault systems, composed of numerous subparallel faults that splay or step from main fault traces. Strong seismic shaking could be produced by any of these faults during the design life of the proposed project.

We consider the most significant geologic hazard to the project to be the potential for moderate to strong seismic shaking that is likely to occur during the design life of the project. The proposed project is located in the highly seismic Southern California region within the influence of several fault systems that are considered to be active or potentially active. A Holocene-active fault is defined by the State of California as a "sufficiently active and well-defined fault" that has exhibited surface displacement within the Holocene epoch (about the last 11,000 years). A pre-Holocene fault is defined by the State as a fault with a history of movement within Pleistocene time (between 11,000 and 1.6 million years ago).

As previously stated, the site has been subjected to strong seismic shaking related to active faults that traverse through the region. Some of the more significant seismic events near the subject site within recent times include: M6.0 North Palm Springs (1986), M6.1 Joshua Tree (1992), M7.3 Landers (1992), M6.2 Big Bear (1992), M7.1 Hector Mine (1999), and M7.1 Ridgecrest (2019).

Table 2 lists the closest known potentially active faults that was generated in part using fault parameters from The Revised 2002 California Probabilistic Seismic Hazard Maps (Cao et al, 2003), 2008 National Seismic Hazard Maps – Source Parameters (USGS, 2008) and the Fault and Fold Database of the United States (USGS, 2024a). This table does not identify the probability of reactivation or the on-site effects from earthquakes occurring on any faults in the region.

TABLE 2 CLOSEST KNOWN ACTIVE FAULTS		
Fault Name	Distance (Km)	Maximum Event
Landers*	0	7.3

BACKGROUND INFORMATION RELATIVE TO THE ALQUIST-PRIOLO ACT

The objective of the Alquist-Priolo Act (Act) is to regulate development near active faults so as to mitigate the hazard of surface fault rupture (Hart and Bryant, 1997). Current law prohibits the construction of habitable structures across active fault traces. Therefore, the evaluation of the potential ground rupture hazard to establish building setbacks is required by reviewing agencies. In addition, the Act mandates that structures intended for human occupancy of over 2,000 person-hours per year not be built over known active faults. A Holocene-active fault is defined by the California Geological Survey as a fault that has experienced surface displacement within the Holocene Epoch (approximately the last 11,700 years). A pre-Holocene fault is defined by the State of California whose recency of past movement is older than 11,700 years. In areas of known or suspected Holocene-active or potentially active faults, and prior to site development, the actual location of an active fault(s) needs to be ascertained, such that appropriate setbacks from the fault(s) can be determined and Restricted Use Zones (RUZs) or no building areas established. Not only is it important to identify the fault location, but it is also equally important to verify areas where no faults exist.

To evaluate on-site fault hazards, subsurface exploration by excavation of trenches is performed to expose the soil and rock profiles and to allow for the direct observation of existing shallow/near-surface faults. Trenches are oriented generally perpendicular to the regional fault trends and are logged in detail by Geologists experienced in fault rupture hazard studies. Trench depths are controlled by the age of the surficial sediments or rocks exposed within the trench. In general, it is desirable to have exposed soil profiles spanning at least the last 11,000 years, or Holocene Epoch. Soil profiles with Holocene and older profiles can then allow for the determination of the relative age of the encountered fault. If the fault disrupts Holocene sediments, then the fault is determined active and building setbacks are established accordingly. Conversely, if the fault is buried by pre-Holocene sediments or rock, then the fault can be deemed inactive or potentially active, with construction of non-critical structures allowed over or immediately adjacent to the fault. In many cases, the sediments exposed may only cover a portion of the Holocene epoch, such that judgment and risk assessments are professed relative to the age of the faults and suitability of the site for development. The success of the risk assessments is dependent upon the quality of the data collected, local agency requirements, and the experience of the Professional Geologists performing the work.

Building setback distances from the fault, generally mandated by the Act to be approximately 50 feet, are dependent upon the confidence or degree of accuracy of the fault location across the site: the higher the degree of confidence, the lesser the setback requirements. The size of the property, number of faults, number of exploration trenches defining the fault location(s), survey quality, and local regulatory agency requirements, affect the setback distance requirements.

The Act also allows for jurisdictions to establish policies and criteria that are more restrictive than the Act.

SITE-SPECIFIC GROUND MOTION PARAMETERS

Sladden has reviewed the 2022 California Building Code (CBC) and ASCE7-16 and developed site-specific ground motion parameters for the subject site. The project Seismic Design Maps and site-specific ground motion parameters are summarized in the following table and included within Appendix C. The project Structural Engineer should verify that all design parameters provided are applicable for the subject project.

TABLE 3
GROUND MOTION PARAMETERS

Latitude / Longitude	34.1669/-116.4207
Risk Category	II
Site Class	D
Code Reference Documents	ASCE 7-16; Chapter 11 & 21

Description	Type	Map Based	Site-Specific
MCE_R Ground Motion (0.2 second period)	S_S	2.162	---
MCE_R Ground Motion (1.0 second period)	S_1	0.766	---
Site-Modified Spectral Acceleration Value	S_{MS}	2.162	**2.466**
Site-Modified Spectral Acceleration Value	S_{M1}	Null	**1.902**
Numeric Seismic Design Value at 0.2 second SA	S_{DS}	1.441	**1.644**
Numeric Seismic Design Value at 1.0 second SA	S_{D1}	Null	**1.268**
Site Amplification Factor at 0.2 second	F_a	1.0	**1.0**
Site Amplification Factor at 1.0 second	F_v	Null	**2.5**
Site Peak Ground Acceleration	PGA_M	1.013	**0.938**

GEOLOGIC HAZARDS

The subject site is located in an active seismic zone and will likely experience strong seismic shaking during the design life of the proposed project. In general, the intensity of ground shaking will depend on several factors including; the distance to the earthquake focus, the earthquake magnitude, the response characteristics of the underlying materials, and the quality and type of construction. Geologic hazards and their relationship to the site are discussed below.

I. Surface Rupture. Surface rupture is expected to occur along preexisting, known active fault traces. However, surface rupture could potentially splay or step from known active faults or rupture along unidentified traces. Based on our review of CGS (2024) and CDMG (1993), the site is located within the Landers fault zone (Figure 4). ***In accordance with current State of California guidelines, subsurface fault studies should be performed to identify the active surface rupture potential. Habitable structures are not permitted to be constructed across active fault splays. Local planning agencies are responsible for regulating and enforcing the applicable laws and ordinances regarding building and construction in accordance with state and local requirements. This includes oversight regarding the construction of structures not intended for human occupancy on parcels delineated to be within the fault zone. Based on the nature of the project, it is our understanding the proposed self-storage units and office are not intended for human occupancy or to exceed 2,000 person-hours per year.***

II. Ground Shaking. The site has been subjected to past ground shaking by faults that traverse through the region. Strong seismic shaking from nearby active faults is expected to produce strong seismic shaking during the design life of the proposed project. Based on site-specific ground motion parameters developed for the property (Appendix C), the site-modified peak ground acceleration (PGAm) is estimated to be 0.938g.

III. Liquefaction. Liquefaction is the process in which loose, saturated granular soil loses strength as a result of cyclic loading. The strength loss is a result of a decrease in granular sand volume and a positive increase in pore pressures. Generally, liquefaction can occur if all of the following conditions apply; liquefaction-susceptible soil, groundwater within a depth of 50 feet or less, and strong seismic shaking. Based on the depth of groundwater greater than 50 feet, risks associated with liquefaction should be considered "low".

IV. Tsunamis and Seiches. Because the site is situated at an inland location and is not immediately adjacent to any impounded bodies of water, risks associated with tsunamis and seiches are considered "negligible".

V. Slope Failure, Landsliding, Rock Falls. Slope instability in the form of landslides and rock falls were not observed at or near the subject site. The site is situated on relatively flat ground and is not located immediately adjacent to any slopes. As such, risks associated with slope instability (landslides, mass wasting, and rock falls) are considered "negligible".

VI. Expansive Soil. Generally, the site soil consists of silty sand (SM)). Based on the results of our laboratory testing (EI=1), the materials underlying the site are considered non-expansive.

VII. Static Settlement. Static settlement resulting from the anticipated foundation loads should be tolerable provided that the recommendations included in this report are considered in foundation design and construction. The ultimate static settlement is expected to be less than 1 inch when using the recommended allowable bearing pressures. As a practical matter, differential static settlement between footings can be assumed as one-half of the total static settlement.

VIII. Subsidence. Land subsidence can occur in valleys where aquifer systems have been subjected to extensive groundwater pumping, such that groundwater pumping exceeds groundwater recharge. Generally, pore water reduction can result in a rearrangement of skeletal grains and could result in elastic (recoverable) or inelastic (unrecoverable) deformation of an aquifer system. Locally, no fissures or other surficial evidence of subsidence were observed at or near the subject site.

IX. Debris Flows. Debris flows are viscous flows consisting of poorly sorted mixtures of sediment and water and are generally initiated on slopes steeper than approximately six horizontal to one vertical (6H:1V) (Boggs, 2001). Based on the flat nature of the site and the composition of the surface soil, we judge that risks associated with debris flows should be considered "negligible".

X. Flooding and Erosion. No signs of flooding or erosion were observed during our field investigation. Risks associated with flooding and erosion should be evaluated and mitigated by the project design Civil Engineer.

CONCLUSIONS

Based on the results of our investigation, it is our professional opinion that the project should be feasible from a geotechnical perspective provided that the recommendations included in this report are incorporated into design and carried out through construction. The main geotechnical concerns are the presence of loose and potentially compressible near-surface native soil throughout the project site, and the potentially active fault splay located on the property.

We recommend that remedial work within the proposed new building areas include over-excavation and re-compaction of the primary foundation-bearing soil to provide uniform foundation support and to help mitigate potential differential settlements. Specific recommendations for foundation area preparation are presented in the Earthwork and Grading section of this report.

As previously stated, the subject parcel is located within a State of California delineated fault zone (Figure 4). In accordance with current State of California guidelines, habitable structures are not permitted to be constructed within the fault zone unless the absence of active faulting can be demonstrated. Based on the nature of the proposed project, it is our understanding the proposed self-storage units and office are not intended for human occupancy or to exceed 2,000 person-hours per year. If the proposed project is expected to exceed 2,000 persons-hours or vary significantly, Sladden should be contacted to re-evaluate the necessity for a subsurface fault study.

Caving did occur to varying degrees within each of our exploratory bores and the surface soil may be susceptible to caving within deeper excavations. All excavations should be constructed in accordance with the normal CalOSHA excavation criteria. Based on our observations of the materials encountered, we anticipate that the subsoil will conform to that described by CalOSHA as Type C. Soil conditions should be verified in the field by a "Competent person" employed by the Contractor. The following recommendations present more detailed design criteria that have been developed based on our field and laboratory investigation.

EARTHWORK AND GRADING

All earthwork including excavation, backfill, and preparation of the primary foundation and/or slab bearing soil should be performed in accordance with the geotechnical recommendations presented in this report and portions of the local regulatory requirements, as applicable. All earthwork should be performed under the observation and testing of a qualified soil engineer. The following geotechnical engineering recommendations for the proposed project are based on observations from the field investigation program, laboratory testing, and geotechnical engineering analyses.

a. Site Clearing: Areas to be graded should be cleared of vegetation, associated root systems, underground utilities, and debris. All areas scheduled to receive fill should be cleared of old fills and any irreducible matter. The strippings should be removed off-site, or stockpiled for later use in landscape areas. Voids left by obstructions should be properly backfilled in accordance with the compaction recommendations of this report.

b. Preparation of the Building Foundation Areas. To provide firm and uniform foundation-bearing conditions, we recommend over-excavation and re-compaction throughout the proposed building and foundation areas. All artificial fill soil and native low density near surface native soil should be removed to a depth of at least 2 feet below existing grade or 2 feet below the bottom of the footings, whichever is deeper. Remedial grading should extend laterally, a minimum of five feet beyond the building limits where possible. The native soil exposed by over-excavation should be scarified, moisture conditioned to near optimum moisture content, and compacted to at least 90 percent relative compaction prior to fill placement. The previously removed soil may then be replaced as compacted engineered soil in accordance with the recommendations below.

c. Compaction: Soil to be used as engineered fill should be free of organic material, debris, and other deleterious substances. All fill material should be placed in thin lifts, not exceeding six inches in a loose condition. If import fill is required, the material should be of a low to non-expansive nature and should meet the following criteria:

Plastic Index	Less than 12
Liquid Limit	Less than 35
Percent Soil Passing #200 Sieve	Between 15% and 35%
Maximum Aggregate Size	3 inches

The subgrade and all fill should be compacted with acceptable compaction equipment, to at least 90 percent relative compaction. The bottom of the exposed subgrade should be observed by a representative of Sladden Engineering prior to fill placement. Compaction testing should be performed on all lifts to ensure proper placement of the fill materials. Table 4 provides a summary of the excavation and compaction recommendations.

TABLE 4 SUMMARY OF RECOMMENDATIONS	
*Remedial Grading	Over-excavation and re-compaction within the building envelope and extending laterally for 5 feet beyond the building limits where possible and to a minimum of 2 feet below existing grade or 2 feet below the bottom of the footings, whichever is deeper.
Native / Import Engineered Fill	Place in thin lifts not exceeding 6 inches in a loose condition, at near optimum moisture content and compact to a minimum of 90 percent relative compaction.
Asphalt Concrete Sections	Compact the top 12 inches to at least 95 percent compaction at near optimum moisture content.

*Actual depth may vary and should be determined by a representative of Sladden Engineering in the field during construction.

d. Shrinkage and Subsidence**:** Volumetric shrinkage of the material that is excavated and replaced as controlled compacted fill should be anticipated. We estimate that this shrinkage should be between 10 and 20 percent. Subsidence of the surfaces that are scarified and compacted should be between 1 tenth and 2 tenths of a foot. This will vary depending upon the type of equipment used, the moisture content of the soil at the time of grading and the actual degree of compaction attained.

CONVENTIONAL SHALLOW SPREAD FOOTINGS

Conventional shallow spread footings are expected to provide adequate support for the proposed structures. All footings should be founded upon properly compacted engineered fill soil and should have a minimum embedment depth of 12 inches measured from the lowest adjacent finished grade. Continuous footings and isolated pad footings should have minimum widths of 12 inches and 24 inches, respectively. Continuous footings and isolated pad footings supported upon properly compacted engineered fill soil may be designed using allowable (net) bearing pressures of 1800 and 2000 pounds per square foot (psf), respectively. Allowable increases of 200 psf for each additional 1 foot of width and 250 psf for each additional 6 inches of depth may be used if desired. The maximum allowable bearing pressure should be 2500 psf. The allowable bearing pressures are intended for combined dead and sustained live loads. The allowable bearing pressures may be increased by one-third when considering transient live loads, including seismic and wind forces.

Based on the recommended allowable bearing pressures, the total static settlement of the shallow footings is anticipated to be less than one inch provided foundation preparations conform to the recommendations described in this report. Static differential settlement is anticipated to be approximately one-half of the total settlement for similarly loaded footings spaced up to approximately 40 feet apart.

Lateral load resistance for the spread footings will be developed by passive pressure against the sides of the footings below grade and by friction acting at the base of the footings. An allowable passive pressure of 250 psf per foot of depth may be used for design purposes. An allowable coefficient of friction 0.45 may be used for dead and sustained live loads to compute the frictional resistance of the footing placed directly on compacted fill. Under seismic and wind loading conditions, the passive pressure and frictional resistance may be increased by one-third.

All footing excavations should be observed by a representative of the project geotechnical consultant to verify adequate embedment depths prior to placement of forms, steel reinforcement, or concrete. The excavations should be trimmed neat, level and square. All loose, disturbed, sloughed, or moisture-softened soils and/or any construction debris should be removed prior to concrete placement. All footings should be reinforced in accordance with the project Structural Engineer's recommendations.

SLABS-ON-GRADE

To provide uniform and adequate support, concrete slabs-on-grade must be placed on properly compacted engineered fill soil as outlined in the previous sections of this report. The slab subgrade should remain near optimum moisture content and should not be permitted to dry prior to concrete placement. Slab subgrade should be firm and unyielding. Disturbed soil should be removed and replaced with engineered fill soil compacted to a minimum of 90 percent relative compaction.

Slab thickness and reinforcement should be determined by the Structural Engineer. We recommend a minimum slab thickness of 4.0 inches and minimum reinforcement of #3 bars at 18 inches on center in both directions. All slab reinforcement should be supported on concrete chairs to ensure that reinforcement is placed at slab mid-height. Final floor slab design and reinforcement should be determined by the Structural Engineer.

Slabs with moisture-sensitive surfaces should be underlain with a moisture vapor retarder consisting of a polyvinyl chloride membrane such as 10-mil visqueen, or equivalent. All laps within the membrane should be sealed and at least 2 inches of clean sand should be placed over the membrane to promote uniform curing of the concrete. To reduce the potential for punctures, the membrane should be placed on a pad surface that has been graded smooth without any sharp protrusions. If a smooth surface can not be achieved by grading, consideration should be given to placing a thin leveling course of sand across the pad surface prior to placement of the membrane.

RETAINING WALLS

Minor retaining walls may be necessary to complete the proposed construction. Cantilever retaining walls may be designed using "active" pressures. Active pressures may be estimated using an equivalent fluid weight of 35 pcf for level native backfill soil acting in a triangular pressure distribution with drained backfill conditions. "At Rest" pressures should be utilized for restrained walls. At rest pressures may be estimated using an equivalent fluid weight of 55 pcf for native backfill soil with level drained backfill conditions.

We recommend that a back drain system be provided behind all retaining walls or that the walls be designed for full hydrostatic pressures. The back drains should consist of a heavy walled, four-inch diameter, perforated pipe sloped to drain to outlets by gravity, and of clean, free-draining, three-quarter to one-and-a-half-inch crushed rock or gravel. The crushed rock or gravel should extend to within one foot of the surface. The upper one foot should be backfilled with compacted, fine-grained soil to exclude surface water. A Mirafi 140N (or equivalent) filter cloth should be placed between the on-site native material and the drain rock.

We recommend that the ground surface behind retaining walls be sloped to drain. Under no circumstances should the surface water be diverted into back drains. Where migration of moisture through walls would be detrimental, the walls should be waterproofed.

CORROSION SERIES

The soluble sulfate concentrations of the surface soil were determined to be 20 parts per million (ppm). The soil falls within the "negligible-S0" sulfate exposure category. The use of Type V cement and special sulfate-resistant concrete mixes may not be necessary. The soluble sulfate content of the surface soil should be reevaluated after grading and appropriate concrete mix designs should be established based upon post-grading test results.

The pH level of the surface soil was determined to be 7.7. Based on soluble chloride concentration testing (80 ppm) the falls within the "C1" chloride exposure category. The minimum resistivity of the surface soil was found to be 6,700 that suggests the site soil is considered to have a "low" corrosion potential with respect to ferrous metal installations. A corrosion expert should be consulted regarding appropriate corrosion protection measures for corrosion-sensitive installations.

UTILITY TRENCH BACKFILL

All utility trench backfill should be compacted to a minimum of 90 percent relative compaction. Trench backfill materials should be placed in lifts no greater than six inches in a loose condition, moisture conditioned (or air-dried) as necessary to achieve near optimum moisture content, and mechanically compacted to a minimum of 90 percent relative compaction. A representative of the project soil engineer should test the backfill to verify adequate compaction.

EXTERIOR CONCRETE FLATWORK

To provide uniform support and minimize settlement related cracking of concrete flatwork, the subgrade soil within concrete flatwork areas should be compacted to a minimum of 90 percent relative compaction. A representative of the project geotechnical consultant should observe and verify the density and moisture content of the soil prior to concrete placement.

DRAINAGE

All final grades should be provided with positive gradients away from foundations to provide rapid removal of surface water runoff to an adequate discharge point. No water should be allowed to be pond on or immediately adjacent to foundation elements. To reduce water infiltration into the subgrade soil, surface water should be directed away from building foundations to an adequate discharge point. Subgrade drainage should be evaluated upon completion of the precise grading plans and in the field during grading.

LIMITATIONS

The findings and recommendations presented in this report are based upon an interpolation of the soil conditions between the exploratory locations and extrapolation of these conditions throughout the proposed building areas. Should conditions encountered during grading appear different than those indicated in this report, this office should be notified.

The use of this report by other parties or for other projects is not authorized. The recommendations of this report are contingent upon monitoring of the grading operation by a representative of Sladden Engineering. All recommendations are considered to be tentative pending our review of the grading operation and additional testing, if indicated. If others are employed to perform any soil testing, this office should be notified prior to such testing to coordinate any required site visits by our representative and to assure indemnification of Sladden Engineering.

We recommend that a pre-job conference be held on the site prior to the initiation of site grading. The purpose of this meeting will be to assure a complete understanding of the recommendations presented in this report as they apply to the actual grading performed.

ADDITIONAL SERVICES

Once completed, final project plans and specifications should be reviewed by use prior to construction to confirm that the full intent of the recommendations presented herein have been applied to design and construction. Following review of plans and specifications, observation should be performed by the Soil Engineer during construction to document that foundation elements are founded on/or extend into the properly compacted soil, and that suitable backfill soil is placed upon competent materials and properly compacted at the recommended moisture content.

Tests and observations should be performed during grading by the Soil Engineer or his representative in order to verify that the grading is being performed in accordance with the project specifications. Field density testing shall be performed in accordance with acceptable ASTM test methods. The minimum acceptable degree of compaction should be 90 percent for engineered fill soil and 95 percent for Class II aggregate base as obtained by ASTM Test Method D1557. Where testing indicates insufficient density, additional compactive effort shall be applied until retesting indicates satisfactory compaction.

APPENDIX A

FIELD EXPLORATION

APPENDIX A

FIELD EXPLORATION

For our field investigation two (2) exploratory bores and four (4) percolation test holes were excavated on the subject site. Continuous logs of the materials encountered were made by a representative of Sladden Engineering. Materials encountered in the bores were classified in accordance with the Unified Soil Classification System.

Representative undisturbed samples were obtained within our borings by driving a thin-walled steel penetration sampler (California split spoon sampler) or a Standard Penetration Test (SPT) sampler with a 140 pound automatic-trip hammer dropping approximately 30 inches (ASTM D1586). The number of blows required to drive the samplers 18 inches was recorded in 6-inch increments and blowcounts are indicated on the boring logs.

The California samplers are 3.0 inches in diameter, carrying brass sample rings having inner diameters of 2.5 inches. The standard penetration samplers are 2.0 inches in diameter with an inner diameter of 1.5 inches. Undisturbed samples were removed from the sampler and placed in moisture sealed containers in order to preserve the natural soil moisture content. Bulk samples were obtained from the excavation spoils and samples were then transported to our laboratory for further observations and testing.

APPENDIX B

LABORATORY TESTING

APPENDIX B

LABORATORY TESTING

Representative bulk soil samples were obtained in the field and returned to our laboratory for additional observations and testing. Laboratory testing was generally performed in two phases. The first phase consisted of testing in order to determine the compaction of the existing natural soil and the general engineering classifications of the soils underlying the site. This testing was performed in order to estimate the engineering characteristics of the soil and to serve as a basis for selecting samples for the second phase of testing. The second phase consisted of soil mechanics testing. This testing including consolidation, shear strength and expansion testing was performed in order to provide a means of developing specific design recommendations based on the mechanical properties of the soil.

CLASSIFICATION AND COMPACTION TESTING

Maximum Density-Optimum Moisture Determinations: Representative soil types were selected for maximum density determinations. This testing was performed in accordance with the ASTM Standard D1557, Test Method A. Graphic representations of the results of this testing are presented in this appendix. The maximum densities are compared to the field densities of the soil in order to determine the existing relative compaction to the soil.

Classification Testing: Soil samples were selected for classification testing. This testing consists of mechanical grain size analyses. This provides information for developing classifications for the soil in accordance with the Unified Soil Classification System which is presented in the preceding appendix. This classification system categorizes the soil into groups having similar engineering characteristics. The results of this testing is very useful in detecting variations in the soil and in selecting samples for further testing.

SOIL MECHANIC'S TESTING

Expansion Testing: One (1) bulk sample was selected for Expansion testing. Expansion testing was performed in accordance with the UBC Standard 18-2. This testing consists of remolding 4-inch diameter by 1-inch thick test specimens to a moisture content and dry density corresponding to approximately 50 percent saturation. The samples are subjected to a surcharge of 144 pounds per square foot and allowed to reach equilibrium. At that point the specimens are inundated with distilled water. The linear expansion is then measured until complete.

Direct Shear Testing: One (1) bulk sample was selected for Direct Shear testing. This test measures the shear strength of the soil under various normal pressures and is used to develop parameters for foundation design and lateral design. Tests were performed using a recompacted test specimen that was saturated prior to tests. Tests were performed using a strain controlled test apparatus with normal pressures ranging from 800 to 2300 pounds per square foot.

Corrosion Series Testing: The soluble sulfate concentrations of the surface soil were determined in accordance with California Test Method Number (CA) 417. The pH and Minimum Resistivity were determined in accordance with CA 643. The soluble chloride concentrations were determined in accordance with CA 422.

9.14.060: MINI-/SELF-STORAGE FACILITIES:

A. General: The only commercial activities permitted on the site of a self-service storage facility shall be rental of storage bays and pick up and deposit of goods and/or property in dead storage. Storage bays shall not be used to: manufacture, fabricate or process goods; service or repair vehicles, boats, small engines or electrical equipment, or to conduct similar repair activities; conduct garage sales or retail sales of any kind; or conduct any other commercial or industrial activity on the site.

B. Security Quarters Permitted: Residential quarters for security purposes may be established on the site.

C. Bays Have No Legal Address: Individual storage bays or private postal boxes within a self-service storage facility shall not be considered a premises for the purpose of assigning a legal address in order to obtain an occupational license or other governmental permit or license to do business.

D. Outside Storage:

1. Except as provided in this section, all property stored on site shall be entirely within enclosed buildings.
2. Open storage of private recreational vehicles and dry storage of recreational boats for personal use shall be permitted within a self-service storage facility provided that the following is met:
   a. Such storage shall take place only within a designated area. The area so designated shall be clearly delineated upon the site plan accompanying the application;
   b. The open storage area shall not exceed twenty five percent (25%) of the buildable area of the site;
   c. The open storage area shall be entirely screened from view from adjacent residential areas and all street rights of way by a solid building wall or a masonry wall with a minimum height of eight feet (8');
   d. Vehicles shall not be stored within the area set aside for minimum building setbacks; and
   e. No vehicle maintenance, washing or repair shall be permitted on site. Recreational boats stored on the site shall be placed and maintained upon wheeled trailers. No dry stacking of boats shall be permitted on site.

E. Minimum Lot Size: Notwithstanding any other provision of this code the minimum lot size for a self-storage facility shall be one acre.

F. Separation Between Storage Buildings: If separate buildings are constructed, there shall be a minimum ten foot (10') setback between individual buildings within the facility.

G. Maximum Bay Size: The maximum size of a storage bay shall be five hundred (500) square feet.

H. Maximum Building Height: With the exception of a structure used as a security quarters, the maximum height of a self-service storage facility shall be one story. The height of the building shall not exceed twenty feet (20'), except for any architectural features located along the street entrance to the facility. In addition, a parapet wall shall be constructed to screen roof mounted air conditioning and other equipment, if any. The combined height of the building and the parapet wall shall not exceed twenty five feet (25').

I. Parking Requirements: See , "Parking And Loading Regulations", of this title for ministorage parking requirements.

J. Miscellaneous Requirements:

1. Outdoor Lighting: All outdoor lighting shall meet the requirements of title 8,, "Outdoor Lighting", of this code.
2. Loudspeakers: Exterior loudspeakers or paging equipment shall not be permitted on the site.
3. Bay Doors: Storage bay doors shall not face any abutting property which is residentially zoned, nor shall they be visible from any adjacent residential property or any street right of way.
4. Barbed Wire: Barbed or similar wire may be used for security purposes, but it shall not be visible from any adjacent residential property or any street right of way.
5. Architectural Treatment: The exterior facades of all structures shall receive uniform architectural treatment, including stucco and painting of surfaces. All structures adjacent to properties designated with a residential land use shall have a pitched roof or other treatment comparable to the adjacent residential development. (Ord. 253, 12-16-2014)

1 INTRODUCTION

Ninyo & Moore was retained by DRP Enterprises, LLC (herein referred to as the client) to perform a Phase I Environmental Site Assessment (ESA) of the property located at the southeast corner of Sun Mesa Drive and Newton Lane in Yucca Valley, California and identified by the County of San Bernardino Accessor's Parcel Number (APN) 0597-111-67-0000 (hereinafter referred to as the site). The following sections discuss the purpose, the involved parties, the scope of services, and the limitations and exceptions associated with this Phase I ESA.

1.1 Purpose

The objective of this ESA is to identify, to the extent feasible pursuant to the process described in ASTM International (ASTM) Standard Practice E1527, recognized environmental conditions (RECs), which are defined by ASTM as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." Ninyo & Moore performed this ESA in conformance with the scope and limitations of ASTM E1527-21.

Identification of RECs fall into the following three categories: existing RECs (as defined above); Historical RECs (HRECs); or Controlled RECs (CRECs). HRECs and CRECs are defined as follows:

- **HREC** – An HREC is defined as "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). An example of an HREC may be a former gas station where a release of gasoline had occurred, but the site was cleaned up to an unrestricted land use standard.

- **CREC** – A CREC is defined as a "recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations). An example of a CREC could be a former gas station where a release of gasoline has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria.

A *de minimis* condition is defined by ASTM as "a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition."

1.2 Scope of Services

Ninyo & Moore's scope of services for this Phase I ESA included the activities listed below.

- Reviewed physical setting and background information.
- Performed a site reconnaissance.
- Reviewed federal, state, tribal, and local regulatory agency databases for the site and for properties located within a specified radius of the site.
- Reviewed reasonably ascertainable local regulatory agency files for the site, as applicable.
- Reviewed historical information for the site, such as historical aerial photographs, historical topographic maps, reverse street directories, Sanborn fire insurance maps, and building records, as available.
- Reviewed user-provided information, as available.
- Interviewed the property owner representative and tenant regarding the environmental status of the site.
- Performed a preliminary vapor encroachment screen to evaluate the potential for vapor encroachment conditions.
- Prepared this Phase I ESA report, summarizing findings and providing opinions and conclusions regarding RECs at the site.

1.3 Significant Assumptions

Ninyo & Moore assumes that the information provided by the third-party environmental database vendor, regulatory agencies, and interviewees and that was utilized for this report provided adequate and accurate information. No other significant assumptions were made during the preparation of this report.

1.4 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard of care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore

should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or human activities at the subject site or nearby properties. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control. Ninyo & Moore cannot warrant or guarantee that not finding indicators of any particular hazardous substance means that this particular hazardous substance or any other hazardous substances do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5 Special Terms and Conditions

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, unless otherwise indicated in this report, this Phase I ESA does not include analysis of the following, which is not intended to be all-inclusive: asbestos-containing materials (unrelated to releases into the environment), biological agents, cultural and historic resources, ecological resources, emerging contaminants, endangered species, health and safety, high voltage power lines, indoor air quality (unrelated to releases of hazardous substances or petroleum products into the environment), industrial hygiene, lead-based paint (unrelated to releases into the environment), lead in drinking water, methane gas, mold, polychlorinated biphenyl (PCB)-containing building materials, radon, regulatory compliance, or wetlands.

1.6 User Reliance

This report may be relied upon by, and is intended exclusively for, the client and its assigns. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than the above-referenced client is undertaken at said parties' sole risk.

1.7 Involved Parties

Mr. Gabriel Haro, Senior Staff Geologist, performed regulatory and historical research and conducted the site reconnaissance on October 14, 2024. Mr. Travis Meier, Principal Environmental Scientist, performed project oversight and quality review.

2 SITE DESCRIPTION

The following table provides a general description of the site. Photographs taken during the site reconnaissance are provided in Appendix A.

Table 1 – General Site Setting

General Site Setting	Description
Location	The site is located at the southeast corner of Sun Mesa Drive and Newton Lane in Yucca Valley, California (Figure 1).
Assessor Parcel No. (APN)	0597-111-67-0000 (County of San Bernardino)
Property Owner	Robert Billings (as reported by Environmental Data Resources)
Size (approximate)	4.5 acres
Structures / Site Use / Occupants	The site is undeveloped.
Roads	Roads are not present on the site. The site is accessible from Sun Mesa Drive to the north and Newton Lane to the west.
Heating and Cooling Systems	Heating and cooling systems are not present at the site.
Electricity Provider	Southern California Edison (vicinity)
Natural Gas Provider	Southern California Gas (vicinity)
Potable Water and Sewer Disposal Provider	Hi Desert Water District (vicinity)
Site Vicinity Description	The site vicinity is primarily comprised of undeveloped land, commercial properties, and industrial properties.

3 USER-PROVIDED INFORMATION

Mr. Daniel Patneaude, Civil Engineer and owner of DRP Enterprises LLC, completed the User Questionnaire on October 16, 2024. The following table summarizes information provided by Mr. Patneaude. A copy of the questionnaire is provided in Appendix B.

Table 2 – Summary of User-Provided Information

User's Responsibilities	User's Responses
Title Records	Title records were not provided by the User.
Environmental Liens or Activity and Use Limitations (AULs)	None reported
Specialized Knowledge	None reported
Commonly Known or Reasonably Ascertainable Information	Mr. Patneaude stated that the site has remained undeveloped (i.e., a vacant lot).
Valuation Reduction for Environmental Issues	None
Reason for Performing Phase I ESA	Mr. Patneaude stated that the Phase I ESA is required by the Town of Yucca Valley to obtain a new development permit.

Mr. Patneaude also provided a conditional use permit application, a biological resources assessment, proposed site plans and drawings, a preliminary grading plan, and a topographic survey for the site. Environmental concerns were not identified in the provided documents, which have not been appended to this report.

4 RECORDS REVIEW

The following sections summarize records reviewed for the site.

4.1 Standard Environmental Record Source - Environmental Databases

A computerized, environmental information database search was performed by Environmental Data Resources, Inc. (EDR) on September 24, 2024. The search included federal, state, tribal, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted properties of potential environmental concern, is presented in the EDR report (Appendix C). The review was conducted to evaluate whether the site or properties within the site vicinity have been documented as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

4.1.1 Geocoded (Mapped) Listings

The site was not listed within the environmental database report. Off-site properties within 1 mile of the site appeared on various regulatory agency databases. The following table lists ASTM standard environmental databases that were searched.

Table 3 – ASTM Standard Environmental Databases

Database Name	Search Radius (mile)	Number of Listings
Federal Databases		
NPL (National Priority List)	1	0
Proposed NPL	1	0
NPL LIENS (Federal Superfund Liens)	site	0
Delisted NPL	1	0
FEDERAL FACILITY (Federal Facility Site Information listing)	1	0
SEMS (Superfund Enterprise Management System; formerly Comprehensive Environmental Response Compensation and Liability Information System)	0.5	0
SEMS-ARCHIVE (Superfund Enterprise Management System Archive)	0.5	0
CORRACTS (facilities subject to Corrective action under RCRA)	1	0
RCRA-TSDF (hazardous waste treatment, storage, or disposal facilities)	0.5	0
RCRA-LQG (large quantity generator)	0.25	0
RCRA-SQG (small quantity generator)	0.25	2
RCRA-VSQG (very small quantity generator)	0.25	0
US ENGINEERING CONTROL (EC)	0.5	0
US INSTITUTIONAL CONTROL (IC)	0.5	0
ERNS (Emergency Notification System)	site	0
State/Tribal Databases		
RESPONSE (State Response Sites, State- and Tribal- equivalent NPL)	1	0
ENVIROSTOR (The DTSC's Site Mitigation and Brownfields Reuse Program; CERCLIS-equivalent)	1	0
SWF/LF (Solid Waste Information System)	0.5	0
San Diego County Site Assessment and Mitigation (SAM)	0.5	0
LUST (GeoTracker's Leaking Underground Fuel Tank Report)	0.5	0

Table 3 – ASTM Standard Environmental Databases		
Database Name	**Search Radius (mile)**	**Number of Listings**
SLIC (Spills, Leaks, Investigation and Cleanup database by the California Regional Water Quality Control Board [RWQCB])	0.5	0
UST (registered underground storage tanks [USTs])	0.25	0
AST (registered aboveground storage tanks [ASTs])	0.25	2
FEMA UST (Underground Storage Tank Listing)	0.25	0
VCP (Voluntary Cleanup Program Properties)	0.5	0

Off-site properties/facilities listed in the database report were evaluated as to their potential to impact soil and/or groundwater at the site. To supplement the information in the EDR report, regulatory agency files and environmental databases were reviewed, as appropriate. Information from the EDR database report and supplemental sources is included in the facilities of potential concern summaries below. Supporting documentation is provided in Appendix D. The following properties/facilities were interpreted to represent a potential environmental concern to the site, based on their proximity to the site, the nature of the database on which they are listed, and/or the assumed direction of groundwater flow in the site vicinity (east).

Table 4 – Off-Site Facilities of Potential Concern			
Facility Name / Address	**Distance/ Direction from Site**	**Database**	**Summary**
Full-Circle Swivels, Inc. 4831 Newton Lane	Adjoining south, cross-gradient	CERS CERS HAZ-WASTE CHIMRS E MANIFEST HAZNET HWTS RCRA-NONGEN SAN BERN CUPA	The property is listed in the SAN BERN CUPA database as an active small quantity generator of hazardous waste and as a handler of hazardous materials with the San Bernardino County Fire Protection District (SBCFPD). According to records provided by SBCFPD, the facility has maintained permits to handle hazardous materials and generate hazardous waste since 2004. In 2011, two anonymous complaints were received by the SBCFPD alleging that the facility had released machine coolant fluids onto the ground; however, the SBCFPD confirmed with the owner that it was actually rinse water generated from cleaning mop buckets. The SBCFPD recommended contacting the stormwater regulatory agency to discuss applicable stormwater compliance requirements. The investigation prompted by the anonymous complaint was closed thereafter. According to the CERS database, inspection violations were issued during select years from 2011 to 2021 for an incomplete business plan, improper inspection frequency, improper materials labelling, and improper materials storage. In each instance the violation was corrected and the facility returned to compliance. Based on the absence of a significant release, ongoing regulatory oversight, and location relative to the site, this listing is not considered a REC.

Table 4 – Off-Site Facilities of Potential Concern			
Facility Name / Address	**Distance/ Direction from Site**	**Database**	**Summary**
Vista Auto Truck / Craftsman's RV Truck & Auto Repair / Mesa Garage 4828 Newton Lane	Adjoining, southwest, cross-gradient	HAZNET NWTS	The property is listed in the HWTS database as a general automotive repair facility. According to the HAZNET database, organic liquid mixtures, aqueous solutions, and oil-containing waste were disposed from 1991 to 2002. Based on the absence of a reported release, this listing is not considered a REC.
AmeriGas Propane 4785 Old Woman Springs Road	548 feet west, upgradient	AST CERS EMI HAZNET HWTS SAN BERN CUPA	The property is listed in the SAN BERN CUPA database as an active handler of hazardous materials with the SBCFPD. According to the CERS database, routine compliance inspections were completed from 2013 to 2022. Violations were issued during select years for failure to complete/submit a business plan and maintain an active handlers permit with the SBCFPD. In each instance, the violation was corrected and the facility returned to compliance. The property is also listed in the AST database; however, tank capacities and contents were not provided in the listing. Based on the absence of a significant release and ongoing regulatory oversight, this listing is not considered a REC.
Burrtec Yucca Valley / Hi Desert Disposal 4878 Newton Lane	587 feet south-southwest, cross-gradient	AST CERS CERS HAZ-WASTE CIWQS E MANIFEST ECHO FINDS HAZNET HWTS PFAS ECHO NPDES RCRA-NONGEN RCRA-SQG SAN BERN CUPA	The property is listed in the RCRA-SQG database as a small quantity generator of hazardous waste. According to the HAZNET database, wastes disposed during 1995 to 2021 included various quantities of tank bottom waste aqueous/alkaline solutions, solvent solutions, organic liquids/solids, waste oil, and oil/water separation sludge. The property is also listed in the AST database associated with a 2,240-gallon AST; however, tank contents were not provided in the listing. The property is also listed in the NPDES and CIWQS databases associated with industrial stormwater construction permits previously issued to the property owner. Based on the absence of a significant release and ongoing regulatory oversight, this listing is not considered a REC. The property name (not associated with an address) is listed on the PFAS ECHO database. Additional information was not available but may be related to the past use as a waste-related site. Based on the absence of a significant release and estimated depth to groundwater, this listing is not considered a REC.
Bill's Diesel Truck & Equipment 4695 Old Woman Springs Road	596 feet northwest, cross-gradient	CERS CERS HAZ-WASTE HWTS RCRA-SQG SAN BERN CUPA	The property is listed in SAN BERN CUPA database as an active small quantity generator of hazardous waste and as a handle of hazardous materials with the SBCFPD. According to the CERS database, routine compliance inspections were completed from 2014 to 2024. Violations were issued during select years for failure to annually certify the business plan, improperly labeled hazardous waste, and incomplete hazardous material inventory. In each instance, the violation was corrected and the facility returned to compliance. Based on the absence of a significant release and ongoing regulatory oversight, this listing is not considered a REC.

Notes:
- Distances and direction provided by EDR
- A complete description of each database is provided in the EDR Report (Appendix C).

It is our opinion that there is a low likelihood that the remaining listings for off-site properties appearing in the database report represent a REC to the site at the current time. This opinion is based on one or more of the following factors:

- The nature of the database(s) on which the property appears, and/or because the property did not appear on a database that reports unauthorized releases of hazardous substances;
- Reported regulatory agency status (e.g., case closed);
- Reported nature of the case (e.g., soil contamination only);
- Reported distance of the property from the site; and/or
- Location of the property in relation to the site with respect to topography or expected groundwater flow direction (east).

4.1.2 Orphan (Unmapped) Listings

This portion of the regulatory database report includes properties for which regulatory agencies did not report sufficient address information to be plotted by EDR. Orphan listings were not reported by EDR.

4.2 Additional Environmental Record Sources

According to the ASTM Standard, “if the property or any of the adjoining properties is identified on one or more of the standard environmental record sources, pertinent regulatory files and/or records associated with the listing should be reviewed.” Regulatory agency files for properties of potential concern in the immediate site vicinity were reviewed and summarized in Table 4. The review of regulatory agency records for the site is discussed in the following sections. Regulatory records for the site are provided in Appendix D.

4.2.1 San Bernardino County Fire Protection District

According to Ms. Christina Rivera of the SBCFD on October 9, 2024 via email, no records were found for the site.

4.2.2 South Coast Air Quality Management District

According to the South Coast Air Quality Management District (SCAQMD), a records search was unable to be completed because there is not a physical address associated with the site. The SCAQMD reported that they are unable to search for records by APN.

4.2.3 San Bernardino County Environmental Health Services

According to Ms. Jessica Carlson of San Bernardino County Environmental Health Services (EHS) on October 9, 2024 via Next Request, no records were found for the site.

4.2.4 Regional Water Quality Control Board, Colorado River Basin Region

According to Ms. Helen Gout of the RWQCB on October 21, 2024 via email, no records were found for the site.

4.2.5 Online Regulatory Databases

Online regulatory databases were reviewed by Ninyo & Moore to supplement the environmental database search conducted by EDR. The following is a summary of pertinent information.

Table 5 – Online Regulatory Databases

Online Database/Website	Findings
DTSC EnviroStor	Neither the site nor properties within 1,000 feet are listed.
SWRCB GeoTracker	Neither the site nor properties within 1,000 feet are listed.
California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System	Neither the site nor properties within 1,000 feet are listed.
United States Pipeline and Hazardous Materials Safety Administration, National Pipeline Mapping System Map Viewer	Pipelines are not depicted on or adjoining the site.
US Army Corps of Engineers, Formerly Used Defense Sites (FUDS), Geographic Information System	FUDS listings are not located within 1,000 feet of the site.

4.3 Physical Setting

The following table summarizes topographic, geologic, and hydrogeologic conditions in the vicinity of the site, based upon the referenced documents review and/or our visual reconnaissance of the site.

Table 6 – Physical Setting

Physical Settings	Reference	Summary
Topography	A	The elevation at the site approximately ranges from 3,015 to 3,030 feet above mean sea level (MSL). The topography at the site slopes to the southeast while topography in the vicinity generally slopes to the east.
Site Geology	B	The site is underlain by older alluvium and gravel surficial sediments (Pleistocene). The older alluvium deposits consist of poorly bedded to non-bedded, granitic cobble-pebble gravel and sand. The older gravel deposits consist of poorly bedded granitic cobble-gravel and coarse sand.
Surface Water	D, E	Surface water was not observed during the site reconnaissance. Permanent surface waters are not located within one mile of the site. Intermittent creeks are located within one mile of the site to the east and west.

Table 6 – Physical Setting		
Physical Settings	**Reference**	**Summary**
Groundwater	C	The site is located in the Joshua Tree Hydrological Unit (HU) within the Lucerne Valley Planning Area. Groundwater within the Joshua Tree HU has existing beneficial uses for municipal and industrial supply. The depth to groundwater, gradient and flow direction at the site currently are not known, but based on our experience in the area, the depth to groundwater is estimated to be greater than 200 feet below ground surface (bgs). Groundwater flow is expected to follow topography and flow to the east. The groundwater flow direction may vary due to hydrogeologic properties, such as soil porosity and permeability, groundwater extraction, recharge by irrigation and rainfall, and other factors.

E = Site Reconnaissance

4.4 Site Historical Use Information

Ninyo & Moore conducted a historical record search for the site. This included a review of city directories, historical fire insurance maps, historical aerial photographs, topographic maps, and building records, as available. The following sections summarize information obtained from the historical sources utilized for this assessment.

4.4.1 City Directories

Available historical reverse street directories from 1976 through 2017 were provided by EDR. The site is not associated with a physical address and was therefore not listed. The addresses in the surrounding area appear to be associated with commercial and industrial properties (discussed in Section 4.1.1), as well as potentially several residential properties. The EDR City Directory Report is provided in Appendix E.

4.4.2 Sanborn® Fire Insurance Maps

Sanborn® fire insurance maps were requested from EDR; however, according to EDR's Certified Sanborn Map Report, there is no map coverage in the site vicinity. EDR's Certified Map Report is provided in Appendix E.

4.4.3 Historical Aerial Photographs and Topographic Maps

Historical aerial photographs and topographic maps were provided by EDR for select years from 1953 through 2021. Additionally, recent aerial photographs were reviewed online using Google Earth. A listing of the sources reviewed and summary of notable observations from

the photograph review are provided in the table below. EDR-provided photographs and maps are included in Appendix E.

Table 7 – Aerial Photographs and Topographic Map Summary

Date	Source	Summary
1953 1955	A, B	The site, adjoining properties, and vicinity are undeveloped. Old Woman Springs Road and Buena Vista Drive are depicted to the west and south of the site, respectively, as dirt roads. A structure is present to the northwest of the site.
1970 1972 1975 1979 1983	A, B	The site appears similar to the previous photograph and map. The southeast-adjoining property is developed with a residential property and the remaining adjoining properties appear undeveloped. West-adjoining Newton Lane is depicted as a dirt road. Residential properties are depicted in the general site vicinity. By 1983, commercial/industrial properties are also depicted within the general site vicinity.
1989	A, B	The site appears similar to the previous photographs and maps. The southwest-adjoining property appears to be under development and the north-adjoining properties appear to be cleared of vegetation. Although difficult to discern, the northwest- and northeast-adjoining properties appear to be used for vehicle or material storage and the north-adjoining property is undeveloped. The northern west-adjoining property is vacant and the remaining adjoining properties are undeveloped.
1995 2005	A	The site appears similar to the previous photographs. The south- and southwest-adjoining properties are developed with commercial/industrial properties. The northeast-adjoining property is undeveloped and the remaining adjoining properties appear similar to the previous photograph. By 2005, the northwest-adjoining property is undeveloped and rows of stored vehicles are visible on the southwest-adjoining property.
2009 2012 2015 2016 2018 2020 2021 2023	A, B, C	The site appears similar to the previous photographs and maps. The northern west-adjoining property appears to be used for equipment and material storage with stockpiles of soil and other materials visible from 2009 to 2023. The remaining adjoining properties appear similar to the previous photograph. By 2023, the southern west-adjoining property appears to be used for trailer/equipment storage but was observed to be vacant during the site reconnaissance (see Section 5). The site, adjoining properties, and site vicinity are developed similar to today.
Sources: A = EDR Aerial Photographs B = EDR Topographic Maps C = Google Earth		

4.4.4 Town of Yucca Valley Building and Safety Department

According to Ms. Sandy Heller of the Town of Yucca Valley on October 16, 2024 via Next Request, no records were found for the site.

4.5 Previous Reports

Ninyo & Moore was not provided copies of prior reports completed for the site.

4.6 Adjoining Property History

The adjoining properties appeared to remain undeveloped until approximately 1970. A residential property was developed southeast of the site around 1970. From the 1980s to 1990s, commercial/industrial properties were developed south and southwest of the site. From the 1980s

to present, the north- and west-adjoining properties were intermittently used for materials/vehicle storage but were otherwise vacant. The east-adjoining property has remained undeveloped.

5 SITE RECONNAISSANCE

The objective of the site reconnaissance was to obtain information indicating the potential for RECs in connection with the site. Mr. Gabriel Haro conducted the reconnaissance on October 15, 2024. A site plan is provided as Figure 2 and photographic documentation is provided in Appendix A.

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of walking the site and along its perimeter (for viewing of adjoining/nearby properties). Limiting conditions were generally not encountered during the site reconnaissance.

5.2 General Site Setting

At the time of the site reconnaissance, the site was undeveloped. The site was primarily vegetated with dry brush and Joshua Trees. Minor surface debris was observed at the site. Waste onsite included six bags of green waste along the western site boundary and miscellaneous metal, wood, paper, and plastic debris across the site. These materials would be considered a *de minimis* condition.

Several shallow excavations (approximately 1-2 feet deep) were observed near the central portion of the site. These appear to be the locations where Joshua Trees had been relocated/replanted.

Topography at the site slopes generally to the southeast. Surface drainage was expected to either percolate into the soil or flow southeast and offsite.

5.3 Adjoining Property Observations

Adjoining properties were observed from the site and from accessible vantage points along the site boundary during the site reconnaissance. The properties adjoining the site are as follows and as depicted on Figure 2:

- **North**: Sun Mesa Drive followed by undeveloped land.
- **East**: Undeveloped land.
- **South**: From east to west, residential property (4816 Terry Lane), Full Circle Swivels (4831 Newton Lane), and an auto repair facility (4828 Newton Lane, formerly Mesa Garage).

- **West**: Newton Lane followed by, from north to south, a materials and debris storage lot (4812 Newton Lane) and a vacant gravel lot.

5.4 Site Observations

Ninyo & Moore evaluated the site for evidence of the following potential environmental concerns:

Table 8 – On-Site Observations

Conditions	Observed or Noted	Comments
Hazardous Substances/Petroleum Products		Not observed
Waste Generation/Storage/Disposal	X	Minor surficial debris was observed at the site. Waste onsite included six bags of green waste along the western site boundary and miscellaneous aluminum, wood, paper, and plastic debris across the site. These materials would be considered a *de minimis* condition. Ninyo & Moore does not consider this a REC.
ASTs		Not observed
Suspected Evidence of USTs		Not observed
PCB-Containing Equipment		Not observed
Chemical/Petroleum Odors		Not observed
Concrete Patches/Pads		Not observed
Sewage Discharge Pipes		Not observed
Floor Drains/Sumps		Not observed
Elevator		Not observed
Wells		Not observed
Drums		Not observed
Unidentified Substance Containers		Not observed
Stained Soil or Pavement		Not observed
Stressed Vegetation		Not observed
Pits, Ponds, or Lagoons		Not observed
Wastewater Discharges Disposal Systems		Not observed
Septic Systems/Cesspools		Not observed
Municipal Solid Waste Disposal Areas		Not observed

6 VAPOR ENCROACHMENT/INTRUSION

The purpose of the preliminary vapor encroachment screen is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of potential contaminants of concern (COC) vapors in subsurface soils at the site caused by the release of vapors from contaminated soil or groundwater either on or near the site. The potential for VECs beneath the site was evaluated using a Vapor Encroachment Screening Matrix (VESM) in accordance with ASTM E 2600-15/-22 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The VESM included performing a Search Distance Test to identify if there are any known or suspect contaminated properties surrounding or upgradient of the site within specific search radii, a COC Test (for those known or suspect contaminated sites identified within the Search Distance Test) to evaluate whether or not COCs are likely to be present, and a Critical Distance Test to evaluate whether or not COCs in a contaminated plume may be within

the critical distance of the site (100 feet for non-petroleum hydrocarbon contaminants and 30 feet for petroleum hydrocarbon contaminants).

Based on the completion of the VESM, a VEC was not found and no further investigation is recommended at this time. A copy of the VESM is included in Appendix F.

7 INTERVIEWS

Interviews were conducted by Ninyo & Moore with the objective of obtaining information regarding potential RECs in connection with the site. Interviews with present owners, operators, and/or occupants of the site, as well as other knowledgeable parties as appropriate, is mandated by ASTM E 1527-21. A summary of the interviews conducted is provided in the table below.

Table 9 – Interviews

Representative	Summary
Property Owner	Mr. Daniel Patneaude, property owner representative, completed the property background questionnaire on October 15, 2024. A copy of the questionnaire is provided in Appendix B. According to Mr. Patneaude, the site is currently vacant and has historically remained undeveloped. He stated that USTs have not been installed at the site and is unaware of any issues concerning environmental contamination. Mr. Patneaude indicated a septic system will be installed at the site. Mr. Patneaude stated that both an auto repair facility and junkyard may have been or may be located to the west of the site (discussed in Section 4.1.1). He was not aware of environmental issues impacting the adjoining or nearby properties.
Occupant	The site is currently unoccupied.
Past Owners	Past ownership entities were not made available to Ninyo & Moore during the preparation of this ESA. Therefore, interviews with past site owners were not conducted.

8 FINDINGS

Based upon the results of this Phase I ESA, the following findings are provided.

- The site is comprised of an approximately 4.5-acre parcel and is located at the southeast corner of Sun Mesa Drive and Newton Lane in Yucca Valley, California.
- The site was not listed within the environmental database report.
- At the time of the site reconnaissance, the site was undeveloped. The site was primarily vegetated with dry brush and Joshua Trees. Minor surface debris onsite included six bags of green waste along the western site boundary and miscellaneous metal, wood, paper, and plastic debris across the site (*de minimis* condition). Several shallow excavations (approximately 1-2 feet deep) were observed near the central portion of the site. These appear to be the locations where Joshua Trees had been relocated/replanted.
- Topography at the site and vicinity slopes generally to the southeast. Surface drainage was expected to either percolate into the soil or flow southeast and offsite.

- Based on a review of historical resources, the site vicinity was developed with scattered residential properties by 1970. From the 1980s to present, scattered commercial/industrial properties were developed in the site vicinity.
- Regulatory agency records were requested from the SBCFPD, SCAQMD, EHS, RWQCB, and Town of Yucca Valley; however, no records were found for the site.
- Based on the completion of the VESM, a VEC was not found.

9 OPINIONS

The rationale for concluding whether the conditions listed in Section 8, above, represent RECs, HRECs, or CRECs (i.e., the presence or likely presence of hazardous substances or petroleum products on a property under conditions indicative of releases, past releases, or a material threat of a release of hazardous substances, pollutants, contaminants, and/or petroleum/petroleum products at the site) is provided below.

9.1 RECs

RECs were not identified during the preparation of this report.

9.2 CRECs

CRECs were not identified during the preparation of this report.

9.3 HRECs

HRECs were not identified during the preparation of this report.

9.4 *De Minimis* Conditions

The following *de minimis* conditions were identified in the preparation of this report:

- It is our opinion that surficial debris at the site is considered a *de minimis* condition that, if brought to the attention of an appropriate regulatory agency, would not result in an enforcement action.

9.5 Data Gaps

A data gap is a "lack of or inability to obtain data required by this practice despite good faith efforts to gather such data." Significant data gaps were not identified during the preparation of this report.

9.6 Additional Appropriate Investigation

It is our opinion that additional appropriate investigation to evaluate RECs at the site as part of the Phase I ESA is not required.

10 CONCLUSIONS

We have performed a Phase I ESA, in conformance with the scope and limitations of the ASTM Practice E 1527-21, of the property located at the southeast corner of Sun Mesa Drive and Newton Lane in Yucca Valley, California and identified by APN 0597-111-67-0000. Any exceptions to, or deletions from, this practice are described in Section 1.4 and in the body of this report. This assessment has revealed no evidence of RECs in connection with the property.

12 PROFESSIONAL STATEMENT

As required by 40 CFR §312.21(d) and Section 12.13 of ASTM 1527-21, the following statement is included:

> *I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.*

Travis W. Meier
Principal Environmental Scientist

13 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

Resumes, which document the professional qualifications, pursuant to 40 CFR §312.10(b)(2), of the persons that prepared and reviewed this report are provided as Appendix G.

USER QUESTIONNAIRE

Property Address:

Yucca Valley Property
Southeast Corner of Sun Mesa Drive and Newton Lane
Yucca Valley, California 92284
San Bernardino County APN: 0597-111-67-0000

Please respond to all of the following questions to the best of your knowledge. The purpose of this questionnaire is to assist the user (the client or party seeking to use the Phase I ESA) and the environmental professional in gathering information from the user that may be material to documenting Recognized Environmental Conditions (RECs) at the site. Please note that the user of the Phase I ESA (the client), if seeking protection from CERCLA liability, must adhere to a set of user responsibilities as defined by the ASTM International (ASTM) Standard Practice E1527-21 and the United States Environmental Protection Agency (EPA) 40 Code of Federal Regulations Part 312 titled "Standards and Practices for all Appropriate Inquiries (AAI)". Failure to provide this information could result in a determination that AAI is not complete.

Per Section 6 of ASTM Standard E1527-21 and 40 CFR Part 312 of the AAI rule, the user's responsibilities include, but are not limited to, the following:

- review reasonably ascertainable land title records, lien records, and/or judicial records to search for environmental cleanup liens or activity and use limitations (AULs) against the site filed or recorded under federal, tribal, state, or local law, or engage a title company to review such records. Evidence of environmental liens and/or activity and use limitations on the site, if discovered, must be provided to the environmental consultant;
- report to the environmental professional specialized knowledge or experience material to RECs in connection with the property;
- report to the environmental professional knowledge of environmental liens or AULs encumbering or in connection with the property;
- consider the relationship of the purchase price of the property to its fair market value and whether a lower purchase price is related to potential contamination;
- report to the environmental professional commonly known or reasonably ascertainable information material to RECs; and
- report to the environmental professional the reason for conducting the Phase I ESA.

User responsibilities, CERCLA liability relief, and AAI components are discussed in the AAI rule and in the ASTM E1527-21 standard.

1) Environmental cleanup liens that are filed or recorded against the property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate) identify environmental liens filed or recorded against the property under federal, tribal, state or local law?

☐ Yes ☒ No

2) **Activity and use limitations (AULs) that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi).**

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls, that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

☐Yes ☒No

3) **Specialized knowledge or experience of the person seeking to qualify for the liability protections (40 CFR 312.28).**

As the user of this Phase I ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐Yes ☒No If yes, please describe:

4) **Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).**

a) Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

☒Yes ☐No ☐Not applicable (No Property Purchase Involved)

b) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☐Yes ☐No ☐Not applicable

c) If there is a price difference, please describe:

5) **Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).**

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as the user,

a) Do you know the past uses of the property?

☒Yes ☐No If yes, please describe: VACANT LOT

b) Do you know of specific chemicals that are present or once were present at the property?

☐Yes ☒No If yes, please describe:

c) Do you know of spills or other chemical releases that have taken place at the property?

☐Yes ☒No If yes, please describe:

d) Do you know of any environmental cleanups that have taken place at the property?

☐Yes ☒No If yes, please describe:

6) **The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**
As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
☐Yes ☒No If yes, please describe:

7) **What is the reason for having the Phase I ESA performed (ASTM 1527-21, Section 6.8)?**
REQUIREMENTS OF THE TOWN OF YUCCA VALLEY WITH OUR NEW DEVELOPMENT PERMIT

8) **Are you aware of any previously prepared documentation for the site, such as:**

- previous Phase I ESA or Phase II ESA reports
- environmental sampling, compliance audit, or assessment reports
- environmental permits
- registrations for aboveground or underground storage tanks
- registrations for underground injections systems
- safety data sheets (SDS)
- community right-to-know plans,
- safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans
- geotechnical or hydrogeologic reports
- storm water documents
- risk assessments
- hazardous waste generator notices

☐Yes ☒No If yes, please describe: ALL NEW REPORT HAVE BEEN DONE BY DRP LSA THAT ARE FOR NEW PROJECT ONLY - NOTHING PRIOR TO THIS.

PROPERTY BACKGROUND QUESTIONNAIRE

Property Address: Yucca Valley Property
Southeast Corner of Sun Mesa Drive and Newton Lane
Yucca Valley, California 92284
San Bernardino County APN: 0597-111-67-0000

*Please answer *in good faith and to the best of your ability* and elaborate as much as possible on any question answered "yes."

General Information

1) Describe the current uses of the site. How long has the site been used for these purposes?
Site Vacant -

2) Describe the structures previously present at the site and their usage/occupants and age.
N/A

3) When were the structures constructed, if known?
N/A

4) What is the historical land use of the site? Describe the past uses, owners, and operators of the site. (Be as detailed as possible and note approximate time periods, if known.)
None Vacant -

5) Are there currently, or were there previously any underground storage tanks (USTs) at the site? If so, please describe their capacities and contents.
No

6) Have all USTs been removed from the site? If so, when?
NA

7) Was associated underground piping associated with the USTs removed?
NA

8) Was soil and/or groundwater sampling conducted at the time of UST removal? If so, please describe.
NA

9) Are you aware of any environmental issues associated with the site or of potential soil and/or groundwater contamination?

[ ] Yes [X] No

10) Have fill soils been brought to the property?

[ ] Yes [ ] (No) [ ] Unknown

11) Has there been storage of hazardous materials or wastes on the property?

[ ] Yes [ ] (No) [ ] Unknown

12) Have any of the following items been stored on the site in containers greater than 5 gallons?

Paint [ ] Yes [ ] (No) [ ] Unknown
Chemicals [ ] Yes [ ] (No) [ ] Unknown
Pesticides/Herbicides [ ] Yes [ ] (No) [ ] Unknown
Automotive-Related Oils/Fuels [ ] Yes [ ] (No) [ ] Unknown

13) Have there been any spills or releases of chemicals, hazardous substances, or wastes on the property?

[ ] Yes [ ] (No) [ ] Unknown

14) Have any hazardous substances, petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or other waste materials been dumped aboveground, buried, or burned on the site?

[ ] Yes [(No)] Unknown

15) Is the site hooked up to a municipal sanitary sewer system or is there a septic tank/system?

[ ] Sanitary Sewer [(Septic) - Future.

16) Are/were there any subsurface wastewater features, such as sumps, clarifiers, discharge systems, at the site?

[ ] Yes [ ] (No) [ ] Unknown

17) Does the site discharge wastewater, other than domestic wastewater or storm water, into the sewer or onto another property?

[ ] Yes [ ] (No) [ ] Unknown

18) Other than permission for domestic hookup, have any city, county, or other permits for wastewater discharge been issued to the site?

[ ] Yes [ ] (No) [ ] Unknown

19) Is there a transformer, capacitor, or other equipment that may contain PCBs on the site?

[ ] Yes [ ] (No) [ ] Unknown

20) Other than small quantities of legal pesticides used for landscape maintenance (e.g., Roundup), have pesticides, herbicides, or insecticides been applied on the site?

[ ] Yes [ ] (No) [ ] Unknown

21) Are/were there any wells on the site (e.g., water supply wells, groundwater monitoring wells, etc.)

[ ] Yes [ ] (No) [ ] Unknown

22) Are there currently, or were there previously, any pits, ponds, or lagoons on the site?

[ ] Yes [ ] (No) [ ] Unknown

23) Are there currently, or were there previously, areas on the site with stained soil?

[ ] Yes [ ] (No) [ ] Unknown

24) To your knowledge, have adjoining properties been used for industrial activities, such the following? (Please note that an adjoining property is a property that is contiguous with, or directly across the street from the site.)

Gasoline Station [ ] Yes [ ] (No) [ ] Unknown
Printing Facility [ ] Yes [ ] (No) [ ] Unknown
Metal Plating/Manufacturing [ ] Yes [ ] (No) [ ] Unknown
Landfill [ ] Yes [ ] (No) [ ] Unknown
Auto Repair Facility [ ] (Yes) [ ] No [ ] Unknown — possible yard
Dry Cleaners [ ] Yes [ ] (No) [ ] Unknown
Junkyard [ ] (Yes) [ ] No [ ] Unknown
Waste or Wastewater Treatment [ ] Yes [ ] (No) [ ] Unknown
Storage, Disposal, or Recycling Facility [ ] Yes [ ] (No) [ ] Unknown

25) Are there any known issues related to spills/contamination with adjoining or nearby properties?

[ ] Yes [ ] (No) [ ] Unknown

26) Are you aware of any previously prepared documentation for the site, such as:

- environmental sampling, compliance audit, or assessment reports
- environmental permits
- registrations for aboveground or underground storage tanks
- safety data sheets (SDS)
- community right-to-know plans
- safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans
- geotechnical or hydrogeologic reports
- storm water documents
- risk assessments

(If so, are they available for review?) NONE

Legal/Activity and Use Limitations

27) Are you aware of any environmental cleanup liens or activity and use limitations such as engineering controls, land use or deed restrictions or institutional controls associated with the site that are filed or recorded under federal, tribal, state, or local law?

[ ] Yes [X] No

28) Are you aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?

[ ] Yes [X] No

29) Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

[ ] Yes [X] No

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2

RCRA-SQG sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 07/10/2024 has revealed that there are 2 CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that

there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

BURRTEC WASTE EPA ID:: CAL000305622	***4878 NEWTON ROAD***	***SSW 0 - 1/8 (0.111 mi.)***	***B13***	***121***

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
BURRTEC YUCCA VALLEY		NW 0 - 1/8 (0.005 mi.)	1	9

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 2 E MANIFEST sites within approximately 0.25 miles of the target property.

HWTS: DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

A review of the HWTS list, as provided by EDR, and dated 07/19/2024 has revealed that there are 11 HWTS sites within approximately 0.25 miles of the target property.

Violation Program: HW
Violation Source: CERS,

Site ID: 393584
Site Name: FULL-CIRCLE, INC.
Violation Date: 12-19-2014
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes: Returned to compliance on 12/26/2014. Failure to note accumulation start date on labels (CCR 66262.34(f)(2)) Observed (3) 55 gallon drums of oily water waste, and (1) 55 gallon drum of used oil with missing accumulation start dates. Per operator the accumulation start date of the used oil is 10/01/2014, and 12/01/2014 for the oily water waste. The violation was corrected at the time of the inspection: operator added new hazardous waste labels with all the required information and the accumulation start date to all the hazardous waste drums at the time of the inspection.

Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes: Returned to compliance on 12/19/2014. Failure to manage contaminated containers lawfully (CCR 66261.7) Containers, or inner liners removed from a container, that previously held a hazardous material or a hazardous waste are considered contaminated containers and shall be managed properly. Empty contaminated containers larger than 5 gallons must be marked with the word Empty , the date that the container became empty and must be removed from the site within one year of that date. Observed (10) empty 55 gallon drums that previously held hazardous materials or hazardous waste. Per operator the oldest empty drum has been on site for less than 11 months. The violation was corrected at the time of inspection: operator marked all the drums with the word "Empty", and the dates that the drums became empty.

Violation Date: 07-23-2013
Citation: HSC 6.95 25505(a) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)
Violation Description: Owner/Operator failed to complete and/or submit a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet.
Violation Notes: Returned to compliance on 08/22/2013.
Violation Division: San Bernardino County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 385087
Site Name: AMERIGAS PROPANE
Violation Date: 03-25-2022
Citation: Un-Specified
Violation Description: Business Plan Program - Administration/Documentation - General Local Ordinance
Violation Notes: Returned to compliance on 03/25/2022. OBSERVATION: This facility stores hazardous materials in reportable threshold quantities. At the time of the inspection, this facility did not have a valid CUPA Hazardous Materials Handlers permit. Permit expired 01/31/2022. During today's inspection, Christine Rodgers renewed the facility's permit through the county's online payment portal.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

Next Scheduled EDR Contact: 10/14/2024
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.
